(19) *Duties towards the gods.*—In lands where, as in Ancient Egypt, an official cult of the gods has been established—wherever, in fact, religious observances are not dictated by mere individual desires—this cult and these observances become a duty. The only question is whether the obligation falls on the shoulders of the people at large or is vicariously discharged by a specially-appointed priesthood. The Egyptian priesthood was only in part professional; whence it follows that private persons, so far as their wealth and position prescribed, took part in the public worship of the gods. How far the populace at large attended to, or were supposed to attend to, the gods of the State will be discussed in such articles as WORSHIP (Egyptian); here it will suffice to quote a precept which enjoins on all men generally the observation of the Divine feast days: 'Make the feast of thy god, and repeat it in its season. God is wroth when He is neglected' (*Any*, 2. 3-4). Various religious offences are mentioned in the Negative Confession, including fraudulent diminution of the temple-offerings, the slaying of sacred animals, and blasphemy. There were also prohibitions as to food, rules of purity, and much else that cannot here be discussed. The fact that the gods rewarded virtue (see above) proves that righteousness was regarded in one aspect as a duty towards them; and, owing to this religious side of ethics, the relations of a man with his deity might become very intimate. Certain votive stelæ of the New Kingdom exhibit the nearest approach to *penitence* that is found in Egyptian texts; a certain Nefer-abu, for instance, humbly confesses that he is a 'foolish man,' and prays to his god not to punish him for his 'manifold transgressions' (Erman, *Äg. Rel.*[2] 99, and in detail, *Sitz. d. kön. Preuss. Akad.*, 1911, no. xlix.).

14. Conclusion.—In conclusion, a rough moral estimate of the Egyptians may be attempted.

They were gay, light-hearted, luxurious, and inclined to ostentation; prone to self-indulgence, and not proof against sensual temptations. They were kind, charitable, and courteous; perhaps rather less callous to pain than other nations of antiquity. Honesty and incorruptibility were not among their strong points, but in this respect they were at least able to perceive the ideal standard, if they did not attain to it. Intellectually, the Egyptians were gifted but not deep; their aversion to dull brooding, and their love of all that is artistic and pleasurable in life, are characteristics which have played by no means a small part in helping to endear them to their modern votaries.

LITERATURE.—Besides the authorities quoted throughout the article the following books may be mentioned: E. Amélineau, *Essai sur l'évolution histor. et philos. des idées morales dans l'Égypte ancienne*, Paris, 1895; W. M. Flinders Petrie, *Religion and Conscience in Ancient Egypt*, London, 1898.

ALAN H. GARDINER.

ETHICS AND MORALITY (Greek). — **1. Homeric age.**—The mental attitude of the society which Homer depicts was neither introspective nor agitated by moral doubts. It belonged to an age of action, when bodily strength, courage, and resolution were more highly esteemed than unswerving rectitude or pre-eminent wisdom. The sagacity of Nestor was treated with formal respect, but he had lost in the feebleness of age the position which he had successfully claimed in his prime. On the other hand, the counsel of Odysseus was the more readily welcomed in consequence of his practical resource and military skill. The authority wielded by the chieftains over their feudal retainers depended on their power to enforce it: in the absence of Odysseus and Achilles, Laertes and Peleus were too old to watch effectively over their sons' interests, and Telemachus as a mere stripling was ignored. Similarly, the nominal over-lordship of Agamemnon failed to coerce Achilles, who was strong enough to assert his independence. Thus the exercise of the humaner virtues was restricted to the bounds of family or clan; but within these limits we find evidence of a highly developed morality. The sanctity attached to the marriage bond may be illustrated from the wonderful pictures of Hector and Andromache, and of Odysseus and Penelope; and the supreme happiness of a well-assorted union is recognized in the words of Odysseus to Nausicaa: 'There is nothing greater or better than a husband and wife dwelling together with united minds' (*Od.* vi. 182 ff.). The position of women recognized in the Homeric poems — but always within the limits indicated above — was characterized by greater freedom and influence than was customary at Athens in later times, as may be seen in the several cases of Penelope, Nausicaa, and Arete the wife of Alcinous (*Od.* vii. 66).

Various causes have been assigned for the change, such as (1) the fact that the women described in Homer belonged to a privileged class, (2) the necessary seclusion imposed by the conditions of town life, and (3) the contact with the Ionian civilization of Asia Minor (see Mahaffy, *Social Life in Greece*², London, p. 147, and T. D. Seymour, *Life in the Homeric Age*, New York, 1907, p. 117 ff.). Seymour, in suggesting (p. 128) that the society of Homer was Æolic rather than Ionian, refers to the abuse directed against the Æolic poetesses by non-sympathetic Ionians.

There is similar evidence of sympathy with children (see esp. *Il.* xv. 362, xxii. 499). The cases of Euryclea and Eumæus show that slavery was compatible with relations of intimate affection and devoted fidelity between the master and his household. Beggars and suppliants were under the special protection of Zeus, and had an indefeasible claim to hospitality (*Od.* vi. 208, xiii. 213). The same mild spirit was shown in the gentle treatment of the lower animals, such as horses and dogs; and the example of the old dog Argus (*Od.* xvii. 292 ff.), who recognized his master after twenty years' absence, is familiar to every one. The claims of morality as thus acknowledged imposed obligations which could not be broken without offending public opinion. The sense of honour (αἰδώς) corresponded to the feeling of resentment (νέμεσις, as in *Il.* xiii. 122) with which a disregard of propriety was visited. Nevertheless, behind all these manifestations of refinement and generosity there was a dark background of hardness and cruelty.

In his wrath the Homeric hero was a savage. Patroclus slew the son of Amphidamas in anger over a game of knuckle-bones (*Il.* xxiii. 88), and Achilles was afraid lest his passion should drive him to kill the defenceless Priam, who as suppliant and guest could claim his special protection (*Il.* xxiv. 568, 585). Mutilation of an enemy is mentioned over and over again without reprobation (see *Il.* xi. 145, xiii. 202, xiv. 488, etc.). The punishment of the treacherous slave Melanthius is carried out with brutal and repulsive ferocity (*Od.* xxii. 474 ff.). In fact, in dealing with those who were beyond the pale, the heroic warrior showed no pity for unprotected weakness; when a town was captured, the old men and children were slain, and the women were carried off as the property of the victors (see *Il.* xxii. 62; *Od.* viii. 528 ff.).

2. Hesiod.—The poems of Hesiod, whether belonging to a time somewhat later than Homer or expressing the sentiments of a lower grade of society not articulate in the *Iliad* and the *Odyssey*, may be regarded as a bridge which enables us to cross the gap dividing the heroic from the historical age. For in the *Works and Days* we find the earliest signs of a conviction that all is not well with the world, that the gods no longer dwell with men, and that even honour and resentment (αἰδώς and νέμεσις) have departed, abandoning mankind to the workings of harsh and malignant jealousy (200 f.).

'Potter is wroth against potter, carpenter against carpenter; even beggar is envious of beggar, and one minstrel of another' (25). 'Money is a man's soul' (686).

Morality is depressed from the heroic level to suit the work-a-day requirements of the struggling farmer. Life is a continual battle against poverty, and the simple virtues which it needs leave no room for the exercise of elevated sentiment. Industry and fair dealing, temperance and simplicity, are enjoined:

'Hard work is no shame; but idleness is a disgrace' (311). 'Take a good measure and give as much or even better in return, so that in need you may afterwards find sufficiency' (350).

Among the most famous of Hesiod's sayings is his rebuke of the unjust judges who robbed the poor:

'Fools! they know not how much greater is the half than the whole, how mighty a blessing there is in mallow and asphodel' (40).

There is plenty of shrewd and homely wisdom, breathing the spirit merely of commercial prudence; and we are hardly surprised to find a wife enumerated as a part of the necessary agricultural stock-in-trade (375), or to read the advice that she should be chosen after much circumspection, lest the neighbours should have cause to mock (701). But we reach a higher level in the crowning exhortation to Perses.

'Vice is easy of attainment even by the crowd; for the road is smooth and she dwells hard by. But the Immortals have placed Toil in front of Virtue; long and steep and rough at first is the path that leads to her' (287 ff.).

3. The age of the gnomic poets and the Seven Wise Men.—In this period thought began to be consciously directed to moral questions. A change had taken place in the political conditions of Greece: the old feudal monarchies had passed away, and were succeeded by a long period of unrest. At first the domination of an aristocratic class and subsequently the rise of the tyrants, nominally as the champions of the masses, but actually in the interest of absolutism, kept the communities agitated with successive upheavals of internecine strife. Insecure of their lives, men were brought face to face with the hard necessities of a struggle for existence. Hence in all the literature of the time a vein of melancholy may

be traced, to be seen in its fullest outcrop when Theognis writes:

'It is best of all things for the sons of earth not to be born, or to see the bright rays of the sun; or else after birth to pass as soon as possible the gates of death, and to lie deep down beneath a weight of earth' (425 ff.).

Debarred by stress of present anxiety from celebrating the glories of the past, the creative instinct found an outlet in recording the lessons of personal experience. The more individual and passionate outbursts of the lyric poets are of less direct importance to a survey of morality. But the elegiac writers, and especially Mimnermus, Solon, Phocylides, and Theognis, contain a mass of proverbial wisdom to which after ages never ceased to appeal. Trite and commonplace as much of their writing seems to a modern reader, their immediate audience judged very differently.

'To obtain concise and abstract maxims upon the ethics of society, politics, and education was to them a new and inestimable privilege. In the gnomic poets the morality which had been merely implicit in Homer and Hesiod received separate treatment and distinct expression. The wisdom which had been gradually collecting for centuries in the Greek mind was tersely and lucidly condensed into a few pregnant sentences. These sentences formed the data for new syntheses and higher generalizations, the topics for enlarged investigation, the "middle axioms" between the scattered facts of life and the unity of philosophical system' (J. A. Symonds, *Greek Poets*[2], London, 1877, i. 102).

The poets were, in fact, the educators of Greece (cf. Isocr. ii. 43, and see K. J. Freeman, *Schools of Hellas*, London, 1907, p. 247); and to this age belongs the formulation of all that was most characteristic in Greek popular morality. The dramatists were steeped in this literature, and their sententious passages often prove to be adaptations from some gnomic poet: thus Sophocles in *Oed. Col.* 1225 reproduced the above-quoted lines of Theognis, just as in fr. 329 he paraphrased Theogn. 255, and in fr. 286 Theogn. 215.

Similar considerations apply to the traditional utterances of the Seven Wise Men. They belonged to the latter part of this era, the age of the tyrants: indeed, one of them, Periander, was himself tyrant of Corinth, and another, Pittacus, tyrant of Mytilene. They were happily described by Dicæarchus (fr. 28 [*FHG* ii. 243]) as 'neither adepts nor students of philosophy, but men of intelligence endowed with some legislative capacity.' Although Thales and Solon distinguished themselves independently, the others were merely convenient eponyms to whom could be attached such scraps of unappropriated wisdom as were handed down from one generation to another (for the details, see Diels, *Fragmente der Vorsokratiker*[2], Berlin, 1907, p. 518). The famous 'Nothing too much,' attributed to Solon and repeated by Cleobulus as 'Measure is best,' comes from the innermost kernel of Greek sentiment.

Phocylides (fr. 18) praised the middle rank as the happiest; Solon (fr. 2) rebuked the insolence (ὕβρις) of the popular faction, arising from the excess which they could not check; and Aristotle followed popular opinion when he defined Virtue as a Mean. Closely akin is the saying of Pittacus, *καιρὸν γνῶθι*, which is inadequately rendered 'Know the right season,' since *καιρός* (as may be seen from the Lexicons) is not limited to time. Theognis (401), enlarging upon this text, gave a wider application to the words of Hesiod, who recommended the farmer not to overload his waggons (*Op.* 694).

It should be observed that in recommending moderation the Greeks were impelled as much by æsthetic and intellectual motives as by the strictly moral consideration that the free indulgence of the appetites is harmful. But, in fact, no such distinction was known to them. Sappho had testified to the identity of the beautiful with the good (fr. 101); and the fact that we have no word corresponding to *καλός* is no less significant than the absence from Greek of terms capable of expressing adequately the ideas of 'duty' and 'sin.'[1] The intellectual aspect of Greek morality appears still more strongly in Chilon's *γνῶθι σεαυτόν*, 'Know thyself,' which, together with *μηδὲν ἄγαν*, was inscribed on the front of the temple of Apollo at Delphi. In its most obvious application it recalls the advice given by Pythagoras to his pupils, that they should always, on their return home, put to themselves these questions: 'Whither have I strayed? What have I done? Which of my duties was unfulfilled?' (Diog. Laert. viii. 22). But it was capable of a wider significance, and was interpreted by Plato in the *Charmides* (164 D) as a recommendation of *σωφροσύνη*, understanding thereby a proper examination by the observer of his own capacity. In this sense it was adopted by the tragic poet Ion (fr. 55): '*Know thyself* is but a brief saying, and yet is a task so great that Zeus himself alone can master it.'

[1] It is unnecessary to show that *καθῆκον* (or *δέον*) and *ἁμαρτία* do not fill the gap.

An increased recognition of the importance of justice is characteristic of an age which continued and developed the strain of wisdom introduced by Hesiod (*Op.* 320, etc.).

Solon declared (fr. 13) that unjust gains bring their own retribution; and Theognis (197) writes to the same effect, that riches righteously acquired are a sure possession, but dishonesty, though it seems to prevail for the time, issues finally in ruin. And Chilon said (fr. 10 [Diels]): 'Choose loss rather than shameful gain, for the one will hurt for the moment, but the other will never cease to be a curse.' Phocylides (fr. 15 = Theogn. 147) went so far as to declare that all virtue is comprehended in justice; and this view afterwards exercised considerable influence on the ethical systems of Plato and Aristotle (see Arist. *Eth. Nic.* v. i. 1129[b], 29).

The greater the value attached by men to the observance of justice in their mutual dealings, the keener was the disappointment with which they viewed the apparent tardiness of the gods in visiting with retribution the transgressions of the unjust. The poets were forced to conclude that, while the actual sinner escaped, his crime was expiated by the sufferings of his descendants (Solon, fr. 4, 27–32). Yet no protest follows against the injustice of the gods: their ways are inscrutable and past finding out (fr. 9). Similarly Theognis, while praying that the purpose of the gods may yet be changed, mournfully acquiesced in the punishment of the innocent for the sins of the guilty (731–742). It must at the same time be remembered that the sense of justice was so limited as to exclude any consideration for enemies.

'Beguile your enemy with fair words' says Theognis (363); 'but, when you have him within your grip, wreak your wrath on him, and let no scruple stand in your way.' 'Would that I could drink their blood!' is another of his utterances (349), when he is speaking of those who had robbed him. These are not isolated sentiments. To Pittacus is ascribed: 'Do not speak ill of your friend, or well of your enemy.' Above all, you must not give your enemies cause to exult; therefore hide your misfortunes, as Periander advised.

We can now appreciate the significance of the apologue in Theogn. 215:

'Assume the character of the polypus, which, as it coils round a rock, makes itself of like aspect thereto. So be thou adroit in changing from one appearance to another; for wisdom, let me tell you, is better than an unbending front' (cf. Pind. *Pyth.* ii. 84).

It was reserved for Plato to anticipate Christian ethics by controverting the popular view (*Rep.* 335 B; *Crit.* 49 C), and maintaining that the good man will not harm another. The justification of deceit in the case of enemies leads us to consider the general estimate of truth. Although it would not be difficult to collect passages in which the value of absolute truthfulness is highly esteemed (*e.g.* Hom. *Il.* ix. 312 f.), it can hardly be doubted that public opinion did not seriously disapprove of deception in suitable circumstances. It is sufficient to point to the character of Odysseus (cf. *Od.* ix. 19), and to the conception of the god Hermes as patron of trickery, who had trained Autolycus as his human representative (*Od.* xix. 395). Two fragments of Æschylus (frs. 301, 302) are preserved which, in the absence of their context, ought not to be held to warrant a sinister inference: 'God does not

withhold his countenance from righteous deception,' and 'There are times when God honours a lie in season.' But Plato (*Legg.* 916 D) explicitly affirms that the many are too fond of saying that at proper times the practice of falsehood may be justified. Sophocles often follows closely the precepts of popular morality; and it may be concluded from the evidence which he affords that falsehood was justified either in cases where it brought final success in a momentous issue (*Phil.* 109; fr. 326), or even where some definite advantage was to be expected. 'Gain is sweet, even when it is the fruit of falsehood' (fr. 749). 'No speech is evil, if fraught with gain' (*El.* 61; cf. Athen. 122 C).

It has been suggested, on the strength of the Attic evidence, that in the period between Homer and the Persian wars, under the influence of the Delphic religion, a higher estimate of truthfulness was prevalent than in the subsequent period (L. Schmidt, ii. 413). This is a mistaken view, due partly to neglect of the fact which has already been emphasized, that the tragedians constantly echoed the sentiments of the gnomic poets, adapting them to the conditions of their art, or ascribing them to their most conventional characters.

4. The era of the Persian wars.—It may be broadly affirmed as a general proposition that the conventional morality which can be gathered from the fragments of the early poets continued to be the standard of the masses throughout the classical period. Although the fifth century—of course, our evidence applies almost exclusively to Athens—was characterized by a revolution of thought which may be fairly described as epoch-making, the time which elapsed before the establishment of the Macedonian empire was far too short for the new radicalism of the advanced thinkers to penetrate the prejudices of the average citizen, even in a community so sensitive to novelty as Athens. The conviction of Socrates is enough to show that the majority shared the sentiments of Strepsiades in the *Clouds*, and would willingly have lent him a hand in setting fire to the 'Reflectory,' so soon as they perceived the danger of an inroad on their cherished prepossessions. Hence it would be a mistake to deduce the bias of contemporary opinion from the sympathies which may be aroused by this or that play of Æschylus or Euripides. Nor must this be understood as applying solely to subjects which excited the keenest controversy. For example, the *Heraclidæ* of Euripides is mainly devoted to a panegyric of Athens as the protector of the weak, and the advocate of generosity to a beaten foe (see Introduction to the edition by the present writer, p. xxvi ff.). Yet, at almost the same time when this play was produced, the assembly was debating the Mytilenæan decree; and the atrocities of Scione and Melos occurred not long after. It is dangerous to infer an advance in general morality because a few enlightened thinkers might condemn the execution of Peloponnesian envoys in retaliation for the similar treatment of traders in contraband (Thuc. ii. 67), or because the ruthless proceedings of a Spartan admiral evoked a general protest from Ionia (iii. 32). But to assign to literary evidence its necessary limitations is not to disparage the value of its guidance. The true spirit of an age is to be gathered from the aspirations of its leading minds; but, when we finally leave the era of the tyrannies and encounter the first fresh breezes of democratic Athens, it behoves us to remember that the individual witnesses will be less likely to conform to a general pattern.

The effect of the Persian wars, following closely upon the democratic reforms of Cleisthenes and the expulsion of Hippias, was to deliver the Athenians from the danger of political slavery, and to open out an almost unlimited field for their practical and intellectual energies (see Gomperz, i. 382 ff.). Athens, at the head of her maritime league, was the leading member of a powerful confederacy, and was soon to aspire to an imperial rule. On the other hand, the combined resistance offered to a common danger had given birth to a new sense of pan-Hellenic unity. The best representative of pan-Hellenic sentiment is Pindar (*q.v.*) the Theban. He belonged to a State which had taken the side of the Persians, and was said to have been heavily fined by his countrymen for his praise of Athens in the poem partly preserved in frs. 76, 78, and 83. As a writer of odes in honour of victorious athletes who competed at the great festivals from every quarter of the Greek world, he displayed an extraordinary sympathy with the local associations of his patrons' families, and testified to the unity of sentiment and tradition in the Greek race which Salamis and Platæa had made a living reality. He was so little a particularist that all Greece could feel proud of his genius. So in part he continued to expound the familiar axioms of the national ethics with a wider outlook, a more elaborate imagery, and a more varied application. No one perhaps so well illustrates the central Hellenic principle of σωφροσύνη, the need of self-control, the reduction of all excess to the normal measure required by the interests of society (Gomperz, i. 301).

Even the highest ambition, the desire for the fame which song alone can give (*Nem.* vii. 17), must be controlled by the fear of going too far. A mortal must shape his aims with a sense of his own weakness; let him not seek to become Zeus (*Isth.* iv. 14). The pillars of Herakles are set as a limit to human emprise (*Ol.* iii. 44). Strain not the eyes too far; the brazen heaven cannot be climbed (*Pyth.* x. 27). But there are those who, like Tantalus and Ixion, cannot bear the stress of great prosperity (*Ol.* i. 56; *Pyth.* ii. 28). Then Surfeit breeds Insolence, whose child is Ruin. The germs of this thought are to be found in Solon and Theognis, but Pindar and Æschylus (*Ag.* 749) invested it with a fuller meaning.

Perhaps the most striking note in Pindar's poetry proceeds from his aristocratic pride. He will have no commerce with the vulgar, and cares nothing for the jealousy of lesser rivals. Birth is the supreme advantage, and natural powers are the gift of heaven, the want of which no training can replace (*Ol.* ix. 100, τὸ δὲ φυᾷ κράτιστον ἅπαν). So he concludes from heroic examples:

> 'A man who hath the birth-right of nobility prevaileth greatly; but he whose knowledge is a lesson learned is a man in darkness, whose thought is as a veering gale, and who never cometh to port with unerring course, but with ineffectual mind tasteth a thousand excellencies' (*Nem.* iii. 40 ff., tr. Bury).

Great powers should be worthily exercised:

> 'Happy and meet to be sung in verse is he who, prevailing by might of arm or excellence of speed, so directs his courage and his strength as to win the highest prizes; and who lives to see his son in the bloom of youth crowned with Pythian wreaths as his due' (*Pyth.* x. 22 ff.).

While Pindar sang the glories of the great games, Æschylus (*q.v.*) was making a more direct appeal to the national honour of Athens. Few poets have left with their readers so keen an impression as Æschylus of their deep interest in the highest problems of morality. In his fervour for righteousness he has often been compared to a Hebrew prophet. With the issue of the dramatic conflict is involved the solution of an ethical or religious question which permeates the atmosphere of the play. Thus in the *Prometheus* the sufferings of the chief character and those of Io are inseparably bound up with the justification of the ways of Zeus. It was a leading motive of Æschylus' poetic activity to find a moral lesson which could be traced amidst the horrors and cruelties of the old legends, and especially to discover how the interference of the gods in human affairs could be reconciled with the requirements of justice. It is a mistake to regard Æschylus as a conservative thinker, though he came to be so classed at a later date. Probably to his contemporaries he appeared as a revolutionary. But, however this may be, he was undoubtedly a loftier moralist than any of the

earlier poets. We cannot conceive of him as justifying a falsehood for the sake of obtaining a practical advantage: 'The mouth of Zeus knows not how to lie, and all his words he will fulfil' (*Prom.* 1064). It is especially instructive to observe how Æschylus contrives to read a new and higher meaning into the precepts of the old morality. That suffering is learning was an old saw which in Hesiod (*Op.* 218) took the form of 'A child knows when he is hurt.' But Æschylus deduced from it the profound truth that suffering is an education which schools men to wisdom by awakening the conscience.

'Stern is the grace and forcèd mercy kind
By spirits upon their awful bench assigned'

(*Ag.* 192 f., tr. Headlam). 'Whom he loveth he chasteneth.' Again, in the *Eumenides* (520 ff.): 'There are times when terror is in place, and the inquisitor of hearts must bide in his seat. It is good to learn wisdom by duress' (Verrall's tr.).

He was especially concerned to find an answer to the old problem respecting Divine justice, why the sins of the fathers are visited upon the children. In effect Æschylus denied the doctrine that 'the fathers have eaten sour grapes, and the children's teeth are set on edge' as completely as the prophet Ezekiel (18[2]). Agamemnon was not punished for the sin of Atreus. He yielded to the fatal Temptation which lured him to the sacrifice of Iphigenia, as in the days of his triumph over Troy he forsook σωφροσύνη and gave way to ὕβρις (W. G. Headlam in *Cambridge Prælections*, 1906, p. 126). There is always an act of sin breaking out afresh in the new generation—in consequence of the inborn taint in the blood. But how did the first sin come to be committed? Here Æschylus definitely rejected the traditional view which attributed it to the jealousy of the gods aroused by great prosperity:

'But single in the world I hold
A doctrine different from the old:
Not weal it is but sinful Deed
More sinners after him doth breed
Formed in his image' (*Ag.* 754 ff.).

The name of Æschylus was permanently connected with the 'good old days' of the Μαραθωνομάχαι; and old-fashioned citizens at the end of the century still held him to be the greatest of poets (Aristoph. *Nub.* 1366), and attributed to his teaching the virtues of the generation which grew up under the discipline described in the famous speech of the Just Reason (*ib.* 961 ff., 986). When Æschylus and Euripides appear in the *Ranæ* of Aristophanes as candidates for the favour of Dionysus, they agree to base their claims upon their respective merits as teachers of morality (1009, 1055); and Dionysus in proceeding to his final decision proposes to examine them, in order to see which gives the best advice in his country's need (1430). It is important to emphasize this old view of the poets as teachers, since we are now on the threshold of an age in which a class of professional educators arose styling themselves 'teachers of virtue.' In the eyes of the ordinary man, the chief of these Sophists, who claimed to supplant the poets, was Socrates (*Ran.* 1491); and, as the result of his and their labours, the teaching of morality was henceforth to be considered as the proper function of philosophy. (On the subject of this section, see the treatise of Buchholz, *Die sittliche Weltanschauung des Pindaros u. Aeschylos*, Leipzig, 1869.)

5. Influence of religion upon Greek morality.—In the summary description which has been given of the growth of Greek morality, hardly any account has been taken of religious influences; and, before we proceed further, these must be briefly examined. At the present day morality is popularly regarded as an established code of precepts and obligations which has been framed to regulate human action and rests ultimately upon the authority of a religious sanction. But, inasmuch as their religion, so far at least as it related to the cult of the Olympian deities, did not comprise any such code, the Greeks, in the earlier period of their national development, scarcely recognized any connexion between morality and religion. It is true that there existed a vague and misty belief that wrong-doers were visited with retribution after death; but it was not a doctrine which swayed the conscience of the ordinary man. Such exceptional punishment was reserved for exceptional transgressors like Tantalus and Ixion, whose offences culminated in the arrogance of their attempts to share the blessings of the immortals. Each god had his appointed sphere (μοῖρα [Eur. *Bacch.* 302; Headlam on Æsch. *Ag.* 1007]) within which he exercised control; and, though Zeus was supreme over all, even he was subject to the adamantine decrees of destiny (Æsch. *Prom.* 553 f.). The gods were jealous to avenge any infringement of their privileges. But the sinner was punished not as a moral offender, but as a trespasser—and often as an ignorant trespasser—against a vindictive power. Apart from special circumstances, the general attitude towards the conception of a future life, as may be gathered from the well-known utterance of Achilles, was one of contemptuous indifference: 'Sooner would I be a serf on some poor man's farm . . . than lord over all the spirits of the dead' (*Od.* xi. 489 ff.). So little concerned was the Greek to extend his vision to the farther side of the grave.

No less unsubstantial was the belief that wickedness is punished in this life. Such a conception is so notoriously contradicted by the facts of daily experience, that the believer in Divine justice is obliged, as we have already seen, to suppose that punishment is sometimes reserved for another generation, and the scoffer is convinced that the gods do not regard the affairs of man. The fact is that the investment of the gods with moral attributes was an attempt to reconcile tradition with the needs of an awakening conscience. The primitive gods were not moral agents; they were vindictive and inscrutable potencies, to be conciliated and appeased, if need arose, but hardly to be securely venerated as the unswerving champions of righteousness. The natural result was not to stimulate a desire of improvement or a passion for righteousness, but to quell the promptings of Hope as a treacherous seductress into forbidden regions. This consideration will serve to explain the presence of Hope as one of the evils in Pandora's box (Hes. *Op.* 96), and the disparaging language applied to Hope in very many passages of Greek literature.

Thus Theognis (637) puts Hope on a level with Danger, and calls them both 'cruel demons.' Euripides condemned the untrustworthiness of Hope (*Suppl.* 479), which exalts the passions of rivalry and brings one State into conflict with another. And Pindar (*Nem.* xi. 45) spoke of the limbs of men as fettered by importunate Hope, while the streams of foresight are far distant. (Many other illustrations are given by L. Schmidt, ii. 70 ff.; see also Headlam, *Cambridge Prælections*, p. 115 f.)

The power of hope depends upon the uncertainty of the future. It expresses the efforts of man to escape from his destiny, and points at once to his rashness and to his weakness. It is an invitation to man to step beyond his proper limits, to disregard the rule of temperance, even to seek to be a god. But true wisdom will recognize human impotence, and will counsel resignation to a lot which is inevitable. Hence, to acquiesce in destiny (στέργειν μοῖραν), as a mortal to aim no higher (θνητὰ φρονεῖν), and to bear misfortune with a stout heart (κακὰ εὖ φέρειν), are inculcated again and again. The joyful aspect of Greek religion was embodied in its cults. But the recurring cycle of the city festivals and the greater splendour of the pan-Hellenic gatherings hardly touch the sphere of morality.

In relation to the individual, religious contemplation was pervaded by a spirit of melancholy which may be traced without difficulty from Homer to the latest writers of the Anthology (see S. H. Butcher, *Some Aspects of the Greek Genius*[2], London, 1893, pp. 142–176).

If this was the general effect of religion upon the best minds, it is not surprising to find a plentiful crop of evils issuing from the superstitions of the vulgar. Here the old savage beliefs in magic and demons still flourished vigorously, and the superstitious were the victims not only of their own fears, but of all kinds of mercenary impostors. The portrait of the superstitious man, as delineated by Theophrastus (*Characters*, p. 162, ed. Jebb, 1870), will furnish copious illustration. But in Greece, as elsewhere, superstition only ministered to fear; and, when Greek civilization awakened to a consciousness of its inner development, when the animistic conceptions of their forefathers ceased to satisfy the men of the historic era, and when the creative play of the imagination had hardened the outlines and determined the personalities of the anthropomorphic gods, the religious instinct—craving for something which would rescue man from the terrors of supernatural malignity, and assist him in his unceasing struggle towards the light—eagerly welcomed the professions of a purer creed which seemed to promise relief. Such, at least in certain of their aspects, were the tenets of Orpheus. Orphism aimed at a purity of thought and act higher than the common standard, and, in order to stimulate the enthusiasm of its adherents, required of them a general asceticism of life, and in particular the wearing of white garments, the observance of certain tabus, and abstention from a flesh diet. Curiously enough, this vegetarianism was combined with an initiatory ceremony in honour of Dionysus Zagreus—intended to effect an identification with the Divine nature—at which raw flesh was consumed by the novice (Eur. fr. 472, 9 ff.). The leading notion of the Orphic creed, which cannot now be separated from that of the Pythagoreans, was to cleanse the soul from the original sin contracted by its earthly imprisonment in the body. With their consciousness of sin and their systematic attempt to restore the soul to its former purity by the mortification of the body, the Orphics united a belief in metempsychosis and in the purgatorial office of the under world. (The best account of Orphism is in Gomperz, i. 123 ff.)

In a similar way the claims of morality were recognized in the Mysteries (*q.v.*) of Eleusis. Although we are imperfectly informed as to the details of these ceremonies, there is ample evidence to attest their influence on the religious emotions, and especially the promise offered to their votaries of happiness in the world to come (Soph. fr. 753; Pind. fr. 137). Yet, when every allowance has been made for the influence exerted by mysticism upon Greek society, its diffusion was too partial to leaven the character of the community. In the *Hippolytus* of Euripides, Theseus appears to adopt the standpoint of the ordinary citizen when he inveighs against the Orphics as self-satisfied and pretentious hypocrites who veiled a vicious disposition beneath a sour exterior (952 ff.). The Eleusinia, doubtless, were much less the rallying point of a sect; initiation seems to have been the normal proceeding of an Athenian gentleman; and the privilege was so highly prized that Æschylus and Alcibiades had to meet a storm of popular indignation when accused of divulging its secrets. Nevertheless, an occasional festival, however venerable and soul-stirring, was necessarily lacking in sustained influence: the celebrants might, indeed, be moved by a transient enthusiasm, but were scarcely conscious of a new direction given to the current of their lives.

6. **Beginnings of ethical inquiry.**—The appearance of ethics as a subject of scientific inquiry was directly due to the Sophistic movement, and especially to the commanding personality of Socrates (*q.v.*). Before Socrates, to adopt Hegel's distinction, the morality of the Greeks rested rather upon custom than upon principle. Even the moral teaching of Heraclitus (*q.v.*) and Democritus (*q.v.*), so far as our records go, consisted of *ex cathedra* pronouncements, excelling perhaps in subtlety and penetration, but hardly differing in the form of their presentment from the dogmatic utterances of the Seven Sages.

There are several noteworthy sayings among the fragments of Heraclitus, such as 'Character is a god to every man' (fr. 119), or 'Insolence must be quenched sooner than a conflagration' (fr. 43). When he affirms that opinion is 'the falling sickness,' and that the power of sight is deceitful (fr. 46), we may trace the working of his central doctrine concerning the supremacy of Logos.

Much greater in bulk is the amount of sententious moralizing connected with the name of Democritus. We may select the following as favourable specimens:

'Peace of soul (εὐθυμίη) comes from moderation (μετριότητι) in pleasure and harmony of life' (fr. 191), and 'The crown of righteousness is a mind confident and unamazed; but the end of unrighteousness is the fear of impending calamity' (fr. 215).

The key to these and similar utterances may be found in the results of physical speculation, but they do not profess to rest upon an assured basis of ethical science, and derive such additional weight as may accrue to their intrinsic importance from the personal authority of the teacher who was responsible for them.

'The fact is that a moral system could not satisfactorily be constructed until attention had been strongly directed to the vagueness and inconsistency of the common moral opinions of mankind; until this was done, the moral counsels of the philosopher, however supreme his contempt for the common herd, inevitably shared these defects' (H. Sidgwick in *EBr*[9], viii. 576[a]).

Towards the middle of the 5th cent. B.C. the ontological inquiries of the early thinkers had issued in such conflict of opinion that further progress on the lines hitherto followed became impossible. The failure of repeated attempts to read the secret of the universe led to a fever of scepticism which left no shred of tradition untouched. Nor was it surprising that the intellectual upheaval should spread to the region of morality, and undermine the established rules prescribed by authority. The struggle between the opposing forces was concentrated in a discussion on the mutual limitations of Nature and Convention, where the ambiguity of the term 'Nature' helped to confuse the issue. The advocates of free thought rebelled against settled customs as artificial restraints imposed upon natural freedom.

'Convention,' says Hippias in Plat. *Prot.* 337 D, 'is the tyrant of mankind, and often compels us to do many things which are against nature.' Archelaus, the pupil of Anaxagoras, declared that all moral distinctions were due to convention and not to nature (Diog. Laert. ii. 16). Euripides, who was pre-eminently the poet of the new movement, is perhaps the best witness of the extent to which the revolt against customary bonds had spread itself in cultivated circles. 'The rebuke of bastardy is but a name, for nature levels all' (fr. 168). We have travelled far from Pindar in fr. 336: 'I have but small praise for noble birth: the good man is nature's nobleman, but the unrighteous, though his father be higher than Zeus, is naught but a churl.' 'There is one thing that disgraces a slave—to be so called: in all else no honest slave is inferior to the free' (*Ion*, 854).

Sentiments like these appeal to the universal sympathy which is always ready to take the part of the weak. But Nature could be invoked to serve another turn. Callicles in the *Gorgias* argued that Nature is on the side of the strong, that Might is Right, that the strong man will break through the fetters of Convention, and make himself supreme over the weak (482 E ff.). Laws which proclaim the equality of rights are framed in the interest of the weak, to protect them against the

encroachments of the strong. In a similar spirit Thrasymachus in the *Republic* (338 C ff.) says that Justice is the advantage of the stronger, and that only the fool willingly obeys the law, since the wise man knows that he may disregard it if he can. The prominence of this type of argument in Plato's dialogues, and the prejudice attaching to Protagoras' profession of his ability to make the weaker cause appear the stronger (Arist. *Rhet.* ii. 24. 1402ª, 23), have earned for the Sophists as a class an evil reputation which they did not deserve (see Grote's *Hist. of Greece*, 1869, ch. lxvii. ; and H. Sidgwick in *JPh* iv. [1872] 288). But, apart from this, they naturally attracted the unpopularity which is the usual portion of innovators. The effect of Sophistic teaching upon the average mind may be gauged by a quotation from the anonymous work known as Διαλέξεις (ii. 18 [Diels, *Vorsokr.*² p. 639, 24]):

'I think that if one were to bid all men collect in a heap the several customs which they consider base, and then to withdraw from it those which they hold to be good, nothing would be left, but all would be completely distributed.'

7. Socrates.—It was in such a crisis that Socrates came forward as the founder of Greek ethics. Starting from the proposition that the errors of men were due to a failure to comprehend the extent of their ignorance, and that his own claim to instruct others was founded not on any greater knowledge, but only on the absence in himself of any pretensions to know anything at all (Plat. *Apol.* 23 A), he represented himself as eager to examine, in company with his fellow-learners, the possibility of arriving at knowledge which should have a practical result in conduct. Holding that, for the time at any rate, the opportunity of making further progress in physical science was excluded by the failure of previous investigators to agree upon a common basis of research, he urged that men should clear their minds by discovering the content of such common terms as Piety, Justice, Temperance, and Courage. By a searching examination (ἔλεγχος) of those who were willing to submit themselves to his questions, he convinced them of holding loose and imperfect notions; and afterwards, by the comparison of homely and familiar examples, he sought to obtain their assent to more rational definitions (cf. Arist. *Metaph.* xiii. 4. 1078ᵇ, 28). The leading proposition upon which he sought to base the whole of his moral teaching was the identity of Virtue with Knowledge. He interpreted 'knowledge' as 'practical wisdom' (φρόνησις), holding no other knowledge to be attainable, and considered that right action necessarily results from a properly furnished understanding. No one desires evil, he was wont to argue; and vicious conduct, though it may seem to be founded on deliberate choice, may invariably be traced to ignorance. Virtue is thus a unity, and its separate branches are distinguished as the varying spheres of action in which knowledge is applied. At the same time it follows that virtue can be imparted by teaching. If we inquire, further, to what object our knowledge is to be related, the answer is—to the Good; and this in its turn is expounded as the Useful or Expedient. Thus the virtuous man is required to possess a complete knowledge of the conditions of his own well-being or advantage. However unsatisfying the positive result of Socrates' teaching may appear, his influence upon his successors was so great as to direct the course taken by Greek thought throughout the whole of its subsequent development.

8. Knowledge and virtue.—Critics, both ancient and modern, have not failed to remark upon the extraordinary omission to include any account of the will in the Socratic analysis of moral action; and it has been suggested that Socrates himself exercised so complete a control over his own impulses that he was led to ignore the important results which flowed from the failure of will-power in others. There may be some measure of truth in this, but it is far more important to observe that the Greeks never at any time succeeded in drawing a clear line between the intellectual and the moral qualities, and that with them morality was always rather a concern of the head than of the heart.

Æschylus described insensate *folly* as causing the sin of Laius (*Theb.* 742); Hermes warned the Oceanides not to be led by *folly* into disobedience to the will of Zeus (*Prom.* 1113); and Helen was the *insane* cause of the bloodshed at Troy (*Ag.* 1456). So in Soph. *Ant.* 603, Antigone, the last hope of the royal stock, has been destroyed by *folly* of speech and *frenzy* of the mind.

These examples, taken almost at random, might be multiplied indefinitely; but the tendency is summarized in a fragment of Sophocles (839), 'Folly is most nearly akin to depravity.' It has left its mark on the vocabulary not merely in the moral connotation of such words as ἀμαθής, σκαιός, and ἀπαίδευτος, but in the more general use of σώφρων, κακῶς φρονεῖν, and the rest. It must also be remembered that ἀρετή itself was not entirely a moral quality like our 'virtue,' but included the other gifts and capacities which sustain and enrich life (see also Gomperz, ii. 66 ff.).

The subsequent history of moral philosophy in Greece was so far determined by the influence of Socrates that the various schools founded by his immediate pupils all professed to continue the teaching of the same doctrine, and those who came afterwards followed in the current. Until Christianity set up a new ideal, Socrates continued to be the pattern of moral perfection to the pagan world (M. Anton. i. 16).

9. The Cynics.—The founder of this school was Antisthenes, who is said to have attached himself to Socrates, after a life of hardship, at a later age than was usual (Plat. *Soph.* 251 B). In the school which he established after the death of his master, he emphasized the Socratic principle of the supreme importance of knowledge, by a searching criticism of the ideals of the average citizen. Thus he denounced the false notions which are implicit in the popular estimation of riches, honour, and power. Antisthenes even went so far as to depreciate the patriotic ideals of his fellow-citizens, by declaring that the national victories in the Persian wars were of no great account, as shown by the instability of the results obtained. But his severest condemnation was reserved for pleasure. 'May I be mad sooner than glad' (Aul. Gell. ix. 5. 3). 'If I could lay hands on Aphrodite, I would shoot her' (Clem. Alex. *Strom.* ii. 20, p. 485 P). The popular judgment is an illusion (τῦφος), and the wise man must cultivate complete freedom from such illusions (ἀτυφία). In order to reach this security he must fix his regard entirely upon the requirements of Nature, and distrust everything which is sanctioned only by convention. For this purpose he must be self-sufficient (αὐταρκής), and must train himself to acquire the 'Socratic strength,' the complete self-control which springs from the wisdom of a master mind. The Cynic chose Heracles as his patron saint (Zeller, p. 306, n. 4), glorifying his labours as victories won against cruelty and lust; and loved to contrast him with Prometheus, who had beguiled mankind with the delusive promise of an injurious civilization (Gomperz, ii. 145, 151). It soon became evident that the requirements of a life 'according to Nature' were inconsistent with the habits of ordinary society. The Cynic deliberately adopted the life of a beggar. He wore his beard long and unkempt, dressed himself in a rough coarse cloak, and carried a wallet and a staff.

The leader in this movement of practical asceticism was Diogenes of Sinope, who ultimately settled at Corinth, and to whose name a number of witty sayings were attached by later writers. Cynicism

has been termed the philosophy of the Greek proletariat, and, by mixing with the masses and striving to instil their minds with saving knowledge, the Cynics remind us of the wandering friars of the Middle Ages. The power of the movement is shown by the fact that it lasted until at least A.D. 400. Diogenes scornfully adopted as a title of honour the nickname 'Dog' (κύων, whence 'Cynic'), which had been applied to him in contempt. His life was directed especially to prove that the ordinary standards of value are based upon illusion. What the many esteem as goods are impediments to the attainment of happiness. Only when a man has learnt that sickness, death, and dishonour cannot impair his peace of mind is he able to grasp the absolute indifference (ἀδιαφορία) of external goods. But the Cynics were not content to be philosophical anarchists. Their writings advocated a new Utopia founded upon the abolition of all privileges, political and social, and of all distinctions between one nation and another, even of that which to the Greek was fundamental—the distinction between Greeks and barbarians. Diogenes proclaimed himself a 'citizen of the world.' The extremes to which they were prepared to go in combating the prejudices of society—as when they defended incest or cannibalism as natural—are responsible for the degradation of the word 'cynic' in modern usage. But the social communism which led Diogenes to advocate a community of wives and children was no more reprehensible in him than in Plato; and the spirit of the paradoxes by which he startled his hearers was no doubt often misunderstood and misrepresented. (An excellent estimate of the strength and weakness of Cynicism is given by Gomperz, ii. 166 ff.; see also art. CYNICS.)

10. The Megarians (*q.v.*), a school founded by Euclides, are chiefly important to the student of philosophy as the earliest of the Sceptics, who from this time forward, under various leaders, attacked the conclusions of the dogmatic schools; but as to their views in the department of Ethics we have hardly any information. All that can be said is that Euclides, starting from the Socratic position that the good is the highest object of knowledge, proceeded to identify it with the Eleatic Being, and to declare that Good is a Unity, whereof God, Mind, and Prudence are but different names. Further, since Good comprehends all existence, Evil, the opposite of good, is non-existent (Diog. Laert. ii. 106). In his attempt to unite Eleaticism with Socraticism, Euclides reminds us of Plato, who sought to blend with his master's teaching elements derived from Heraclitus and Pythagoras.

11. The Cyrenaics.—Aristippus of Cyrene was the earliest apostle of hedonism. From the Socratic identification of the good with the useful, and his limitation of knowledge to the discovery of the proper end of action, Aristippus deduced that every virtuous action aims at pleasure. The analogy of the irrational impulses of children and animals, who continually strive after pleasure or seek to avoid pain, pointed to this process as a fundamental condition in the operation of Nature. Further, he held that all knowledge is relative to the subject, since we have no knowledge of things in themselves, but only so far as they affect our feelings. Consequently, we can only aim at producing what is gratifying to ourselves. He defined pleasure as a gentle movement, distinguishing it from pain on the one hand, and absence of pain on the other. The pleasure to be pursued is not to be found in the sum of a series of pleasurable activities, although happiness might be so called, but rather in the particular pleasure of the present moment (μονόχρονος ἡδονή [Athen. 544 A]). The past and the future are alike indifferent; only the present is ours to enjoy. Since every pleasure, *qua* pleasure, is good, there is no difference between them; and there is no such thing as a disgraceful pleasure. Nevertheless, a pleasure may be accompanied by such painful consequences that it must be rejected (Diog. Laert. ii. 87, 88). Therefore, on the balance of convenience, a wise man will abstain from pleasures which are forbidden by law or reprobated by custom. Wisdom, in fact, is required as a means to an end—the selection of the greatest good; for, though external circumstances press too hardly to permit the enjoyment of unbroken happiness, the wise man's life will in the main be passed in pleasure, that of the fool in pain (Diog. Laert. ii. 91).

The anecdotes which are related concerning the life of Aristippus, his alternate subservience and indifference to Dionysius the tyrant, his enjoyment of and contempt for wealth, and the importance which he ascribed to intellectual freedom and self-control (Zeller, 362 ff.), illustrate the ideal of cautious cheerfulness and moderation to which he aspired. 'I endeavour,' says Horace, speaking in the person of Aristippus, 'to make things submit to my control, not to submit myself to them' (*Epist.* i. 1. 18). And again: 'No form of life, no condition or situation, came amiss to Aristippus, who, for all his lofty aims, was yet equal to every present need' (*Epist.* i. 17. 23; cf. Diog. Laert. ii. 66). The well-known saying, 'I possess but am not possessed' (Diog. Laert. ii. 75), referred primarily to his connexion with Lais; but it has a wider significance in relation to the general attitude of Aristippus towards the emotions.

It is worth while to mention that one of the developments of Cyrenaic ethics took the direction of Pessimism. The impossibility for the great majority of mankind of attaining pleasure, and the consequent worthlessness of life, were most strongly asserted by Hegesias, who earned his title 'advocate of death' by his treatise on suicide (Diog. Laert. ii. 86). He argued that the best thing to which we can attain is freedom from pain, and that this is most fully realized by death (*ib.* 94; cf. also art. CYRENAICS).

12. Plato.—Of all the pupils of Socrates, Plato (*q.v.*) was the most fully endowed with his master's spirit, and must be accounted the true heir of the succession to his doctrine. By way of contrast with Plato, the philosophers previously discussed have been called the imperfect Socratics. The influence of Plato upon subsequent generations has been extraordinary (Cic. *Tusc.* i. 79; *ad Att.* iv. 16. 3), but has been due at least as much to the charm of his surpassing literary genius as to the character of his philosophical speculations. Plato's philosophical views were presented in a series of dialogues, in which the professed object of investigation often appears not to have been attained, and other questions of equal importance are introduced incidentally, only to be dismissed unsolved. The coherence and development of his system have in consequence given rise to protracted discussion. Fortunately, however, these difficulties are less urgent in the sphere of ethics than in that of ontology. Plato started from the Socratic position that virtue must be acquired through knowledge; but, in his investigation of the conditions upon which the acquisition of knowledge depends, he passed far beyond the Socratic limits. He derived from previous philosophers the conviction that sense-perception of the phenomenal world is thoroughly untrustworthy as a basis for the apprehension of actual existence. Socrates, leaving all such difficulties on one side, had contented himself with affirming that whatever knowledge we have must be of the general conception underlying individual instances, which we endeavour to express by definition; but Plato made the general conception a Reality, something existing in and for itself, at once comprehending and transcending the particulars as they appear to our senses. Further, he was able to identify existence with good, on the ground that each thing exists only so far as it performs its par-

ticular good. True knowledge can proceed only from contact with the supreme entities (ἰδέαι or εἴδη), through participation in which the world of appearances comes into being or seems to be. To bridge the gap between apparent and real existence is the lifelong task of the philosopher; and only in so far as he is successful can he attain to knowledge, and consequently to virtue. Hence Plato arrived at the important distinction—corresponding to that which exists between right opinion and knowledge—between ordinary 'civil and political' virtue and the true virtue of the philosopher (*Phædo*, 82 B; *Meno*, 100 A). The former may be acquired by the successful statesman through habituation or by some Divine dispensation (θείᾳ μοίρᾳ); but the latter can be reached only by the arduous path of inquiry into the true nature of absolute virtue. The effect of this rejection of the sensible world as the field for knowledge was to drive the philosopher to the contemplation of the immaterial ideas. He must turn aside from the phenomenal and seek refuge in the Divine; his whole life must be a preparation for death, a purification of his soul from the debasing influences of its association with the body (*Phædo*, 64 ff.). This element of mysticism seems to have been derived from Pythagorean sources, just as the sceptical attitude towards phenomena was suggested by the conclusions of Heraclitus, Parmenides, and Protagoras.

An important part of Plato's ethics can be understood only in connexion with his psychology. As the soul existed before, and will continue to exist after, its period of incarceration in the body, it must contain within it an element akin to the eternal essence of the ideas, at the head of which is placed the idea of the Good (*Rep.* 511 B, with Adam's discussion, ii. 170). On the other hand, it is clearly accessible to earthly influences, and its deterioration must be attributed to the growth of those tendencies which depress its higher aspirations and strengthen its material bonds (*Rep.* 611). From these conditions Plato deduced his doctrine of the tripartite soul. The part which is akin to real existence is known as the ruling part, and as informed with reason (ἡγεμονικόν, λογιστικόν); opposite to it are the two parts which are the seats of the emotions, the one of the nobler promptings of anger (θυμοειδές), and the other of the lower cravings of sensual desire (ἐπιθυμητικόν). How Plato was able to reconcile this triple division with the essential unity of the soul is a question which need not be discussed here. The exposition of the character of virtue rests upon his psychology. Each part of the soul has its own appropriate excellence, or virtue, and, according to their various dispositions, men tend to excel in this or that direction. In this way Plato arrived at his doctrine of the four cardinal virtues. As Wisdom corresponds to the rational (λογιστικόν) part, so does Courage to the spirited (θυμοειδές), and Temperance to the appetitive (ἐπιθυμητικόν). But the exercise of the moderating power of reason over the other two parts, compelling them to subordinate themselves to its guidance, is assigned to the fourth virtue, Justice (δικαιοσύνη). It should be observed that Plato is here using Justice in the wider sense, which common opinion warranted (Adam on *Rep.* 331 E), of general righteousness in relation to others. It comprised the whole duty of man to his neighbour, and was not immediately limited by the requirements of particular values. But Plato would hardly have given to it such a prominent place in the analysis of the individual soul, if he had not been thinking at the same time of the welfare of the body politic. For the correspondence between the parts of the soul was conceived as analogous to the mutual relations of the three classes in the ideal community; and civic justice was the fulfilment by each separate class of its duty to observe the limits prescribed to its activities.

The Highest Good must be found in the complete development of the soul in its proper function of communion with the ideal world. Thus alone can a soul be esteemed happy either in this phase of existence or after death. It is obvious that Plato had moved far from the simple utilitarianism of Socrates. But it is extremely difficult to define Plato's attitude towards Pleasure, which is variously expressed in different dialogues. Whereas in the *Protagoras* (351 A) he seems to identify Pleasure and Good, in the *Gorgias* (497 A) and the *Republic* (509 A) he declares that the two are entirely distinct. Finally, in the *Philebus*, although he denies that Pleasure is the Chief Good, and asserts that in the scale of goods Intelligence and Reason stand far above Pleasure, nevertheless it is admitted that a life without pleasure (or pain) is not to be chosen (21 D, 63 E), and the pure and harmless pleasures of the senses are allowed to possess a certain degree of value (66 C).

13. **Aristotle.**—The moral philosophy of Aristotle (*q.v.*) should be regarded as the complement of Platonic speculation. Their differences are less important than the particulars in which they agree, although the former are made the more prominent by the fundamental contrast of their method and style. Aristotle formulates and defines conclusions which are implicit in Plato's writings, and, by correcting the relative values to be assigned to certain views which occupy a part of the common field of investigation, he appears to be more in opposition than he really is. Thus, in his treatment of the Socratic ground-work, Aristotle definitely draws the distinction between speculative and practical wisdom (σοφία and φρόνησις) towards which Plato was working in contrasting civil with philosophic virtue. But, whereas Plato employed all the energy at his command in urging the paramount claims of philosophy, Aristotle admitted the supremacy of the theoretic life (*Eth. Nic.* x. 7) as an end in itself, and as an approximation to the Divine through the activity of reason, but concluded that the proper exercise of man is to be found in the moral virtues which belong to a practical life.

The Highest Good, or ultimate aim, of all action is to be found, as every one agrees, in Happiness (εὐδαιμονία), or—to adopt a more accurate equivalent—in well-being. Neither pleasure nor external goods can be identified with Happiness, which can be attained only by rational activity. This activity properly performed is Virtue (*Eth. Nic.* i. 6). Happiness, however, is not to be predicated of single acts, but is commensurate with life taken as a whole, and requires a certain supply of external advantages. No one could call Priam happy. Friendship, health, noble birth, and beauty are all elements which cannot be disregarded in making an estimate of complete happiness. In the same way Aristotle deals with the claims of Pleasure. While fully conscious that it cannot be weighed in the scale against virtue, and that, if it becomes necessary to make a choice between suffering and the abandonment of virtue, every hardship must be borne on behalf of the latter, he refuses to regard pleasure as something indifferent or negligible. On the contrary, he maintains that it is the necessary concomitant of every activity (*ib.* x. 4), and that the purest and best pleasures are those which spring from the exercise of moral and intellectual virtues. The pursuit of pleasure is natural and not to be condemned (*ib.* x. 2, vii. 13). Nevertheless, pleasure and external goods are valuable only

in relation to virtuous activities (*ib.* i. 8), whether intellectual (διανοητικαί) or moral (ἠθικαί).

Moral virtue is a permanent condition (ἕξις) of the soul (*ib.* ii. 4), as distinguished from an emotion (πάθος) or a faculty (δύναμις). Virtue is not innate but acquired by practice, not involuntary but dependent on a definite exercise of the will. Again, a virtuous action implies a virtuous agent; unless it proceeds from a right motive, and is such as a virtuous man would perform, no action can properly be described as virtuous (*ib.* ii. 3, v. 13). Virtue requires the presence of certain natural qualities, *i.e.* we are born with a capacity for moral activity (*ib.* vi. 13). But these are not enough in themselves: otherwise children or animals might possess virtue. Virtue is impossible without insight (φρόνησις); but knowledge and virtue are not identical, as Socrates thought. Socrates ignored the irrational part of the soul, and the effect of emotion upon conduct. Virtue implies the free exercise of the will in controlling or yielding to impulse, and is rooted in habit. The repeated performance of moral actions produces as its result a moral character. But how is the will to be exercised? Here Aristotle can only give the rule that the proper mean between the extremes of excess and defect must be preserved, and that it should be determined by reason according to the judgment of the man of practical intelligence (see the definition of Virtue in *Eth. Nic.* ii. 6).

After propounding the definition of Virtue in general, Aristotle proceeds to describe the particular virtues in their character as means lying between two extremes, but without unfolding any principle of classification. Most of the virtues are discussed briefly, but Justice—in the narrower sense as the virtue which aims at equality—is examined at length in book v. Book vi. is devoted to the treatment of Insight (φρόνησις), the virtue of practical reason, which is carefully distinguished from ἐπιστήμη, νοῦς, σοφία, and the rest. This is not the place to enter into the details of the analysis, but it should be observed that Aristotle regards ethics less as an abstract science than as an opportunity for recording the results of his own observation in the sphere of contemporary morality. The general principles reached by this method of induction cannot be so exactly systematized as to fit the varying circumstances of everyday life. Just as a lawyer will refuse to refine upon a broad generalization, by saying that each case must be judged on its own facts, so the philosopher leaves the reciprocal relations of insight and moral virtue to be decided by the experienced judgment of the practical moralist.

14. The Hellenistic age.—There can be no question that the period which closed with the death of Aristotle was one of marked decay in public virtue. After the disastrous issue of the Peloponnesian war, Athens was never again more than a shadow of her former self. She was still to produce eminent citizens, but her political spirit was broken. The venality of her politicians, and the failure of her citizens to make an adequate response to the calls of military and other public services, were continually on the increase. If we make allowance for the universal tendency to idealize the past, there was still sufficient reason for Isocrates to complain (vii. 48) of the increasing idleness and profligacy of the young men, of the want of respect towards their elders, and of the tendency to esteem wit and cleverness more highly than the more solid civic virtues. Sparta, again, had failed conspicuously to realize the opportunities afforded by her success. Her rule was marked by so much cruelty, stupidity, and avarice that she quickly aroused a general opposition to her ascendancy, which never recovered from the shock given to her military power at Leuctra. If Thebes seemed for a season to have revived the ancient Hellenic fire, it proved to be only a temporary flash, quickly extinguished by the death of the heroic leader whose efforts had kindled it. In fact, the conditions under which the city communities had flourished were rapidly passing away. The time had come for the establishment of a wider dominion, and in the person of Philip of Macedon the destined conqueror appeared. The task of his successor Alexander was not so much the establishment of a universal empire as the opening out of every part of the known world to the spread of Greek thought and Greek civilization. Thus, in the words of Plutarch (*Mor.* 329 A), was realized the dream of Zeno the Stoic, that all men should live as members of a single community, since Alexander, by mixing, as in a loving-cup, the lives and characters of all men, had required of them that they should consider the world as their native country. Henceforward the distinctive characteristics of the Greek communities were merged in a general cosmopolitanism; and the mode of life customary at Athens was not widely different from that of Pergamum or Alexandria. The decay of civil interests led to the withdrawal of serious and intelligent people to the seclusion of philosophy, and so fostered the growth of the individual conscience, which is reflected in the teaching of the Stoics and Epicureans.

So far as the morality of the individual is concerned, it is difficult to make a comparison with the earlier era. But the pictures of ordinary life which are presented to us in the plays of the New Comedy—as known to us until quite recently only through the Latin adaptations of Plautus and Terence—are not of an attractive character. The society depicted is narrow and mean, and there is hardly a trace of elevated feeling or generous ambition. The tricks of a cunning slave, and the outwitting of a straitlaced father or a rascally pander were the common stock-in-trade of every dramatist. 'Idleness, frivolity, luxury, self-indulgence, are the attributes of the society which went to see its own reflection upon the stage' (Mahaffy, *Greek Life and Thought*[2], London, 1896, p. 137). The extent of the decay in public spirit which had set in since the great period of Athenian expansion may be gauged by contrasting—to take a trivial illustration—the caricature of Lamachus in the *Acharnians* with the military braggadocios of the New Comedy, or the speeches of Pericles in Thucydides with the servile compositions which bestowed Divine honours on Demetrius Poliorcetes (*Poetæ Lyrici Græci*, ed. Bergk[4], Leipzig, 1882, iii. 674). Even the chief ornament of Alexandrian literature, the development of the Theocritean idyll, has been referred, like the case of Rousseau in the 18th cent., to a reactionary movement seeking to find relief, in the freshness of Nature, from the depravity of contemporary society (see Ziegler, 142). But the importance of this evidence must not be exaggerated by omitting certain items on the other side of the account which deserve consideration. Thus, if the characteristic traits of the period showed less vigour, they had lost much of the earlier harshness. The increase of enlightenment brought with it a more widely diffused humanity. The most important sign of progress was the growing influence of philosophy upon daily life. The ancient system of education, which was sufficient for old-fashioned people at the end of the 5th cent., had ceased, after the lapse of a hundred years, to satisfy the needs of their descendants. To attend philosophical lectures, which was a fashionable craze for 'up-to-date' people in the time of the Sophists, had become the established practice. Philosophers, instead of being prosecuted

for impiety,[1] were considered worthy of the highest honours which the State could confer. Aristotle had been summoned to Macedonia to superintend the education of the young Alexander, and in the next generation we have the honorific decree in favour of Zeno the Stoic, the intimate friendship of Persæus with Antigonus Gonatas, and the political missions of Xenocrates to Antipater and of Crates to Demetrius.

Philosophy was no longer regarded merely as an educational instrument, or even as an avenue leading to knowledge. The schools of Plato and Aristotle became permanent institutions localized at the Academy and the Lyceum, and organized so as to encourage a spirit of corporate enthusiasm among their members. For the degradation of politics, as has already been mentioned, had driven those who were sufficiently serious to be dissatisfied with the frivolity of ordinary life, and were not preoccupied with commerce or military service abroad, to take refuge in the disputations of the schools. But, in spite of the fame of their founders and the influence which they were destined to exercise over mediæval and modern thought, neither the Academy nor the Lyceum provided exactly what the generation required. The lofty idealism of Plato and the minute and accurate science of Aristotle were alike unsuited to the need which craved a sustaining principle of hope and comfort amidst the sinister influences of a corrupt society. In other words, philosophy was expected to supply what religion was then incapable of affording. Herein lay the opportunity which the new schools of Zeno and Epicurus were not slow to seize. Both Stoics and Epicureans made practical ethics the ultimate end to which their physical and logical speculations were directed; they aspired to discover truth in order to throw open the way to happiness.

15. **The Stoics.**—Zeno, a native of Citium in Cyprus, who had studied under Xenocrates and Polemo the Academics and Crates the Cynic, established a separate school at Athens in the closing years of the 4th century. Under his successors, Cleanthes (*q.v.*) and Chrysippus (*q.v.*), the distinctive doctrines of the Stoics, so called from the *Stoa Pœcile*, where Zeno had lectured, were developed and defined; and during the following centuries, through which it continued to flourish, the leaders of the school, without abandoning their main positions, succeeded better than any of their rivals in accommodating their teaching to the needs and aspirations of the time. Although Zeno and his immediate successors devoted an immense amount of labour to the study of logic and physics, the supreme importance of ethics was recognized at an early date (*Stoic. Vet. Fragm.*, ed. von Arnim, iii. [Leipzig, 1905] 68), and, as time went on, it tended more and more to be the sole subject of general interest. The ultimate end of moral action was, according to the Stoics, a life in agreement with Nature, whereby they understood a conformity with the workings of Reason as immanent both in the individual and in the universe (*ib.* 4). Reason, which is the Universal Law, is identified with Zeus, and happiness is attained when the individual reason is made to submit itself to the will of the Supreme Governor of the universe. Life in accordance with Nature is identical with a perfect life, and the perfection of anything is the same as its virtue (*ib.* 16). Thus virtue is the only thing which should be chosen for its own sake (*ib.* 39), and is by itself sufficient for happiness (*ib.* 54). The Good was interpreted, as by Socrates, as equivalent to advantage (*ib.* 75), and it was obvious that virtue alone could furnish true profit, and that vice alone could harm (*ib.* 75, 76). It follows that everything except virtue and vice—health, riches, fame, beauty, even life itself—is absolutely indifferent. So far Zeno was in accord with the Cynics; but he refused to draw the same inference from the premisses. Things indifferent are capable of being used either well or ill, and are not all indifferent to the same extent. In other words, things indifferent may have a certain value, positive or negative (ἀξία, ἀπαξία), as contributing towards a life in accordance with Nature or as hindering its development (*ib.* 126). But there are certain things which have so much value that, in the absence of over-riding circumstances, they will always be chosen in preference to their contraries. Such things are natural ability, life, riches, fame, and so forth, and they are consequently described as being preferred (προηγμένα), whereas their opposites are to be rejected (ἀποπροηγμένα [*ib.* 31]). Such advantages, however, will weigh as nothing in the scale against virtue; and, if it becomes necessary to make a choice, we must face death sooner than be guilty of vice (*ib.* 168). All moral action arises from impulse (ὁρμή), that is to say, the movement of the soul directed towards the acquisition of some external object. In man, impulse is controlled by reason; but, where reason does not exist or is not fully developed, as in the case of children and animals, the natural impulses are primarily directed towards self-preservation, and not, as the Epicureans believed, towards pleasure (*ib.* 178). The objects thus sought after (τὰ πρῶτα κατὰ φύσιν) serve as an introduction to the subsequent action of wisdom, which is exercised in the separation of the natural from the unnatural and the rational selection of the former (*ib.* 186, 190).

The impulses given by Nature are directed to the right objects, but the reason may be distracted by the seductions of pleasure or the urgency of associates (*ib.* 228). Nevertheless, virtue can be taught, as experience proves (*ib.* 223). The Socratic view that Virtue is Knowledge is still maintained; but the Stoics, who held that nothing but body exists, were obliged to argue that the virtues also were corporeal, being, in fact, a particular disposition of the soul itself (*ib.* 305). Virtue is thus both one and many—one in so far as it is inseparable from the soul, and many in relation to the sphere of its activities. Thus Insight is the knowledge of what to do and what not to do, Temperance the knowledge of what to choose and what to avoid, Justice is that knowledge which gives every man his due, and Courage that which can distinguish the proper objects of fear (*ib.* 262). The virtues are reciprocally connected with each other, and he who has one necessarily possesses all; nor can he act in the exercise of a single virtue without at the same time employing the others (*ib.* 299). Virtue, being based upon secure convictions, was so completely identified with a man's moral nature that some of the Stoics considered it absolutely indefectible (*ib.* 237). The ordinary man (φαῦλος), however, fails to exercise his reason properly. He is the slave of emotion (πάθος), which may be described either as an excess of impulse, or as an outburst breaking away from the control of reason (*ib.* 379), or again as perverted judgment (*ib.* 456). The Stoics spent much labour in distinguishing the varieties of emotion, grouping them round the four chief classes, two of which, Pleasure and Grief, are concerned with the present, and the others, Desire and Fear, with the future (*ib.* 391). It will be seen that emotion is a disordered condition of the reason itself; we have no longer, as in Plato

[1] The last echoes of the older thunder were the decree for the expulsion of philosophers from Athens in 316, which was repealed within a year; and the unsuccessful prosecution of Theophrastus by Agnonides.

and Aristotle, to think of two rival powers striving for the mastery, but rather of a revolt against the rightful authority. It follows that emotion must be absolutely suppressed, since everything that is contrary to right reason is sinful (*ib.* 445, 448).

The Stoics drew up a classification of actions so as to correspond with the distinction between Virtue as the Absolute Good and things indifferent but yet valuable. Actions proceeding from virtue are Right Actions (κατορθώματα), vicious actions are Sins (ἁμαρτήματα). These classes comprise every act of the wise man on the one hand, and of the fool on the other. Hence the paradox that all sins are equal; for no difference in degree is conceivable (*ib.* 527, 528). But, if we look not at the agent, but at the act in relation to its object, we must distinguish between what is fitting (καθῆκον) and its opposite. A perfectly fitting action (τέλειον καθῆκον), such as to act justly, may be identified with Right Action. Otherwise, fitting actions are such as may be justified on grounds of probability (ὃ πραχθὲν εὔλογον ἴσχει ἀπολογισμόν), as to honour one's parents or to take care of one's health (*ib.* 134 f.). The actual embodiment of the Stoic conception of Virtue is to be seen in their picture of the Wise Man. In the exercise of his knowledge the wise man never makes a mistake, never opines, never changes his mind. He is an expert on every subject, being endowed with every excellence. His body may be in pain, but he never suffers; though he were as unfortunate as Priam, he would still be happy. None but the wise can lay claim to riches, beauty, or freedom; for no one has possessions so valuable, no one is so deserving of love, no one is so unfettered by prejudice. The wise man is the only true prophet, priest, and king. True friendship can exist only between the wise, for they alone can benefit each other: 'If a single wise man anywhere extends his finger with a wise purpose, all the wise men in the world are benefited' (*ib.* 627). The wise man bears no trace of softness; he is unmoved by passion; he never pardons, never pities, and is never surprised. It is not to be wondered at that this doctrine involved the Stoics in controversial difficulties, or that Chrysippus was forced to admit that the wise man was a rarer portent than the phœnix (see E. V. Arnold, *Roman Stoicism*, Cambridge, 1911, p. 298, and cf. art. STOICISM).

16. Epicurus.—The school of Epicurus (see art. EPICUREANS), first established at Mytilene and subsequently removed to Lampsacus, was transferred to Athens in 306. The system was in all essentials the work of the founder, and was faithfully guarded by his successors, remaining practically unchanged so long as the school continued to exist. Epicurus asserted emphatically that the object of all philosophical inquiry is the attainment of happiness by the individual, and that neither knowledge nor virtue has any worth in itself. Thus, his exposition of the true nature of the gods, as absolutely indifferent to human affairs, was intended to remove superstitious fears, which are among the most serious obstacles to human happiness. Similarly, by his inquiry into the essence of the soul, and his demonstration that it could not be immortal, he hoped to destroy entirely the fear of death. He laid the ground-work of his ethics by a psychological examination of the varieties of Pleasure and Pain. The highest grade of pleasure is attained when every painful need is removed, and every natural craving stilled. The condition thus attained is one of complete rest (καταστηματικὴ ἡδονή), and must be contrasted with the pleasure which consists in the satisfaction of a want (ἡδονὴ ἐν κινήσει). The latter is necessarily mingled with discomfort, unless it is merely connected with a variation (ποικιλμός) of the highest good. Wants were accordingly classified as (1) natural and necessary, (2) natural and not necessary, (3) neither natural nor necessary. The second class is not subject to the influence of passion, except when men are misled by a false opinion that the highest good is capable of increase. The third class are products of the imagination, and must be totally rejected (frs. 450–453 [Usener]).

Epicurus differed from the Cyrenaics in three respects: (1) he declared freedom from pain, which the Cyrenaics did not count as a pleasure at all, to be the greatest of all pleasures; (2) he declared that all pleasures of the mind are ultimately referable to and derived from bodily pleasures, whereas the Cyrenaics held that the pleasure of intercourse with friends or the gratification arising from honour is independent of sensation; (3) pleasures of the mind refer to the past and future as well as to the present, and, as being more durable, are greater than immediate bodily pleasures. In other respects his ethical principles are those of undiluted hedonism. Experience shows that pleasure and pain are the only motives which control our actions. The attainment of pleasure and the avoidance of pain are the natural criteria by which the value of our impulses and activities is measured. Reason is a later accretion, which does not alter the ultimate aim, but points out the means of attaining it. Reason teaches us to look not to immediate enjoyment, but to the remoter consequences of our actions. Every pleasure is a good in itself, as being suitable to our nature (οἰκεῖον), but it is not every pleasure which is an object of pursuit (αἱρετόν). Conversely, certain pains are comparatively so unimportant that we must accept them, if on the balance of the account they appear to bring with them a larger amount of pleasure.

The value of the virtues is to be found in the fact that without them we cannot reach the highest good—absence of all pain and of every fear of future disturbance. Insight (φρόνησις) is the root of all the other virtues: it sets us free from false opinion, and puts before us the true goal of our endeavour. Self-control (ἐγκράτεια) imparts the necessary resolution to adhere to the decisions of the judgment, so that we may receive as much pleasure and as little pain as are possible for us; and courage prevents our peace of mind from being destroyed by fear of death, superstition, or pain. Lastly, the violation of justice is incompatible with an agreeable life. For the unjust man, even though his misdeeds are concealed, is continually anxious lest they should be discovered. On the other hand, upright conduct contributes to our enjoyment, by earning the good-will and affection of our fellow-men. On the value of friendship the Epicureans laid great stress: it was grounded ultimately upon mutual advantage, but the happiness of the individual was conceived to reach its highest pitch in the unselfish fellowship of the wise and virtuous (fr. 544). In other respects, Epicurus assigned very little value to the conditions of civil society. Laws would not be needed in a community of the wise; as things are, they exist to protect the wise from injustice (fr. 530). He recommended abstention from politics on the ground that public life interferes with happiness (λάθε βιώσας [fr. 551]). Similarly, he discountenanced marriage as likely to lead to much trouble (fr. 525). The result of Epicurean hedonism is not far removed from the Stoic ideal: the happiness of the Epicurean wise man is no less founded on the secure possession of insight, and is so entirely independent of external circumstances that it

endures while its possessor is suffering physical torture (fr. 601).

17. The Græco-Roman age.—In the sketch that has already been given of Stoic ethics, little or nothing has been said of the adaptation of Stoic principles to the needs of daily life. But the influence and vitality of the school were shown by nothing more clearly than by their success in procuring the adhesion to their system of so large an element of Roman society (for the details, see E. V. Arnold, *op. cit.* 99 ff., who shows the importance of the modifications made by Panætius). Stoicism, as it was opened out to the practical Romans, became less a subject of study for the curious than a religious creed to which every serious man might look for support. Its success in this direction was undoubtedly promoted by the attitude which had been adopted towards the popular religion. By an elaborate series of allegorical explanations the Stoics sought to accommodate their pantheistic belief in the universal immanence of the Divine Reason to the existence of the separate personalities represented in popular theology. Hephæstus was fire, Rhea earth, Zeus æther, and so forth. Thus, a breach with tradition was avoided, and an advantage gained which neither the agnosticism of the New Academy nor the outspoken hostility of Epicurus to the orthodox religion was able to secure. The history of the Stoa after Panætius shows a continually diminishing interest in philosophy and an increasing strength in moral exhortation. Seneca (*q.v.*), for instance, laid much stress on the healing powers of philosophy for all who were mentally sick. He prescribed rules for those who were in various stages of progress (προκοπή) towards wisdom; for the removal of vicious habits; for the training of the impulses; for the mastery of the passions; and for the strengthening of the will. The restraint of civil liberty under the Empire imparted a gloomy tone to the discourse of the philosophic preacher. The doctrine of 'a reasonable departure' (εὔλογος ἐξαγωγή)—by which the earlier Stoics had countenanced suicide as an escape from intolerable evils, thereby emphasizing the moral indifference of life and death—was repeated by Seneca with morbid insistence. Musonius and Epictetus admit into their writings even less philosophical discussion than Seneca. Epictetus (*q.v.*) in particular was the preacher of a pure and gentle morality which often approximates to Christian doctrine. His famous maxim, 'Suffer and abstain' (fr. 179), testifies to his belief in a benevolent Providence; and he never fails to recommend the duty of submission to outward events which are not within our power. The same spirit of pious resignation appears in Marcus Aurelius (*q.v.*), the last of the Stoics: the proud independence of the sage had given way before the human sense of helplessness; the soul was hampered by the prison-house of the body, and found life to be 'a sojourn in a strange land.' Thus in its last moments Stoicism came near to Platonism.

Of the four post-Aristotelian schools, neither the Epicurean nor the Peripatetic made any progress, of sufficient importance to be recorded here, beyond the views of their founders. But the Academy had a more chequered history, to which we must briefly refer. The New Academy under Arcesilas and Carneades was precluded by its determined scepticism from admitting the possibility of scientific ethics; but on the basis of probability they gave a general adherence to Platonic teaching. Later, Antiochus of Ascalon, Cicero's teacher, endeavoured to effect a fusion of the doctrines of Plato with those of Stoicism, but his influence soon exhausted itself. In the 1st cent. B.C. there was a notable emergence of mystical asceticism, associated with a revival of Pythagoreanism. Its general tendency was to recommend purity of soul, to be attained by a special restriction of the bodily appetites, as the only proper channel whereby the devotee could acquire a knowledge of the Divine mysteries (see Mahaffy, *Greek World under Roman Sway*, London, 1890, p. 179 ff.). This movement reacted upon Platonism, and the traces of its working may be found in the moral treatises of Plutarch (*q.v.*). According to him, the structure of morality is built upon a religious foundation. Virtue is identified with an assimilation to the Divine, and the Highest Good is the knowledge of God (*Aristid.* 6). Thus his attitude towards religion was conservative; he defended divination, maintained the doctrine of metempsychosis, and believed in the power of demons and spirits to control human action by their interference. To avoid the defilements of sense, and to cultivate the reason as the indwelling source of Divine inspiration, were the supreme duties of man (see *de gen. Socr.* 20, p. 588 E ff.). But the culmination of this mystical tendency was realized in Neo-Platonism (*q.v.*); and Plotinus, who was its chief representative, has been justly regarded as the last of the great thinkers of antiquity. In conformity with Plato, who had denounced the untrustworthiness of sense-impression, Plotinus identified matter with evil, and made purification from the contaminations of sense, withdrawal from the world, and liberation of the soul from its enslavement to the body, the fundamental requirements of his ethical teaching. The ordinary civil virtues are of no value, since they tend to bind the soul to the world of matter. The soul must approach God by re-absorption into the Intelligence (νοῦς) from which it sprang. This process must be encouraged by contemplation; and the love of the Beautiful (the Platonic ἔρως) helps to direct us from the impressions of sense to the ideal world. Constant association with the ideas may lead ultimately to the condition of supreme bliss, when the soul in a moment of ecstasy finds itself by contact with the Divine Unity identified with God Himself.

LITERATURE.—Several of the authorities have been mentioned incidentally, but the chief sources of information are the Histories of Greek Philosophy, and more particularly E. Zeller, *Phil. d. Griechen in ihrer geschichtl. Entwicklung*[5], Leipzig, 1892 (the greater part has been translated into English by various writers from the 3rd Germ. ed.); Th. Gomperz, *Griech. Denker*[2], Leipzig, 1903–8 (three vols. of an Eng. tr. have appeared, London, 1905 ff.); W. Windelband, *Gesch. der alten Philosophie*[2], Munich, 1894. Special treatises on the History of Greek Ethics are the following: L. Schmidt, *Die Ethik der alten Griechen*, Berlin, 1882; J. Denis, *Hist. des théories et des idées morales dans l'antiquité*[2], Paris, 1879; Ch. E. Luthardt, *Die antike Ethik in ihrer geschichtl. Entwicklung*, Leipzig, 1887; Karl Köstlin, *Gesch. der Ethik*, i. 1, 'Die Ethik des classischen Alterthums,' Tübingen, 1887; Th. Ziegler, *Ethik der Griechen und Römer*[2], Bonn, 1886; cf. also L. R. Farnell, *Greece and Babylon*, Edinburgh, 1912.

A. C. PEARSON.

ETHICS AND MORALITY (Hindu).—Hindu ethics is deeply tinged with the belief in transmigration or rebirth according to the doctrine of *karma* ('action') under which every act, whether good or bad, finds its reward, not only in heaven or hell, but in innumerable other bodies, from a god to an insect or plant, or even a stone. The same gradation of rebirths which pervades the entire creation prevails in the more limited circle of human life, from the high-born Brāhman to the low grovelling Chaṇḍāla, all of which stations depend on the various shades of merit and demerit acquired in a previous existence. The hymns of the Vedas, it is true, contain no distinct allusion to metempsychosis; they abound in glowing descriptions of the deified powers of Nature rather than in moral sentiments, though reference is made to the delights of paradise and to the tortures of hell. The Upaniṣads, on the other hand, mention, for

instance, the rebirth of virtuous men as Brāhmans or other persons of high caste, of wicked men as dogs, hogs, or Chandālas, and of those who eat rice as rice (see *Chhāndogya Upaniṣad*, v. 10). The idea of *karma*, or action, and *karmavipākaḥ*, or ripening of acts in future births, pervades the six systems of philosophy, and the earliest lawbooks of the Dharmasūtra class. It is the highest goal of Indian philosophy to get rid of the fetters of action and consequent rebirth by overcoming the inclination to be active. The question of will, whether bound or free, does not concern these philosophers; they rather aim at the entire extinction of individual volition by absorption into the supreme Being. The Dharmasūtras state the special duties of men, as determined by their rebirth in a particular caste, notably the Brāhman caste; and they discuss the obligations of Brāhman ascetics who, by keeping the five vows of abstention from injury to living beings, of truthfulness, of abstention from theft, of continence, and of liberality, by the practice of various austerities, and by concentration of mind, wish to obtain full deliverance from the bonds of *karma* and to reach final emancipation.

The narrowmindedness of Brāhman moralists was objected to by Buddha and his followers. Thus Buddha is said to have been consulted by two Brāhmans as to whether a man becomes a Brāhman by birth or by his acts. His reply was that the station of a Brāhman is not due to birth, but to abhorrence of the world and its pleasures. The Buddhistic *Dhammapada*, a beautiful collection of proverbs and moral sentiments, contains an eloquent exposition of the virtues, such as self-restraint, patience, contentment, mildness, sympathy, which entitle a man to be rightly called a Brāhman. In other respects, there is no essential difference between Brāhmanical and Buddhistic ethics. *Karma* in Buddhism is the cause of the aggregation of the five *skandhas*, which include all mental and physical phenomena, and therefore of birth and rebirth, of the universal passage through a succession of existences (*saṁsāra*). The middle course, which destroys the working of *karma* and leads to the cessation of suffering and to Wisdom and *Nirvāṇa*, is the Eightfold Path, consisting of right views, right thoughts, right speech, right actions, right living, right exertion, right recollection, and right meditation. The five commandments (*pañchaśīla*) of Buddhism—Kill not, Steal not, Commit not Adultery, Lie not, Drink not Strong Drink—closely resemble the above mentioned five special duties enjoined on Brāhmanical ascetics. Buddha made these rules obligatory on all his followers, and added five more severe commandments for his monks—not to eat at forbidden hours; not to attend worldly amusements, such as dancing or singing; not to use wreaths, unguents, or ornaments; not to use high mats or thrones; not to acquire or receive gold or silver. The five first rules of this Decalogue (*daśaśīla*), though binding on all men alike, were made more stringent in the case of Buddhist monks and nuns. Thus chastity means in the case of monks and nuns absolute abstinence from sexual intercourse; in the case of laymen it means refraining from adultery. There are also secondary precepts extending beyond the rules of the *daśaśīla* for those who have renounced the world. This superior morality corresponds in many particulars to the rule of life prescribed for a Brāhmanical *yati* ('ascetic'). That which especially characterizes Buddhism is the sympathy displayed towards all living beings, carried to the extreme of avoiding injury to the smallest insects, and showing kindness to the most noxious animals. It is recorded of the Buddha himself, in those charming tales of his anterior births, the Jātakas, that in former births he often gave himself up as a victim to satisfy the appetites of hawks and beasts of prey; and on one occasion, meeting with a famished tigress, sacrificed his own body to supply the tigress and her cubs with food. This regard for animal life comes out very clearly in the rock and pillar edicts of the Buddhist king Aśoka (c. 250 B.C.), which contain ample discourses on Buddhist morality, furnishing an early and authentic record of Buddhist teaching. Reverence to parents, elders, and preceptors, true charity and true ceremonial, toleration for the beliefs and practices of others, kind treatment of slaves and servants, liberality to ascetics and Brāhmans, truthfulness, purity, gentleness, and saintliness are other virtues extolled in the edicts of king Aśoka.

Jainism, which, unlike Buddhism, continues to flourish in India at the present day, goes even beyond Buddhism in the regard paid to animal life. The oath not to hurt animals is exacted from the Jaina ascetic on his entrance into the Order; it demands watchfulness over all functions of the body by which anything living might be hurt, and for this purpose the Jaina ascetic must carry with him a straining cloth for his drinking water, a broom, and a veil before his mouth, in order to avoid killing insects. In his four other oaths the Jaina monk promises, like the Brāhman and the Buddhist, and almost in the same words, not to speak untruth, to appropriate nothing to himself without permission, to preserve chastity, and to practise self-sacrifice. Asceticism, both inward and outward, is made specially prominent in this religion; it embraces repentance of sin, confession of the same to the teacher (as in Buddhism), penance done for it, the study and teaching of the holy faith, pious meditations, the renunciation of all worldly possessions, temperance, begging, different kinds of self-mortification, especially by fasts which may be continued to starvation, voluntary death by withdrawal of food being regarded as a sure entrance to Nirvāṇa. The rules of 'the right way' for the Jaina laity are less severe, the oath of chastity, *e.g.*, being replaced by that of conjugal fidelity, just as the rules for Brāhman and Buddhist laymen are less strict than those destined for the clergy. In practical life Jainism may be said to make of its laity earnest men who excel in an exceptional willingness to sacrifice anything for their religion. The clergy in the education of worldly communities are united again to humanity and its interests, and conversions of people of low caste to the Jaina creed are not uncommon even at the present day.

Later Brāhmanism, as represented in the Code of Manu, the 'Great Epic' (*Mahābhārata*), and many other productions of what is called classical Sanskrit literature, reiterates the old iniquitous law of caste, and tries to enforce the claims of the priestly class to spiritual and social superiority. 'The Hindu code as a whole is savage and antique' (Hopkins). Thus in criminal law the *jus talionis* is carried to an extreme degree (see CRIMES AND PUNISHMENTS [Hindu]). Witnesses in a court of justice are exhorted to speak truth, with many fine sentiments extolling veracity and denouncing falsehood; yet perjury is permitted where an accused of respectable caste may be saved from death by it (see LAW AND LAWBOOKS [Hindu]). Long lists of offences of various degrees are given, which do not differ essentially from the moral code and the notions of right and wrong current among other nations of antiquity, except perhaps in the peculiar sanctity attributed to Brāhmans and all their belongings, and to the cow, the sacred animal of the Hindus. But every sin may be atoned for

by performing a penance (see EXPIATION AND ATONEMENT [Hindu]); and these penances were an important source of profit to the Brāhmans. Though each class has its special duties assigned to it, there are also general obligations common to all castes, such as forbearance, veracity, self-restraint, purity, liberality, self-control, regard for animal life, obedience towards elders, visiting places of pilgrimage, sympathy, straightforwardness, contentment, etc. (*Viṣṇusūtra*, ii. 16 f.). The doctrine of *ahiṁsā* (non-injury to living beings) is, however, not so much insisted on as in the Buddhist and Jaina creeds; for a sacrifice, cattle may be slain, and the meat of such cattle may be eaten, although the doctrine of *karma* and of the soul's passage through all kinds of animal bodies, according to its deeds in a previous life, is fully recognized in the Code of Manu. The merit of asceticism, combined with religious meditation, is highly extolled; and the entrance into the order of religious mendicants is supposed to form a regular stage in the life of a Brāhman, preceded by the stage of a hermit in the woods (*vānaprastha*). The sacerdotal element is very strong in the Mahābhārata also, which is, like the codes, a vast thesaurus of Hindu ethics. Thus there is an eightfold path of religious duty, as in Buddhism, but here it consists in sacrifice, study, liberality, penance, truth, mercy, self-control, and lack of greed. The epics contain many touching pictures of domestic and social happiness: children are dutiful to their parents and submissive to their superiors; parents are fondly attached to their children, and ready to sacrifice themselves for their welfare; wives are loyal and devoted to their husbands; husbands are affectionately disposed towards their wives; love and harmony reign through the family circle (M. Williams). The didactic and sententious note prevails in the whole range of Sanskrit literature (Macdonell). It is particularly strong in the old collections of fairy tales and fables, which agree in putting instructive speeches and moral sentiments into the mouths of jackals, cats, elephants, parrots, monkeys, and other animals; and it also pervades Sanskrit lyrics and dramatic works, among which the *Prabodhachandrodaya* furnishes an instance of an allegorical and philosophical play which may be fitly compared to some of our old Moralities. The keynote in Sanskrit moral poetry is the conception of fate, but fate is declared to be nothing else than the result of action done in a former birth, so that every man can by right conduct shape his future fate himself.

Passing to modern developments, we find a general tendency on the part of religious founders such as Basava, the founder of the Liṅgāyats, in the 12th cent., Kabīr, the founder of the Kabīrpanthīs, in the 15th, Nānak, Dādū, and Chaitanya, in the 16th, and many others, to proclaim the social equality of all those who enrolled themselves in their Order. In practice, however, this levelling down of caste distinctions met with only partial and temporary success. As a way of salvation, the 'way of love and faith' (*bhaktimārga*) has been gaining ground, though the 'way of works' (*karmamārga*), i.e. the practice of religious rites, austerities, penances, and sacrifices, is held to be equal, and the 'way of true knowledge' (*jñānamārga*) is held to be superior to it. The *puṣṭimārga*, or 'way of enjoyment,' is sometimes recognized as a fourth way. The Reports on the Census of 1901 contain some interesting attempts at establishing the actual standard of morality in India.

'The code of morality of the ordinary Hindu is much the same as that of most civilized nations, though it is nowhere reduced to a code. He knows that it is wrong to commit murder, adultery, theft and perjury, or to covet, and he honours his parents, in the case of the father, at any rate, to a degree exceeding the customs of most nations, which have no ceremony resembling that of *Śrāddh* [funeral oblation]. The influence of caste is, however, of the greatest importance here, and some inquirers have expressed their opinion that the principal sanction attaching to a breach of morality is the fear of caste penalties rather than the dread of divine punishment, and there are many facts which go to support this view. . . . An extreme example of the effect of caste principles may be seen in some of the lowest castes, where adultery is only condemned . . . when committed with a person of different caste. In the case of perjury, the offence may be committed, without public reprobation, on behalf of a caste-fellow, or even an inhabitant of the same village. . . . I believe that the doctrine of *Karma* is one of the firmest beliefs of all classes of Hindus, and that the fear that a man shall reap as he has sown is an appreciable element in the average morality. . . . A man and his wife bathe in the Ganges with their clothes tied together, to ensure their being married to one another in a future existence.' As for Heaven and Hell, they are not merely 'transitory stages of existence in the chain of transmigration,' but 'the soul' when sufficiently purified 'goes to dwell in Heaven for ever. . . . There is no idea of absorption in the deity whose place is far above' (*Census of India*, 1901, Report, p. 363 f.).

The belief in metempsychosis does not prevail all over India; thus the ordinary Hindu peasant in the Central Provinces 'has practically no belief in the transmigration of souls, but has a vague idea that there is a future life, in which those who are good in this world will be happy in a heaven (*sarg*), while those who are bad will be wretched in a hell (*narak*)' (*Central Provinces Report*, p. 78). The general effect of these two different beliefs on the state of morality remains the same, the idea of retribution in a future state being common to both of them. The influence of Christian morality on the religious life of India becomes visible in the teaching and practical working of the various theistical sects called Samājes (see ĀRYA SAMĀJ and BRĀHMA SAMĀJ). Thus the *Ārya Samāj* insists on education both of males and females, and aims at doing good to the world by improving the physical, intellectual, spiritual, moral, and social condition of mankind.

J. JOLLY.

ETHICS AND MORALITY (Japanese).—**I. Ancient Japanese.**—The Japanese nation through its long history has cherished several peculiar forms of morality, which, of course, must be admitted to have undergone modifications to some extent, although their essential character has remained unaltered. The characteristic ethical features of the ancient Japanese are to be found in the morality of Japan at the present day. One of them is certainly nationalism. It is recognizable in the old mythology, which, unlike that of any other land, centres in the Imperial family and the State. In the course of the creation, the Divine pair, Izanagi and Izanami (see COSMOGONY AND COSMOLOGY [Japanese]), first produced the country (*i.e.* the earth) and, after a long interval, the Sun-goddess, the Moon-god, and one other son. The first of the three was made ruler of the heaven-world; she afterwards sent her grandson to Japan, gave him a mirror, a sword, and a bead, to be handed down to their posterity as the royal insignia, and said:

'This country has to be ruled by my descendants; thou oughtest to go and reign over it. The sacred dynasty will be so prosperous that it will last eternally, even as heaven and earth do.'[1]

The Sun-goddess is sister to the country, and is regarded as the first ancestor of the Imperial family and of the people in general, which are to be, as her prediction indicates, eternally the ruler and the ruled. A throne occupied by a single dynasty

[1] *Nihongi*, fasc. 2.

is the possession of no nation in the world except the Japanese. A great respect has always been paid by the people to such a sacred throne. At one time they regarded the Mikados as living gods, and, even when they were deprived of ruling power, the people never ceased to pay the respect due to them. This does not mean that they stood in a slavish relation to the Imperial family, which, on the contrary, is related to the people as the main house to branch houses. The Mikados are not their conquerors, as with the majority of other nations. The people are often addressed by the Mikados as 'Our children,' which accounts for the special relation between the two. Submission to the Mikados, therefore, is not merely loyalty but filial piety.[1] In contrast with China, filial piety in Japan comes next to loyalty, though in most cases the two are mentioned side by side. In the Japanese family, parents are absolutely obeyed by their children, and superiors by inferiors, as the Mikados are obeyed by their subjects. Filial piety is not so highly valued as loyalty, which is absolute, and very often bids people sacrifice other virtues for its sake. Dutifulness to parents and obedience to superiors were the chief morals in the Japanese home in ancient days, as they are still. Honesty and righteousness were among the principal virtues in old Japan. Classical scholars are of opinion that the ancient Japanese were honest and upright of themselves without any teaching, and could be governed quite easily, and that neither were detailed laws needed to rule them, nor minute moral doctrines to regulate their daily life, because they were simple, honest, and good, and committed neither illegal nor immoral acts.[2] They were practical and optimistic to an extreme, thinking neither of the future nor of the past, but only of the present.[3] Death was hateful, but not fearful, to them. They seem never to have thought of whither they would go after death—a state of things which was much modified after Buddhism was introduced. In ancient chronicles, we meet with the words *nigitama* (a gentle spirit) and *aratama* (a rough spirit); the former denotes the virtues of gentleness and generosity, the latter those of bravery and chivalry. The old Japanese were gentle and magnanimous on the one hand, and so were kind and indulgent to others, and lived in harmony with the world; but, on the other hand, they had strong wills and brave hearts, which, when duty called them, very often made them face dangers, and, if necessary, sacrifice their lives for the sake of the fatherland.[4]

2. Shintoism.—The word *shinto* is not Japanese, but Chinese; it means 'the Way of the Gods' (*Kami-no-michi*). Some say it is a religion, some a moral system, and others a political way. It may be any or all of these three, for in ancient days no distinction was made between them. It presents no peculiar doctrines, and nothing like a code of ethics; but, as it is the great way of the Empire, all the Japanese, ancient and modern, in spite of different creeds, must be Shintoists. The Shinto scholars (*e.g.* Hirata) say that they are acting and moving in accordance with the Shintoistic teachings when they worship national deities, when they venerate Mikados and parents, when they try to promote the national welfare and happiness, or when they lead an honest and godlike life. Shinto is a mixture of Ancestor-worship and Nature-worship, as may be seen from the nomenclature of the deities worshipped. The Japanese have combined their ancestors with natural phenomena, have deified them, and worship them. In dealing with them in such a manner, they mean that the ancestors are their progenitors,

[1] Sawayanagi, *op. cit. infra*. [2] Motoori, *Nawonohire*, 1771.
[3] Haga, *op. cit. infra*. [4] Arima, *op. cit. infra*.

superiors, and benefactors; not only the creators of their bodies, but the furnishers of their life, professions, estates, and all other things. They hold their merits in great esteem, and thank them for their perpetual favours. Esteem for their ancestors being common to all, the sentiments of loyalty, patriotism, and filial piety, the love of family and the feeling of honour are combined, and thus a phase of morality peculiar to the Japanese has been developed.[1] In ancient times no distinction was made between worship and administration, between reverence for the gods and loyalty. Loyal people only could be faithful to the deities or their ancestral spirits, and the Emperors in taking the reins of government were appeasing and worshipping national deities. The very words *matsuri* ('worship') and *matsurigoto* ('worship-matter' or 'administration') signify the identity of these two. Patriarchal monarchy was thus theocratical monarchy as well. Various ceremonies were performed to serve the national deities, of which the most important is the ceremony of purification, or *harai*—important alike from the religious, the moral, and the legal point of view. *Oharai*, or grand purification, was performed at the Court twice a year, and is so still, though nowadays it is a mere ceremony, to drive away the evils resulting from the sinful, immoral, or unlawful deeds of the whole nation during every half-year; and, when any serious offence was committed, a ceremony for the same purpose was performed. *Misogi* (body-washing) was another rite of purification which at first consisted in washing the body when one touched anything unclean, but afterwards became confused with *harai*, so that no distinction was made between them. Defilement, mental or physical, was hateful to the Japanese; and, according to their simple ideas, any guilt, moral or legal, could be as easily removed by the performance of purification as literal dirt can be removed by bathing. See, further, art. SHINTOISM.

3. Bushido.—*Bushido*, or simply *Budo* or *Shido*, is the Chinese term for the Jap. *Mononofu-no-Michi*, lit. 'the Way of Fighting Knights or *Samurai*' (attendants). It is a moral system intended for the military class. Though its full development belongs to later ages of the national history, say the feudal periods—the 12th and following centuries—it may be said to be as old as the race themselves; and *Yamatodamashii* ('the soul of Japan,' *Yamato* being a classical name for this country) is not only the soul of the military men, but that of the whole nation. As Shinto is the indigenous religion of the nation, so Bushido is their national morality, or at least its essence.[2] But here we have only to deal with the Bushido for the Bushi class, and not as national morality. The Bushi should be, in the first place, loyal to lords and filial to parents; these, along with reverence for gods and worship of Buddhas, were considered their chief duties. Indeed, loyalty and filial piety were the fundamental morality of the Bushi class, as is the case with the nation in general. Then they should be brave and fearless in fighting, and calm and never flinching in the face of any danger or death. Bravery, fearlessness, self-possession, and the like, were what they always specially cultivated; but they were not by any means foolhardy or brutal in fighting or in their daily life. Their courage was restrained and softened by the feeling of benevolence and the sense of rectitude and honour; they were not to do anything brutal or underhand, but what was right and manly. Benevolence was one of the chief virtues of the Bushi; and many pathetic stories are told of 'benevolence of warriors.' Kindness, magnanimity, sympathy, and the like, were praised as supreme

[1] Sawayanagi, *loc. cit.* [2] *Ib.*

virtues for the military men, who might otherwise be disposed to coldheartedness or even to cruelty. They should be polite to superiors as well as to inferiors, faithful in the fulfilment of their duties, and simple in their life. These, with a few others of a kindred nature, were the qualifications thought necessary to *Samurai*-ship. The Emperor Meiji gave his soldiers five commandments, in which he recommended loyalty, politeness, bravery, faithfulness, and simplicity; and he concluded with words to the effect that in the fulfilment of these five precepts a sincere spirit is essential, for without this neither good language nor good conduct will be anything more than a mere ornament, of no practical use. These five items are 'the public path of heaven and earth, and the perpetual code of human relations.'[1]

4. Confucianism.—In A.D. 284[2] the Pakchian king sent his minister Achiki to the Japanese Court to offer tributary homage. The minister being a man of letters, the Crown Prince became his pupil and learned from him Chinese literature. In the following year another scholar was invited, who brought with him ten copies of the *Analects* and a copy of the *Book of One Thousand Characters*; he taught the prince Chinese literature and Confucian doctrines. The literature thus introduced influenced the nation in at least three points. (1) They learned Chinese characters, by means of which they could reduce their thoughts to writing. (2) Prior to this time, things had had no distinguishing names: loyalty, filial piety, friendship, for instance, though they were virtues inborn with the nation, had been devoid of particular designations. Now that Chinese wording was introduced, any notions could be expressed in words. (3) The manners, customs, and other things in the neighbouring countries came to be understood among the Japanese, who by and by followed them in these matters.[3] During the following centuries, Chinese moral teaching acquired considerable popularity among the people, especially of the higher classes; but from the 10th cent. it gradually declined, being first crushed out by classical studies, and then neglected on account of successive disturbances. At the commencement of the Tokugawa Shogunate, *i.e.* early in the 17th cent., it revived under the protection of the founder of the dynasty; well-informed Chinese scholars, though divided into several schools, appeared one after another and brought it back to its original glorious state. This dynasty witnessed the best days of the history of Confucian ethics in Japan; and the system has continued to flourish down to the present day, though not free from degeneration. The morality taught in this system, not differing materially from the ancient morals of the nation, has never encountered such vehement opposition as Buddhism; it deepened and elaborated the pre-existing sentiments of loyalty, filial piety, rectitude, truthfulness, and other virtues. A few of the principal points of difference between the Chinese and the Japanese systems are as follows: Chinese ethics is founded on the worship of Heaven, whereas the Japanese worship ancestral spirits; the Chinese pay supreme respect to men of wisdom, and hence admit that unwise or tyrannical monarchs may be dethroned at the people's will, whereas the Japanese regard the Mikados as sacred and inviolable; and, lastly, the chief virtues of the former are benevolence and filial piety, whereas the latter attribute supreme value to loyalty and rectitude, loyalty and filial piety being, according to their national morality, identical.[4]

[1] Shigeno and Kusaka, *Bushido in Japan*; Arima, *loc. cit.*
[2] The official date of its introduction; but the verified one is about A.D. 402.
[3] Endo, 'Confucianism' (*Encyc. of Philosophy, ut infra*).
[4] Arima, *loc. cit.*

Confucius taught that benevolence is the supreme virtue, the highest ideal of man, the *summum bonum*; Mencius connected it with rectitude, declaring that 'the greatest way in the world is only benevolence and rectitude,' and that 'benevolence is the peaceful residence of mankind, and rectitude is the right road of mankind.' Scholars who appeared later on added politeness, knowledge, and truth to these two; and the whole pass under the name of the five cardinal virtues, the sum-total of human virtue. In human society men are related to each other in five different ways, which impose on them as many obligations. They are as follows: rectitude between lord and subject, familiarity between father and son, distinction between husband and wife, grade between elder and younger brother, and confidence between friend and friend. The most important of these are the first two, especially the second; hence filial piety is the root of all virtues, of all moral practices. Generosity, respect, gratefulness, humility, faithfulness, self-control, courage, and manliness are some of the virtues commended in the Confucian teaching. For thirteen centuries the Japanese have lived under this moral teaching, and probably there is no one of them who is wholly uninfluenced by it; but they have wisely adopted only the points suitable to their special culture and national development, neglecting the elements that might be injurious to public morals or fatal to the welfare of the State.[1] See, further, CONFUCIAN RELIGION, CONFUCIUS.

5. Buddhism.—Buddhism was officially introduced into Japan in A.D. 552. Its introduction at once gave rise to a controversy between two parties at the Court—a controversy which was not merely religious but also political and tribal, and which after a violent conflict resulted in victory for the pro-Buddhist party. Prince Shotoku (573–621), one of the wisest and greatest personages Japan had ever produced, did all in his power for the advancement of the newly introduced creed, and well deserves the high respect paid by the Buddhists to his memory. The doctrine of Divine incarnation, according to which some Shinto deities are the incarnations of Buddhas, Bodhisattvas, or certain Indian Devas, was first taught by Prince Shotoku and then by Gyoki (670–749), a learned and virtuous high priest, and was further broadened and deepened by two great men who arose shortly after his death—Saicho and Kukai, who respectively founded the Tendai and the Shingon sects in Japan. Thus Shintoism was seemingly absorbed into Buddhism. Strangely enough, the two somewhat antagonistic creeds co-existed in unity for nearly a thousand years, until their final separation in 1871. Prince Shotoku and other great personages who appeared early in the history of Buddhism in Japan seem to have striven to nationalize its teachings and to bring it into as close contact with the nation as possible. During those days all the work of the Buddhists was designed in the interests of the national welfare and peace. The Emperor Shomu (reigned 724–748), for instance, had a monastery and a nunnery built in each province throughout the Empire, as well as the general monastery, in which the famous *daibutsu* (*q.v.*) is set up, at Nara, then the capital. During the Kamakura age (1190–1333) many new sects were imported from China or sprang up in Japan, and all of them laboured in the interests of the Imperial family and the welfare of the State. In return, Buddhism received great favours from Court and Government, and certainly it is owing to these favours that it has flourished so long in Japan. The national morality, especially Bushido, was reinforced and expanded by it. Its doctrines

[1] Endo, *loc. cit.*

of unselfishness and freedom from desire being in harmony with the essential elements of Yamato-damashii, it has found a ready entrance into the Japanese heart. Its teaching of benevolence softened the otherwise harsh character of the national spirit. It introduced the idea of another world, which was entirely lacking in the ancient Japanese system. The Mahāyānist teachings enlarged the insular spirit. As it was long popular among the people, high and low, no grade of society remained uninfluenced by it, and the highest culture is solely the work of the Buddhist teachers. Japanese Buddhism at the present day is divided into a dozen sects and into some fifty sub-branches, which differ more or less in doctrines, ritual, habits of monastic life, and as a matter of course in their ethical systems. The teachings of some of the sects appear to be quite antagonistic to each other —a fact which shows how inclusive and assimilative the whole system is.

Buddhistic ethics is founded on the assumption that all the creation is sprung from one common Cause, and things in the universe are connected with one another in complicated ways.[1] The naming and location of that Cause may differ with different sects, but all the Mahāyānist sects agree in regarding it as the primary source of all that exists in the universe. Things with and without life are all closely related to one another; and persons of the same household, trade, or social rank, and those who are the same in other respects, have been born thus from one and the same Cause; in other words, they did the same *karma* in a previous existence. Besides, we have transmigrated through the six states of existence, in the course of which we may somewhere have been closely connected with some who are strangers to us to-day. Ought we not then to be kind to others, whether familiar or unfamiliar to us? Of many moral precepts given by the Buddha, as practical morality, the four favours, with their corresponding obligations, must first be mentioned. They are (i.) of parents, (ii.) of fellow-beings, (iii.) of the king, and (iv.) of the triple treasure, *i.e.* the Buddha, the Law, and the Congregation. Next to them come the five or ten precepts and the six *pāramitās*, or perfections. The precepts are as follows: (1) not to destroy life, (2) not to steal, (3) not to have unlawful sexual intercourse, (4) not to tell a lie, and (5) not to drink fermented liquors. Otherwise they are: (1) not to take life, (2) not to steal, (3) not to commit adultery, (4) not to tell a lie, (5) not to talk frivolously, (6) not to slander, (7) not to be double-tongued, (8) not to be covetous, (9) not to be malicious, and (10) not to be heretical. The *pāramitās* are: perfect exercise of (i.) charity; (ii.) morality; (iii.) patience; (iv.) fortitude; (v.) meditation; and (vi.) knowledge. Cf., further, ETHICS AND MORALITY (Buddhist).

LITERATURE.—The *Kojiki*, *Nihongi*, *Kujiki*; the works on Shinto, Nationality, and Bushido, of Hayashi Razan (1583–1657), Kamo (1697–1769), Motoori (1730–1801), Hirata (1776–1843), Kaibara (1630–1714), Yamaga (1622–1685), and other authors; T. Inoue's three works on Japanese philosophy (*Yang Ming School*, 1899, *Revival School*, 1902, *Chu Hi School*, 1906); M. Sawayanagi, *Education in Our Country*, Tokyo, 1910; Y. Arima, *Japanese Nationality*, do. 1907; Y. Haga, *Ten Lectures on Japanese Nationality*, do. 1908; R. Endo, *Oriental Ethics*, do. 1909; *Encyc. of Philosophy*, published by the Dobunkwan.

S. TACHIBANA.

ETHICS AND MORALITY (Muslim).—I. Muhammad and the Qur'ān.

—As Islām in its genesis and development was to some extent influenced by the moral ideas of the ancient Arabs, it will be well to make a brief preliminary reference to these. The social conditions amid which Muḥammad appeared, and which survive to this day with but little change among the denizens of the desert, had reached the stage of tribal organization, and the life of the people was regulated by established custom, *i.e.* by tribal morality. Their moral ideas, so far as we are in a position to judge, reveal an unmistakably secular spirit, alike among the merchants of the cities and among the Bedawīn. The Prophet opened his propaganda among them by denouncing their sins and threatening them with the impending Day of Judgment and the fire of Hell, but at first he encountered nothing but mockery; and it was only when he had in some measure accommodated his message to the present world that they gave heed to his words about the world beyond.

But, while the ancient Arabs were intent upon material advantage and enjoyment, they were not wholly unmindful of higher things. As we may see from the powerful impression produced among them by satirical poems—an impression due only in part to the dread of magic—they had a high sense of both personal and tribal honour. The moral ideal of the Bedawīn found expression in the patient endurance of privations; in a loyalty accorded not so much to the chief of the tribe as to co-equal fellow-members; in a courage which, in open warfare and still more in marauding expeditions, was controlled by a wise policy of sparing the lives of enemies; and, finally, in hospitality—a virtue which, it is true, is ever a native of regions where there is little occasion for its exercise. As compared with the Bedawīn, the people of the cities had, to say the least, a larger share of worldly wisdom. The Meccans, in particular, both before and after Muḥammad's day, were astute enough to put their market under the protection of a sanctuary, and to exploit the very piety of those who came to trade within the sacred precincts. The present inhabitants of the holy city quite frankly avow their adherence to the ethics of the happy mean, asserting that, while the people of Yiddah are very worldly, and those of Medina very devout, they themselves hold an even balance between heavenly and earthly interests.[1]

In pre-Muhammadan poetry terms expressive of moral sentiments occur only sporadically. We find, indeed, warnings against arrogance and threatenings of Divine vengeance; but such exceptions, in which moral and religious concepts are distinguished from law or custom, are probably traceable to Jewish-Christian influence. It was under that influence, at all events, that Muḥammad stood forth as a reformer—to work, in the words of tradition, 'for the improvement of morals.'

Muḥammad made the demand of personal belief and personal morality.

'No burdened soul shall bear the burden of another.'[2] In the Day of Judgment every one shall ho answerable for himself: 'O ye people, fear your Lord, and dread the day when the father shall not atone for the son, nor the child atone at all for his parent.'[3]

Hence, too, the Qur'ān urges—though less insistently than the NT—the necessity of repentance, conversion, the good heart, the changed spirit. Good intentions are commended; unpremeditated lapses from virtue are leniently judged. In short, Allāh makes it no onerous task for His faithful to serve Him: He is forgiving, merciful.

Nevertheless, as Muḥammad's earliest adherents were but a small company, it was no child's play for them to respond to his demand of personal morality. Such a demand shattered the old family ties and came into conflict—at first somewhat too harshly, though afterwards in a milder fashion—with immemorial usage and custom. In this way the moral fellowship of the true believers came to mean more than the tribal relationship. In the light of the ideal thus introduced every believer

[1] Saito, *Outlines of Buddhist Ethics*, 1903.

[1] Snouck Hurgronje, *Mekka*, ii. 72 f., 149.
[2] Qur'ān, liii. 39. [3] *Ib.* xxxi. 32.

was henceforth the neighbour or brother of every other. Islām was to be a universal brotherhood, in which kindness and equity should count for more than custom and law. Muḥammad was, nevertheless, unable to bring this ideal to its full realization with respect to the right of hospitality and protection and to the practice of blood-revenge. In principle, no doubt, private revenge was superseded by legal punishment, but in practice the former was still permitted, though in a somewhat mitigated form. It had now to be kept within the bounds of moderation, and must involve none but the actual culprit. Moreover, Muḥammad helped to foster a higher regard for human life by prohibiting the heathen custom of killing female infants; but, on the other hand, the practice of fœticide has all along prevailed, without censure, in Muslim countries.

The ethics of the Qur'ān might be summed up in the trite formula: 'Believe and do right.' Belief, of course, is the primary obligation, since without belief all works are vain—a mere mirage in the waste.[1] But, as it does not come within the scope of the present article to deal with belief (see FAITH [Muslim]), or with the duties of religion in the narrower sense, our sole concern here is with the question, What is implied in 'doing right'?

Of human virtues the Qur'ān insists most frequently and most urgently on beneficence—the bestowing of benefits upon the poor, the needy, the orphan, the stranger, the slave, and the prisoner, especially in the form of alms (*zakāt*). By almsgiving a person not only helps others, but also manifests the true spirit of self-denial—in the expectation, it is true, of winning, not indeed the treasures of earth, but the rewards of Heaven. This spirit was displayed by Muḥammad himself, chiefly in the earlier years of his prophetic activity in Mecca, when he declaimed against the rich. Afterwards, when his followers had become a political organization in Medīna, the antagonisms were somewhat less pronounced. A similar development appears in the practice of *zakāt*. Originally a voluntary expression of love, and, in the view of Oriental Jews and Christians, almost identical with piety or the fear of God, *i.e.* with virtue in general, it gradually became a tax upon property, and as such became one of the five pillars of Muslim law.[2] In Muslim countries the *zakāt* came usually to be assessed for the public treasury. The collectors of the tax did not neglect their own interests, while the lawyers or priests (so far as we may speak of a priesthood in Islām) claimed to rank pre-eminently among the poor and needy who had a right to share therein.

Besides almsgiving, many other virtues are spoken of in the Qur'ān as acceptable to God. A series of corresponding commandments which, while lacking systematic form, seems to be dependent upon the Mosaic Decalogue, is given in sūra xvii. 23–40:

'Set not up another god with Allāh, lest thou sit down despised, forsaken. Thy Lord hath ordained that ye shall worship none but Him; and kindness to your parents, whether one or both of them attain to old age beside thee; and say not to them "Fie!" neither murmur against them, but speak to them in gracious words. And defer humbly to them out of compassion; and say, "Lord, have compassion on them, even as they brought me up when I was little." Your Lord well knoweth what is in your souls, whether ye be righteous: And verily, He is forgiving towards those who return to Him with repentance. And to thy kinsman render his due, and also to the poor and the wayfarer; yet waste not wastefully; for the wasteful are ever brethren of the Satans, and Satan is ever unthankful to his Lord. But if thou dost turn away from them, and seekest from thy Lord boons for which thou hopest, in any wise speak to them with kindly words. And let not thy hand be fettered to thy neck; nor yet open it with all openness, lest thou be made to sit down in rebuke and beggary. Verily, thy Lord provideth plenty for whomsoever He will; and He too giveth with measure. Verily, He ever beholdeth and observeth His servants. Kill not your children for fear of poverty; we will provide for them and for you. Beware, for killing them is a great wickedness. Withhold yourselves from adultery, for it is an abomination, and evil is the way thereof. Neither slay any one whom God hath forbidden you to slay, except for a just cause; for, if one be slain unjustly, to his nearest of kin have we given authority; yet let not *him* exceed in slaying; verily, he is ever helped. And touch not the substance of the orphan, except in an upright way, till he attain the years of strength; and perform your covenants; verily, a covenant shall be inquired of. And give full measure when ye measure, and weigh with an equal balance—this is the better, and more just for settlement. And follow not that of which thou hast no knowledge; verily, the hearing and the sight and the heart—these shall all be inquired of. And walk not proudly upon the earth, for thou canst not cleave the earth, and thou shalt not reach the mountains in height. All this is evil, hateful in the sight of your Lord.'

These precepts are intended primarily for Muslims, and apply only in a limited degree to the adherents of other faiths. Towards the heathen, towards the Jews, Christians, and other possessors of sacred scriptures who would not submit to the secular power of Islām, and also towards apostates from the faith, the Muslim policy was the holy war and death. Here we have an instance of the religious restriction of moral obligation. The same thing is observable in the fact that the development of a free personal moral life is seriously cramped by religious considerations. The fundamental principle of Islām is that Allāh is sovereign and that men are his slaves, whose virtue consists in obedience. The will of Allāh—in reality, of course, the mind of His Prophet—alone decides as to good and evil. 'Islām,' indeed, simply means the surrender of believers to the will of Allāh.

The sanctions of morality are also of a religious character. Reward and punishment belong mainly to the other world. The majority of mankind must presumably expiate their sin in the fire of Hell. But those who believe and do right shall enjoy the delights of Paradise, which Muḥammad depicts after a fashion suggested by the wine-shop of the ancient Arabs. For all their self-denial on earth—their abstinence from wine, from games of chance, and from luxury in general—they shall find compensation in the heavenly virgins and κίναιδοι who serve the deathless ones with the goblet that inebriates not.

2. Muḥammad and tradition.—Muḥammad made no claim to be a saint, nor was he one, but shortly after his death devout Muslims endeavoured to order their lives by his example. Hence, as the Qur'ān did not furnish the requisite information on every detail, there arose a demand for definite traditions regarding the Prophet's manner of life, as also that of his companions and most intimate adherents; and, as the pious fraud is not usually accounted the most heinous of sins, the supply corresponded to the demand. In Islām, accordingly, we find several collections of traditions—compounds of the authentic and the spurious—some of which are regarded as canonical, and thus ancient tribal custom came to be superseded, in theory at least, by the *sunnah* of the prophet (cf. art. LAW [Muhammadan]). The true believer felt himself obliged to follow this idealized *sunnah* as loyally as possible, and, while the first sentence of the most celebrated collection, viz. that of Bukhārī, but echoes the teaching of the Qur'ān in asserting that actions are judged by their motive, yet the conformity of the faithful consisted largely in externals, being ritualistic rather than ethical. To 'Umar, the second successor of the prophet, is attributed the saying:

'Nowadays [*i.e.* when the process of revelation mediated by Muḥammad, and therefore also the possibility of discerning the

[1] Qur'ān, xviii. 105, xxiv. 39.

[2] Viz. the third, the others being (1) the creed, (2) the ritual of prayer, (4) fasting, and (5) the pilgrimage. According to an ancient tradition, Muḥammad enjoined as a sixth primary obligation the active love of one's neighbour, *i.e.* the duty of doing to others what one would wish done to oneself.

thoughts of the heart, has ceased for ever] we judge people entirely by their outward actions; we protect him who appears to us to do right, for we know nothing of what is within—Allāh is the judge thereof!—and we do not protect him who appears to do wrong, nor do we find faith in him even if he asserts that his motives are pure.'[1]

It is likely enough, indeed, that many who availed themselves of this pronouncement forgot the parenthetic clause regarding the judgment of Allāh. It was easier, moreover, in conformity with the *sunnah*, to use a toothpick, to rub oneself with water or sand, and to submit to circumcision, than to cleanse the soul from sin, and with pure heart to serve Allāh in spirit and in truth. Thus the great bulk of the moral precepts of Islām, as found even in the Qur'ān, and more particularly in the tradition, bear a somewhat external and—one may venture to say—commercial character.[2] The believer has an account with Allāh. One tradition has it that a convert to Islām has all his previous good deeds put to his credit.[3]

The *sunnah* agrees with the Qur'ān in assigning the leading place among good works to almsgiving. If a man is unable to give alms, let him labour with his hands[4]—in order, of course, to make himself able; for this is the conception of work presented by the tradition. Only by way of exception do the *ḥadīths*—the Qur'ān is silent on the subject—ascribe an independent ethical value to work. Thus the following saying was put into the mouth of the Prophet: 'No man can have a better meal than that which he has earned by the labour of his hands. David, the prophet of God, ate what he had earned by the work of his hands.' But perhaps this saying, and others like it, may simply imply that work is superior to begging, though not to almsgiving.[5] The practice of almsgiving, as indeed the element of self-denial in general that was present in Islām from the outset, was strongly reinforced by the influence of Christianity, and, subsequently, of Indian religions, as appears from the fact that the *sunnah* is much less distinctively Arabian in character than the Qur'ān. When Islām had overspread the Christian provinces of the Roman empire, it assimilated many elements of Christian asceticism.

The assertion that early Islām was absolutely destitute of the ethical spirit has been refuted, above all, by Goldziher.[6] The *sunnah* undoubtedly contains ethical elements. It is true that Arabic has no single specific term for 'conscience,' but the thing itself is quite adequately connoted by such periphrases as 'unrest of heart.' According to one highly esteemed *ḥadīth*, 'virtue is [the sum of] good qualities, iniquity is what disturbs the soul, and what thou desirest others not to know concerning thee.' The last clause certainly savours of conventionalism, but there are other traditions in which the requirement of inward sincerity is more clearly expressed.

Thus, *e.g.*, we read: 'Shall I tell you what work stands higher than all prayer, fasting, and almsgiving? It is to make peace between two enemies'; or, again: 'Of more avail [than ritual prayer] is the prayer which a man utters in his own house, where no one sees him but Allāh, and which has no other motive than the desire to draw near unto Allāh.' Another tradition tells how a pious female devotee who was using insulting language towards her neighbour was consigned to hell by the Prophet; whereas his judgment regarding another woman, who was negligent of prayer and fasting, but gave to the needy and never insulted her neighbour, was 'She is destined for Paradise.' The compassion of Allāh is frequently set forth as a pattern for the faithful, and they are urged to the performance of pious works.[7]

According to a favourite and frequently quoted *ḥadīth*, the best works are: (1) honour towards parents; (2) not to take a niece in marriage against her will; and (3) to pay one's day-labourers well. A tradition of quite another cast, which had its source among the devout, gives the following list of precepts: (1) Love thou the poor, and be accessible to them; (2) look always at those who are beneath you, and gaze not at those who are above you; (3) never solicit anything from any one; (4) be loyal to thy kinsfolk, even if they should vex you; (5) always speak the truth, even when it is unpalatable; (6) be not overawed in the paths of Allāh by the reviling of the reviler; (7) frequently cry aloud, 'There is no might or power save by Allāh,' for this comes forth from the treasure which is hidden under God's throne.

Probably none of these pious counsels was more fervently obeyed than the last; we find it used as a magic formula, as, *e.g.*, in the *Thousand and One Nights*. But in all likelihood the everyday life of Islām was otherwise but little in harmony with such ideal demands. The mass of the people paid less attention to the Qur'ān and the *ḥadīths* than to the actual life lived by Muḥammad in his Medīna period, when his love was given mainly to women, and the objects of his hate and greed were the unbeliever and their possessions. The early annals of Islām, in fact, exhibit the chosen servants of Allāh as world-conquerors, who, whatever might be their hopes of heavenly reward, were meanwhile wonderfully content with earthly spoils.

3. Development of the law. — To the true Muslim, as to the devout Jew, religion means a law which should control and regulate the whole life of man. From the Oriental point of view, not only social, but also political life, is bound up in the closest way with religion, and hence the Jewish and Christian communities that secured toleration and protection within the pale of Islām by paying tribute always formed in a greater or less degree an *imperium in imperio*. Thus, too, for the Muslim community sacred and secular law are one, and this holds good—in theory—universally, even under foreign domination, while the ideal is in some measure realized under sovereigns who are of the faith. A knowledge of this law (*fiqh*)—a law with religious sanctions—has, therefore, been all along imperative upon every educated Muslim. Legally, children under the age of seven, and, in practice, women also—for the most part—are exempt from this requirement: the former, because they cannot as yet discriminate between right and wrong, good and evil; the latter, because, by ancient tradition, they are but fuel for the fire.

This law, then, as based upon the Qur'ān and the *sunnah*, and to some extent influenced by Roman jurisprudence, entered upon a process of independent development. And just as some—to wit, six—of the collections of traditions gradually acquired a special prestige, so in Sunnite Islām four schools or systems of the *fiqh* came to enjoy canonical authority, even before the development of the *ḥadīth* had reached its term. Ever since that development took place—in the first three centuries of Islām—the Qur'ān and the *sunnah* have become almost a dead letter except in matters of ritual, and their place in practical life has been taken by the law. From the handbooks of its schools and the decisions of its more distinguished contemporary exponents, the educated Muslim learns what he must do and forbear to do. But he learns likewise that the world, even the Muslim world, lies in wickedness, so that obedience to the sacred law is possible only in a very limited degree, and, at most, in the spheres of purely religious obligation and of family life. The tolerant Umayyad dynasty (A.D. 661–750) is regarded by Muslim historians as having been excessively worldly. But the Abbāsids (from A.D. 750), though they adopted

the Persian maxim that religion and government are sisters, were not much better. In the most numerous Muslim sect, the Shī'ites—and elsewhere as well—the divergence between ruling governments and their subjects with regard to the law has had the effect of making hypocrisy a virtue. We refer to the doctrine of *taqiyya* ('prudence'), according to which it is the primary duty of the Shī'ite who sojourns in the land of the adversary—a very elastic term—to disavow his convictions by word and deed, for the sake of his personal security and the welfare of his associates. Everywhere within the bounds of Islām, and at all periods of its history, the discrepancy between ideal law and actual practice has, on the one hand, led to a policy of compromise on the part of the majority, and, on the other, given rise to scruples and conflicts of conscience, and also to numerous attempts, under the leadership of a Mahdī, to supersede a sinful and worldly régime by a better. In Islām, accordingly, endeavours after moral and religious reform are always involved with or accompanied by political action. The work of a man like General Booth, who, as leader of the Salvation Army, seeks to achieve moral and spiritual results among Christian peoples, would be quite impossible in Islām, unless he or his officers tried at the same time to grasp the reins of political power.

The historical development of Muslim jurisprudence cannot be dealt with in detail here, and it must suffice to refer the reader to the works of Goldziher, Snouck Hurgronje, and others (see the Literature at end, and cf. art. LAW [Muhammadan]). We are meanwhile concerned with the *fiqh* only in so far as it bears upon ethical conceptions and leaves room for the free expression of moral life. In this reference the most important point is the classification of actions according to their gradations of legal obligation, and here we find a number of such arrangements more or less in agreement with one another. The most widely accepted division has five legal categories, as follows: (1) absolute duty (*farḍ* or *wājib*), embracing actions the performance of which is rewarded and their omission punished; (2) commendable or meritorious works (*sunnah*, *mandūb*, or *mustaḥabb*), which are rewarded, but their omission not punished; (3) permitted actions (*mubāḥ* or *jā'iz*), which are legally indifferent; (4) reprehensible actions (*makrūh*), which are disapproved of, but not punishable, by the law; (5) absolutely forbidden actions (*ḥarām*), the doing of which calls for punishment.

As regards the reference of each particular action to its proper category in this arrangement, there is, as might be expected, no unanimity among the learned in Islām. The more easy-going moralists among the sages of the law endeavour to make out that certain forbidden actions are doubtful, *i.e.* permissible, and certain obligatory actions merely commendable. In general, the great regulative principle is public opinion, *i.e.* the consensus of the authoritative scholars of the day. This consensus (*ijmā'*) is binding upon the conscience not merely in matters of faith, but also in the most trifling details of daily life. Yet, in spite of all, many Muslims, whether from want of knowledge or from want of will, order their lives by unauthorized *'ādāt*, or, what is accounted still worse, exercise their own discretion.

Further, the law is not uniformly binding upon every one. It distinguishes between duties incumbent upon all (*farḍ 'ala' l-'ain*) and obligations which affect certain individuals only (*farḍ 'al-kifāyah*). The duty of taking part in the holy war is an instance of the latter class.

Another distinction of importance is that between great and small sins—a distinction elaborated largely in connexion with the doctrine of evidence, which demanded that witnesses must be above reproach. Sins universally regarded as great are murder, unchastity, misappropriation of money belonging to a ward, the taking of interest, the refusal of *zakāt*, and the like. To the class of small sins are assigned such offences as taking part in unlawful games or listening to forbidden music.

As might be expected, the science of the law, in dealing with such distinctions, frequently degenerates into an arid casuistry, or becomes a sophistry which will enable one to cozen and defraud either God or man. The letter of the law kills the spirit of morality. An illustration of this will be found in the *Thousand and One Nights*, Night 296 ff. The manner in which legal luminaries tone down the prohibition of wine-drinking is set forth by Goldziher, *Vorlesungen über den Islām*, p. 63 ff.

4. The development of doctrine.—Islām found in the countries which it conquered not only legal and political institutions, but also systems of doctrine with more or less of an ethical element, as well as a popular didactic literature. With the latter we shall deal below (§ 6); of more immediate importance for the development of the Muslim doctrine of faith are the speculations of Christian theologians.

A factor of the utmost significance for later times was the ethico-religious system of the Mu'tazilites—descendants of the Qādarites. This sect was designated originally 'the people of the righteousness' (of Allāh), because they held that Allāh is the Righteous One who rewards men according to their deserts. This was not a genuine Muslim conception in the early days. The original conception of Allāh—and, somewhat spiritualized, it still holds sway—was that, as the Almighty, He is a vengeance-breathing tyrant towards His enemies, and an indulgent God of mercy towards His friends. In His vengeance He is arbitrary; in His love and mercy, capricious. With many persons, no doubt, this idea was a cause or a consequence of unprincipled conduct. It was possible for a man to transgress the whole law and still remain a believer; confession to Allāh in words, or even in thought—faith without works—was all that was required. Such was the teaching of the Murji'ites, who, though they discriminated between small offences and great sins, yet held that even the latter were forgiven to the Muslim who but uttered the creed.

This Murji'ite teaching was challenged by the originally powerful sect of the Khārijites, who have been called the puritans of Islām. They looked upon the great sinner as an unbeliever, and maintained that there is no true faith without works. This view approximates to the Mu'tazilite ethics, which might indeed be regarded as that of the Khārijites mellowed by the influence of Christianity, and, subsequently, of philosophy. It is certainly true that many of the early Mu'tazilites insisted emphatically on the importance of good works, and in this aspect they might be compared with the Pelagians of the Christian Church.[1] They were neither liberals in theology, nor libertines in ethics.

Their speculations upon the Divine righteousness, moreover, were closely connected with the question of human freedom. No quite unequivocal teaching on this problem could be drawn from either the Qur'ān or the *ḥadīth*; nevertheless the devout multitude was always inclined to believe in predestination. The idea that everything, not even excepting evil and sin, is ordained and brought to pass by Allāh largely dominates the popular mind to this day. The Qādarites and Mu'tazilites, on the other hand, affected probably by the dogmatic controversies of the Eastern Church, preached the

[1] Cf. R. Strothmann, in *Der Islām*, ed. C. H. Becker, ii., Strassburg, 1911, p. 60.

doctrine of free will. In support of their position they could appeal to certain passages of the Qur'ān, according to which Allāh does not cause, but simply allows, the sinner to go astray. They held, accordingly, that man is the author of his own deeds, the artificer of his own good or evil fortune, and that Paradise or Hell lies within his own choice. Evil and sin have their source in the human will; whatsoever comes from Allāh is necessarily good. Subsequently, indeed, they went as far as to say that God can devise nothing but good, and must in all things work for the welfare of His creatures. Here, in effect, we have a theodicy, such as has frequently been propounded from Plato's day, and as frequently shattered by the monistic trend of faith or of reason. The theodicy of the Mu'tazilites was influenced even in its early stages by Neo-Platonic ideas. Their doctrinal system resolved itself in time into a rationalistic theology, with reason as its first principle—the source, not only of knowledge, but also of the laws of conduct. It is reason, they held, that distinguishes between good and evil.

The doctrine of free will became in this way a rational determinism. An action is good when reason finds it good or beautiful; an action is evil when reason finds it evil or repulsive; in short, moral distinctions do not depend upon the will of Allāh. Caprice thus gives place to knowledge, authority to discernment, and obedience to reflexion. Knowledge, discernment, reflexion—it is these, accordingly, that reveal to us what is in itself good or evil. That which is in itself good is binding upon the will of God Himself, and thus involves a limitation of both His omnipotence and His freedom. In order to leave room in human life for a rational freedom and an individual sphere of action, for self-determination and moral responsibility, Allāh was represented as being conditioned by the law of His being.

While the Mu'tazilite doctrines maintained their position in Shī'ite literature, the orthodox party in Sunnite Islām adopted a mediating position. They would not cast the shadow of a doubt upon the doctrine of God's omnipotence and unlimited freedom. Human beings are absolutely dependent upon Him: their good purposes, their good works, the ability to carry these into effect—all flow from Him, from His mercy and grace towards mankind. Man, however, as was maintained by the orthodox Ash'arite school, has power to appropriate God's works, and it is this appropriation (*kasb* or *iktisāb*) that constitutes the believer's sole merit. And even his great and heinous sins do not make him an unbeliever, so long as he does not believe, when he commits them, that they are permitted.[1]

5. Ascetic-mystical ethics.—So long as the primitive community of Islām remained comparatively feeble, the Prophet's call to renunciation of the world was generally complied with. But this state of matters did not last; the Arabs, with their predatory instincts, soon learned to appropriate the world, and, in the succeeding generations, to enjoy it. Caring little for supernal rewards, they were in reality a military aristocracy, an oligarchy, in the empire. In no long time, however, the peoples whom they exploited and laid under tribute began themselves to embrace Islām, thus creating a situation that demanded a new policy, even in moral and religious matters. Here and there, moreover, a feeling of satiety began to settle upon the luxurious classes in both the older and the newer centres of culture, and this in turn prepared the way for a system of an ascetic morality—which, it is true, had never been entirely absent from Islām. This ascetic morality had special links of connexion with the ideas of Christian monasticism.

One characteristic feature of monasticism, viz. celibacy, was, however, alien to primitive Islām; nor has it ever at any time gained general recognition. 'There is no monasticism in Islām'—so the Prophet is recorded to have said; and in his later years he showed by his example that woman may be regarded merely as man's plaything. The asceticism preached in the earliest period, whatever its object was, actually served, however, as a species of training for the soldiers of the faith. It consisted in fasting and watching, and accorded admirably with the performance of the ritual of prayer. But, when at a later day the ascetic spirit became more widely diffused, the positive value of the practice as a means of discipline was more and more lost sight of in favour of a purely negative renunciation. To mortify the flesh became the cry. Absolute trust in God led to quietism: in God's hands man should be *perinde ac cadaver*. The mystic eventually becomes a mere will-less pauper, who accepts as a gift the alms he will not ask or hold out his hand to take, and who fills his feeble life with pious ceremonies. Morality is hardly to be looked for in such conditions. The mendicant (*faqīr*) lives only for the moment and for his God; in relation to his contemporaries or to posterity, he is as good as dead. Yet it was but the absolutely consistent application of his convictions that carried him to such extremes.

The ascetics, clothed in their coarse woollen frocks (*ṣūf*), sought to vindicate their manner of life chiefly by appeal to passages in the NT. A sense of sin and a craving for penance were the forces which largely helped to fill their ranks. But amongst them were also a number of brooding idlers, who began to speculate in Oriental fashion; and it was accordingly in Ṣūfī'ism that the practice of asceticism—from about the 8th cent. A.D. onwards—found a theoretical basis. Platonic-Pythagorean doctrines, gleaned from Hermetic and Gnostic writings, here joined hands with Indian speculation. Ascetic morality is always founded upon the conviction that the human body is of little value, if not indeed absolutely evil, or else a mere phantasm; while the soul, on the other hand, is regarded as the essential element in human nature, or at least as forming a stage of transition to the higher life of the Spirit and of God. Thus the supreme object of human endeavour is to free oneself from the bondage of sense, to purge the soul of foul desire, and to become pure Spirit, or God—not merely God-like, but positively Divine. Stage by stage does man advance on the paths of the soul. By the use of intoxicants, by means of macerations and of pious exercises sustained to the point of ecstasy, the finite being dissolves in God, who is viewed in the abstract manner of Pantheism as pure light or absolute truth. The earthly life is of value only in so far as it is animated by love to God and aspiration after things above.

While every age in Islām has had its devout ascetics, men whose moral excellence cannot be disputed, this Ṣūfī'ite fanaticism cannot claim any high degree of moral approval. The Ṣūfī'ites' fervent love of God left no place for the practical love of their neighbour. The aim of all their striving was, not a moral life upon earth, but a fancied salvation in Heaven. Hence Ṣūfī'ism, alike on its practical and on its speculative side, inculcates poverty, self-humiliation, and the surrender of personality; these were its supreme virtues, and could be best acquired by living in a community under strict monastic discipline. The individual members of such communities must yield unconditional submission to their superior. Moreover, the mystics were for the most part at one with the dogmatists in repudiating

[1] For the Mataridite theory, which is akin to that of the Ash'arites, cf. Macdonald, *Development of Muslim Theology*, p. 310 f.

the freedom of the will,[1] and were sometimes even more thoroughgoing in their denial. Likewise in actual practice they went far beyond the jurists, so that their mysticism consorted uncommonly well with despotism of every kind.

From the beginning of the 9th cent. A.D. these mystical and ascetic tendencies occasionally took practical shape in cœnobitism, but not until the 11th cent. was there any extensive development of a regular monastic system. This, while certainly less highly elaborated than the system of Orders in the Christian Church, had nevertheless much in common with it. Those belonging to the Dervish Orders have always been more highly esteemed in Islām than the representatives of the law or the governing classes, and many among them, both male and female, are revered as saints. The common people venerate them as miracle-workers and medicine-men, as their mediators and advocates with Allāh.

The adherents of the ascetic-mystical morality sought in various ways to adapt their views to the official teaching of the law, or at least to reconcile them with it. Of the two classes into which human actions were frequently divided, viz. 'deeds of the bodily members' and 'works of the heart,' the Ṣūfīs not unnaturally gave preference to the latter. The extreme mystics regarded the outward act as nothing more than a symbol of the inward sentiment, or else considered the obligations of the law to be utterly beneath their notice, so that the extremes of abstemiousness and of sensual indulgence might both be found in their ranks. Sects of pronounced mystical tendencies, such as the Ismā'īlites, showed a special liking for the classification of mankind into grades. Obedience and sacrifice were imperative only upon the common people and brethren of low degree, while the initiated members of the higher grades, or of the highest, were independent of every law.

Mystical sects and mystical tendencies have always abounded in Islām. But, just as Sunnite Islām had, besides its canonical collections of *ḥadīth* and its schools of the *fiqh*, an orthodox system of theology, so it had also an orthodox mysticism, the fullest exposition of which is found in the writings of Ghazālī (see § 7, below). See also art. ASCETICISM (Muslim), vol. ii. p. 99 ff.

6. Philosophical ethics.—Among the Arabs and other Muslims a popular philosophy of morals, at once international and interconfessional, is found in their fables and proverbs: suffice it to refer to Luqmān, the Arabian Æsop. Luqmān's counsels to his son, which in reality owe their inspiration to Jewish-Christian and Hermetic 'wisdom,' are often quoted in ethical and parenetic writings.

The literary *genre*, which is made up of moralistic aphorisms, and more especially of the maxims of court politics found in the various 'Mirrors for Magistrates,' bulked largely in Persian literature, consisting partly of translations from Indian originals. Even to-day this type of literature maintains a certain popularity, and is highly esteemed among the cultured classes of Persia. The earliest known representative of this Persian school is 'Abdallah ibn al-Muqaffa' (executed *c.* A.D. 757), who translated the *Pañchatantra* from Pahlavi into Arabic. His *al-Durra al-yatīmā*, printed in Cairo and Beirūt, is a short 'Mirror for Magistrates,' with rules for prudent behaviour at court and polite intercourse among friends. In his introduction, after circumspectly assigning the supreme place to faith and the avoidance of great sins, he eulogizes the following virtues: temperance, courage, liberality, and proficiency in discourse and business. It is the morality of worldly-wise politicians and merchants, and is thoroughly typical of this class of literature.[1]

A much larger and more elaborately systematized contribution comes, through Syrian channels, from the philosophical literature of Greece. Collections of biographies, with supplements of moral aphorisms, testaments, letters, etc., were very popular. Pseudepigraphic writings, especially of the Hermetic type, were extensively circulated. Works of Plato and Aristotle, as also compositions falsely ascribed to them, found great favour among philosophers in the stricter sense. Thus Plato's *Republic* was translated by Ḥunain ibn Isḥāq as the *Kitāb al-siyāsa*, and forms the main source of the doctrine of the soul (trichotomy) and of the four cardinal virtues which appears in many Muslim writers on ethics. To Plato also were ascribed a treatise on the education of children (*Adab al-ṣibyān*), and a testament (*waṣīya*) addressed to Aristotle. Of Aristotle's own writings, Arabic authors refer to and quote from the *Nicomachean Ethics* (*Kitāb al-akhlāq*), which is said to have been translated by the afore-named Ḥunain or by his son Isḥāq ibn Ḥunain. Extant quotations from this work show traces of Neo-Platonic redactions.

These and other translated works of the kind helped to mould the development of Mu'tazilite and Ṣūfī'ite ethics. But it was only in the limited circles of sectaries or of scholars and persons of culture that ethical doctrine attained the more independent status of a philosophical science (*'ilm al-akhlāq*). Conformably to the scholastic Aristotelian tradition current in the East, philosophy was defined as 'a knowledge of the essence of things and a doing of the good.'[2] The theoretical side was invariably discussed more exhaustively than the practical, but the latter also received attention from those who dealt with morals and politics as more or less independent of each other.

But it was the pseudepigraphic writings of a spiritualistic and an ascetic and edifying character that produced the most powerful effects in this sphere. These writings were often supplemented by astrological speculations, according to which the natural temperament and even the moral constitution of human beings are conditioned by the influence of the stars. The felicity of man was believed to consist in his being delivered from matter and exalted to the pure spirit-world of the higher spheres. This type of ethics, pervaded by metaphysico-psychological speculation, has left a characteristic deposit in the eclectic writings of the 'Pure Ones' or 'Brethren of Purity' (*Iḫwān aṣ-Ṣafā*).

In the system of the Brethren of Purity, the moral nature of man is determined by the following four causal agencies. (1) The bodily structure: the body is composed of the four elements, and a person whose body contains, say, much earth will be harsh and greedy, while another, with a large proportion of water in his body, will be gentle and gracious, and so on. (2) Climate: those who live in a northern climate have more courage than those of southern lands. (3) Education. (4) The influence of the stars; and this, indeed, is the most powerful of all, since the other three are dependent upon it. Even education, which superposes something upon the natural constitution, is affected by the heavenly bodies and relative positions. All this holds good of the first stage of human nature, the stage of natural morality, in which conduct is instinctively good or bad. But the soul can raise itself above nature, and in the second or psychical stage, where man has freedom

[1] But see *ERE* i. 13.

[1] Cf. also the will of a merchant in *The Thousand and One Nights*, Night 308 ff.

[2] See *Mafātiḥ*, ed. van Vloten, Leyden, 1895, p. 132 f.

of choice, his deeds are praised or blamed according to their quality. Should a man reach the third stage—that of rational deliberation—he acts either wisely or foolishly, nobly or basely. Finally, the fourth or highest stage is that of the Divine cosmic order (*nāmūs*) conformed to by godly prophets and holy angels, and a man is rewarded or punished according as he does or does not associate himself with them in the endeavour to become, as far as in him lies, like God.

The path by which this mystic goal of life is to be reached, according to the Brethren of Purity, is the practice of asceticism. The supreme virtue, the yearning after things above, or the love that presses towards God, must manifest itself upon earth in a pious endurance of, and indulgence to, all creatures, even the animals. Man thereby wins freedom from sensual passion here, and hereafter the ascent to the eternal light. But, if a man does not in this life purge himself of bodily desire, and persists in 'foolish slumber and careless sleep,' he remains after death hovering in the air, trammelled and drawn downward by his fleshly passions. Hell is simply this life in time, whether on the earth or in the air; Paradise, on the other hand, is the eternal world of the celestial spheres to which pure souls ascend.

All men, according to the teaching of the Brethren, are imperfect, though in different degrees. But the sum-total of good qualities is found in the absolutely perfect man, who has the characteristics of the Platonic Idea and the 'wise man' of the Stoics. The Sunnite mystics find the perfect man (*insān kāmil*) in Muḥammad; the Shī'ites in Ali or Ḥusain. The Pure Ones are less definite in their choice, and—apart perhaps from the 'Imām of the age,' whom they greatly honour—it is rather Socrates and Christ that win their enthusiastic homage. In their estimation the ideal of reason was realized in Socrates, and the law of love in Christ; and it is these great ones, accordingly, whom they seek to emulate. In the interests of this *imitatio* they concede a relative value to the earthly life in the flesh; the body should be guarded and cared for, so that the soul may have time for its full development.

The moral theory of the Pure Ones is a mystical intellectualism. It is found—in a somewhat less fantastic form, no doubt—also in the so-called Aristotelians of Islām, from al-Kindī to Ibn Rushd. In keeping with the character of their sources, these thinkers set—to use Aristotle's own words—the dianoetic virtues above the ethical. Thus, *e.g.*, in the *Apophthegmata Philosophorum* of Ḥunain ibn Isḥāq the highest good is identified with the sound understanding. Wit and shrewdness, talent and sagacity, are put on a higher level than goodness and rectitude. Such, too, is the spirit which pervades nearly all the *adab* writings ('the doctrine of good or elegant manners') of the Arabs—often, indeed, mere compilations of extracts, and having hardly the slightest concern with ethics and morality.

A counterpoise to the extravagances of mysticism was provided by the supreme Aristotelian principle of the *mean*—the doctrine of the μεσότης, which was introduced into Islām at an early period. The Mu'tazilite al-Jāḥiẓ († A.D. 869) writes as follows: 'Divine religion approves the conduct of him who neither does too little, nor performs too much, of the Good.'[1] Some professed to find the doctrine in the Qur'ān (cf. ii. 137, 'Thus have we made you an intermediate people'). The principle of the mean came at length to permeate both the popular conception of morality and the ethical science of jurists and philosophers; and it was also combined—especially among the latter—with the Platonic doctrine of the four cardinal virtues (σοφία, ἀνδρεία, σωφροσύνη, δικαιοσύνη). As early as the 9th cent. A.D., in the writings of the Mu'tazilite author Dāwūd ibn Marwān al-Maqammis, we find mention of the Platonic series of virtues, which thereafter, with occasional modifications in the order and grouping, gained general currency.[1]

[1] Goldziher, *Muh. Stud.*, Halle, 1889-90, ii. 397 ff.

The most notable representative of Neo-Platonic eclecticism in Muslim ethics is Ibn Maskawaih († A.D. 1030), physician, philologist, and historian, who was the treasurer and friend of Sultan 'Adudaddaula, and ranks as an orthodox Muslim. It is true that his ethical doctrine (*Tahdhīb al-akhlāq*, 'the improvement of morals'), like that of the Pure Ones, shades off into mysticism, but it is free from astrological accretions. Its underlying psychology, and, indeed, the structure of the system as a whole, is Platonic, though in matters of detail the author quotes frequently from Aristotle, as well as from Socrates, Hippocrates, Galen, and al-Kindī. The work is divided into six (or seven) parts and may be outlined as follows:

i. By way of introduction we have a Platonizing doctrine of the soul. The soul is of a spiritual nature, and, as an independent and immortal entity, stands on a higher plane than the mutable substance of the body. It finds its peculiar sphere of action in the sciences (dianoetic virtue). After enumerating the parts of the soul—desire, impulse, and reason—the work specifies the four principal virtues: prudence or temperance, courage, wisdom, and the combination of the three in justice. The virtues, with their various sub-species, are then defined, liberality being treated more elaborately in a special paragraph. Liberality is thereafter frequently mentioned along with the cardinal virtues, and in one passage it actually takes the place of wisdom. Each of these virtues is then defined on the Aristotelian principle, *i.e.* as the mean between two vices, justice itself being placed midway between doing wrong and suffering wrong. As regards prudence, however, a defect is said to be better than an excess, while as regards liberality the reverse holds good.

ii. The second section treats of man's natural disposition, of habituation, and education. Ibn Maskawaih adopts Galen's idea that a few men are good by nature, some become good by practice, and very many remain evil to the last. Parts of the chapter on the education of children recall Plato's *Republic*, as, *e.g.*, the assertion that moral education should precede instruction in mathematics and other sciences; while the ancient Arabic poetry is to be treated as having a harmful influence on children. This section discusses also the rules of good breeding.

iii. The third division of the work treats of the supreme good and the supreme happiness (εὐδαιμονία). The supreme good is interpreted absolutely or objectively; it is eternal and the same for all, and hence it is probably identical with the Deity. Happiness, on the other hand, is defined subjectively: it has various gradations, corresponding to differences among individuals. The supreme happiness is attained in the closest possible approximation to the supreme good, *i.e.* in becoming as like God as is possible for man. But there are innumerable gradations of human happiness, and hence also innumerable degrees of human virtue or efficiency. The measure of realization appropriate to each individual constitutes his virtue and determines his happiness. It is, therefore, best for all to live a moral and happy life in the community—in the State. Monasticism is not virtue. So long as man remains man, *i.e.* is composed of body and soul, so long does his happiness remain incomplete without the satisfaction of his bodily wants. Nevertheless, the psychical or purely spiritual enjoyments are the most perfect, since they are the most enduring. The doctrine of the bodily resurrection and the sensual delights of Paradise is treated by this theory with polite silence.

iv. This section deals specially with justice. Aristotle likewise had devoted a whole book of his *Ethics* to this virtue.

v. Here the themes are love and friendship. Two circumstances, viz. that Aristotle had allotted two books (viii. and ix.) to the discussion of friendship, and that love occupies a leading place in the Neo-Platonic system, have conspired to give this part of the treatise a somewhat prolix character. A notable feature of the section is the endeavour to invest religious duties with moral significance. Thus the daily liturgical prayers of the Muslims, which the *sunnah* ranks far above solitary prayer in the silent closet or the monk's cell; the meeting of dwellers in cities with the inhabitants of the surrounding districts at the two official festivals of the year; the flocking of pilgrims—each once in his lifetime—from all countries to Mecca: these things, as enjoined by the law, foster the sense of brotherhood and the universal love of mankind.

vi. The concluding section (sometimes divided, as vi. and vii.) discusses the health and sickness of the soul. The diseases of the soul are the eight vices—the *aṭrāf* of the four cardinal virtues—and their sub-species. Of the four pairs of vices only one—the excess and defect of courage—is handled in detail, its

[1] Goldziher, *Kitāb ma'ānī al-nafs*, Berlin, 1907, p. 18* ff.

extremes being presumption or foolhardiness, and cowardice or want of spirit, with their sub-species. But the actual vices are dealt with less thoroughly than the affections from which they spring—anger and grief, and their varieties.

Thus far Ibn Maskawaih and philosophical ethics. The Platonic-Pythagorean features of the theory, *i.e.* its dualistic psychology and its hyperphysical morality, found special favour among the mystics, while, on the other hand, the scholars of the *ḥadīth* and the *fiqh*, as well as the dialectical theologians (the Mutakallim) and the rationalistic writers, gave the preference to the Aristotelian elements.

7. **The ethics of Ghazālī.**—The ethical system of the great theologian Abū Ḥāmid al-Ghazālī (A.D. 1059–1111) merits separate treatment, more especially as he is the final authority for orthodox Islām. In his case life and doctrine are one—rooted in his own personality. He was delivered from the snare of vain learning and worldly ambition by becoming convinced of the truth and moral power of Islām. In Islām he holds single-handed a position corresponding to that shared by Augustine and Aquinas in the Christian Church.

Ghazālī's moral philosophy is the synthesis of the various doctrines which we have passed in review. He is also acquainted with philosophical ethics, *i.e.* the doctrines of the four cardinal virtues and of the mean. These he expounds in his *Mīzān al-'amal*, probably one of his early works, and we find traces of them also in his later mystical writings. Thus the narrow bridge which leads to Paradise (*Ṣirāt*), and the scales in which the deeds of men are weighed (*mīzān*), he interprets esoterically as the true mean of virtue, just as many Mu'tazilites and speculative Ṣūfīs had done. Ignoring the actual sequence of history, he maintains that the philosophers borrowed their ethical theories from devout Ṣūfīs. Such might certainly be said of his own system, as it is saturated with and held together by the spirit of Ṣūfī'ism, and is intelligible only in the light of the mystics' doctrine of stages (the corporeal earthly life; the sensuous psychical intermediate stage; the spiritual celestial life; the being of God). Ghazālī's theory is, in point of fact, a mysticism that vitalizes the law and doctrine of Islām, as is indeed clearly indicated by the title of his greatest work, *Iḥyā' ulūm al-dīn*, *i.e.* 'the revivification of the religious sciences,' dealing with living religion or the religious life. Faith without works was in his view a dead faith. Religion must be an experience of the soul, and must manifest itself in works. 'He who knows and acts accordingly shall be called great in the kingdom of Heaven.'

The relation between faith and works, knowledge and action ('*ilm* and '*amal*), had formed the theme of much speculation before Ghazālī's time.[1] The philosophic school, and even the mystics, were all more or less influenced by the intellectualism of Greek ethics. Correct thinking was preferred before good conduct. Action, moreover, was restricted to the present life, *i.e.* it was deemed of value only as a preparation for a higher life; while perfection or salvation in the hereafter was thought of as a state of pure knowledge, not indeed without joy, but certainly without action. With Ghazālī, however, as with the mystics, the relation in question is complicated by the introduction of a third factor. Between knowledge ('*ilm*) and action ('*amal*) he places the state of the soul (*ḥāl*), a condition akin to emotion, and having a propensity to good or evil conduct. We have thus a sequence of three causally connected elements: knowledge gives rise to an affective volition, and this in turn produces action.

In connexion with these explanations, the extreme intellectualism (gnosticism) of the philosophers who assert that knowledge without consequent action is better than action without knowledge of the grounds of action is assailed by Ghazālī as sheer folly. Nevertheless, we trace the influence of the philosophical-dogmatic tradition in his own predilection for knowledge, even though he thereby means knowledge of the religious sciences. For him, too, the perfection of the pure spirit consists in intuitive knowledge, *i.e.* the beatific vision of God. In the first book of the *Iḥyā* he fully discusses knowledge—the religious knowledge that is profitable for the life beyond, and is 'a work of the heart'; and in the second book he deals with the knowledge of religious doctrine as man's primary obligation. Religious knowledge, or true doctrine, is in fact the tree whose branches are the various states of the soul (*aḥwāl*), and whose fruits are good deeds.

Ghazālī agrees with the Ash'arite school in teaching that the merit of man's action lies in his appropriation or assimilation (*iktisāb*) of Divine action. The life of the soul, with its activities, stands midway between the absolute freedom of the Divine will and the absolute necessity of bodily and earthly existence. The moral disposition can be improved by education and asceticism. Such is Ghazālī's theory. But his truly religious spirit kept him from saying much about human freedom, or even about human ability. Allāh is omnipotent, and acts as it pleases Him. He will assuredly lay on any soul no burden beyond its power; for so it is written in the Qur'ān (vii. 40); but He might without injustice demand from His servants what they could not give. He is in no sense bound to have regard to the welfare of His bondslaves. These and similar statements, however, should be interpreted as in the first instance polemical, being directed against the Mu'tazilites, and may be regarded as so much theorizing. We shall perhaps best succeed in doing justice to the spirit of Ghazālī's system by setting forth his view as follows: the material world of the body is the sphere of absolute necessity, where God's omnipotent will is all in all; in the realm of the sensuous and psychical, a relative freedom must be recognized; in the kingdom of pure spirit, there is a return to absolute necessity—the law of love, which is at the same time absolute freedom.

Passing, however, from these vague and—in relation to the system as a whole—certainly esoteric speculations, we shall find it of more utility to make a brief examination of his principal ethical work, the *Iḥyā 'ulūm al-dīn*.

The work is in four parts, each comprising ten books.[1] The first part discusses religious duties in the narrower sense (*'ibādāt*); the second, the duties of social and political life (*'ādāt*); and in both parts the substance and its arrangement are taken mainly from books of the *ḥadīth* and the *fiqh*. The third part sets forth that which perverts the soul, and its renunciation of the world; the fourth, that which saves the soul, and its return to God. This second half (the third and fourth parts) is based upon the manuals of ascetic Ṣūfī'ism; but to the author alone belongs the credit of the excellent selection of material, as also of its arrangement and synthesis. In the first half of his work, for instance, he does not deal with the religious duties and the social and political institutions of Islām in the purely external and casuistical manner of most teachers of the *fiqh*, but expounds their 'mysteries' (*asrār*), *i.e.* their import for the inner spiritual life, and with special regard to the hereafter. If he begins, as books of the *ḥadīth* and the *fiqh* usually do, with ceremonial purity, he immediately makes reference to the purity of the heart, the innermost recesses of which, when it has renounced every vice, are free from all that is not God. The same thing holds good of the ritual of prayer, to the outward forms of which inward experience alone lends plenary significance. He deals with religious prayer—prayer in the proper sense—and with such pious practices as the recitation of the Qur'ān, much more fully than with the ceremonies prescribed by the law. At the same time he never forgets to urge that outward compliance with the law is imperative upon all—primarily, no doubt, upon the people in general, but no less upon those who occupy a higher spiritual level. The lower stage must

[1] Cf. Goldziher, *Kitāb ma'ānī al-nafs*, p. 54* ff.

[1] The reader should note this enumeration, as in mystical writings such numbers are never without significance.

always be merged in the higher, and in the light of this fact Ghazālī combines the distinction made by the *fiqh* between *farḍ al-'ain* and *farḍ al-kifāyah* with the doctrine of stages propounded by Neo-Platonic Ṣūfī'ism. So, *e.g.*, in regard to fasting, the fourth of the religious duties; in the first stage, as obligatory upon all believers it means abstinence from food, drink, and the enjoyments of love; in the second, it signifies refraining from the sins of the bodily members—the eye, the ear, etc.; finally, in the third stage, attained only by the few, fasting implies the heart's abnegation of the world and of all that is not God.

Ghazālī's ethical theory is thus, as regards its ideal, out and out ascetic. Divine service, as he says in a later work (*Minhāj al-'ābidīn*), has two sides: a positive—meritorious action; and a negative—the abandonment of sin, or the warfare against the evil world, the creatures, Satan, and the sinful self. The negative side is the more excellent—the higher stage. On certain points Ghazālī has some difficulty in harmonizing his theory with tradition. In the *Iḥyā*, e.g., he raises the question whether marriage or celibacy is the more excellent way. His first answer is that each has its advantages and disadvantages, and neither is expedient for every one. But he inclines, in conformity with his doctrine of stages and the practice of his later life, to hold that, while marriage is good, celibacy is better. The question then arises whether in that case Jesus was not superior to Muhammad. Ghazālī's answer, which may at a pinch be reconciled with the theory of stages, is that, while the celibate life is intrinsically the better—not for everybody, of course—the best of all, as in Muḥammad's case, is to be married and at the same time to be as the unmarried, *i.e.* to live always in the presence of God and to be susceptive of His manifestations. Had our moralist dealt in earnest with this idea, his system would have assumed a very different character. But his ascetic temperament, while he does not put it forward as the norm for all, dominates the entire work, alike as regards its structure and as regards his selection of the Jewish, Christian, and Muslim traditions which he so plentifully introduces for the edification of his readers.

At the end of the second part of the *Iḥyā*, i.e. after the religious and the social duties have been discussed, Ghazālī utters a panegyric upon Muḥammad as the standard of human virtue, and commends him as a pattern for human conduct. The beauty of his outward appearance and the grace of his speech are highly extolled, as are also his marvellous deeds. Of all men, moreover, he was the most affable, the bravest, the most just, the most temperate, and the most generous; he was chaste and modest above all others; at once reserved and frank, straightforward and without dissimulation—one saw the anger in his face; simple and kindly in his whole manner of life.

The second half of the *Iḥyā* (parts three and four) carries us far beyond this imitation of Muḥammad—as a historical person, at least. 'Man's perfection and happiness,' as Ghazālī expresses himself elsewhere,[1] 'consists in endeavouring to reproduce the characteristics of God and in adorning himself with the true essence of His attributes.' It is only the soul of man that lies in the snare of sense; in his heart—his distinctive spiritual nature—he is the image of God. So the first book of the third part deals with the wonders of the heart, and the second book with the virtues of the soul. It is in this second book that philosophical ethics—the doctrines of the cardinal virtues and of the mean—are discussed. Here, however, Ghazālī, following Plato, remarks that justice has but one antithesis, viz. injustice. The chief virtue is said to be wisdom, which was not mentioned at all in the sketch of the Prophet's character referred to above. The superficial way in which the Platonic and Aristotelian doctrines are attached to the work appears also from the fact that they have no further influence on the contents of parts iii. and iv. The third part discusses, on the basis of the Platonic psychology, the purification of the spirit from carnal and psychical lusts; and the fourth, its turning towards God by means of repentance and fear, patience and thanksgiving, and absolute trust culminating in union with Him in love. The last book of all is a *meditatio mortis*, in which the dying experiences of Muḥammad and the four orthodox Khalifs are set forth as examples. Parts iii. and iv. have little to do with ethics in the modern sense, but they contain valuable observations in the sphere of religious psychology.

The *Iḥyā* as a whole might be described as the ethics of a pastor. Ghazālī considers that men require such a counsellor. Only a few, he remarks, are perfect by nature: such are Jesus, John the Baptist, and other prophets. All others are weak, and require prophetic guidance, which, after the death of the prophets, is adjusted to human nature in various ways. Consequently Ghazālī thinks it advisable that men should place themselves under the spiritual care of a shaikh, as was done in the religious Orders. The numerous religious brotherhoods in Islām, which have a vast influence among the masses—especially in North Africa—even to the present day, may find a warrant for their existence in his words. But it may justly be doubted whether their moral influence upon the people has realized the hopes of the great theologian.

[1] Cf. Goldziher, *Vorlesungen*, p. 31.

The principles of Ghazālī are very characteristic of the peculiar nature of Oriental civilization. Neither philosopher nor devout mystic has in this sphere ever been able to attain fully to the thought of moral self-development. The Orient lacks the vital idea of autonomy, and of a super-personal law which, written on men's hearts, is binding upon all. Although in the East an all but immutable law has been in operation for centuries, yet the frequent changes of dynasties and rulers have ever and anon been attended with intervals of anarchy. An imperative law is thus always associated in the popular mind with a particular ruler and those who represent him in secular or sacred things. There has as yet been little scope for individual freedom or personal initiative in any sphere of life. The populace submit to the secular power, or to the shaikh of an Order, or to the 'Hidden Imām,' or to some one who claims to be the Mahdī; for neither in social and political affairs nor in the sphere of religion and ethics can they do without a leader.

8. The period after Ghazālī.—For centuries the instability of Oriental life has been hedged round by a remarkable stability of doctrine. Since the 13th cent. A.D. Islām has been content to study and expound the teachings of the ancients. The writings of the earlier ages are constantly being re-issued in lithographed or printed editions—not as mere scientific curiosities, but as real stepping-stones to learning; and this is true also in the sphere of ethics.

In Ghazālī orthodox speculation reaches its culminating point, and in the sphere of religious learning his influence is immense. But other factors continued to operate. The masses still clung devoutly to their *'adat*, teachers of the *fiqh* did not discard their casuistry, while many philosophers and speculative Ṣūfīs ignored the law in its outward form (antinomianism).

Ethics (*'ilm al-akhlāq*) could make no further advance in Islām as an independent science. People found their moral doctrine in the compendiums of the legal schools, or in some guide-book to the Ṣūfī'ite life, or in the manuals of good breeding (*adab* literature). Books of the last-named class found special favour in secular circles. In Persia there exists a marked predilection for the teachings of the ancient poets, and, in particular, for the didactic verses of Sa'adī. An illustration of the way in which ethics has been incorporated with the *adab* literature is found in the *Adab al-dunyā wal-dīn* of Abū 'l-Ḥasan al-Māwardī († A.D. 1058).

This work, which was written before Ghazālī's day, is still used in the higher schools of Stambul, where it serves as a treasury of quotation for the young. After passing the time-honoured encomiums upon reason and knowledge, it gives a profusion of aphorisms, uttered by devout scholars, poets, and sages regarding religion, the world, and the soul. The section that treats of the secular life bears the impress of Aristotelian ideas, while the closing section, dealing with the morals of the soul, shows an ascetic strain, and singles out for special commendation such virtues as humility, meekness, veracity, and contentment. Its counsels are regarded in the same light as in the 11th cent., when Māwardī compiled them, *i.e.* as so many fine sayings.

This continuity of doctrine is certainly a remarkable fact. Even those who have in modern times tried to introduce reforms into Islām appeal for support to the ancient teachings. This is specially true of the Wahhābī movement, which sprang up about the middle of the 18th century; it aimed at restoring Islām to its pristine state, and denounced in puritanical fashion all innovation, the use of tobacco and similar indulgences, the luxury of cities, and the worship of saints. Of greater significance than this Arabian attempt to restore the past is the Persian Bābī movement (see BĀB, BĀBĪS), which took its rise about the middle of the 19th century. It was in

its origin associated with ancient mystical ideas, and trafficked in all manner of magical trumpery, speculations about numbers and letters, etc. It has latterly assumed a more progressive aspect, and now advocates the emancipation of women and the brotherhood of all classes and religions. To the present writer, however, it seems highly questionable whether the flaccid mystical utterances of the Bābī prophets are capable of effecting anything—in the face of Oriental despotism—on behalf of a free and active morality. Some look more hopefully to the revival of Mu'tazilite teaching, more especially in British India, where its best-known exponent is Syed Ameer 'Ali. This movement, however, presents but few of the typical features of Islām, and is scarcely to be distinguished from a liberal form of Christianity.

Here, indeed, we have lit upon the characteristic feature of present-day Islām. The culture of Europe and America, with Christian customs and moral ideas in its train, is forcing its way on every hand into Muslim countries, and by means of education and the press is asserting itself everywhere, with the possible exception of Afghanistan and Morocco. The movement is meanwhile largely confined to scientific and technical learning, which is assimilated in a somewhat superficial fashion; but whether it will prove fruitful, not only in the economic, but also in the ethical and the social and political spheres, the future alone can decide.

9. Moral life.—We have now dealt with the foundations and the growth of moral conceptions in Islām; and, although much obscurity still rests upon the subject, we have found it possible, with the help of the extant literature, to trace the main lines of ethical development. A much more difficult question, and one, indeed, that must probably remain in great part unanswered, is that concerning the actual moral life of the people. What was its character, and how did it compare with moral doctrine? Law and doctrine may often act as incentives to good conduct, but they are oftener simply the conscious reflex of actual morality, and sometimes but the drapery which hides the hypocrisy beneath. Our main concern is the people's actual mode of life, and our knowledge of this is very defective.

It has already been remarked that the sacred law, alike in its original form and in its later expansion, has to a great extent the weight only of an ideal canon law; as a rule, the people restricted their observance of it to purely religious duties and the provisions regarding family life. The sentiments and practices of daily life were largely conditioned by racial character, by circumstances, by occupation—in a word, by the stage of civilization that had been attained by society or the individual. A detailed history of the morality of Oriental society—could such a work be written at all, and as yet there is an almost complete lack of competent preliminary studies in this field—would have to depict a vast variety of phenomena, such as, for instance, the various gradations by which nomadism passed into permanent habitation, and, in city life, the practice of confining the inhabitants to certain quarters or streets, according to their creed, nationality, or trade.

The fact that differences in nationality and occupation involve differences in moral characteristics and conduct has attracted attention from ancient times. Thus, according to an early Muslim tradition, 'pride and haughtiness are among the people of horses and camels, the shouters, and the tent-dwellers, but modesty (*sakīna*) among keepers of cattle.'[1] A still greater contrast, and one that pervades the whole course of Muslim history, is that between the predatory semi-nomads and the owners and leaders of city caravans, whose great concern is security of travelling and the undisturbed enjoyment of their gains. The largely inartificial customs of the former are very different from the more comfortable life of townspeople. This more luxurious mode of life was condemned by official Islām, which, however, was long unable to restrain the merchants of the Syrian cities—a gay and humorous class of people—from their wine-bibbing and other self-indulgent habits. In Persia this restriction never proved effective in any real sense. The Arabs did not succeed in assimilating the national character of the Persians to their own, just as they failed afterwards with the Turks and the Mongols. In the polemical literature evoked by the struggle between Arabs and Persians in the 2nd and 3rd centuries A.H., neither side failed to pass judgment upon the qualities of the other, and, as we might expect, each judged with all the bias of mutual animosity. Such estimates must, of course, be utilized with the utmost caution. It will be well also to be somewhat sceptical regarding the jeremiads emanating from teachers of the law, as the class to which they belong has been prone in every age and among all peoples to proclaim the utter wickedness of a world that did not tally with their sacred ideals, or submit to their personal rapacity. Our best course will be to avail ourselves of incidental observations found in poetry, in narrative literature, in historical writings, and books of travel; while for recent times we may have recourse to ethnographical works. As regards the polite literature, in particular, we must certainly bear in mind that the poets, in their vainglory, are wont to magnify out of all measure both their own sybaritism and the munificence of their exalted patrons. Muḥammad himself had it revealed to him that poets do not really do what they say—and the East has never lacked an abundant supply of poets.

When we examine the representations of manners given by the ancient poets in the *Kitāb al-Aghānī* and *The Thousand and One Nights*, we see little indication of a rigorous conformity to the law, or of a profound and vital morality. We generally find ourselves in the sprightly and voluptuous society of princes and merchants—a society whose basis is largely sordid gain, and whose life revolves round 'wine, woman, and song.' These people know the moral code by heart. They also indulge in pious meditations of an ascetic and mystical tendency, but only by way of rhetorical embellishment. At a very early date, even in the holy city of Mecca, then at the Umayyad court in Damascus, and subsequently in the Abbāsid city of Baghdad—in Cordova, Cairo, and other less important centres of Muslim culture—we find, under the mask of religion, a most worldly mode of life among the higher classes of society. Their morality had always much in common with the popular ideas expressed in fables and proverbs—*i.e.* it was altogether mundane. We shall search the fables of Luqmān in vain for any mention of God or the hereafter. Death, which in religious and mystical ethics is always hailed as a deliverer, appears, conformably to the common sentiment, in *The Thousand and One Nights*, as the 'destroyer of all delights.' The enjoyment of life is at once the ideal of popular literature and the grand concern of educated society. To acquire wealth in the easiest possible way—often by means of magic—and to squander it in pleasure, to go in quest of adventures as a cunning thief, a robber, or a warrior, in most cases, however, as a travelling merchant who is a favourite of fortune: such were the visions which, designed originally to captivate the imagination, many endeavoured to realize in practice. Here,

[1] Quoted in Jacob, *Altarab. Beduinenleben*, p. 220.

in fact, we find a society that fostered the virtues of worldly wisdom, polite intercourse, tolerance, and business initiative, and at the same time practised the old and prevalent vices in more refined forms. The higher ranks in Muslim countries, even in cities of more recent foundation, became infected—under the influence, it must be conceded, of Byzantine and Persian ideas—with the vices of the κίναιδοι, who were in great demand as musicians and singers, as also with all the mischiefs attendant upon the practice of keeping *harîms* and eunuchs.

The civilization of Muslim lands, in the first three or four centuries of its development, reached a height that it never again attained after the irruption of the Turks and the Mongols. In the cultivation of science and art, in the refinement of manners, in the systematic provision for the treatment of illness and for other public services, it was, as far down as the 12th cent. A.D., and in part even later, in advance of Christendom and the West. In intelligence and outward culture the Muslim showed himself superior to the Crusader, but whether he stood higher also in an ethical respect it is not easy to decide. What was morally good in him was nurtured and cultivated in secret, and, when it was exercised with the supercilious and ironical air of a Saladin, it was perhaps no longer good at all. But, be this as it may, it is certain that in a moral aspect the Muslim world, even as it exists to-day, is rather to be compared —to leave absolute standards out of account altogether—with mediæval Europe than with the conditions of our modern civilization. In order to put the matter in a clearer light, and in view of the fact that Muslims of the present day are seeking in considerable numbers to assimilate Western culture, it will be well to add a few observations on the point.

Various as are the ways in which the many systems of religion and philosophy set forth the essence and the religious sanction of morality, there is one feature common to all, viz. the requirement that the individual shall, on the one hand, permanently hold in control the moods and pleasures of the moment, and that, on the other, by a process of constant self-expansion towards the ideal of humanity, he shall adjust himself to, and play a useful part in, a smaller or larger whole. Every stage of civilization has its rightful measure of stability and its appropriate sphere of operation—these being conditioned by the sway of the forces of nature without, and of the impulses of nature within; and under this sway, while the West has been making progress, the East has stood still, yielding to its changing destinies with a species of fatalism.

When we go a little more deeply into the popular literature of Islām, we recognize the elementary stage of its underlying morality. In the following paragraph a number of particulars are combined in a sketch which, though its dependence upon romantic sources, such as *The Thousand and One Nights*, will be obvious to all, may nevertheless help us to form at least a relative estimate of Muslim morality.

There is no theme that fills so large a place in this literature as the vicissitudes of fortune. Just as the peasant lies at the mercy of rain and sunshine, so does the citizen depend upon the favour and good-will of his superiors. Human life has no stability: the beggar of to-day may be a king to-morrow, and conversely; while one who to-day drinks deep at the wells of pleasure may to-morrow renounce the world. There is a corresponding lack of perseverance: people live for the day and do not lay by. Then the law against taking interest stands in the way of a profitable investment of capital. The idea that the giving of charity, especially to crazy devotees, is in itself a meritorious work, is an encouragement to idleness. A man's living and prosperity are supposed to be dependent, not upon work, but upon Allāh or some magical power. Many are, of course, often reduced to want, but there are occasional festivals at which everything is surrendered to merry-making, and the savings of a year are squandered in a day. The absence of steady self-control makes itself felt everywhere. Promises are lightly forgotten, and secrets lightly betrayed. Men cannot curb their curiosity, and so bring disaster upon themselves; and it is curiosity also that prompts them to make adventurous journeys. They make gifts freely, but give in order to receive again. They fall in love at first sight, and transfer their affections easily and frequently. Passionate weeping and lamentation alternate with extravagant rejoicing or helpless dismay. It is true that many have acquired the power of controlling their looks and bearing—or, rather, of hiding their feelings; but, when they seem to overlook an injury, and really defer their vengeance till a more favourable opportunity, the ethical character of their emotion or of the eventual deed of revenge is not thereby altered. But the man who has the power to strike never fails to indulge the impulse of the moment; he mutilates and beheads without any serious inquiry as to the guilt or innocence of his victims; and repentance often comes too late, and when it can no longer avail. Great as is the venality of judges and officials, their credulity and caprice are greater still. Mere arbitrariness, finding expression now in extravagant kindness and now in atrocious cruelty, appears to be the sole rule of a society so constituted, while patient submission is its supreme virtue. A typical representative of a class far from uncommon in the smaller Muslim State of mediæval times has been limned by Ibn Baṭūṭa in a single sentence: 'From his gate was never absent the beggar who received an alms, nor the corpse of one who had been executed.'[1] The potentate referred to was Muḥammad Tughluq, Sultān of Delhi (A.D. 1325–51).

The wider psychological explanation of these various phenomena (which are not without significance even for modern Islām) has been given—not perhaps without some indebtedness to Plato's *Republic*—by Ibn Khaldūn (b. Tunis, A.D. 1332; d. Cairo, 1406). He points to the limitations of psychical force within which alone the social and political energy of Islām has hitherto had an opportunity of asserting itself. The most telling instance of this is seen in the soon-exhausted vitality of the various dynasties. A dynasty usually begins with two or three vigorous rulers, who settle and maintain their kingdom; then its energies begin to flag, and the heritage of the fathers is consumed in enervating luxury. A dynasty such as that of modern Morocco—one which, though now apparently approaching dissolution, has lasted since 1659—is a rare exception in Muslim history. In Islām no ruling house has ever been able to maintain its position without the slaughter of relatives and war among brothers. And, while it is true that the same sinister features, with all their significance for the state of public morality, are found also in mediæval Christendom, yet it is in Turkey alone that fratricide has been legally sanctioned, as falling within the domestic rights of the Sultan.

10. The present condition.—Islām, in its diffusion from Morocco to the Malay Archipelago, is professed by races of widely different character. In N. Africa negroes of an easy-going and untrustworthy temperament, though often fanatically devout, and Berbers, in part semi-savage and difficult to subdue, live in close proximity to mixed city populations, with whom they have as little in common as with the hard-working, all-enduring Egyptian *fellahin*. In Western Asia the Arab brigand comes in contact with Turkish peasants and soldiers, as also with Persian merchants. The Muslims of India, who are among the most loyal subjects of the British Crown, are very different from the Afghans, a people proud of their independence. In the Dutch East Indies are found the quiet and tractable Javanese as well as the predatory and warlike Achehnese; and many more instances of diversity might be given. Notwithstanding the common faith of these peoples, they do not form a homogeneous ethical whole. The violent political disruptions which have taken place since the shortlived glories of the Umayyad and Abbāsid khalifates have been anything but favourable to the growth of fraternal unity throughout Islām.

Nor is there any lack of social and economic dis-

[1] *Voyages*, tr. Defrémery [2], Paris, 1874–79, iii. 216.

parities in Muslim countries. Slavery still exists, more particularly in the forms of eunuchism and concubinage. As the slaves, both male and female, are kept from motives of luxury and pleasure, they are relatively well treated. Such cruelties of capitalistic exploitation as we hear of in the annals of Greece and Rome, or in the more recent history of the plantation system in the Indies and America, are seldom or never found in Islām. The Muslim owner frequently treats his slaves, and even his dumb animals, more humanely than his fellow-men of equal standing with himself. Here, moreover, it is accounted a good and praiseworthy work to educate slaves and then grant them their freedom.

The further division of Muslim society into classes is not everywhere the same. It strikes the Western mind as primitive, mediæval, or, at least, as pre-revolutional. In India, for instance, Islām has not entirely abolished the system of caste. The inhabitants of cities in Western Asia were still in many cases segregated according to their various trade-gilds. An illustration is furnished by the membership of the first Persian Parliament, which by the constitution of the 5th of August 1906, was composed of the following representatives: (1) those of the princes and the ruling house (the only nobility in the proper sense); (2) those of learned men and students; (3) those of the merchant class; (4) those of landlords and peasants; and (5) those of the various industries—one member for each gild (embracing from three to nine trades).[1]

It is impossible in the space at our disposal, and especially in view of our defective knowledge of the more private life of Islām, to deal exhaustively with the morals of all these peoples and their various social ranks. We shall, therefore, confine ourselves to a few general observations regarding Muslim life as actually affected by the moral code.

Islām lays upon its followers the duty of propaganda—of active effort in spreading the faith, either by the peaceful methods open to merchants and traders, or, where possible, by the holy war. This demand has pronounced moral effects. For the Muslims themselves the result is twofold: on the one hand, sinister—in so far as an impulse is given to fanaticism; and, on the other, favourable—in so far as active virtue is sustained by a manly pride and by the consciousness of belonging to a vast and effectively expanding organization. With regard to this propaganda, nevertheless, the present political situation of Islām is anything but propitious. There are in all some 225 millions of Muslims; but of these about 65 millions live under British rule, 35 under Dutch, 30 under Chinese, 20 under Russian, 20 under French, and so on; while the Turkish empire, the last great power of Islām, and in the 16th cent. the strongest State in Europe, is now being harassed on every side. It is possible, however, that the diffusion of Islām among lower races, like the less civilized tribes of Africa, may prove effective in raising their moral conditions to a higher level.

Throughout Islām the religious law has a powerful influence in family life. Christian writers have usually a good deal to say about the Muslim form of married life—polygamy. The law permits any man who has the requisite means to have four wives, and as many concubines as he wishes. But it should be borne in mind that this permission is circumscribed in practice by the fact that the number of women is not unlimited, as also by the economic conditions, which allow only the prosperous few to maintain more than one wife. Monogamy is all but universal among the peasantry, and is practised by the majority of townspeople. As a matter of fact, polygamy has nothing like such baneful effects as the facility of divorce, also sanctioned by the law. It is not so much the practice of having more than one wife at a time as that of frequently changing the wife that works great moral harm in Muslim society. The husband can put away his wife at any time and for any reason, provided only he repays her dowry or gives her a compensation. This extreme liberty of divorce, which is certainly incompatible with all higher culture, is very widely taken advantage of, and the result is the derangement of domestic relations and the neglected training of the young.

In most Muslim lands the position of women is an inferior one. The Qur'ān explicitly declares the superior status of men. Tradition and popular proverb have it that heaven is full of poor people, and hell of women, and that women are deficient in understanding and religion. But they have, of course, their own peculiar type of intelligence, as also of religion, which the men call superstition. Women attend the mosque much less frequently than men, but are, on the other hand, much more addicted to the magical arts and to the practice of visiting the graves of holy miracle-workers. The latter custom, however, has in many cases no deeper motive than visits to the bazaar or the baths.

The Muslim reckons the preservation of his own life as one of his primary duties. Suicide is rare in Islām. It is prohibited by the Qur'ān, as is also the killing of one's neighbour, though the latter prohibition is not so scrupulously observed.

The moral practice of everyday life is regulated in Islām, as elsewhere, more by circumstances than by religious law. The ordinary offences are due to momentary weakness, sensuality, or defective memory, rather than to evil will. In some respects the religious law, when it is not hypocritically evaded, tends to clog the wheels of progress. The interdict against interest, and the fast of Ramaḍān—the latter being in the main rigidly observed—militate against a settled commercial life; and alms-giving, as was said above, encourages idleness. The theme of perennial interest is either enjoyment or else abstinence therefrom, while a man's daily work is not regarded as having any ethical value. Praying, or begging, or even being insane is thought of by many as providing a more excellent career than working or trading. Study of the law is frequently prized more highly than obedience to it. In the greatest Muslim university, the Azhar, in Cairo, and elsewhere, many continue their study of the sacred sciences till old age—not, however, with a view to becoming useful members of society, but simply in order to win a higher place in Paradise.[1] By way of instructing the faithful as to the right disposal of their wealth, a Cairo newspaper recently published the will of a pious Sayid—a genealogist and a sheikh of the Azhar—who died in 1906. He left one-third of his property for a distribution of bread among the poor; a granddaughter received 3000 piastres; his books were bequeathed to his two sons, and his clothes to the poor students and learned men of the Azhar.[2]

An example of the false analogies to which the Muslim is led by his fatalistic trust in God may be seen in his condemnation of the principle of insurance. A shaikh of the Azhar says in a *fatwa* that life and fire insurance is to be regarded as gambling, and as contrary to the spirit of the Qur'ān.[3]

One great obstacle to the development of social morality in the East has been from time immemorial the corruption of official life. Both in Persia and in Turkey, however, voices are now being raised in favour of a purer public service. Thus a celebrated preacher in Teheran recently uttered the following words from his pulpit: 'We have, thank God, the best law in the world, for we have the Qur'ān, and we do not desire the laws of Europeans. But what we might well take from them is their method of appointing and supervising officials, and of collecting taxes in such a way that none need suffer extortion.'[4] The rapacity of governments and officials has often pernicious results upon pious bequests—the so-called *waqf*-endowments. In various ways, and sometimes doubtless in the interests of justice and morality in a higher sense, the dead hand is compelled to move again. In the hands of devout teachers of the law these funds have been used as a weapon against the State, and the State accordingly encourages their secularization, though, as we might expect, the process is seldom carried out without fraud. Another consequence of the systematic extortion that prevails in Oriental life is that many strive to conceal the fact of their wealth, as they would conceal heretical opinions. The majority, however, lay out their easily won gains on houses, finery, and large retinues of servants.

The middle classes, who devote themselves by preference to trading—industry is everywhere in a backward condition—have generally a bad reputation for self-interest and avarice. This is possibly an exaggeration, and in any case these vices are not confined to Islām. It cannot be denied, indeed, that in the East the policy of fixed prices prevails still less than in Southern Europe, and that many Orientals have little natural repugnance to falsehood. But to say that commercial honour is here unknown, or that lying is not reckoned a sin among Muslims generally, is mere slander, though it may be admitted that the Muslim, like the majority of mankind, judges of truth and falsehood from the standpoint of immediate advantage rather than from that of morality.

The official moral code has less to say about the means by which a man earns his living than about the way in which he enjoys, or refrains from enjoying, his gains. But how does the matter stand in actual practice? One feature that forces itself upon the eye at once is that many morally indifferent commandments and usages are the most widely and most zealously observed of all. The laws against luxury and intemperance are much less strictly adhered to. As regards luxury, indeed, some measure of dressing and finery is permitted to children, who as yet cannot commit sin; and to women, who are lost in any case; while the men as a rule study to be simple in dress and dignified in bearing. Many Muslims produce a favourable impression by their unaffected manner and their temperate habits. The prohibition of wine is observed by the majority; but it must be granted that with many Muslims *ḥashish*, opium, and other intoxicants take the place that alcohol has in the West. There are many opium-smokers in Persia and Turkey, and there is also a considerable amount of wine-drinking. In India the use of opium keeps pace with the spread of Islām itself. But the Muslims of the Celestial kingdom are said to be much less addicted to this vice than their Chinese masters.

With these insufficient references to the morals of contemporary life in Islām this article must draw to a close. The question as to the ethical significance of Islām for the future is one easier asked than answered. If the sacred law continues to be interpreted literally, then, though it may still prove helpful to peoples at a lower stage of civilization, it will in other circumstances act as an obstacle to moral development. Among more highly civilized peoples, Islām must either degenerate into a mere sect, or else adapt itself anew to new conditions. It must come to realize—as in many quarters, indeed, it has already realized—that the laws of Muhammad and the tradition were given in view of the primitive conditions of an earlier age. Will the modern Muslim community, in assenting to this idea, be able to raise itself above the Qur'ān and the *sunnah* without surrendering Islām itself?

T. J. DE BOER.

ETHICS AND MORALITY (Parsi).—1. The place of ethics in the religious system of the Avesta.—The religion of Zarathushtra, qualified by the Avesta and the Pahlavi books, is in the fullest sense of the word a religion of morality. When comparing Persian religion with Indian, we see in the former a moral interest take the place of the sacrificial and philosophical interests of the Brāhmans. This moral interest corresponds with the practical and political character of the Persians themselves; but the Zarathushtrian ethic has its real foundation in the religious system of the Avesta. This system we know as a dualistic one (see DUALISM [Iranian]). Already in the theology of the *Gāthās*—the oldest part of the Avesta, originating perhaps in the time of the Prophet himself or in that of his nearest successors—we hear of the two opposing Spirits, the pure and good Spirit Ahura Mazda (Ormazd [*q.v.*]), and the evil and impure Angra Mainyu (Ahriman [*q.v.*]).

'Of these two the wicked Spirit chose to do the most evil things, the holy Spirit chose Righteousness and those men who in performing acts of purity please Ahura Mazda' (*Yasna* xxx. 5). 'And, when the two Spirits first met, they created as the first things *Life and Death*, and as the final end *Hell* for the wicked and *Heaven* for the Righteous' (*ib.* xxx. 4).

The conception of these principles of Life and Death is elaborated in the idea of two real empires, the one being the dominion of Ormazd, the other that of Ahriman. As these two empires are not divided according to the natural division of material and spiritual, they rule together in Nature, and in bodily phenomena as well as in spiritual, as do life and death, good and evil. The motto of Ormazd's empire is 'the furthering of life' (*frādaṭ-gaētha*), and the words are almost a war-cry in the combat; the angels of Ormazd, the *Amesha Spentas* (*q.v.*), 'Immortal Holy Ones,' are always described as the 'furtherers of the living,' that they may not wither or decay; while, on the other hand, the chief of the Evil Spirits is called *Pourumahrka*, 'Full of Death.' From a formal or moral point of view the two principles might be defined as Purity and Impurity—Purity containing all the vital forces of the world, Impurity all the forces of death. It is the sacred duty of man, and constitutes his moral righteousness, to uphold the forces of good; and so we see *purity*, *holiness*, *righteousness* appearing as identical conceptions, and all included under the one word *aša*. This *aša* is the fundamental idea of the Zarathushtrian religion. Personified, it is the angel *Aša Vahišta*, 'The Best Righteousness'; and, as the *summum bonum*, *Aša Vahišta* gives its name to Paradise (= New Pers. *Bahišt*). The final aim of religion, the regeneration of the world, corresponds with this idea of righteousness. It endeavours to make the world absolutely pure and righteous, free from every defilement of evil and death.

This dualistic idea, found already in the *Gāthās*, is developed further in a mythological direction in the Pahlavi book *Būndahiš*, where the Evil Spirit attempts to destroy what the Good created. He is conquered, but is allowed to continue his evil work in the world for a time, in order that it may be perfectly manifest how bad the evil is, and that good deeds and a good life constitute the only right in the world. This tolerance of evil is to last for 6000 years, after which period the final processes leading to the victory of Ormazd begin. These 6000 years make up the period of the actual world, and so this world-period is naturally a time of *struggle* between the powers of Good and Evil (cf. AGES OF THE WORLD [Zoroastrian]). The later Avesta (*Vendīdād*, i.) describes the beginning of that struggle as a twofold creation—Ahriman always creating something evil, in imitation of each good thing created by Ormazd. So Nature itself becomes twofold—good things and pure creatures always mingling with the wicked inventions of the Evil One.

The world of spirits is divided into good and evil, and so is it in the world of men: Ahriman is the chief not only of Evil Spirits, but of unbelieving men. The great problem of life is now (1) Who shall prevail—Ormazd or Ahriman? and (2) What can be done to further the cause of Ormazd? *Religion* solves this problem. To believe in Ormazd is to believe in his cause—to believe that he is right, and that he has the power and will obtain the victory at last. This belief must be not only theoretical but practical. To belong to the empire of

Ormazd is to struggle for his cause, to work out his ideas in the world, to realize the good and pure in Nature, as in the life of man. Thus the Good One and his followers struggle *together* against the powers of evil, and the final victory will depend on this collaboration of God and man. No other religion has made the work of man a condition of the ultimate success of the Divinity; and, because the system of Zarathushtra does so, we may truly say that in a unique sense it is the religion of morality: duty being an inherent religious necessity, and moral actions the inevitable consequence of the religious principle.

2. **Morality a struggle against the evil spirits.**—This morality is, however, no pure morality in our modern sense of the word: the immediate struggle against the evil spirits forms a large part of the duties of man—especially of his sacrificial and ritual duties. For the priesthood the actions involved in the performance of the cult are the most important, but this cult has its meaning only as a combat against the evil spirits, and as a system of purifications to expel the evil spirits found in Nature and in human life. Against the evil spirits the priests are armed with a mighty weapon, consisting of the pure elements, and especially of the holy fire which is always kept burning as an ever active power of purification. In ordinary human life a great multitude of observances are needed for keeping the evil spirits at a distance; among these, *cleansings* are the most important, for evil is always considered as a form of impurity. At the same time the cleansings have the power of expelling the evil spirits; and many performances that would commend themselves to us as being practical and useful are, according to the Persian ideas, in reality effective because they expel the indwelling evil spirits. Water, for example, has a real anti-demoniac efficacy, and not merely a hygienic or æsthetic value, as in our modern view. Again, after an illness all the bed-clothes must be cleansed with the utmost care, not so much to obtain clean bed-clothes as to free them from the indwelling evil spirits. Every sickness and the natural states of organic life, such as menstruation, are understood to pertain to the great realm of death and devils. Every dead thing belongs to Ahriman, is impure, and makes impure; therefore ritual observances of cleansing are needful when one has touched a dead dog, a dead man, or any other dead body—only, however, if the creature, when living, belonged to the realm of purity.

Thus the customs of mourning imply at every step the expulsion of evil spirits, the purification of the house, the family, and the district where the evil spirit of Death has dwelt. The Parsis to-day bring the dead bodies of men and of dogs to the 'Towers of Silence,' where they are exposed to the birds of heaven, in order that earth, fire, or water be not defiled by the burning or other destruction of the bodies. But, on the other hand, the corpses of evil men or of noxious animals convey no impurity, since by their death the demon has left them (*Vend.* v. 35–38; cf. DEATH AND DISPOSAL OF THE DEAD [Parsi], § 3).

3. **Morality as an art of civilization.**—Besides the actual decease of living creatures, every state implying a poverty of life or a tendency opposed to life, in Nature and practice, is considered as a manifestation of death, and so, naturally, of the action of evil spirits. Therefore unfruitfulness, cold, destructive heat, withering, noxious substances, blight, weeds, harmful insects, etc., all belong to the empire of Ahriman, and are to be striven against in the works of man. Thus religious duties go hand in hand with the work of *civilization*. In the time of Zarathushtra this civilization referred mainly to a nomadic and an agricultural community. The pious man ought to treat his cattle well, to nourish them, and not slay them for useless sacrifices; and this care for the cattle led in later Parsiism to the classic symbol of pious morality. Besides these virtues of the nomad we hear much in the later Avesta of agricultural duties: the cultivation of the fields, cutting of canals, construction of roads and bridges, building of houses, and manufacture of agricultural implements are all important and necessary duties of the faithful. The weeding of the fields and the destruction of noxious insects and beasts are meritorious deeds, tending to obliterate the boundaries of Ahriman's empire. The duties of an agricultural life provide the religious ideals of the Persians, and in the religious texts we continually meet with pictures drawn from agriculture which are used to illustrate the holy life.

To the question where the earth enjoys the best fortune, Ahura Mazda naturally answers: first, 'Where most sacrifices are made, the laws obeyed, and praise given to the Gods.' Then follows the second answer: 'There it is, where a believer builds a house, with priest and cattle, with wife and children; where cattle and holiness flourish, and food and dog, and wife and children, and all abundance.' And thirdly he says: 'There it is, where the believer grows most corn and grass and fruit; where he waters the dry soil and drains the damp' (*Vendidād*, iii. 1–4). 'For that soil is not blessed which lies long uncultivated, waiting for an husbandman, like a ripe maiden who goes childless, longing for an husband; but to him who works the soil with both arms will she bring riches, as a beloved spouse brings her child to her husband' (*ib.* 24 f.).

With this desire for cultivation goes the representation of its religious meritoriousness and of its holy power.

'Who sows corn sows holiness,' is a saying of the *Vendidād*, which also declares: 'When the barley is arranged (for threshing), the demons begin to sweat (for fear); when the mill is arranged (for grinding the barley), the demons lose their senses; when the meal is arranged (for leavening), the demons howl; when the dough is arranged (for baking), the demons break wind (for fear). Here let some of this leaven be ever in the house to cast upon the demons; let their mouths be burned by it; they are seen to turn to flight' (*ib.* 31 f.).

4. **Higher ideas of morality.**—The norm of ethics is based upon the principle of utility contained in the Avesta. But that utility has in many cases an ideal character, and leads, at its height, to a real ethic even in our sense of the word. The productive activity of man is always highly esteemed. Nothing may be done that might curtail life in any sense. Therefore we never find any ascetic elements in the ethics of the Avesta (see ASCETICISM [Persian]); on the contrary, it is the duty of man to be in health and vigour, that he may work well for the cause of Righteousness. He ought to marry and become the father of strong children; every act that could diminish the fertility of man is strongly prohibited. Chastity is a necessary duty; and every form of unnatural sexual relation is forbidden and severely punished, as being under the power of evil spirits and leading not only to impurity but to the destruction of life. In the later contest with the Manichæans in Persia, the positive character of Zarathushtrian ethics is always evident, and a chief point in the policy of the Zarathushtrian priests was to conduct a polemic against the various forms of asceticism, such as celibacy, fasting, self-flagellation, and other forms of mortification of the flesh.

Besides the immediate obligation to care for oneself and for the race, we meet a series of duties always highly esteemed in practical life: for example, industry, temperance, economy, the keeping of early hours, assiduousness in all practical things. But the principle of purity and usefulness in life leads to a still higher ethical plane, where righteousness is understood not only as being outward purity and practical deeds, but as the true realization of right conduct in life, including truthfulness, uprightness, justice, faithfulness, and generosity. These elements are demanded not

only as pointing to social instincts necessary to the life of the community, but as being also personal qualities inherent in the highest type of Persian manhood, and giving to it its highest value. The truthfulness praised by Herodotus (i. 136) as one of the elements in Persian education includes, without doubt, the duty of speaking religious truth; so at least the *arš-ukhdha vāxš* ('truth-speaking') of the Avesta is to be understood. Truthfulness in the moral sense is found, if not directly in the Avesta, at least in the ethics of the Pahlavi books; and here we note also how a city civilization in Persia leads to a higher moral state than that of an agricultural utilitarianism. The inward qualities of man—the tender emotions, benevolence, thankfulness—are mentioned in the Table of Duties in the *Dīnā-ī Maīnōg-ī Khraṭ*, ch. 37. Of the thirty-three duties mentioned in that chapter we choose some characteristic ones: benevolence, truthfulness, thankfulness, contentedness, to further the welfare of the good and to be a friend of all men, to marry one's sister, to adopt children, to labour industriously, to respect the capacities and goodwill of every one, to keep maliciousness and untruthfulness far from one's mind, not to show rancour, not to be libidinous, not to be quarrelsome, not to touch the goods of travellers and the unprotected, not to give way to anger, to exercise self-control, to resist laziness, to be happy oneself and to further the happiness of others, to help the good and to protect against the evil, to be careful not to speak untruth, to be scrupulously careful in keeping one's word, to open one's house to the sick, the poor, and the traveller. This is, as we see, a composite scheme of ethics, where a very refined moral outlook is combined with remnants of relatively primitive social customs—*e.g.*, the marrying of a sister, which in the times of the Achæmenians was regarded as a mark of the highest aristocracy.

5. Morality.—Parsiism being in this extreme sense of the word a religion of morality, the community naturally found a special task in upholding morality and educating the people in good works. The daily life of the priests was, of course, much taken up with ritual matters of cleansing and exorcism; but these rites included many moral and pedagogical elements—*e.g.*, to insist that it is the duty of men to cleanse themselves from every defilement, as it is their duty to expel the devils by the doing of useful works. It was the office of the priests directly to oversee and govern these multifarious exercises, and they had also to instruct husbands and wives in their duties and to punish them when these duties were not fulfilled. The name of the priest who had the latter function, *sraoša varez*, 'he who works out obedience,' is very significant of the duty, and to 'work out obedience' he used a scourge called by the same name.

The system of penalties belonging to this sacred pedagogic is codified in the moral law of the Avesta, the *Vendīdād*, whose name, 'given against the demons,' hints once more at the characteristic identification of demonology and morality in the Avesta. The idea of *sin* which usually meets us in this book is, therefore, essentially a juristic one. The *pešō-tanu*, as the sinner is called, is he who deserves corporal punishment. The conception of sin as an inward state of mind is hardly found in the Avesta.

The deepest guilt is not conceived of as sin, but, from a religious point of view, as unbelief; or, in the extreme case, as worship of the evil spirits. The fulfilment of all duties is contained in the Threefold Rule of Good Thoughts, Good Words, and Good Works (*humata, hūkhta, huvaršta*). Every pious man or woman may produce a great store of these three for gaining the bliss of heaven, and very holy persons, such as priests, may sometimes produce more than is needed for their own salvation. This overplus of good thoughts, words, and works is stored up in heaven as a *thesaurus operum supererogatorum*, to be distributed among the souls that are not sufficiently well provided for.

6. The Final Judgment.—It naturally follows from this system that the Final Judgment will turn upon the question of good works. The Zarathushtrian eschatology knows already in the *Gāthās* two stages of Judgment. The one corresponds to the *judicium speciale* of Christian theology, and is a scrutiny of individual souls; the other, the *judicium generale*, is a trial of mankind as a whole. The former is the trial before the tribunal of Mithra, on the mountain *Chakāṭ-ī Dāītih*. There the *souls* will be weighed in the

'balance of the spirits, which renders no favour on any side, neither for the righteous nor yet the wicked, neither for the lords nor yet the monarchs. As much as a hair's breadth it will not turn, and has no partiality; and him who is a lord and a monarch it considers equally, in its decision, with him who is the least of mankind' (*Dīnā-ī Maīnōg-ī Khraṭ*, ii. 120 ff. [tr. West, *SBE* xxiv. 18]).

Even the soul that is acquitted is punished for its evil works by the angel Asha; then it may pass the Bridge of Judgment, *Chinvaṭ*, which leads to heaven. The guilty fall from this bridge into the gulf of hell beneath (see, further, BRIDGE, ii. 2 (*e*)).

The Final Judgment is carried out on the Last Day, when the bodily resurrection takes place, and the souls, blessed and wicked together, rise again to join their bodies. This Judgment is an immense ordeal, in which resurrected mankind will be required to pass through the molten metal that will overflow the whole earth. Here the true character of each will be tried; for the wicked the fire will burn very fiercely, to the good it will appear like lukewarm milk; but in all cases the fire will destroy every remnant of impurity, leaving man, as well as the whole earth, in that complete state of purity and holiness which was the original state before Ahriman introduced his defilements.

This Last Judgment, as we see, has much of the character of a natural process of cleansing; but in relation to the individual the formal element in the procedure appears; indeed, the idea is founded upon a principle of merciless retribution. The good Mithra has merely the duty of superintending the procedure; the supreme God Ahura Mazda has no part to play at all, the idea of mercy being absolutely excluded from the accomplishment of human destiny.

Nevertheless, the religious community has the power of releasing men from the consequences of their guilt (1) by means of the *Patēt*, the confession of sin made at the moment of death (see EXPIATION AND ATONEMENT [Parsi]); and (2) by sacramental means, viz. putting the holy juice of *haoma* into the ear of the dying. These dispensations are possible only in virtue of the overplus of good works at the command of the community.

Reviewing the whole field, we note the extremely formal and rather juristic character of the Zarathushtrian ethic, while the Persian genius for utilitarianism and things practical always enters into the scheme of righteousness and justice. In the individual life, this ethic appreciates industry, self-control, and veracity; in social life—righteousness, regularity, and social accord. The reverse of this ethic is an abstract stiffness that will not accommodate itself to life, and whose irrational consequences are often inimical to life. The monotonous opposition of good to evil and evil to good leaves no room for the intermediate stages of real life, for the individual and spontaneous states in the soul of man. The Persians cared little for

the emotions of disinterestedness; even in the religious feelings we feel too often the want of lyric elements; on the contrary, we always feel the heavy burden of the juristic spirit. In accordance with this, 'religion' in the Avesta is called 'law' (*daēna*), and the Persians could not distinguish between the two ideas.

LITERATURE.—The only important special treatments of the ethic of the Avesta are in the Introduction to J. Darmesteter's tr. of the *Vendidād* in *SBE* iv. (Oxford, 1895), and in A. V. W. Jackson's 'Iranische Religion' viii. (*GIrP* ii. 678–683), based on his 'Moral and Ethical Teachings of the Ancient Zoroastrian Religion,' in *IJE* vii. [1896] 55–62. Many passages bearing on the subject may be found in general works like J. Darmesteter, *Le Zend-Avesta*, Paris, 1892–3, i.–iii.; C. P. Tiele, *Geschiedenis van den Godsdienst in de Oudheit*, Amsterdam, 1901, vol. ii. (Germ. ed., Gotha, 1896); Edv. Lehmann, *Zarathustra*, Copenhagen, 1899–1902, vol. ii.

EDV. LEHMANN.

ETHICS AND MORALITY (Polynesian, Melanesian, and Malayan).—The character of the Polynesians has been painted both in the brightest and in the darkest colours. The truth seems to lie between the two extremes, and the explanation is to be found in the fact that the Polynesian is a child of nature, and, like all children, under the sway of each passing emotion. It was the better side of the Polynesian character which first impressed the early voyagers. Their lightheartedness, their ceremonious courtesy, and their abstinence from petty quarrels led their European discoverers to fancy that there was no darker side to the picture. Yet the same childish superficiality which filled them with unrestrained joy could fill them in an instant with melancholy which might not stop even at suicide. Nor was their lightheartedness always ingenuous; it often formed a cloak for falsehood and treachery. In many of these cases the Europeans were not free from blame, provoking, by their violence and licentiousness, such revenge as the weaker natives could inflict. On the other hand, perfidy was common between the Polynesians themselves, so that wars were conducted by ambuscade rather than by open attack. One of their leading characteristics was revenge, which was often concealed for years with deep secrecy until a fitting opportunity occurred for its gratification. This principle of revenge, which, it must be borne in mind, is reckoned a virtue rather than a vice among many peoples, frequently led to the vendetta. Thievery and robbery were considered commendable and skilful when practised against foreigners; yet among themselves or towards those who had been adopted into their number, as well as in regular barter, the Polynesians evidenced a high code of honour. In like manner, they possessed the primitive virtues of hospitality and generosity, though these qualities, like their honesty, suffered from the coming of the whites. Indolent and fitful at work, the Polynesians were, nevertheless, devoted to war; yet flight was not regarded as a disgrace. The Tahitians regarded wounds in battle as marks of awkwardness and foolishness. Their wars were conducted with the utmost cruelty and with pitiless barbarity towards captives, though, on the other hand, there was in New Zealand and Tonga a noble recognition of a prisoner's valour. Closely allied with their bravery in war was their pride, even though this sometimes degenerated into vanity. In the use of spirituous liquors the Polynesians were originally extremely temperate, but their licentiousness, especially in Tahiti, was almost incredible. The abstract was by no means lacking among the Polynesians. Noble deeds were admired, and the Tongans struck the keynote of hedonistic ethics when they said: 'After a good deed one feels well, therefore we do good deeds.' Shame for theft or other unseemly conduct was by no means rare, and the ethical sense grew steadily higher with ascent in the social scale.

The position of women throughout Polynesia was comparatively high, although they were not considered equal to men. Ill-treatment was rare, and women were often admitted to the councils, possessing an influence which was very real. Heavy toil was spared them; and where, as in Hawaii, they did not eat with the men and were forbidden the enjoyment of certain foods, this was due in most cases to the laws of tabu. Pre-nuptial chastity was unknown, excepting in the higher classes, and the utmost indelicacy in conversation and jests prevailed throughout the islands, especially in Tahiti. After marriage, chastity was more strictly preserved, and the adulterer was severely punished. On the other hand, those who were united to a husband by the blood-covenant might regard his wife or wives as their own. From this must be distinguished a husband's prostitution of his wife, especially to Europeans. Unnatural and secret vices, as well as incest, were disgracefully common, all combining with the general licence to aid in the decay of the Polynesian race. Parents met with scant esteem from their children, yet, despite the prevalence of infanticide and abortion, they were devoted to those who were allowed to survive. The status of slaves was toilsome, yet relatively merciful. Punishment for crime was stern, among the penalties being death and mutilation, while the *lex talionis* was common throughout the Polynesian Islands, and extended not only to the criminal but to his family, although pecuniary compensation was not unknown.

The character of the Melanesians was ethically inferior to that of the Polynesians. Thus theft was extremely common, especially in Fiji, where it was punished only when committed against compatriots. In like manner, the Melanesians were notorious for their falsehoods, except that one's own deeds were never denied. Proud and revengeful to the last degree, they forgot no injury, seeking requital both by murder and by black magic. They were cruel, but were cowardly rather than brave. On the other hand, the Melanesians were very susceptible to civilizing influences, and in their courtesy and hospitality were little inferior to the Polynesians. The position of women was less elevated among them, however, since wives were obliged to do the heavier sorts of work and to surrender the greater part of the adornments to the men. Their condition was particularly debased in the Fiji Islands, where they were in the absolute power of their husbands, and were frequently maltreated. Melanesian women were far more chaste than their Polynesian sisters, even the unmarried girls observing strict chastity. In the Fiji Islands sexual relations were unknown before the young men had reached the age of eighteen or twenty—a restraint which in its time checked the shameless precocity which prevailed in Polynesia. In Melanesia strong affection prevailed, for the most part, between parents and children, and they were carefully educated, although they had no ethical training. The practice of infanticide was shockingly prevalent, two-thirds of the children in Fiji being killed as soon as they were born—often by people who made this their profession; girls were the chief victims, because they could not be warriors. Abortion was also extremely common; yet, if an infant survived the first day, it was safe, and was treated with all tenderness. The immorality of infanticide and the murder of the aged was lessened by the Melanesian belief that human beings lived in the future life in the age and the estate in which they were at death. The aged, or those afflicted with long and tedious illnesses, were put to death either by burial alive or by abandonment. The sick and aged themselves desired to die thus, and it was accounted a tribute of love for sons to put them to death. Whether the practice of cannibalism may properly be considered

as appertaining to ethics is somewhat doubtful, but it may be noted that this custom was prevalent throughout both Polynesia and Melanesia. (See CANNIBALISM.)

The characteristics of the Polynesians and Melanesians are most clearly defined in Tahiti and Fiji respectively. The one people was facile, mercurial, social, relatively cultured, kind, and chivalrous, but marred by an all-pervading and enervating sensuality; the other was cruel, treacherous, and inferior to its kindred race in almost every respect save that of sexual purity.

LOUIS H. GRAY.

ETHICS AND MORALITY (Roman). — *Sources.*—In scarcely any field of Roman life are we so conscious of the paucity of our sources as in that of ethics and morality. For the earliest period we seem at first sight fairly well supplied, for we have, or seem to have, a multitude of anecdotes and figures from which to draw that picture of the virtuous early Roman in which the later and decadent period of antiquity took such retrospective satisfaction. But, once we have caught up with modern scientific progress in the matter of Roman history, these figures, and even the legends of them, lose all value as contemporary documents. Modern theories of anthropology and primitive psychology take their place. With the beginning of Roman literature our situation improves; but this literature is to a high degree dependent upon Greek models; and, even where it reflects Roman feeling, the latter is merely that of the intellectual classes. Nor does the advent of Greek philosophy, with its formal teaching of ethics, succeed in any considerable sense in enlarging our vision. But, during the Empire at least, the multitude of inscriptions and our knowledge of Oriental cults diminish our darkness.

In spite of these obstacles, the following outline seems tolerably sure; in it an attempt has been made to sketch the evolution of the moral attitude of the Romans from the earliest times until the conquest of Christian ideas. It does not attempt to trace the development on Roman soil of ethics as a philosophical discipline. This is not possible, simply because no such development ever took place. Roman philosophy, to be sure, dealt preferably and almost exclusively with ethics; but it took its origin from Greece, not merely at the beginning, but in every individual attempt, during all its history. It does not, therefore, represent so much a Roman development as the reflexion, among Roman writers, of a development which took place in Greece and the Greek-speaking lands.

The ethical development of any people is a continuous process; but, though the process is continuous, it is, nevertheless, subject to change of speed, and may be accelerated or retarded by circumstances. The acceleration is usually due to the pressure of outside influence, while a lack of foreign impact often tends to quiescence and lethargy in the moral sphere. In Rome's history, between the foundation of the city and the accession of Constantine, there are three such accelerations: the first (in the 6th cent. B.C.), caused by the coming of the Etruscans; the second (in the 3rd cent. B.C.), caused by the victories of the Punic wars; and the third (in the Julian-Augustan age), caused by the influence of Greek philosophy and Oriental culture.

1. The period before the coming of the Etruscans.—In the phraseology of the orthodox history of Rome, this is the period of 'the Early Kingdom.' In it we are confronted with a series of pictures of heroic virtue. The majority of those who have discussed the morality of the early Romans have used these stories as evidence, thus unwittingly spreading utterly false views. Before the middle of the 6th cent. B.C. the Romans had obtained, at best, merely the rudiments of civilization. Their moral life was dependent upon the categorical imperative of obedience to those principles and actions which tended to preserve and perpetuate the race in its struggle for existence. The basal concept of ethics was, therefore, the fulfilment of the obligations which society laid upon the individual members. The moral life of the individual was entirely dissolved into that of the race. Actions were good or bad according as they assisted or hindered the race in its struggle for existence. The intensity of the struggle is reflected in the cogency which these ethical demands possessed, and in the extension of moral feeling into regions of activity which a higher and more civilized state regards as ethically indifferent. This attitude of mind can best be illustrated by those two words which together sum up the ethical ideal of early Rome: *virtus* and *pietas*. *Virtus*, which for this earlier period is wrongly translated by 'virtue' or even by 'valour,' has a strongly sexual implication. It is the possession of the power of reproduction, and its opposite is neither 'vice' nor 'cowardice,' but physiological 'impotence.' It is the rating of the individual in regard to his capacity to act for the continuance of the race. Similarly, *pietas* is simply the respect and homage shown to parents in their lifetime, and to the larger company of 'ancestors.' It is, in a sense, the apotheosis of the continuity of the race. This is its pristine significance, and it is only by extension that it comes to refer generally to the attitude of worship towards the gods.

Thus the obligations implicit in *virtus* are those of the individual to labour for the propagation of the race; and the obligations of *pietas* are the homage of the race for its own continuity. These seem to be the most important positive elements, and they are accompanied by one negative condition: the moral obligation of conservatism and the immorality of innovation. This is, of course, the respect for the *mores majorum*, the customs of the ancestors, which bears its philological testimony in the word 'morality.'

We are thus enabled to understand how, owing to misinterpretation, the half-civilized Italic folk, just issuing from the portals of the age of magic, can figure in the traditional history of morals as possessed of 'virtue, piety, and morality.' It was this kind of misinterpretation which assisted the idea of the 'fall of man,' and of the 'Paradise' and the 'Golden Age' in the past.

2. From the coming of the Etruscans to the Punic wars. — Into this primitive community, busied with the processes of self-preservation and propagation, there came, about the middle of the 6th cent. B.C., the race of Etruscans. The origin of this people, and their means of reaching Italy, do not concern us here; it is sufficient for our purpose to realize that they were a people of advanced culture, possessed of a developed form of government, and of a certain appreciation for art. However decadent they may have grown later, they were a strong and virile people in this 6th century. About a century later, *i.e.* about the middle of the 5th cent., their influence began to be eliminated. But their residence had sufficed to introduce to the Roman people developed ideas of government, and to call forth Rome's natural instinct for law. Rome commenced to realize her own destiny, and patriotism began to be a vital force in the community.

In the sphere of religion it is relatively easy to trace the effects of this patriotic instinct. But its effects were also perceived in the moral sphere. The chief end of man, the *summum bonum*, no longer consisted exclusively in physical increase.

The mass of accumulated power must be put to a purpose. The fulfilment of this purpose became a duty. Thus *virtus* adds to virility the idea of valour, and the *patria* takes its place alongside the *patres* as the object of *pietas*. Thus we step forward into the period of the Republic, with its series of wonderful conquests; and the farmer of the old régime becomes the soldier of the new, while still retaining his farming instincts. This state of affairs continued until the end of the Second Punic War, or, in other words, until the beginning of the 2nd cent. B.C. It is scarcely an accident that at the opening of this 2nd cent. we have the remarkable words of the old Cato in the introduction to the treatise, *de Agri Cultura*—words which seem to sum up the whole ethical situation. Speaking of what their ancestors (*majores nostri*) thought, he says:

'And when they praised a man and called him good, they praised him in this fashion, that they called him a good farmer or a good tiller of the soil. And he who was thus praised, they considered to be praised indeed. For from farmers are begotten the strongest men and the bravest soldiers.'

Thus production has had added to it conquest; and the whole ethical system gradually adjusts itself to this new valuation. Henceforward, actions are good or bad, not simply as they assist or hinder increase, but also as they further or retard the progress of the State.

3. The last two centuries of the Republic.—The Second Punic War and the wars of the 2nd cent. B.C. brought to Rome great material prosperity. Riches increased with amazing rapidity, and large private fortunes became less and less uncommon. At first these riches were solemnly and frugally invested in lands, but such investments served only to increase the problem by increasing the riches themselves. Thus began the spending of money for luxury, and, later, for mere extravagance. But, as the rich grew richer, the poor grew, if not correspondingly, at least considerably, poorer; and, in any case, the gulf between the two extremes of society gaped open more widely. The effect of riches and of poverty was in so far similar that each alike begat indifference to ideals. The simple life of the fathers was impossible for either class: for the one, because they were choked with riches; for the other, because they were throttled by poverty. Thus the old life was forgotten; and it was not many decades after Cato's death before a man was 'good' according to the extent of his riches—the essential *bona*—rather than because he was a good farmer or a good citizen. That was already true which Cicero says (*de Republica*, i. 51): 'In their ignorance of virtue, they call those the "best men" who live in riches and plenty.' Similar phrases are found a century and a half earlier in Plautus (*Curculio*, 475; *Captivi*, 583); and, though here they doubtless go back to Greek originals, they could count upon an answering echo in the Roman audience. The commercializing of ethics was the inevitable accompaniment of the general commercializing of human life. The older maxims of severe frugality and patriotic zeal were not entirely forgotten, and they lived on with considerable power among the now despised farming classes; but gradually, in the city at least, goodness and poverty were incommensurable; and the favourite phrase of Cicero, 'all good men' (*omnes boni*), referred in actual practice to respectable well-to-do citizens. Certainly, in Cicero's informal moments, when he would be more likely to express his real feelings, for example, in his correspondence, it is so used (*ad Att.* viii. 1, 3).

But, in spite of their apparent profitlessness, the last two centuries of the Republic, by this very luxury and self-indulgence, were working out an ethical salvation. By a strange psychological antinomy, through self-indulgence ethical individuality was born; and in the reaction from the depths of sensuous luxury we have the new and severe ethic of individual moral responsibility, which is characteristic of our fourth and last period—the Empire to Constantine.

4. The Empire until Constantine.—The result of the general dissolution of ideals which characterized the last centuries of the Republic was such a condition of scepticism in the realm of theory, and of sensuous materialism in the world of practice, that a moral revolution could not fail to follow. This new idea of morality was based upon the concept of the individual, and his responsibility. It was, doubtless, assisted in its development by the ethical theories of Greek philosophy, which now began to be popular in Rome; but it does not owe its rise entirely to these theories. The influence of Oriental cults was, at least among the masses, stronger than that of Greek philosophy. But both these influences worked side by side; and, although they were based on entirely contrary principles, they seem to have lived together without jealousy or interference. Thus we have the two great crusades for moral regeneration: that of the philosophers, especially the Cynics, and their wandering preachers, proclaiming the doctrine that moral regeneration comes from knowledge, that to know the truth is to do it, and, conversely, that sin is merely ignorance; and that of the priests of the various Oriental cults (of Magna Mater, Isis, Mithra), proclaiming that men are saved from sin and its consequences, not by knowledge, but by faith. It was the latter idea especially which affected almost all classes. The attempt to bring philosophy to the masses was destined to failure; but, where Stoicism failed, Mithra conquered. The world has seldom witnessed a more strenuous moral atmosphere than that which existed during the first two centuries of the Empire. Perhaps the most powerful proof of this statement is to be found in the fact that even the Oriental cults themselves were purified and spiritualized by their residence in Rome. See MITHRAISM.

Thus it came to pass that the Christian ethic, radically different as it was in many respects from that of the other Oriental religions which surrounded it, found many of its tenets in accord with the accepted morality of the day; and its teachings, which would have been almost entirely unintelligible to society in the time of Sulla, were in many respects commensurable with the world of Trajan. There were, however, even then, grave points of disagreement; and, by an unfortunate accentuation of certain Oriental interpretations of the Christian ethic, the old Pagan ethic of patriotism engaged in conflict with the whole Christian system. The conflict raged for centuries, through Julian on to Gratian and to the altar of Victoria, and on to Alaric's capture of Rome, until in Augustine's *City of God* it received at least a partial solution.

JESSE BENEDICT CARTER.

ETHICS AND MORALITY (Teutonic).

—The term 'ethics' can be used in this connexion only in its general sense of 'ethical ideas' or 'recognition of moral obligations,' for we may be very certain that no idea of a system of ethics had ever suggested itself to the early Teutonic mind.

1. Sources of information.—No race has left so much literature behind it with so little of a merely didactic or theoretical nature. All the heathen Teutonic peoples, so far as we can judge, seem to

have been intensely interested in conduct, but mainly as revealing character, not as illustrating abstract principles of right and wrong. In ancient Teutonic society there was no class set sufficiently apart from the ordinary business of life to survey it as a whole, like the poets of early Greece or the Druids of Celtic heathendom. The poets, law-givers, and saga-tellers were fighters and farmers as much as everybody else, and even the priests were not a caste apart—except possibly in England—but only chiefs with priestly functions super-added. Perhaps it is significant that it is in early Anglo-Saxon poetry that we find those traces of reflexion on moral issues, as well as a facility in the expression of ethical ideals, which are so noticeably absent in all other early Teutonic literature; but it is most probable that these characteristics are the result of the early conversion of England to Christianity.

Most of the foreigners who had any opportunity of observing the manners and customs of the Teutonic races were missionaries, to whom the ethical ideas of the heathen made no appeal, so that we can depend very little on outside judgments. From an earlier date, however, the *Germania* of Tacitus gives an admirable outline of the social life of the Germani of the 1st cent. A.D., and everything we know of these races in later times goes to show that Tacitus' observations on their code of morality were in the main correct. Still, in the absence of all open utterance on ethical ideals by the people themselves, we are driven back on the more or less unconscious self-revelation of the old hero cycles and sagas, in which the mere choice of subject betrays where the moral interest of the hearers lay. It is necessary to bear in mind that the period covered is a long one—ten centuries—and that our sources usually reflect the ideas of the ruling classes only.

2. Teutonic virtues.—Such virtues as were vital to the continued existence of the society naturally ranked first in public opinion, and of these (1) the first and foremost was *courage*. Lack of courage is the one unpardonable sin.

Tacitus (*Germ.* vi.) tells us that a German who abandons his shield in battle has committed the basest of crimes, and is shut out thereafter from the sacred rites and from the council; and he adds that many, after escaping from battle, have ended their infamy with the halter. No less emphatic is the curse pronounced on the coward thanes in the Anglo-Saxon *Beowulf*, and it, too, ends significantly: 'Death is better for every well-born man than a shamed life' (*Beowulf*, ed. Harrison and Sharp, 4th ed., Boston, 1901, line 2891 f.).

Many a good man doomed himself to death at the hands of a vastly superior force of enemies because he could not conquer his repugnance to the idea of seeking safety in flight. Even treachery to friends and kinsmen can be condoned or understood, but no one will listen to a justification of an act of physical cowardice.

Many tales reveal how far courage takes precedence of all the other virtues. The faithlessness with which Gunnar and Högni slay their foster-brother Sigurd, in the Völsung story, is wiped out in the eyes of posterity by their heroic defence at the court of Atli, and their still more heroic acceptance of defeat.

The mind unshaken by adversity is the object of the Teuton's highest admiration. An almost American Indian stoicism underlies that grim humour in the acceptance of death or wounds which strikes us so keenly in the Northern stories.

Thormod, St. Olaf's scald, dragging a death-arrow from his breast after the battle of Stiklastad, looks at it as he dies and observes: 'Well hath the King fed us, fat am I yet at the heart-roots' (*Heimskringla*, Morris-Magnússon's tr., 1893-95, ii. 442). When Thorgrim is sent to climb up Gunnar's hall in Iceland to see if he is within, he returns mortally wounded to his comrades, who ask if Gunnar is there. 'You can learn that,' he says, 'what I found out is that his halberd was at home,' and falls dead (*Brennu-Njálssaga*, ed. F. Jónsson, 1908, ch. 77).

Fortitude in bearing the death of friends or kinsmen is also admired, but the betrayal of feeling under such circumstances is readily condoned, especially in the aged, though we can feel the saga-writer's admiration in the tale of the old Viking Thorarin, who hears of the slaying of his son with apparent phlegm, with only a casual inquiry as to his defence, and all the while fumbles with the uncertain hand of age at a dagger with which he attempts to avenge himself ('Thorsteinn the Staff-smitten,' in Morris-Magnússon's *Three Northern Love-Stories*, 1875, p. 261 f.).

(2) *Endurance* and *tenacity of purpose* were allied virtues that ranked with courage. 'Enduring of toil, hunger, and cold, whenever fortune lays it on them,' says Geoffrey of Malaterra of the Normans; and every expedition in the undecked Viking ships must have been a training ground of such qualities. Anglo-Saxon literature, in the poem on the battle of Maldon, supplies us with those two lines which are a very epitome of Teutonic ideals of courage and endurance:

'Our soul shall be the more steadfast, our heart the higher,
Our mettle the more, the more our might is minished.'

(3) But in modern eyes perhaps the noblest of the early Teutonic virtues is the supreme *loyalty* which inspired the followers of any chief or king. A man could choose whom he would follow, or whether he would attach himself to any one, but, once his choice was made and he had become the 'man' of some chief, nothing could wean him from his allegiance. Loyalty transcends all other duties, and will lead men to arraign the gods, and defy Fate itself, as they fall in the last rally by their leader's side, like Bjarki in the story of Hrolf Kraki, as told by Saxo. Tacitus and the *Beowulf* concur in saying that it is a reproach for life to have survived the chief in battle. Even in the 12th cent., when the old heathen virtues were dying out, the young Icelander Ari Thorgeirsson makes a shield of his body for his Norwegian lord, standing weaponless between him and his enemies. This is self-sacrifice born of courage, but the idea of loyalty fostered other virtues besides that of courage—virtues which otherwise would hardly have flourished on Teutonic soil. Tacitus tells us that the chief fights for victory, his vassals fight for their chief; that to ascribe one's own brave deeds to one's chief, to increase his renown, is the height of loyalty. The self-forgetfulness, the abnegation involved can be gauged only by those who realize that personal fame was the highest earthly good of the Teuton warrior. Loyalty was not confined, however, to the warriors by profession, but permeated the whole fabric of Teutonic society. Every little Icelandic farmer expects that his 'home-men,' his farm-labourers, will cheerfully sacrifice their lives on his behalf, and the obligation even extends to the chance guest, so that many a Norwegian merchant in Iceland lost his life in a quarrel that was not his. The call of loyalty is yet sterner in one case on record.

Ingimund the Old has been slain by a base and unworthy hand; and, on receiving the news, one of his old shipmates declares: 'It is not fit for the friends of Ingimund to live,' and falls on his sword. His example is followed by another of Ingimund's old companions (*Vatsdœla Saga*, ch. 23).

We may suppose that this spirit of devotion to a chosen chief had its root in the ancient tribal solidarity which made the whole kindred adopt the cause of any member of it. Only in Northern Germany and the Netherlands, however, do we find this devotion to the kindred unimpaired in historical times, and there it persisted for centuries.

A chronicler of the little land of Dithmarschen, writing after the end of the 16th cent., describes the old kindreds of that country, and how the members of it protected the weakest and poorest against outside aggression, and would risk life and limb for any member of their kin (*Neocorus*, ed. Dahlmann, Kiel, 1827, i. 206). But in Scandinavia loyalty to the chief seems to have been far more binding than loyalty to the kin. Treachery to a master brings infamy, and, in fact, is hardly mentioned in the old tales, but the slaying of kinsmen is frequently dealt with, and, though theoretically disapproved, it does not alienate all sympathy.

Eirik Blodöx is said to have burnt his half-brother Rögnvald

in his house, at the bidding of their father, Harald Fairhair, because Rögnvald had become addicted to sorcery; and 'much was that work praised,' says *Heimskringla* (Morris-Magnússon's tr. i. 133).

How far the new idea of loyalty transcends the duty to the kindred is disclosed in the *Egilssaga* (ch. 22 ff., F. Jónsson's ed., Copenhagen, 1886–88), where King Harald Fairhair treacherously attacks and slays Thorolf, one of his own men, wrongly suspected of treachery. Thorolf has kinsmen, as well as comrades, in the king's bodyguard; but, so far from attempting vengeance on the king or the slanderers, they do not even ask for compensation (wergild) for themselves. Hagen, in the *Waltharilied*, overlooks the slaying of his nephew by Walther, his sworn friend, but cannot refuse to attack him when his king's honour is involved (*Ekkehard's Waltharilied*, Germ. tr., H. Althof, Leipzig, 1902, lines 1109, 1112). Rüdiger, in the *Nibelungenlied*, makes a similar choice between lord and friend (line 2152 ff).

In England this loyalty to the king early developed into *patriotism*, finding favourable soil in the sufferings of the country from the Danes, and in the appeal which such a king as Alfred made to the hearts of his subjects. In other Teutonic States, however, an effective patriotism was a plant of slow growth; and of Norway and Iceland it may be truly said that their foes were of their own household.

(4) In return for the loyalty of his subordinates the chief was expected to be *generous*—'mild,' as all the old Teutonic tongues phrase it,—and the Northern praise of princes, as 'gold-scatterer,' 'bracelet-spender,' and so forth, indicates the form which their generosity took. According to modern ideas, this quality was unduly glorified, and we may guess that it could cover a considerable degree of unscrupulousness in the method of acquiring wealth, as well as a disregard for the general welfare of the kingdom. But its glorification was natural in a State where the fighting man had no fixed wages, and where the poets were the servants of the prince. Even Walther von der Vogelweide considers it reasonable to estimate kings by their generosity towards himself. The chronicler of the Normans already quoted tells us that 'their chief men were especially lavish, through their desire of good report.' His previous cryptic utterance, that they hold a certain mean between lavishness and greed, is perhaps to be explained by the system of gifts and counter-gifts prevalent all through Teutonic society. Tacitus, indeed, says that the Germans 'expect no return for what they give' (*Germ.* xxi.), but the testimony of the most worldly-wise of the old Edda poems is perhaps more deserving of acceptance: 'I never found a man so "mild," or so free with food, that he was loath to receive reward' (*Hávamál*, 40). But the generosity manifested itself also in less questionable forms. The quality which makes it a 'nithing's deed' to take advantage of weakness, and the generous appreciation of an enemy's virtues, merge into the love of 'fair play,' so characteristic of the Teutonic races.

Even King Eirik Blodöx, guilty of the death of several of his half-brothers, cannot kill his deadly enemy Egill, who, wrecked on his shores, has thrown himself on Eirik's mercy; because to do so under such circumstances would be a 'nithing's act' (*Egilssaga*, ch. 61). In a similar position, Kári, who has killed over a dozen of Flosi's companions, is not mistaken in going to Flosi's house and relying on his generosity (*Njála*, ch. 159).

The opposite of a 'nithing' is a *góðr drengr*, a characteristic Northern phrase, only to be translated 'a good fellow,' 'an honourable man'—in fact, exactly what is meant by 'gentleman' when that word is used to denote certain moral qualities.

(5) A kindred duty to that of generosity is *hospitality*, which is even more binding. 'To exclude any human being from the roof is thought impious,' says Tacitus (*Germ.* xxi.); and the same idea is found all over Teutonic Europe in early times, and in Iceland to this day.

(6) *Truth* was a highly esteemed virtue among the Germanic race. Tacitus (*Germ.* xxii.) calls them 'a race without natural or acquired cunning'—an estimate which may be partly inspired by the natural attitude of a sophisticated race towards a barbaric one; for the mediæval chronicler already quoted calls the Normans 'gens astutissima,' and the somewhat cynical Edda poem *Hávamál* has no hesitation in advising its hearers to flatter a false friend and to reward deceit with lies (*Háv.* 42, 45). But Saxo, the early historian of the Danes, says that 'the illustrious men of old thought lying most dishonourable'; and it may be said that the sagas reveal a high ideal of straightforwardness in general. It is characteristic of the Northern trend of thought that there was no sin in a slaying openly confessed, but an indescribable baseness in a secret or a midnight slaying, which was qualified as murder. To lie to a friend would certainly have been thought a baseness, and we meet with individuals who would rather risk their lives than impair their self-respect by lying. The accounts of the early Norwegian kings and their courts reveal that flattery, at least, was not one of the besetting sins of the Northmen. Great sanctity attached to oaths and promises of every sort, and nothing was held to excuse breaches of faith, though instances, especially of truce-breaking, are found scattered up and down the sagas—oftener after than before the introduction of Christianity. To the recognition of an obligation to strict veracity in the recital of stories we owe much of our knowledge of ancient Teutonic customs.

(7) *Modesty*, strangely enough, entered into the ideal of the perfect warrior in Iceland, and boastfulness was regarded with more contempt than censure. In the epics of the heroic age, however, boasting is freely indulged in.

So far we have been dealing with qualities or obligations which are still recognized as virtues and duties in modern ethical systems.

(8) *Vengeance*, however, has not only been degraded from its paramount position among duties, but is placed in a different category altogether. We catch glimpses of a time when it was an absolutely binding obligation, but in all Teutonic States the system of money compensation had been adopted before historical times, to mitigate the recognized evils of blood-feuds. But among a race which, from the time of Tacitus onwards (*Germ.* xiv.), rather scorned peaceful methods of money-getting, it was hardly to be expected that every one should be willing to 'put his (slain) kinsman in his pocket,' as the saying went. The Icelandic sagas give such a vivid picture of the havoc wrought by blood-feuds that the custom of vengeance in the early history of that country is a matter of common knowledge, but its persistence in country districts in Germany is not so generally realized. In many parts vengeance was held to be obligatory, not only on nobles, down to the 16th century.

Thus our sources tell us that in 1577 a Holstein peasant named Graumann, who had more or less accidentally slain another, was killed by the deceased's brothers with 48 wounds. These brothers were proceeded against in a court of law, but were never condemned. In Frisia, as late as the 13th cent., it seems to have been customary for the relatives to hang up the corpse of their slain kinsman under their roof until they had acquitted themselves of the duty of vengeance. In England, so early Christianized, the current ideas concerning this duty are quaintly revealed in a verse made on King Edward's death in 979:

> 'Him would not avenge
> his earthly kinsmen,
> him has his heavenly father
> greatly avenged' (*Saxon Chronicle, sub anno* 976 [Gomme's tr. 1909]).

The idea that vengeance alone can wipe out an insult was prevalent, and has persisted to this day in the Continental attitude towards duelling (*q.v.*).

(9) In the matter of *sexual morality* the heathen Germanic races have always had a high reputation since the time of Tacitus, and on this point Christian priests have added their testimony to his (see Salvian, *de Gubern. Dei*, bk. viii.).

'Their marriage code,' says Tacitus, 'is strict, and no part of their manners is more praiseworthy. Almost alone among barbarians they are content with one wife, except a very few among them, and these not from sensuality, but because their noble birth procures for them many offers of alliance' (*Germ.* xviii.). 'Clandestine correspondence is equally unknown to men and to women' (*ib.* xix.).

This description needs little modification to fit the customs of a much later age. It was no reproach to King Harald Fairhair to have several wives, but it must be especially noted that this polygamy involved no *harim*, for it seems that for the most part each wife continued to live with her own family or in the part of the country where she was born. The Icelandic sagas indicate that divorce was easily obtainable—apparently on trifling grounds; but the fates of Brynhild and Sigurd, of Gudrun and Kjartan in the *Laxdale Saga*, of Björn the Hitdale Champion, and Oddny, show that the persons wrongly mated make no attempt to throw off the marriage bond in order to be free to marry another—presumably because such action was held to be base. It is surely not entirely out of jealousy that the Icelandic Gudrun brings about the death of the man she loves, but because only so can she rid herself of the degradation of preferring another man to her husband, and of the continual temptation of that other's presence. She prefers his death to dishonour.

Tacitus tells us of the punishment of a faithless wife; but later sources, Icelandic and Norwegian, mention no penalty for the woman, though they speak of a heavy fine to be exacted from her lover. The old Norwegian laws make the ecclesiastical fine for conjugal infidelity the same for either sex.

(10) Perhaps the most remarkable feature of the ethical ideas of the Teutons is that *the ethical ideal was the same for both sexes.* Women do not fight, but the wife, according to Tacitus, does not 'stand apart from aspirations after noble deeds or from the perils of war, but is her husband's partner in toil and danger, destined to suffer and to dare with him alike in peace and war' (*Germ.* xviii.); and earlier he tells us how the dauntless courage of the women has been known to rally wavering forces in battle (*ib.* viii.). For Helen of Troy, for the Irish Deirdre, beauty and an unhappy love have been sufficient titles to immortality; but to fire the Germanic imagination women have needed these and more: the character that shapes destiny, the courage which does not blench before responsibility, the truth which scorns to evade consequences. Such are Brynhild, Gudrun, Hervör, Svanhild, and the Anglo-Saxon Hildegyth of the Waldere-fragment (C. W. M. Grein, *Angelsächs. Bibliothek*, i. [1883] 7 f.). It is perhaps significant that Germanic hero-legend exalts no woman who has yielded to a dishonourable love. The Icelandic sagas not only attribute these greater virtues to women, but expect them to urge the love of fair play and a high sense of honour on their men-folk, if these fail to realize their public responsibilities. Griselda is no Teutonic conception. In one minor detail a sharp line is drawn between the sexes: drinking to excess at feasts is no reproach to men, but is unheard of in women.

3. Ethical motives and sanctions.—(1) If we regard the ethical ideas of the Teutonic races as a whole, the main point which emerges is that they are the outcome of a sound *utilitarianism*, not of chance tradition or custom. We cannot even call this in question with regard to the ideals of generosity and vengeance, if we bear in mind the social and economic conditions of the time. Their ideal of generosity has struck moderns as blameable lavishness, but it originated in an epoch when wealth was of little use save to attach warriors to one's cause. Otherwise capital had no beneficent functions to perform, no industrial enterprises to maintain; and, where gold and chattels were hoarded in few hands, they became dangerous to the freedom of the rest of the community, and liable to excite the cupidity of suspicious neighbours. The same defence can obviously be made for the duty of vengeance, which, in the absence of a powerful State executive, must be considered, with Lecky (*Hist. of European Morals*[2], 1897, i. 41), to have been 'the one bulwark against social anarchy.' The moral outlook was limited to the community, and actions were judged—consciously or unconsciously—from its standpoint. This is clearly exemplified in the attitude towards human sacrifice. Persons outside the pale may be immolated for the good of the community, but public opinion condemned and ostracized any individual suspected of practising such rites for his own personal advantage (*Vatsdœla Saga*, ch. 16. 30). The same distinction can be traced in the similar attitude towards magic, and also in the treatment of the aged and infirm at moments when the life of the community was threatened (see OLD AGE [Teutonic]). It is more pleasant to recognize the sense of social obligation, of duty towards the community, in the 'courtesy' so carefully practised between man and man, in the acceptance of arbitration in disputes, and still more in the conscious sacrifice of self-interest to the claims of law and order. 'We must allow Snorri to carry out the law,' says his enemy Arnkell in *Eyrbiggja Saga* (Morris-Magnússon, *The Ere-dwellers*, 1892, ch. 22); and the idea constantly recurs in all Scandinavian literatures. The political genius of the Teutonic races was born out of the conflict between this sense of responsibility—the recognition that man does not live to himself alone—and the intense independence and powerful will of the individual. Perhaps the idea of duty to the community finds its noblest expression in the lofty conception that men are not freed from its claims even in the other world, but must band together in fellowship with the gods for one last vain fight against the forces of evil and of destruction, before the end of the world (see DOOM).

(2) The Teutonic races had too strong a tendency to look to motives, too keen an interest in the clash of character with circumstances, for *custom* to become as binding a social sanction among them as in many primitive societies. *Religion*, also, had little force as a moral sanction, though we note that, in the ancient formula, the 'wrath of the gods' is declared to follow 'truce-breaking.' And there was probably some notion of divine sanction in the carefully ordered duels which in Europe seem to have been the heathen forerunners of the ecclesiastical ordeal. Cf. art. DUELLING.

(3) Of external sanctions, by far the most powerful was *public opinion*. All the condemnation the Icelandic sagas usually allow themselves is to say that such and such an act was 'ill spoken of.' And, if the condemnation of the community was strongly felt as a deterrent to crime, far more did its praise act as an incentive to virtue. From the time of their supremacy in Europe until their racial consciousness was merged in their citizenship of the Roman Church, the quest of glory called forth much that was best in the Teutonic race; and in judging it as a motive we must remember that there has hardly been an epoch in the world's history when a man might gain so wide and lasting a renown—a fame that extended as far as the Teutonic race, so that the selfsame hero might be sung from the north of Africa to Greenland. We cannot

wonder that even the cynical *Hávamál* is inspired to the noble verse:

'Chattels die, kinsmen die,
One dies oneself also;
But fame dies never
For him who has won it worthily' (*Háv.* 76).

(4) But the deepest, most potent sanction of morality was an internal one: the sense of personal integrity, the sturdy *self-respect*, the fear of that sense of degradation which was probably as near as the heathen Teuton ever approached to the sense of sin.

LITERATURE.—Tacitus, *Germania*; *the Older Edda* (B. Sijmon's text, Halle, 1888–1901; an English tr. by O. Bray, London, 1907, and in Vigfússon-Powell's *Corpus Poeticum Boreale*, Oxford, 1883); *the Icelandic Sagas* (some of which have been translated by Morris-Magnússon, in the Saga Library, etc.); *Njálssaga* and *Gisla Saga* have been translated by G. W. Dasent (Edinburgh, *Nj.*, new ed. 1900, *Gisla*, 1866); and *Laxdale Saga*, by A. C. Press (London [2nd ed. 1906]). O. Jiriczek, *Deutsche Heldensage*, Strassburg, 1898 (Eng. tr. by M. Bentinck-Smith, London, 1902), treats the older epics. Little attention has been paid to the subject by modern scholars. A. Olrik's *Nordisches Geistesleben*, Heidelberg, 1908, is an able and sympathetic work; and the last chapter of Chantepie de la Saussaye's *Religion of the Teutons*, Boston, 1902, is valuable. See also H. M. Chadwick, *The Heroic Age*, Cambridge, 1912, ch. xv. ff. A. P. Fors, *The Ethical World-Conception of the Norse People*, Chicago, 1904, should be used with great caution.

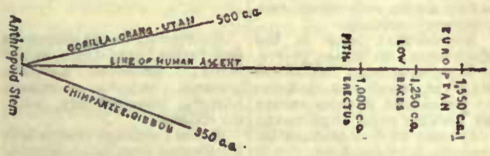
B. S. PHILLPOTTS.

ETHNOLOGY.—**1. Definition.**—Ethnology is that section of Anthropology (the science of man in general) which deals systematically with the various branches of mankind in detail. It is not merely descriptive (Ethnography), but aims at co-ordinating all known data bearing on the inter-relations of the several members of the human family, regarded not as independent groups, but as mutually related divisions of mankind. As so defined, Ethnology assumes a genetic connexion between these divisions; and the most important problem which it has to solve is whether all races really constitute not distinct species, still less genera, but only varieties of a single species of a single genus.

Polygenism, which postulates a given number of distinct groups independently originating in so many distinct geographical areas—the actual number of these distinct groups and areas ranging from about four to sixteen or even more—is certainly not yet extinct. But the tendency of modern thought is undoubtedly towards *Monogenism*, which postulates only one such distinct group and one such distinct area, with four main or relatively fundamental divisions separately evolved in four corresponding geographical areas reached by migration from a single cradle-land. A return is thus made after much 'storm and stress' to the sober teachings of Linné, in whose Order of ANTHROPOMORPHA man appears as one genus with one species, 'cujus varietates *Europæus albus*, *Americanus rufescens*, *Asiaticus fuscus*, *Africanus niger*' (*Systema Naturæ*, ed. 1756, p. 3). This scheme, forming the solid basis of all rightly directed ethnological studies, is frankly accepted by Sir William Flower, in whose Sub-Order of ANTHROPOIDEA the *Hominidæ* (Linné's *varietates*) constitute the fifth and highest family, coming nearest to, but still independent of, the *Simiidæ*, that is, the four groups of the so-called man-apes: Gibbon, Chimpanzee, Gorilla, Orang-utan.

These *Hominidæ*, with their numerous diverging and converging sub-forms, are the proper study of Ethnology, which thus seeks to determine their origin, primeval home, antiquity, and early migrations, their distinctive physical and mental characters, social and cultural developments, and, especially for our purpose, their religious notions, not as separate units, but as interconnected members of the human family.

2. Specific unity of mankind.—(*a*) Perhaps the most convincing proof of common descent from one stock is afforded by what Broca calls their *eugenesis*, the complete and permanent fertility of unions between all races *inter se*. Such crossings between the highest and the lowest and all intervening groups have taken place in all ages, and this physiological test has been so universally applied that there are no longer any pure races, except perhaps a few isolated groups, such as the Andamanese, the Fuegians, and some African and Oceanic negritos. Miscegenation is everywhere the rule, and all peoples are now essentially hybrids, representing both diverging and converging types of the original prototypes, which must now be regarded as mainly ideal. Already in the Stone Ages we have intermingling of long-heads from North Africa with short-heads from Asia, resulting in the present mixed Europeans. In recent times these Europeans migrating to the New World have formed fresh amalgams with the aborigines; and the Hispano-American and Lusitano-American Mestizos now number little short of 50,000,000, and in many places (Mexico, Salvador, Colombia, Peru, Brazil) are steadily increasing, with little accession of fresh blood from Europe. Even in Anglo-Saxon America the present Indians are largely mixed with whites and negroes, and 'we find the rather unexpected result that the fertility among half-breed women is considerably larger than among full-blood women' (F. Boas). The Boviands of British Guiana form a vigorous half-caste community, 'descendants of the old Dutch settlers by Indian squaws' (Henry Kirke), and most of the present South African Hottentots are also Dutch and native half-breeds. To realize the full force of this argument, we have only to consider how impossible such *eugenesis* would be on the Polygenist assumption. Distinct human species originating in Pliocene or at least early Pleistocene times could not now be racially fertile, and their unions would serve only to illustrate the opposite law of *kakogenesis*.



(*b*) Specific unity is further shown in the prevailing physical and mental uniformity of all peoples. As these points will again engage our attention, it will suffice here to remark with E. B. Tylor that 'all tribes of men, from the blackest to the whitest, the most savage to the most cultured, have such general likeness, in the structure of their bodies and the working of their minds, as is easiest and best accounted for by their being descended from a common ancestry, however distant' (*Anthropology*, p. 5).

But, it is urged on linguistic grounds, languages differ specifically and even generically, and hence cannot be reduced to a single stock, to a common centre of evolution. This, says Abel Hovelacque, 'is for us sufficient proof of the original plurality of the races that have been developed with them'; that is, with these irreducible forms of speech. This reasoning still passes current, and, although involving a patent fallacy, is perhaps the chief present mainstay of the Polygenist school. How fallacious it is will at once become evident when we reflect that the stocks in question are reckoned not by tens or scores, but literally by the hundred, so that *quod nimis probat nihil probat*. In the United States and the Dominion of Canada alone Powell enumerates about sixty stock languages; and as, on this hypothesis, each of these represents a stock race, we should have in North America alone some sixty specifically distinct human groups, though *de facto* all are admittedly very much alike, scarcely distinguishable physically or mentally one from the other. The facts relied upon merely show that race and speech are not convertible terms, that there is no arguing from one to the other; and this may now be taken as axiomatic in Ethnology.

3. Origin: centre of dispersion: migratory routes.—Specific unity may thus be removed from

the sphere of speculation, and accepted as an established fact with all its far-reaching consequences. A first consequence is that man, being one, had but one cradle, whence he peopled the earth by migration. This cradle has been sought in all quarters of the globe—in the Arctic regions now covered with ice, in the Austral lands now flooded by the Indian Ocean, in the Eastern and Western hemispheres, in Asia the reputed *officina gentium*, in Africa, and now (by Wilser and others) in Europe, and more particularly in Scandinavia (South Sweden). But none of these lands has made good its claim, and the tendency now is to look for the centre of origin and dispersion in South-East Asia, where it breaks away into the insular Malaysian world.

The latter view, which for the present at least may be said to hold the field, has acquired a certain consistency from the discovery made in 1892 by Eugène Dubois of some distinctly human remains embedded in the late Pliocene deposits of the Solo river in the Trinil district of East Java. These highly fossilized remains of *Pithecanthropus erectus*, as he has been named by the finder, include a femur, two molars, and portion of a skull, and are regarded by Manouvrier, Deniker, Hepburn, and most other competent judges, as undoubtedly those of a human precursor. The great capacity of the skull (900 to 1000 cubic centimetres) shows that it could not have belonged to any of the allied anthropoids, none of which even now exceeds 500 c.c., while the perfectly human femur makes it clear that this Javanese prototype could already walk erect. In the accompanying diagram he is seen to diverge, not from any of the living Simians, but from a common anthropoid stem having its roots far back in the Miocene; and that is the now commonly accepted view regarding the line of

human ascent. The same diagram shows that, as regards its mental powers, as indicated by its cranial capacity, the Javanese 'missing link' held a position about midway between Orang-utan and the present average European, while the present low races (Bushman, Vaalpen, Botocudo, Aeta, and Semang) stand about midway between these two.

Ethnology thus seems to have at last found a sure starting-point for the evolution and dispersion of mankind over the globe. For the Javanese remains, long antedating the *Neanderthal*, that is, the lowest human cranium previously described, present the physical characters which were anticipated in Pliocene as compared with Pleistocene man, should his remains ever be discovered. His erect position implies a perfectly prehensile hand, the chief instrument of human progress, while the cranial capacity suggests vocal organs sufficiently developed for articulate speech. *P. erectus* was thus well equipped for his long migrations round the globe, and it is safe to conjecture that without such equipment he never could have completed the journey. Physically he was far too helpless to contend with the great Pliocene fauna that barred the path. But, armed with stone, wooden, bone, and other weapons that lay at hand, and endowed with mental powers far beyond those of all opponents, he was assured of success from the first, and eventually became the one living species whose *habitat* coincided with the habitable world. He certainly had not yet acquired any knowledge of navigation. But such knowledge was not needed to cross inland seas, open waters, and broad estuaries.

At the time of the first migratory movements, the Indo-African Continent, the existence of which was established by the geologists of the Indian Geological Survey, still presented almost continuous land across the present Indian Ocean, between the Deccan, Madagascar, and South Africa. The shallow inland waters, even now nowhere exceeding fifty fathoms in depth, had not yet transformed into great archipelagoes the Sunda region (Borneo, Sumatra, Java), which is now separated by narrow channels from the Asiatic mainland. The Australian Continent was connected across Torres Strait with New Guinea, and extended much farther west than at present. New Zealand also occupied a far wider area, while the recent borings in the island of Funafuti in the Ellice group (1897) leave little doubt that Polynesia itself is to a large extent a region of comparatively recent subsidence. In the northern hemisphere Africa, as proved by the range of the southern fauna (hyæna, elephant, hippopotamus, cave lion, etc.), was still connected with Europe at least at three points — across the Strait of Gibraltar; between Tunis, Pantellaria, Malta, Sicily, and Italy; and, farther east, between Cyrenaica and Greece, across the present Ægean waters. Lastly, Britain still formed part of the European mainland, while almost continuous land appears to have extended in both directions, across Bering Strait to Alaska, and from North-West Europe through the Faroes and Iceland to Greenland and North America. Here, therefore, are sufficient land connexions for early man to have gradually spread from his Indo-Malaysian home to the uttermost confines of the habitable globe. That he did so is an established fact, as will be seen; and, if the routes here suggested as followed by him may seem somewhat speculative, they must still be accepted, because there were no others available during the required late Tertiary (Pliocene and Pleistocene) period.

4. Areas and lines of specialization from the Pleistocene precursors.—A considerable mass of trustworthy evidence has in recent years been brought together from all quarters to show that the whole world had really been occupied by primitive man during this late Tertiary period, which is synchronous with the last recorded recurrent invasions of ice in the northern and southern hemispheres. The 'Ice Age'—an expression covering a pre-glacial, two or more interglacial, and a post-glacial epoch—thus coincides with the first migratory movements, which may be conceived as advancing and receding with the spread and retreat of the ice-cap, but were all completed, if not during the inter-glacial, certainly in the post-glacial (early Pleistocene), epoch. That is to say, the earth was first occupied by a generalized Pleistocene prototype, which became independently specialized into the four fundamental varieties in the four above-mentioned geographical areas. The main divisions of mankind may thus be regarded as respectively descended in their several zones from four undifferentiated Pleistocene ancestral groups.

This view of human origins at once removes some of the greatest difficulties that systematists have hitherto had to contend with, while at the same time accounting in a reasonable way for many phenomena which must otherwise remain inexplicable. Thus the four varieties, springing independently from four generalized Pleistocene ancestors, become each specialized in its own domain, and need no longer be derived one from the

other—black from white, yellow from black, and so on,—a theory which both on physiological and on physiographical grounds has always presented all but insurmountable difficulties to the anthropologist. Indeed, no anthropologist has yet seriously grappled with the insoluble problem presented by conditions which, as we now see, have no existence. To suppose that some highly specialized group, say, originally black, migrating from continent to continent, became white in one region or yellow in another is a violent assumption which can never be verified, and should on reflexion be rejected. Had such a group passed from its proper zone to another essentially different environment, it would probably have died ont long before it had time to become acclimatized. The fundamental racial characters are the result of slow adaptation to their special surroundings. They are what climate, soil, diet, heredity, natural selection, and time have made them, and are of too long standing to be effaced or blurred except by miscegenation, a process rendered possible by primordial unity.

5. Early works of man: Old and New Stone Ages.—By descent from common Pleistocene ancestors is further readily explained the surprising resemblance, amounting to identity, which is everywhere presented both by the earliest skeletal remains of primitive man and by the first rude objects of primitive culture. Such are the skulls found in West and Central Europe, in Egypt, California, Brazil, and other parts of South America; the stone implements occurring in prodigious quantities in Britain, France, North and South Africa, Somaliland, India, the United States, Argentina, Fuegia; the social and religious institutions of primitive man in Australia, Melanesia, Africa, North and South America. Certain Australian skulls seem cast in the same mould as the Neanderthal, the oldest yet found in Europe. Sir John Evans, the first judge on this subject, tells us that rude stone objects brought from the most distant lands are 'so identical in form and character that they might have been manufactured by the same hands. On the banks of the Nile, many hundred feet above its present level, implements of the European types have been discovered, while in Somaliland Mr. Seton-Karr has collected a large number of implements which . . . might have been dug out of the drift deposits of the Somme and the Seine, the Thames or the ancient Solent' (*Inaugural Address, Brit. Assoc.*, Toronto, 1897). Similarly, the animistic concept is found to be equally well illustrated in the religious notions of the Melanesians, the West African Negroes, and the natives of British Guiana (see below).

To the Pleistocene or Post-Pliocene, answering roughly to the Quaternary of French writers and the Diluvium of the Germans, has been assigned a duration of from 200,000 to 300,000 years, and this may be taken as the measure of early man and all his works. It covers two distinct periods of cultural growth, the PALÆOLITHIC or OLD STONE, and the NEOLITHIC or NEW STONE AGE, these being so named from the material, chiefly flint, everywhere used by primitive peoples in the manufacture of their weapons and implements of all kinds. As many are still in the primitive state, it is obvious that here Old and New do not imply time sequence absolutely, but only relatively to those regions, mainly Europe, North Africa, and America, where the subject has been most thoroughly investigated. Even in these regions Old and New do not always follow in chronological order, since the two stages still flourish side by side in some places, as, for instance, amongst the North American aborigines. The distinction between the two periods is based especially on the different treatment of the material, which during the immeasurably longer Old Stone Age was merely chipped, flaked, or otherwise rudely fashioned, but in the New more carefully worked and polished. Hence experts assure us that they can always tell a *palæolith* from a *neolith*, although a warning note has recently been raised, amongst others, by A. Thieullen, who, speaking from personal observation, declares that 'toutes les formes, même les plus archaïques, ont été fabriquées simultanément avec les formes plus nouvelles, à tous les âges de la pierre, et cela jusqu' aux derniers jours de la pierre polie' (*Hommage à Boucher de Perthes*, Paris, 1904, p. 13). Nevertheless, Sir John Evans' great test of a palæolith—the bulb of percussion—still holds good, while it is safe to say that no well finished and polished neoliths were produced in the early period.

Other distinguishing features of Palæolithic and Neolithic culture are here tabulated in parallel columns for more convenient comparative study:

OLD STONE AGE.	NEW STONE AGE.
Fire: at first known only, later partly under control; could be preserved when kindled by natural means.	*Fire*: under complete control; could be artificially kindled and preserved.
Food: at first mainly vegetable, then animal also; mostly perhaps eaten raw; obtained by hunting and fishing only.	*Food*: vegetable and animal, obtained by hunting, fishing, stock-breeding, and tillage; mostly cooked.
Cultivated plants: none.	*Cultivated plants*: numerous: cereals, vegetables, fruits.
Industries: limited to the making of stone and bone implements, the former never ground or polished, but of progressively improved types, and later embellished with artistic carvings, chiefly of the mammoth, horse, and other contemporary animals.	*Industries*: polished stone implements of diverse types; spinning, weaving, basketry, mining, pottery hand-made without the wheel and poorly ornamented; artistic sense low at first, later well developed.
Monuments: none in the strict sense; no houses, graves, or barrows at first; habitations chiefly caves and rock-shelters; no permanent stations except for working stone implements.	*Monuments*: very numerous and varied: monolithic, megalithic; dolmens, menhirs, mounds, barrows, kurgans, nuraghi, pile-dwellings, aquatic stations.
Speech: at first perhaps inorganic, later involved.	*Speech*: perhaps everywhere involved at first, later organic.
Social groups: the family, later the clan reckoning kinship through the female line.	*Social groups*: the family, the clan, the gens reckoning kinship through the male line, the tribe, the phratry, the *civitas* (city-State).
Letters: none, unless certain pebble-markings found in the Mas d'Azil caves, Dordogne, be regarded, with M. Piette, as a kind of crude script, with ideographic if not phonetic values.	*Letters*: very general, and well developed beyond the pictographic to the ideographic, the syllabic, and even alphabetic (purely phonetic) stage.
Religion: generally supposed to be non-existent. But cave burials in late Palæolithic times suggest funeral rites. The painted figures also lately discovered by MM. Rivière and Capitan in caves of the Madelenian epoch (see below) seem to afford evidence of religious notions at that time. M. Salomon Reinach is inclined to think that some, especially of the animal figures, may have served as totemic or tribal symbols, so that such pictures may have exercised a magic influence. If so, this would imply the existence of religious ideas in still earlier times.	*Religion*: prevalent and well developed everywhere, as attested beyond doubt by solemn burials in dolmens and barrows, and by crematory ceremonies, mortuary urns, the so-called lachrymary vessels, and other indications of a belief in an after-life. In Neolithic times Animism and Psycholatry, lying at the root of all religion, were well established, in fact, universal, so that Haberlandt seems justified in holding that, as all peoples have always been gifted with the faculty of speech, so all, at least since the late Stone Ages, have been endowed with the religious sentiment.

Here it is to be noticed that the 'hiatus'—the gap or break supposed by some ethnologists to intervene between the two early cultural eras—is now generally discredited. Partial breaks of continuity may have been of local occurrence. But the absolute hiatus here in question is an absurdity. It would imply that the first period of human culture was somehow arrested and extinguished everywhere;

and that then, after a blank of unknown duration, a fresh start was made with the sudden appearance of a new and higher culture, as if dropped ready-made from the clouds. Evidence is now accumulating to show that progress was not arrested but continuous throughout the whole of the first cultural era, which thus tended in favourable localities (South France, the Riviera, North Africa) to merge imperceptibly in the second, so that it is not always possible to draw any hard and fast line between the Old and New Stone Ages.

The Old Stone Age is itself divided into a number of successively progressive eras, the most generally accepted of which, at least for Europe, are: (1) The *Chellian*, so called from Chelles on the Marne, where were first found some of the very oldest and rudest chipped flints, now often called *eoliths*. (2) The *Moustierian*, named from the Cave of Moustier on the Vézère River, Dordogne, which has yielded some improved but still rude spear-heads, scrapers, and other flints of a simple type. (3) The *Solutrian*, from the cave at Solutré near Mâcon, whence come the famous 'laurel-leaf' and some other patterns, showing an immense advance in finish and variety, still unpolished, but so delicate and dainty that they have never since been rivalled or even imitated. Hence an object of true Solutrian type is always genuine, as it cannot be forged like most other 'antiques.' Yet vast numbers have been found not only in Europe but in the United States, where occur whole *caches* ('nests') of these beautiful palæoliths. (4) The *Madelenian*, from the rock-shelter of La Madeleine, also on the Vézère, representing a very long inter- or post-glacial period of steady progress, during which was developed quite a Palæolithic 'school of art.' Here were first brought to light some of those remarkable stone, horn, and even ivory scrapers, gravers, 'harpoons,' ornaments, and statuettes with carvings on the round, and skilful etchings of seals, fishes, reindeer, horses, mammoths, snakes, and man himself, considerable numbers of which occur also in many other stations in Dordogne and elsewhere. The remains found in the Placard Cave, the Charente basin, as well as in the Balsi Rossi caves at Mentone on the Riviera, together with the numerous rock carvings of the neighbouring Ventimiglia district, show distinct interminglings of Old and New Stone Age types, and thus the 'hiatus' vanishes for ever.

The Palæolithic Age gives the measure of the antiquity of man. The Palæolithic remains supply the proof of that antiquity. Many of the Chellian eoliths (Gr ἠώς, 'dawn,' *sc.* of culture) are found *in situ* under conditions and in associations which bespeak very great age. They occur, for instance, in the undisturbed glacial drift (sands, gravels, boulder-clays) of the Ouse, Thames, Somme, Seine, Nile, and other rivers which have since scoured their beds down to depths of 50, 100, and even 400 feet. In Tunisia many have been found under a thick bed of Pleistocene limestone deposited by a river which has since disappeared. The now absolutely arid and lifeless Libyan plateau is strewn with innumerable worked flints, showing that early man inhabited this formerly fertile and well-watered region before it was reduced by the slowly changing climate to a waste of sands. Many objects of human industry have been recovered from Kent's Hole and other caves beneath great masses of stalagmite, while others again are found associated with the now extinct Post-Pliocene fauna. And what changes have taken place even in the comparatively recent New Stone Age, which acquired its greatest development in North Africa (pre-dynastic Egypt), in the Ægean lands (pre-Mycenæan culture), in Italy, Central and West Europe, the British Isles, Scandinavia, and South America (Tiahuanaco)! In Scotland the Neolithic era lasted long enough to witness the formation of the Carse clays, which now stand 40 or 50 feet above sea-level, but then formed the bed of a sound or estuary flowing between North and South Britain. Hence Sir W. Turner's suggestion that after the separation of Britain from the mainland, during the Ice Age, another land connexion, a 'Neolithic land-bridge,' may have enabled Neolithic man to reach Scotland while the upheaved terrace was still clothed with the great forest growths that have since disappeared.

6. Pre-Historic and Historic Ages.—The Neolithic era, to which a duration of from 50,000 to 100,000 years has been ascribed, merges in an ill-defined Pre-Historic period, when stone was gradually superseded by the metals—first copper, then bronze, lastly iron, as correctly stated by Lucretius (*de Rer. Nat.* v. 1286–7):

> 'Posterius ferri vis est aerisque reperta,
> Et prior aeris erat quam ferri cognitus usus.'

To these Pre-Historic times may perhaps be referred most of those popular myths, demi-gods, eponymous heroes, and traditions of real events which even still survive and have supplied the copious materials which were eagerly seized upon and worked up by the early rhapsodists, the founders of new religions, and later legislators (Homer, Hesiod, Zoroaster, Manu, Solon, Lycurgus).

7. Antiquity of the primary types.—With these names, shadowy though most of them be, are ushered in strictly historical times throughout the Aryan world, while in Hamitic and Akkado-Semitic lands more certain and far more ancient records are supplied by the dated monuments, the rock and mural inscriptions and clay tablets of the Nile Valley, South Arabia, and Mesopotamia. With the revelations made by archæologists in these earlier seats of the higher cultures the Historic period itself is constantly receding farther into the background, and we are now assured that the Mesopotamian city of Nippur already possessed a history some 8000 years ago. Thus is approached the period of 10,000 years which may have to be assigned to the Historic Age before the archæological exploration of Egypt and Babylonia is exhausted. From the pictorial and plastic remains here brought to light, as well as from other early sources, it is now placed beyond doubt that the great divisions of the human family had at that time already been fully specialized. Even in the Neolithic era the European type had already been established, as shown by the osseous remains of the 'Cromagnon race,' so called from the cave of that name in Périgord where the first specimens were discovered. Professor Virchow has described a skull of the early Iron period from Wildenroth in Bavaria, which had a cranial capacity of no less than 1585 cubic centimetres, and was in every respect a superb specimen of the regular-featured, long-headed North European. In Egypt, where Oppert finds traces of a well-developed social and political organization dating back to over 13,000 years, Professor Petrie discovered in 1897 the portrait statue of Prince Nenkhetftka of the Vth dynasty (3700 B.C.), a man also described as of 'European features.' Still older is the portrait of Enshagsagna, who reigned over the Babylonian Akkad about 4500 B.C., and had quite regular features which might be 'either Semitic or even Aryan.'

Thus we have documentary evidence that the *Caucasic*, that is, the highest human type, had already been not only evolved, but spread over a wide area (Europe, North Africa, Mesopotamia),

some millenniums before the new era. The other chief types (*Mongol, Negro*, and even *Negrito*) are also clearly depicted on early Egyptian monuments, so that all the primary groups must have already been differentiated at least in Neolithic times.

8. Nomenclature.—As these main divisions will be dealt with separately, it will here suffice to give a summary statement of the more salient physical and mental characters (such as may be regarded as true racial criteria) by which they have been distinguished throughout the strictly Historic period. With regard to the nomenclature, much of which is purely conventional, it should be noted that the *Ethiopic, Negro*, and *Black* are taken as practically synonymous, answering roughly to Linné's *Africanus*, but including also the allied Oceanic blacks commonly called *Papuasians* (Papuans and Melanesians), and *Australasians*, with the now extinct *Tasmanians*. The Ethiopic division thus forms two distinct sections—the *African* or *Western*, and the *Australasian* or *Eastern*, now separated by the intervening waters of the Indian Ocean (see above). This remark applies also to the *Negrito* subdivision, of which there are likewise two sections (*African* and *Oceanic* Negritos). *Mongolic* and *Yellow* are similarly equivalent terms, as are also *American* and *Red*, where 'Yellow' and 'Red' are to be taken in a somewhat elastic sense, as in Linné's corresponding expressions *Asiaticus fuscus* and *Americanus rufescens*. Lastly, *Caucasic* and *White* are the same, answering in a general way to Linné's *Europæus albus*. 'European,' however, can no longer be taken in this wide sense, since the division is now known to have also extended from Pre-Historic times to a large part of Asia, as well as to North Africa, where it most probably originated (Sergi, Keane). The forms *Eurafrican* and *Afro-European* have been proposed; but they leave out Asia, so that nothing better has yet been suggested for Blumenbach's somewhat equivocal *Caucasic*. As here used it does not mean a Caucasian, an inhabitant of the Caucasus, but is the collective name of the white division, of which some natives of the Caucasus (Georgians, Circassians) are or were assumed to be typical members. The three now nearly obsolete terms, *Turanian, Allophyllian*, and *Alfuro*, are here discarded as useless, and leading to endless confusion.

As the four divisions have not remained stationary in their respective original homes, but have been subject to great fluctuations during Historic times, in the subjoined general Conspectus are given their *cradle-land, later expansion or retreat*, and *present domain*, with approximate population.

9. Religions of primitive and later peoples: evolution of the religious sentiment.—In the treatment of religions, with which we are here more nearly concerned, it is assumed, with most unbiased observers (E. B. Tylor, E. im Thurn, A. B. Ellis, E. S. Hartland, E. Clodd, R. H. Codrington, T. Waitz, F. Ratzel, A. de Quatrefages, J. B. Ambrosetti, F. Boas, P. Ehrenreich, J. W. Powell), that all later developments spring from the first vague notions formed by primitive man of himself and his environment. The absolute starting-point, behind which it seems impossible to get, is everywhere the *dream*, which, as soon as the reasoning faculty is sufficiently awakened, enforces the subtle and apparently metaphysical distinction between soul and body, spirit and matter. 'The dreams which come in sleep to the Indian are to him . . . as real as any of the events of his waking life. To him dream-acts and working-acts differ only in one respect—namely, that the former are done only by the spirit, the latter are done by the spirit in its body. Seeing other men asleep, and afterwards hearing from them the things which they suppose themselves to have done when asleep, the Indian has no difficulty in reconciling that which he hears with the fact that the bodies of the sleepers were in his sight and motionless throughout the time of supposed action, because he never questions that the spirits, *leaving the sleepers*, played their part in dream-adventures.' And thus is explained the at first sight strange fact that 'a savage should be able to form for himself a conception of so immaterial a thing as a spirit.' The quotations are from E. im Thurn (*Among the Indians of Guiana*, Lond. 1883, p. 343 f.), one of the closest students of the savage mind, and they have reference to the British Guiana natives (Caribs, Arawaks), whose religious system is perhaps the most primitive of which we have any clear record.

From this starting-point the development proceeds in two directions, which lead on the one hand to Psycholatry (Spirit-worship, Animism) in its simplest form, on the other to Ancestor- and Nature-worship, the two great factors in all primitive religions. For early man, after the concept of an independent soul is thoroughly realized in his own person, the next step is to extend the idea to his fellow-men, and then to other animals and to plants, that is, to all living organisms, and, lastly, to the inorganic world, to such conspicuous and lifelike objects as the raging torrent, the rolling seas, snowy peaks, frowning crests, steep rocky walls, gloomy gorges, dark woods, trees, crags, clouds, storms, lightning, tornadoes, heavenly bodies, until all Nature becomes animated and everything personified and endowed with a living soul. But this soul emanates, so to say, from his own, and consequently resembles it in all respects, has the same passions, feelings, affections, and differs only in being, perhaps, a little more or a little less powerful; and thus is established the universal principle of *anthropomorphism* (*q.v.*), which pervades all religions from the lowest to the highest. The mental qualities of the individual soul become the norm to which everything is referred, and, when in more advanced stages man likens himself to his deities, he is really fashioning his deities to his own likeness. Hence the intensely anthropomorphic character of the gods of the Babylonians (Anu, Ea, Marduk), the Semites (El, Baal, Jahweh), the Greeks (Zeus, Aphrodite, Apollo). So C. Hill Tout, speaking of the British Columbian Siciatl tribe, tells us that 'their anthropomorphic conceptions of the animal and vegetable worlds coloured all their lives and thoughts. Even to-day . . . there is still a strong belief in *the human or man-like side of animals, plants, and other objects and forces*' (*JAI* xxxiv. [1904] 28). And so it is everywhere.

Why any spirits, all being of a human nature, should be reverenced or worshipped at all is easily explained by the above remark that some may be more, some less, potent than man himself. The latter are, of course, treated with indifference, while the former are respected and even feared, and have often to be appeased, being for the most part ill-disposed towards mortals, whence the saying that *timor fecit deos*. And, if even a human being was more powerful in life—a tribal chief, for instance, or any great warrior—he would also be more powerful in death, since death is only an extended sleep from which he may and does often return, as in dreams. Hence his survivors naturally suppose that 'the spirit of the dead man, yet living, continues to act just as does the living man in dreams' (im Thurn, p. 344). Thus are sown the germs of the wide-spread Ancestor-worship (*q.v.*), which amongst some peoples almost seems to be the only form of religion, and in some places gives rise to such strange and even sanguinary rites as the horrible 'customs,' now everywhere happily sup-

pressed, of the Gold and Slave Coast Negroes; and the curious notions of the East African Wagiryama people, who suppose that the departed spirits appear in dreams and ask for *pombe* to allay their thirst. So, when it is a-brewing, some is poured out on the graves of the dead, who are asked to drink, and when drunk to fall asleep and cease to disturb the living with their brawls and bickerings. Thus also Dengdit (on whom see *ERE* iv. 707 f.), the rain-giver, god of the Nilotic Dinka Negroes, is endowed with 'Dinka propensities'; while Umvile, god of the neighbouring Golos, is actually 'the father of mankind by his wife, Barachi' (S. L. Cummins, *JAI* xxxiv. 164).

These Golos distinguish things and people from their shadows (*vuvu*), which enter the dreamer's mind in sleep, and after death are spoken of as the souls gone to cloudland. Thus is afforded a first clue to those otherwise inexplicable refinements and distinctions made by primitive psychology between the personal soul and other associated spiritual entities, such as the classical *manes* which 'Orcus habet,' the *umbra* which 'tumulum circumvolat,' and the *spiritus* which 'astra petit.' Such are the Egyptian *ba*, 'soul,' *akh*, 'mind,' *ka*, 'existence,' 'being,' *khaba*, 'shade'; such the Greek νοῦς, ψυχή, πνεῦμα; and the Malagasy *saina*, 'soul,' 'mind,' which vanishes at death, *aina*, 'life,' which becomes 'air, thin air,' *matoatoa*, 'ghost,' which hovers round the grave. Such is especially the *kra* of the Gold Coast Negroes, an indwelling soul, which is absolutely distinct and independent of the personal human soul. Both lead a separate existence, and both survive death, the disembodied *kra* becoming again a *sisa*, or wandering spirit, still seeking to return to a human body as a *kra*, while the real soul becomes a *srahman*, or ghost-man, which goes to dead-land. This dead-land is itself a ghost-land, its mountains, forests, and rivers being 'the ghosts of similar natural features which formerly existed in the world. The trees, as they die in the earthly forest, go and join the ranks of the shadowy forest in dead-land' (Ellis), since all things have souls which must die, and, like the human soul, become *edsietos*, departed spirits dwelling in *edsie*, Hades.

It might be supposed that these teachings, implying a belief in the sublime doctrine of immortality quite beyond the mental grasp of savage man, cannot be genuine, but are rather the ideas read into the mind of savage man by his civilized interpreters. But it is not so. Life after death does not imply everlasting life, since the *edsieto* and the *edsie* itself must also die. 'The notion of an absolute immortality of the dead does not appear to be held. If left to themselves the natives do not inquire into such matters as how long the dead live in dead-land; but if a European asks them if they live for ever, they nearly always reply that nothing can live for ever, and that the dead must also die; so that the Negroes, when thinking of dead-land, practically only think of it as inhabited by the ghosts of men who lived in times approaching their own' (Ellis, *The Ewe-speaking Peoples*, London, 1890, p. 108).

Stress has here been laid on the difference between the *kra* and the personal soul, because the distinction is lost sight of in most anthropological writings. To this neglect is due, in great part, the prevalent confusion and the contradictory statements regarding the religious notions of primitive man. A clear understanding of the distinction is also important in other respects. Thus, the same train of thought that evolved the *kra* has likewise evolved the many strange superstitions associated with the widely-diffused belief in 'wer-animals,' that is, 'man-animals' (Old English *wer*, Goth. *wair*, 'man'). As the *kra* can become disembodied and re-enter the human body at pleasure, so during its ramblings in quest of adventures it can enter any other body; and later, when the *kra* and the personal soul are merged in one, the real human soul can do the same. Then, if evilly disposed, it will select the fiercest and most dreaded wild beast to effect its purpose—the wolf in Europe (whence 'wer-wolfism' and 'lycanthropy'); the tiger, bear, or crocodile in Asia; the lion, leopard, hyæna, shark in Africa; the jaguar in America; and so round the globe. The principle extends even to the after-life; and Cummins (*loc. cit.*) tells us that the Nilotic Dinkas believe that the spirits of the dead sometimes take the forms of lions, leopards, hyænas, and such beasts. A transition is thus effected to the *vampire*, a nocturnal demon, or the soul of a dead man who, the Slavs think, leaves its buried corpse to suck the blood of the living (Tylor, *PC*[3], 1891, ii. 192 f.).

From these animalistic notions, themselves the outcome of pure Animism (*q.v.*), directly flow snake-, bear-, and all other kinds of animal- and spirit-worship. During the early phases of social life the safety of the tribe is supposed to be largely dependent on the due observance of the prescribed rites. Hence public worship becomes a matter of general concern, and is entrusted to experts, such as the medicine-man, the wizard, the shaman, the priest. These gradually assume an official as well as a sacred character; they are the pleaders between the people and their tutelary deities, and 'Church and State' are inseparably one. In the tribal council chamber—the Hellenic *prytaneum*, the Roman *capitol*, the N. American *kiva*, the Mangbattu *assembly-hall*—all matters spiritual and temporal are transacted in common. Later, with the growth of general intercourse and increasing trade and wealth, a slow divergence takes place, and the agora and forum stand apart from, but still somewhat overshadowed by, the temple. Sacrifice and ceremonial rites of all kinds now acquire their full development, and are entirely controlled by the sacerdotal caste, which long continues to be an *imperium in imperio*, even exercising a direct influence on public opinion, as witness the death of Socrates. But, divorced from State affairs, religion becomes more introspective, concerned more with liturgies, outward forms, and dogmatic teachings than with personal conduct. In Aralu, the Babylonian Hades, the dead are judged by the goddess Beltis-Allat, and punished or rewarded, not according to the good or bad lives they may have led, but according as they may have neglected the service of the temples, or taken part in sacrifices and offerings made at the shrines of the gods. Many religious systems certainly contain immoral elements, and place low ideals before their votaries. The faithful Muslim, for instance, is rewarded in the after-life with gross sensual pleasures, while in this life such a trivial thing as the use of knife and fork is regarded as sinful. But the general attitude of religion towards ethics is a wide question which cannot here be discussed. See the series of artt. under ETHICS AND MORALITY.

Nor need we be detained with the higher forms of religion and their concomitants—polytheism and other forms of theism, Judaism, Brāhmanism, Buddhism, Shintoism, Christianity, metempsychosis (*avatars*, incarnations), immortality, *nirvāna*, *karma*, ordeals, and the like—all of which will be separately dealt with in detail.

10. Conspectus.—

ETHIOPIC, NEGRO, OR BLACK DIVISION.

1. *Western* (*African*) *Section.*

Cradle-land: Africa south of the Sahara.

Later expansion: Madagascar, North Africa,

Southern United States, West Indies, Nicaragua, North-East Brazil, the Guianas.

Population (pure and mixed): Africa, 160,000,000; Madagascar, 3,000,000; America, 20,000,000: total, 183,000,000.

Physical characters: *head* dolichocephalic, *i.e.* long from glabella to occiput; *cephalic index* 72, taking length at 100; *jaws* prognathous; *nose* broad at base, short, flat; *lips* thick, everted, showing the red inner skin; *cheekbones* rather prominent; *brow* arched; *eye* large, round, black, with yellowish sclerotic; *foot* flat, with low instep and larkspur heel; *leg* slender; *calves* undeveloped; *arms* disproportionately long; *colour* very dark brown and blackish, rarely quite black: *hair* short, black, woolly, flat in cross section, sparse or no beard; *height* above the average, 5 ft. 8 in. to 6 ft. and 6 ft. 4 in. (Turkana).

Mental characters: *temperament and culture*: sensual, unintellectual, fitful, passing readily from tragedy to comedy; mind arrested at puberty, hence unprogressive, this trait being attributed to the early closing of the cranial sutures; no science or letters; few industrial arts beyond agriculture, stock-breeding, weaving, dyeing, pottery, woodwork, and metallurgy (iron, copper); in Benin artistic casting and carving in relief and on the round.

Speech: agglutinating, with both prefixes and postfixes; stock languages numerous in Sudan, one only in Bantuland, besides Negrito, Hottentot, and Bushman tongues; in Madagascar, Malayo-Polynesian exclusively; in America, European *patois* exclusively.

Religion: generally at the stage of simple Animism, Ancestor-worship being on the whole much more prevalent than Nature-worship; no *ens supremum* anywhere; chief deities *Munkulunkulu*, with many variants, along the east coast, *Nzambi*, also with many variants, along the west coast, both intermingled in the interior; witchcraft and ordeals very prevalent; *obeah* and *voudoo* rites, with ceremonial cannibalism surviving in the West Indies, especially Hayti, and in the Guianas; human sacrifices and fetishism in its purest form in Upper Guinea.

Chief Sub-Groups: I. SUDANESE (NEGROES PROPER): *Wolof, Serer, Felup, Timni, Kru, Nalu, Vei*, West Sudan; *Gurma, Mossi, Gurunga*, within the Niger Bend; *Tshi, Ewe, Yoruba*, Gold and Slave Coasts; *Sonrhay, Hausa, Kanuri, Baghirmi, Mosgu, Yedina, Bassa, Michi*, Central Sudan; *Igarra, Ibo, Nempé, Benin, Qua, Igbara, Borgu*, Lower Niger and Oil Rivers (Southern Nigeria); *Maba, Nuba, Dinka, Golo, Shilluk, Bari, Fur, Nuer, Shuli, Bongo*, East Sudan and White Nile; *Zandeh* (*Niam-Niam*), *Mangbattu, Momfu, A-Barmbo, A-Babua*, Welle Basin.

II. BANTUS (NEGROID PEOPLES SOUTH OF SUDAN): *Waganda, Wanyoro*, Lakes Victoria and Albert; *Akikuyu, Akamba, Wapokomo, Wanyika, Wagiryama, Waswahili, Wanyamwezi, Wasagara*, British and German East Africa; *Makua, Batonga, Banyai, Basenga, Achawa, Magwangara*, Portuguese East Africa; *Marotse, Makalanga* (Mashona), *Wayao, Zulu-Kafir, Basuto, Bechuana*, British South Africa; *Ovaherero, Ovampo, Bunda, Eshi, Kongo, Bateke, Mpongwe, Ibea, Duala, Batanga*, West Coast between Orange and Oil Rivers; *Aduma, Bangala, Balolo, Tushilange, Babanda, Vuaregga, Manyuema, Kalunda, Vuarunga, Vuafiba, Baluba, Bayansi*, Congo Free State.

III. ABERRANT AND DOUBTFUL GROUPS: *Fula*, West and Central Sudan; *Fan*, Ogowe and Gabun Basins; *Negrito* (*Akka, Wochua, Batwa, Obongo, Dume* [?], *Doko* [?], *Wandorobbo* [?]), Congo-Welle and Ogowe Basins, Masailand; *Bushmen*, British South Africa; *Hottentots* (*Namaqua, Griqua, Gonaqua, Koraqua, Hill Damaras*), Cape Colony, German South-West Africa; *Vaalpens*, Limpopo River.

2. *Eastern* (*Oceanic*) *Section*.

Cradle-land: Malaysia, Andamans, Philippines, New Guinea, Western Polynesia (Melanesia), Australia, Tasmania. No later expansion.

Present domain: Malay Peninsula, Malaysia east of Flores, Andamans, New Guinea, Melanesia, parts of Philippines, and Australia.

Population: 2,000,000 (?), chiefly in New Guinea and Melanesia.

Physical characters: very variable, differing from the African section chiefly in the *height*, which is about or even below the average of 5 ft. 6 in.; the *hair*, though always black, is rather frizzly ('mop-headed' [Papuasians] or shaggy [Australians]); *nose* often large, straight, and even aquiline, with downward tip; *lips* less thick, and never everted. The eastern Negritos often closely resemble the African, the chief difference being the *colour*, which is always darker (blackish), the *stature*, which is greater, and the *gnathism*, which is sometimes more pronounced (Semangs).

Mental characters: *temperament and culture*: Papuasians boisterous, very cruel and treacherous; head-hunting and cannibalism common, generally more savage than the African; Australians better in all these respects, though at a much lower stage of culture (no tillage or navigation, and cruel puberty-rites); no science or letters anywhere; few industrial arts; elaborate wood-carving and good boat-building in Papuasia.

Speech: archaic forms of the Oceanic (Malayo-Polynesian) stock language everywhere in Melanesia: agglutinating tongues with postfixes in Australia and most of New Guinea; have no terms for the numerals beyond 2 or 3. In the Andamans the one stock language has developed agglutination to a surprising degree, numerous prefixes and postfixes being combined with the alliterative harmony of the Bantu tongues.

Religion: Spirit-worship very prevalent, with *tabu* in Melanesia, and *totemism* in Australia; *mana*, a subtle essence or virtue like the Augustinian *grace*, is a distinctive feature of the Melanesian system, which is otherwise essentially animistic, distinguishing between pure spirits (supernatural beings that never were in a human body) and ghosts, *i.e.* men's disembodied spirits. There are prayer, sacrifice, divination, omens, death and burial rites, also a Hades (*Lolomboetogigi*), with trees and houses, and a ghostly ruler, but no Supreme Being. There is none of all this in Australia and New Guinea, where the religious sentiment is so little developed that many close observers have failed to detect it. The Australian *Bunjil* is too grossly anthropomorphic to be regarded as a spiritual being at all, much less a deity; and we are assured that those who credit these natives with a belief in gods 'have been imposed upon' (Giles). But there are mythical heroes, such as *Nurunderi*, who are already a kind of demi-gods, and may eventually tend to develop Ancestor-worship. Meantime, however, there is 'nothing of the nature of worship, prayer, or sacrifice'—a remark which may also be safely applied to the natives of New

Guinea, and to all the Oceanic Negritos. The Australian totemistic and puberty ceremonies must all be regarded as features of the social life, and in no sense religious institutions.

Sub-Sections: *Papuasians*, including the *Papuans* proper and the *Melanesians*. The Papuans, most typical of all the Oceanic Negroes, occupy most of East Malaysia as far west as Flores inclusive, with nearly the whole of New Guinea. The Melanesians give their name ('Black Islanders') to the Melanesian world, most of which they occupy almost exclusively. The chief groups are New Britain, New Ireland, and the Duke of York, now by the Germans renamed the Bismarck, Archipelago; the Louisiades, Solomons, New Hebrides, Banks, New Caledonia, and Loyalty, with the outlying western part of Fiji. The *Australians*, a highly specialized branch, with marked uniformity of type, speech, and usages, originally scattered thinly over the whole continent, now disappearing; *Tasmanians* of Tasmania, somewhat intermediate between the Australians and the Melanesians, all extinct since about 1876. *Negritos*, formerly wide-spread throughout Malaysia, now reduced to three detached groups: *Andamanese* of the Andaman Islands; *Semangs* and others of the Malay Peninsula; and *Aetas* ('Blacks') of the Philippines, where they are extinct in several islands, but have left a distinct Negrito strain amongst all the other inhabitants (Malayans, Japanese, Chinese, Spaniards).

MONGOLIC OR YELLOW DIVISION.

Cradle-land: probably the Tibetan plateau.

Early expansion: Indo-China, China, North and Central Asia, Malaysia, Mesopotamia (?).

Present domain: Japan, Formosa, China, Korea, Manchuria, Mongolia, Siberia, Turkestan, Tibet, parts of Irania, Armenia, and Caucasia; most of Asia Minor; parts of European Russia, Scandinavia, the Balkan Peninsula, and Hungary; most of Malaysia and Madagascar, here intermingled with the African aborigines.

Population: China, 380,000,000; Japan and Korea, 57,000,000; Mongolia and Manchuria, 15,000,000; Tibet, 6,000,000; Turkestan and Siberia, 8,000,000; Indo-China, 35,000,000; Malaysia, 30,000,000; West Asia and East Europe, 15,000,000: total, 546,000,000.

Physical characters: *head* brachycephalic, *i.e.* short between glabella and occiput; *cephalic index* somewhat variable, but mean about 85, ranging from 80 to 90, and even 95; *jaws* fairly orthognathous; *nose* very short and flat, or snub; *lips* thin, never everted; *cheek-bones* very high and prominent laterally; *brow* low and moderately arched; *eye* small, black, oblique, outer angle slightly elevated, vertical fold of skin over inner canthus (a highly characteristic trait); *foot* normal, artificially deformed in Chinese women; *colour* dirty-yellowish and light-brown (Malays); *hair* uniformly black, lank, coarse, lustreless, rather long, round in transverse section, no beard, but moustache common; *height* about or slightly under the average of 5 ft. 6 in., but tall in North China and Manchuria (5 ft. 8 in. to 5 ft. 10 in.).

Note.—Many grouped as Mongols originally, and some of them still speaking Mongolic tongues, are now largely and even completely assimilated to the Caucasic physical type (Finns, Turks, Bulgarians, Magyars). They are the *Allophyllians* and *Turanians* of the early writers.

Mental characters and culture: *temperament* generally somewhat reserved, sullen, apathetic, outwardly very courteous, but supercilious; very thrifty, frugal, and industrious in China and Japan, elsewhere mostly indolent (Malays, Siamese); nearly all reckless gamblers; science slightly, arts and letters moderately, developed; porcelain, bronze work, ivory carving, and decorative painting scarcely surpassed (China, Japan, Korea formerly), but all plastic and pictorial art defective, lacking perspective, and the human figure mostly caricatured.

Speech: three great linguistic families:

1. *Ural-Altaic* (*Mongolo-Turki*), ranging with great lexical and structural diversity from Lapland to Japan, from the Lena Basin through Turkestan and Asia Minor to Turkey in Europe and Hungary. Japanese and Korean stand quite apart; but all the rest are typical members of the agglutinating order of speech, with unchangeable roots and variable postfixes, cemented together by the principle of vowel harmony.

2. *Tibeto-Indo-Chinese*, from the Himālayas to the Pacific, and from the Great Wall to the Indian Ocean; originally agglutinating, now in every transition of phonetic decay towards monosyllabism, which is not a primitive but a very late condition of articulate speech. In the process of decay innumerable homophones are developed, which have to be distinguished by their tones; hence the members of this family may be called monosyllabic toned languages. Structurally they are isolating, the sentence being made up of unchangeable isolated words, the inter-relations of which are determined not by inflexion or affixes, but by their position, as often in English (*James hit John; John hit James*).

3. *Malayo-Polynesian*, the 'Oceanic' family in a pre-eminent sense, ranging from Madagascar across the Indian and Pacific Oceans to Easter Island, and from Hawaii to New Zealand (Maori); all are more or less agglutinating at various stages of dissolution, but untoned; vocalism predominates, and the vowels are more stable than the consonants—a trait peculiar to this group.

Religion: *Psycholatry* in its widest sense is the dominant note, the worship extending both to the disembodied human soul (Ancestor-worship, which is now perhaps the most prevalent form) and to the innumerable spirits, bad and good (*feng-shui* and *fung-shui*), which people earth, air, water, and all natural objects of the Mongol world (pure Animism). The practical Chinese and Annamese combine both cults, and, while passing their lives in terror of the malevolent circumambient genii, keep the anniversary of 'roast pig day,' as they call their 'All Souls' day,' by littering the graves of the departed with pork, chicken, cakes, and other food. This Spirit-worship still persists elsewhere, and lies at the base of the later pre-historic and historic superimposed cults. Amongst uncultured peoples (Siberians, Yukaghirs, Kamchadales) it takes the form of undisguised *Shamanism*, where the shaman (wizard, medicine-man, not yet priest) is the 'paid medium' of communication between his dupes and the surrounding good and evil spirits. Even in Tibet the primitive shamanistic *Bonbo* (*Boa-ho*) still survives beneath the official *Lamaism*. Nor have the Tibetans yet forgotten their red and black demons, the snake-devil, and especially the fiery tiger-god, father of all the secondary members of this truly 'diabolical pantheon.' In North-East Siberia the tiger is ousted by the bear, and

here the Gilyaks, Oronches, and Ainus are all *bear-worshippers.* The historical religions are largely a question of race, all true Mongols of Mongolia, Manchus, Chinese, Indo-Chinese, and Tibetans being at least nominal *Buddhists*; the Turks, Tatars, and most Malays *Muhammadans*; the Finns, Lapps, and Magyars now *Christians.* Other so-called State religions—the *Confucianism* and *Taoism* of China and Annam, the *Shintoism* and *Bushidoism* of Japan —are rather ethical codes, fostered and upheld for political purposes. The 'filial piety,' everywhere inculcated, for the most part means devotion to the reigning dynasty, while the great weight attached to the purely civic as distinguished from the theological virtues—self-mastery, courage (the Roman *virtus*, 'valour'), benevolence, and loyalty—shows that the sole aim of these systems is to nurture good citizens in this world without a thought for the hereafter. Here is no antagonism between religion and ethics, but a complete divorce of one from the other.

Chief Subdivisions: Mongolo-Turks, commonly called Mongolo-Tatars. MONGOL BRANCH: *Khalkas* or *Sharas, i.e.* Eastern Mongols; *Kalmuks, i.e.* Western Mongols; *Buriats, i.e.* Siberian Mongols; *Tunguses, Manchus, Lamuts, Oronches, Golds, Gilyaks*, East Siberia and Amur Basin. TURKI BRANCH: *Yakuts* of Lena Basin; *Kirghizes, Uzbegs, Kara-Kalpaks, Turkomans*, West Siberia and Turkestan; *Nogais, Tats, Anatolians, Turks, Osmanli*, Caucasia, East Russia, Asia Minor, Rumelia. UGRO-FINNIC BRANCH: *Soyots, Ostiaks, Voguls, Permians, Siryanians, Samoyeds, Lapps, Finns, Livonians, Vepses, Mordvins, Cheremisses, Bulgars* (now Slavonized in speech), *Magyars*, Altai Mts., West Siberia, North and East Russia, Lapland, Bulgaria, Hungary. TIBETO-CHINESE BRANCH: *Tibetans, Burmese, Shans* or *Laos* (*Siamese Ahoms, Khamti*), *Chins, Nāgās, Mishmis, Annamese, Chinese*, Tibet, Himālayas, most of Indo-China and China. MALAYAN BRANCH: *Malays proper, Sundanese, Javanese, Madurese, Balinese, Sassaks, Bugis, Mankassaras, Dayaks, Tagals, Bisayans, Formosans, Hovas*, and other *Malagasy*, Malaysia, Philippines, Formosa, Madagascar. KOREO-JAPANESE BRANCH: *Koreans, Japanese, Liu-Kiu Islanders.* SUB-ARCTIC BRANCH: *Chukchi, Koryaks, Yukaghirs, Kamchadales.*

AMERICAN OR RED DIVISION.

Cradle-land: the whole of the New World.

Present restricted domain: the unsettled parts and some reservations in the Dominion of Canada; Alaska; numerous reservations and a few tracts in the Western parts of the United States; most of Mexico, Central and South America, partly intermingled with the white and black intruders, partly still independent or in the tribal state.

Population: full blood, 10,000,000; Mestizos, 20,000,000: total, 30,000,000; chiefly in Mexico, Guatemala, Colombia, Venezuela, Peru, Bolivia, and Brazil; 250,000 only in the United States, and 100,000 in Canada.

Physical characters: *head* very variable, long and short in many places, intermingled inextricably; highest known brachycephaly in South America (the extinct Calchaquis with cephalic index 92·6); *jaws* slightly prognathous, very large and square; *cheek-bones* moderately prominent; *nose* large, bridged or aquiline; *eyes* small, round, straight, black, rarely with Mongolic fold; *colour* normally reddish or coppery, but variable and rather yellowish in the South American woodlands; *hair* uniformly very long, coarse, lank, black (horse-hair type), round in transverse section, no beard or moustache; *height* generally above the average, 5 ft. 8 in. to 6 ft. (Patagonians), and 6 ft. 4 in. (Brazilian Bororos, almost the tallest known race), others very short, 5 ft. or a little over (Qnechuas, Fuegians, some Eskimos), highlanders generally undersized, prairie Indians tall.

Mental characters and culture: *temperament* reserved, moody, taciturn, wary, deep feelings masked by an impassive exterior, strong nervous system with great power of enduring physical pain; great range of culture from almost the lowest savage state (Mexican Seres, Brazilian Botocudos, Fuegians) to the fairly civilized Aztecs, Mayas, Chibchas, Quechuas (Peruvians), and Aymaras. Amongst these architecture, engineering, calendric systems, pictorial writing, pottery, weaving, well developed.

Speech: almost universally of polysynthetic structure, with a great number of irreducible stock languages, some (Algonquian, Athapascan, Siouan, Shoshonean, Nahuatlan, Maya-Quichéan, Tupi-Guaranean, Quechuan) spread over wide areas, but the great majority crowded together in narrow spaces, especially along the West Coast of North America. This order of speech is confined exclusively to the New World, implying separation from the Eastern hemisphere from very remote times, probably the late Palæolithic or early Neolithic Age.

Religion: *Shamanism* (see above) is widely diffused amongst the North American aborigines: *totemistic* systems, presenting analogies with those of the Australians, but apparently of a more religious cast, are highly developed amongst Iroquoians, Algonquians, Dakotans, and the North-West Coast tribes. *Animism* in its simplest form (worship of animated Nature rather than of ancestral spirits) prevails amongst all the uncultured peoples that have any religion at all. With it are associated in Mexico, Argentina, and elsewhere strange superstitions about the terrible *wer-jaguar*, while in the Guianas similar notions are held in connexion with the *kenaimas* and *peaimen*. The former enter the body not of wild beasts, but of man himself, as caterpillars or in other forms, causing sickness which can be cured only by the aid of the *peaiman*, who exorcizes the patient with the usual make-believe incantations. Solar worship prevailed in Peru, while the cultured peoples of Mexico (Mayas, Zapotecs, Aztecs) had developed a complete system of polytheism with ferocious deities (Tezcatlipoca, Quetzalcoatl, Tlaloc, etc.), whose thirst for human blood was insatiable; hence the hecatombs of victims offered to the gods on solemn occasions, and often accompanied by unutterable horrors. Aztec women still cast their infants into the Mexican lagoons, to propitiate the rain-god Tlaloc. Thus the principle of sacrifice, which pervades all advanced religious systems, acquired its highest development in the New World, where some tribes (Seres, Fuegians, Botocudos) have scarcely yet evolved any true religious notions at all.

Subdivisions: I. NORTHERN: *Eskimo* (*Innuit*), with *Aleut* and *Yuit*; *Déné* or *Athapascan* (Chippewayan, Kutchin, Taculli, Hupa, Umpqua, Apache, Navaho); *Algonquin* (Delaware, Fox, Sac, Mohican, Cree, Ojibwa, Shawnee, Massachusett, Illinois, Cheyenne, Blackfoot); *Iroquois* (Erie, Huron, Mohawk, Onondaga, Seneca, Tuscarora, Cherokee); *Tlingit; Haida; Tsimshian*;

Chinook; Siouan (Dakota, Assinaboin, Omaha, Ponca, Kansa, Osage, Quapaw, Iowa, Oto, Missouri, Winnebago, Mandan, Hidatsa, Crow, Tutelo, Catawba); *Shoshone* (Bannock, Comanche, Ute, Hopi); *Muskhogean* (Choctaw, Chickasaw, Creek, Alibamu, Seminole, Apalachi); *Natchez; Pawnee; Kiowa; Salish* or *Flathead; Pueblo* (Zuñi, Tewa, Taos, Picuri, Tusaya).

II. CENTRAL: *Opata-Pima* (Tarahumare, Yuma, Cora, Papago, Tepehuane); *Sere; Guaycuran; Tarascan; Otomi; Mexican* or *Nahuan* (Aztec, Chichimec, Pipil, Niquiran); *Maya-Quiché* (Toltec [?], Huaxtec, Maya, Lacandon, Quiché, Mamé, Cachiquel, Sutughil, Pocoman, Zendal, Chol, Zotzil, Poconchi); *Zoque; Mixe; Mixtec; Zapotec; Charotegan; Lencan* (Chontal, Wulwa, Rama, Paya, Guatusa); *Bribri; Talamanca; Cuna.*

III. SOUTHERN: *Chibcha; Choco; Chinchasuyu; Quichua* (Inca, Chanca); *Aymara* (Colla, Calchaqui); *Antisuyu; Jivaro; Zaparo; Pano; Ticuna; Puru; Mojo; Barré; Curetu; Caripuna; Charrua; Chuncho; Cocoma; Conibo; Carib* (Macusi, Akawoi, Rucuyenne, Bakairi, Arecuna); *Arawak* (Atorai, Wapiana, Maypure, Parexi); *Warrau; Chiquito; Bororo; Botocudo; Hipurina; Tupi-Guarani* (Chiriguana, Caribuna, Paraguay, Tupinamba, Goajire, Tocantins, Omagua, Mundrucu, Tupinambaze); *Payagua; Mataco; Toba; Guaycuru; Gaucho; Araucan; Puelche; Pampas; Tehuelche* (*Patagonian*); *Fuegian.*

CAUCASIC OR WHITE DIVISION.

Cradle-land: probably North Africa between the Mediterranean and the Sudan.

Early expansion: all the Mediterranean lands; Central, West and North Europe; Britain, Asia Minor, Syria and Palestine, Arabia, Mesopotamia, Irania, Eurasiatic steppe between Carpathians and Pamir, India, South-East Asia, Malaysia, Polynesia, North-East Asia.

Present domain: nearly the whole of North Africa and Europe; Abyssinia and Arabia; parts of Turkestan, Caucasia, and Armenia; Irania, India, and parts of Indo-China; Malaysia and Polynesia; New Zealand; Australia; South Africa; North and South America.

Population: Europe, 355,000,000; Asia, 300,000,000 (chiefly India and including unclassified low-caste Hindus); America, 115,000,000; Africa, 15,000,000; Australasia, 5,000,000: total, 790,000,000.

Physical characters: Three Types: I. *Homo Europæus: head* rather long; *cephalic index* 74 to 79; *jaws* orthognathous; *cheek-bones* generally small, not prominent; *nose* large and straight; *eyes* blue or grey, white sclerotic, straight; *colour* florid; *hair* rather long, straight or wavy, fair, flaxen, very light brown or reddish ('carroty'), full beard; *height* above the average, 5 ft. 8 in. to 6 ft. 2 in. II. *Homo Alpinus: head* short; *cephalic index* 80 to 90 and even 95; *eyes* brown, hazel, or black; *colour* pale-white, in aberrant groups (East Africa and India) very dark, and even blackish; *hair* brown or chestnut and black, rather short and straight, or wavy, small beard; *height* medium, 5 ft. 5 or 6 in. III. *Homo Mediterraneus: head* long; *cephalic index* 72 to 78; *nose* large, straight, or aquiline; *eyes* black and straight; *colour* pale-olive or swarthy; *hair* black, wavy or curly; *height* undersized, generally under 5 ft. 6 in., except in aberrant groups, which are often tall (Gallas, Somals, Sikhs).

Mental characters and culture: *temperament* of I. slow and somewhat stolid, cool, collected, resolute, tenacious, enterprising; of II. and III. fiery, fickle, bright, impulsive, quick, but unsteady, with more love of show than sense of duty; all three highly imaginative and intellectual; hence science, arts, and letters fully developed, to some extent even from early historic times; most civilizations (Egyptian, Babylonian, Sabæan, Assyrian, Persian, Indian, Mycenæan, Hellenic, Italic) have had their roots in Caucasic soil.

Speech: mainly inflexion (highest order, with complete fusion of root and formative elements), but also agglutinating (Caucasia, Deccan, Polynesia); several stock languages in Caucasia; one (Basque) in Western Pyrenees; apart from these the whole Caucasic domain is covered by four great linguistic families: 1. *Hamito-Semitic*, North Africa, South-West Asia; 2. *Aryan* (*Indo-Germanic, Indo-European*), most of Europe, Armenia and Irania, Northern India, most of America, Australia, Tasmania, New Zealand, parts of North and South Africa; chief branches: Indic, Iranic, Hellenic, Italic, Slavic, Lettic, Teutonic, Celtic; 3. *Dravidian*, Southern India (the Deccan); chief branches: Telinga (Telugu), Tamil, Malayalim, Kanarese; 4. *Kolarian*, formerly perhaps wide-spread throughout India, now reduced to the Vindhyan uplands between Aryan and Dravidian North and South.

Religion: from the first Nature-worship seems to have greatly predominated over Ancestor-worship. The Egyptians did not worship but embalmed the dead, who were supposed to remain human in the after-life. The chief gods of the Semites were the sun and moon, and those of the Aryans—Dyaus, Indra, Zeus, Apollo, Jupiter, Saturn, etc.—were the personified elements of the upper regions. The eponymous heroes, such as Heracles, who may be supposed to have had a human origin, always remained mere demi-gods, and were scarcely worshipped at all. Amongst the Aryans the gods were symbolized in stone, wood, or bronze; and this led to the worship of the image itself—true idolatry, which, despite iconoclastic zeal, still persists amongst the uneducated classes in many parts of Christendom. The picture of St. Anthony is not clearly distinguished from the saint himself, and, when it fails to protect the Italian *bifolco* from accidents, is cursed and stabbed. Out of the general polytheism various shades of monotheism were slowly evolved by a natural process of elimination. The process is now going on amongst some of the lower races, and it is a popular error to credit the Semites with the monotheistic concept from the first, as if it were a sort of racial character, a special privilege of those worshippers of Elu, Baal, Molech, and innumerable other repulsive deities. Out of the monotheism thus evolved arose the historic religions of the West (*Judaism, Christianity, Muhammadanism*), while crass polytheism still dominates the East (*Brāhmanism* in India, a degraded *Buddhism* in Ceylon). Between monotheism and polytheism is the dualistic doctrine which had its home in Persia, where *Ormazd* and *Ahriman*, the good and evil principles, contend for supremacy in the universe. This Zoroastrian system, which refers light and all good things to Ormazd and his host of angels, darkness and all evil to Ahriman and his host of demons, was already denounced by Isaiah, whose Jahweh is the single source of everything, 'formans lucem, et creans tenebras,

faciens pacem, et creans malum' (45^7). Nevertheless, it found its way into the early Christian communities, and explains the *demonology*, with all its attendant horrors, which flourished in mediæval times, and is not yet quite extinct.

Subdivisions: HAMITES: *Egyptians*, *Bejas*, *Afars* (Danakil), *Somals*, *Gallas*, *Masai*, *Turkana*, *Wahuma*, East African seaboard from the Mediterranean to the equator; *Mauritanians*, *Berbers*, *Tuaregs*, North Africa between the Mediterranean and Sudan; *Iberians*, *Picts*, *Ligurians*, *Pelasgians*, *Etruscans*, *Hittites* (?), the Mediterranean lands, Britain, Syria. SEMITES: *Himyarites*, *Abyssinians*, *Arabs*, *Assyrians*, *Canaanites* (*Israelites*, *Idumæans*, *Philistines*, *Phœnicians*, *Syrians*), Arabia, East Africa, Mesopotamia, Syria, Palestine. ARYANS: *Kashmiri*, *Panjabi*, *Gujarati*, *Marathi*, *Bengali*, *Assami*, *Beluchi*, *Afghans*, *Persians*, *Kurds*, *Armenians*, *Ossetes*, India, Irania, Armenia, Caucasus; *Thracians*, *Illyrians*, *Greeks*, *Italians*, Balkan Peninsula, Greece, Italy; *Slavs* (*Russians*, *Poles*, *Bohemians*, *Wends*, *Croatians*, *Servians*, *Dalmatians*, *Montenegrins*), East Europe, Balkan Peninsula; *Teutons* (*Goths*, *Scandinavians*, *Low* and *High Germans*, *Dutch*, *Flemings*, *Anglo-Saxons*, *English*, *Lowland Scots*); *Letts* and *Lithuanians*; *Celts* (*Irish*, *Highland Scots*, *Manx*, *Welsh*, *Bretons*). CAUCASIANS (Georgians, Circassians, Lesghians). DRAVIDIANS and KOLARIANS: *Telugus*, *Tamils*, *Santals*, *Bhils*, *Konds*. POLYNESIANS: *Samoans*, *Tahitians*, *Tongans*, *Maori*, *Hawaiians*. AINUS.

ETRUSCAN RELIGION.—I. *ANCIENT SOURCES.*—**1. Etruscan documents.**—Unfortunately we have no original document giving such valuable information regarding the Etruscan religion as the calendar of festivals (Mommsen, *CIL* i.[2] 205 ff.) supplies for the study of the ancient Roman religion. It is true that the Agram linen-roll (§ 3) is regarded by some scholars as a ritual calendar of festivals, but the numerals which stand at the beginning of the several paragraphs, and which accordingly formed the starting-point of the theory, do not seem to serve as monthly dates. It must not be forgotten, however, that the Roman calendar of festivals itself, with its arrangement of kalends, nones, and ides (Etr. *itis*), and perhaps also the actual institution of the liturgical calendar of festivals in Italy, are traceable to the hieratic colleges of the Etruscans. Archives of families, temples, and cities, the sifting of which has proved so important for the history of the primitive Roman religion, must be presumed to have had their counterparts also in Etruria, but none of these survives in the original; and, in particular, among all the 8000 extant Etruscan inscriptions we do not find, or at least have so far failed to identify with certainty, any specimen of such official documents as statutes, minutes, formularies of prayer, or rubrics of the priests' colleges or the religious fellowships of individual *gentes*: the one or two gratifying exceptions from which better results may be expected will be discussed below. Meanwhile we possess definite and reliable evidence of the fact that such documentary records, together with oral traditions, were at an early period brought into an orderly form—probably in rhythmical language—in works ascribed to mythical authors (*e.g.*, the books of Tages and of Begoe, § 29), and bearing mysterious titles ('libri fatales,' 'libri Acherontici,' § 35), and that afterwards, for antiquarian and practical purposes, they were reduced to a learned and complicated system in the 'libri fulgurales,' 'libri haruspicini,' and 'libri rituales' (§§ 30–34), as the *Etrusca disciplina*.

2. Latin adaptations.—These books were often recast in Latin forms, or adapted to Roman conditions, and the history and contents of this derivative literature must now be laboriously gathered from sporadic and casual references in the works of Cicero, Livy, Seneca, and Pliny the Elder, as also of grammarians, antiquaries, commentators on Vergil, *gromatici*, and Church Fathers. More or less prominent among those who dealt with the subject are the following: Tarquitius Priscus (before Vergil's time) made poetical experiments in the field of the *Etrusca disciplina*, and occupied himself with the study of *ostenta* ('unnatural phenomena') as the objects of *haruspicina* (§ 32). A. Cæcina, whose family came originally from the Etruscan city of Volterra, and who was an opponent of Cæsar, wrote on the Etruscan doctrine of lightning (§ 30). P. Nigidius Figulus, the friend of Cicero, wrote, among other works, books *de Extis*, *de Divinatione*, *de Animalibus*, in which he can hardly have ignored the *Etrusca disciplina*. The writings of Labeo, *de Diis Animalibus* (§ 20), are mentioned in Servius's commentary on the *Æneid*, while Julius Aquila, Umbricius Melior, Vicellius, and Cæsius are cited by Pliny, Lydus, and Arnobius as authorities in the literature of the Etruscan discipline.

3. The Agram linen-roll.—The Agram linen-roll—by far the longest Etruscan text (some 1500 words in twelve columns) that we possess—has been regarded as an original fragment of the *Etrusca disciplina*. The remains of this *liber linteus* were found in Egypt, carelessly torn into strips and wrapped about a female mummy. They are now preserved in the National Museum at Agram (Croatia). The writing and spelling of the fragment, and the dressing of the mummy, point to the Græco-Roman period. Arguing from the few words and constructions which we understand, scholars are variously inclined to see in this formulary text a sacrificial ritual (Krall, Lattes), a ritual calendar of festivals (Torp), portions of the Etruscan doctrine of the lightning-flash (Skutsch), or a relic of Etruscan religious poetry bearing some analogy to the Eugubine Tables (Thulin). To the present writer the various items of external and internal evidence (the circumstances of its discovery, the manuscript rolls of Etruscan sepulchral monuments, the divine names, litanies, and certain definite appellatives in the text itself) seem to indicate a funerary text, and also to imply a more than merely accidental connexion between the roll and the mummy—in so far, namely, as the funeral liturgies and the ideas of the hereafter found in the *libri Acherontici* (§§ 20, 35) may have in this particular instance been used in the same manner as the Egyptian Book of the Dead.

4. Other sepulchral rolls and longer sepulchral inscriptions.—With the Agram roll we may fitly associate the manuscript rolls and diptychs held in the hands of figures on the lids of Etruscan sarcophagi and ash-chests, or in the hands of the persons or the gods of the under world sculptured on the sides of these memorials, or painted on Etruscan vases; and, above all, the so-called *pulena*-roll, a sepulchral inscription of nine lines upon an

open roll which the figure on the lid (*i.e.* the dead person himself) holds up before the onlooker. Nor is the longest Etruscan inscription, the sepulchral tablet of Capua—so far as we are able to interpret it—inconsistent with the conjectural contents of these funerary book-rolls; while the third longest Etruscan text, the *cippus Perusinus*, seems actually to furnish certain analogies to them. In comparison with these as yet very imperfectly interpreted literary remains, however, the furnishings and contents of excavated tombs, such as mural paintings, reliefs on cinerary chests and sarcophagi, figured lids, and also the abundant accessaries of vessels, utensils, clothes, and ornaments warrant much more definite conclusions regarding the cult of the dead and the hopes and fears of the hereafter (§§ 25, 26) that prevailed among the Etruscans.

5. The leaden tablet of Magliano and similar relics.—The text of this inscription introduces us to a different sphere of religious ideas. Certain assonances in language have led some to compare it with the text of the Agram roll. But the external form of the memorial seems rather to connect it with the leaden tablets of Volterra and Campiglia Marittima, which Skutsch has identified as *devotiones*; and, as a matter of fact, the chthonic deities named in the Magliano text are quite in keeping with the personal and non-official magic and imprecatory spells which we are able, with the help of Græco-Roman analogies, to recognize on these tablets. The Etruscan ABC monuments should likewise be assigned to this group. Finally, the simple, semi-anatomical votive gifts—not, it is true, confined to Etruria—which the excavations have brought to light, and which often strikingly suggest the sacred objects of modern shrines and places of miraculous healing (cf. § 28), seem rather to fall outside the sphere of the official religion.

6. The bronze liver of Piacenza.—A singularly important survival of Etruscan haruspicy is found in the bronze liver of Piacenza, a fairly accurate model of a sheep's liver, which is marked off into regions corresponding to the Etruscan divisions of the sky, and is inscribed all over with divine names or abbreviations thereof. We shall hardly err in regarding this hastily written and relatively late document as a kind of index-catechism of Etruscan haruspicy, or as an instrument which the officiating haruspex employed for purposes of orientation. Remarkable analogues have been recently unearthed in Babylonia and at Boghaz-keui.

7. Bronze mirrors, gems, mural paintings, reliefs, coins, and statuettes of deities.—Apart from the bronze liver, our main source for the names of Etruscan deities is the large number of bronze mirrors exhumed from Etruscan tombs. The mythological scenes which they present in such profusion serve better than anything else to enlighten us as to what the Etruscans borrowed from Greek mythology and adapted to their own apparently very sober views. Next in importance come the gems, with their carved figures and names; then the mural paintings of tombs and the reliefs of sarcophagi and cinerary chests, with their representations from the Græco-Italian mythology of deities and heroes, and their occasional inscriptions. Of much less value in this respect are the paintings on the so-called Etruscan vases, which have proved to be, in the main, importations from Greece, and tell us more of Greek than of Etruscan ideas. Finally, coins and statuettes, though they seldom bear inscriptions, are valuable sources of information regarding the characteristics and the various types of the gods.

8. The difficulty of isolating the purely Etruscan element.—One very serious difficulty in regard to both the monumental and the literary sources is that of clearly disengaging the specifically Etruscan from the Greek, Roman, and Oriental factors. If, even in investigating the earlier Greek religion, we find it no easy task to separate the purely Greek elements from those of Oriental origin, or those inherited from the primitive Aryan age, and if it is hard to disentangle the Greek and Italic strands in the history of Roman religion, the difficulty will naturally be greatly intensified in the case of a religion like the Etruscan, where the literary sources in particular are much more scanty and the linguistic memorials remain in great measure unexplained, while the ethnological, linguistic, and religious relationships of the people have not yet been conclusively made out. The old and the new, the exotic and the indigenous, intermingle in the nebulous tradition; and, even where foreign influence can be clearly traced, it is often impossible to distinguish between ideas fused together by later syncretism and those mutually related from the first.

9. The impossibility of a systematic or genetic delineation.—From the sources (the bibliography of which will be found at the end of this article) we gain some impression of the various deities and systems of deities, the worship, and certain phases of the religious and ethical ideas of the Etruscans, and this impression it will be the aim of the succeeding paragraphs to set forth. In view of the defective and fortuitous transmission of the records, and owing to the impossibility of interpreting them clearly and finally, it is out of the question to think of reducing the aggregate mass of data to a system, or of tracing the course of their historical development. Moreover, we lack as yet —apart from a few excellent but still unfinished compilations of particular groups of objects (see lit. under 7)—a critical or relatively exhaustive collection of the materials furnished by the various monumental sources. Such a collection, again, would be of little service without an atlas of illustrations —not only because religious ideas are reflected in the artistic portrayal of the various types of deities, and in the conscientious workmanship, seen in the Etruscan sepulchral monuments and their abundant furnishings, but even more because, by reason of the peculiar character of the Etruscan record, the pictorial and glyptic sources usually speak to us more distinctly than the linguistic sources, which still remain largely inarticulate, and, in their Græco-Latin form, show a considerable admixture of non-Etruscan elements. We should add, further, that the (in part) very imperfectly preserved readings of the all-important Etruscan mirrors—especially of those published some decades ago—require to be collated once more with the originals; while a persevering philological investigation, not, indeed, of the roots—for such were at present a hopeless task —but of the suffixes of the Etruscan divine names, would even to-day be a most serviceable piece of preparatory work (see § 14).

II. *NAMES OF THE DEITIES.* — **10. Ancient Etruscan deities.**—The etymology of the genuinely Etruscan divine names remains for the most part an unsolved problem; nor do the vast majority of these names occur in the literary tradition. Still, the pictorial representations enable us to identify —with certainty, or, at least, with some degree of confidence—a number of them with the names of Roman and Greek deities. That the spheres of connotation in such secondary identifications only partially coincide, and that assimilations of this kind actually obscure the original character of the two deities so compared, is made perfectly clear, for example, from the study of Roman religion. The following pairs are broadly homologous: *tin(i)a* and Juppiter, *seθlans* and Vulcan, *turms* (*trm·s*)

and Mercury, *fufluns* and Bacchus, *turan* and Venus, *θesan* and Aurora. More or less obscurity still hangs over the names *ca(u)θa* (a sun-god ? cf. § 11), *cilens*, *cvlalp*, *leθam*, *mantrnś* (cf. *Mantus*, § 25), *θufltha*, *tecum*, *tluscv*, *laran* (a war-god ?), *aminθ* (Amor ?), and *svutaf* (a winged youth). For another series of names which cannot be interpreted individually, but are intelligible as a group, see § 23.

11. **Italic and Greek deities.**—Other deities bear Italic or Greek names, the forms of which have been more or less adjusted to Etruscan phonology. Thus *hercle* (Ἡρακλῆς), *ap(u)lu(n)* (Ἀπόλλων), *χaru(n)* (Χάρων), *aita* (Ἀΐδας), *ar(e)aθa* (Ἀριάδνα), and many names of heroes, seem to have been borrowed directly from the Greek. The Italic pantheon contributes, or may contribute, the following: *uni* (Juno), *mariś* (Mars), *neθuns* (Neptune), *sel(v)ans* (Silvanus), *vetis* (Vedius), *ani* (Janus), *satre* (Saturn), *mae* (Maius), *vesuna* (Umbr. and Mars. Vesune, Uesune [dat. sing.]). It is true that, phonetically, these parallels do not correspond in all respects, and in some instances (*neθuns*, *sel(v)ans*, *satre*) it is still an open question whether the Romans did not rather borrow the name and conception from the Etruscans. In some other cases a Greek or Italic name came to be used in place of the original Etruscan one; thus *atrpa* (Ἄτροπος) instead of *vanθ* (§ 25), *usil* (Sab. *ausel*) instead of *cauθa* (ἀμάρακον . . . Ῥωμαῖοι Σῶλις ὄκουλουμ, οἱ δὲ μιλλεφόλιουμ, Θοῦσκοι καυτάμ[-ν] [Dioscor. ii. 147, l. 17]), *herm-* (Ἑρμῆς) for *turms*, and *ani* (Janus) for *culśanś*. As regards the last, the bronze statuette which, according to *CIE* 437, was dedicated to *culśanś*, shows—as the present writer can attest, from a personal examination of the object at Cortona—the two faces of Janus, and we may therefore venture, on the analogy of other votive statues showing the image of the deity to whom they are dedicated, to couple the ancient Etruscan *culśanś* with the Etruscanized *ani*, who was perhaps related to the Faliscan Janus quadrifrons (Serv. *Æn.* vii. 608).

12. **Deities mentioned in the literary tradition.**—Other Etruscan deities, bearing Latin or Latinized names, are known to us only from the literary tradition. *Vertumnus* is designated 'deus Etruriae princeps' by Varro (*de Ling. Lat.* v. 46). *Voltumna* comes before us as the goddess of the federal temple of the twelve Etruscan city-States (Livy, iv. 25. 7: 'consilia ad movenda bella . . . in Etruria ad fanum Voltumnae agitata. Ibi prolatae in annum res, decretoque cautum, ne quod ante concilium fieret'). The temple of *Nortia*, the goddess of destiny, at Volsinii was noted for the device of registering the years by nails driven into the door (Livy, vii. 3. 7). The Etruscan city of Mantua took its name from *Mantus* (cf. §§ 10, 25), the Etruscan god of the under world (ancient authorities in Müller-Deecke, *Die Etrusker*, i.², note 6). A mythical *monstrum* called *Volta* is mentioned by Pliny (*HN* ii. 53, 140). The nymph *Begoe* and the divine youth *Tages* will be referred to below (§ 29).

13. **Oriental deities.**—While we are on comparatively safe ground in recognizing certain Greek and Roman deities under their Etruscan disguise, we are quite at a loss with regard to other foreign deities. It is true that the only Etruscan inscription that comes from Carthage contains the name of the Semitic *melkarθ*. But of the identifications of Etruscan and Egyptian deities which the present writer, by inference from the records on mummy dressings brought from Egypt (§ 3), has ventured to suggest, not a single instance is absolutely certain. The question whether pre-Hellenic ('Pelasgian,' 'Ægæo-Anatolian,' 'Carian,' 'Cretan,' 'Hittite,' or the like) types underlie the ancient Etruscan deities—a question which as regards some of these deities, e.g. *fufluns*, *śeθlans*, and *selvans*, a number of scholars answer affirmatively—is not, in the present writer's opinion, yet ripe for decision. Babylonian and Etruscan affinities will be dealt with below (§§ 30–32).

14. **Suffixes of divine names.**—Perhaps the suffixes of the Etruscan divine names may yet prove to be the key to further progress in this field, though some of these terminations are so slightly characteristic that they might even be Indo-Germanic, while others may possibly indicate only the Etruscan modifications of Italic, Greek, or Oriental names. The forms noted below may serve at least as a starting-point for further discussion; meanwhile it is important to notice that in some cases the same suffix may occur in the names of both male and female deities.

Suffix.	Names of Deities.
-nθ	ami-nθ, lei-nθ, va-nθ.
-ns	fuflu-ns, neθu-ns, śeθla-ns, selva-ns, culśa-nś, (lasa) isminθia-ns, cile-ns, mantr-nś (§ 25).
-θa	θufl-θa, area-θa, tali-θa, (lasa) racune-ta, mlaχ(u)-ta.
-mn-	Vertu-mn-us, Voltu-mn-a, Volu-mn-us, Volu-mn-a, Vitu-mn-us; probably also Pilu-mn-us, Picu-mn-us, Clitu-mn-us.
-rn-	Mant-urn-a, Iut-urn-a(?), Sat-urn-us, Volt-urn-us, Lav-ern-a, Numit-ern-us, El-ern-us.
-an	tur-an, θes-an, alp-an, ev-an, me-an, lar-an.
-l	hlnθia-l, recia-l, rescia-l.
-χ	puri-χ, malavis-χ, mlacu-χ, munθu-χ.

III. *SYSTEMS OF DEITIES.*—15. **Triad, ennead, dodecad; 'Dei involuti.'**—The various deities of the Etruscans (*æsar*, Hesych. *s.v.* αἰσοί; Sueton. *Aug.* 97; Dio Cass. lvi. 29) were grouped in distinct orders or systems. In every city that was founded *Etrusco ritu* special honours were accorded to the divine triad of Tinia, Uni, and Menrva, and a city which had not dedicated three gates and three temples to the triad did not find favour with the *prudentes Etruscæ disciplinæ*. To an ennead of gods, again, there belonged the power of launching certain kinds of lightning (*manubiæ*, 'hand-weapons,' separate flashes); and, as Tinia grasped three such *manubiæ* in his hand, there were in all eleven distinct species of lightning (Plin. *HN* ii. 138); in this connexion the number eleven is probably derived from Bab. ideas (Serv. on *Georg.* i. 33). The *prima manubia* was hurled by Tinia *suo consilio*; the *secunda* was sent with the advice of the dodecad of gods ('hos *Consentes* et *Complices* Etrusci aiunt, quod *una oriantur et occidant una*, sex mares et totidem feminas, nominibus ignotis et miserationis parcissimae: sed eos summi Jovis *consiliarios* ac participes existimari' [Varro, in Arnob. ii. 40]; the connexion of these six pairs of deities, who daily rise and set together in the sky, with the Gr. δώδεκα θεοί, the Græco-Oriental θεοὶ βουλαῖοι, the twelve months, and the Bab.-Oriental signs of the zodiac, is quite unmistakable). The *tertia manubia*, however—the most destructive of all—was sent by Tinia only with the concurrence of the *dei superiores*, *involuti*, or *opertanei*, whose names and number were unknown, and who, mysterious and inscrutable, sat enthroned above all (Cæcina, in Seneca, *Nat. Quæst.* ii. 41; Varro, in Arnob. ii. 40).

16. **Deities of lower rank.**—From these exalted gods we must distinguish the groups of spirits associated with persons and places. Here, however, it is more than usually difficult to detach the Etruscan from the Roman element. The *lares* (O. Lat. *lases*), the spirits who attach themselves to particular plots of land, and roam about at the cross-roads (*q.v.*); the *di penates*, who dwell and hold sway in the *penus*, i.e. the storeroom, beside the kitchen and the hearth; the *genii* of men and the *junones* of women, who, as guardian spirits (δαίμονες), are accorded special honours on birthdays—just as in the Rom. Cath. Church the tutelary saint is honoured on the name-day, which

by its association with baptism became the true birthday of the Christian; the *aisna hinθu*, or *divina anima*, the deified soul of the dead; the *dei gentiles*, who share the name of their particular *gens*: all these Roman divinities reappear—some quite evanescently, others more palpably, in the Etruscan tradition as well, though we cannot form a clear impression of the several groups, of their derivation from one another or from other types (gods of the under world, ancestral spirits), or of the way in which they were fused together at a later stage.

17. **Lares.**—But we are able at all events to distinguish the prænomens

Etr. *lar*	Lat. Lar	Gr. Λᾶρος
,, *larθ*	,, Lars	,, Λάρτας

with the long *ā* attested by the spelling and accentuation of names like Lártius, Laaro, Lāronius, Λᾶρος, from the Lat. appellative *lār* (from **lărs*), gen. *lăris*, O. Lat. pl. *lăses*, with *ă* short by nature. But, on the other hand, it is not impossible that the Lăra, the goddess of the nether world (Ov. *Fasti*, ii. 599 ff.), whom scholars are unwilling to detach from the Lăres or Lases, may be akin, alike in name and in function, to the Lasa (quantity of first *a* unknown), seen as a winged and attired goddess of fate or death, unfolding a roll and standing between the seer *hamφiare* (Ἀμφιάραος) and the *aivas* (Αἴας), whose look is submissively bent to the ground (Gerhard, *Etr. Spiegel*, iv. fig. 359). But there is a still unexplained incongruity between this particular *lasa* and the usual *lasa*-types of Etruscan mirrors (§ 23); and the 'Lăra' used by Ovid instead of the ordinary 'Lārunda' may perhaps be peculiar to that writer. The identification of the Etruscan deities *leθn* and *lasa* found on the Piacenza liver with the *Lar militaris* and the *Lar cœlestis* mentioned by Martianus Capella is quite uncertain.

18. **Penates.**—Our authorities with regard to the Etruscan *penates* are Nigidius and Cæsius, as quoted by Arnobius (*adv. Gent.* iii. 40). Both writers speak of a tetrad of deities. Nigidius distinguishes four *genera*, viz. the *di penates Jovis, Neptuni, inferorum*, and *mortalium hominum*; while Cæsius specifies the four individual deities, Fortuna, Ceres, Genius Jovialis, and Pales. In the four categories of Nigidius may be discerned the four elements—sky, sea, under world, and earth; but whether, or in what manner, the four deities of Cæsius are to be brought into relation with these, the present writer does not venture to decide.

19. **Genii and junones.**—Whether the term *genius* ('procreator') is the Lat. rendering of an Etr. word, as has been conjectured, and whether the Roman *genii* and *junones* had their counterparts in Etruria, it is likewise impossible to say. A *genius Jovialis* as one of the Etruscan *penates* was cited above (§ 18); in Festus, 359, Tages (§ 29) is designated *genii filius, nepos Jovis*. The serpent, the Roman symbol of the *genius*, is not infrequently depicted on Etruscan monuments.

20. **'Dei animales.'**—The practice of deifying the dead has left its impression in the sepulchral art of the Etruscans, and is directly attested by the literary tradition. According to Servius (on *Æn.* iii. 168), Labeo, in 'libris qui appellantur de diis animalibus,' had written: 'esse quaedam sacra quibus animae humanae vertantur in deos, qui appellantur animales, quod de anima fiant'; and Arnobius (*adv. Gent.* ii. 62) explicitly says: 'Etruria libris in Acheronticis pollicetur, certorum animalium sanguine numinibus certis dato, divinas animas fieri et ab legibus mortalitatis educi.' Such a *divina anima* or *deus animalis*—as indicated by the phrase *aisna hinθu* (the deified soul of the dead)—is repeatedly referred to also in the text of the Agram roll.

21. **'Dei gentiles.'**—We may safely assume, therefore, that ancestor-worship and the cult of the dead prevailed among the Etruscans. But to determine whether and how far the cult of mythological heroes, which was not very fully developed, and which borrowed most of its materials in a rather superficial way from Gr. mythology (§ 11), was connected with the cult of the dead is certainly very difficult. We are able, however, to distinguish more and more clearly a series of clan deities, though the relation between the deity and the *gens*—even in a chronological respect—is not always evident. In these cases the name of the *gens* is added in adjectival form to that of a well-known deity, or else the clan name and the divine name are simply identical. Thus in funerary text-rolls we can clearly trace the *culśu leprnei*, i.e. a death-goddess of the gens **Leprinia*, and the *uni ursmnei*, the *juno* of the gens *Orsminnia*. The Etr. divine name *satre* is related to the Etr. clan name *saterna* as the Lat.-Etr. clan name *satrius* to the Rom.-Etr. divine name *Saturnus*. The family deity of the *Numitorii* was sometimes called *Numiternus* and sometimes *Mars*; the *gens Numisia* worshipped *Numisius Martius* or *Numesius Mars*; and, similarly, we find in Etruscan inscriptions a *mariś husr-na-na*, and perhaps also a Hermes *huz-r-na-tre*—deities, that is to say, of a *gens Fusia* (**Husia*)—these names being fitted with characteristic Etruscan suffixes and accumulations of suffixes. Nor can it be disputed that the Etruscan or semi-Etruscan goddesses *Ancharia* of Fæsulæ and Asculum, and *Feronia* of the Faliscan Soracte, are connected with the *Ancharii* and the *Heruli* (= **Feruli*; in the Faliscan dialect *fere* is still = **Herus*). The name of the dictator *Egerius Lævius* explains that of the 'nymph' *Egeria*; and, similarly, the name of the Etruscan 'nymph' *Begoe, Vegoia*, **Vegonia* (inferred from the adj. *Vegonicus*) is quite identical with the regular feminine form of the clan name *vecu*, i.e. with *vecui*, **vecuia*, **vecunia*; and, if we are unable to say with certainty whether the *lasa vecu* belongs to the same group, it is only because the spelling with *-u* instead of *-ui* (which would in this case make *lasa vecu* = *lasa vecui* = *Lasa Begoe*) has been but rarely found, and because the explanation breaks down when applied to other names with *lasa* (§ 23). The Roman and Etruscan deities *Vitumnus, Vortumnus*, and *Volumnus, Voltumna* (§ 12), as appears from the stems and the common suffix of their names, are connected with Etruscan *gentilicia*; while the names of the death-goddesses *Tarp-eia, Mant-ur-na* (on *Mantus*, cf. § 25), and *Lav-er-na*, to judge from their structure and their stems, may really be pure Etruscan forms of clan names.

22. **'Ani' and 'uni'—clan deities?**—Even the names of the well-known Etruscan deities *ani* (m.) and *uni* (f.) cannot be satisfactorily explained on any other hypothesis. The word *Janus*—the original Etruscan name was noted above (§ 11)—is in Latin an *o* or *u* stem; but the Etr. form, instead of being, as we should have expected, **ane* or **anu*, is *ani*, which would yield in Latin an otherwise unknown **Janius*, or would exactly correspond to an *Annius* (cf. Ἄννιος, the Etruscan king [Alex. Polyh. in Plut. *Parall. min.* 40]), and this would imply that an Etruscan clan (= *gens*) god had at a later stage come to be identified with the Lat.-Faliscan Janus, owing to the similarity of their names. The Etr. equivalent of Juno, viz. *uni*, the Faliscan prænomen *iuna*, the Faliscan patronymic *iuneo*, the Roman gens *Junia*, and the month *Junius* (not **Junonius*) are all undoubtedly connected with the Lat. name of the goddess, but the direct link of connexion cannot be made out philologically; the name *Juno, -ōnis*, not yet satisfactorily explained as to the final constituent of its stem, would

yield, in Etruscan, the form **unui* or **ununia*; while the Etr. *uni* is the representative of an extinct Latin, or perhaps (in view of the Faliscan cult of Juno in the semi-Etruscan town of Falerii) Faliscan, name-form **Junia*, unless, indeed, it really represents the Indo-Germanic feminine form in -ī of which only fugitive traces survive in Latin itself (Skr. *yūnī-*; cf. Lat. *jūnī-x*).

23. **Etruscan 'lasa.'**—We find numerous representations of the goddesses whose function it is to serve and adorn others. The majority of these belong to the group of *turan*, and may be most appropriately compared with the *Horai* and the *Charites*. They are depicted as winged, and generally as naked, but they wear trinkets and ornamental shoes, and handle vessels for anointing, hair-pins, and mirrors, or crown others with wreaths, fillets, or sprays. Two of them—*θanr* and *eθauśva*—are seen assisting at the birth of Athene from the head of Jove, just as the Greek *Horai* likewise sometimes act as midwives. They are designated either by the name *lasa* (perhaps an appellative name?), or by this name joined to a personal name, or, again, by a personal name alone. Of such names, most of which remain unexplained, we meet with the following examples: *lasa vecu* (=**vecui*?) (§ 21), *lasa sitmica, lasa θimrae* (=**θimrai*?), *lasa racuneta, alpan, aχvizr, evan, zipanu* (*zipna, zipnu*), *zirna, θalna, θanr, mean* (*meanpe*), *mlacuχ, munθuχ, puriχ, rescial, snenaθ, taliθa*; while *malavisχ* and *hinθial* (Psyche) also seem to belong to the group.

24. **Fate-recording goddesses.**—Whether the term *lasa* was broad enough to be applied in some cases (§ 17) to the goddesses who record or predict fate—such as *vanθ* or *mlaχ(u)ta*—must remain an open question. It is quite possible that at a later stage the recording Μοῖραι, and, above all, Atropos, took the place not only of the Roman *Parcæ*, but also of the Etruscan death-spirits, and, in particular, of *vanθ*. Whether in any given case the goddesses who appear on Etruscan monuments holding a stylus and a roll or diptych represent the ancient Etruscan *vanθ* or the Etruscanized Atropos (*atrpa*), *mlaχ(u)ta*, or a *lasa*, cannot always be decided.

25. **Hell.**—The goddess *vanθ* just referred to, together with her companions *culśu* (§ 21) and *leinθ*, introduces us to the Etruscan views of Hell, the horrors of which might seem to be reflected in the demons of Michelangelo and in Dante's *Inferno*. Gruesome figures (*χarun, tuχulχa*), with distorted faces and animals' ears, and with hammers held as if to strike, bear away the dead from the circle of their loved ones. The sad necessity of parting is most touchingly portrayed on ash-chests and sarcophagi; on foot, on horseback, by waggon, or by ship, the dead set out on their long journey to the under world. In paintings on the walls of chambered tombs we see *aita* (Ἀΐδας) and *φersipnei* (Περσεφόνη) sitting enthroned, and in a bronze-mirror, *turms aitas* ('Hades-Hermes'). It is only in the Latin tradition that Mantus is spoken of as the Etruscan god of the under world, but he seems to be identical with the *mantrnś* of the monuments; while our sole evidence for the Etruscan origin of the death-goddesses *Mant-ur-na* (alongside of *mant-r-nś*), *Lav-er-na*, and *Tarp-eia* is the linguistic structure of their names (§ 21).

26. **Paradise.**—The ideas of the Etruscans regarding the hereafter, however, had also their brighter side. We referred above (§ 20) to the practice of deifying the souls of the dead—perhaps an Orphic-Pythagorean accretion—which finds expression in the literary sources. It is true that, on the whole, the Etruscans seem not to have been very susceptible to mystical views of the life beyond. The gorgeous displays seen in the cemeteries of Southern Etruria present, not the glorified scenery of a celestial paradise, but the reminiscences rather—and often, indeed, very realistic reminiscences—of earthly splendours. It may well be that the trappings of the sepulchre were used originally for apotropæic purposes, and were designed to pacify the dead or protect the living from being disturbed by them; but, in point of fact, amid the wealth and magnificence of the tombs of aristocrats and merchants in Southern Etruria, death and the dead must surely have lost their terrors. The variety of objects found in these cemeteries baffles description. The shields and weapons of departed warriors hang upon the pillars; while beside the bodies of women are laid gold ornaments of the finest hammered, granular, and filigree work, together with sumptuous toilet articles, including the artistically chased bronze mirrors with their mythological scenes and their unveiled beauties, in which some have vainly tried to discern a mystical and symbolical meaning. The carved figures of the sarcophagi—like the statues of the gods at the *lectisternia*—recline at table as if at some festive meal; whole sets of table services and wine-jars stand ready for them; while the great candelabra would once, no doubt, illuminate the solemn games in honour of the dead, as well as the splendid banquets, the huntings, the dances, and the delights of love, portrayed in the many-coloured frescoes upon the walls.

IV. *WORSHIP OF THE GODS AND THE ETRUSCA DISCIPLINA.*—27. **Priests.**—A striking contrast to the full enjoyment of life which still, after more than two thousand years, sparkles from the mausoleums of Etruscan magnates, is presented by the punctilious and pedantic worship of the gods, as made known to us, in particular, from the remains of the *Etrusca disciplina*. Livy (v. 1. 6) incidentally alludes to the Etruscans as a 'gens . . . ante omnes alias eo magis dedita religionibus, quod excelleret arte colendi eas'; and Clement of Alexandria (*Strom.* i. 306*d*) writes: θυτικὴν ἠκρίβωσαν Τοῦσκοι. The statement, 'Tusci autem a frequentia sacrificii dicti sunt, hoc est ἀπὸ τοῦ θύειν' (Serv. on *Æn.* ii. 781; Varro, in Isidore, xiv. 4, 22), is an example of the superficial etymology of the ancients, but nevertheless gives point to a truth. When the twelve cities assembled *ad fanum Voltumnæ* for their common festival, they chose from among the nobility a *sacerdos* for the *sollemnia ludorum*, who doubtless also enjoyed great political influence (Livy, v. 1. 5). The *Etrusca disciplina* was handed down in the families of the *principes* from generation to generation, and Roman youths were sent to Etruria to study the mysterious science (Cic. *de Leg.* ii. 9. 21, *ad Fam.* vi. 6, *de Divin.* i. 41. 92; Livy, ix. 36. 3; Tac. *Ann.* xi. 15). From the *bilinguis* of Pesaro (*CIL* xi. 6363) and other inscriptions we learn a few of the titles borne by the priests; the Latin terms *haruspe(x)* and *fulguriator*, which correspond in some way to the Etr. *netśvis trutnvt frontac*, indicate at least two such priestly functionaries, viz. the examiner of the liver or entrails and the priest of the lightning, the former of whom is depicted also in the figured cover of an ash-chest from Volterra (*Röm. Mitteil.* xx. [1905] fig. xiv.). The *haruspices* had intimate relations with the Roman aristocracy; they were frequently consulted by the Senate; they were upon the staff of commanders-in-chief and provincial governors; and the Emperors Augustus, Tiberius, Claudius, Alexander Severus, and Julian all had communication with them. Even the drastic measures of the Emperors Constantine and Theodosius did not avail to suppress them entirely. The fact that we find the *ordines haruspicum* in Rome and in the *municipia* seems to warrant us in assuming that special colleges and schools of priests existed also in Etruria.

28. Religious ceremonies.—The cultus consisted in prayers and imprecations, sacrifices and sacrificial meals. The worship of statues and the *lectisternia* feasts (§ 26) seem to have prevailed also in Etruria; while games, dances, music, stately processions, horse-races, and prize-fights (often attended with bloodshed) all had a place in the service of the gods.

We cannot fail to recognize the presence of formal litanies in the Agram roll—especially at the top of column 7; and Varro (*de Re Rust.* i. 2. 27) transmits in Latin form an Etruscan rhythmical charm for diseased feet which he had taken from the book of the Etruscan Sasernæ. Mention was made above of imprecatory tablets and the Magliano lead (§ 5). The epigraphic ABC monuments seem to have been used for the same mystical and apotropæic purposes as their Greek and Roman counterparts.

Besides the ordinary votive gifts, which often take the form of bronze statuettes of the deities to be worshipped, we find in Etruria, as elsewhere on ancient Italian soil, other offerings of a peculiar character, such as clay models of heads, faces and parts of faces, arms and hands, legs and feet, entrails, and external and internal organs of generation, which may have served as expressions of the worshipper's gratitude for restoration to health or the blessing of children, or of his desire for such boons.

Animal sacrifices were of two kinds, *hostiæ animales*, and *hostiæ consultatoriæ* (Serv. on *Æn.* iv. 56). In the former the soul or life of the animal was sacrificed to the gods as a propitiation and a substitute for the soul and life of man; in the latter the offerer solicited a revelation of the deity's will or counsel in the entrails of the victim. But alike in the monumental and in the literary records we find evidence also of such barbarities as the massacre of prisoners and stoning to death.

29. Origin of the disciplina (Tages, Begoe), and its divisions.—The *Etrusca disciplina* was traced to a mythical origin. The wondrous child *Tăges* was cast out of a clod by the plough, and those who crowded round to hear wrote down what he revealed and sang (Cic. *de Divin.* ii. 50, and other writers). The 'nymph' *Begoe* (§ 21) taught Arruns Veltymnus (Etr. *arnθ ultimne*) the sacred law of limitation (§ 33). The doctrine thus revealed falls into three parts—the *libri fulgurales, libri haruspicini*, and *libri rituales*. The *libri fatales* and *libri Acherontici*, to judge from their contents, seem to have belonged to the last-named category.

30. The 'libri fulgurales.'—The *libri fulgurales* contained the Etruscan doctrine regarding the regions of the heavens and the gods of the lightning (§ 15). The *fulguriatores* (§ 27) defined the various species of lightning according to their origin, force, and result; they interpreted the flashes according to the objects struck—places, trees, buildings, sanctuaries, statues, or human beings. They propitiated the lightning by removing the traces of its work ('burying the lightning'); they knew how to mitigate or suspend its effects, but they had it also in their power to call it down by adjurations, and to summon the deity to appear in the flash as guest or counsellor, or to destroy an enemy. With such adjurations the rain-charm would doubtless often be combined.

That the object struck by lightning becomes tabu, sacred, or *religiosum*—a thing in face of which man vacillates between dread and worship—seems to be a universal human belief; but whether the development of the Etruscan doctrine of the lightning by priestly speculations shows in its details the influence of Roman, Greek, or Babylonian ideas, or whether—as was the case with haruspicy—it was the means of conveying Babylonian ideas to the Romans, and perhaps to the Greeks as well, is a problem that awaits further investigation.

31. The 'libri haruspicini.'—The *libri haruspicini* comprised the doctrines relating to the inspection of entrails, and especially of the liver. The reeking entrails of the slaughtered animal were believed to be the media through which the gods spoke to men. The bronze liver of Piacenza (§ 6), with its regions and divine names, shows that the Etruscans, like the Babylonians, assigned to their deities definite localities both upon the liver and in the sky, and that their doctrine of the lightning was inherently related to their haruspicy. The account given by Martianus Capella (*de Nuptiis Merc. et Philol.* i. 41–61) and the Piacenza model both represent the celestial temple of the Etruscans, but each in its own way, so that the regions and deities of the one cannot be summarily identified with those of the other. In Etruscan, as in Babylonian haruspicy, the *caput iocinoris*, the *pars familiaris*, and *pars hostilis* (right and left?), the *fissa* (indentations and crevices seen especially in the sheep's liver), the *fibræ* (tips or edges of the liver), and the gall-bladder all had their special functions. We cannot say as yet whether the clay models of livers with Hittite cuneiform inscriptions which have been found in Boghaz-keui will prove, when deciphered, to be connecting links between the Babylonian and the Etruscan models. But we can even now make out a certain textual connexion between the Babylonian examples and the liver of Piacenza. Thus the two leading types of Babylonian haruspication were as follows: (1) 'If the left side of the gall-bladder is thus or thus, the enemy will capture the sovereign's country'; and (2) 'If [the left side of the gall-bladder is] complete, the flattened middle of the gall-duct is the hand of Ishtar of Babylon'; and, when we compare with these the divine names in the several regions of the Etruscan model, we find that they are abbreviations of the second type. Both the Etruscan and the Greek practice of haruspicy seem to be directly related to the Babylonian; the Roman *extispicium* was no doubt strongly influenced by the Etruscan system, but its sole object was to decide whether the victim was acceptable to the deity or not, whereas the Etruscans read in the liver revelations of the future, even in minute details.

32. The 'libri rituales' ('ostenta').—The Etruscan doctrines of the lightning-flash and of haruspicy were in certain portions closely akin to the doctrine of *ostenta*, which formed a division of the *libri rituales*. Our best source of information regarding the doctrine of *ostenta* is found in the *responsa* given by the Etruscan *haruspices* to the Romans who consulted them. With reference to any particular *prodigium*, the following four points had to be determined: (1) From which deities did the sign proceed? (2) Why had they sent it? (3) What did it portend? and (4) How was it to be propitiated? Examples of such *ostenta* were earthquakes, tempests, showers of stones or blood (fire-balls) in the sky, and comets. Ill-omened trees with black fruits, and unlucky animals (beasts of prey and night-birds) struck terrror into the beholder; white horses and rams with purple or golden spots denoted good luck; serpents might portend either good or evil. Monstrous births, especially hybrids, and grotesque animals stirred the imagination, and such creatures —chimæras, winged beasts, and crosses between lions and birds—appear also on the monuments, but have not as yet received special attention. These terrifying signs were usually propitiated by removing all traces of them. Statues which had been thrown down by tempest or lightning were set up more securely; injured temples were consecrated anew. Monsters and hybrid children were thrown into the sea or buried alive; adults who changed

their sex were banished to a desert island. A marriage disturbed by an earthquake or a celestial portent was postponed. Animals that spoke were supposed to be the mouthpieces of deities, and were maintained at the public expense. Whether certain other propitiatory rites, such as sacrifices, gifts, lustrations, and choirs of virgins, are of Greek, Roman, or Etruscan origin can hardly be decided in particular cases; and it is also doubtful whether divination by observing the flight of birds was indigenous to Etruria. Babylonian ideas make their influence strangely felt likewise throughout the Etruscan doctrine of *ostenta*, even in points of detail.

33. The 'libri rituales' (limitation, and ceremonies of consecration and foundation).—The *libri rituales* contained also directions regarding ceremonies on particular occasions. Plots of land, houses, temples, and cities had to be orientated and limited *Etrusco ritu*; *pomerium* and *mundus* seem originally to have been Etruscan terms. The arts of land-surveying and architecture enjoyed the sanction of religion. The books of the *gromatici* contained an oracle of Vegoia (§§ 21, 29) regarding the surveying and allotment of land (*agrimensores*, 350); the word *gruma* itself is most satisfactorily explained—in accordance with Etruscan analogies—as a derivative of the Gr. γνώμων (acc. -ονα). The Etruscan temple-design and the Etruscan *ritus* for the foundation of cities were adopted by the Romans. The excavations made, *e.g.*, at Marzabotto confirm the literary tradition. The investigation of Italian place-names has yielded a surprisingly large number of Etruscan forms; and, as such names are nearly always attached to high places capable of being defended, they are in all likelihood to be explained on the theory that urban colonies of Etruscans, located above and amidst the Italic peasant farm-houses, were founded and named *Etrusco ritu* by the ruling families of Etruscan nationality; though it is not, of course, to be supposed that these settlers, who, being relatively few in numbers, would soon be granted the rights of *connubium* and *commercium* with the neighbouring peoples, were able to maintain the distinctively Etruscan character of their new locations.

34. The 'libri rituales'; law.—In Etruria, legal institutions likewise formed a branch of religion. Thus we hear nothing of a separate legal code; the *jus civile* was merged in the *jus sacrum* of the religious books. The law of property seems to have been connected in the closest way with the sacrosanct art of land-surveying. The saying of Vegoia, found, as noted above, in the writings of the *agrimensores*, finishes with words that suggest the phraseology of Oriental religions: 'propterea neque fallax neque bilinguis sis; disciplinam pone in corde tua.' The perjurer and his offspring were doomed to become fugitives and outcasts. The frightful penalties wreaked upon hermaphrodites in Etruria (§ 32) are found attached to certain crimes also in Roman Law. By a fortunate accident of transmission a representation of the solemn Etruscan rite of adoption has come down to us: a sketch on a mirror shows us the adult Herakles sucking the breast of Juno in the presence of the other Olympians. Here the act of sucking signifies the rite of adoption, the child being admitted into Olympus in virtue of the milk-tie—a relationship which is quite common in the Caucasus, and which, through the influence of Islām, has become a universal law in the East. Cf. art. FOSTERAGE.

35. The 'libri fatales' and 'libri Acherontici.'—The *libri fatales* and *libri Acherontici*—the books of fate and of death—were also included among the *libri rituales*. We have already spoken of the deification of souls (§ 20); and in accordance therewith the Acherontic books would appear to have contained certain elements of the Orphic-Pythagorean doctrine of metempsychosis, and, in the manner of the Orphics, they based the fact upon certain mysterious sacrifices. These books treated also of a certain respite of fate: '. . . sciendum secundum aruspicinae libros et sacra Acheruntia, quae Tages composuisse dicitur, fata decem annis quadam ratione differri . . . primo loco a Jove dicunt posse impetrari, post a fatis' (Serv. on *Æn.* viii. 398). Birthdays and other periods of life were accounted of great, and even critical, importance. The *libri fatales* assigned to human life a duration of twelve hebdomads; but, when life had extended to ten hebdomads, or seventy years, man could no longer delay the incidence of fate by propitiatory rites. From that stage onwards he must ask nothing more from the gods; and, even if he should survive for other two hebdomads, yet his soul is really sundered from his body, and the gods vouchsafe him no further *prodigia* (Varro, in Censorinus, xiv. 6).

36. 'Sæcula'; cosmogony.—The doctrine of the periods of human life was adapted also to the life of the Etruscan city-State, appearing here as the doctrine of *sæcula*, which we meet with again in the sphere of Roman history. It was believed that a respite from the menaces of fate foreboded in the *ostenta sæcularia* could be secured by means of propitiatory ceremonies until the tenth *sæculum*, and that thereafter fate took its inexorable course. The 'secular' festivals were simply propitiations of the *ostenta sæcularia*. Conformably to the tradition regarding the *sæcula* found in the sacred books, the *terminus a quo* of Etruscan chronology was laid down as 967 B.C.—a date which is perhaps not without importance in regard to the appearance of the Etruscans in Italy.

The Etruscan cosmogony was of a very remarkable character. According to the account of it given by Suidas (*s.v.* Τυρρηνία), the demiurge appointed twelve millenniums for his acts of creation, and assigned them severally to the twelve signs of the zodiac. In the first chiliad he created heaven and earth; in the second, the firmament; in the third, the sea, and the waters upon the land; in the fourth, the great lights of heaven—sun, moon, and stars; in the fifth, everything in air, earth, and water that creeps and flies and runs upon four feet; and in the sixth, man. Six thousand years had thus elapsed before the creation of man, and the human race should endure for six thousand years more. The similarity of this creation story to the Biblical account is unmistakable. Whether the source used by Suidas, and very vaguely indicated by him, had been composed under the influence of the Biblical narrative, or whether his account really embodies an ancient Etruscan tradition—in the sense, let us say, that Western Asiatic conceptions underlie both the Biblical and the Etruscan doctrine of the origin and the *sæcula* of the world—is a problem which we are at present unable to solve.

LITERATURE.—I. *GENERAL*: K. O. Müller, *Die Etrusker*, new ed. by W. Deecke, Stuttgart, 1877, ii. 1–195: 'Von der Religion u. Divination d. Etrusker' [still of value, especially for its comprehensive account of the literary sources]; the same writer in Ersch-Gruber's *Allgem. Encyc.*, Leipzig, 1830, *s.v.* 'Hetrurien,' 'Hetrusker' (= *Kleine deutsche Schriften*, Breslau, 1847, i. 173–185); E. Gerhard, *Über d. Gottheiten d. Etrusker: Eine in d. kgl. Akad. d. Wiss. zu Berlin vorgelesene Abhandlung*, Berlin, 1847 [deals with monumental sources, but with untenable mystical interpretations]; G. Dennis, *The Cities and Cemeteries of Etruria*, new ed., London, 1883, i. pp. liii–lx; A. Noël Des Vergers, *L'Étrurie et les Étrusques*, Paris, 1862–64, i. 278–314; J. Martha, *L'Art étrusque*, Paris, 1889, pp. 255–283: 'L'Architecture religieuse,' 313–321: 'La Sculpture religieuse (Les Figures mythologiques)'; the same writer in Daremberg-Saglio, *Dict. des Ant.*, *s.v.* 'Etrusci'; G. Körte, in Pauly-Wissowa, *s.v.* 'Etrusker,' vi. 765–768. L. A. Milani (*Ausonia*, i. [1906] 133) has promised a study on the Art and Religion of the Etruscans. Further bibliographical particulars in G. Herbig, 'Bericht über d. Fortschritte d. Etruskologie für d. Jahre 1894–1907,' in

Jahresber. über d. Fortschritte d. klass. Altertumswissensch. cxl. (Leipzig, 1908) 79 ff. ('Religion,' nos. 488–518; previous reports by W. Deecke, cf. *ib.* under no. 5). Short summaries of the literature will be found also in many treatises on Roman and ancient history.

II. *FOR THE SPECIAL SUBJECTS OF THE PARAGRAPHS.*—**1.** For the calendar and astronomy: Müller-Deecke, *Etrusker*, ii. 300–316; C. Thulin, *Die Götter des Martianus Capella u. der Bronzeleber v. Piacenza*, Giessen, 1906, pp. 75–81; cf. F. Boll, in *Berl. philol. Wochenschr.* xxviii. (1908), cols. 1372–79. For calendar dates and the Agram linen-roll: A. Torp, 'Etrusk. Monatsnamen,' in *Videnskabs-Selskabets Skrifter*, ii., Histor.-Filos. Kl., Christiania, 1902, no. 4; G. Herbig, 'Die etr. Leinwandrolle d. Agramer Nat.-Museums,' in *Abhandl. d. kgl. bayer. Akad. d. Wissensch.*, Philos.-Philol. u. Histor. Kl. xxv. (Munich, 1911), no. 4, p. 43 (with additional literature). Collections of Inscriptions: *Corpus inscr. ital.*, ed. A. Fabretti, Turin, 1867, with three suppl. 1872–78, and G. F. Gamurrini, *Appendice*, Florence, 1880; *Corpus inscr. etr.*, Leipzig, 1893 ff., edd. C. Pauli, O. A. Danielsson, G. Herbig, B. Nogara; more recent discoveries in the current issues of the 'Notizie degli scavi' (*Atti d. R. Acc. d. Lincei*, Rome).

2. For the ancient references to the Etruscan religion and the *Etrusca disciplina*: Müller-Deecke, *Etrusker* (as above); G. Schmeisser, *Quæstionum de Etrusca disciplina particula*, Inaug. Diss., Breslau, 1872, also *Die etr. Disciplin*, Programm, Liegnitz, 1881; A. Bouché-Leclercq, *Histoire de la divination dans l'antiquité*, iv. (Paris, 1882) 3–115; G. Wissowa, *Rel. u. Kultus d. Römer*², Munich, 1912, pp. 543–549; C. O. Thulin, *Die etr. Disciplin*, i.–iii., Gothenburg, 1906–09. For Latin writers on the *Etr. disciplina*: M. Schanz, *Gesch. d. röm. Lit.* i. 2³, Munich, 1909, pp. 494–497; *Scriptorum disciplinæ etr. fragmenta*, coll. C. Thulin, i., Berlin, 1906; E. Bormann, 'Denkmäler etr. Schriftsteller,' in the *Jahreshefte d. österr. arch. Inst.* ii. (Vienna, 1899) 129–136.

3. For the Agram roll: I. Krall, 'Die etr. Mumienbinden des Agramer National-Museums,' *DWAW*, Philos.-Hist. Kl. xli. (Vienna, 1892) 1–70; E. Lattes, 'Saggi e appunti intorno alla iscrizione etrusca della mummia,' in *Memorie d. R. Ist.-Lomb.*, Cl. di lett. e scienze stor. e mor. xix. (Milan, 1893) 133–389, and elsewhere; A. Torp, *Etr. Beiträge*, i., ii., Leipzig, 1902–03; G. Herbig, *Etr. Leinwandrolle* (as above): a new ed. is in preparation for the *CIE*.

4. For sepulchral rolls and the *pulena*-roll: G. Herbig, *op. cit.* 11–18, 20–20. For the clay tablet of Capua: A. Torp, 'Bemerkungen zu d. etr. Inschrift von S. Maria di Capua,' in *Videns.-Selsk. Skrifter*, ii., Hist.-Filos. Kl., Christiania, 1905, no. 5. For the *cippus Perusinus*: *CIE* 4538.

5. For the leaden tablet of Magliano: L. A. Milani, 'Il Piombo scritto di Magliano,' in *Mon. ant. dei Lincei*, ii. (Rome, 1893). For imprecatory tablets: F. Skutsch, in Pauly-Wissowa, *s.v.* 'Etrusker,' vi. 785 f., and elsewhere. For ABC monuments: A. Dieterich, in *Rhein. Mus. f. Phil.* lvi. (1901) 77–105 (cf. *Kleine Schriften*, Leipzig, 1911, p. 202 ff.). For anatomical votive gifts: L. Stieda, 'Über altital. Weihgeschenke,' in *Mitteil. d. kaiserl. deutsch. arch. Inst.*, Röm. Abtheilung, xiv. [1899] 230–243: Anatomische Hefte, Abt. i., xvi. (1901) 1–83.

6. For the bronze liver of Piacenza: W. Deecke, 'Das Templum von Piacenza,' *Etrusk. Forschungen*, iv., Stuttgart, 1880, with Supplement, *Etr. Forsch. u. Studien*, ii. [1882] 65 ff.; C. Thulin, *Die Götter d. Mart. Cap.* (above under **1**), and cf. W. F. Otto, in *Deutsche Lit.-Zeitung*, 1909, cols. 1035–43; G. Körte, 'Die Bronzeleber von P.,' in *Röm. Mitteil.* xx. [1905] 348–379. For Oriental analogues, see lit. in G. Herbig, *Bericht* (cf. above, under I.), esp. M. Jastrow, *Die Religion Babyloniens u. Assyriens*, Giessen, 1905 ff., ii. 213–415. Cf. art. DIVINATION (Roman), vol. iv. p. 825ᵃ, notes 1 and 2.

7. E. Gerhard, A. Klügmann, G. Körte, *Etr. Spiegel*, i.–v., Berlin, 1840–97; A. Furtwängler, *Die antiken Gemmen*, i.–iii., Leipzig, 1900; H. Brunn and G. Körte, *I Rilievi delle urne etrusche*, i., ii., Rome, 1870–96; lit. on mural paintings in F. v. Stryk, *Studien üb. d. etr. Kammergräber*, Inaug. Diss. (Munich), Dorpat, 1910; W. Deecke, 'Das etr. Münzwesen' (*Etr. Forsch.* ii.), Stuttgart, 1876. There exist as yet no really comprehensive works giving reproductions of the Etr. mural paintings, coins, statues of deities, or vases (with the actual and genuine Etruscan paintings).

8. Wissowa's genetic analysis of the various orders of deities in Rom. religion (*Religion u. Kultus*, pt. ii. sect. 1–5) is a masterpiece of method.

9. A great deal of philological material relating to the names of the gods will be found here and there in the writings of W. Corssen, S. Bugge, W. Deecke, C. Pauli, and E. Lattes. But, grateful as we are for much that has been written on points of detail, we cannot shut our eyes to the fact that nearly every attempt to explain these names etymologically has proved a failure.

10 and **12.** Artt. on individual deities by W. Deecke and C. Pauli, in Roscher, and by C. Thulin and G. Herbig, in Pauly-Wissowa, *s.vv.*

11. For Italic and Greek deities in Etruria: G. Wissowa, *Religion*, etc.; W. F. Otto, in Pauly-Wissowa; J. B. Carter, 'Die Etrusker u. d. röm. Religion,' in *Röm. Mitteil.* xxv. (1910) 74–88. For Gr. names of gods and heroes in Etr. form: W. Deecke, in *Beiträge z. Kunde d. indogerm. Sprachen*, ed. Bezzenberger, ii. (Göttingen, 1878) 161–186. For (*usil* and) *cauθa*: Skutsch-Pontrandolfi, *La Lingua etrusca*, Florence, 1909, p. 15; G. Herbig, *Etr. Leinwandrolle*, p. 24 f.; for *herm-* and *turms*: G. Herbig, *op. cit.* p. 25; for (*ani* and) *cultanś*: G. Herbig, *Glotta*, iv. (1912) 173.

13. On *melkarθ*: M. Bréal, *Journal des Savants*, 1899, p. 63 ff. For Egyptian deities in the Agram document: G. Herbig, *Etr. Leinwandrolle*, 34–38. For the relations between Etruscans and pre-Hellenic civilization (with very dubious results): L. A. Milani, in *Studi e mat. di arch. e numism.* i., ii. (1899–1905), and in the *Rivista critica e storica, promotrice della cultura religiosa in Italia*, vi. (1905); S. Bugge, *Das Verhältnis d. Etrusker zu d. Indogermanen u. d. vorgriech. Bevölkerung Kleinasiens u. Griechenlands*, Strassburg, 1909. On *fufluns*: most recently W. Schulze, 'Zur Gesch. lat. Eigennamen,' in *AGG*, Philol.-Hist. Kl., new ser., v. 5, no. 5 (Berlin, 1904), p. 589; on *šeθlans* and *selvans*: C. Pauli, in Roscher, *s.vv.* For links between Etruria and Babylonia, see lit. to § 6 and §§ 30–32.

14. For the suffixes of Etr. words: Müller-Deecke, *Die Etrusker*, ii. §§ 23, 24, and especially W. Schulze, *op. cit. passim.* Precarious conclusions regarding the formation of Etr. divine names in C. Pauli, in *Beiträge z. Kunde d. indogerm. Sprachen*, ed. Bezzenberger, xxv. (Göttingen, 1900) 194–227, xxvi. (1901) 48–63.

G. HERBIG.

EUCHARIST (to end of Middle Ages).—The title 'Eucharist,' as applied to the central rite of the Christian Church, has its origin in the thanksgivings pronounced over the bread and cup by Christ at the Last Supper (Mk $14^{22f.}$, Mt 26^{27}, Lk $22^{17\text{-}19}$, 1 Co 11^{24}). From early times the word was applied to the Christian 'thank-offering,' with special reference to the bread and wine over which the thanksgiving was pronounced (*Didache*, 9; Ignatius, *Philad.* 4, *Smyrn.* 6; Justin, *Apol.* i. 66). On the uses of the words εὐχαριστία, εὐχαριστεῖν, see note by Hort in *JThSt* iii. 594 f.; and on the later history of the parallel word εὐλογία, based on the 'blessing' (εὐλογήσας, Mk 14^{22} [Mt 26^{26}]) pronounced at the institution, see Brightman, *Liturgies Eastern and Western*, Oxford, 1896, Index. There is no instance of these uses of the word εὐχαριστία in the NT, where the terms employed to denote the common meal of the Christians with which the Eucharist was associated are 'the breaking of bread' (ἡ κλάσις τοῦ ἄρτου, κλᾶν ἄρτον, Ac $2^{42.46}$ $20^{7.11}$, 1 Co 10^{16}; in the last 'the cup of blessing' is also referred to) and 'supper of the Lord' (κυριακὸν δεῖπνον, 1 Co 11^{20}; see below). From the presentation in the rite of bread and wine regarded as an offering of the fruits of the earth, along with the prayers and thanksgivings of the worshippers, the term 'sacrifice' (θυσία, *Did.* 14) or 'offering' (Iren. *adv. Hær.* IV. xviii. 1, *ecclesiæ oblatio*; cf. Clement of Rome, *ad Cor.* 40, 44) came to be applied to the rite. Later expansions of this earlier language will be illustrated in the course of the present article. See, further, Drews, *PRE*³, art. 'Eucharistie.'

I. *THE EUCHARIST IN THE NEW TESTAMENT.*—**1. Accounts of the Last Supper.**—The four passages dealing with the Last Supper are Mt $26^{26\text{-}29}$, Mk $14^{22\text{-}25}$, Lk $22^{15\text{-}20}$, 1 Co $11^{23\text{-}26}$. Of these four accounts Mt. is dependent on Mk.; St. Paul supplies fresh features, while Lk. exhibits important differences from the other three. According to the Synoptists and St. Paul, Jesus on the evening before His arrest, during a meal with His disciples, took bread, and pronounced over it a blessing or thanksgiving (εὐλογήσας, Mt., Mk.; εὐχαριστήσας, Lk., Paul; the words are nearly synonymous—see 1 Co 14^{16}; the 'blessing' or 'thanksgiving' is an act of praise addressed to God). The bread was distributed to the disciples with the words 'This is my body.' Then Jesus took the cup, and, having given thanks (εὐχαριστήσας, Mt., Mk.), He gave it to them and said: 'This is my blood of the covenant which is shed for many' (ὑπὲρ πολλῶν, Mk.; περὶ πολλῶν, Mt.; Paul has 'the new covenant in my blood'; so Lk. acc. to the *textus receptus*). After the words 'This is my body' Paul has 'which is for you (τὸ ὑπὲρ ὑμῶν), and this is expanded by the *textus receptus* of Lk. into 'which is given for you.' Similarly, Mt. expands the words of Mk. about 'the blood shed for many' by the addition 'unto remission of sins.' Mt. alone has the injunctions, after the delivery of the bread and the cup, 'Eat,' 'Drink ye all of it,' while Mk. has simply 'and they all drank of it.' Mk. also records that it was after they had drunk of it that the words 'This is my blood,' etc., were spoken, whereas Mt. connects both the commands to eat and to drink closely with the statements 'This is my body,' 'This is my blood.' Paul and the *textus receptus* of Lk. add the command, 'Do this for my memorial' (τοῦτο ποιεῖτε εἰς τὴν ἐμὴν ἀνάμνησιν) after the words 'This is my body'; and Paul has the same words, with the addition 'as often as ye drink it,' after the words about the cup (the injunction in connexion with the cup is not found in the *textus receptus* of Lk.). Paul and the *textus receptus* of Lk. assert that it was 'after they had supped' that the thanksgiving over the cup was pronounced. In Mt. and Mk. the account concludes with the words, 'Verily I say unto you, I will no longer drink of the fruit of the vine, until that day when I drink it new (Mt. adds 'with you') in the Kingdom of God' ('my Father,' Mt.). The words are absent from Lk. in this connexion, but similar words appear earlier in his account, in connexion with the thanksgiving over a cup and the delivery of it, before the blessing of the bread. St. Paul's account concludes with the words, 'for as often as ye eat this bread, and drink the cup, ye proclaim the Lord's death until he come' (in which Schweitzer sees a reminiscence of the concluding words in the accounts of Mt. and Mk.).

The main problem in the NT account of the institution centres in Lk. Westcott and Hort, on the ground of the omission of vv.$^{19b.\,20}$ in some early Western authorities, regard these words as a later insertion (see Sanday, in *HDB* ii. 636). But the resultant text is full of difficulty. According to their reading, in vv.$^{15\text{-}18}$ Jesus alludes to His desire to eat this Passover with them before He suffers, and declares that He will not eat of it, until it be fulfilled in the Kingdom of God. Then follows a thanksgiving over a cup, and its delivery to them to be divided amongst them, with no reference to the words about His blood, but merely with the statement that He 'will not drink henceforth of the fruit of the vine, until the Kingdom of God come' (some MSS omit the words ἀπὸ τοῦ νῦν). Then in v.^{19a} follows the account of the thanksgiving over the bread, which is broken and given to them with the words, 'This is my body.'

Those who adopt the reading of Westcott and Hort regard v.^{17} as taking the place of the narrative in Mt. and Mk. about the cup, which thus precedes the blessing pronounced over the bread (for this order, which follows the common Jewish order of the benedictions at meals, cf. *Didache*, 9). According to this interpretation, the sacramental significance of the acts of Jesus is indicated only in the case of the bread. But the omission of the words recorded by the other Synoptists with reference to the cup is in any case difficult to explain. Moreover, the parallelism exhibited in vv.$^{15\text{-}18}$ suggests that these verses are closely connected, and form a narrative distinct from that in v.^{19a}, which thus becomes a mere isolated fragment. Hence it may be argued that the text of Westcott and Hort represents a transition between two types of text, the one containing only vv.$^{15\text{-}18}$, the other being that represented in the received text of Lk. On the former supposition the whole of v.^{19} would be an interpolation from St. Paul; and Lk., like the Fourth Gospel, would then contain no account of the institution of the rite (Blass, *Philology of the Gospels*, London, 1898, p. 179 f.). There is, however, no manuscript authority for the omission of the first part of v.^{19}. On the other supposition the *textus receptus* of Lk. represents the original reading, and the variations and omissions are explained as due to the difficulty created in the minds of scribes by the existence of two cups in Lk.'s account. Of those who accept the *textus receptus* of Lk., some regard vv.$^{15\text{-}18}$ as referring, at least in the intention of the author of Lk., to the Paschal meal (see, however, § 2), and as having no reference to the Eucharist, the account of which follows in vv.$^{19\text{-}20}$ (Resch, Holtzmann, Schweitzer). Schweitzer regards the account in Lk. as due to editorial revision, and as possessing no independent value. It has been suggested in this connexion that the rearrangement of his material by Lk. has been carried out with the object of bringing the account into accord with the ritual of the Passover, and that the first cup is intended to represent that which began the Paschal ritual, while the second cup is placed, as in the Paschal ritual, at the end of the meal (cf. Goguel, *L'Eucharistie*, p. 64). Others, however, regard vv.$^{15\text{-}18}$ as a doublet, containing a distinct account of the Supper from that found in vv.$^{19.\,20}$ (Batiffol, *Études*, 2nd ser., p. 82; Blakiston, *JThSt* iv. 548 f.). A further stage is represented in the opinion which attaches exclusive importance to vv.$^{15\text{-}18}$, and finds in them the clue to the real interpretation of the Supper (Loisy, *Les Évangiles synoptiques*, ii. 536 f.; Andersen, *Abendmahl*, 85 f.). But it is a purely arbitrary reconstruction of the history which leaves out of account the tradition preserved in the other Synoptists and in St. Paul.

2. Significance of the Supper.—As to the significance of the words and acts of Jesus at the Supper there has been a wide divergence of opinion in modern discussions of the subject (for useful summaries, see A. Schweitzer, *Das Abendmahl*; Loisy, *Les Évangiles synoptiques*, ii. 535, note 1; Goguel, *L'Eucharistie*, p. 1 ff.). Individual scholars have emphasized severally some particular aspect of the rite, and have denied that it contained any

other reference. The brevity of our accounts leaves much unexplained. Possibly Jesus intended His acts and words to be interpreted by the experience of the disciples (cf. Robinson, *EBi*, art. 'Eucharist'), in the light of the events which followed and the new relationship with Him upon which the disciples entered after the Resurrection.

The chief lines along which the interpretation of the Supper has been sought are as follows.

(1) The setting of the meal points to its association with other similar Jewish religious meals, in which there was a solemn benediction of the bread and cup, followed at the close by a prayer of thanksgiving spoken by the president (von der Goltz, *Tischgebete und Abendmahlsgebete*, Leipzig, 1905, p. 7 f.). The prayers of the *Didache* (cc. 9, 10) exhibit the influence of such Jewish formulæ, and the reference to the 'breaking of bread' not only in the early chapters of Acts ($2^{42.46}$), but also in Lk 24^{30-35}, points to the possibility that the Last Supper had links with previous meals which our Lord had shared with His disciples. From this point of view it would sum up and perpetuate that relationship with Him which had been theirs in the days of His ministry.

(2) A second feature of the meal is its connexion with the coming death of Christ. The breaking of the bread and the outpouring of the wine were 'an acted parable' (Jülicher), by which Christ consoled His disciples, declaring to them that His coming death was destined to be a source of blessing to them. This idea, which is clearly expressed in St. Paul's interpretation of the body as 'that which is for you' (τὸ ὑπὲρ ὑμῶν, 1 Co 11^{24}), is implied in Mt. and Mk. by the reference to the blood as 'shed for many' (Mt 26^{28}, Mk 14^{24}), and by the interpretation given to it in Mt. as 'unto remission of sins.' The separate mention of the body and the blood in this connexion shows that it is the body as slain which is spoken of, and rules out all interpretations such as that, *e.g.*, of Andersen, which regards 'the body' as a Pauline phrase, equivalent to 'the Church,' adopted and misunderstood by Mk. from St. Paul. In this way we can explain the idea of the rite as a commemoration of the death of Christ, which is emphasized in the account of St. Paul (1 Co $11^{24f.}$).

(3) A further point is emphasized in our Lord's reference to the cup as 'my blood of the covenant' (Mt., Mk.), or, according to St. Paul (and the *textus receptus* of Lk.), 'the new covenant in my blood.' This aspect has been dwelt upon by Holtzmann (*NT Theol.*, Freiburg, 1896–97, i. 296 f.), who finds in it the clue to the meaning of Christ's action in the Supper. The words refer to Ex 24^{8}, where, at the ratification of the Sinaitic covenant, Moses sprinkles the people with the blood of the victim, saying, 'Behold the blood of the covenant.' According to this view, our Lord intended by His act to declare the abrogation of the Old Covenant and of the Law, and the inauguration of a new relationship between the disciples and God. In this connexion St. Paul's phrase 'new (καινή) covenant in my blood' is a natural interpretation of the simpler words found in Mk. and Mt., with a probable allusion to Jer 31^{31}. For a fuller expansion of the thought in the light of Christian experience, see He 8-9, where reference is made both to Jer 31^{31-34} and to Ex 24^{8}. Holtzmann's further contention, that the words of Christ contain no reference to an expiatory death, is not consistent with the language recorded by the Synoptists and St. Paul. The latter, as we have seen, speaks of 'the body which is for you' (τὸ ὑπὲρ ὑμῶν, expanded in the *textus receptus* of Lk. into 'which is given for you'). Similarly, Mt. and Mk. speak of the blood as 'poured out for many,' which Mt. further interprets as 'unto remission of sins.' Moreover, the reference to Ex 24^{8} points to a covenant based upon a sacrifice, and in the parallel passage Jer 31^{31-34} there is a reference to the forgiveness of sins in connexion with the new covenant. Such language is fully in accordance with the early Christian interpretation of the death of Christ (cf. 1 Co 15^{3}, Mk 10^{45}, Mt 20^{28}).

(4) The delivery by Jesus to the disciples of the bread and the cup, accompanied by the command, 'Take' (Mk., Mt.), 'Drink ye all of it' (Mt.), has been interpreted as conveying the idea of a bestowal of spiritual food and drink, of which the bread and wine were representative symbols. The meal as such was to be a memorial feast of the death of Christ, and the bread and wine, received with thanksgiving in remembrance of Christ's death, are designated His body and blood, which are given for the nourishment of the soul (cf. Harnack, 'Brod u. Wasser,' *TU* VII. ii. 117 ff.). This idea is illustrated by St. Paul's implied comparison of the manna and water in the wilderness with the Christian sacraments, and his reference to them as 'spiritual food' and 'spiritual drink' (1 Co 10^{3-4}). It also finds expression in the prayers of the *Didache* (ch. 10). It is this aspect of the Sacrament from which the author of the Fourth Gospel starts in the discourse of ch. 6, which contains an implied reference to the Christian Sacrament, though the author nowhere records its institution. In that chapter we find developed the thought of Christ as the Bread of Life, who gives to men His flesh to eat and His blood to drink. The language used has points of contact with the OT, Rabbinical teaching ('to eat the years of the Messiah,' or 'to eat the Messiah'), and the language of Philo (the Logos the food of the soul); while the terms used ('flesh' and 'spirit') form the starting-point of the theology of Ignatius and Justin, and prepare the way for the conception of the Sacrament as the extension of the Incarnation. The general idea is a spiritual assimilation of Christ in the higher elements of His humanity.

The conception of the Christian Sacrament as a meal following upon a sacrifice lay near at hand in the allusion to Ex 24, where the covenant sacrifice is followed by a sacrificial meal (Ex 24^{11} 'they saw God, and did eat and drink'). A similar reference has been seen in He $13^{10f.}$ where, whatever be the interpretation of the word 'altar,' it is urged that the idea of the writer seems to be that the superiority of the new covenant consists in the fact that, while, in the chief sacrifice of the Day of Atonement, the priests were not allowed to partake of the flesh of the sacrifice, the Christian sacrifice provides at once an atonement and a means of communion. But this interpretation reads more into the passage than can legitimately be inferred from it.

(5) The words with which Mk. and Mt. conclude their account, and in which Jesus declares, 'I will no longer drink of the fruit of the vine, until that day when I drink it new in the Kingdom of God,' contain an allusion to the Jewish belief which represented the coming Messianic age under the form of a banquet, and described its blessings under the form of eating and drinking. Starting from these words in Mk 14^{25}, some modern scholars have explained the words and actions of Jesus at the Supper in an eschatological sense. The pioneer in this interpretation was Spitta (*Urchristenthum*, i.), who illustrates at great length from the Prophets and Wisdom literature of the OT, as well as from Jewish apocalyptic and later Rabbinical writings, the idea of the Messianic feast, in which the Messiah Himself is the food of the subjects of the Kingdom (among the OT passages referred to are Is 25^{6-8} 55^{1-3}, Ps 132^{15}, Pr 9^{2-5}, Sir 15^{3} 24^{17-21}; cf. Mt $22^{2f.}$, Lk $14^{15f.}$ 22^{28-30}). He further sees in the words of Jesus an allusion to the Davidic-Messianic covenant (see § 4). According to this interpretation, the ideas of Jesus were wholly centred in the future, and had no reference to His death. He turned away from the present, with its prospect of suffering and death, to the future Kingdom, in which, as Messiah, He would bestow on His

disciples the blessings of the coming age. The meal was thus a foretaste of the Messianic feast. Spitta's illustrations of the thought of the spiritual assimilation of the Messiah are instructive and valuable, but his denial that the words and actions of Jesus in regard to the meal have any connexion with His death does great violence to the narratives of the Gospel.

The eschatological view has also been maintained by A. Schweitzer, who in his two works, *Das Abendmahl in Zusammenhang mit dem Leben Jesu und der Gesch. des Urchristenthums* (1901), and *Von Reimarus zu Wrede* (1906), has pleaded for a fuller recognition of the eschatological character of the teaching and acts of Jesus. Starting from St. Mark's account, which he regards as the most authentic, he finds the key to the meaning of the Supper in the words, 'I will no longer drink of the fruit of the vine, until that day when I drink it new in the Kingdom of God.' But, unlike Spitta, he recognizes the connexion of the words of Jesus with the thought of His coming sufferings. The thought of suffering, however, is brought into connexion with the eschatological expectation: Jesus spoke to the disciples, not of His death, but of His death and speedy re-union with them in the feast in the 'Kingdom' (*Abendmahl*, p. 61). Similarly he interprets the feeding of the five thousand as a foretaste of the Messianic meal (*Von Reimarus zu Wrede*, p. 372 f.). By distributing bread to the multitude, He consecrates them to be partakers of the coming Messianic feast, and gives them a pledge that, 'as they had been His table-companions in the time of His obscurity, so should they be also in the time of His glory' (p. 373). The feeding was more than a love-feast or communion-feast. It was a sacrament of deliverance. The Last Supper at Jerusalem had the same sacramental significance. The action of Jesus in distributing the bread and wine is an end in itself, and the meaning of the feast depends upon the fact that He personally distributes the food. The words spoken during the distribution with reference to the propitiatory meaning of His death do not touch the essence of the feast, but are accessary (p. 377). The doubtful feature of this interpretation is the attempt to find the central idea of the Supper in the words of Mk 14^{25} rather than in the words spoken with reference to the bread and wine, and connecting them with the body and blood of Jesus and His coming death. But that there was some such eschatological reference in the Supper, by which the disciples were pointed forward to the coming Kingdom, and their fellowship with Jesus as the Messiah, seems clear not only from the language of the Synoptists, but also from the echo of that language found in the words with which St. Paul concludes his account in 1 Co 11^{26}, 'As often as ye eat this bread, and drink the cup, ye proclaim the Lord's death until He come.'

The eschatological interpretation enables us to reconstruct more exactly the *milieu* amid which the words of Jesus were spoken at the Supper, even if it does not exhaust their reference. It also throws light upon the language of St. Paul, and the spirit in which the early Christian community, with its eager hope of the Second Coming, continued to observe the rite.

(6) The attempt to find a sacrificial meaning in the terms of the command, 'Do this as my memorial,' recorded by St. Paul, and found in the *textus receptus* of Lk., has not gained the general assent of scholars. With the possible exception of St. Paul's words ('ye proclaim the Lord's death until he come') in 1 Co 11^{26}, the NT throws no light upon the way in which the words ποιεῖν ('do') and ἀνάμνησις ('memorial') were interpreted in Apostolic times; and Justin Martyr (*Dial. c. Tryph.* 41) stands alone among 2nd cent. writers in interpreting ποιεῖν in a sacrificial sense ('offer'). The conception of the Eucharist as a sacrifice, which appears already in the *Didache*, arose from more general considerations than the interpretation of the particular words ποιεῖν and ἀνάμνησις used by St. Paul.

In the above discussion the question of the relation of the Eucharist to the Passover meal has been left for separate treatment. The setting of the Supper in the Synoptic accounts implies that it was a Passover meal (see Mt 26^{17}, Mk 14^{12}, Lk 22^{7}). According to that account, Christ sent the disciples to prepare the Passover on 'the first day of unleavened bread,' which Mk. and Lk. identify with the day on which the Passover lamb was killed. The Supper took place on the evening of the same day. Again, the words of Lk 22^{15} ('with desire I have desired to eat this Passover with you'), in the setting in which they occur in the Lucan narrative (see, however, below), imply that the meal was the Passover. Paschal references have been seen in St. Paul's account of the institution (1 Co $11^{23ff.}$), *e.g.* the word 'memorial' (cf. Ex 12^{14}); the 'proclamation' (καταγγέλλετε) of the death, corresponding to the Haggada; the 'cup of blessing,' corresponding to the third cup of the Passover meal (against this reference, see Spitta, *op. cit.* p. 248; Bickell, *Messe und Pascha*, Eng. tr., *The Lord's Supper and the Passover Ritual*, by Skene, Edinburgh, 1891, p. 163). Again, the reference to Christ's death and its sacrificial character undoubtedly arises more naturally out of Paschal associations than it would do if the meal were an ordinary one. On the other hand, the accounts of Mk. and Mt. exhibit no distinctively Paschal features, but refer simply to the covenant-sacrifice of Ex 24^{8} (against this argument, see Lambert, *The Sacraments in the NT*, pp. 253, 297 f.).

But the most serious difficulty connected with the identification of the Last Supper with the Passover meal arises out of the conflicting chronological notices in the Synoptists and in St. John. The day on which Christ sent the disciples to prepare the Passover is identified in Mk 14^{12} (on which Lk. and Mt. depend) with 'the first day of unleavened bread, when they sacrificed the Passover.' Jewish scholars are agreed that this date contains a contradiction, as the first day of unleavened bread was the 15th of Nisan, while the day of the Passover was the 14th of Nisan. It has been suggested that there is some corruption in the source which underlies our Synoptists, and that the original Aramaic text may have had something like 'before the day of unleavened bread' (Resch), or 'the day of unleavened bread drew nigh, and the disciples drew nigh to Jesus' (Chwolson, *Das letzte Passamahl Christi*, ed. Leipzig, 1908, p. 11; on p. 178 f. a different solution is suggested). Other facts in the Synoptic account seem to contradict the idea that the Last Supper was the Passover. Such are the notice of time in Mk $14^{1.2}$, 'after *two* days was the feast of the Passover,' and the words of the priests, 'not on the feast day, lest there be a tumult of the people.' Again, the reference to the carrying of arms (Mk 14^{47}), the incident of the trial, and the buying of spices are all inconsistent with the idea that the Passover feast had begun, since work of all kinds was prohibited on the feast. Lastly, the account in St. John plainly contradicts the Synoptists in their representation of the Passover feast as the day of the crucifixion (Jn 13^{1}, the Supper was 'before the Passover'; Jn 18^{28}, the Jews would not enter the hall of Pilate, that they might not be defiled, but might eat the Passover; Jn 19^{14}, the day of the crucifixion was 'the preparation of the Passover'; Jn 19^{36}, the identification of Jesus with the Passover lamb, implied in the reference to Ex 12^{46}, Nu 9^{12}). Hence two theories have been propounded: (1) The theory of an anticipated Passover. This view is maintained by Chwolson, *op. cit.* p. 81 f., who explains such anticipation by the suggestion that in the year of the crucifixion the 14th of Nisan fell upon a Sabbath, and that this led to the transference of the day on which the lambs were offered, and to a divergence of custom as to the time of the Passover meal. But this argument is strained and artificial. Another explanation of such a possible anticipation is suggested by M. Power, *The Anglo-Jewish Calendar for every Day in the Gospels* (London, 1902); see Lambert, *JThSt* iv. 192 f. (2) A different interpretation of the problem is supplied by the theory that the Last Supper was the *Ḳiddûsh*, or weekly 'sanctification,' of the Sabbath—a domestic ceremony, in which a cup of wine, and bread, are solemnly blessed and distributed to the household before the evening meal. The *Ḳiddûsh* also preceded great festivals, including the Passover. This theory explains the order in the account of Lk., where the thanksgiving over a cup precedes that pronounced over the bread (cf. 1 Co $10^{16.21}$; *Didache*, 9). This view was propounded by Box (*JThSt* iii. 357–369), and still earlier by Spitta (*Urchristenthum*, i. 247); cf. also Drews, *PRE*³ v. 563, art. 'Eucharistie,' and Batiffol (*Études*, ii. 43–46). According to this view, Christ did not keep the actual Passover with His disciples, but only its preparatory *Ḳiddûsh* (it is in this sense accordingly that Mk $14^{12.14}$ must be understood). In this connexion it may be noticed that the words of Lk 22^{16} ('with desire I have desired to eat this Passover with you before I suffer'), apart from their context in the Lucan narrative, might indicate an unfulfilled desire (cf. *JThSt* ix. 569 f.). But against this view that we have a description of the *Ḳiddûsh* in the accounts of the Synoptists must be set the order of Mk., Mt., and St. Paul, in which the thanksgiving over the bread precedes the thanksgiving over the cup.

Moreover, according to Mk., it was '*while they were eating*' that Jesus broke bread, and St. Paul describes the blessing of the cup as taking place '*after the supper*' (so Lk. in *textus receptus*). Our accounts are too short, and the writers probably too little interested in the external procedure at the Supper, to enable us to attain any certainty as to the exact details. The general structure of Jewish ceremonial prayers appears to have been much the same as those of ordinary Jewish household prayers, and the parallels adduced prove little more than that our Lord availed Himself of the ordinary Jewish forms of blessing employed at meals.

In any case the Last Supper took place amid the associations of the Paschal season; and, whether in the words and acts of Jesus there is an implied reference to the Passover or not, the association of the Eucharist with the Passover was a natural one, though we may have to admit that the Paschal features in the language of St. Paul represent the later reflexion of a period when the idea of Christ as the true Passover (1 Co 5^{7}, Jn 19^{36}) had influenced the conception of the institution.

3. The Eucharist in Apostolic times.—(1) In the early chapters of Acts mention is made of a meal, 'the breaking of bread' (Ac $2^{42.46}$), as one of the characteristics of the life of the early church at Jerusalem. In the former of the two passages (Ac 2^{42}) it occurs in close connexion with the mention of 'the fellowship' which marked the early disciples, and is followed by the mention of 'the prayers' (on the connexion of the clauses, see Robinson, *HDB*, art. 'Communion'). In the second passage (Ac 2^{46}) there is an implied contrast between the daily public attendance of the disciples at the Temple-worship, by which they showed their loyalty to the religion of their countrymen, and the distinctive Christian act of 'breaking bread at home.' The main clause of the sentence in v.^{46}, 'they took their food with gladness and singleness of heart,' (*a*) may indicate that this 'breaking of bread' formed part of an ordinary meal, or (*b*) it may be a general expression summing up the participial clauses προσκαρτεροῦντες . . . κλῶντες, and expressing in Biblical language (cf. Lv 26^{5}) the joy which pervaded the life of the early community (Batiffol). In any case the meal was an expression of fellowship, and doubtless had a religious character (see above, § 2 (1)). Spitta, who sees in Ac $2^{42f.}$ a reference to the Agape, maintains that it was inevitable that the thoughts of those who partook of these meals should go back to the words of Christ at the Supper (*op. cit.* p. 289). Thus the meal would naturally assume a Eucharistic character, and, we may add, include Eucharistic acts. The next mention of the 'breaking of bread' is in Ac 20^{7-11}, where, during St. Paul's stay at Troas, there was a gathering 'on the first day of the week to break bread.' The whole account indicates greater formality than is implied in Ac $2^{42.46}$. The mention of the 'first day of the week' (cf. 1 Co 16^{2}), the 'many lights' in the upper room, and the discourse of St. Paul, followed by the breaking of bread, all point to a solemn religious gathering for worship.

(2) St. Paul's account of the Eucharist at Corinth (1 Co 11^{17-34}) throws fuller light upon the fragmentary notices contained in Acts. From his account it appears that the Corinthians assembled for a meal, including, probably at its close [Drews, *PRE*^{3} v. 562, suggests that it was at the beginning; so Box, *JThSt* iii. 365 f.], the Eucharistic commemoration, which, as St. Paul reminds them, had been commanded by the Lord at the Last Supper, and which constituted a solemn memorial of His death 'until he come.' The whole account implies that the Eucharist formed part of a meal (*e.g.* 'when ye come together *to eat*'; 'each one *in eating* [ἐν τῷ φαγεῖν] taketh beforehand his own supper'; lastly, the form in which St. Paul records the institution of the cup, '*as often as ye shall drink*'), though, from its association with the solemn Eucharistic acts, the whole meal should be regarded as 'a supper of the Lord' (κυριακόν is emphatic). To this meal each brought his own provisions; but, instead of waiting for the general distribution, the richer members ate beforehand what they had brought, and by greed and selfishness and excess turned the meal into a private supper (ἴδιον δεῖπνον). Thus the sense of fellowship was lost, and it became impossible to eat a 'supper of the Lord.' Such unworthy participation made a man 'guilty of the body and the blood of the Lord,' and showed a failure to 'discern the body.'

With 'guilty of the body and the blood of the Lord' cf. He 6^{6}, which refers to the sin of those who 'crucify the Son of God afresh,' and He 10^{29} ('who hath trodden under foot the Son of God, and hath counted the blood of the covenant, wherewith he was sanctified, an unholy thing'). Spitta suggests that St. Paul may have had Judas in mind. This guilt arises from the relationship established between the bread of the Eucharist and the Lord's sacrificed body (τὸ σῶμα τὸ ὑπὲρ ὑμῶν) on the one hand, and the Lord's cup and the 'new covenant in his blood' on the other. In the words 'not discerning the body' (omit τοῦ κυρίου with the best MSS), St. Paul is referring primarily to the body of v.^{24}, but it is possible that he has in view the more inclusive sense of 'body' (note τὸ σῶμα, not τὸ σῶμα καὶ τὸ αἷμα, though ἐσθίων καὶ πίνων precedes) referred to in 1 Co $10^{16.17}$. By his selfish action the richer brother failed to realize that the sacred meal was a fellowship of believers with Christ and one another. It was the sacrament of their incorporation in Christ. The abuses at Corinth turned it into a private meal.

(3) In another passage of the same epistle (1 Co $10^{16f.}$), St. Paul dwells upon the inconsistency of Christians taking part in idolatrous feasts. In this connexion he refers to the Christian sacrament of the 'fellowship of the body and blood of Christ.' His language is suggested by the associations of the sacrificial feast—an institution which finds a place not only in Semitic life, but also in Greek religion, as well as in early tribal religions. According to this conception, the sacrifice is not merely an offering to the Deity. The worshippers partake of the food of the sacrifice, and in this way a communion is established between the Deity and His worshippers, as well as between the worshippers themselves. Thus to partake of a sacrifice implies fellowship with the Deity who is worshipped (1 Co $10^{18.20}$). Similarly, St. Paul says 'the cup of blessing which we bless' and 'the bread which we break' are 'a fellowship' (κοινωνία) of the blood and of the body of Christ, and Christians cannot consistently partake of the table of the Lord and of the table of devils. This aspect of the Christian rite St. Paul develops on striking and original lines. The Christian sacrament is at once a means of spiritual communion with Christ and of corporate fellowship. By participation in the one bread the partakers become one body. The 'fellowship of the body of Christ' would appear to have suggested to him the larger conception of the body of Christ (cf. 1 Co $12^{12.13}$), in which Christ and the members of Christ form one whole and are inseparably united (cf. Robinson, *loc. cit.*). In the same way, as we have seen, he interprets the cup to mean 'the new covenant in my blood' (ct. Mk., Mt.), where again the idea is of the fellowship of believers with God and one another, effected through the death of Christ. (For a later development of the whole conception by St. Augustine, see below, II. 3 (2).)

(4) Thus it appears that in the period A.D. 55–57 the Eucharist formed the chief feature of a religious meal, being celebrated probably at its close. St. Paul traces it back to the institution of Christ, and regards its observance as due to His command. This fact throws light upon the earlier references in Acts, and makes it probable that the 'breaking of bread' in Ac $2^{42.46}$ 20^{7-11} included the Eucharist.

The meal with which the Eucharist was associated in Apostolic times has generally been identified with the Agape, which is first expressly mentioned by name in Jude ^{12} (cf. also, on the reading in 2 P 2^{13}, Mayor's note). But St. Paul's account in 1 Co 11 suggests that the gathering there described provided indirectly an opportunity for feeding poorer brethren (vv.$^{21.22}$),

and that the meal was a pledge of brotherly love and fellowship. But the use of the term Agape and its distinction from the Eucharist, as applied to the conditions described in Ac. and 1 Cor., are possibly anachronisms. As yet there was no sharp distinction between the two parts of the meal. The whole meal in St. Paul's thought had the character of a sacred meal. It was 'a supper of the Lord.' It was only when the social side of the meal came to be distinguished from the solemn liturgical acts connected with it that the Agape came to be thought of as distinct from the Eucharist, and was finally dissociated from it; see, further, Batiffol, *Études*, 1st ser., and art. AGAPE.

4. Critical theories.—The two main questions which have been raised with regard to the early Eucharist in modern discussions are: (1) the significance of the acts and words of Christ at the Last Supper, and (2) the relation of the Last Supper to the later rite, as found, *e.g.*, in St. Paul's account in 1 Corinthians.

(1) It has been maintained that there was no intention on the part of Christ to institute a rite. The meal was simply a parting meal (Andersen). Christ's act was 'a parable' (Jülicher), 'a momentary inspiration,' rather than a premeditated act (Spitta, Holtzmann), in which there was no idea of giving a command for the repetition of the rite. The object of Jesus was to console the disciples by assuring them that His death would not be in vain. The blood 'shed for many' would be the blood of a covenant (Jülicher, and, more fully, Holtzmann). Others, like Spitta and Loisy, think that the thoughts of Jesus at the Supper were wholly directed to the coming Messianic Kingdom. The theory of Schweitzer (see above, § 2 (5)) emphasizes this eschatological reference of the Supper, but does more justice than either of the preceding writers to the connexion of the Supper with the death of Jesus and the mystery of His suffering (*Abendmahl*, p. 61 f.). Both Spitta and Holtzmann deny that there was in the acts and words of Jesus any reference to the sacrificial character of His death. On this see above, § 2 (3).

(2) Many attempts have been made to explain the origin of the meal described in Ac. and 1 Cor. as due to some other cause than a command of Christ at the Last Supper. But, if the Last Supper meant nothing more than some of the theories referred to above represent it to mean, it is difficult to explain how the early disciples came to repeat it or connect their own religious meal with it. By some the early Christian meal has been derived from the Jewish religious meal, adopted by the Christian community as an expression of their sense of fellowship and religious devotion, and enriched by the memory of the Last Supper and the hope of the Second Coming (so Spitta, J. Hoffmann).

Others have emphasized its affinity with the ritual feasts of the heathen world, and have seen in it not an original creation of Christianity, but a particular Christian growth upon the older stock of pre-Christian and non-Christian religious customs. In this case the Eucharist in the form exhibited in 1 Cor. cannot have been a creation of Jesus or have come from strict Jewish circles, but must be explained as due to the reaction upon primitive Christianity of the syncretism of religious beliefs amid which it lived (cf. Heitmüller, *Taufe u. Abendmahl bei Paulus*). In this connexion much is made of the parallel which St. Paul draws in 1 Co 10 between heathen sacrificial feasts on the one hand and the Christian Eucharist on the other, where the 'table of the Lord' is contrasted with 'the table of devils,' while a parallel is sought for St. Paul's implied reference to the Christian sacrament (1 Co 10[3f.]) as 'spiritual food' and 'spiritual drink' in the Eleusinian mysteries, where the initiated became ἔνθεοι by means of a meal in which they partook in some mysterious way of the body of Dionysus (cf. Lake, *Earlier Epistles of St. Paul*, pp. 199 f., 213 f.). The attempt has recently been made to trace more explicitly the influence of the mystery religions of the ancient world upon primitive Christianity, especially as seen in St. Paul's Epistles (cf. A. Dieterich, *Eine Mithrasliturgie*[2], Leipzig, 1910; R. Reitzenstein, *Die hellen. Mysterienreligionen*, do. 1910). This method has been subjected to a searching criticism by A. Schweitzer in his *Geschichte der paulinischen Forschung* (Tübingen, 1911). He discusses the whole question of Hellenizing influence in St. Paul, and repudiates it with characteristic thoroughness. St. Paul, he urges, cannot have been familiar with the mystery religions as known to us, for their general spread in the Græco-Roman world (with the possible exception of the Serapis mystery cult) dates only from the beginning of the 2nd century. Again he emphasizes the danger of constructing from distinct and separate sources a kind of universal mystery religion, possessing a definiteness of contents and ideas such as never really existed, least of all in the time of St. Paul. Nor will he admit that St. Paul's attitude to heathenism was such as to allow of his borrowing from the Nature-worships of heathenism. It is possible that Schweitzer has carried his thesis too far, but he has provided a much-needed caution for those who would press the analogies between Christian and pagan ideas; and, before any satisfactory results can be attained, a more careful sifting of the evidence and dating of the documents are needed. The existence of sacrificial feasts in the pagan world was plainly known to St. Paul, as the passage in 1 Co 10 shows, and provided a *milieu* in which the Christian sacred meal was able to take its place in the life of converts to Christianity. But St. Paul in the same chapter appeals also to similar feasts among the Jews (1 Co 10[18]), and it is precarious to infer that his own teaching with regard to the Eucharist was moulded by the influence of pagan rather than Jewish customs, especially as the latter formed the original setting of the Christian meal. At the same time it is possible to admit that at Corinth such an influence of pagan customs may have been at work in the case of St. Paul's converts.

Schweitzer's own positive construction connects the sacramental teaching of St. Paul with his eschatology. He finds an earlier parallel to sacraments in Jewish life in the baptism of John, which he maintains was regarded not merely as a symbol of the cleansing of repentance, but as in some way a sacrament of deliverance. Thus the idea of 'eschatological sacraments' would lie near at hand, and St. Paul may have taken it over from the practice of John the Baptist and the early Church. The further question whether the Supper in the view of Jesus was already regarded as bestowing something on those who partook of it, or only first became a sacrament in the primitive Church, would still remain undecided (*op. cit.* p. 189). This attempt to re-state the problem is of importance in two ways: (1) if Schweitzer's criticism proves valid, it sets a limit to the attempt to trace the origin of the Eucharist to the syncretism of Jewish and pagan ideas; (2) it endeavours to find a place for sacraments in connexion with the ideas of the contemporaries of Jesus.

The absence of the command, 'Do this in remembrance of me,' from the narratives of Mt. and Mk. (and according to some texts from Lk.) leaves St. Paul as our ultimate authority for the statement that Jesus commanded the observance of the rite. But it is difficult to believe that in this matter St. Paul was innovating upon the tradition of the Church, or that his account represents a different belief as to the origin of the rite from that current in the primitive Christian community. Nor does his claim to be recording a tradition received 'from the

Lord' (1 Co 11[23] *ἐγὼ γὰρ παρέλαβον ἀπὸ τοῦ Κυρίου*) necessarily imply that he is speaking of knowledge given to himself alone, rather than knowledge derived through the medium of the tradition of the Church, though ultimately based on the words of Christ (cf. 1 Co 15[3] *ὃ καὶ παρέλαβον*: and for this use of *ἀπό* to denote the ultimate source, cf. Gal 1[1] *οὐκ ἀπ' ἀνθρώπων οὐδὲ δι' ἀνθρώπου*). So Harnack says (*Hist. of Dogma*, Eng. tr. i. 66, n. 1): 'the words of 1 Co 11[23] are too strong for me.' On the whole, it would seem that the tradition according to which our Lord commanded the observance of the rite was current in the Church in the time of St. Paul, and was not originated by him. Though Mk. and Mt. do not record the command, they would appear to have interpreted the narrative which they give as implying an institution (cf. Goguel, *L'Eucharistie*, p. 190; the writer, however, regards the Synoptic accounts as already influenced by the custom of the Pauline Churches).

Even if we admit that the tradition of the early Church attributed to Jesus the express statement of the command, the question still remains whether this interpretation is the right one. In this connexion we may consider the relation of the Last Supper to the other meals which our Lord had shared with His disciples. Though Schweitzer's suggestion that the feeding of the multitude partook of a sacramental character, and was intended as a foretaste of the Messianic meal, is precarious and improbable, the same objection does not apply equally to the view that this character was first given to the meal by Jesus in the inner circle of the disciples and in close connexion with His coming Passion. In view of the coming separation the 'table-fellowship' which they had shared with Him in His ministry was at this last meal summed up and perpetuated and invested with a new significance. Jesus points them forward to their future reunion with Him in the Messianic feast, and at the same time by the striking symbolism of the Supper points to His death, by which He gives Himself to them and for them, as a source of blessing and a new bond of fellowship between Him and them. The meal was thus at once a sacrament of their deliverance, a pledge of unbroken union through death, and a consecration of them to be partakers of the Messianic feast. That the act was intended to be in some sense sacramental seems implied by the Synoptists when they connect the delivery of the bread and the cup with the words, 'This is my body,' 'This is my blood.' Schweitzer (*Gesch. der paulinisch. Forschung*, 155 ff.) points out that by St. Paul the sacramental meal is represented as a 'fellowship (*κοινωνία*) of the Body and Blood of Christ,' rather than as an 'eating of the Flesh and drinking of the Blood'—language which he nowhere uses, and which first appears in the Fourth Gospel. But St. Paul elsewhere has the more general phrases 'spiritual food' and 'spiritual drink' (1 Co 10[3.4]); and, though the Fourth Gospel develops—along lines different from St. Paul—the thought of the communion feast as a participation in the Divine life, the accounts in the Synoptists, St. Paul, and the Fourth Gospel alike point to the idea of a sacramental union with Christ effected through His death.

If the words and acts of Jesus can be interpreted, in the sense indicated above, as summing up and perpetuating the fellowship of the disciples with Himself, it is possible to see how the words 'Do this in remembrance of me' would be regarded as a natural interpretation of His meaning. It was thus that the waiting Church of St. Paul's day renewed again and again in the 'breaking of bread' its fellowship with the exalted Lord, and proclaimed His death 'until he should come.' But, while the primitive Church kept vividly before it this hope of the coming in connexion with the Eucharist, it was inevitable that, as time went on, the emphasis should be laid more exclusively upon the death of Christ commemorated in it. Thus, while in the Eucharistic prayers of the *Didache*, which comes from Jewish Christian circles, we find an echo of the eschatological hope, with no reference to the death of Christ, in the Gentile Christian circles represented by Justin the eschatological features have disappeared, and the Eucharist is primarily a memorial sacrifice. The former view seems to be an attenuation of the conception current in the Apostolic age; the latter represents the transition from Jewish to Gentile forms of Christianity.

It has been further contended that the account of Mk. (on which Mt. depends) shows traces of the influence of St. Paul, especially in the language which describes the cup as 'my blood of the covenant which is shed for many.' Thus Goguel (*op. cit.* p. 82) maintains that the relationship between v.[24] and v.[25] in Mk 14 is artificial, and that the two distinct ideas associated with the cup—the one referring to the blood of the covenant, the other pointing to the Messianic feast—cannot have thus been brought together by Jesus, as they produce an impression inconsistent with the luminous simplicity of the thoughts and acts of Jesus which we find in His other sayings and acts. But this apparent want of simplicity may be due to the compression of the narratives of the Synoptists and the setting and connexion in which they have recorded the sayings at the Supper. It is insufficient to discredit the sayings themselves. Again, it may be urged that the connexion between the thought of the covenant and the Messianic Kingdom was not so remote as appears on the surface. In the OT the idea of the covenant is associated with (1) the covenant of Sinai (Ex 24[8]); (2) the 'new covenant' of Jer 31[31], cf. Is 42[6] 49[6]; (3) the Davidic-Messianic covenant, connected with the promise to David of a kingdom which should last for ever (2 S 7[12ff.], Ps 89[28] 132[11f.], Is 55[3], Ezk 34[23]). The 'covenant' in the two types of prophecy represented in (2) and (3) was in either case associated with the new age, which was identical with the Kingdom. Thus the words 'This is my blood of the covenant' point to Christ's death as inaugurating His Messianic work of bringing in the 'new covenant' or 'the Kingdom,' with an obvious reference to the covenant-sacrifice of Sinai (in the words of Lk 22[29] 'I appoint [*διατίθεμαι*] unto you, as my Father hath appointed unto me, a kingdom, that ye may eat and drink at my table in my kingdom,' we find an idea parallel with that of the *διαθήκη* referred to in the words spoken about the cup). Goguel's theory leads him to the further conclusion that the identification of the cup with 'the blood' was made only by the primitive Church, and he infers from the title of the meal, 'the breaking of *bread*,' that the cup formed no part of the meal in the earliest period described in Acts. But neither of these conclusions can be said to rest on any adequate grounds.

LITERATURE.—The extensive character of the literature makes it impossible to do more than select a few of the more representative works. For useful summaries of the different treatments of the subject, see the works of Schweitzer, Loisy, and Goguel, referred to below. *HDB*, artt. 'Communion' (Robinson), 'Jesus Christ' (Sanday), 'Lord's Supper' (Plummer); *EBi*, art. 'Eucharist' (Robinson); *PRE*[3], artt. II. *THE EUCHARIST IN THE PATRISTIC PERIOD* (A.D. 100–800). — **I. The 2nd century.** — The materials for the history of the Eucharist in the period immediately following the Apostolic age are scanty, and much of their evidence is obscure. Incidental references in the Epistle of Clement of Rome to the Corinthians, the account in the *Didache* or *Teaching of the Twelve Apostles* (A.D. 100–140), the letter of Pliny to Trajan (*Ep.* x. 97 [96], A.D. 112), and the Epistles of Ignatius (A.D. 110–117) constitute the sole materials before the time of Justin Martyr. Of these the most important are the *Didache* and Ignatius. Their evidence may be summarized as follows.

(1) The name by which the rite is known is the 'Eucharist' (ἡ εὐχαριστία) or 'thank-offering' (Hort, in *JThSt* iii. 594 f.), derived from the 'giving of thanks' at the Institution (εὐχαριστήσας, Mk 14[23] [Mt 26[27]], Lk 22[19], 1 Co 11[24]). Side by side with this 'giving of thanks' the *Didache* still speaks of 'breaking bread' (κλάσατε ἄρτον καὶ εὐχαριστήσατε [c. 14]). The Eucharist is the centre of common worship (Ignat. and *Did.*), and is celebrated on the Lord's Day (*Did.* 14). It appears to be associated, as in Apostolic times, with a common meal. The testimony of Ignatius, indeed, on this point is not conclusive. Lightfoot (*Apost. Fathers*, 'Ignatius,' i. 51 f.) and Loofs (*PRE*[3] i. 39, art. 'Abendmahl') maintain the connexion on the ground of the passage *Smyrn.* 8 ('it is not lawful apart from the bishop either to baptize or to hold a love-feast'), where it is contended that the 'love-feast' (or Agape) includes the Eucharist. But this inference is weakened by the preceding statement that 'that Eucharist is to be considered valid which is under the bishop or him to whom he commits it,' which renders unnecessary any reference to the Eucharist in what follows. The evidence of the *Didache*, however, points more clearly to the association of the two rites. In cc. 9–10 the writer gives some forms of thanksgiving to be used in connexion with the 'thank-offering' (περὶ τῆς εὐχαριστίας οὕτω εὐχαριστήσατε). The first of these prayers is entitled 'for the cup,' the second 'for the broken bread' (περὶ τοῦ κλάσματος). Both prayers are thoroughly Jewish in character, and resemble common Jewish forms for grace at meals (Drews, *PRE*[3] v. 563; Box, *JThSt* iii. 361). There is no reference in them to the words of institution, or to the body and blood of Christ, but only to 'the Holy Vine of David thy servant' (on the title 'Vine of David' as applied to Jesus the Messiah, see Taylor, *Teaching of the Twelve Apostles*, Cambridge, 1886, p. 70). There is, further, a prayer for the gathering of the Church from the ends of the earth into the Kingdom, and the writer sees a symbol of this in the grains of wheat formerly scattered upon the mountains, and now forming the loaf which is broken (this again is probably Jewish rather than Pauline; see Taylor, *op. cit.* 71). The third prayer (c. 11), which is to be said 'after ye are filled,' re-echoes much of the language of the earlier prayers (of which it may be a doublet; see von der Goltz, *Das Gebet in der ält. Christenheit*, Leipzig, 1901, p. 211; Batiffol, *Études*, ii. 114 f.), and speaks, like them, of 'the knowledge and faith and immortality' made known 'through Jesus thy servant,' and of the gathering of the Church into the Kingdom.

Hence it has been maintained that the whole of the thanksgivings in cc. 9–10 refer only to the Agape. There are not wanting, however, references which point to the Eucharist. Such are the direction at the end of c. 9 that none are to eat or drink of the 'thank-offering' (ἀπὸ τῆς εὐχαριστίας) except the baptized, because the Lord has said, 'Give not that which is holy to the dogs'; the words in c. 10 (following the mention of the gift of meat and drink), 'and to us thou didst vouchsafe spiritual meat and drink and life eternal through thy servant' (cf. 1 Co 10[3, 4]); possibly also (though the words may refer to entry into the coming Kingdom) the words at the end of c. 10, 'if any is holy, let him come; if any is unholy, let him repent.' But the most probable explanation is, as Drews suggests (*PRE*[3] v. 563 f.), that for the author of the *Didache* the whole meal constituted a unity, the elements of which are not carefully distinguished.

On the relation of the prayers in the *Didache* to the prayers used at Jewish meals, see von der Goltz, *Tischgebete u. Abendmahlsgebete in der altchr. u. in der griech. Kirche*, Leipzig, 1905, p. 16 f.; Box, *JThSt* iii. 366 f. The latter suggests that they are forms of thanksgiving for the use of the recipient, not a formula of consecration for the celebrant. Both Drews and Box suggest that the communion precedes the Agape. For other views, see Batiffol, *op. cit.* p. 109 f.; R. A. Hoffmann, *Die Abendmahlsgedanken Jesu Christi*, p. 143 f.; Andersen, *Das Abendmahl*, p. 57 f.; Keating, *The Agape and the Eucharist*, p. 53 f.; Leclercq, art. 'Agape,' in *DACL*; and art. AGAPE in the present Encyclopædia.

That the Eucharist is included in the account which the *Didache* (c. 14) gives of the service on the Lord's Day is shown by the terms employed (συναχθέντες κλάσατε ἄρτον καὶ εὐχαριστήσατε), the mention of the confession of sins, 'that your sacrifice may be pure,' and the injunction which follows in c. 15, 'Elect therefore (οὖν) for yourselves overseers and deacons'—language which could scarcely be used of the Agape alone. These indications, in fact, accord with the evidence of Acts and of Ignatius (*Smyrn.* 8).

Pliny's letter to Trajan (*Ep.* x. 97 [96]), written A.D. 112, has often been adduced in proof of the separation of the Eucharist and Agape in his time. He mentions two gatherings 'on a fixed day' (*stato die*; probably Sunday): (*a*) a gathering before dawn, at which the Christians sang a hymn to Christ as God, and bound themselves by an oath (or 'by a sacrament,' *sacramento*) to abstain from certain crimes; (*b*) a later gathering on the same day, when they partook of an ordinary and harmless meal (*cibum promiscuum tamen et innoxium*). Pliny's informants added that even this had been given up after the Emperor's edict. Lightfoot ('Ignatius,' i. 51) is inclined to the view that the earlier gathering was for the Eucharist, and the later for the Agape. But the inference is doubtful, and the meaning of *sacramento* uncertain (see Robinson, *EBi*, art. 'Eucharist'). The 'ordinary and harmless meal' might quite well, in information given to the heathen, refer to the Eucharist. Possibly in consequence of the Emperor's edict, the common meal may have been given up, and the Eucharist, with this modification, transferred to the earlier hour. The Eucharist was undoubtedly separated from the Agape in the time of Justin and Tertullian. See, further, art. AGAPE.

(2) The nature of the 'thank-offering' (εὐχαριστία) is further illustrated in the *Didache* by the title of 'sacrifice' (θυσία) applied to it. It is to be preceded by a confession of sins, 'that your

sacrifice may be pure'; and in this connexion the writer refers to the words in Mal 1[11] about the 'pure offering.' Light is thrown upon this language by the incidental references of Clement of Rome to the 'offerings' and 'gifts' which it was the duty of the presbyter-bishop to offer (*ad Cor.* 40, 44; cf. 36), the allusion doubtless being to the thanksgivings, prayers, and gifts of bread and wine which were offered in grateful acknowledgment of the bounty of God (cf. the later language of Irenæus). This element of praise, which was a development of the 'giving of thanks' at the Last Supper, forms the starting-point of the later liturgical development of the Eucharistic prayer (the prayer in Clement of Rome, *Ep. ad Cor.* 59–61, is possibly a reminiscence of such a liturgical thanksgiving). Similarly, Ignatius urges the Ephesians 'to come together frequently for thanksgiving to God and for his glory' (*Eph.* 13), and he applies the term 'sanctuary' or 'place of sacrifice' (θυσιαστήριον) to the Christian assembly (*Eph.* 5, *Philad.* 4, *Trall.* 7), gathered round the Eucharist.

(3) The conception of the Eucharist as a means of grace is not clearly marked in the *Didache*, and the doubts as to the reference of the prayers in cc. 9–10 to the Eucharist render uncertain any conclusions which may be drawn. The language of the prayers is mystical in character, and the blessings referred to, as has been shown above, do not go beyond the ideas of 'life,' 'knowledge,' 'immortality,' or, more explicitly, 'spiritual food' and 'spiritual drink.' Ignatius is more definite, though in his case, too, there is a mystical strain which makes the interpretation of his language uncertain. Still it is clear that to him the Eucharist is more than a 'thank-offering.' It is a means of union with Jesus Christ, a true participation in the blessings of redemption, and an expression of the unity of the Church.

The chief passages on the subject are: (*a*) *Eph.* 5, 'If any one be not within the sanctuary, he lacketh the bread [of God]'; (*b*) *Eph.* 20, 'Breaking one bread, which (ὅ for ὅς) is the medicine of immortality, the antidote preserving us that we should not die, but live for ever in Jesus Christ'; (*c*) *Philad.* 4, 'Therefore give heed to keep one Eucharist. For there is one flesh of our Lord Jesus Christ, and one cup unto union with his blood. There is one sanctuary, as there is one bishop, together with the presbyter and deacons'; (*d*) *Smyrn.* 6, 'They [i.e. the Docetæ] withhold themselves from Eucharist and prayer, because they confess not that the Eucharist is the flesh of our Saviour Jesus Christ, which flesh suffered for our sins, and which in his loving-kindness the Father raised up.' To these may be added, as illustrating the more mystical language of Ignatius, (*e*) *Rom.* 7, 'I desire the bread of God, which is the flesh of Christ, who is of the seed of David; and for drink I desire his blood, which is love incorruptible.'

The language of Ignatius on the Eucharist can be fully understood only when it is viewed in connexion with his whole conception of the Incarnation and the Church. The Incarnation is the reconciliation of the material and the spiritual, the outward and the inward, 'flesh' and 'spirit.' All that represents or embodies the truth of the Incarnation exhibits the same character. Thus the Gospel is spoken of as 'the flesh of Jesus' (*Philad.* 5). The same union of 'flesh' and 'spirit' is exhibited practically in the life of faith and love (*Eph.* 8, 14, *Smyrn.* 13). Hence Ignatius speaks of faith as 'the flesh of Christ,' and of love as 'his blood' (*Trall.* 8, *Rom.* 7). The fullest expression of this 'union of flesh and spirit' is the unity of the Church (*Magn.* 1, 13). In this connexion, Ignatius insists upon the 'one Eucharist,' the 'one sanctuary,' the 'one bishop' (*Philad.* 4). Hence it has been maintained (Andersen, *Das Abendmahl*, p. 67 f.) that the 'flesh of Christ,' when used by Ignatius in connexion with the Eucharist, means 'the Church' (*Smyrn.* 6), and that even *Eph.* 20 has the same reference. But, apart from the unnatural exegesis of these passages, and even allowing for the fact that Ignatius occasionally uses the words 'flesh' and 'blood' in a mystical sense, his references to the Eucharist do not justify a purely symbolical interpretation of his language (cf. Loofs, *PRE*[3] i. 39 f.). When Ignatius speaks of the Eucharist as 'the flesh of Christ . . . *which suffered for our sins, and which the Father . . . raised up*' (*Smyrn.* 6); of the 'one cup unto union with his blood' (*Philad.* 4); and, lastly, when he says that 'if any one be not within the sanctuary, he lacketh the bread [of God],' it seems clear that the rite was to him in some real sense a means of union with Christ, and of participation in the fruits of His Passion and Resurrection. Lastly, we may notice that Ignatius' language re-echoes the Johannine teaching, which associates the flesh of Christ with the gift of life and immortality (*Eph.* 20, 'the medicine of immortality'; cf. Jn 6[54ff.]), and in this respect it anticipates much later teaching (see, further, von der Goltz, 'Ignatius v. Antiochien als Christ u. Theolog,' *TU* XII. iii. 69 f.).

About the middle of the 2nd cent. Justin Martyr, in his first *Apology*, refers to the Eucharist (cc. 65–67). His narrative contains two accounts. In the first the Eucharist follows on baptism; in the second he describes the Sunday worship. From the two accounts we can gather the main features of the service. It begins with the reading of the 'memoirs of the Apostles' and the writings of the Prophets (cf. Tertullian, *de Orat.* 14). The elements (bread and a cup of wine and water) are next presented to the president, who offers up prayers and thanksgiving, 'as far as he is able' (ὅση δύναμις αὐτῷ, cf. *Did.* 10, 'Suffer the prophets to give thanks as much as they will'), to the Father through the Son and Holy Spirit (c. 65), for the creation of the world and all that is therein for man's sake, also for deliverance from evil and for redemption through the Passion (*Dial. c. Tryph.* 41). To this prayer, which corresponds to the Eucharistic Preface in the liturgy of the *Apostolic Constitutions*, the congregation respond with the Amen. Then follow the reception of the elements, and their conveyance by the deacons to absent members. Mention is also made of the alms, which are collected and laid up with the president for the relief of those in need. To this description, Justin adds his own comment on the meaning of the rite (c. 66): 'This food is called by us Eucharist.' Only the baptized may partake of it. For the elements are not received as common bread or common drink. He draws an analogy between the assumption of flesh and blood by Jesus Christ in the Incarnation and the consecration of bread and wine, which possess the ordinary properties of nutrition (κατὰ μεταβολήν refers to the assimilation of the food by digestion), so that they become the flesh and blood of Christ. The Incarnation was 'through the Word of God' (Justin does not clearly distinguish the operations of the Word and the Spirit). The Eucharist becomes Christ's body and blood 'through the prayer of the word which came from Him' (δι' εὐχῆς λόγου τοῦ παρ' αὐτοῦ: either (1) a reference to the liturgical thanksgiving derived from the εὐχαριστήσας of the institution [see Brightman, *JThSt* i. 112]; or (2) a reference to the operation of the Logos [taking λόγου in a personal sense]; see E. Bishop, in Connolly's *Homilies of Narsai*, Cambridge, 1909, p. 158 ff.). Justin then refers to the account of the institution contained in the 'memoirs of the Apostles.' The day on which the Christians assemble for worship is the day of the sun, for it is the first day, on which God made the world, and on which Christ rose from the dead. In this account we may notice: (*a*) the Eucharist, as in the *Didache* and Ignatius, forms a central act of Christian worship on the Sunday. It is a 'thank-offering,' and consists of a service of prayer and praise, in which the bless-

ings of creation and redemption are commemorated. Justin's account shows how the original 'thanksgiving' of the Last Supper has already expanded into the Eucharistic prayer which finds a place in the later liturgies, though this thanksgiving was still mainly extempore in character (ὅση δύναμις αὐτῷ, c. 67). (*b*) Justin marks an advance upon the language of the *Didache* and Ignatius in the greater precision of his description of the Eucharistic gift. The word 'Eucharist' (εὐχαριστία) is applied to the consecrated food, which is expressly identified with 'the flesh and blood' of Christ. It is no longer 'common food' after the thanksgiving has been pronounced over it, but has acquired a sacred character. (*c*) The reference to the sending of the Eucharist to absent members is the earliest indication of a development which received considerable extension in the subsequent period, when, as we learn from Tertullian (*ad Uxorem*, ii. 5), Christians were allowed to keep the Sacrament in private for their own use.

Justin says nothing in the *Apology* of the sacrificial aspect of the rite, though he quotes the words 'Do this as my memorial' (τοῦτο ποιεῖτε εἰς τὴν ἐμὴν ἀνάμνησιν), in referring to the account of the institution. But in the *Dialogue with Trypho* (c. 41) he dwells at greater length on these words, and interprets them in a way which shows that he regards both the words 'do' and 'memorial' as having a sacrificial meaning. 'The offering of fine flour,' he says, referring to Lv 14[10], 'was a type of the bread of the Eucharist, which our Lord Jesus Christ commanded us to offer (ποιεῖν) for a memorial of the Passion undergone by Him on behalf of men who are being cleansed in soul from all evil'; and he connects with this offering the giving of thanks to God for the blessings of creation and redemption. Lastly, he refers, like the *Didache*, to the prophecy of Mal 1[11] (cf. *Dial.* 70, 116, 117). This conception of the Eucharist as a memorial of the Passion, based on the words of institution as found in St. Paul, is, however, peculiar to Justin among 2nd cent. writers.

(*a*) The 'simple realism' (Batiffol) of Justin's language about the Eucharist is re-echoed by Irenæus, the bishop of Lyons, in the last quarter of the 2nd century. In arguing with the Gnostics, who disparaged the material creation as being the work of an inferior power, he appeals to the Eucharist as a witness to the truer view. The Gnostics cannot consistently take part in the Eucharist, for (α) in their view the bread and wine are not creatures of the Father of Jesus Christ, and they cannot offer them to Him or call them the body and blood of His Son (*adv. Hær.* IV. xviii. 4); (β) they deny the future resurrection, and cannot appreciate the efficacy of the Eucharist as a principle of life for the body as well as the soul (*ib.*). Christ, he maintains, confessed the cup to be His blood, and the bread to be His body (V. ii. 2). The bread and the mixed cup, on receiving the word of God (*i.e.* either (1) the invocation [ἐπίκλησιν] of IV. xviii. 4; cf. 1 Ti 4[5]; Origen, hom. *in Matt.* [*PG* xiii. 948]; or (2) the personal Word; cf. the passage in Justin, above), become the Eucharist, which is the body and blood of Christ. When consecrated, the bread is no longer common bread, but consists of two elements, an earthly and a heavenly. In like manner our bodies, by partaking of the Eucharist, are no longer corruptible, but have the hope of the resurrection (IV. xviii. 4).

This treatment exhibits the same features as that of Justin, but advances beyond it in emphasizing, more clearly than Justin had done, 'the composite character of the Eucharist' (Swete, *JThSt* iii. 171). By virtue of the invocation the elements become something which they were not before. A 'heavenly element' (πρᾶγμα οὐράνιον) is added to them and operates through them (on the interpretations of the passage, see Loofs, *PRE*³ i. 47 f.). Irenæus also dwells more fully than Justin upon the effects of the Eucharist as a means of imparting life to the body and soul of man (cf. Ignatius, 'the medicine of immortality'). Lastly, Irenæus' theory of the consecration of the elements, and his emphasis upon the invocation (ἐπίκλησις), mark an advance upon the treatment of Justin (Loofs [*PRE*³ i. 42 f.] sees in this last an approximation to Greek conceptions derived from the mysteries).

(*b*) Irenæus' conception of the Eucharist as a sacrifice differs from that of Justin. While Justin dwells upon its connexion with the Passion, Irenæus emphasizes the aspect of it which has already been found in the *Didache*. It is the offering of the first-fruits of the earth. He applies to it, like the author of the *Didache* and Justin, the language of Mal 1[11]. It is the 'new oblation of the new covenant, which the Church, receiving from the Apostles, offers throughout the world to God,' not because He needs any offering, but as an expression of gratitude, and as sanctifying the creature (IV. xvii. 3 f.). But this offering is connected with the fact that Christ, when instituting the rite, confessed the bread to be His body, and the cup to be His blood (*ib.*): 'Since we are members of Him, and are nourished by the creature, and He Himself provides us with the creature . . . He declared the cup which is supplied by the creature to be His own blood, and affirmed that the bread supplied by the creature was His own body' (V. ii. 2; on this fusion of the oblation with the sacramental meal, see Inge, *Contentio Veritatis*, London, 1902, p. 287). Irenæus further maintains that the Eucharist differs from the offerings of the Jews, as being offered by 'children,' in virtue of their freedom, and not by 'servants' (IV. xviii. 1). Lastly, he refers to the 'altar in heaven' to which the prayers and oblations of Christians are directed (IV. xviii. 5; cf. the prayer in the Roman Canon, and see below).

Subsidiary sources of evidence for the history of the Eucharist during the 2nd cent. are the Gnostic writings, and the epitaph of Abercius, bishop of Hierapolis in Phrygia. The references in Gnostic literature are collected in Struckmann, *Die Gegenwart Christi in der hl. Eucharistie* (Vienna, 1905, p. 90 f.), and are summarized by Batiffol, *Études d'hist. et de théol. positive*, 2nd ser., p. 168 f. Amid much that is grotesque, they re-echo the language of which we have already found traces, and speak of 'the giving of thanks' (εὐχαριστεῖν) and of the 'invocation' (ἐπίκλησις). But they advance beyond this language in their magical conception of the effects of the consecration of the elements, and so exhibit points of contact with pagan thought. Thus, amongst the followers of Marcus we read (Irenæus, I. xiii. 2) of thanks being given over cups in which the wine is turned into blood, and in one fragment of Theodotus (quoted by Clem. Alex. *Exc. Theodoti*, 82) the bread (of the Eucharist), the oil (of Confirmation), and the water (of Baptism), after they have been consecrated 'by the power of the Name,' are spoken of as 'changed into spiritual potency,' though they retain their outward appearances (τὰ αὐτὰ ὄντα κατὰ τὸ φαινόμενον οἷα ἐλήφθη [omitting οὐ before τὰ αὐτά, with Bunsen, Loofs, Batiffol]). On the other hand, we find the opposite tendency towards a mystical rendering of the language of St. John, and the 'flesh of Christ' is interpreted as meaning the Church (*Exc. Theodoti*, 13; see on Ignatius, above).

The epitaph of Abercius exhibits, in language which recalls the pictures of the catacombs, a primitive and simple conception of the Eucharist. In his journeys from the East to 'royal Rome,' faith everywhere led the way, and set before him for food 'the fish from the fountain, mighty and stainless (whom a pure virgin grasped), and gave this to friends to eat always, having good wine, and giving the mixed cup with bread.' The reference in the 'fish' is plainly to the emblem of Christ (ἰχθύς), while 'the fountain' refers to Baptism, which gave admission to the Eucharist (see Lightfoot, *op. cit.* 'Ignatius,' i. 496 f.). See, too, the almost contemporary inscription of Pectorius of Autun in Batiffol, *op. cit.* 166 f., and in *DACL*, art. 'Autun.'

The evidence which has been reviewed shows the main lines on which the rite instituted at the Last Supper was conceived of and developed during the 2nd century. It formed the central feature of the Church's worship, and constituted a great act of

thanksgiving—a sacrifice of prayer and praise for the gifts of creation, and a memorial of redemption. Though there was no fixed liturgy, and considerable freedom was allowed to the leaders of the Church in the way of extempore prayer (*Didache*, Justin), the main lines of later liturgical development may already be traced in Justin. The Eucharist was at the same time a means of spiritual refreshment, in which the faithful partook of 'the flesh and blood of Christ' for the nourishment of soul and body unto eternal life. Lastly, it was a pledge of the unity of the One Body. There was as yet no attempt to analyze the exact nature of the gift, or to discuss the relation of the sign to the thing signified. The mystical language of the *Didache* speaks of 'spiritual food and drink,' and there is a strongly mystical strain in the language of Ignatius. But the majority of Christians probably accepted simply, without elaborating any conception of the matter, the words 'This is my body,' 'This is my blood.' See, further, Swete, *JThSt* iii. 176 f.

2. Developments in Eucharistic teaching and practice during the 3rd and 4th centuries.—It was not till many centuries had passed that the Eucharist became a subject of controversy. But during the earlier period considerable developments took place, which gradually affected the conceptions associated with the rite. During the 3rd and 4th centuries the simple faith of the early days was succeeded by a period of greater reflexion and analysis, the results of which appear in the expressions used with reference to the Eucharist, and in the practices associated with it.

(1) As to the nature of the Eucharistic gift, we find that, while in popular belief and practice the elements were more and more identified with the sacred realities of which they were believed to be the vehicle, language was used by both Eastern and Western writers which distinguished between the elements and that which they signified. The former tendency may be illustrated by the use of such language as 'to handle the Lord's body' or 'to offer violence' to it (Tertullian). It is shown, again, in the growing reverence for the consecrated species, and the care bestowed to prevent even a drop or crumb from falling to the ground (Tert. *de Cor.* 3; Origen, hom. *in Exod.* xiii. 3; cf. *Canons of Hippolytus*, 209). Lastly, it is shown in the stories told by Cyprian of the portents which attended the abuse of the Sacrament, as in the case of the defaulter who found the consecrated bread turned to a cinder in his hand (*de Lapsis*, 25 [26]). But, in spite of this growing reverence, and even superstition, with which the consecrated elements were regarded, both Tertullian and Cyprian, when they set down their more deliberate conceptions of the nature of the Eucharistic gift, use language which seems far removed from such ideas. Thus Tertullian speaks of the bread as 'the figure of His body' (*figura corporis*; see *adv. Marc.* iii. 19) and as 'representing His body' (*panem quo ipsum corpus suum repræsentat*; see *ib.* i. 14). Similarly, Cyprian speaks of 'the blood of Christ' as 'shown forth in the wine' (*Ep.* lxiii. 2, 'Christi sanguis ostenditur'; cf. *ib.* 11, 'aqua . . . quae sola Christi sanguinem non possit exprimere'; cf. *ib.* 13).

Nor is this language peculiar to the Latin Church of North Africa, or to the age of Tertullian and Cyprian. It forms the starting-point of the teaching of Augustine (see below), and it appears in the references to the Eucharist made by a series of Eastern writers during the latter part of the 3rd and throughout the 4th century. Thus the *Didascalia* (second half of 3rd cent.), if the text be correct (on this see Struckmann, *op. cit.* p. 225), speaks of 'offering the acceptable Eucharist, which is a symbol (ἀντίτυπον) of the royal body of Christ' (vi. 30). In the *Apostolic Constitutions*, written a century later, and based on the above, the mysteries are described as 'symbols (ἀντίτυπα) of His precious body and of His blood.' The 'unbloody sacrifice' is celebrated to commemorate the Lord's death 'by virtue of the symbols (συμβόλων χάριν) of his body and blood.' In the liturgy thanksgivings are offered for the precious blood and for the body 'of which we celebrate these symbols' (ἀντίτυπα; see v. 14, vi. 23, vii. 25). At the same time the formula employed at Communion is 'the body of Christ,' 'the blood of Christ.' Eusebius of Cæsarea, while speaking of Christians as 'fed with the body of the Saviour' (*de Solemn. Pasch.* 7), says that Christ delivered to His disciples the symbols (σύμβολα) of His Divine Incarnation, charging them to make the 'image (εἰκόνα) of his own body,' and to use the bread, the 'symbol (συμβόλῳ) of his own body' (*Dem. Evang.* viii. [*PG* xxii. 596]). Similarly, Eustathius of Antioch (*PG* xviii. 684 f.) speaks of the bread and wine as 'symbols (ἀντίτυπα) of the bodily members of Christ.' The liturgy of Serapion, bishop of Thmuis (before 361), while speaking of the elements as 'the body and blood,' also speaks of 'offering the bread' as 'a likeness (ὁμοίωμα) of the body,' and 'offering the cup' as 'a likeness (ὁμοίωμα) of the blood' (Brightman, *JThSt* i. 105 f.). Similarly, Gregory of Nazianzus († 390) speaks of offering the external sacrifice, 'the symbol (ἀντίτυπον) of the great mysteries' (*Or.* ii. 95); of the hand 'treasuring aught of the symbols (ἀντιτύπων) of the precious body or blood' (*ib.* viii. 18, cf. xvii. 12). Lastly, Macarius the Egyptian († 390) speaks of bread and wine as offered in the Church as 'a symbol of His flesh and blood' (*Hom.* xxvii. 17). Such language, however, may be easily misunderstood. The Latin words *figura* and *repræsentare* do not necessarily imply that the objects of which they are used are bare symbols and nothing more (on *repræsentare*, see Swete, *JThSt* iii. 173, note 5; Batiffol, *op. cit.* p. 222; Loofs, *PRE*[3] i. 59; on *figura*, see Turner, *JThSt* vii. 596); in many cases actual presence is intended (*e.g.* Tert. *adv. Marc.* iv. 22), though in others a representation to the mind seems to be implied. Again, as Harnack (*Hist. of Dogma*, Eng. tr. ii. 144) has said,

'what we now-a-days understand by "symbol" is a thing which is not that which it represents; at that time "symbol" denoted a thing which, in some kind of way, really is what it signifies; but, on the other hand, according to the ideas of that period, the really heavenly element lay either in or behind the visible form without being identical with it.'

In the case of Tertullian and Cyprian, moreover, such language must be qualified by other expressions in which they speak of the elements as 'the body and blood of the Lord' (see, *e.g.*, Tert. *de Idololatr.* 7, *ad Uxor.* ii. 5, *de Orat.* 19; Cyprian, *Ep.* xv. 1). Lastly, we may notice (Steitz, *JDTh* x. 402 f.; Loofs, *PRE*[3] i. 58) that in many of the Eastern writers referred to above the sacramental conception of the rite is subordinated to the sacrificial, and it is to the elements as offered, not as received in communion, that the language in question is applied. The same statement is true of Cyprian. It was possibly owing to the emphasis laid upon the commemorative character of the Eucharistic offering that the use of this symbolical language came to be applied to the elements even when conceived of as the food of the faithful. But, as Loofs (*loc. cit.*) and Harnack (*op. cit.* iv. 289, note 2) have said, a purely symbolical representation, in our modern sense of the word, of the Eucharist is to be found practically nowhere in ancient times.

(2) In certain quarters this tendency to distinguish the sign from the thing signified was carried to great lengths. This applies especially to the language of the two great Alexandrian

teachers, Clement and Origen. While witnessing to the current teaching of their day, which adopted the more usual and literal interpretation (νοείσθω δὲ ὁ ἄρτος καὶ τὸ ποτήριον τοῖς μὲν ἁπλουστέροις κατὰ τὴν κοινοτέραν περὶ τῆς εὐχαριστίας ἐκδοχήν, says Origen, *in Joann.* xxxii. 24 [16], ed. Brooke, Cambridge, 1891, ii. 196), they tend to refine upon the language of Scripture about the body and blood, and interpret it, according to their own spiritualizing and allegorical tendency, as denoting 'the participation in the Lord's incorruptibility' (Clem. *Pæd.* ii. 2. 19), 'the apprehension of the Divine power and essence' (Clem. *Strom.* v. 10. 67), or the teaching and words of Christ, which are life-giving, and nourish and sustain the soul (Origen, *in Matt.* 85, hom. *in Num.* xvi. 9; cf. *in Joann.*, *loc. cit.*). This teaching is repeated later on by Eusebius of Cæsarea, who in one passage interprets 'the flesh and blood' of Jn $6^{51ff.}$ to mean the words and discourses of Christ (*Eccl. Theol.* iii. 12), and it finds an echo still later in the ardent Origenist, Basil of Cæsarea (*Ep.* viii. 4). In using such language these writers are conscious that they are not speaking the current language of their day, but refining upon it. Elsewhere they use the common phraseology, and speak of the bread 'becoming the body' and as 'being holy, and sanctifying those who use it with right purpose,' in virtue of the prayer (or word) uttered over it (Origen, c. *Cels.* viii. 33, *in Matt.* xi. 14); of 'being fed with the body of the Saviour and partaking of the blood of the Lamb' (Euseb. *de Solemn. Pasch.* 7); of 'partaking of the holy body and blood of Christ' (Basil, *Ep.* xciii.). Outside the immediate circle of Origen's esoteric teaching, we find the Alexandrian writers speaking, like Dionysius in the 3rd cent., of the communicant as 'partaking of the body and blood' of Christ (Euseb. *HE* vii. 9), or, if they venture to dwell upon the nature of the gift, emphasizing, as Athanasius does, the fact that the flesh of Christ is received in a spiritual manner (*Ep. ad. Serap.* iv. 19).

(3) In the *Catecheses Mystagogicæ* of Cyril of Jerusalem (A.D. 347 or 348) we find the first traces of a new development. His language embodies many of the characteristic features of previous teaching. The literal interpretation of the words of institution, the use of the word 'figure' or 'type' (τύπος, ἀντίτυπος), and the terms 'spiritual bread' and 'spiritual drink' (cf. Athanasius) are all employed. After the invocation the bread becomes the body of Christ, and the wine His blood. But Cyril goes further, and attempts to explain the nature of the effect produced upon the elements by the consecration. He uses the word 'change' or 'convert' (μεταβάλλειν) to denote this effect, and he illustrates it from the change of water into wine in the miracle of Cana. This change or sanctification (ἡγίασται καὶ μεταβέβληται, v. 7) is effected by the Holy Spirit. Cyril's treatment marks an epoch in the history of Eucharistic teaching by introducing the conception of a mysterious change of the elements. Taken literally, his language might seem to anticipate the later mediæval doctrine. But his illustration from the miracle of Cana must not be taken too seriously. It is the language of popular teaching, not that of scientific theological statement. Lastly, it must be qualified by the expressions quoted above from the same *Catecheses.* Still it is an indication of the direction in which thought was moving; and, in the period which follows, the conception of a conversion of the elements received considerable extension.

Its great apologist was Gregory of Nyssa († 395), who expounds the idea of the conversion in a striking and original theory. Put briefly, his view is as follows (see *Oratio Catech.* c. 37). As the Word of God Himself, when on earth, received nourishment from bread and wine, so that they became, by the process of digestion, His body and blood, while His body also, by its union with the Word, was raised to the dignity of the Godhead, in like manner in the Eucharist the bread which is consecrated by the word of God is transformed (μεταποιεῖσθαι; cf. μεταστοιχειοῦν in the same chapter), no longer, as in His earthly life, by eating, but immediately, into His body by the Word. Here again, however, the language must not be taken too literally. It is of the nature of an illustration, and presupposes a particular theory of the relation of the 'form' of the body to its constituent elements. The change is a change of relation. The 'constituent elements' (στοιχεῖα) of the bread and wine acquire a new form (εἶδος), 'the body and blood,' and receive fresh properties. Gregory teaches, in fact, 'a qualitative unity' (Harnack) between the bread and the body, not a complete identity (see notes on the passage in the present writer's edition of the *Or. Cat.* in *Cambridge Patristic Texts*, Camb. 1903). But, while the theory in itself is halting and hesitating, its connexion with another statement of Gregory, that, while Baptism is intended for the soul, the Eucharist is a means by which the body of man is brought into union with the Saviour (*Or. Cat.*, *loc. cit.*), and so is raised to incorruption, tended to emphasize the physical character of the Eucharistic food, and so prepared the way for a materialistic interpretation (Gregory, however, insists on the need of faith). There is a similar treatment to that of Gregory in Macarius Magnes, who also repudiates the teaching of those who maintain that the Eucharist is a figure (τύπος) of the body and blood (see Stone, *History of Doctr. of Holy Euch.* i. 65, 73 f.).

None of the later Patristic writers followed Gregory of Nyssa in his attempt to expound the rationale of the Eucharistic mystery, but from this time the language of conversion became common. It is found in Theodore of Mopsuestia († 429), who uses the word employed by Cyril of Jerusalem (μεταβάλλεσθαι, *in Mt.* 26^{26}), though side by side with this presentation he speaks of the change as spiritual (*in 1 Cor.* 10^{3}), and, like other Eastern Fathers, calls the elements 'symbols' (σύμβολα) of the death of Christ (*in 1 Cor.* 11^{34}). It appears again in Chrysostom († 407), who revels in the use of realistic phrases, and speaks of 'eating the body,' of 'burying the teeth in His flesh' (*in Joann.* hom. 47. 1, 46. 3), and of Him who is seated above with the Father being 'held in the hands of all' (*de Sacerd.* iii. 4). But the rhetorical and devotional character of such language prevents us from taking it too seriously, and elsewhere Chrysostom blunts its force by speaking of the gift of the Sacrament as being perceived only with the eyes of the mind, and not by the senses (*in Matt.* hom. 82. 4). Like Gregory, he speaks of the elements as re-fashioned and transformed (μεταρρυθμίζειν, μετασκευάζειν, *in prodit. Jud.* hom. i. 6; *in Matt.* hom. 82. 5), but he does not analyze, like Gregory, the nature of this transformation. He adheres to the literal realism of the popular conception of the rite, and the imaginative fervour and eloquence with which he sets it forth explain the influence of his teaching on later Greek piety.

From the East this way of conceiving the effects of the consecration of the Eucharistic elements passed into the West, finding its earliest exponent in Ambrose, bishop of Milan († 397), who in other respects acted as the interpreter of Greek theology to the West. In his treatise *On Faith* (iv. 10. 125), while using language suggestive of the symbolic sacrificial conception, which we have noted in other writers of the East and the West ('the sacraments of the Lord's death,' 'we proclaim the Lord's death'), he speaks of the elements as 'transformed'

or 'transfigured (*transfigurantur*: on this word see Batiffol, *op. cit.* p. 299) by the mystery of the sacred prayer, into the flesh and blood' (cf. *de Incarn.* iv. 23, 'offerre transfigurandum corpus'). In another treatise, *de Mysteriis*, the authenticity of which, however, has been doubted (see Loofs, *PRE*[3] i. 61), the doctrine of conversion is expounded at length. The writer emphasizes the importance of the consecration of the elements, which he regards as a miraculous act of God, to which analogies may be found in the miracles of the Old and New Testaments (*e.g.* the miracles of Moses and Elijah, the Virgin Birth). 'How much greater than the blessing of man is the power of the consecration pronounced by God Himself.' For in the Eucharist it is Christ's own word, 'This is my body,' which changes the nature of the material elements on which it is pronounced (*de Myst.* ix. 52–54). Such language, with its repeated insistence on a change of nature in the elements (*præter naturam, naturam mutare, species mutare elementorum*), was new to the West; and even in the treatise in which it is found it is qualified by other expressions which weaken to some extent its force. Thus the writer still uses occasionally the older forms of expression, and speaks of the body as being 'signified' (*corpus significatur*), and of the wine as being 'called' the blood (*sanguis nuncupatur*). Again, he maintains that the food is spiritual, and that the body of Christ is the body of the Divine Spirit, because Christ is Spirit (*ib.* 58). In another treatise, the *de Sacramentis*—also bearing the name of Ambrose, though plainly not his work, but probably written about A.D. 400, somewhere in North Italy (Duchesne)—the influence of the teaching of the *de Mysteriis* is plainly shown, and the doctrine of conversion is expounded on similar lines. Though the writer does not state the spiritual character of the Eucharistic food, he is careful to guard against a physical conception of the Eucharistic gift, and in doing so speaks, like earlier writers in the East, of the sacrament as being received 'in a likeness' (*in similitudinem accipis sacramentum*), though this 'likeness' bestows the virtue of the reality (*naturæ gratiam virtutemque consequeris*, vi. 3; see Batiffol, *op. cit.* p. 305). His language, in fact, shows that he has not completely overcome the influence of the older tradition. Even if neither of these works, the *de Mysteriis* and the *de Sacramentis*, may be ascribed to Ambrose, they still remain authorities of great importance for the history of the Eucharist, as they were later on appealed to as containing the teaching of the great Western Father, and they exercised an undoubted influence on Western conceptions.

But this new train of thought did not succeed as yet in imposing itself on the West. The language of Jerome (*Ep.* 98. 13), of Ambrosiaster (*in 1 Cor.* 11[23-26]), and of the fragment of the Roman Canon of the Mass, quoted by the author of the *de Sacramentis* (iv. 6), still witnesses to the earlier Western view. The bread 'shows forth' the body of the Saviour (Jerome). The Eucharist is 'a memorial of redemption.' The eating of the flesh and drinking of the blood signify the new covenant. The 'mystical cup of the blood' is received 'in a figure' (*in typum* [Ambrosiaster]). The Eucharistic oblation is 'a figure of the body and blood of Christ' (Roman Canon in *de Sacramentis*; see Batiffol, p. 302 f.).

(4) During this same period the conceptions of the benefits of communion underwent a corresponding development. The idea which had been thrown out in Ignatius' phrase, 'the medicine of immortality,' and which was taken up by Irenæus, finds more definite and precise expression as time goes on. Tertullian speaks of 'our flesh being fed by the body and blood, that the soul may be sated with God' (*de Resurr. Carn.* 8). Cyril of Jerusalem says that the Eucharist makes us 'of one body and one blood with Christ' (σύσσωμοι καὶ σύναιμοι τοῦ Χριστοῦ). In this connexion he quotes 2 P 1[4], 'partakers of the divine nature' (*Catech. Myst.* iv. 1, 3). By passing into our frame, the Eucharistic food 'helps' body and soul (*ib.* v. 9). But in Hilary of Poitiers and Gregory of Nyssa we meet with a more systematic attempt to exhibit the place of the Eucharist in the economy of the spiritual life. Both writers expound the idea that the Sacrament is the 'extension' of the Incarnation. Thus Hilary maintains (*de Trin.* viii. 13 f.) that the union of the faithful with Christ is more than a union of will, because Christ abides in us *naturaliter*, in that He gives us His body and blood; and He draws a parallel between the union of the Word with flesh, and our union with the Word made flesh in the Sacrament. Gregory of Nyssa (*Or. Cat.* 37) says that Christ 'infused himself into our perishable nature, that by communion with the Deity mankind might at the same time be deified.' As already indicated, Gregory lays special stress upon the value of the Eucharist for the body, and in his whole conception of the sacraments he emphasizes the gift of immortality which they convey (*ib.*). The starting-point of this conception, which appears in a succession of Church writers, is thoroughly Christian, and is based upon the language of Jn 6[51ff.]; but, in the more precise form in which it is presented, it exhibits points of contact with the ideas perpetuated in the Greek mysteries.

(5) The conception of the Eucharist as a sacrifice received considerable development during the period under discussion. Hitherto the Eucharist had been spoken of as a 'sacrifice' only in connexion with the Christian interpretation of OT types, and by way of contrasting the spiritual service of Christians with Jewish and pagan ideas of sacrifice. Thus Athenagoras (*Suppl. pro Chr.* 13) speaks of 'the bloodless sacrifice and rational service of Christians' (ἀναίμακτον θυσίαν καὶ τὴν λογικὴν λατρείαν; cf. Ro 12[1]; and *Test. of xii. Patr.* [Levi 3], cited by Gore, *Body of Christ*, p. 159, note 2). As we have seen, Justin stands alone among 2nd cent. writers in associating sacrificial ideas with the words 'Do this as my memorial.' Origen appears to follow him in one passage (hom. *in Lev.* xiii. 3 f.), though a little further on he adopts the meaning 'remembrance' (*ib.* c. 5).

But in the Church of North Africa, and in the writings of Cyprian, we find the language of sacrifice freely applied in this connexion. Cyprian speaks of 'celebrating the Lord's sacrifice' (*sacrificium dominicum*; cf. also *hostia dominica* [*de Unit. Eccl.* 17]), of 'offering,' not only the cup, but 'the Lord's blood,' and once of 'sacrificing.' The words 'priest' (*sacerdos*) and 'altar' (*altare*) are employed by him in connexion with the rite (though Tertullian had already used *sacrificium, sacerdos*, and *ara* in a Christian sense; see Swete, *op. cit.* p. 166). Cyprian finds the justification of such language in the account of the institution and in the words 'Do this as my memorial.' Christ offered to God the Father bread and wine, 'that is, his body and blood.' The priest, officiating in Christ's stead (*vice Christi fungitur*), 'offers to God the Father in the Church a true and full sacrifice,' when he imitates what Christ did, and fully carries out His words and acts (he is reproving the custom of using water only). In this sacrifice 'mention is made of his Passion; for the Passion is the Lord's sacrifice which we offer' (*Ep.* lxiii. 4, 14, 17). This close association of the Eucharistic sacrifice with the sacrifice of the Cross opened up a new era. There is no idea of a repetition of the sacrifice of the Cross. For, side by side with phrases which

speak of 'offering the blood of Christ,' Cyprian speaks of 'offering the cup *in commemoration of* His Passion' (*loc. cit.* 17). But the transference of the sacrificial idea from the service as a whole to the consecrated elements (Harnack) marks the development of a more specific and clearly defined conception of the sacrifice. It is possible that this had already taken shape in popular thought before Cyprian's time. Another feature, which first appears in the North African Church, is the practice of offering the Eucharist for the departed (*oblationes pro defunctis*, Tert. *de Coron.* 3; *sacrificia pro dormitione*, Cyprian, *Ep.* i. 2).

Traces of a corresponding development appear in the East. Origen already employs the terms 'priest' and 'altar' in a Christian sense (Swete, *loc. cit.*), and in his *Homilies on Leviticus* (xiii. 3) he uses language which prepared the way for the association of propitiatory ideas with the Eucharist. He draws a parallel between the shewbread, which is a type of Christ, the true Propitiation (Ro 3[25]), and the permanent memorial ordained by Christ in the words 'Do this as my memorial.' The shewbread was set before God as a propitiatory memorial. The 'memorial' (*commemoratio*) instituted by Christ has also great propitiatory power. As Steitz has observed (*JDTh* x. 93), it was the development of this conception which gave to the later doctrine of the sacrifice of the Eucharist its essential meaning. This teaching is carried on by Eusebius of Cæsarea (*Dem. Evang.* i. 10), who contrasts the OT sacrifices with the sacrifice of Christ and the 'memorial' (*μνήμη, ὑπόμνησις*) which Christ commanded to be offered to God in place of sacrifice. At the same time he brings this 'memorial' into close connexion with the forgiveness of sins which the sacrifice of Christ won for heathen and Jew alike. Another important feature in his representation is the way in which the conception of 'celebrating' or 'offering' a 'memorial' of the sacrifice of Christ passes over into the idea of an 'offering of his body' (*τοῦ θύματος τὴν μνήμην, τὴν ἔνσαρκον τοῦ Χριστοῦ παρουσίαν, καὶ τὸ καταρτισθὲν αὐτοῦ σῶμα προσενηνέχθαι τῷ θεῷ διδάξας, ib.*). Similarly, in the *Apostolic Church Order* (c. A.D. 300) we find the phrase 'the offering (*προσφορά*) of the body and blood' (Harnack, Eng. tr. ii. 137).

But the fullest statement of the sacrificial idea is found in Cyril of Jerusalem. While repeating the language of the earlier period, and speaking of 'the spiritual sacrifice,' 'the bloodless service,' he definitely calls it 'the holy and most awful sacrifice' (*ἡ ἁγία καὶ φρικωδεστάτη θυσία*), 'the sacrifice of propitiation' (*ἡ θυσία τοῦ ἱλασμοῦ*), over which God is entreated for the common peace of the churches. It is Christ sacrificed for sins who is offered (*Χριστὸν ἐσφαγιασμένον ὑπὲρ τῶν ἡμετέρων ἁμαρτημάτων προσφέρομεν*), while the loving God is propitiated (*ἐξιλευόμενοι τὸν φιλάνθρωπον θεόν*) on behalf of the living and the dead. Cyril defends such prayers for the departed on the ground of the belief that 'the greatest benefit will accrue to the souls on whose behalf intercession is offered, while the holy and awful sacrifice lies before us.' Allowing for its popular and devotional character, such language shows the increasing awe with which the sacrificial aspect of the rite was invested, and the significance of the intercessions offered immediately after the consecration (the intercessions are found also at this point in the liturgy of Serapion and in that of bk. viii. of the *Apostolic Constitutions*).

Later on in the 4th cent. Chrysostom carries on the teaching of Cyril, and, like him, abounds in the use of sacrificial terms. He speaks of 'the most awful sacrifice,' of 'the Lord sacrificed and lying, and the priest (*ἱερέα*) standing over the sacrifice and praying, and all reddened with that blood' (*de Sacerd.* vi. 4), and of the silence and quiet attending the moment of consecration (*de Cœm. et de Cruce*, 3). But in his exposition of the Epistle to the Hebrews the realism and exuberant rhetoric of this language receive their corrective. There is no repetition of the sacrifice of the Cross. There is one body of Christ, and, therefore, one sacrifice: 'We do not offer a different sacrifice . . . but always the same; or rather we celebrate a memorial of a sacrifice' (*Ep. ad Heb.* hom. xvii. 3). Christ 'offered sacrifice once for all, and thenceforward sat down' (*ib.* xiii. 3). The whole action of the Eucharist lies in the heavenly and spiritual region (*ib.* xiv. 1, 2). And the same thought of the mystical nature of the Eucharistic sacrifice appears in the language of the Western Father, Ambrose, who contrasts the 'shadow' (*umbra*) of the Law with the 'image' (*imago*) of the Gospel on the one hand, and the heavenly 'reality' (*veritas*) on the other. The rites of the Church are an 'image' of heavenly realities. The priests on earth follow, as they can, the offering of their High Priest. Christ Himself is offered, when the body of Christ is offered. Indeed, He Himself is plainly shown (*manifestatur*) to offer in us, seeing that it is His word which sanctifies the sacrifice which is offered, and He Himself stands by us as our Advocate with the Father. But in the Eucharist we have only the 'image.' The 'reality' is to be found 'where Christ intercedes for us as our Advocate with the Father' (*in Psalm.* xxxviii. 25; *de Officiis*, bk. i. xlviii. 238). Ambrose, in fact, views the whole action of the Eucharist from the standpoint of the abiding humanity and intercession of Christ in heaven, and the same thought is implicit, though not so clearly expressed, in the language of Chrysostom (see, further, below, § 3 (2)).

(6) The 4th cent. marks a period of considerable liturgical development in connexion with the Eucharist. The writings of Cyril of Jerusalem and Chrysostom enable us to reproduce with a considerable degree of certainty the liturgy current in their time. To this period also belongs a series of Church manuals, which contain liturgical forms for the celebration of the Eucharist.

Of these the oldest are the *Ethiopic Church Order*, and the Verona *Latin Fragments* (published by Hauler), both of which are based on the same Greek original and may belong to the second half of the third century. For Egypt we have the liturgical prayers of Serapion, bishop of Thmuis (written before 361), and for Syria the liturgy of bk viii. of the *Apostolic Constitutions* (c. 375). The *Testament of our Lord* (published by Rahmani, Mainz, 1899, from Syriac MSS) may belong to the same century (Zahn, Morin), or may be a century later. Lastly, in the *de Sacramentis* (c. 400) we have some Western prayers, which exhibit the earliest known form of the Roman Canon of the Mass.

Their evidence for the conceptions of the Eucharist may be briefly summarized. (*a*) The primitive character of the rite as a service of praise and thanksgiving for the gifts of creation and the blessings of redemption is emphasized in the long prayer which leads up to the central part of the liturgy. In this respect there is, amid many variations, a general uniformity in these liturgical forms. The following fixed points stand out: (α) the *Sursum corda* ('Lift up your hearts'), with the response 'We lift them up unto the Lord' (found in Cyprian, *de Orat. Dom.* 31, and in the *Canons of Hippolytus*; cf. *Eth. Ch. Ord.*, and *Apost. Const.*), followed by the invitation 'Let us give thanks,' and the response 'It is meet and right'; (β) the commemoration of God's work in creation, leading up to (γ) the angelic hymn, the *Sanctus* (Serapion; *Apost. Const.*). This leads on to (δ) the commemoration of the Incarnation, Passion, Resurrection, and Ascension, and the narrative of the institution (*Apost. Const.*; *de Sacramentis*). Then follows (ε) the oblation of the elements, and in the Eastern rites the invocation of the Holy Spirit to consecrate them. Thus the structure of this part

of the rite sets forth the successive stages of God's revelation, culminating in the work of the Holy Spirit, whose intervention in the mystery is invoked.

(*b*) This invocation of the Holy Spirit upon the elements is found in most of our early sources (*Eth. Ch. Ord.*; *Apost. Const.*; Cyril; Chrysostom). In Serapion it is the Logos who is invoked; in the *Testament of our Lord* it is the Trinity (cf. Cyril of Jerusalem, *Cat.* xix. 7). In the fragments of the Roman Canon in the *de Sacramentis* we find in place of the invocation of the Holy Spirit (1) a prayer to God to make the oblation approved, ratified, reasonable, acceptable, because it is a figure of the body and blood of Christ; (2) a later prayer that the oblation may be received up 'on the altar on high by the hands of Thy angels.' Duchesne suggests (*Chr. Worship*, Eng. tr., London, 1904, p. 181 f.) that the latter prayer may be a symbolical way of expressing the same request for God's intervention in the mystery (others, however, see the equivalent of the invocation in the former of the two prayers [no. 1, above]).

On the question of the precise moment of consecration, see W. C. Bishop, *CQR* lxvi. 398 f.; Procter and Frere, *History of Book of Common Prayer*[3], London, 1910, p. 446; Scudamore, *Notitia Eucharistica*[2], London, 1872, p. 572 ff.; and *DACL*, art. 'Anamnèse.' The Western idea, that the consecration is effected by the recital of the words of institution, appears to be adumbrated in Ambrose and the *de Sacramentis* (Ambrose, *de Myst.* ix. 52, 54; *de Sacram.* iv. 14–23).

(*c*) As to the effects of consecration, the earliest Eastern forms are explicit in identifying the elements with the body and blood of Christ. The words ποιεῖν ('make' [Cyril]), γίγνεσθαι ('become' [Serapion]), ἀποφαίνειν ('show' [*Apost. Const.*], probably a synonym of ποιεῖν) are used in the invocation to express the relation of the elements to the body and blood (cf. Roman Canon [Gelasian], where we find *ut nobis corpus et sanguis fiat*). In spite of the use of symbolic language by Eastern writers to denote the oblation, these liturgical forms adhere to the 'simple realism' of early times (cf. Justin, Irenæus). The prayers of the Western Canon in the *de Sacramentis* are less explicit. While using symbolic language of the oblation ('figure of the body of Christ'), the elements are spoken of as 'the holy bread and the cup of eternal life.' This accords with the Western tradition and the language of Jerome and Augustine. But in these prayers the sacramental idea is subordinated to the sacrificial, and, in place of a reference to the body and blood, we find a reference to the gifts of Abel and the sacrifices of Abraham and Melchizedek.

(*d*) The conception of the sacrifice in these sources combines the idea of the oblation of the gifts (cf. *Didache* and Irenæus) with that of the memorial of the Passion (cf. Justin and Cyprian). Thus we find mention made of 'this living sacrifice,' 'this bloodless oblation,' and a reference, before the invocation, to the 'bread scattered upon the mountains' (Serapion; cf. *Didache*); also a prayer for those who have offered the offerings and thanksgivings, after the invocation (Serapion). Similarly the *Apostolic Constitutions* contains the prayer, 'We implore Thee to look graciously upon these gifts lying before Thee,' while the Western prayers in the *de Sacramentis* speak of *oblatio rationabilis*, *immaculata hostia*, and compare the sacrifice with the gifts of Abel and the sacrifices of Abraham and Melchizedek.

Most of these sources contain a prayer of oblation in connexion with the *Anamnesis*, or commemoration of the Passion and Resurrection. In Serapion and the *de Sacramentis* this oblation is conceived of as a 'type' of Christ's offering, and the elements are offered as 'types' and 'figures' of His body and blood. So in the Western Canon the gifts of Abel and the sacrifices of Abraham and Melchizedek may be quoted as 'types' of the offering of Christ.

Serapion accords with the fuller development of the sacrificial idea, as found in Cyril of Jerusalem, in the prayer after the consecration: 'We beseech Thee, through this sacrifice, be reconciled to all of us and be merciful' (ἱλάσθητι). Lastly, in Serapion and the *Apostolic Constitutions* intercessions for the departed and others are offered after the consecration (cf. Cyril Jer. *Cat.* xxiii. 9, quoted above). This development is significant, and helps to explain how the primitive communion feast passed into the 'High Mass' of later times.

3. The Eucharist in the later Patristic period (5th–8th centuries).—The two main developments in Eucharistic teaching which have been traced above may be summarized as follows: (1) the transition from a distinction between the elements and that which they signify (the 'dyophysite' view, Harnack, Batiffol) to the conception of a complete identification of the elements with the body and blood of Christ (the 'conversion' doctrine, Batiffol); (2) the transformation of the idea of sacrifice, according to which the conception of the offering of the gifts and the memorial of the Passion passes into an offering of the body and blood as a propitiatory memorial sacrifice. In the period which followed, these two tendencies were accentuated, though they had to encounter the influence of an earlier tradition, and in the West the authority of Augustine's teaching long resisted the former.

(1) The parallel which Gregory of Nyssa had drawn between the Eucharist and the Incarnation, and the idea that the latter is continued, as to its effects, in the former, concentrated attention on the rite as a living witness and attestation of the practical power of the Church's faith with regard to the Person of Christ. Thus Gregory of Nyssa complains that Eunomius (the Arian) had 'slighted the fellowship of the sacramental customs and tokens from which the Christian profession draws its vigour,' and that he had maintained that 'the sacramental tokens do not, as we have believed, secure spiritual blessings and avert from believers the assaults directed against them by the wiles of the evil one' (*c. Eunom.* bk. xi. [*PG* xlv. 880]). Similarly, Cyril of Alexandria, in his *Third Letter to Nestorius*, appeals to the Eucharist as teaching that the flesh of Christ is 'life-giving' (ζωοποιόν). Thus it witnesses against Nestorius' teaching, which maintains that the flesh of Christ is not the flesh of God the Word. In the Christological controversies of the subsequent period we find the same appeal to the Eucharist made by the orthodox and the Monophysites alike in support of their doctrine. On the one hand, the Monophysites contend that in the Eucharist there is a conversion of the elements into the body and blood of Christ, while their opponents adhere to the 'dyophysite' view, and maintain that the elements retain their own nature, and that the 'change' effected by consecration is in the region of grace (κατὰ χάριν). Such is the argument of Theodoret († 457) (*Eranistes*, i. 56 [*PG* lxxxiii. 87], ii. 165 f. [*ib.* 207]). The same argument re-appears in the *Epistle to Cæsarius* (by an unknown author), and at the end of the 5th cent. it is employed by Pope Gelasius († 496) in his *de Duabus Naturis*. But after the 6th cent. this analogy between the Incarnation and the Eucharist passes out of view (Batiffol, *op. cit.* p. 332), and in the East the doctrine of the conversion of the elements became more and more the accepted teaching, until in the 8th cent. John of Damascus († after 759), whose work *de Fide Orthodoxa* sums up the Church tradition of his time, sets it forth as the established doctrine of the Church. Like Gregory of Nyssa, he illustrates the change in the elements by the transformation of food in our bodies, but he goes beyond Gregory in asserting the complete identity of the consecrated elements with the body and blood of Christ, and he

further maintains the identity of the Eucharistic and the historical body of Christ (though even he shows lingering traces of the earlier view when he speaks of the bread as 'not mere bread, but bread united to the Divinity'). For his whole treatment, see *de Fide Orth.* iv. 13.

In the West the influence of the teaching associated with the name of Ambrose (see above, § 2 (3)) must be reckoned as one of the main factors in introducing the doctrine of conversion. But into the opposite scale was cast the weighty authority of Augustine's teaching, which delayed for some centuries the complete acceptance in the West of the Ambrosian view. Augustine starts from the earlier Western teaching, and is in the same line of tradition as Tertullian and Cyprian. But his importance also consists in the fact that he attempted an analysis of the idea of sacraments, which was epoch-making, and became authoritative for Western Christendom in later times. Thus his definition of sacraments as 'visible signs of divine things,' in which 'the invisible things themselves are honoured' (*de Cat. Rud.* xxvi. 50), his statements that in them 'one thing is seen, another is understood' (*Serm.* cclxxii.), and that 'what is seen has a bodily appearance, what is understood has spiritual profit' (*ib.*), as also his distinction between the *sacramentum* (or outward part) and the *res* (or inward part; cf. *Tract. in Joann.* xxvi. 15) on the one hand, and between the 'sacrament' and the 'virtue' (*virtus*) of the sacrament (*in Joann. ib.* 11; *En. in Ps.* lxxvii. 2) on the other, became classical for the later period, and form the starting-point of mediæval discussions upon the subject. Of importance, too, is his statement that 'the word is added to the element, and a sacrament is constituted, being itself, as it were, a visible word' (*in Joann.* lxxx. 3). But, in accordance with the emphasis which his teaching laid on the spiritual side of things, and the importance which he attached to 'faith' and 'the word,' his language at times seems to pass almost into a figurative or symbolical view of the sacraments, and he has been claimed as teaching such by theological controversialists, as well as by many modern scholars (*e.g.* Harnack and Loofs). Thus he speaks, like Tertullian, of Christ delivering to the disciples 'the figure' (*figuram*) or 'sign' (*signum*) of His body and blood (*En. in Ps.* iii. 1; *c. Adimant.* xii. 3). The bread becomes the body of Christ, because it has been sanctified by the word of God (*Serm.* ccxxvii., ccxxxiv.). Augustine uses the words *consecratio*, *benedictio*, and *sanctificare* to denote this consecration, and this sanctification has the effect of making the elements 'a sacrament of commemoration' of Christ's sacrifice (*c. Faust.* xx. 21). The sign, however, must be carefully distinguished from that which it signifies: 'it is not that which is seen that feeds, but that which is believed' (*Serm.* cxii. 5). 'Believe, and thou hast eaten' (*crede et manducasti* [*in Joann.* xxv. 12]). The 'eating of the body' and 'drinking of the blood' in Jn 6[56] are expounded by him as meaning 'to dwell in Christ and to have Christ dwelling in us.' But elsewhere he shows that the Sacrament is not for him an empty sign. The Eucharist conveys a gift of life. This gift is a spiritual gift, and the eating and drinking are a spiritual process (*Serm.* cxxxi. 1). The Eucharistic body is not the sensible flesh, for of that we could not partake, but of this flesh we receive that which was its essence, the Spirit which quickens it (*in Joann.* xxvii. 5). The presence of Christ is, in fact, a spiritual presence (Augustine, however, nowhere uses this phrase of the Eucharist). Augustine does not identify the Eucharistic body with the historical body of Christ, but seems to conceive of the spiritual essence of Christ's humanity as receiving a new symbolical body (*non hoc corpus quod videtis manducaturi estis . . . sacramentum aliquod vobis commendavi*), and this spiritual essence also becomes the spiritual essence of the Church, which is sometimes spoken of as the body of Christ, and as the *res sacramenti* (see *Serm.* ccxxvii. *in Joann.* xxvi. 15, *Ep.* clxxxv. [*ad Bonifacium*] 50; cf. Gore, *Dissertations*, p. 233, note 1). The latter presentation is in accord with the earlier language of Tertullian and Cyprian (cf. Tert. *de Orat.* 6; Cyprian, *Ep.* lxiii. 13). Again, Augustine has been thought to teach a 'receptionist' view of the Sacrament, and some of his language certainly accords with such an idea. But his treatment is unsystematic, and his teaching on the subject of the reception by the wicked is not consistent. In some passages he seems to identify the eating of the flesh of Christ with believing on Him (see above), and maintains that those who 'abide in Christ' alone eat of the body and blood (*in Joann.* xxvi. 18; *de Civ. Dei*, xxi. 25), though elsewhere he teaches that the 'inward part' (or *res*) is given to all (see *Serm.* clxxiv. 7 ['infants partake of His table, that they may have life in themselves'], and for the reception by the wicked, see *Ep.* cxl. 66; *de Bapt. contrà Donat.* v. 8. 9; *Serm.* lxxi. 17; *in Joann.* xxvii. 11). On the whole, Augustine must be ranked with those Eastern and Western writers upon the Eucharist who, during the 3rd and 4th centuries, taught what has been called the 'dyophysite' view. The characteristic of this teaching is, as we have seen (above, § 2), the sharp distinction which it draws between the sign and the thing signified. But, though Augustine emphasizes this point so strongly, and at the same time urges the importance of faith and the spirituality of the gift, there is no real justification for regarding him as teaching a purely symbolical view. His merit consists in his attempt to set forth the nature of the sacramental idea, and in his endeavour to conceive of the body of Christ, as given in the Eucharist, in a way that accords with the highest spiritual conceptions. In this respect his influence was wholly for good, and the authority of his teaching resisted for some centuries to come the inroads of a materializing tendency with regard to the sacraments.

For a further discussion of Augustine's teaching, see Harnack, *Hist. of Dogma*, Eng. tr. v. 155 f.; Loofs, *PRE*[3] i. 61–63; Batiffol, *Études*, 2nd ser., p. 232 f. The last-named criticizes Loofs' symbolical interpretation, and also the view of those who appeal to Augustine as teaching explicitly a belief in an objective presence in the elements (e.g. *En. in Ps.* xcviii. 9; *ib* xxxiii. 1. 10; 2. 2).

These two currents of thought, the Ambrosian and the Augustinian, are exhibited in the writers of the 6th century. The Africans, Fulgentius and Facundus, and the Spaniard, Isidore of Seville, re-echo the language of Augustine, while Cæsarius of Arles and Pope Gregory the Great repeat the teaching of Ambrose (Loofs, *loc. cit.*). The same is true of the language of the prayers in the Western liturgies between the 6th and the 8th century. On the one hand, there are found such phrases as 'the bread changed into the flesh . . . the cup changed into the blood,' 'unto the transformation of the body and blood of our Lord God Jesus Christ,' 'to eat the body,' 'to drink the blood'; on the other hand, there occur 'spiritual food,' 'spiritual cup,' 'the virtue of the heavenly food,' 'the image of the sacrament.' In the early Middle Ages the language of these prayers, as well as the authority of Augustine and Ambrose, was appealed to in the controversies on the Eucharist (Batiffol, *op. cit.* p. 348 f.).

(2) The transformation of the conception of the sacrifice in the Eucharist during the 3rd and 4th centuries, which has been indicated above, affected the course of the developments during the following period. In the East there was little development beyond the standpoint of Cyril of Jerusalem

and Chrysostom. John of Damascus has only a passing reference to the subject, in which he recalls the type of Melchizedek and the prophecy of Mal 1[11], and speaks of the 'pure and unbloody sacrifice' (*de Fide Orth.* iv. 13).

In the West we find, as in the treatment of the nature of the gift, two traditions, represented by Augustine on the one hand, and Ambrose on the other.

Augustine's conception of the sacrifice exhibits two characteristics, both of which may be paralleled from the earlier language current in the West. (*a*) The Eucharist is a 'commemoration of the sacrifice of the Cross' (*sacrificii memoria, sacramentum memoriæ* [*c. Faust.* xx. 18. 21]). The sacrifice of the Cross was prefigured by the OT sacrifices. It was offered in reality on the Cross. It is celebrated by a 'sacrament of commemoration' in the Eucharist (*ib.* 21). This language may be paralleled from Cyprian (*calicem in commemorationem Domini et passionis ejus* [*Ep.* lxiii. 17]), and from the prayers of the Roman Canon in the *de Sacramentis* (the oblation is *figura corporis et sanguinis*). Again, he speaks of the Eucharist as 'the sacrifice of the body and blood of Christ' (*de An. et de Orig.* i. 11 [13]), of 'offering the body of Christ' (*ib.* i. 9 [10]), and of 'the sacrifice of our ransom' (*Confess.* ix. 12 [32]). This also recalls Cyprian (see above, II. 2 (5)). (*b*) But the most distinctive feature of Augustine's teaching is his emphasis on the union of the faithful in the Eucharist with the sacrifice of Christ. The faithful themselves, by partaking of Christ's body and blood, are the sacrifice, and become 'the body of Christ' (*Serm.* ccxxvii.; *de Civ. Dei*, x. 6. 20, xxii. 10). This conception, which is a development of Pauline teaching (1 Co 10[16f.]), had been anticipated by Tertullian (*de Orat.* 6), who connects with the gift of 'daily bread' the idea of continuance in Christ and inseparability from His body (*i.e.* the mystical body), and by Cyprian (*Ep.* lxiii. 13), who finds in the mixture of water with wine in the chalice a representation of the incorporation of the people in Christ.

On the other hand, the teaching of Ambrose (see above, II. § 2 (5)) is reproduced by Gregory the Great in the 6th century (*Dial.* iv. 58). (*a*) The Eucharist is related to the sacrifice of the Cross, which it is said to 'renew' (*reparat*), though this language is qualified by the words 'in a mystery,' and by the comment that it 'imitates the Passion of the Only-begotten Son' (cf. Ambrose, *in imagine*). (*b*) Like Ambrose and Chrysostom, Gregory connects the Eucharist with the heavenly life of Christ. He who is 'immolated for us again in the mystery of the holy oblation' is the Son who dieth no more, but liveth in Himself immortally and incorruptibly. In the mystery of the Eucharist things earthly are united with things heavenly (*ib.*). The whole action is, in fact, as in Ambrose, mystical and transcendental. Moreover, Gregory combines with this presentation two conceptions which further qualify his language, and relate it to that of Augustine. (*a*) The sacrifice of the Eucharist is closely associated with the communion of the faithful. (*β*) The sacrifice is consummated only in the self-oblation of the worshippers (*ib.* 59, 'For then will He be truly the victim [*hostia*] for us to God, when we have made ourselves a victim' [*hostiam*]).

Ambrose, Chrysostom, and Gregory the Great in their teaching upon the sacrifice in the Eucharist exhibit certain common features, which re-appear in later Greek teaching, and in some of the early mediæval writers in the West. Behind their language there lies the Pauline conception of the mystical body of Christ. The Church 'offers' through Christ, the Head of the body, and in union with Him (hence the emphasis of Gregory and Chrysostom on the communion and self-oblation of the worshippers; cf. Augustine). At the same time these Fathers appear to recognize that the Scriptural application (*e.g.* in Hebrews) of the language of sacrifice and priesthood to the heavenly life of Christ is but the language of illustration, used to express the abiding truth of the assumption of humanity in the Person of Christ to the throne of God: 'His Incarnation is itself the offering of our purification' (Greg. Mag. *Moral.* i. 24. 32; cf. Euthymius, quoted below, III. § 6). The Eucharist sets forth that truth 'in an image' or 'in a mystery' (Ambrose, Greg.). The whole action of the rite is 'spiritual' and 'heavenly' (Chrysos.). The same idea is suggested by the earlier language of Irenæus on the 'heavenly altar,' and in the *de Sacramentis* and Eastern liturgies. See Gore, *Body of Christ*, p. 185 f.

(3) The conception of the propitiatory value of the sacrifice in the Eucharist, which has been traced in the earlier Patristic period (Origen, Cyril of Jerus.), received a considerable development later on. The metaphorical language used by some of the Fathers suggested a renewal of the sacrifice of Christ in the Eucharist (*e.g.* Ambrose, *de Off.* i. 48 [*quasi recipiens passionem*]; Greg. Mag. *Dial.* iv. 58 [*mortem unigeniti reparat, iterum immolatur*], hom. *in Ev.* ii. 37. 7 [*iterum patitur*]), and, though qualified by other expressions, it came to be taken in a literal sense. The liturgical custom of offering intercessions for the living and the dead immediately after the consecration led to the same result. Lastly, the practice of offering the Eucharist specially for the departed, which appears first in Tertullian and Cyprian, led gradually to the idea that each offering constituted a distinct sacrifice for sin. The transition was made slowly and almost imperceptibly. In popular religion the propitiatory conception doubtless received a considerable impetus from the influx of pagan ideas into the Church. The language of Gregory the Great shows in this respect the advance made upon the earlier period. He dwells much upon the benefits resulting from the offering of the sacrifice of the Mass for souls in purgatory; in his *Dialogues* (iv. 55) he tells how a priest is visited by the apparition of a departed soul, who offers to him bread, and says, 'Offer this bread to Almighty God on my behalf, that thou mayst intercede for my sins.'

The transition from the Eucharistic to the propitiatory view of the Eucharist is reflected in the Western Sacramentaries, when compared with the earlier prayers (*e.g.* the *de Sacramentis*). Thus in the Leonine Sacramentary (6th cent.), side by side with the older language, which speaks of 'the sacrifice of praise,' we find 'sacrifice of propitiation and praise' (*sacrificium placationis et laudis*).

We may compare also the following prayers from the same source: (*a*) 'O Lord, we beseech Thee, mercifully sanctify these gifts, and, receiving the offering of a spiritual sacrifice, make us to be an eternal gift unto Thee'; (*b*) 'O Lord, mercifully look upon these gifts, which we bring for the commemoration of Thy saints, and offer for our offences' (ed. Feltoe, Cambridge, 1896, pp. 24, 19).

The Western Sacramentaries, in fact, exhibit, in the multitude of their variable prayers, the gradations between the earlier Eucharistic and the later propitiatory view.

LITERATURE.—In addition to the literature quoted under I., reference may be made to the general Histories of Doctrine by Harnack and Schwane, and to Loofs, *Leitfaden z. Stud. der Dogmengesch.*[3], Halle, 1893; also to the artt. in *PRE*[3], 'Eucharistie' (Drews) and 'Abendmahl II.' (Loofs). The following special treatises or discussions deal with the Patristic period or particular portions of it: G. E. Steitz, 'Abhandl. über die Abendmahlslehre der griech. Kirche,' in *JDTh* ix.–xiii. (1864–68); F. S. Renz, *Opfercharakter der Eucharistie*, Paderborn, 1892; C. Gore, *Body of Christ*, London, 1901; W. B. Frankland, *The Early Eucharist*, Cambridge, 1902; H. B. Swete, 'The Eucharistic Belief of the Second and Third Centuries,' in *JThSt* iii. 161 f. (1902); A. Scheiwiler, 'Die Elemente der Eucharistie in den ersten drei Jahrh.,' in *Forsch. zur chr. Lit. u. Dogmengesch.* iii. 4 (Mainz, 1903); A. Andersen, *Das Abendmahl in den zwei ersten Jahrh.*, Giessen, 1904; V. Ermoni, *L'Eucharistie dans l'Église primitive*, Paris, 1903; P. Batiffol, *Études d'histoire et de théologie positive*, 2nd ser., Paris, 1905; K. G. Goetz, *Die heutige Abendmahlsfrage in ihrer gesch. Entwicklung*, Leipzig, 1907; A. Struckmann, *Die Gegenwart Christi in der hl. Eucharistie*, Vienna, 1905; D. Stone, *A History of the Doctrine of the Holy Eucharist*, 2 vols., London, 1909.

III. *THE EUCHARIST IN THE MIDDLE AGES* (A.D. 800–1500). — 1. Introductory. — With the Middle Ages we enter upon a period of reflexion and controversy upon the Eucharist, which before

the time of Paschasius had never received really systematic treatment at the hands of theologians. From the 9th cent. onwards, however, it continued to occupy a prominent place in theological discussion, which gradually formulated a theory of sacraments, their character, mode of operation, effects, and place in religion. The period from the 9th to the 15th cent. marks the growth of a system of belief and practice, against which the Reformation of the 16th cent. was a reaction and protest. The history, however, is limited mainly to the West, where there was much greater movement of thought and much less unanimity upon the subject than in the East. The Greek Church, as a whole, held by the teaching of John of Damascus, in spite of occasional movements in the direction of a closer accord with later Western teaching (as at the Council of Lyons in 1274, when Greeks and Latins met to discuss re-union, and a statement was drawn up in which μετουσιοῦν occurs as an equivalent for *transubstantiare*). In the Western Church, on the other hand, the history of the doctrine exhibits the stages by which the conversion theory, taught by Ambrose, and established under Greek influence, gradually asserted itself, and was carried to its final development in the doctrine of transubstantiation. The two chief authorities appealed to by early Western mediæval writers upon the Eucharist were Ambrose and Augustine. The teaching of the former was appealed to by those who tended to the view of a miraculous conversion of the elements into the body and blood of Christ. The teaching of Augustine formed the starting-point of those who distinguished sharply the sign from the thing signified, and who inclined to the view of a spiritual presence of power and efficacy—a view which passes in its more extreme forms into a receptionist or commemorative view of the rite. Generally, however, an attempt was made by both parties to harmonize the teaching of these two Fathers and to interpret them in accordance with their own standpoint. There are three reasons why the conversion doctrine finally prevailed during the Middle Ages. (1) It gave to simple minds an easy and literal interpretation of the words 'This is my body,' 'This is my blood.' (2) It fell in with the realism of popular thought, which viewed everything in the concrete, whereas the more vague but spiritual language of Augustine resisted all attempts to materialize it, and it was only by a *tour de force* that mediæval writers made Augustine speak the language of transubstantiation. (3) The language of conversion lent itself to the growing love of the miraculous.

2. The Eucharistic controversies of the early Middle Ages.—The mediæval history of the Eucharist begins with the controversy excited by the appearance of the treatise of Paschasius Radbertus, *On the Body and Blood of the Lord*, in 844. The author was a monk, and afterwards abbot, of Corbey. His book, which was the most complete treatise on the Eucharist that had yet appeared, dealt with the whole subject of the Sacrament, and was inspired by a profoundly religious spirit. Paschasius exhibits clear traces of Greek influence (Cyril of Alexandria, John of Damascus), and no less clearly is he indebted to Augustine, especially in his emphasis on the spiritual character of the gift which is received (*e.g.* ch. 10), and his repudiation of the Capernaite view (cf. Jn 6[52]), which was apparently held in uninstructed circles. He is no metaphysician, but starts from the omnipotence of God, the need of faith, and the words of Christ, 'This is my body.' His treatment follows that of Ambrose in the main. He adduces the miracles of the OT and NT in support of the belief that the substance of the bread and wine is changed into the flesh and blood of Christ. Yet the change is an inward one, and is not apparent to sight or taste. If the elements retain their outward appearance, the object is to call forth faith and to remind believers that the gift is spiritual. He adduces, however, instances in which a miraculous change of the outward appearance has occurred to convince doubters or reward faith. Yet no portents can enhance the value of that which the faithful receive in the Sacrament. He maintains the identity of the Eucharistic and historical body of Christ, and explains its presence in countless places at once by a creative act of God on each occasion.

Paschasius' treatise fell in with popular tendencies and became in the subsequent period the authoritative exposition of the rite. But the influence of Augustine was still too strong to allow such teaching to pass unchallenged. Outside the circle of Paschasius' admirers the language of Augustine was still repeated (Amalarius, Florus, Rabanus Maurus), while John Scotus Erigena appears to have taught a purely symbolical view of the Sacrament. But the great opponent whom Paschasius' book called forth was Ratramnus (also a monk of Corbey), who, in response to a request of Charles the Bald, wrote his treatise, *On the Body and Blood of the Lord*. The two questions submitted to him were: (1) Is the Eucharist the body of Christ in a mystery or in reality? (2) What is the relation of the Eucharistic to the historical body?

(1) He begins by defining the words *figura* and *veritas*. The former denotes the setting forth of something under a veil, as when Christ speaks of Himself as the Bread or the Vine. The word *veritas* denotes the showing of a thing unveiled in its natural character, as when we say that Christ was born of a virgin. The bread and wine show one thing outwardly to the senses, and proclaim aloud another inwardly to the minds of the faithful. There is no material miracle in the Eucharist. Outwardly the elements are the same as before. Inwardly, to the minds of the faithful, they are in a figure (*figurate*) Christ's body and blood. The change is a spiritual one. There are not two different substances, body and spirit, but one thing under two aspects—in one aspect bread and wine, in another the body and blood of Christ. In their bodily nature they are bread and wine; in power and spiritual efficacy they are the mysteries of the body and blood of Christ. Ratramnus throughout represents the older conservative tradition of the West (Tertullian, Jerome, the *de Sacramentis*). He quotes from Augustine the phrase *figura corporis Christi*, to prove that the sacraments are one thing, the thing of which they are the sacrament is another. As visible creatures the elements feed the body; according to their invisible substance (*i.e.* the power of the Divine word) they feed and sanctify the soul.

(2) In dealing with the second question, Ratramnus appeals to a distinction drawn by Ambrose (*de Myst.* 53) between the sacrament of the flesh and the verity of the same, and to a further statement of Ambrose (*de Myst.* 58) that the body of Christ is the body of a Divine Spirit. It is called the body of Christ because in it the Spirit of Christ (*i.e.* the power of the Divine word) feeds and cleanses the soul. Finally, he quotes two prayers from the Mass to show that the elements are the 'pledge' and the 'image' of the verity of Christ's body and blood, but not the verity itself, which will be manifested in open vision only hereafter.

Ratramnus' treatment of the subject exhibits in an acute form the ambiguity attaching generally to the older Western tradition as represented most conspicuously in Augustine, and it is difficult to decide whether Ratramnus believed that the gift bestowed in the Eucharist was merely a mysterious

operation of the Divine power through the elements, effecting union with Christ, or a presence in the elements of the body and blood of Christ. His teaching, however, had a certain currency in the subsequent period. Much of it reappears in the *Homilies* of the English Aelfric (10th cent.). Ratramnus' book, which came to be attributed to John Scotus Erigena (see below), also attracted considerable attention at the time of the Berengarian controversy (it was highly esteemed, and quoted by Ridley at the time of the Reformation).

Other writers besides Ratramnus protested against particular views expressed in the work of Paschasius (*e.g.* Rabanus Maurus rejects the view of the identity of the historical and Eucharistic body of Christ), but circumstances favoured the spread of Paschasius' doctrine, which received cruder expression as time went on. The transformation of the elements was regarded as so complete that they could no longer be spoken of as 'signs.' During the 10th cent. the idea of a physical miracle was carried so far in some quarters that, if we may trust the statement of Berengar, expressions were current which countenanced the revolting idea of a *portiuncula carnis* received by the faithful in the Sacrament.

3. **The Berengarian controversy** (cf. art. BERENGAR).—The wide-spread acceptance of the teaching of Paschasius and the crudities of popular language about the Eucharist aroused a fresh protest against the doctrine of conversion during the 11th century. Berengar, who was head of the school of Tours, had refused to accept the teaching of Paschasius, and re-opened controversy on the subject by addressing a letter to Lanfranc defending the teaching of John Scotus upon the Sacrament of the altar, which Lanfranc had spoken of as heretical.

Berengar was condemned unheard at Rome and Vercelli in 1050. But, though public opinion was against him, he had some powerful friends, and succeeded in 1054 in persuading Hildebrand (then Papal legate at Tours) of his orthodoxy. He appeared before a Synod at Rome in 1059, where he was compelled to submit, and to subscribe a confession of faith put forward by Cardinal Humbert, in which a crude and materialistic conception of the Sacrament was taught ('panem et vinum . . . post consecrationem non solum sacramentum, sed etiam verum corpus et sanguinem domini nostri Jesu Christi esse, et sensualiter non solum sacramento, sed in veritate manibus sacerdotum tractari, frangi, et fidelium dentibus atteri'; see Lanfranc, *de Euch.* 2). (For a more lenient view of this confession, see the language of Innocent III. and Alexander of Hales, quoted by Stone, *Hist. of the Doct. of the Holy Eucharist*, i. 310, 316.) Berengar retired to France, but shortly afterwards renewed the controversy. The accession of Hildebrand to the Papacy did not save him, however, from condemnation (though the Pope showed him much indulgence, and endeavoured to secure for him the opportunity of making a confession of faith couched in general terms), and in 1079 he was required to subscribe a formula couched in milder terms than the earlier one, but still acknowledging the conversion doctrine ('panem et vinum . . . substantialiter converti . . . et post consecrationem esse verum Christi corpus, quod natum est de Virgine . . . non tantum per signum et virtutem sacramenti, sed in proprietate naturae et veritate substantiae'). He again submitted, and spent the rest of his years in retirement.

In Berengar's letter to Lanfranc he expresses his agreement with the opinions of John Scotus. It has been argued, however, with some show of reason, that the work referred to is Ratramnus' book, which was commonly ascribed to John Scotus (Gore, *Dissertations*, p. 240 ff.), and Berengar's position is certainly in the main that of Ratramnus. His more mature view of the subject is set forth in his work, *de Sacra Coena* (written in 1073), which is a reply to Lanfranc (ed. Vischer, Berlin, 1834). He goes back to the tradition of the West before the time of Paschasius, and appeals to the language of Augustine, the *de Sacramentis* (which was ascribed to Ambrose), and the prayers of the Roman Mass in support of his protest against the doctrine of conversion. In his exegesis of the Fathers he is far superior to his opponent. But the novel element in Berengar's treatise is his use of the dialectical method. In this his opponents were no match for him. While they rest their appeal on faith in the omnipotence of God and on the authority of the Fathers, Berengar puts forward the appeal to reason. He attacks the idea that the elements cease to exist, on the ground that 'accidents' cannot exist without a subject—the first appearance of the later Scholastic terminology. By attributing the accidents of the elements to the body and blood, Lanfranc is really teaching that the body and blood are visible (ed. Vischer, pp. 127, 171). He further illustrates the use of the negative in Scripture and the Fathers, in order to prove that it is often employed not to deny the continued existence of that to which it refers, but to emphasize something which it has become, or some aspect of it to which attention is directed. Thus, when it is said that after consecration the elements are not bread and wine, but the body and blood of Christ, it is not necessarily implied that the bread and wine cease to exist (*ib.* p. 177 f.). He attacks Paschasius' idea that the body and blood of Christ are produced by a new act of creation (*per generationem subjecti*), he denies that the wicked receive the body and blood, and, lastly, he protests against the idea of a *portiuncula carnis* as that which is received in the Sacrament. In so doing he states, apparently for the first time among mediæval writers (though he appeals to Augustine for the phrase), that *totum corpus* or *totus Christus* is received. In his positive teaching Berengar appears to have followed Augustine and Ratramnus. As a result of consecration there is a real, though spiritual, presence of the body and blood, which are received with the heart, not with the mouth, of the faithful. He denies that he maintained a merely figurative view. Every sacrament implies a *res sacramenti*, seeing that it is, in Augustine's phrase, 'a visible sign or form of an invisible grace.' Lastly, he has a valuable statement of the nature of the Divine working in its use of natural means. 'Everything which is consecrated is of necessity enhanced, but by no means destroyed.'

To Berengar's opponents such teaching seemed to deny any real presence of Christ in the Sacrament. A purely 'spiritual' presence, such as Berengar taught, seemed scarcely distinguishable from a presence only in the intelligence or memory (so Hugh of Langres; cf. Gore, *op. cit.* p. 256). Hence Berengar's language seemed to lead to a merely figurative view of the Sacrament. Others charged him with teaching a theory of impanation, *i.e.*, that, as Christ took human nature into personal union with Himself and became incarnate, so in the Sacrament He takes bread and wine into the same kind of union, and may be said to be impanate and invinate (see below, § 4). Both these views are attributed to the followers of Berengar by writers of the 11th and 12th centuries (Witmund, Alger of Liège, Gregory of Bergamo).

The controversy produced a series of replies to Berengar (Lanfranc, Hugh of Langres, Witmund of Aversa, Durandus of Troarn), which exhibit traces of the current conceptions (physical manducation, reception by the wicked, incorruptibility of the consecrated species). But Berengar's protest had not been in vain. From this period the cruder views tend to disappear. The rising Scholasticism of the 12th cent. took up the task of formulating the doctrine of conversion. The term 'transubstantiation' had not yet appeared, though Witmund's phrase *substantialiter transmutare* is a close approximation to it. In the task of formulating the Church's belief, however, the Schoolmen learned from the controversy with Berengar to lay aside many of the crude and untenable conceptions which had been current before.

4. **The Schoolmen and the doctrine of transub-**

stantiation.—During the 12th cent. the development of the doctrine of the Eucharist was affected by two factors in the general history of the period. The first of these was the religious revival which had resulted from the reform of the Papacy and the preaching of the Crusades. It was the age of the Catholic mystics, St. Bernard and the Victorines (Hugh and Richard). And this revival brought with it a revival of the influence of St. Augustine's teaching. The effect of this appears in the greater spirituality of conception shown by writers upon the Eucharist during the period, and in the recoil from the materialism of the preceding century (cf. *e.g.* Hildebert of Tours, *de Sacramento Altaris*: the presence of Christ is real, yet spiritual; Christ is in heaven, yet He is in the Sacrament; His presence is a presence of power and efficacy, yet it is in the elements). The language of St. Bernard (*de Coena Domini*) echoes the Augustinian distinction between the invisible grace and the visible sign, while Hugh of St. Victor speaks of the Eucharist as 'an image of the invisible and spiritual participation of Jesus which is accomplished inwardly in the heart by faith and love' (*de Sacr. Christ. Fid.* ii. 8. 7).

A second influence was the intellectual revival, of which Berengar and Roscellin had been pioneers. The age of the Schoolmen had begun, and the questions raised by the Eucharistic controversy were transferred to the region of metaphysics. Attempts were made to state the nature of the Eucharistic mystery in metaphysical terms. At the same time the whole idea of sacraments was revised, and in this task the influence of Augustine played an important part.

(1) The great problem of the period, which divided Nominalists and Realists, was the nature of 'universals' or 'general ideas.' This question had come to the front through Roscellin's Nominalist teaching on the Trinity. In refuting him Anselm and Abelard, starting from the standpoint of Realism, and with the help of Aristotle, discussed the relation of 'universals' to corporeal existence. In this way the terms *substantia* and *accidentia* came to be used by them. They are first definitely applied to the Eucharist in the 12th cent., though Berengar had anticipated their use when he employed the distinction between *subjectum* and *accidentia*. By *substantia* was denoted 'the impalpable universal which was held to inhere in every particular included under it,' while *accidentia* denoted the 'sensible properties which came into existence when the pure Form clothed itself in Matter' (Rashdall, *Universities of Europe in Mid. Ages*, London, 1895, i. 46 f.). From the 12th cent. onwards the application of this metaphysical language to the Eucharistic mystery dominated Western teaching. (2) A second result of Scholasticism was the revision of the whole conception of sacraments. This was mainly the work of Hugh of St. Victor († 1141) and Peter Lombard († 1164; his *Sentences* became the manual of the Schools in the Middle Ages). They start from Augustine's definition of a sacrament as 'a visible form or sign of an invisible grace,' and distinguish between the *sacramentum* and the *res sacramenti* (Peter Lombard further distinguished in the Eucharist the *res contenta et significata*, i.e. the body and blood, and the *res significata et non contenta*, i.e. the unity of the Church). They maintain that the sacraments 'contain' grace (Hugh of St. Victor) and are 'causes' of grace (Peter Lombard). Their purpose is not only to signify, but to sanctify. These statements became the accepted definitions, and were completed in the 13th cent. by Thomas Aquinas, who taught that the sacraments effect that which they signify, though they are instrumental causes, the principal cause being God.

Both the developments which we have indicated as due to Scholasticism marked in some ways a considerable gain. The metaphysical distinction of *substantia* and *accidentia*, as apprehended by the Schoolmen, made it possible to hold a more refined view of the mode of the Sacramental Presence. For the *substantia* of the Schoolmen was in the final resort real only to thought, and could be apprehended only by the faith of the believer (popular thought undoubtedly held a far different conception and clung to the cruder notions of the earlier period). Again, the distinction between the outward sign and the inward grace, when clearly defined and held, tended to minimize the dangers of materialism. From this time onwards the language of the Schoolmen shows a growing emphasis upon the spiritual character of the hidden *substantiæ* of the Sacrament, and an increasing tendency to give more reality to the accidents. Thus, in their discussions upon the Eucharist, Hugh of St. Victor and Peter Lombard reject the materialistic views which in the previous century had been associated with the fraction and reception of the consecrated species (see Hugh of St. Victor, *de Sacr. Christ. Fid.* ii. 8. 13; Peter Lombard, *Sent.* lib. iv. dist. 13). In dealing with such questions the mysticism of Hugh comes to his rescue. Thus he says (*op. cit.* ii. 8. 13):

> 'Christ exhibits His bodily presence for a season in order to stir us to seek His spiritual presence. Just as in the Incarnation He withdrew His bodily presence at the Ascension, though His spiritual presence remained, so is it in the Sacrament. The Sacrament is completed. The virtue remains. Christ passes from the mouth to the heart. That food belongs to the soul, not to the body. If, then, after this you seek the bodily presence of Christ, seek it in heaven.'

Both Hugh of St. Victor and Peter Lombard start from the language of conversion, and teach that the elements pass into the body and blood (they teach a change *per transitionem*, not by creation or addition or annihilation: the 'miraculous creation' theory of Paschasius is given up). Peter Lombard discusses the question (*Sent.* lib. iv. dist. 11) whether the change is one of form or substance or some other kind, and inclines, with some hesitation, to the idea of a change of substance. The only substance in the Sacrament is that of the body and blood. The accidents of the bread and wine continue to exist without a subject. They do not inhere in the substance of the body, which is unaffected by them. Hence there is no fraction of the body. He teaches (with other writers of the period) that the whole Christ (*totus Christus*) is received. At the same time he distinguishes between the sacramental and the spiritual eating, quoting Augustine's words, *Crede et manducasti*, and emphasizing the need of faith. The wicked receive sacramentally, but not spiritually.

Neither Hugh of St. Victor nor Peter Lombard employs the term *transubstantiatio*, which is used, however, by Hildebert of Tours early in the 12th cent., while the verb *transubstantiare* is found in Stephen of Autun in the first half of the same century. But they clearly hold the teaching expressed by it, which is that, as a result of consecration, the *substantiæ* of the bread and wine pass into the *substantiæ* of the body and blood of Christ, the sensible properties (or 'accidents') of the bread and wine being all that remains of the original elements.

The doctrine thus expressed became the formally recognized teaching of the West. It fell in with the accepted philosophy of the day, and it gave shape and consistency to the conceptions of popular thought. It secured the belief in a miraculous conversion which was demanded by popular religion, and it minimized the crude materialism of the earlier period. On the whole it seems to have met with little opposition after the middle of the century.

Rupert of Deutz († 1135) represents the standpoint of earlier Patristic teaching (Theodoret, Gelasius) in drawing a parallel between the two natures in Christ and the earthly and Divine elements in the Sacrament. Like Berengar, he denies that the working of the Divine Spirit destroys the substances which are assumed for its own uses. The human nature assumed by Christ was not changed or destroyed by the union. So, too, the bread and wine become the body and blood of Christ, not by being changed into the sensuous realities of flesh and blood, but by assuming invisibly the realities of the immortal substance, Divine and human, which is in Christ (*de Trinitate et operibus ejus: in Ex.* ii. 10). Card. Bellarmine charges Rupert with teaching the theory of impanation (see above, § 3), which was also attributed to Berengar. But in both cases the use of the familiar Patristic analogy lends no support to the view that they carried the parallel as far as their opponents suggested. In both cases, however, the motive which inspired the use of such language was opposition to the popular conception of the conversion of the elements. But such language as that of Rupert is an isolated phenomenon among the Schoolmen of the 12th cent.; it is the language of survival.

The next event of importance in the history is the Fourth Council of the Lateran convened by Pope Innocent III. in 1215. At this Council the Pope put forward a Confession of Faith directed against the errors of the Albigenses. It deals with the doctrine of God, the authority of the Old Testament, the Incarnation, and the sacraments. The statement upon the Eucharist runs as follows: 'There is one universal Church of the faithful, outside which no one at all is in a state of salvation. In this Church, Jesus Christ Himself is both Priest and Sacrifice: and His body and blood are really contained in the Sacrament of the altar under the species of bread and wine, the bread being transubstantiated into the Body, and the wine into the Blood by the power of God, so that, to effect the mystery of unity, we ourselves receive from His what He Himself received from ours.'

The reserve exhibited in the language of this decree has given rise to the question whether the Council intended to impose upon the Church the Scholastic definition of transubstantiation. For, though the term *transubstantiare* is employed, the accompanying term *accidentia* is not found in the decree, and there is no explicit statement to the effect that the *substantiæ* of the elements cease to exist, and that the *accidentia* alone remain. Hence it has been maintained that *transubstantiare* is used in a more general sense to denote a mysterious change (cf. Palmer, *Treatise on the Church of Christ*[3], ii. 166 f.; Pusey, *Real Presence*, p. 14 ff.; Batiffol, *Études*, ii. 383). The language of Pope Innocent III. in his treatise, *On the Mystery of the Mass* (iv. 7–9), has been adduced to show that he speaks without condemnation of the view that the elements of bread and wine continue in their natural substances after consecration. But such a conclusion may be doubted, and the treatise appealed to contains a most careful and explicit statement of the doctrine of transubstantiation. More to the point is Pusey's appeal (*op. cit.* p. 22 f.) to the language used in the 15th cent. by Peter d'Ailly, who, after setting forth the various views upon the subject, decides in favour of that which maintains that the substances of the elements cease to exist, 'although,' he says, 'it does not follow evidently from Scripture that it is so, nor, so far as I can see, from the determination of the Church.' Card. Franzelin (*de S. S. Euch. Sacramento et Sacrificio*, p. 202 f.) adduces against this isolated expression of opinion other language which shows that the Mediæval Church from Thomas Aquinas onwards regarded as heretical any other view than transubstantiation. So, too, the Council of Trent explains it, maintaining the change of the whole substance of the bread and wine into the body and blood of Christ, and denying the continuance of the substance of the bread and wine after consecration, though at the same time it speaks of the sacramental Presence as a 'mode of existence which can scarcely be expressed in words.' See, further, Stone, *History of Doctrine of Holy Eucharist*, i. 313.

Whatever ambiguity there is in the language of this decree, the scholastic doctrine of transubstantiation became the accepted teaching of the Western Church. It found its fullest expression in the *Summa Theologiae* of Thomas Aquinas (III. lxxiii.–lxxxii. 6). In two respects he advanced upon previous teaching. (*a*) He defined more exactly the nature of the Presence. (*b*) He dealt more fully with the question of the accidents.

(*a*) Aquinas affirmed that the whole Christ (*totus Christus*) is present, being entire in each species and every fragment of each species, the body being present by concomitance in the species of the wine, and the blood being present by concomitance in the species of the bread. (This had already been affirmed by some opponents of the Berengarians. In its origin the phrase *totus Christus* maintained the important truth that the gift of the whole Christ is received in the Sacrament, and guarded against the idea of a *portiuncula carnis*. In this sense it had been used by Berengar.) Aquinas denies that the presence of Christ is a local presence (*localiter, in loco*). He is present only *per modum substantiæ* (so also, still earlier, Odo of Cambrai). Hence Christ is not moved in the Sacrament *per se*, but only *per accidens*, in relation to the movement of that in which He is. He denies any fraction of the body, and maintains, like Peter Lombard, that the wicked receive sacramentally, but not spiritually. Lastly, the body remains till the species are corrupted. On all these points he gathers up preceding discussions, and attempts to evade the materialistic conclusions of earlier times by refining and spiritualizing the conception of the Presence.

(*b*) In treating of the accidents, Aquinas, like the later Schoolmen generally, allows them greater reality than had been conceded in the earlier period. The problem was how to reconcile the fact that the elements preserve many of the ordinary effects of a substance with a literal acceptance of the belief that they become Christ's body and blood. Aquinas maintains that the accidents exist without a subject, yet they retain the power of affecting objects and can breed life, nourish, be broken and corrupted. Yet, according to the Schoolmen, the accidents have no independent being, but simply characterize the substance in which they inhere. The solution which Aquinas offers is that they inhere in quantity (*quantitas dimensiva*), as in a subject. This was the great problem of discussion among later Schoolmen, and under the stress of it the metaphysical theory of transubstantiation tended to break down. In the following period the Schoolmen are inclined to allow still greater reality to the accidents. Duns Scotus denies that they require a subject in which to inhere, while Wyclif ridiculed the prevailing uncertainty on the question (*de Eucharistia*, c. 6).

The controversies upon the Eucharist tended to intensify the devotion of the faithful to the Sacrament, which came to be regarded as the mystery of religion *par excellence*. Around the miracle of transubstantiation there gathered a wealth of legend intended to illustrate the mystery and do honour to the Sacrament. Corresponding to this sense of the miraculous character of the Sacrament, we find a growing decrease of communion. Attention came to be concentrated upon the act of consecration. Peter Lombard had affirmed that the form of the Sacrament is to be found in the words of institution, while Aquinas maintained that the Eucharist is completed in the consecration, whereas all other sacraments are completed in the application of the matter to the sanctification of the individual (*Summa*, III. lxxx. 12, where, however, he maintains the necessity of the communion of the priest in both kinds). Worship and adoration formed the central feature of the rite. This in turn led to some important additions to the ceremonial of the Mass, the chief of them being the introduction of the ceremony of the elevation of the consecrated Sacrament.

This ceremony must be distinguished from the earlier ceremony found in the Eastern liturgies and connected with the invitation to communion addressed to the faithful, 'the holy things for them that are holy.' There is no rubric in the Eastern rites prescribing the adoration of the consecrated Sacrament, though later on in the 17th cent., under Roman influence, the Council of Jerusalem (1672) assigned to the Sacramental Presence the same worship (λατρεία) as is paid to the Trinity. In the West, some time during the 12th cent., the practice of elevating the Host and chalice immediately after consecration, and before the close of the canon, came into use. It was intended, doubtless, partly as a protest against the views of the Berengarians, and partly in order to stimulate worship of the mystery of Christ's presence. In earlier days the altar had

been veiled with curtains, but the object of this new ceremony was to make a spectacle of the central portion of the rite. Henceforth, the 'gazing upon' the Sacrament plays a prominent part in popular instructions upon the Mass (*e.g.* the *Lay Folks' Mass Book*). The canons of various English Councils in the 13th cent. allude to the custom of elevation for the purpose of adoration, and in the same century Durandus, bishop of Mende, and author of the *Rationale Divinorum Officiorum*, shows acquaintance with the ceremony in a form resembling the present Roman rubric. For the rubric in the use of Sarum, see Frere, *Use of Sarum*, Cambridge, 1898–1902, i. 81, where, however, there is no explicit mention of worshipping the consecrated Sacrament. On the history of the subject, see Drury, *Elevation in the Eucharist*, Cambridge, 1907.

This devotion connected with the Eucharistic mystery culminated in the institution of the festival of Corpus Christi in 1264 by Pope Urban IV. (confirmed and established in 1311). The occasion called forth the noble hymns of Thomas Aquinas, in which the Eucharistic devotion of the Mediæval Church found its loftiest expression.

5. The doctrine of transubstantiation in the later Middle Ages.—The doctrine of transubstantiation remained throughout the later Middle Ages the standard of faith for Western Christendom, and the attempts to challenge it met with little success, and in some cases were visited with severe censures. At the beginning of the 14th cent. John of Paris and Durandus of Pourçain declared that it was possible to believe in the Real Presence without accepting transubstantiation. William of Occam, the Nominalist Schoolman of the same century, suggested that on the grounds of reason alone, apart from the decision of the Church, the permanence of the substances of bread and wine was not improbable. But the greatest of all mediæval opponents of the doctrine was Wyclif. Inspired by the practical abuses of the day, he exposed the inconsistencies of the Scholastic teaching, repudiating the idea of accidents existing without a subject, and charging the popular devotion with idolatry. He is also reported to have taught that the unworthiness of the priest invalidates the Sacrament. Such a theory was undoubtedly held by some of his followers; but Wyclif himself, while holding that the disposition of the priest affected to some extent the value of the Mass celebrated by him, regarded the sanctity which the Sacrament has from Christ's presence as the same in all Eucharists (*de Eucharistia*, c. 4 [Wyclif Society, London, 1892]). Some of Wyclif's language looks like an assertion of a merely symbolical presence. He rejects transubstantiation, identification, impanation, and maintains that the words of institution are used in a tropical sense (*op. cit.* c. 9, p. 291). He attacks the popular idea of a sensible, visible presence of Christ (*op. cit.* c. 1, p. 20 f.), and maintains that the body of Christ is 'virtually in the Host as in a sign' (*op. cit.* c. 8, p. 271). The Sacrament is the form of bread and wine, and not Christ or part of Him (*ib.* c. 1, p. 29). But this language was directed against the materialistic conceptions of his time. Wyclif's positive teaching seems to indicate a belief in a real, though sacramental, virtual, spiritual presence. The Host is not itself the body of Christ, but the very body of Christ is sacramentally hidden in it (*op. cit.* c. 1, p. 15; cf. *Fasc. Ziz.*, London, 1858, pp. 115, 117). The bread is an 'effectual figure' of the body of Christ, and the Sacrament has a special efficacy beyond that of other signs of the OT and NT (*de Eucharistia*, c. 4, p. 84 ff.). But the influence of Wyclif's positive teaching on this subject was less than that of other parts of his teaching. In Bohemia his teaching on transubstantiation did not gain many followers, and John Hus, while protesting against practical abuses connected with the Sacrament (*e.g.* the denial of the cup to the laity), appears to have accepted the doctrine of the Church in its main features.

The great movement in the direction of spiritual religion, originated by the German mystics during the 14th and 15th centuries, did not at first affect the Eucharistic doctrine of the Church. Though some of the mystics, like Eckhardt, were accused of speculative errors in the direction of pantheism, they adopt for the most part the semi-mystical position, which is not indifferent to sacraments, but seeks to interpret them in a way which brings out their spiritual value, as emphasizing the union of the soul with Christ and its devotion to Him (so Ruysbroek and the author of the *Imitatio Christi*). In John Wessel († 1489), however, there is a tendency to break loose from current teaching. Luther regarded Wessel as a precursor of his own teaching in several respects. While emphasizing, with earlier mystics, the spiritual character of the participation of the body of Christ, Wessel held that this spiritual presence was not restricted to particular moments, but extended over the whole life of the believer, and that there is no essential difference between spiritual and sacramental participation. The latter had value only in so far as it rested upon the former. As a sacrament, the Lord's Supper could be celebrated only by a priest. As a spiritual act of participation in Christ by faith, it is possible for all without a priest (*de Sacr. Euch., passim*).

Still earlier than the Mystics, the wide-spread sects of the 12th and 13th centuries promoted a spirit of revolt from the established doctrines. Some, like the Waldenses, appealed to Scripture alone. Others, like the Albigenses, were affected by Manichæan views. From the Franciscans in the 13th cent. there proceeded a famous book, *The Eternal Gospel* (the work of a disciple of the Abbot Joachim of Floris), which preached the near advent of a purely mystical religion, in which the Church system, with its priesthood and sacraments, should find no place.

6. The Eucharistic sacrifice in the earlier Middle Ages.—In the Eastern Church there was little development in the doctrine of the Eucharistic sacrifice beyond the conceptions of the earlier Patristic period, as exhibited in Cyril of Jerusalem and Chrysostom, and in the West by Ambrose and Gregory the Great. The commemorative character of the rite, as a memorial of Christ's sacrifice, and its relation to the sacrifice of the Cross on the one hand, and to the heavenly life of Christ on the other, were clearly affirmed. Later on in the Middle Ages the Greek theologians, Theophylactus (11th cent.), Euthymius Zigabenus and Nicholas of Methone (12th cent.), and Cabasilas (14th cent.) still emphasize these points. The Eucharist is really a sacrifice. That which is offered is the body of Christ, and the moment of the sacrifice is when the bread and wine are changed into the body and blood of Christ (Cabasilas). In this sacrifice Christ offers Himself through His ministers, and unites the Church with Him in His intercession with the Father. The very presence of Christ's humanity before God in heaven constitutes an intercession. 'His very manhood entreats the Father on our behalf' (Euthymius on He 7[25]). The whole Eucharistic action on earth is, in fact, conceived of as a mystical representation in time of the 'eternal redemption' won for man by Christ. It proclaims aloud the death, resurrection, and ascension of the Lord, and it avails by intercession for the living and the dead, and by communion benefits the faithful (Cabasilas). Lastly, like the mystical commentators of the West, Cabasilas sees in the Eucharistic rite itself a drama of the life, death, and resurrection of Christ. See, further, D. Stone, *op. cit.* i. 156 ff.

The teaching of the West in the 9th and following centuries exhibits some of the main characteristics of Patristic teaching.

(1) The Eucharist is regarded as a commemoration and representation of the Passion. But this representation is found in the ceremonies of the Mass rather than in its wider purposes. The prayers of the Mass are a tableau of the life and death of Christ (Amalarius). The mixture of the chalice represents the water and the blood which flowed from the side of Christ (Paschasius). Others find this representation in those acts of the priest which are based upon what Christ did at the Supper, *e.g.* the fraction of the Host (William of Thierry, 12th cent.), or the double consecration of bread and wine (Peter Lombard, Alexander Hales). On the influence of these ideas on later conceptions of the sacrifice of the Mass, see below, § 7.

(2) Emphasis is laid upon the effects of the sacrifice. The sacrifice is, in fact, explained by, and identified with, the effects which it produces upon the worshippers (cf. Augustine). Thus Paschasius (*op. cit.* c. 9) teaches that the consecration of the gifts renews the Passion, because Christ reiterates daily that which He did upon the Cross, offering himself to the Father to deliver us from our sins. The daily offering is due to our need of daily cleansing. By communion we partake of the fruits of Christ's death. Lastly, he repeats Augustine's saying that by participation we become Christ's body and blood (*op. cit.* c. 7). The same identification of the sacrifice with its effects appears in Alger of Liège (12th cent.; see *de Sacram. Corp. et Sang. Dom.* ii. 2 f.).

(3) Paschasius and Alger of Liège connect the Eucharistic offering with the heavenly intercession of Christ. According to Paschasius, the true priest in every Eucharist is Christ Himself, now made a priest for ever. It is He who offers the gifts presented on the earthly altar, and it is from His offering of Himself that we receive them back as His body and blood. Thus he explains the prayer in the Roman Canon, *Jube hæc perferri.* The lifting up of the gifts is their consecration. The whole act of offering is sacramental, mystical, supra-local. The altar on high, at which the gifts are offered, is the body of Christ, through which and in which He offers to the Father the prayers of the faithful and the faith of believers (*op. cit.* 8, 12; cf. Alger of Liège, *op. cit.* i. 14). This view combines the earlier Western view of the Eucharistic offering, contained in the Roman Canon, with the Greek view exhibited in Chrysostom, and found also in Ambrose and Gregory the Great among the Western Fathers. The Eucharist is no repetition of the sacrifice of the Cross. It is offered, as Paschasius says, in commemoration of the Passion (*op. cit.* c. 9; this expression qualifies the words 'passionem illius reparamus' in the same chapter). But that which connects it with the sacrifice of the Cross is the heavenly priesthood of Christ, who has passed through death and is ever present with the Father, and presents to Him our prayers and intercessions. (Note the identification of the 'altar on high' with the body of Christ. This shows the practical identity of Paschasius' teaching with that of Ambrose and Gregory the Great. See above, II. 3 (2).)

7. The Eucharistic sacrifice in the Scholastic period.—The early Schoolmen paid little attention to the doctrine of the Eucharistic sacrifice, their thoughts being occupied with discussions as to the mode of the presence of Christ in the Sacrament. They content themselves mainly with denying that there is any repetition of the sacrifice of the Cross, and with the simple statement (following Augustine) that there is a representation, or commemoration, or likeness of the sacrifice of the Cross in the Mass. Thus Rupert of Deutz declares that the whole Christ is present upon the altar, 'not that He may again suffer, but that to faith, to which all past things are present, His Passion may be represented by way of a memory' (*de Trin. et op.; in Gen.* vi.). Similar language is used by Peter Lombard (*Sent.* iv. 12. 7).

The Schoolmen of the 13th cent. attempt a more analytical treatment, and endeavour to define the rationale of sacrifice. William of Auvergne, Bishop of Paris († 1249), discusses the chief elements of sacrifice. (*a*) Sacrifice is an act of homage to God with a view to the sanctification of the individual. (*b*) It is, in the form of the sacrificial meal, a means of communion with God, and a source of spiritual refreshment. (*c*) It is an act by which the worshipper is associated with the family of God (*de Legibus*, c. 24). In what follows he maintains that the first and chief sacrifice is that of ourselves, without the offering of which nothing that we present to God is pleasing or acceptable to Him. The essence of the sacrifice of Christ lay in His sinless life of virtue (*ib.* c. 28). By his one oblation on the Cross, Christ has reconciled and sanctified the world. The sacrifice of the Mass is the application by the will of Christ of the benefits which accrue from the sacrifice of the Cross. As a sacrifice the Eucharist propitiates God and averts His wrath. As a sacrament it sanctifies and supplies spiritual refreshment to those who receive it. Without the manifestation of Christ in the Mass faith and devotion would die, and the faithful would be deprived of spiritual food. In it Christ is present as priest and victim, as advocate and healer (see the treatise *de Sacramento Eucharistiæ*, cc. 2, 3, 5). Similarly Albert the Great († 1280), the master of Thomas Aquinas, while combining in an original way the conceptions of earlier writers, and emphasizing the sanctifying effects of the sacrifice of the Cross which are imparted in the Eucharist, regards the Mass as an act of homage to God, and as representing the union of the Church with the self-oblation of Christ (*de Sacram. Euch.* dist. v. 4; *Sent.* iv. 13. 23). At the same time he prepared the way for future developments by discussing the question in what sense the Mass is distinct from the offering of the Cross (*Sent.* iv. 13. 23). See Vacant, *Hist. de la conception du sacrifice de la messe dans l'église latine*, Paris, 1894, p. 39 f.

Nothing shows more clearly the undeveloped character of the doctrine of the Eucharistic sacrifice in the middle of the 13th cent. than the slight treatment which it receives in the *Summa Theologiae* of Thomas Aquinas. Like earlier Schoolmen, he emphasizes the effects of the sacrifice, and maintains that it is a 'representative image' of the Passion (III. lxxxiii. 1). Elsewhere he discusses the nature of sacrifice. It has its roots in the Laws of Nature. 'A sacrifice is something done for the honour properly due to God, to appease Him' (III. xlviii. 3). But he goes beyond previous Schoolmen in his further definition that sacrifice involves the production of a change in the object offered, 'as that animals were killed and burnt, that bread is broken and eaten and blessed' (IIª. IIªᵉ. lxxxv. 3 ad 3). The result of this definition was that the sacrifice was treated independently of the effects which it produced. This opened up a new era. In the later period the main question was, 'What is the physical act accomplished in the Victim which constitutes the essence of the sacrifice of the Mass?' Peter Lombard and Alexander Hales had found a representation of the Passion in the double consecration of bread and wine, and the latter had suggested that it represented the separation of the body and blood in the crucifixion (*Univ. Theol. Summa*, iv. 10. 3). Incidentally Aquinas takes up this idea (III. lxxiv. 1), and later on it was developed (*e.g.*, by Vasquez in the 17th

cent.) in discussions upon the sacrificial character of the Mass.

In other respects the teaching of Aquinas associated the sacrifice of the Mass more closely with the consecration, and threw into greater prominence the importance of the priest in the rite. (*a*) In justifying communion in one kind, he argues that it is sufficient for the priest to receive in both kinds, because he receives in the person of all, and because 'the perfection of the sacrifice consists not in the use of the faithful, but in the consecration of the matter' (III. lxxx. 12). This dictum, by isolating the act of the priest, encouraged the separation of the ideas of sacrifice and communion, which had already taken place in practice, and increased the tendency to view the Mass as an *opus operatum* completed in the act of consecration. (*b*) In connexion with the question, 'What is the relation of the priest's action in the Mass to that of Christ?' Aquinas maintained that the priest is the representative of Christ and acts in His person. The sacrifice of the Eucharist has the same value as that of the Cross, being offered directly by Christ Himself (III. lxxxviii. 1 ad 3). (*c*) In one passage (*Sent.* IV. xii. 2 [2 ad 4]), Aquinas asserts that the sacrifice of the Mass has an efficacy, by way of impetration, for all who have a right disposition. Thus it blots out mortal sins, in so far as it obtains for those on whose behalf it is offered, by way of impetration, the grace of contrition. Later on this teaching was used, without the qualification 'a right disposition,' to support the mechanical application of the sacrifice of the Mass, apart from Communion, as a satisfaction for all for whom the intention of the priest applied it.

8. The Eucharistic sacrifice in the later Middle Ages.—The teaching indicated above fell in with certain tendencies of popular religion, the beginnings of which may be traced in the Patristic period.

(1) The practice of offering the Eucharist with special intention, which grew rapidly after the 4th cent., and of associating with each Mass the idea of a distinct offering for sin (cf. above, II. 3 (3)) led to an exaggerated belief in the *ex opere operato* idea of the Mass. An almost magical conception of the operation of sacraments came to be current, which took no account of the spiritual condition of the recipients. Thus the benefits of the Mass were regarded as operating mechanically for the good of those on whose behalf it was offered.

(2) A second feature of the popular religion was the multiplication of Masses. This was a wide departure from primitive usage (*e.g.* the 'one altar,' 'one Eucharist' of Ignatius, and the practice of 'concelebration'). As late as the 6th cent. the Synod of Auxerre (578) forbade the saying of two Masses at the same altar on the same day (Vacant, p. 26). Convenience led to the relaxation of this rule, and the habit of offering Masses with special intention, and of going from one Mass to another, grew from the 9th cent. onwards. From the 11th cent. onwards various decrees were issued forbidding priests to say at first more than three Masses a day; later on, more than one (Vacant, p. 27). This popular practice encouraged a mechanical idea of the rite, and gave ground for the belief that each Mass was a distinct act of propitiation made for sin or to procure some specific benefit.

(3) The system which did more than anything else to externalize the idea of the Mass was the chantry system. Endowments were given to procure the saying of Masses for the souls of the founder and his family. Some of these dated from the 12th cent. in England, but the system became wide-spread in the 14th and 15th centuries. On its better side it represented a touching devotion which followed departed friends beyond the grave, and showed its interest in them by intercession and commemoration (for a defence of it, see Sir Thomas More's *Supplication of Souls*). In practice it led to a traffic in Masses, which degraded the conception of the Mass and excited the cupidity of the clergy (cf. Chaucer, *Canterbury Tales, Prologue*, 507–510).

There are two developments in the later Middle Ages which affected the doctrine of the sacrifice of the Mass.

(*a*) In connexion with the question of the relation of the priest's action in the Mass to that of Christ, the disciples of Aquinas followed their master in maintaining the direct action of Christ Himself in the Mass through the instrumentality of the priest. Duns Scotus (14th cent.), however, departs from this position in two respects. (*α*) He shows a greater anxiety to defend the unique character of the sacrifice of the Cross, and maintains that the sacrifice of the Mass has not the same value as the Passion of Christ, and that in it Christ does not offer immediately by an act of His own will, though He is offered as being contained in the sacrifice (he quotes in support He 9[25. 28]). Still the Mass has a special worth, as being a special commemoration of the oblation of Christ upon the Cross, and as beseeching God by it (*Quæst. Quodlibet.* 20. vol. xii. p. 529). (*β*) He emphasizes the fact that the Eucharist is the act of the Church, rather than of the individual priest, and that it is accepted not by reason of the will of Christ acting immediately, but by the will of the Church (*ib.*). This teaching was developed by the later Scotists (*e.g.* Hiquæus and Biel).

In this later teaching upon the Eucharist the thought of the connexion between the worship of the Church and the heavenly intercession of Christ its Head, which had formed the background of the early Christian conceptions of life and worship (cf. *e.g.* Clement of Rome, *ad Cor.* 36, 'the High priest of our offerings'; see also Origen, *de Orat.* 10), and which characterizes the teaching of the later Greek Fathers, and in the West appears in Ambrose, Gregory the Great, and the early mediæval writers, became obscured or even lost. Logically the later Scholastic teaching involved consequences which affected the value not only of the sacrifice of the Mass, but of the priesthood as well. Hence Vacant (*op. cit.* p. 49) says of it that it 'prepared the way for Protestantism' (cf. Kidd, *op. cit.* p. 103 f.).

(*b*) A second development of later mediæval teaching was the idea that, while the sacrifice of the Cross availed for original sin, that of the Mass was an offering for daily sins both deadly and venial. This opinion was mentioned and condemned in the Confession of Augsburg in 1530 (cf. the English Pr. Bk. art. xxxi.). The Roman theologians at first denied that such an opinion had been held. In reply the Reformers appealed to Aquinas. But the sermons appealed to, though ascribed to Thomas Aquinas, and also included in another form among the works of Albert the Great, undoubtedly belong to a later period. The same opinion was attributed to the Dominican Catherinus, who was present at the Council of Trent, and it apparently gained a certain currency, largely because of its association with the two famous Schoolmen mentioned above. It was denounced by Latimer; and, when brought to light in the 16th cent., it was repudiated by the Roman theologians (for the history, see Vacant, *op. cit.* p. 41, note; Kidd, p. 73 f.).

9. The place of the Eucharist in mediæval religion.—The historical development which has been traced above represents the growth of a doctrinal and practical system in which the influence of popular religion played a large part.

(1) In their attempt to formulate a scientific statement of the mode of Christ's presence in the Eucharist the Schoolmen were hampered by the existence of an established belief which had taken shape in the later Patristic and early mediæval period, and which exhibited all the features of a

crude and unreflective piety. They undoubtedly made a sincere attempt to free the doctrine from the materialistic expression which had been given to it before their time, but their influence in this respect, whatever their own conceptions may have been, only very partially succeeded in affecting the general belief. The crude materialism of popular belief continually re-asserted itself (see, *e.g.*, the statement of Archbishop Arundel in 1413, quoted by Stone, *op. cit.* i. 376 f.). Again, the absorption of the Schoolmen in the question of the mode of the Eucharistic presence only served the purpose of keeping the discussion on a lower plane, in which it was continually encumbered by the intrusion of purely physical questions, which withdrew attention from the purpose and significance of the Sacrament as a whole. We must except, however, from this criticism the treatment of the subject by such writers as William of Auvergne (see above, § 7).

(2) One effect of this excessive attention given to the question of the relation of the elements to the spiritual gift bestowed in the Sacrament was to concentrate the thought of worshippers upon the moment of consecration, when by the miracle of transubstantiation the body and blood of Christ were present upon the altar. The elevation of the Sacrament for the purposes of worship (see above, § 4) gave point and precision to this aspect of the rite. Thus the *Lay Folks' Mass Book*, which provides no devotions for communion, directs the worshipper after the consecration to do reverence to Jesus Christ's own presence and to kneel, holding up both hands, and so to behold the elevation and meditate on Christ's Passion. The manifestation of Christ in the Mass was regarded as supplying the greatest incentive to faith and devotion (see the language of William of Auvergne quoted above, § 7), and there is little doubt that in its higher forms this belief fostered a noble and beautiful piety (see, *e.g.*, the prayers in the *Lay Folks' Mass Book* and the *Ancren Riwle*). But on its lower side this 'gazing on' the Sacrament tended to divert attention from the purpose of the Sacrament as a whole, and ministered to the craving for the miraculous and to a magical conception of religion.

(3) Corresponding to this emphasis on the moment of consecration we find a decline in frequency of communion. Amalarius in the 9th cent. still counselled daily communion, but later on a monthly (Langland, *Piers Plowman*, *Pass.* xix. B. 387 f.) or even yearly communion (Chaucer, *Parson's Tale*) was regarded as sufficient. The Fourth Lateran Council (1215), by prescribing a minimum of one communion a year, had contributed unintentionally to this growing infrequency, though local Councils from time to time sought to secure a higher standard. Among lay-people frequent communion was exceptional (*e.g.*, Fisher mentions as a mark of exceptional piety that the Lady Margaret was 'houselled' well-nigh twelve times a year). Moreover, the custom had sprung up of giving communion outside the time of Mass (see Langland, *Piers Plowman*, *Pass.* xxii. 4: 'and dyhte me derly . . . and dude me to churche. To huyre holliche ye massc and be housled after'). This dislocation of the rite, by severing the idea of communion from it, marks a wide departure from earlier usage.

(4) Another mediæval departure was the withdrawal of the cup from the laity. This practice began in the 12th cent., and was justified in the 13th by Aquinas (see above, § 4), though he declares the other use permissible. Finally, though communion in both kinds continued even at Rome on Easter Day late in the 14th cent., the Council of Constance in 1415 made communion in one kind compulsory.

(5) The Schoolmen, as we have seen, devoted comparatively little attention to the sacrificial aspect of the Eucharist, though some writers of the 13th cent. have valuable discussions on the rationale of sacrifice in general (*e.g.*, William of Auvergne and Albert the Great). Here again they were hampered by the existence of a popular system of practice which had been growing up since the time of Pope Gregory the Great. This popular system had encouraged, by the frequency of Masses, an external and mechanical conception which led to the belief that each Mass had a distinct propitiatory value apart from the moral condition of the worshipper. The result was that an exaggerated importance came to be attached to the mere hearing of Mass.

(6) Lastly, the loss of the corporate aspect of the Eucharist as an expression of the unity of the faithful, which finds a place in the teaching of St. Paul and St. Augustine, was another consequence of the severance of the idea of communion from that of worship. The Schoolmen, indeed, in their treatises frequently refer to this aspect of the matter, and quote Augustine's language upon the subject, but in popular religion and practice it seems to have found little place.

On the other hand, the mediæval doctrine and practice with regard to the Eucharist rendered important services to religion by the impressive witness which they bore to particular aspects of the rite. (*a*) Worship and adoration found a striking and noble expression in the mediæval Mass, and in the prayers contained in some of the popular books of instruction. To the men of the Middle Ages the Mass was the mystery *par excellence* of the Church. Around it there gathered all the splendour which art and music could provide. The appeal that was made to eye and ear in the public worship of the Church was calculated to enthral the imagination and subdue the will. And there is little doubt that to multitudes the Mass provided a real incentive to devotion and to spiritual worship. (*b*) The mediæval Mass kept the memory of the Passion of Christ vividly before the minds of the worshippers. The popular books of devotion and the mystical commentators on the Mass alike emphasize the conception of the Mass as a sacred drama exhibiting and rehearsing again and again the story of the Lord's Passion 'until He come.' (*c*) The mystical aspect of the Eucharist as a means by which the union of the soul with Christ is effected finds clear expression in the best forms of mediæval religion, alike in the teaching of St. Bernard, Hugh of St. Victor, William of Auvergne, in the hymns of Thomas Aquinas, and the devotions of the *Imitatio Christi*.

J. H. SRAWLEY.

EUCHARIST (Reformation and post-Reformation period).—I. *GENERAL.*—The first Reformation utterance concerning the nature of the Eucharist is found in Luther's sermon of 1518, 'De digna praeparatione cordis pro suscipiendo Sacramento Eucharistiae.' In order to its worthy reception, the believer must free his mind of all hatred and dissension. No other sins are so incompatible with both the name and the *res* of this sacrament, for its name is communion, and its *res* the unity of hearts. The elements of the Eucharist are a picture of this, for the one bread is made up of many grains and the wine of many grapes.

'Nomen est communio ; Res unitas cordium. . . . Quod et figuratur in speciebus sacramenti, in quibus multa grana, amissa singulorum differentia, in unum panem. Item uvae multae, amissa sua quoque differentia, in unum vinum redactae sunt.'

It has often been remarked that, instead of union, this sacrament brought disunion into the ranks of the Reformers; in place of the 'unitas cordium' there is a bitter sacramental controversy. But, while this is true, it ought not to blind us to the underlying unity of the Protestant doctrine. The Reformed Church in all its branches was and is united in rejecting certain points of mediæval theory and practice. Chief among these are: (1) the doctrine of Transubstantiation; (2) the idea of *any* priestly miracle; (3) the Adoration of the Host; (4) the 'sacrificium propitiatorium' of the Mass; (5) the denial of the cup to the laity. If not so united on the positive side, it has been, and is, practically unanimous in making the following assertions: (1) that the Eucharist—whatever name for it may be in common use—is a sacrament instituted by Christ.

Here the Quakers dissent. They reject the idea of sacraments altogether. The Spirit of God is the only signature and pledge of our Gospel inheritance. 'The communion of the body and blood of Christ is inward and spiritual. . . . Of which things the breaking of bread by Christ and His disciples was a figure, which even they who had received the substance used in the church for a time, for the sake of the weak . . . yet, seeing they are but shadows of better things, they cease in such as have obtained the inheritance' (Barclay, *Apology*, Prop. 13).

(2) That it is the central act of Christian worship. (3) That it is a means of grace.

At this point a not inconsiderable number part company with the general Protestant doctrine. Historically, they are represented by the Socinians. To them the Lord's Supper is not directly a means of grace. In their Confessional doctrine, they were even loath to speak of sacraments. They called the Eucharist a ceremony (*præceptum Christi cæremoniale*) which it was becoming to retain as a venerable and beautiful custom. It was instituted that believers might call to mind with thankfulness the Lord's death, and for no other purpose (*Cat. Rac.* qu. 337). With them in this matter Winer (*Confessions of Christendom*, Edinburgh, 1873, p. 264) has classed the Arminians who 'regard the Lord's Supper as a mere ceremony of thanksgiving and profession.' But the Brotherhood of the Remonstrants (the representatives of Arminius), while rejecting the full Calvinistic doctrine, have held to a position similar to that of Zwingli at one period of his career, and using largely his language, *e.g.* 'signa repraesentantia rem,' give to the Supper a real though comparatively insignificant place among the means of grace.

(4) That there is a real presence of Christ in the Sacrament.

The phrase 'real presence' would fail to commend itself to many, as being connected with certain dogmas, but the real presence in some sense would not be denied.

Amid all the differences, therefore, of teaching and practice which obtain in the Reformed Churches, there is a profound and wide-spread agreement which must not be overlooked.

II. *THE MAIN CONSTRUCTIONS OF EUCHARISTIC DOCTRINE IN THE CHURCHES OF THE REFORMATION.*—The Reformation, with all its substantial unity, produced three distinct types of doctrine in regard to the Lord's Supper. These are associated with the names of Zwingli, Calvin, and Luther. The main point of divergence lies in the way in which the presence of Christ in the Supper is conceived. H. Schultz (*Zur Lehre vom heiligen Abendmahl*, Gotha, 1886) has called them 'historisch,' 'mystisch,' and 'wunderhaft' respectively. And, subject to certain modifications, this characterization may stand.

1. The doctrine of Luther.—As the differences in doctrine arose largely from different points of departure, something must be said about the mediæval doctrine. In the pre-Reformation Church the Eucharist was regarded not merely as a sacrament, but at the same time as a true sacrifice:

'In quantum in hoc sacramento repraesentatur passio Christi, qua Christus obtulit se hostiam Deo . . . habet rationem sacrificii ; in quantum vero in hoc sacramento traditur invisibilis gratia sub visibili specie, habet rationem sacramenti' (Thomas Aquinas, *Sum. Theol.*, pt. iii. quæst. 79, art. 7).

There had come to be, in fact, two distinct rites—the Mass and the Eucharist. The first time, however, that the distinction was drawn Confessionally was at the Council of Trent, where the doctrines of the 'sanctissimum sacramentum Eucharistiæ' and the 'sacrificium Missæ' are dealt with in two separate sections, the former being defined in 1551, the latter not until 1562.

Now, Luther's great concern was to conserve for the believer all the invisible grace of the Eucharist; Zwingli, on the other hand, attacked the doctrine of the Mass, and, in particular, any thought of the repetition, renewal, or continuance of the sacrifice of the Cross. Luther approached the subject from the point of view of the troubled conscience desiring grace and the assurance of grace, and was content merely to remove the 'superfluous miracles' from the Eucharist; Zwingli from the point of view of the educated layman, sick of priestly claims, and intolerant of any such thought as the manufacture of Deity.

The teaching of Luther, however, is not all of a piece. It has been asserted that there is an obvious Romeward retrogression from the evangelical simplicity of his early doctrine, from the moment he began to enter into controversy with Carlstadt. But over against this may be set the facts that in his earliest teaching he seems simply to have accepted the doctrine of Transubstantiation as he found it, and that, while he was himself conscious of development, he was conscious of it in quite a different direction. In 1545 he asserted that at first, with great humility, he left too many articles to the Pope, which he afterwards condemned as abominations (cf. I. A. Dorner, *History of Prot. Theol.*, Eng. tr., Edinburgh, 1871, i. 124). But he certainly did pass through several stages before reaching the precision of his final doctrine.

It has to be remembered that Luther came to the doctrine of the Eucharist after he had already attained a general theory of the Sacraments. His controversy over the Indulgences and the Sacrament of Penance had given him such a theory—'non sacramentum, sed fides sacramenti, justificat.' To the Scholastic 'sacramenta sunt efficacia signa gratiae,' he added 'si credis, et non amplius' (Serm. *de Pœnitentia*). With such an evangelical theory already to hand, he proceeded to deal in various sermons with the Eucharist. Characteristic is his outburst against the obscuring of the Word in the Sacrament. 'What Devil,' he asks, 'suggested that the words should be hidden from the people?' 'In the Sacrament everything lies in the words that Christ says, which we should verily set with gold and precious stones' (Serm. *Von dem neuen Testament*, Erlangen ed. xxvii. 139 f.). This whole sermon, as A. W. Dieckhoff remarks, reads like a song of victory over the rediscovered word (*Die evangel. Abendmahlslehre im Reformationszeitalter*, Göttingen, 1854, p. 210).

There is, however, no consistent theory in these early sermons—not even consistent progress towards the later doctrine. Throughout, Luther regards the Eucharist as a 'beneficium,' not as an 'officium,' but the details of the exposition vary. In 1518, bread and wine are pictures of the 'unitas cordium' (see above). In 1519, the transformation (*Wandlung*) of bread and wine into body and blood is a picture of our transformation into the spiritual body of Christ. In 1520, the body and blood are present to support the trustworthiness of the word of forgiveness, being outward signs of the death which was necessary before the testament of Christ could have effect. In 1521, the body and blood are present for the same purpose, but now they are identical with the means through which the forgiveness was won (cf. F. Graebke, *Die Konstruktion der Abendmahlslehre Luthers*, Leipzig, 1908, pp. 1–42).

There is here no consistent theory. Luther throughout is operating within Scholastic limits, and has sought to invest the old formulæ with an evangelical meaning. His great aim is to

restore the Word to its rightful place in the Sacrament and alongside the Sacrament, and to keep the Sacrament from being regarded as the vehicle of a higher grace than the Word. Indeed, in the *de Captivitate Babylonica*, he asserts that he prefers to speak of one Sacrament—the Word—and several signs ('si usu Scripturae loqui velim, non nisi unum sacramentum habeo, et tria signa sacramentalia').

From the beginning, however, of the controversy with Carlstadt, Luther's doctrine began to be more distinctive, for it had now not only, on the negative side, to be free from the positive errors and 'superfluous miracles' of Rome, but to be developed on the positive side against a theory which denied that the Sacrament was a means of grace at all, and, in particular, refused to allow any real presence of Christ in the Sacrament.

Andrew Bodenstein of Carlstadt was a professor in Wittenberg. When Luther was still in the Wartburg, and Carlstadt was a power in the town, Wittenberg became the scene of tumult and disorder. Hasty reforms were introduced, most of them good; but their hasty execution bred excitement, and the excitement was fanned into uproar and riot by the appearance of the Zwickau prophets. To Luther thereafter Carlstadt was the man responsible for this tumult, a fanatic himself and the associate of fanatics. Carlstadt's Eucharistic teaching was, like Luther's early teaching, not all of a piece. In 1521 he had put forth a small pamphlet on the Eucharist, in which he held, not that the bread was a sign of the body of Christ, but that the body of Christ was a sign of the grace of God. But by 1524, in his treatise 'Von dem wider-christlichen Missbrauch des Herrn Brode und Kelchs,' he had come to another opinion. Much was true and necessary, but there ran through it all the theory that the Lord's Supper was not a pledge and seal of the certainty of reconciliation, but only a mere remembrance with moral influence on the mind, thus setting the Supper on the same plane with any picture or sermon that recalled the death of Christ. In the next year appeared his exposition of the words 'Hoc est corpus meum.' He denied that the presence of Christ in the Supper could be proved from Scripture. When our Lord used the words 'Hoc est corpus meum,' Carlstadt, following an interpretation attributed to the Waldenses, suggested that He pointed to His own body.

Now, of much of Carlstadt's teaching Luther might have been expected to approve. But he never could see Carlstadt as a thinker differing from him in certain points of theology; he always saw him as the representative of a fundamentally different type of piety (cf. K. Jäger, *Luthers religiöses Interesse an seiner Lehre von der Realpräsenz*, Giessen, 1900), or, rather, as devoid of true evangelical religion altogether. And so, in his various answers to Carlstadt and those associated with him, though he always came back to the Sacrament, he attacked their whole conception of salvation and its appropriation. Carlstadt had no conception, he urged, of the needs of a troubled conscience, either in the Sacrament or in Christ Himself. What was needed was comfort through assurance of the forgiving grace of God. This comfort was not to be found in any mere subjective remembrance; some objective guarantee was wanted. Through the necessity of finding this in the Sacrament he never ceased to emphasize his interpretation of the words of Institution, and developed rapidly his own distinctive theory (Consubstantiation). The term 'Consubstantiation,' it should here be noted, is mostly used by non-Lutherans. Lutherans in general object to it, because it seems to express the idea of the mixing of two substances so as to form a third, but they have no objection to it when explained as the real co-existence of the two substances (*das reale Zusammensein beider Substanzen*), the earthly and the heavenly.

Luther's interpretation of 'Hoc est corpus meum' always seemed to him the only full Christian one. He claimed that it was literal; but an absolutely literal interpretation would imply rather the Roman Catholic doctrine. By the *hoc* Luther understood the bread—not, however, as bread alone, but as already forming a sacramental unity with the body of Christ, which sacramental unity exists before the words are spoken. This sacramental unity (and this is important) is not the result, therefore, of any word or act of consecration. Having laid down this sacramental unity of bread and body, he then explains the words as a synecdoche, in which the whole (bread and body) stands for a part (body). To this his fertile mind found many analogies, *e.g.* sword and sheath, soul and body, the two natures in Christ, glowing iron, etc. The most homely, 'the child in the cradle' (Erlangen ed. xxix. 267), as when a mother says, 'This (cradle and child) is my child,' led his opponents to say that Luther by *est* understood *continet*. But he never gave up the idea that his interpretation was the natural one, the most literal, and therefore the only legitimate one. In his Larger Catechism he wrote: 'Though infinite myriads of Devils and all fanatics should impudently demand how bread and wine can be the body and blood of Christ, I know that all spirits and learned men put together have not as much intelligence as Almighty God has in His little finger.'

The explanation of the sacramental unity, the co-existence of body and bread, he found in the metaphysics of Scholasticism.

His theory of the mode of presence of Christ's body goes back to certain distinctions made by William of Occam and adopted by Biel and d'Ailly (cf., further, art. UBIQUITY). It appears first in his sermon *Vom Sakrament des Leibes* (1526), and is developed in his other controversial writings against the Swiss reformers. Occam had taught: (1) the *esse repletive* (=omnipresence) of God, (2) the *unipræsentia* of the body of Christ in Heaven, (3) the *esse diffinitive* (=*multivolipræsentia*) of the body of Christ in the Eucharist. The difficulty here lies in the *esse diffinitive*. It is explained by Luther as that which is in space but does not fill any portion of it, and is not circumscribed by it. To Christ's resurrection-body belonged this kind of presence. 'Just as the sealed stone and the shut door remained unaltered, and yet His body was at the place where were mere stone and wood, in the same way is He in the Sacrament where the bread and wine are, and yet the bread and wine remain untransformed and unaltered' (Erl. ed. xxx. 208 f.). The sacramental presence of Christ is not, therefore, conceived in any local or circumscribed fashion. His body is present not after the mode of the *esse circumscriptive*, but after that of the *esse diffinitive*. When the bread is broken, therefore, Luther holds that Christ's body is not broken, but remains complete in every part, even in the smallest particle.

Luther's teaching might have rested finally on the *esse diffinitive* of Occam, had it not been that he was continually faced with the question, 'Christ is seated at the right hand of God, how then can His body be in the Sacrament?' This he met by denying that the right hand of God is local. It is not a particular place 'like a golden chair, or the like.' God's right hand is everywhere. So he turns round on his opponents with this syllogism: 'Christ's body is at the right hand of God—that is acknowledged. But the right hand of God is everywhere—so assuredly it is in the bread' (Weimar ed. xxiii. 143; cf. Hunzinger, *PRE*[3] xx. 187). The *esse diffinitive* has thus been exalted to the *esse repletive*, the *multivolipræsentia* to omnipresence.

To the same conclusion Luther came also from the side of Christology, in which he taught that the conjunction of the two natures in Christ implies a *communicatio idiomatum*—a transference of the attributes of the one to the other—and that, therefore, the body of Christ possessed the Divine attribute of omnipresence.

But all this proved too much, as his opponents were not slow in pointing out. If the body of Christ was everywhere, then it was received in every common meal, and not only in the Eucharist. This difficulty was met by a specific sacramental presence in accordance with the promise. It is one thing for Christ to be present, and another thing for Him to be present for us. 'He is there for thee, when He binds Himself by His word, and says, "Here art thou to find me"' (*ib.* xxiii. 151). The solution is imperfect, as, indeed, must any attempt be to connect a theory of the ubiquity of Christ's body with a real presence in the Sacrament. For either (1) there is the same presence everywhere as in the Sacrament, or (2) a specific sacramental presence must be added to the other, and is so far distinct from the other.

Luther himself did not consider his theorizing to be binding or final. He had outlined an intelligible way in which the almighty power of God could secure the presence of the body and blood. What he did consider as binding and final was the fact of the real presence in, with, and under the bread and wine.

The characteristic Lutheran *in, cum, et sub pane* is not Luther's own. It first appears in the strife between Hesshus and Klebitz in Heidelberg after his death. Luther himself spoke of *in et sub pane*.

In whatever way it might be explained, Luther's strong religious interest made him insist on the

real presence being conserved. Sometimes his vehemence led him into language which went beyond his theory; *e.g.*, in his instructions to Melanchthon in 1534 he uses language which might seem to imply that the body of Christ in the Eucharist is eaten after the manner of ordinary food:

'In brief this is our doctrine, that the body of Christ is truly eaten in and with the bread, so that what the bread does and suffers, the body of Christ does and suffers: it is distributed, eaten, and masticated with the teeth (*mit den Zähnen zerbissen*), propter unionem sacramentalem.'

But the qualifying phrase and the heat of controversy ought to keep us from pressing these words too far. And the Formula of Concord (Epitome, Art. 7, neg. 21) expressly rules out any such inference:

'We also utterly reject and condemn the Capernaitic manducation of the body of Christ, . . . as if, forsooth, we taught that the body of Christ is torn by the teeth' (*mit Zähnen zerrissen*).

Luther regarded the *manducatio impiorum* as a decisive test of any supposed doctrine of the real presence. It was self-evident to him that, if the body of Christ were really present, in the sense that he understood the word, even the unbelieving who partook of the bread participated also in the body of Christ. This *manducatio impiorum* was so much a part of his doctrine that he used it from the beginning as an argument to overwhelm Carlstadt. The evangelical nature of the Sacrament he preserved by asserting that, though the unbelieving participated in the body and blood, they had no part in the grace of which body and blood were vehicles.

The main thoughts in Luther's reconstruction are these: (1) that the Eucharist was instituted for the strengthening and comfort of believers through assurance of the forgiving grace of God and communion with the Risen Lord; (2) that the objective guarantee of this assurance and the means of this communion is the real presence of the body and blood of Christ, in (with) and under the elements of bread and wine; (3) that the real presence itself is assured by the ubiquity of Christ's body, and made available by the words of institution; (4) that this real presence entails that the unbelieving participate in the body and blood of Christ, though they have no part in the grace of the Sacrament.

2. The doctrine of Zwingli.—As already mentioned, the difference between Zwingli and Luther largely arose from the different points of departure—the Mass and the Eucharist respectively. To this must be added differences in training and religious experience. Luther's education was monastic, his theological studies originally and essentially Scholastic. Zwingli's education was Humanist, his theological studies originally Patristic. Luther's first Eucharistic controversy was with over-zealous Reformers, Zwingli's with upholders of the Mass. Luther's general idea of a sacrament received its evangelical shape in conflict with Rome over Indulgences and the sacrament of Penance, Zwingli's in controversy with the Anabaptists over Baptism. Against magical ideas of sacramental grace, Luther was led, therefore, to emphasize personal understanding and belief; against individualistic notions, Zwingli brought into prominence the social side of Christianity, the relation of the sacraments to the community.

In Zwingli's *Von Touf und Widertouf* (1525), Baptism is a sign of allegiance, a 'tessera' of the Christian soldier. This expression he probably obtained from Melanchthon, who in his *Loci* (1521) had already spoken of the sacraments as 'tesserae militares.' The Eucharist was the symbol of the communion of all believers in Christ. 'Ergo hunc panem edimus, ut unus panis tandem fiamus' (Letter to Alber). It proclaimed the membership of the believer in the covenant of grace, and pledged him to a life in accordance with his profession. So, while Luther almost always thought of the individual in this connexion, Zwingli gave prominence to the significance of the Supper for the Church community, and this especially when in conflict with Luther.

Zwingli's teaching is divided into three distinct periods. In the earliest and latest periods the same teaching is to be found; in the middle period, during the controversy with Luther, one essential point of his teaching at other times is obscured and even denied. In this article the former is taken to be the true Zwinglian doctrine.

Zwingli set out against the sacrificial aspect of mediæval doctrine. Over against the Mass, with its thought of the repetition of the Sacrifice of the Cross, he set the Supper as a memorial or remembrance of the Sacrifice offered once for all. The thought of remembrance, therefore, is not opposed to any thought of present participation, but opposed simply to any thought of repetition. The bread and wine were signs of the broken body and the shed blood. The primary reference of the Eucharist, therefore, was to the death of Christ, and not to any union with the glorified Christ.

From the beginning of his teaching, Zwingli felt that the words 'Hoc est corpus meum' must be understood in some figurative manner. But in 1522 he came to know of Gerhard Hoen's (Honius) 'de Eucharistia,' where for *est* is understood *significat*. This interpretation he adopted, and supported by many passages of Scripture that seemed to him similar, *e.g.* Gn 41[26] 'The seven good kine are seven years'; 1 Co 10[4] 'That rock was Christ.' But in 1525, after his last disputation with his opponents in Zürich, when he had sought in vain for an absolutely conclusive parallel, he dreamt of one—Ex 12[11] 'Hoc est transitus Domini'—where *est* manifestly stood for *symbolum est* or *figura est*. This discovery further defined his interpretation, and more firmly convinced him of its truth.

Even more essential to the Zwinglian teaching is the emphasis laid on Jn 6. This chapter to him is decisive against all ideas of receiving the body of Christ by the mouth. Faith is the organ of appropriation. And it was by his Johannine conception of faith that Zwingli conceived the presence of Christ in the Eucharist. Faith, to Zwingli, included also the mystical union with Christ—the life of Christ in us, and ours in Him. This life of faith has its fluctuations (*fides labascit*), and so God must continually anew increase our faith. To that end Christ gives Himself for food, and so the prayer of the believer in each succeeding Eucharist is that God may renew this union with Christ. The Eucharist is, therefore, a definite renewal of the one continuous central union with Christ (cf. Ebrard, *passim*). From one side, the Eucharist is a memorial of the death of Jesus, and bread and wine are signs of the broken body and shed blood; from another it is an act of renewed union with Christ, and bread and wine are seals of this union.

So had Zwingli's doctrine developed itself before the controversy with Luther; and, though in that controversy he emphasized only the former side—the relation to the death of Christ—yet in his utterances outside the sphere of the controversy, during this time, his full teaching found expression (cf. his first sermon before the Disputation at Berne, 1528). But in the controversy itself, just as Luther inclined to extremes, not only of language but of doctrine, and used words that seemed to imply a Capernaitic eating, so Zwingli at times would have nothing to do with any presence of Christ save as the object of our subjective contemplation. In so far Schultz is justified in speaking of Zwingli's mode of presence as 'historisch.' 'Nunquam enim aliud obtinebis, quam quod Christi corpus quum in coena quum in mentibus piorum non aliter sit, quam sola contemplatione' (Covering letter sent by Zwingli to Luther with the *Amica Exegesis*).

The main elements of Zwingli's completed doctrine are these, and the obvious Scriptural derivation of all the points should be noted—*e.g.* (2) and (3) are founded on the words of institution, (4) on Jn 6, (5) on 1 Co 10—(1) the Eucharist is not a repetition of the Sacrifice of Christ, but a commemoration of that Sacrifice; (2) the bread and wine are signs or symbols of the broken body and shed blood of Christ; (3) the reference of the Eucharist is, therefore, rather to Christ crucified than to Christ glorified; (4) in the Eucharist, Christ is truly our food, and through Him our spiritual life is nourished, but He is appropriated by faith alone; (5) the Eucharist, as a true com-

munion of the body of Christ, is specially significant for the life of the Church community, being the sign and pledge of united allegiance to Christ and membership in Him.

3. **The doctrine of Calvin.**—Calvin's teaching on the Eucharist is much easier to define—partly because he appeared on the scene later, when the problems had already been stated and discussed, and partly because his teaching underwent scarcely any change from the beginning to the end. The later Lutheran controversialists regarded Calvin as a cunning Zwinglian intent on making converts to the Zwinglian teaching by the artful use of Lutheran phrases, while many of the Swiss at first regarded him as a pure Lutheran, whose open and declared purpose it was to undermine the teaching of Zwingli. He stands in the middle, not because, like Bucer, he was for ever seeking a *via media*,—a form of words to which both parties could give adherence,—but by reason of his deeper insight into the essentials of sacramental teaching. He stands in the middle, not in virtue of any mere deft manipulation of theological terms, but because his mind and heart demanded an interpretation of the Supper purified from mediæval accretions, while conserving every real religious interest. He had, like Zwingli, a distrust of all the refinements and subtleties of Scholasticism; therefore he could not accept Luther's doctrine of ubiquity. He had, like Luther, a full and rich religious interest in the real presence of Christ; therefore he could not accept the elements as mere signs. By his contemporary admirers his teaching was rightly regarded both as a spiritualizing of Luther's and as a deepening of Zwingli's. His teaching was tolerated by Luther as no other divergent teaching had ever been; it was accepted by Zwingli's successors (cf. *Consensus Tigurinus*). At one time it seemed as if it might have united the divided ranks of the Reformers.

Even in the first edition of the *Institutes*, bread and wine are to Calvin not mere signs, but symbols; and not merely symbols of the death of Christ, as in Zwingli, but also, and indeed pre-eminently, symbols of our living union with Christ; the action of the Holy Supper is an act of real and true reception of Christ (cf. Ebrard, ii. 417). So Calvin speaks habitually not of *signa repræsentantia*, but of *signa exhibitiva*, and of *instrumenta*.

In this first edition there is found already fully developed Calvin's characteristic teaching as to the mode of presence of Christ. Zwingli and Luther had fought over the sitting at the right hand of God. Zwingli had held that the body of Christ, being thus ascended and localized, is not present in the elements; Luther had taught that the right hand of God is everywhere, and that therefore Christ's body is in the elements. Both were sure that any circumscription of the body precluded the real presence otherwise than to faith. But Calvin conceived the *sessio ad dexteram* as participation in the omnipotence and majesty of God. What followed? 'Christus virtutem suam, ubicunque placuerit, in coelo et in terra exserat' (*Inst.*, 1st ed. p. 246, ed. Tholuck, Edinburgh, 1874, IV. xvii. 18). From the glorified Christ there streams a power over and above the ordinary influence of the Holy Spirit, of which, in the Supper, believers are recipients. The body of Christ is not now present on earth anywhere as substance, *i.e.* as material substance, but it is present as power, as *virtus*; if not *naturaliter*, then *vere et efficaciter*. In the Eucharist, Christ is present with *omnia beneficia*. And this, Calvin adds, is the kind of presence that the nature of a sacrament demands. On this account the words of institution do not speak of the body of Christ apart from His benefits, or of the benefits apart from the body and blood whereby they are procured. 'In affirming of his body that it was broken, and of his blood that it was shed for us, he shows that both were not so much his own as ours, because he took and laid down both, not for his own advantage, but for our salvation' (*Inst.* IV. xvii. 8). Calvin, therefore, does not hesitate to give to the elements the name of Christ's body and blood because they are, as it were, instruments whereby Christ distributes them to us. 'Corporis veri et sanguinis nomen eis attributum, quod sit velut instrumenta quibus Dominus Jesus Christus nobis ea distribuit' ('de Coena Domini,' *Opuscula*, Geneva, 1552, p. 133).

The bread does not bring Christ to us; we are not to look to the bread and build ourselves upon it, as if this 'dead creature' had an immanent power to bring Christ to us; but Christ Himself through His spirit gives Himself to us, and the bread is a pledge and seal by which the assurance of this free gift is made victorious over all the fluctuations of our subjective faith. The mode of presence may, therefore, be named mystical, but it is more accurately spoken of as dynamical.

The main distinctive thoughts of Calvin are these: (1) that the bread and wine are signs of the body and blood of Christ, but exhibiting signs and instrumental means of His presence; (2) that, though the body of Christ is in Heaven, there is a real presence of Christ in the Eucharist; (3) that, because Christ is at the right hand of God, He can be present dynamically and efficaciously; (4) that the Eucharist is a real means of grace, because He is present in power to strengthen our real living union with Him.

In regard to doctrine, Calvin stands between Zwingli and Luther; but not so in regard to mode of administration. There is nothing to justify the wide-spread conception that, while Luther accepted all the old forms except such as were inseparably bound up with obnoxious dogmas, Zwingli removed all the ancient customs and, having made a clean slate, constructed thereupon a new form which was meagre and sterile. The truth is that, in respect of the alteration in the celebration of the Eucharist, Zwingli throughout stands on one side with Luther, as against Calvin. Calvin, and more completely à Lasco, went behind mediæval practices to primitive forms. Like Luther, Zwingli removed only the objectionable. He took over the old liturgy, doing away with some parts and altering others (cf. Ebrard, ii. 60 ff., for a description of the Zürich liturgy).

III. *HISTORY OF THE CONTROVERSY OVER THE EUCHARIST AMONG THE REFORMERS.*—The first controversies in Reformed circles concerning the Eucharist were Luther's controversy with Carlstadt, and Zwingli's with the upholders of the Mass. But we begin at the point where the main bodies of Reformed teaching came into conflict with each other. Zwingli's teaching, as above mentioned, arose independently of Luther's and from another point of view. That teaching might have been tolerable to Luther but for three things. (1) He always associated Zwingli with Carlstadt. As early as 1524 he wrote to Amsdorf: 'Carlstadt's poison is spreading in Switzerland.' (2) At first he knew Zwingli's teaching only by inaccurate report. (3) Zwingli represented a different political ideal. He breathed the free democratic air of Switzerland, which to Luther, with his experience of the Peasants' War, was anathema.

Passing over Zwingli's letter to Alber—which, however, is noteworthy as containing his most radical views—the real controversy began with Bugenhagen's attack on Zwingli, 'Contra novum errorem de Sacramento,' etc., which is mostly an echo of Luther against Carlstadt, and seems to know no more of Zwingli's teaching than that by *est* he understood *significat*. Zwingli in his answer meets his opponent on his own ground, and defends his interpretation.

'Which explanation of the words is the more violent—yours, by which you say, "Bread is bread, but in the bread is eaten the body of Christ"; or ours, when we say that the words are figurative, and then explain the figure "Hoc est, nempe symbolum, figura, vel ἀντίτυπον est corporis mei, quod pro vobis traditur"?' (*Respons. ad Bugenhagenii Epistolam*).

Almost simultaneously with the *Responsio* appeared a contribution from Œcolampadius, 'De genuina verborum Domini, etc., expositione.' This work, unlike Zwingli, started from the words of institution, and, also unlike him, set forth no complete theory, and no firm connexion with the death of Christ. To outsiders it therefore conveyed the impression that the whole Swiss teaching was the meagre product of a particular exegesis. This exposition, being dispatched to the Swabian preachers,

produced an answer, the Swabian *Syngramma*—the work of Brenz. Here the terminology was Lutheran, the thought a partial anticipation of Calvin. It taught a dynamical presence: the body is in the bread, just as the power of healing was in the Brazen Serpent, through the word ('Jam, ut serpentis verbum sanationem ad serpentem attulit, cur non ita cœnae verbum corpus ad panem ferret?'). Œcolampadius answered in his *Antisyngramma*, taking the *Syngramma* sentence by sentence, replying at length to criticisms of his exegesis, and asserting that the analogy of the Brazen Serpent proved no more than a presence in the Sacrament similar to that in the Word. In the meantime, Pirkheimer of Nuremberg had also replied to the *expositio*. This controversy is for two reasons worthy of mention. It was here that the Lutheran ubiquity theory first made its appearance; and it was from Pirkheimer that Luther got his knowledge concerning the doctrines and personalities of the Swiss Reformers; and Pirkheimer's opinion had been coloured by Erasmus' later view of the Swiss Reformers as fanatics and revolutionaries.

And now, Bucer and the other Strassburg Reformers, who had sought in vain to mediate between Luther and Carlstadt, tried to bring about an understanding between Luther and Zwingli. Their envoy, Chaselius, brought back the answer from Luther that no understanding was possible, 'for either we or they must be in the wrong, one or other of us must be the servant of Satan.' And in his preface to the *Syngramma*, Luther now openly joined in the conflict. The fanatics were wrong, he said, because they were so divided among themselves. To this Œcolampadius answered directly; Zwingli contented himself with his 'Clear Instruction concerning the Lord's Supper'—the first of his sacramental writings in German—in which he developed his views in opposition to Luther, but without naming him. It was written to justify his position to the people. A little later he published his *Amica Exegesis*, to justify his position to the learned. Sent to Luther, it crossed his sermon 'On the Body and Blood of Christ against the Fanatics,' which was answered by Zwingli, immediately on its reception, in his *Fründlich Verglimpfung*. In this he says that 'Martin Luther stands in his poor judgment as high as any individual can, but yet God is higher.' Every year the controversy grew more acute, with an excess of bitterness on the side of Luther. In 1527, Luther issued his 'That the Words of Christ, "This is my body," still stand firm.' Zwingli replied in his 'That the Words of Christ, "This is my body," would eternally keep their ancient and sole meaning; and Martin Luther with his last Book has not made good his own and the Pope's Interpretation,' upon which Luther rejoined with his larger *Bekenntniss vom Abendmahl* (1528).

What were the main points at issue in this controversy? The interpretation of the words of institution stands always in the foreground, but only a minor part of the real difference appeared there. In part it became a Christological controversy—Zwingli accusing Luther, with his *communicatio idiomatum*, of Docetism; Luther charging Zwingli with a Nestorian *alloiosis*. In regard to the Eucharist itself, the whole matter hinged on the real presence. By Zwingli it was expressly denied: (1) that the body of Christ corporeally eaten does or can confirm faith; (2) that the body of Christ corporeally or naturally eaten can or does forgive sin; (3) that the body of Christ is corporeally present in the Eucharist so soon as the words 'This is my body' are spoken over the elements (which, as we saw, Luther never taught); (4) that the body of Christ can be corporeally present in the elements, for He is seated at the right hand of God. By Luther it was asserted: (1) that in the Eucharist Christ is not present only to faith; (2) that whoever accepts the miracle of the Incarnation has no ground for doubting the presence of Christ in and with the elements; (3) that Christ is not shut up in Heaven, *quasi carcere* (which is hardly what Zwingli taught); (4) that it is necessary for Christ's body and blood to be in the Eucharist to assure the believer of the forgiveness of sins.

As the controversy grew more acute, the combatants came more and more to misunderstand each other. And as, all the time, the forces of reaction were gathering strength, Philip of Hesse resolved to bring the two sides together; and, after great difficulty, with the useful help of the usual middleman, Bucer of Strassburg, a conference was arranged for Marburg, and took place in the castle there in October 1529. After private conferences between Luther and Œcolampadius, and Zwingli and Melanchthon, came the public conference. Luther's first action, as eye-witnesses on both sides assert, was to write with chalk upon the table 'Hoc est corpus meum' as a sign that he would not waver. The arguments employed in the controversy were used over again, but with none of the old bitterness. To Luther's interpretation, Zwingli opposed Jn 6 as discrediting it, and the familiar ground of the *sessio ad dexteram* and the 'ubiquity' was gone over again. Only on two occasions did there seem likely to be an open quarrel. But no agreement as to the mode of presence was reached.

The Marburg Conference, says Kolde (*PRE*[3] xii. 255), served more to the true understanding of the differences than to bridging them over. But it certainly was not fruitless. There was a mutual undertaking to cease from controversial writings. The two parties came to an understanding on every point save one—an agreement recorded in the fourteen Articles. In regard to the Eucharist, they came to see that one side had been misinterpreting the other—the Zwinglians in attributing to their opponents a Capernaitic eating, and the Lutherans in regarding their opponents as holding to a mere memorial. After acknowledging in the Supper a spiritual enjoyment of the body and blood of Christ, the document closes with the noteworthy statement: 'But, although we have not at this time come to an agreement as to whether the true body and blood of Christ are corporeally in the bread and wine, still each party ought to manifest Christian love towards the others, as far as the conscience of each will allow; and both parties ought diligently to beseech Almighty God to affirm to us the right understanding by His Holy Spirit.'

Within a few months of the Marburg Articles came the Augsburg Confession. Under what influences the tenth Article was drawn up is a matter of debate. The 'under the form of wine and bread' of the German version seems designed to conciliate the Roman Catholics, though it may be a mere protest against communion in one kind; and certainly the rest of the Article in German and the whole in Latin seems a drawing nearer to Zwingli: 'De Cœna Domini docent, quod corpus et sanguis Christi vere adsint, et distribuantur vescentibus in Cœna Domini; et improbant secus docentes' (Schaff, *Creeds*, New York, 1877, iii. 13). This article, drawn up by Melanchthon, had an important history. Under the influence of Calvin, as some maintain, or by reason of an independent approximation to Calvin's teaching, Melanchthon put forth in 1540 the *Variata*, the altered edition of the Augsburg Confession. At the time no man questioned his right to do this, as he had drawn up the original. Now, in the *Variata* this article reads: 'De cœna Domini docent, quod cum pane et vino vere exhibeantur corpus et sanguis Christi vescentibus in Cœna Domini.' The *Variata*, therefore, leaves out the disapproval of opponents and the 'vere et substantialiter adesse.' It uses Calvin's term 'exhibition.' But it is not fully Calvinistic, for Calvin for *vescentibus* would have read *credentibus*. Witnesses even from the Lutheran side, *e.g.* Chemnitz, trace these alterations to the influence of Luther himself. And, at any rate, though Luther held to his own construction and contended strongly in private letters in its interest, he tolerated the Calvinistic construction as he had not tolerated the Zwinglian, and never entered into the lists of

public controversy against it. In 1544, in his last Eucharistic writing, where he attacks erroneous teaching, Zwingli, Œcolampadius, Schwenckfeld, and Carlstadt are all named, but not Calvin; and no passage has been cited which can reasonably be construed into an attack on Calvin's doctrine. The original text and the *Variata*, supposed erroneously to have been disapproved by Luther, came to be a bone of contention between the Philippists and the Gnesio-Lutherans.

After the Marburg Conference, there followed a time of quiet. The place of controversial pamphlets was taken by letters of inquiry, and a possible unifying formula as to the real presence was sought. In Württemberg, *e.g.*, the Zwinglian Blaurer and the Lutheran Schnepff united in this: 'that in the bread and wine Christ's body and blood are present *substantialiter et essentialiter, non autem quantitative aut qualitative vel localiter*.' Bucer, active as ever in mediation, thought he had discovered one in 'Christ's body is bodily present to the soul.' But Luther would have none of it. It used his phraseology to destroy his meaning. After a conference at Cassel between Bucer and Melanchthon, and one at Wittenberg between a larger representation on both sides, came the Wittenberg Concord. Bucer here admitted Luther's phrases, even the statement which was the crucial one, that the body and blood are truly offered to the unworthy, who receive it to their condemnation. Of course, Bucer was able to accept it only by attaching a different meaning to 'unworthy,' by whom he understood, not unbelievers, as Luther, but careless believers. So it was only a seeming unity. And, strive as he would, Bucer could not get the Swiss to accept this. They suspected his explanation of 'indigni,' and on writing to Luther found they had good grounds for doing so.

With the coming of the more positive doctrine of Calvin, hopes of unity waxed brighter. Melanchthon drew nearer to Calvin, until the differences between their teaching became infinitesimal. In 1531 he departed from the ubiquity theory; a little later he gave up the local presence of Christ in the bread; by 1535 he sympathized with the figurative interpretation of the words of institution; and before the end he had given up the 'manducatio impiorum' (cf. Loofs, *PRE*³ i. 66). In his controversy with Westphal, Calvin could write: 'Centies confirmo, non magis a me Philippum quam a propriis visceribus in hac causa posse divelli.' But the union did not come. Zürich, under Bullinger, came over to Calvin; and the *Consensus Tigurinus*, in which they agreed, is the most elaborate Confessional document on the Eucharist. The distinctively Lutheran doctrine was confined to Germany, and even there its limits became narrower.

Within the Lutheran Church there ensued a long and bitter strife, between the Philippists (after Melanchthon's death, Crypto-Calvinists) and the Gnesio-Lutherans. The latter held to the full Lutheran doctrine, but, by asserting it over against Calvin in place of against Zwingli, they were led further than Luther. Some modifications appeared, *e.g.* Chemnitz deserted Luther's later *esse repletive* for the earlier *esse diffinitive*; and in place of *ubiquitas* asserted a species of *multivolipræsentia*: 'Christi carnem reali et essentiali praesentiae modo praesentem esse, non quidem ubique, sed ubicunque et quandocunque vult Christus' (*Explicatio de duabus naturis*). Brenz, now far removed from the *Syngramma*, went beyond Luther. He spoke of a *majestas* of the humanity, under which all Divine properties are embraced, so that from the very moment of its origin the humanity possessed the whole majesty and glory of the Father. In 1577 the strict Lutherans united in the Formula of Concord, which gave prominence to the theory of ubiquity as the basis of the doctrine of the Supper, leaving it undefined whether the ubiquity was absolute or relative (cf. Artt. 7 and 8). The renewed appearance of Crypto-Calvinism was finally suppressed by the Saxon Visitation Articles of 1592. With them the controversy within the Lutheran Church came practically to an end. (For the details of these later Lutheran controversies, see art. UBIQUITY.)

IV. *THE EUCHARIST IN THE REFORMED CHURCHES OF GREAT BRITAIN.*—I. Scotland.—The Presbyterian Church of Scotland, like every other Church of the Reformation except the Lutheran, has possessed from the outset a Calvinistic doctrine of the Supper. The Scots Confession of 1560 is a Calvinistic Confession. But in regard to the Supper it uses strong and picturesque language such as would have delighted the heart of Luther. We can imagine Luther better pleased with it than with any other Confession of the Reformation not purely Lutheran.

'In the Supper richtlie used, Christ Jesus is so joined with us, that hee becummis very nurishment and fude of our saules. . . . So that we confesse and undoubtedlie beleeve, that the faithful, in the richt use of the Lords Table, do so eat the bodie and drinke the blude of the Lord Jesus, that he remaines in them, and they in him: Zea, they are so maid flesh of his flesh, and bone of his bones; that as the eternall God-head hes given to the flesh of Christ Jesus . . . life and immortalitie; so dois Christ Jesus his flesh and blude eattin and drunkin be us, give unto us the same prerogatives' (Art. 21).

The change to the Westminster Confession meant in this regard a change simply to a more precise and definite, if less picturesque, statement of the same Calvinistic doctrine.

The Westminster standards involved also the disuse of Knox's Liturgy. This contained not an imposed but a discretionary ritual, *i.e.* it was not supplied to the people for their responses, but supplied to the minister alone, for his guidance as to the matter and manner of worship, leaving freedom of variation. It was widely used, however. In 1620, Scrymgeour, summoned before the Court of High Commission for disregarding the Articles of Perth, pleaded that he conformed to the one valid form (Knox's Liturgy), 'according to the which, likas I have always done, so now I minister that sacrament' (Calderwood, *History*, Wodrow Soc. ed., Edinburgh, 1843–49, vii. 422). In the Westminster Directory this discretionary ritual was replaced by a rubrical provision, consisting of directions without detailed forms.

There has never been a sacramental controversy within the Church of Scotland or any of its branches.

The attempt of Charles I. to impose an alien liturgy, the 'Lifters' among the Seceders who held to the necessity of the manual act of 'taking bread,' and the conflict over the recent overflow of Ritualism from England are the nearest approaches to such a controversy. It may be mentioned that Knox in his Liturgy suggested monthly observance; that this was early departed from, for in 1711 the General Assembly recommended to the Presbyteries a more frequent observance of the Lord's Supper: 'that it be duly observed in their bounds through the several months of the year'; that a little later the practice came to be an annual celebration, frequented, however, also by strangers, so that, though there was only an annual celebration in the individual Church, the communicants observed it more frequently, at different places; that now it is, in general, celebrated twice, thrice, or four times in the year.

2. England.—The *Ten Articles* of 1536 were obviously an attempt to construct a doctrine which would be tolerable alike to the mediæval mind and to those who had imbibed the new freedom of Humanism and of Lutheran teaching. The *Six Articles* of 1539 restored Transubstantiation, the Mass, communion in one kind only, under severe penalties. With the reign of Edward VI. the anomalies begin. The Church was endowed with a Zwinglian Creed—the *Forty-two Articles* (1553)—and a *Book of Common Prayer* which in both its versions (1549 and 1552) was alternately Zwinglian and mediæval. With the reign of Elizabeth these anomalies were increased—mainly owing to her precarious position politically—in the *Thirty-nine Articles* (1561) and the revised *Book of Common Prayer* (1559). The 29th Article, expunged by the Queen and restored in 1571, effectually barred Lutheranism.

The doctrine of the *Thirty-nine Articles* has been called Zwinglian, and the close connexion of the English Reformers with Zürich and Bullinger (*Zürich Letters* [Parker Society, Camb. 1842]) has been thought to prove it. But, in regard to the Eucharist, it is to be noted that they arose after the *Consensus Tigurinus*, in which Bullinger had accepted Calvin's doctrine; and in reality they are purely Calvinistic. Expressions in the *Short Catechism* of 1553 point to a Zwinglian origin. 'The Supper is a certain thankful remembrance of the death of Christ, forasmuch as the bread representeth his body.' 'Faith is the mouth of the soul, whereby we receive this heavenly meat' (*Liturgies of King Edward VI.* [Parker Society, Camb. 1844], p. 517). In the 28th Art. it is laid down that 'the Body of Christ is given, taken, and eaten in the Supper, only after an heavenly and spiritual manner. And the mean, whereby the Body of Christ is received and eaten in the Supper, is faith'—which might be either Zwinglian or Calvinistic. In the *Book of Common Prayer* the order of administration has more mediæval elements, but is, after all, not so far removed from the Zürich liturgy (cf. Ebrard, ii. 60 ff.). In distributing the bread the Prayer Book of 1549 had directed to be said: 'The Body of our Lord Jesus Christ, which was given for thee, preserve thy body and soul unto everlasting life'; that of 1552: 'Take and eat this, in remembrance that Christ died for thee, and feed on Him in thy heart by faith, with thanksgiving.' 'The difference represented by the change in these words is between what *might* be the doctrine of transubstantiation and a sacramental theory distinctly lower than that of Luther or Calvin, and which *might* be pure Zwinglianism' (Lindsay, *History of the Reformation*, Edinburgh, 1906–07, ii. 363). That of 1559 simply added the one to the other.

Of some importance is the rubric added in 1552 in response to the demand that the Supper be received seated as at a table,

which declares that by kneeling no adoration is intended to the 'Sacramental Bread and Wine there bodily received, or unto any corporal (in 1552, 'real and essential') presence of Christ's natural flesh and blood,' and adds that 'the natural Body and Blood of our Saviour Christ are in Heaven, and not here; it being against the truth of Christ's natural body to be at one time in more places than one.' This rubric was omitted in 1559, as being offensive to Lutherans, and restored in the form quoted above, in the last revision in 1662. This last revision, says Drury (*Elevation in the Eucharist*, Cambridge, 1907, p. 181), 'restored to our Church a complete representation of what our Lord is recorded to have said and done "in the same night that He was betrayed." We "take the Bread" and "take the Cup" as He Himself did, we say the words of Institution which we believe that He said, we break the Bread and bless the Cup as He did, and we perform these significant actions openly in the sight of the people and thus "proclaim the Lord's death till He come."'

As the result of the composite nature of the Prayer Book there has always been a High Church party and a Low Church or Evangelical party in the Church of England. The former came into renewed prominence with the Oxford movement.

In Tract 90, Newman attempted to show that the Articles, 'though the product of an un-Catholic age,' were 'patient of a Catholic interpretation.' By the aid of a return to mediæval ritual, attempts have been made to get behind Article 31, 'Of the one Oblation of Christ finished upon the Cross.' The question of ritual reached its most acute point in the Denison case (1856–58) and the MacConochie case (1867–69). High Churchmen speak of the Eucharist as a Sacrifice. Ridley had spoken of the 'unbloody sacrifice,' but 'as a *representation* of that bloody sacrifice' (*Works* [Parker Society, Cambridge, 1841, p. 250]). The theory advanced by Father Puller at the Oxford Conference of 1899, propounded earlier by Brightman (*The Eucharistic Sacrifice*, 1890), that the Eucharist is a sacrifice because 'our Lord's sacrifice continues for ever and is a perpetual sacrifice,' that it is 'the earthly counterpart of the sacrificial oblation which is being carried on in the heavenly tabernacle,' for which a great weight of authority has been claimed, has been shown by Mortimer (*The Eucharistic Sacrifice*, London, 1901, p. 379 ff.) to have been derived through Mede from Cassander. The controversies concerning the Eucharistic Sacrifice and its ritual continue.

The teaching of the majority of the Nonconformist Churches in England and their sister-Churches in the United States and the Colonies, despite the ultra-Zwinglian Declaration of the Congregational Union of England and Wales of 1833 (Schaff, *Creeds*, iii. 731 ff.), that the Lord's Supper is 'to be celebrated by Christian Churches as a token of faith in the Saviour, and of brotherly love,' is Calvinistic; and in mode of administration they belong to the 'Reformed' type.

V. *THE ROMAN CATHOLIC DOCTRINE.*—The Roman Catholic Church rests entirely on the development described in the preceding article. The Council of Trent first gave Confessional embodiment to the distinction between the Eucharist and the Mass; and, though the decrees gave more space to the 'sanctissimum sacramentum Eucharistiae,' in theory and practice the sacrificial aspect (the Mass) completely overshadows the sacramental character (the Eucharist). The Tridentine decrees were a blend of conflicting mediæval theories, one party wishing to exalt the Sacrifice of the Mass, the other unwilling to obscure the Sacrifice on the Cross.

It is a real propitiatory sacrifice: 'Si quis dixerit, Missae sacrificium . . . neque pro vivis et defunctis pro peccatis, poenis, satisfactionibus et aliis necessitatibus offerri debere: anathema sit' (Sess. xxii. can. iii.). The Mass, unless performed by the priest, is no sacrifice. And yet the priest is not the offerer; Christ offered Himself once on the Cross, and He offers Himself daily in the Mass. The sacrifice is no new suffering for Christ; the once-offered Christ is daily brought before the eyes of God, such presentation (*offere*) being really sacrifice (*immolare*).

But the *Catechismus Romanus* (1566) was a complete victory for the party of the exalters of the Mass. Here the Mass is no representation of a sacrifice, but a repetition (quæst. 53 ff.). Post-Tridentine teaching went far beyond mediæval limits (Scheeben, *La Dogmatique*, Paris, 1882, iii. 399 ff.). Aquinas had taught that the Sacrifice of Christ is impossible of repetition, and the thought of repetition, though current in pre-Reformation times, had little authoritative support, the theologians having been occupied with the dogma of Transubstantiation. Now it became customary to teach that Christ in the Sacrament Himself renews His passion, that in the Mass He is present, not only as *passus*, but much more as *patiens*.

The 'immolation-theory' of Cuesta ran: 'Missa est sacrificium hac ratione, quod Christus aliquo modo moritur et a sacerdote mactatur.' Alongside it stood the 'destruction-theory' of Bellarmine, which attained its fullest expression in De Lugo: 'Consumptio autem quae fit a sacerdote sacrificante non tam est comestio victimae quam consummatio sacrificii.'

These theories appear again and again in various modifications, mainly in Jesuit circles, and were dominant especially during the 17th cent.; but alongside them were theories which did not go beyond the Tridentine decrees, and even sought to spiritualize them, *e.g.* Bossuet: 'Let us not think that the victim which we present in the Eucharist is to be there in truth anew destroyed. . . . We ought to seek therein only a mystical death and destruction' (*Œuvres*, Tours, 1862, vi. 118). Transubstantiation remains as fixed at Trent, and its logical consequences therein mentioned continue, *e.g.* the reservation, adoration (λατρεία), and carrying in procession of the host or consecrated wafer, and the *communio sub una*.

The Old Catholics have not moved far in regard to the Eucharist from Roman dogma and practice. The Synod of 1877 allowed the use of the vernacular in certain parts of the Mass. The Synod of 1883 allowed the partaking of the cup to Anglicans, but resolved to follow among themselves meanwhile their usual practice of communion in one kind.

LITERATURE.—In addition to the works cited and named in the article, and the standard editions of the leading Reformers which are enumerated under the relevant articles, the following are worthy of mention: R. Hospinian, *Historia Sacramentaria*, 2 vols., Zürich, 1598 and 1603; K. B. Hundeshagen, *Die Konflikte des Zwinglianismus, Lutherthums, und Calvinismus in den bernischen Landskirchen, 1532–1558*, Berne, 1842; J. H. A. Ebrard, *Das Dogma vom heiligen Abendmahl und seine Geschichte*, 2 vols., Frankfort, 1845–46; K. F. A. Kahnis, *Die Lehre vom Abendmahle*, Leipzig, 1851; R. I. Wilberforce, *Doctrine of the Eucharist*, London, 1854; C. Sigwart, *Ulrich Zwingli, der Charakter seiner Theologie*, Gotha, 1855; W. Cunningham, *Reformers and Theol. of Reformation*, Edinburgh, 1866; H. Schmid, *Der Kampf der lutherischen Kirche um Luthers Lehre vom Abendmahl*, Leipzig, 1868; C. Hodge, *Systematic Theology*, vol. iii., London and Edinburgh, 1874; F. Schirrmacher, *Briefe und Akten zur Geschichte des Religionsgespräche zu Marburg, 1529, und des Reichstags zu Augsburg, 1530*, Gotha, 1876; Herrlinger, *Die Theologie Melanchthons*, Gotha, 1879; A. Erichson, *Das marburger Religionsgespräch*, London, 1883; E. B. Pusey, *Doctrine of the Real Presence*, Strassburg, 1880; A. Baur, *Zwinglis Theologie, ihr Werden und ihr System*, Halle, 1885; T. Harnack, *Luthers Theologie*, 2 vols., Leipzig, 1862–86; Pierson, *Studiën over J. Kalvijn*, 3 vols., Amsterdam, 1881–91; J. Schwane, *Die eucharistische Opferhandlung*, Freiburg, 1889; P. Schanz, *Die Lehre von den heiligen Sacramenten*, Freiburg, 1893; W. Sanday, *Priesthood and Sacrifice*, London, 1900; J. Köstlin, *Luthers Theologie*[2], Stuttgart, 1901; K. Richard, *Confessional History of the Lutheran Church*, Philadelphia, 1909; H. von Schubert, 'Das marburger Gespräch als Anfang der Abendmahlskonkordie,' in *ZKG*, vol. xxx., Gotha, 1909; D. Stone, *History of the Doctrine of the Holy Eucharist*, London, 1909.

HUGH WATT.

EUCHITES (Εὐχῖται or Εὐχῆται, from εὐχή, 'prayer').—A sect whose leading tenet was that sin could be subdued and perfection attained by the practice of perpetual prayer. Originating as an outgrowth of Syrian monachism, they propagated their ideas from the second half of the 4th cent. till the 6th, and traces of their influence are to be found at a much later date. They were otherwise named, after those who at various times were their leaders, Lampetians, Adelphians, Eustathians, and Marcianists; or, from some of their most striking peculiarities, Messalians (their commonest designation [Aram. מְצַלִּין, from צלא, 'to pray,' as in Dn 6[11], Ezr 6[10]]), Choreutes (χορευταί, from their mystic dances), and Enthusiasts (ἐνθουσιασταί, from their claim to possession of the Holy Spirit). It is somewhat difficult to determine their true character and teaching, as nearly all the information that has reached us regarding them comes from their opponents, the heretical literature having almost completely perished. The chief writers who discuss their doctrines and practices are Epiphanius (*Hær.* 80), Theodoret (*HE* iv. 10; *Hær. Fab.* iv. 11), and Timotheus Presb. (in J. B. Cotelerius, *Ecc. Gr. Mon.*, Paris, 1677–86, iii. 400 f.). Their principal writing, which bore the title *Asceticus*, is often referred to, and it furnished John of Damascus with the 'heads of the impious doctrine of the Messalians taken from their own book' (Cotelerius, i. 302).

It is impossible to say whether their practice grew out of their theory, or their theory was squared with their practice. They taught that every one is possessed from his birth by a demon who incites him to sin. For the expulsion of the evil spirit baptism is ineffectual (τὸ ἅγιον βάπτισμα οὐδὲν συμβάλλεται [Timoth. *loc. cit.* 2]). It only 'shears away' the former sins, leaving the root of the evil untouched. The true remedy is intense prayer, unremitted till the departure of the evil spirit is sensibly perceived. Sometimes the Holy Spirit is seen to enter in the appearance of an innocuous fire, and the demon to pass out of the mouth in the form of a sow with her litter (Augustine, *Hær.* 57). Then ensues the happy time when 'the soul is as sensible of union with its heavenly bridegroom as an earthly bride in the embraces of her husband' (Timoth. 4). The Euchite henceforth regards himself as a partaker of the Divine nature. Frequently he ends in 'a pantheistic self-deification' (Neander, iii. 345). If an angel, a patriarch, a prophet, or Christ Himself is named to him, he will reply in each case, 'That am I myself' (Epiphanius, *loc. cit.*). As spiritual men, the Euchites alleged that they had visions such as were not granted to ordinary people. They danced in order to trample on the demons which appeared to them. They had also prophetic gifts, they knew the state of departed souls, and they had power to read the hearts of men. They regarded all the Church's ordinary means of grace, *e.g.* the Eucharist, as well as the discipline of the monastery, with indifference. Professing to give themselves entirely to prayer, they did no work, but lived as mendicants. Bands of Euchites of both sexes roamed about, as persons who had renounced the world and all its possessions. In summer they slept promiscuously in the streets of towns. They were suspected of believing that they could indulge in unbridled licentiousness without falling from their perfection. That may have been a calumny, but undoubtedly a nemesis often overtakes the presumptuous self-confidence which ignores the radical weakness of human nature.

Edessa was one of the first centres of the Euchite heresy. Flavian, bishop of Antioch (*c.* 390), sent a body of monks thither to summon the false teachers before him. As he knew that they would, according to their custom, deny their doctrines and charge their accusers with slandering them, he resorted to a stratagem. Affecting to side with the accused, he induced their aged leader, Adelphius, to disclose all the secrets of the order, and then rounded upon him with the stern words of Daniel, 'O thou that art waxen old in wickedness, now are thy sins come home to thee' (Susanna [52]). Adelphius and his comrades were beaten, excommunicated, and condemned to exile, without the option of recanting. They went to Pamphylia, where they were again condemned in a Synod held at Side, and presided over by Amphilochius of Iconium. Proceedings were also taken against the sect in Armenia, and they gave trouble in Constantinople. Theodosius legislated against them (xvi. Cod. Theod. *de Hær.* vi. 187), and Valerian and Amphilochius of Side had the book *Asceticus* condemned at the Council of Ephesus (431). Lampetius, the first of the sect to obtain the dignity of the priesthood, was summoned before his bishop, Alypius of Cæsarea (Cappadocia), on a double charge of undue familiarity with women and of deriding the musical services of the Church as a legal bondage. He was found guilty, condemned, and degraded. He wrote a book called the 'Testament,' which is lost, but a fragment of Severus the Monophysite's answer to it is preserved (J. C. Wolf, *Anecdota Græca*, Hamburg, 1722-24, iii. 182). The Euchite leader in the 6th cent. was Marcian, whom one of the Popes pronounced orthodox. Little more is heard of the sect till the outbreak of the Bogomil heresy in the 12th century. The Bogomils (*q.v.*) had their origin in Bulgaria, and 'were without doubt the connecting link between the so-called heretical sects of the East and those of the West' (*EBr* [11] iv. 119). They were also known as the 'Paulicians' (from Paul of Samosata), whose doctrines survive in the great Russian sects. See, further, art. PAULICIANS.

JAMES STRAHAN.

EUDÆMONISM.—Eudæmonism may be defined as the theory that the ethical end, the ultimate object to be achieved by action and conduct, the standard and final criterion of what ought to be, is *Welfare* (εὐδαιμονία). Welfare is not to be regarded as identical with happiness, although the latter term has been widely and even generally employed as a rendering of the Greek word, which 'welfare' (*Wohlfahrt*) more truly represents. Happiness may, of course, be so defined and understood by a moral philosopher as to become the technical equivalent of 'welfare' (Aristotle's εὐδαιμονία); but this involves an unnatural divorce from the meaning which it bears in ordinary speech and literature, where 'happiness' undoubtedly connotes pleasure as an essential and predominant, if not as its sole, constituent, and signifies, in fact, 'a life full of pleasures, well selected and arranged' (Mezes, *Ethics*, London, 1901, p. 397). Now, although welfare may be held to consist of pleasure, that theory (Hedonism) imports so great a difference that, in whichever of its several forms it be maintained, it stands apart and calls for separate treatment (see artt. EPICUREANS, HEDONISM, UTILITARIANISM).

Eudæmonism finds its typical exponent in Aristotle, whose famous definition of welfare (εὐδαιμονία), or man's ultimate good (τὸ ἀνθρωπινὸν ἀγαθὸν)—'activity, or exercise of the powers, of soul according to virtue or goodness, and that the best and most fully developed'—has the high merit of elasticity, leaving room alike for individuality and for discovery in the conception both of psychical activity and of moral excellence. Only he is clear that well-being is founded and rooted in well-doing.

In modern philosophy Eudæmonism proper, as distinct from Hedonistic Utilitarianism, has few representatives. Perhaps Cumberland,[1] who makes 'furtherance of the common welfare' the ethical end, and, after him, Hutcheson and Butler, have the best claim to be so regarded; and, in our own day, Paulsen, with whom 'acts are called good, when they tend to preserve and promote *welfare*; bad, when they tend to disturb and destroy it' (*System of Ethics*, Eng. tr., London, 1899, p. 222), *welfare* 'consisting in the perfect exercise of all human psychical powers' (*ib.* p. 224).

It is of the essence of Eudæmonism that it is teleological: it looks forward and makes for an end, and that end is not precisely, or mainly, 'righteousness,' which implies a pre-existing rule or lawgiver. Herein it is contradistinguished from all that class of ethical theory which is retrospective and introspective, bidding us look back to a law once delivered, or inward to a perpetual and infallible monitor dictating duty without regard to consequences. Unlike every such 'intuitional' theory of morals, Eudæmonism does take account of con-

[1] *De Legibus Naturæ*, London, 1672, ch. 72.

sequences, not only of those immediate consequences which even for the intuitionist commonly form part of the act or thing to be done or eschewed, but (which is the crucial matter) of manifold consequences that lie, foreseen or pictured, in the far or middle distance.

Of Perfectionism, which is likewise teleological, we may fairly say, with Wundt (*Ethical Systems*, Eng. tr., London, 1897, p. 187), that practically it 'coincides with Eudæmonism,' though with the formal 'superiority' that 'it lays more stress on the duty of moral self-development,' as a means, however, not barely to self-perfection, but thereby to the welfare of our fellow-men. This identification will bring the school of Leibniz into the ranks of the eudæmonists. At the same time it marks the difference between ancient (or Aristotelian) and modern Eudæmonism. The former was primarily individualistic, notwithstanding that for Aristotle membership of a State is indispensable to human welfare, and even to manhood. The latter is predominantly altruistic and universal. Now, individual perfection, excepting for Plato, is not manifestly the same as individual welfare, whereas universal perfection may reasonably be identified with universal welfare—the welfare of all human or, as some authorities would have it, of all sentient beings.

See, further, ETHICS, and the Literature there cited.
J. M. SCHULHOF.

EUDOXIANISM.—Eudoxianism denotes the opinions, more especially on the Arian controversy, held by Eudoxius, who was born about A.D. 300, and became successively Bishop of Germanicia in Commagene, of Antioch (A.D. 358), and of Constantinople (A.D. 360–370). The materials available for ascertaining his views are very scanty, consisting chiefly of his 'Confession,' a fragment of a work on the 'Incarnation,' which has been preserved in a collection made by the presbyter Anastasius. Inferences as to his opinions have also been drawn from his conduct at certain crises, and from one or two sayings he is reported to have uttered. One of these is a scurrilous sentence from a sermon delivered by the 'Bishop of Antioch' and referred to at the Council of Seleucia (Hilary, c. *Constantium*, 13). But it is at least doubtful whether Eudoxius was at the time Bishop of Antioch (see G. Krüger, *Lucifer*, Leipzig, 1886, p. 105): he was the only bishop who signed the Acacian formula at Seleucia (Hahn, *Bib. der Symb.*[3], p. 306) without giving the name of his see (Mansi, iii. 321 B; Loofs, *PRE*[3] v. 579), and the probability is that he was at the time suspended from his diocese. A similar story related by Socrates serves rather to convict him of execrable taste than to identify the school to which he belonged.

Eudoxius was an opportunist and a politician rather than a thinker or a man of principle. During the period of his influence as Bishop of Constantinople, he may be said to have belonged to the left-centre, refraining from committing himself to the Anomœan position of Eunomius, while definitely antagonistic to the Nicene, and critical of the semi-Arian. 'The definite breach which Eudoxius made with Eunomius and Aetius (in the time of Jovian) on the one hand, and on the other the permanent hostility between him and the Homoousians, gave the direction to his theology and Church politics' (Loofs, *loc. cit.*). His Confession is notable for its refraining from the use of the watchwords of the moment, either the Homœan or the Anomœan; for its assertion that Christ was 'made flesh, not made man'; and for its denial of the two natures in Christ. (The text of the Confession is printed by Harnack, *Hist. of Dogma*, iv. 147.)

The ten years of Eudoxius' ecclesiastical domination at Constantinople coincided with the close contact between the Ostrogoths and the capital, and his influence was probably most lasting in the type of Arian teaching which established itself in that race.

EUGENICS.—See MARRIAGE, SOCIOLOGY.

EUHEMERISM.—The term 'Euhemerism' is often applied in a general though quite unwarranted sense to the rationalistic interpretation and disintegration of Greek mythology. As a matter of fact, the romantic tale composed by Euhemerus of Messene marks but a single phase of religious-historical thought in the 3rd cent. B.C. and the period following, and it is only the influence exercised by this work upon the Romans, and, through them, upon modern rationalism, that has given the term a significance by no means commensurate with the actual achievement of the man from whom the movement derives its usual name. For, when all is said, the teaching of Euhemerus has but little claim to be called original. Prior to his time reflexion on religious things had undergone a fairly long process of development. The roots of Greek rationalism lie far in the past. The Ionic historian Hecatæus had already dealt with ancient legends on rationalizing principles, and his example was followed by Herodotus and Herodorus, while the Cynics Antisthenes and Diogenes had sought to re-interpret the myths in a sense peculiar to themselves.

Strictly systematic reflexion on the gods of Greek mythology, however, first made its appearance in the epoch of Alexander the Great, and it was also in this period that romance, stimulated by the marvellous adventures of the campaigns in the East, gained a footing in Greek life. The first name that meets us in this connexion is that of Hecatæus of Teos, who lived in Egypt in the reign of Ptolemy I. (323–285 B.C.), and whose work, entitled Αἰγυπτιακά, was made use of by Diodorus Siculus in the first book of his history (E. Schwartz, in *Rhein. Mus.* xl. [1885] 233–262; Pauly-Wissowa, v. 669 ff.). Hecatæus attempted to explain the general belief in the existence of divine beings by the theory that the gods of Egypt were but the deified benefactors of mankind; and his conclusions were all the more incisive in view of the fact that he regards the gods of Greece, and, indeed, Greek civilization in general, as being of Egyptian origin. Thus, in an age when kings were being accorded the honours of deity, the deities themselves—Helios, Kronos and Rhea, Zeus and Hera, and, above all, Isis and Osiris—were being reduced to the level of ancient monarchs whose efforts on behalf of progress had given men cause to look upon them as higher beings.

Some knowledge of the work of Hecatæus seems to be presupposed in the Ἱερὰ ἀναγραφή of Euhemerus. In this book—written perhaps c. 280 B.C.—which purports to be the narrative of a journey, and is composed in the spirit of the numerous political Utopias of the 4th cent. B.C., Euhemerus gives a description of certain Happy Isles that he pretends to have discovered on a voyage from the Red Sea to the Indian Ocean. This romance of travel, the surviving portions of which are found in Diodorus (v. 41–46, vi. 1), as also in the fragments of Ennius preserved by Lactantius (*Div. Inst.* I. xi.

45–48, 63, 65, xiii. 2, 14, xiv. 1–12, xvii. 10, xxii. 21) —Varro perhaps being the intermediary—professes, in particular, to give a sketch of the fabled island of Panchaia, which is here depicted, however, not in the style of a wonder-land, but with a relatively sober and persuasive colouring—an artifice by which Euhemerus hoped to facilitate his readers' acceptance of his theology, for this was in reality his sole concern. Accordingly, he proceeds to tell that he had discovered upon the island a temple of Zeus, and therein a pillar of gold on which Zeus had recorded in sacred script his own deeds and those of Uranos and Kronos. Thus all that had ranked as divine was brought down to the human level, precisely as in the work of Hecatæus, whose views seemed in this way to gain some sort of documentary corroboration. In particular, Zeus himself was now no more than a ruler who had given a powerful impetus to civilization, who had completed the dissemination of his cult by erecting the sanctuary in Panchaia, and who ultimately died and was buried in Crete.

This narrative, of which we have given only the most essential particulars, was generally repudiated and pronounced a fabrication by the more earnest minds among the Greeks (cf. Callimachus, *Hymn.* i. 8 f., frag. 86; Eratosthenes *ap.* Strabo, xlvii. 104 [Polybius]; Plutarch, *de Is. et Osir.* 23); but, as was noted above, it had a great influence upon the Romans, amongst whom it became naturalized in the Lat. rendering of Ennius. It thereby became known to the Roman Christian writers (Minuc. Fel., *Oct.* 21; Lactantius, *loc. cit.*), who were as ignorant of Euhemerus in the original as of the Gr. apologists (Theophilus, *ad Autolycum*, iii. 7, furnishes no evidence on the point), and it was through their influence that Euhemerus and his work became immortal, and his theology passed into a proverb.

It is, accordingly, all the more necessary to insist upon the fact that in Euhemerus we have but a single—though, it may be, the most notable and competent—representative of the spirit of the age. Just as—unless all the evidence is fallacious—he had a forerunner in Hecatæus, so he was followed by others who shared his views. Thus, while we cannot fix precisely the date of Leon of Pella, who fabricated a letter purporting to have been written by Alexander to Olympias—a letter often quoted by the apologists, and setting forth ideas akin to those of Hecatæus—he unquestionably belongs to this period, and must be regarded as an exponent of 'Euhemerism' (cf. Geffcken, *Zwei griech. Apologeten*, Leipzig, 1907, p. 223). Then, in the 2nd cent. B.C., Dionysios Skytobrachion, who is referred to by Diodorus (iii. 56; 57. 2; 60. 3 and 5; 70. 3, 7, 8; 71. 5; 72. 1, 4; 73. 1, 3, 5), followed on the lines of Euhemerus and his predecessor, maintaining that the gods were ancient kings who—as was specially exemplified in the case of Dionysus —had been promoted to divine honours for their services to civilization. Finally, about the end of the 1st cent. A.D., Herennius Philo of Byblus, in his *Sanchuniathon*, applied the same process of transmutation to the Phœnician deities (Euseb. *Præp. evang.* i. 9, p. 29 ff.). The work of Palaiphatos (περὶ ἀπίστων, ed. Festa, in the *Mythogr. græci*, iii. 2, Leipzig, 1902) cannot now be regarded as directly relevant to the point before us. (Cf. with reference to the views developed in the foregoing, E. Schwartz, *Fünf Vorträge über d. griech. Roman*, Berlin, 1896, p. 102 ff.; Jacoby, in Pauly-Wissowa, vi. 952; Wendland, *Die hellenist.-röm. Kultur*², Tübingen, 1912, p. 116 ff.)

The work of Euhemerus, as already remarked, was generally rejected by Greek writers of the more earnest type, and especially, of course, by such as had engaged in research. It is, nevertheless, true that in Greek works of a religious cast we occasionally come upon ideas which, to say the least, emanate from the Euhemeristic sphere of thought. Thus, when certain pagan writers, in seeking to vindicate the practice of idolatry against the vehement onslaughts which Greek scepticism was already making upon it, appeal to man's instinctive craving for the visible presence of deity, and his consequent need of an image (Dio Chrysost. *Orat.* xii. 61; Maximus Tyrus, *Diss.* ii. 10 [p. 28, 12 Hob.]), their argument forms in a manner the basis of the theory by which the Book of Wisdom (14^15ff.) explains the origin of idolatry, viz. that some bereaved father had made an image of the son whom he had lost, and offered sacrifices to it, and that this then became a general practice, till at length the worship of images was legally instituted by kings. In this Judæo-Hellenistic work, therefore, we have a theory of the origin of idolatry that finds no place in extant pagan literature, and shows unmistakably the impress of 'Euhemerism.' Similar ideas found their way also into Hellenistic popular literature, as, *e.g.*, the *Oracula Sibyllina*, which form a medley of heathen, Jewish, and Christian prophecies. In the third book of the Sibyllines, which is known to be the oldest, occurs a myth—relating to Kronos, Titan, Japetos, Rhea, Zeus, and Hera (v. 110 ff.)—whose resemblance to the teaching of Euhemerus found in Ennius was rightly noted by Lactantius, and which is doubtless to be traced back—though hardly in a direct line—to Euhemerus himself. Thus the work of Euhemerus still serves—in the hands of these unintelligent witnesses to religion, who had certainly never read it (even Firmicus Maternus, 3, 6 f., does not imply a direct reading)—as an apologetic weapon against the heathen; and in this fact we may discern the remarkable influence of the writer whose name has come by custom to be associated with the whole intellectual movement to which his original contribution was by no means great.

LITERATURE.—This has been given in the course of the article.

J. GEFFCKEN.

EUMENIDES, ERINYES.—It is not altogether easy to grasp the precise character of the Eumenides, or—to give them their more general and more appropriate designation—the Erinyes; for the traditional representation of these creations of Greek popular belief and poetic fancy is often very indefinite. They sometimes appear as personifications, sometimes as ghosts, and sometimes as really well-defined figures; now the tradition speaks of a single Ἐρινύς, and now of a whole host of these frightful beings. Still, the scientific investigation of this province of religious history has within recent decades to some extent succeeded in discovering the original form and subsequent development of the myth, though we must not expect that every traditional detail will find a place in the resultant delineation. For, while many Greek deities have but little homogeneity of character, and tend rather to coalesce in various aspects with other divine personages, this is especially true of the figures generated by the obscure and primitive popular belief to which we owe also the Erinyes; and the reader who desires to have some idea of the wavering forms shown by the Erinyes in the dawning consciousness of the ancient Greeks will do well to read von Wilamowitz's introduction to his translation of the *Eumenides* of Æschylus (Berlin, 1900, pp. 1–31).

The Erinys—or group of Erinyes—was an earth-deity, who in Thelpusa was identified with Demeter (Pausan. viii. 25. 4). Such chthonic spirits appear nearly always in a dual aspect—one friendly and beneficent, the other dark and sinister, just as the divine pair Demeter and Persephone symbolize, on the one hand, the kindly earth yielding

food for man, and, on the other, the gloomy depths of Hades. We find, accordingly, that in the Peloponnesus well-disposed deities of the earth were worshipped as *Eumenides* (Pausan. ii. 11. 4; cf. viii. 34. 1 ff., and Preller-Robert, *Griech. Mythologie*[4], Berlin, 1894, i. 837); elsewhere they are also designated Πότνιαι or Ἀβλαβίαι, and in Athens, on the Areopagus and at the Demos Colonus, the Σεμναί (Paus. i. 28. 6), while this name, as also the title Πότνιαι, was likewise applied in a descriptive sense to Demeter and Kore (cf. Preller-Robert, i. 747). Such deities, in virtue of their chthonic character, were represented in the cultus as bearing not only flowers and fruits, but also the figure of the snake, which is found among many peoples as the symbolic animal of the dark and gloomy under world. For in the earth underneath live the souls of the dead, the haggard spirits whom those who still live on the earth must charm and propitiate; while, under a different name, these earth-deities are the avengers of murder, especially the murder of a blood-relation. It is true that even here the data remain somewhat obscure, for it seems as if the Ἐρινύς was in general the angry soul of the murdered person himself rather than a deity who avenges the crime wreaked upon that soul. To all appearance Hesiod (*Theog.* 217; cf. Æsch. *Sept. contra Theb.* 1054) identifies the Erinyes with the *Kēres*, who must also be regarded as souls. And, since it is thus impossible, as has just been indicated, to attain to absolute certainty at this point, we must be content to verify some of the more outstanding features of the myth in its primitive form.

Now, it is so far an advantage to have ascertained that the avenging deities who punish the crime of slaying a blood-relation are identical with the beneficent spirits of the under world. The cause of a murdered man was in general taken up by his family group; but, when one individual in such a group killed another, the deed was accounted more atrocious than an ordinary homicide; and, as in this case the avenger could not fittingly be supplied by the family itself, the task of executing justice on behalf of the wailing soul of the slain was undertaken by the deities of the sombre depths. Thus the death-blow which Meleager had dealt the brother of his mother is, at her request, avenged upon him by the ἠεροφοῖτις Ἐρινύς (*Il.* ix. 571); and we are told in *Od.* xi. 280 that, though Œdipus was not directly guilty of his mother's death, yet for him Epicaste left pains behind, 'all that the Erinyes ('Avengers' [Butcher and Lang]) of a mother bring to pass' (ὅσσα τε μητρὸς Ἐρινύες ἐκτελέουσιν). Here, however, we can already trace the genesis of the finer and more spiritual idea that the Erinyes are the curse, or curses (ἀραί), of one who has suffered any kind of injury at the hands of a relative. Thus Telemachus is apprehensive of his mother's curses (*Od.* ii. 135; cf. *Il.* xxi. 412), while in Hesiod (*Theog.* 472), Rheia desires that Kronos shall propitiate the ἐρινῦς, *i.e.*—in this case—the curses of his father; and, similarly, in Æschylus (*Eum.* 417) the Erinyes present themselves to Athene as the Ἀραί (cf. Soph. *Œd. Col.* 1375, 1391; Blass, *Einleit. zu d. Eumeniden des Aischylos*, Berlin, 1907, p. 2 f.). In this way the Erinyes came at length to be the protectresses of family law in general; when a household was bereft of parents, their place was taken by the eldest brother, whose prerogative was now maintained by the Erinyes (*Il.* xv. 204). Finally, when they stop the prophetic utterance of the steed of Achilles (xix. 418), they seem to assume the function, if we may so express it, of maintaining the normal order of Nature. As they are thus the handmaids of justice upon earth, they are also the guardians of oaths and the avengers of perjury (xix. 259; Hesiod, *Op.* 803 f.), and, accordingly, in the court of the Areopagus at Athens the judicial oath was taken in the name of the Σεμναὶ θεαί (Dinarchus, i. 47). On all these details, see Rohde, *Psyche*[2], Freiburg, 1898, i. 268 ff., ii. 231 f.

The Erinyes then came to be depicted with all the power of artistic expression of which Hellenism was capable. The ἐρινύς travels amid a dark cloud, is 'one that walks in darkness' (ἠεροφοῖτις, see above); the sombre goddesses, the στυγεραί, the κρατεραί, and the δασπλῆτες, are also figured as huntresses; nothing escapes their eye; and, like a pack of savage hounds, they pursue the criminal—whose trail of blood they have speedily discovered—till they finally bring him to the ground. Hence Æschylus, too, refers to them as the 'mother's hounds' (*Choeph.* 924; cf. *Eum.* 131 f., 146 ff.).

It was, in fact, Greek poetry, and, above all, Greek tragedy, that gave these creations of popular belief their final form. We cannot fix precisely the period in which the repulsive stories of unnatural crime—parricide, matricide, and incest—first took their rise, and to which, therefore, the legends of Œdipus, Alcmæon, and the Atridæ are to be assigned. But in any case the Erinyes filled a great rôle in this particular phase of Greek mythology. This has already been shown in the case of Œdipus (cf. also Æsch. *Sept.* 69, 857), while, as regards the myth of the Atridæ, we read in Stesichorus, who is our chief authority here, and is of importance also for the development of tragedy, that Orestes, who had killed his mother Clytæmnestra, was pursued by the Erinyes, and received from Apollo a bow as a means of defence (frag. 40). The latter detail is one of great interest, as it indicates the early recognition of that conflict between the deities of light and those of the under world which forms so significant a factor in the *Eumenides* of Æschylus. For there the Erinyes are the primeval goddesses whose sole function it is to avenge the violation of kinship; the murder of a husband, which Apollo sets forth before the Erinyes in all its atrocity, is of no concern to them (*Eum.* 212). In Apollo and Athene, as a matter of fact, the Erinyes are confronted with a new ethical point of view—with the Delphic law of expiation—as also with the claim of the Athenian State to deal in its own right with such deeds as the crime of Orestes. As we know, they lose their case, but they are reconciled by Athene, and then, as beneficent spirits, pass into the under world beneath the Areopagus. The Erinyes have become the Eumenides. Thus did Æschylus contrive to introduce ethical harmony into the primitive saga, which, as we saw above, recognized a dual aspect in the earth-deities. Another perpetrator of the crime of matricide was Alcmæon, who was likewise pursued by the Erinyes, but was at length released from the consequences of his impiety (cf. Eurip. in Nauck, *Fragm. trag.*[2], Leipzig, 1889, p. 379; Bethe, *Theban. Heldenlieder*, Leipzig, 1891, p. 138 f.).

We have already noted the fact that the chthonic character of the Erinyes is symbolized by the snake, and on an Argive votive relief (Roscher, i. 1330) each of the three Eumenides carries a serpent in her hand. Æschylus, however, represents them as also having snakes twining about their heads (*Choeph.* 1049 f.), and plastic art sometimes exhibits corresponding figures (Roscher, i. 1334). They are also provided with wings (cf. Eurip. *Iph. Taur.* 289), while their short hunting χιτών is a further indication of their function as the swift pursuers of their prey. In their hands they hold scourges, and also torches (cf. the vase of Canosa, in Roscher, i. 1326), with which they torment the guilty in the under world.

Æschylus does not mention the number of the Erinyes, but speaks of them as many (*Eum.* 585). At the court of the Areopagus the accusing goddesses were three in number—or, by other accounts, two (Preller-Robert, 837, 1; 841, 3). The Argive relief just referred to shows three, and we find the same number in a passage of Euripides (*Orest.* 408). Euripides, however, speaks of them in another passage (*Iph. Taur.* 968) as a large number, and, strange to say, as being split up into two parties, one of which continues to pursue Orestes, while the other acquiesces in the judgment of Athene.

After the age of tragedy the Erinyes or Eumenides show no further phase of development either in character or in outward form. Subsequently, in order to meet the desire for a simpler form of the myth, they were represented only in their more terrible aspects, their more beneficent functions being left out of account, till at length, among the Romans, and even in the description given by Vergil (*Æn.* vii. 323 ff.) they manifest—as the *Furiæ*—a relatively conventional character.

EUNOMIANISM.—The moral force of Arianism (*q.v.*) was stronger than ever as its end drew near in the East, because the Homœans (those Arians who held the *likeness* of the Son to the Father) were broken up, and there was no more entanglement with the court and politics. Arianism was then represented by Eunomius, who had made no compromises, and had suffered as a martyr to the Anomœan cause (*i.e.* the cause of those who held the *unlikeness* of the Son to the Father). He had to leave his See of Cyzicus, was banished by the Emperor Valens (A.D. 367), and again, when he had returned to Constantinople, by Theodosius—the sole exception to Theodosius' toleration. The Anomœan teaching came to a head, in Eunomius' hands, in the easily understood formula 'that the ἀγεννησία was the essence of the First Person of the Trinity,' whereby a gulf was dug between the Ungenerate and the Generate; in other words, between the Father and the Son.

A passing notice of the word 'Ungenerate' as the equivalent of ἀγέννητος, the catchword of this logician, is necessary at the commencement. It was a term used by the orthodox also as applicable to the Father only, though in a way very different from that in which Eunomius handled it; and, if it were to be translated 'not begotten' or 'unbegotten,' as applicable to the Father only, such a term would confuse the doctrine of the Third Person, who is Himself also 'not made, nor created, *nor begotten*.' Again, 'Ingenerate,' which might be suggested as a substitute, is not supported by the Latin usage. 'Unoriginate,' again, bears only one sense of unbeginning, which even with the Arians could be said of the Son. Lastly, 'not generated' does not furnish a corresponding idiomatic expression for ἀγεννησία, 'ungeneracy.' 'Unmade,' 'uncreate' are out of the question for this purpose, both in themselves and because no proper equivalent would be left for ἀγένητος, and no means of distinguishing it from ἀγέννητος. The distinction between these terms was always felt by the Church writers, whether before the 3rd cent. (which Bishop Bull has doubted) or after it (as has been conclusively shown by Lightfoot, *Ignatius*, vol. ii. p. 90 ff.). Thus 'unmade' (ἀγένητος) could be applied to the Son, but not ἀγέννητος. 'Ungenerate' remains, then, as alone capable of representing the word which was put in the forefront of the Eunomian heresy, and from which all its conclusions flowed. As it was a word accepted also by the orthodox, Eunomius' use of it was all the more convincing and plausible.

As to the source of the term 'ungenerate' there can be little doubt. Though Gregory of Nyssa, in the long and bitter controversy with Eunomius, when everything had to be said that would make for the Nicene faith, more than once accuses him of having invented the term (it certainly became a new thing in his hands), we should expect to find it, and we shall not fail to find it, in the Alexandrian philosophy. Gregory accuses Eunomius of Judaizing by means of it, and of introducing also the Greek idolatry, *i.e.* of the creature. This takes us at once to Philo on the one hand, and to the Neo-Platonists on the other. Of course the contemporary philosophy could not enter into the fine distinction between 'ungenerate' and 'uncreate,' so necessary to be drawn in the Christian controversy. Still 'ungenerate' is the term which Plotinus uses of the Supreme Being (*Ennead*, v. iii. p. 517); and Celsus (the Neo-Platonist whom Origen answered) uses it, according to the text of the *Philocalia*, of his eternal world; while Philo, a century and a half before, had treated it as the exact correlative of the Jahweh of the Jews. As for its early use by the teachers of the Church, it is enough to mention that Ignatius writes that 'the *heretics*' (the followers of Simon, who were precursors of the Sabellians) thought that Christ was ungenerate.

It was this word 'ungenerate,' so familiar to Greek philosophy, so consecrated in its application to the First Person of the Trinity, that Eunomius seized upon to destroy the consubstantiality of Nicæa. He saw in it the expression of a positive idea which enabled the mind to comprehend the Deity, and which at the same time, by virtue of the logical opposition between ungenerate and generate, destroyed not only the equality, but also the likeness, of the Father and the Son. As in all other dichotomies arising from privative terms (*e.g.* 'imperishable,' 'unending,' 'uncreate,' etc.), the Trinity stands apart from creation, so in this last dichotomy the First Person stands apart from the Second and the Third. It was the only distinction of this sort that Arianism could seize on for its purpose, and so this distinctive term 'ungenerate' is hypostatized and deified.

1. 'The Ungenerate' as the name of God.—Eunomius asserts 'God is ungenerate, absolutely and independently of aught beside Himself,' and shows at once what he is going to make of this by adding of the term 'ungenerate' itself: 'This name is His glory. It is grafted in our minds from above.' He then constructs the following syllogism: 'No term expressive merely of the absence of a quality can be God's name: *the Ungenerate is God's name*: therefore it does not express a privation.' But how does he prove his second premiss, viz. that 'the Ungenerate' is God's name? The only definite proof he seems to offer is the somewhat curious one that long before the creation of man God had the naming of things, seeing that in the earliest of the sacred records, before the creation of man, the naming of fruit and seed is mentioned; and, if of things, how much more would He have the naming of Himself; and 'Ungenerate,' which includes everything else we predicate of Him (indestructible, unending, etc.)—in fact expresses His essence—commends itself as the name He must have given to Himself. Once he can establish ungeneracy as the Divine essence above all other qualities (which he labours to do by a *constant misapplication of that which constitutes the Person or hypostasis of the Father to the whole essence* [οὐσία] *of Deity*), the heavenly origin of the name follows as a matter of course in accordance with his theory of the sacredness of names.

But Eunomius' most elaborate proof, that 'Ungenerate is God's name,' is a negative and indirect one. He attacks the mental history which Basil and Gregory of Nyssa give of the term. He denies that it is due to a human *conception*, and boldly asserts instead that it is due to a perception as instinctive, spontaneous, and direct as any perception of the senses: the Deity presented this object, and the mind at once grasped it. He pours contempt not only on the orthodox party for treating this and all other privative names of the Deity as merely privative and the result of conception, but also upon the faculty of conception itself. It would be dangerous, he considers, to trust the naming of the Deity to a common operation of the mind. The faculty of conception may, and does, play us false; it can create monstrosities. Besides, if the names of the Father are conceptions, so also are the names of the Son, *e.g.* the Door, the Shepherd, the Axe, the

Vine. But, as our Lord Himself applied these to Himself, He would, according to the orthodox party, be employing the faculty of conception; and it is blasphemous to think that He employed names which we might have arrived at simply by conceiving of Him in these particular ways. Therefore, conception is not the source of the Divine names; but rather they come from a perception implanted in us directly from on high. 'Ungenerate,' above all others, is such a name, and it reveals to us the very substance or essence of the Deity.

It was urged by Basil and Gregory against Eunomius that 'Ungenerate,' as well as every other name of God, is due to a conception. They show the entire relativity of our knowledge of the Deity. In each case of naming Him we perceive an operation of the Deity, or an absence in Him of what attaches to the created, or of evil; and then we *conceive* of Him as operating in the one, as free from the other, and so name Him. But there is no conception, because there is no perception, of the substance of the Deity. Scripture, which has revealed His operations, has not revealed that.

Basil and Gregory both declare the predicate 'Ungenerate' to be a concept; Eunomius declares it to be a thing, to be not privative, but positive.

We recognize in all this a far-off prelude of the battle that had to be fought a thousand years afterwards as to the nature and source of generic names; then, too, the Conceptualists may be considered to have left the field victorious. See artt. CONCEPTUALISM, NOMINALISM, REALISM.

Behind this first assumption,—for it is an assumption for which Eunomius offers no better proofs than those given above,—that the true name of God is 'Ungenerate,' there lies another assumption, namely, that *God is knowable.* On the one hand, Eunomius attacks the orthodox for saying that we know God only through the universe, and through the Son, the author of the universe; on the other, he attacks the older Arians for saying that we know God only in part. He maintains, on the contrary, that it is unworthy of a Christian to profess the impossibility of knowing the Divine nature and the manner in which the Son is generated. Rather the mind of the believer rises above every sensible and intelligible essence, and does not stop even at the generation of the Son, but mounts above, aspiring to the First Cause. Is this bold assertion—so contrary to the teaching of the Fathers, and of Scripture itself—a direct borrowing from Plato and the Neo-Platonists? The language in which it is expressed certainly belongs to these schools; cf. the terms 'transcending,' 'beyond,' 'longing,' 'First Cause,' 'uplifted.' This direct intuition on our part of the Ungenerate manifestly creates an enormous inconsistency in Eunomius' own system. We have to suppose that the creatures whom the Word, the Son, by Eunomius' own showing, created, unconnected as they are with the Ungenerate (since He has *not* made them), nevertheless conceive of and see, beyond their own Creator, a Being who cannot be anything to them!

2. Eunomius' treatment of the doctrine of the Trinity.—It remains to consider the use, in detail, which Eunomius made of this primal dichotomy of 'Ungenerate' and 'Generate' as applied to the whole doctrine of the Trinity. His *résumé* of his re-arrangement of this, as quoted by Gregory from his *Defence of my Defence*, begins as follows:

'There is the Supreme and Absolute Being; and another Being, existing by reason of the First, but after It, though before all others; and a third Being, not ranking with either of these, but inferior to the One as to cause, to the Other as to the energy which produced it.'

This last statement must mean that the Third Person is inferior to the First, as having a cause at all; and to the Second, as proceeding only from the Second and not from the First. In this Eunomius reveals at once the emanationism which marks his teaching throughout. He goes on:

'There must, of course, be included in this account the energies which follow each Being, and the names germane to these energies. Again, as each Being is absolutely single, and is in fact and thought one, and its energies are bounded by its works and its works commensurate with its energies, necessarily, of course, the energies which follow these Beings are relatively greater and less, some being of a higher, some of a lower order; in a word, their difference amounts to that existing between their works.'

We see that Eunomius in this (and equally so in all that follows) has translated the terms of Scripture straight into those of Aristotle, and changed the ethical-physical of Christianity into the purely physical. Spirit throughout becomes Being (οὐσία, a word which, seeing that Eunomius still regards the substance as living, is best translated as above, 'Being'). Nothing else was to be expected after he had so effectually banished the spiritual and moral from his Ungenerate that it becomes as physical as the 'Motionless First Mover' of Aristotle. The contents of the above formula amount to nothing more or less than Gnosticism. In fact, the earlier and this, the later, Arianism are simply the last attempts of Gnosticism to impose the doctrine of emanations upon Christian theology. For, while Arianism held the Logos to be the highest Being after the Godhead, it regarded this Logos as only the mediator between God and man; just as, before the rise of Arianism, it had been the peculiar aim of Gnosticism to bridge over the gulf between Creator and created by means of intermediate beings (the emanations). It is also most significant, in the same direction, that Eunomius, like his master before him, adopted that system of Greek philosophy (the Aristotelian) which had always been the natural ally of Gnosticism. Aristotle is strong in divisions and differences, weak in 'identifications'; he had marked, with a clearness never attained before, the various stages upwards in the physical world; and this is just what Gnosticism, in its wish to exhibit all things according to their various distances from the ungenerate, required, and accordingly made use of. Gregory had reason when he spoke of the followers of Eunomius as 'these Gnostics.'

It is true that Eunomius uses also orthodox terms in dealing with the Trinity. We encounter such in the following creed of his, but the last words preclude any orthodox meaning:

'We believe in the Son of God, the Only-begotten God, the first-born of all creation, very Son, not ungenerate, verily begotten before the worlds, named Son not without being begotten before He existed, coming into being before creation, *not uncreate*' (quoted by Gregory of Nyssa, *c. Eunom.* ii. 7).

The gulf had been dug when once ungeneracy had been proclaimed to be the substance of the Father; and nothing more could pass it. Even the Godhead of the Son seems destroyed, notwithstanding the above articles from Eunomius' creed, in such a sentence as the following: 'No man who has any regard for the truth either calls any generated thing ungenerate, or calls God, who is over all, Son or generate.' The Son is 'subject,' and this subjectivity is proved by the fact of being generated.

'The Father' and 'the Son' are terms which Eunomius avoids as much as possible; he was sure to use them most sparingly—in fact, only to get, and until he could get, a hearing. But, once he can come back to his Ungenerate, his object is secured, and all the details of his system follow by an easy process of drawing inevitable conclusions. The Son is necessarily 'subject.' The opposition of 'ungenerate' and 'generate' admits,

he says, of no mean, just like that of 'rational' and 'irrational.' He contemplates, as existing in the 'generate' with reference to the 'ungenerate,' the same difference as there is between 'irrational' and 'rational.' As the special attributes of the rational and irrational are essentially incompatible, so the nature of the generate is one, and that of the ungenerate is another; and as the irrational has been created in subjection to the rational, so the generate is, by a necessity of its being, in a state of subjection to the ungenerate.

As to the mode and manner of the generation of the Son, Eunomius says the Father begat Him at that time which He chose, and quotes Philo: 'God, before all other things that are generated, has dominion over His own power.' This power was under dominion, and was restrained as to its activity, while the due time of the generation of Christ was still about to come, and to set this power to its natural work. What the cause of delay was, and what it was that intervened, Eunomius does not specify. Not time, not space, he says. 'Let there be no questioning among sensible men on this point, why He did not do so before.' That is all. With the same tool of 'ungenerate' and 'generate' God (if he really could still give to Christ the name God), Eunomius shatters, as with a resistless wedge, the article of the Nicene symbol 'Light of Light,' which compares the consubstantiality of Father and Son with the oneness of flame lit from flame. 'As great as is the difference between generate and ungenerate, so great is the divergence between Light and Light.' This is a striking instance of how the avoidance of the Scripture terms 'Father' and 'Son,' implying real oneness of nature, made it possible to say almost anything in this controversy. He goes on:

'We know the true Light; we know Him who created the light after the heavens and the earth: we have heard the Life and the Truth Himself, even Christ, saying to His disciples: "Ye are the light of the world"; we have learned from the blessed Paul, when he gives the title of "Light unapproachable" to the God over all, and by the addition defines and teaches us the transcendent superiority of His Light; and now that we have learnt that there is so great a difference between the one Light and the other, we shall not patiently endure so much as the mere mention of the notion that the idea of light in either case is one and the same.'

With Eunomius, that is to say, the 'true' is one thing, the 'unapproachable' another. The Incarnation was a still further divergence of the Light of the Son.

'This Light carried into effect the plan of mercy, while the other remained inoperative with respect to that gracious action.'

It was even a further degradation:

'If he (*i.e.* Basil) can show that the God over all, who is the Light unapproachable, was Incarnate,—or could be Incarnate,—then let him say that the Light is equal to the Light.'

As to the Incarnation itself, the true emptying (*kenosis*), which according to Scripture is involved in it, quite disappears in Eunomius' hands. If the Son is created and man is created, He was 'emptied' (Eunomius clings to this phrase) to become Himself, and changed His place, not from the transcendent to the lowly, but from similar (save with regard to the accidental difference of 'bodied' and 'unembodied') to similar both in kind and dignity. The difference between the uncreated and the created no longer constitutes the difference between the two natures in Christ; that difference is marked by dominion and slavery, for 'all things serve God,' while 'the whole creation is in bondage.' But, that difference having disappeared, or rather having never existed between the Son and the world He came to save, it could no longer be shown that the Master was mingled with the Servant, but only that a servant came to be amongst servants. In fact, in Eunomius' scheme, the Incarnation was a fall rather than a condescension.

'The Ungenerate Light is unapproachable, and has not the power of stooping to experience affections; but such a condition is germane to the generate.'

The 'coming in the flesh' was quite akin, with Eunomius, to the declension of a transmigrating soul into a lower order and manner of existence, such as Pythagoras had taught. Eunomius represents the generate as intermediate between heaven and earth, the Divine and the human, so as not to preserve the Divine unsullied, but to have an essence mixed and compounded of contraries, which at once stretched out to partake of the good, and at the same time melted away into a condition subject to affections or emotions. So man need feel no gratitude to the Only-begotten God for what He suffers, since it was by the spontaneous action of His nature that He slipped down to the experience of such affections. His essence, being from the first *capable* of being affected and moved as men are, was thereby naturally dragged down; and such a transaction or change does not demand human gratitude! Nothing could show more clearly than this parody of the Christian doctrine of the Incarnation how wide the gulf is, and always must be, between Christianity and Emanationism or any modern revival of it. It was in the very cradle of this last that the Christian 'theologian' *par excellence* had proclaimed, as the axiom of the new religion, that 'God is Love.'

We do not find the same fullness of statement by Eunomius as to the Spirit as we find in his treatment of the Son. This is little to be wondered at. The doctrine of the Spirit had not yet come to the front in controversy; with the exception of the heresy of Macedonius, who was forming his sect at the very time when Eunomius was teaching, no heresy was connected directly with this, and no Council dealt with it. That was reserved for the next century. The final clauses of the Nicene Creed, which affirm distinctly, amongst other truths, the Deity and personality of the Third Person, were, if we are to accept the entire silence of the leading historians as evidence, not added at the Council of Constantinople; they were entirely ignored even at the Council of Ephesus. The apprehension of the *Homoousion* of the Holy Spirit was little permeated as yet by the Christian consciousness of the unity of God. Still the faith in it was *in* the Church. The expanded form of the Nicene Creed is found in a work written by Epiphanius *seven years before* the Council of Constantinople (A.D. 381), and it is probable that the old Creed of Jerusalem contained such clauses, and that Cyril produced them before the Council of Constantinople. But the times were not ripe for this controversy. Still, his system obliged Eunomius to say something about the Spirit; he had to draw his conclusions; and what he says savours of the purely Greek heresies of the next century: 'After him (*i.e.* the Son), we believe on the Comforter, the Spirit of truth,' says Eunomius. The omission of 'Holy' is to be noticed; doubtless it is because, being aware of the Scripture expressions, 'God is Spirit' (Jn 4[24] RVm), 'the Lord our God is Holy' (Lv 19[2]), he may prepare the way, by the omission of one at least of these glorious titles, for the still further subjection of the Spirit. So he continues: 'Once for all made subject,' but does not specify what this subjection is. 'Who came into being by the only God through the Only-begotten.' The term 'the only God' for the Father prepares for what is coming, and shows what value to attach to the whole. The Father employs the Son as an instrument for the production of the Spirit. 'Neither on the same level with the Father,

nor connumerated with the Father; nor on an equality with the Son, for the Son is Only-begotten, having no brother begotten with Him.' This is, of course, inconsistent with Eunomius' previous interpretation of the Scripture words πρωτοτόκος τῆς κτίσεως as actually meaning 'first-born amongst many brethren,' *i.e.* the whole creation, including not only the Spirit, but Himself. 'Not yet ranked with any other, for he has gone above all the creatures that came into being by the instrumentality of the Son, in mode of being, and nature, and glory, and knowledge, as the first and noblest work of the Only-begotten, the greatest and most glorious.' Eunomius concedes much to the glory of the Spirit, but he is pledged by his emanationism to His subjectivity. We must discount the value of what follows. Eunomius does not read any text in Scripture about the Spirit in the light of other texts.

'He, too, being one, and first and alone and surpassing all the creations of the Son in essence and dignity of nature, accomplishing every operation and all teaching according to the good pleasure of the Son, being sent by Him, and receiving from Him, and declaring to those who are instructed, and guiding into truth.' Again: 'accomplishing every operation and all teaching,' 'sanctifying the saints,' 'co-operating with the faithful for the understanding and contemplation of things appointed,' 'leading us to that which is expedient for us,' 'strengthening us in godliness,' 'lightening souls with the light of knowledge,' 'emboldening the faint-hearted,' 'acting as a guide to those who approach the mystery,' 'distributing every gift,' 'banishing devils,' 'healing the sick,' 'comforting the afflicted,' 'recovering the distressed.'

Orthodoxy could not have a word to say against all this, for it is true scripturally, only Scripture attributes all these very operations to the Father and to the Son as well, or implies that they must be ascribed to both. But Eunomius, while basing his own doctrine upon Scripture, perforce ignored this. His principle once laid down at the first, 'that the energies and works are commensurate with the Beings which they follow, and are accordingly superior or inferior as the Beings are,' prevents any of these operations of the Holy Spirit from being purely Divine in his eyes. The fatal separation and subordination of the Beings lead to a still more fatal separation and subordination of the works. As redemption itself by the incarnation, being the Son's work and not the Father's, was rather a symptom of weakness in Him than an evidence of the power of Divine mercy, so the work of the Holy Spirit, being not the Son's nor the Father's, is no more to Eunomius than what might be attributed to some human teacher, *e.g.*, to be sent, to receive, to announce, to suggest the truth; it is not God Himself whispering in the heart of man.

To this emanationism ingrained in his system we must, of course, attribute the curious insistence of Eunomius on the Spirit's being the production of the Son alone: the 'energy' of the Son produced the Spirit as the 'energy' of the Father produced the Son. Was it only reverence for the words in Jn 15[26], or was it also the spectacle of Eunomius and many others on this downward road of emanationism, that restrained every Greek Council and every ancient Greek Father from mentioning the Son in connexion with the Procession of the Holy Spirit? Gregory of Nazianzus speaks for them all: 'Standing on our definitions, we introduce the Ungenerate, the Generated, and that which proceeds from the Father (1 *Orat de Filio*, ii.).'

As to Baptism, the views of Eunomius can be speedily stated. He is evidently alluding to it in the following words (as quoted by Gregory of Nyssa, *c. Eunom.* xi. 5): 'But we affirm that the mystery of godliness does not consist in venerable names, nor in the distinctive character of customs and sacramental tokens, but in exactness of doctrine.' He goes on to say that baptism is not into the Father, the Son, and the Holy Spirit, but 'into an artificer and creator'—apparently excluding the Third Person altogether. Accuracy of doctrine and clearness of statement were to the Eunomians salvation, and mysteries worse than nothing, for the claims of the Sacrament of Baptism must disappear altogether with the Divinity of the Spirit, as the claims of the other Sacrament disappear with the Divinity of Christ. Neither could place us, in this system, in communion with this ungenerate God, either in heart and spirit, as the Church could affirm with her living faith in a consubstantial Trinity, or in mind, which was all that the Eunomians would have valued. But for this communion of mind their teacher had provided a better way of his own.

If Eunomius has a title to originality, it must rest on the use he made of this term 'ungenerate,' and it is this peculiar use of it that makes his heresy strange and startling. For 'ungenerate' and 'generate' had been the very terms which the defenders of the *Homoousion* had borrowed from philosophy, to bring home to a cultured but unbelieving world that intimacy between the Father and the Son the mention of which was ever on the Saviour's lips, according to the Gospel records. They had been employed to translate the inmost mystery of the new religion. 'Generate,' which had previously connoted nothing but the opposite of 'ungenerate,' had now been brought into closest correlation and union with the Ungenerate; and expressed that which could not otherwise be expressed, in the current philosophical language. But Eunomius employs the terms in order to destroy that very thing which faith had adopted them to teach—the oneness of the Only-begotten with the God who begat but who is Himself unbegotten. He found these terms within the Church, doing duty, as it were, to make clear that oneness; he employed them, by bringing them back to their former use, to destroy it! Then this dichotomy of his had to be met, *e.g.* by Gregory of Nyssa, with the counter dichotomy of 'created' and 'uncreated,' which, unlike the other, was founded on an *essential* difference, and left that which was within the inviolable circle of the Godhead free for ever from any more dichotomies, whatever other assaults might at any time be made upon it.

'Uncreate, intelligible nature is far removed from such distinctions' (*i.e.* as those of Eunomius), says Gregory (*c. Eunom.* i. 22). 'It does not possess the good by acquisition, or participate only in the goodness of some good which lies above it. . . . It is simple, uniform, incomposite. . . . But it has distinction within itself in keeping with the majesty of its own nature, but not conceived of with regard to quantity, as Eunomius supposes.'

This was the impregnable position that Athanasius also had taken up. To admit that the Son is less than the Father, and the Spirit less than the Son, is to admit, as we have seen, the law of emanation, that is, the gradual and successive degradation of God's substance. By this path Oriental heretics, as well as the Neo-Platonists, had been led to a sort of pantheistic polytheism. Arius had, indeed, tried to resist this tendency, but so far only as to bring back Divinity to the Supreme Being. This was done at the expense of the Divinity of the Son, who was with Arius as much a created intermediate between God and man as one of the Æons. Eunomius treated the Holy Spirit as his master had treated the Son; only by a more complete and decisive method, since his new weapon of ungeneracy created an actual *unlikeness* between the Persons. Arianism, whether the earlier or the later, tended alike to Judaism, and, by making creatures adorable, to Greek polytheism. There was only one way of cutting short the phantasmagoria of Divine emanations, without having recourse to the contra-

dictory hypothesis of Arius; and that was to reject altogether the law of emanations as hitherto accepted. Far from admitting that the Supreme Being is always weakening and degrading Himself in that which emanates from Him, Athanasius lays down the principle that He produces within Himself nothing but what is perfect, and just, and Divine; all that is not perfect is a work, but only a work, of the Divine will, which draws it out of nothing (*i.e.* creates it), and *not out of the Divine substance.*

With regard to the diffusion of Eunomianism, Sozomen says (*HE* vi. 27):

'The heresy of Eunomius was spread from Cilicia and the mountains of Taurus as far as the Hellespont and Constantinople.' In A.D. 380 at Bithynia, near Constantinople, 'multitudes resorted to him; some also gathered from different quarters, a few with the design of testing his principles, and others merely from the desire of listening to his discourses. His reputation reached the ears of the emperor, who would gladly have held a conference with him. But the Empress Flacilla studiously prevented an interview from taking place between them; for she was the most faithful guard of the Nicene doctrines' (*ib.* vii. 6).

At the convention, however, of all the sects, at Theodosius' palace in A.D. 382, Eunomius was present (Socrates, *HE* v. 10). His Ἔκθεσις τῆς πίστεως (to which he added learned notes) was laid before Theodosius in 383. In his answer to Eunomius' Second Book, Gregory of Nyssa finds that Eunomius has still a flock, with whom the former thus expostulated: 'With what eyes will you now gaze upon your guide? I speak to you, O flock of perishing souls!' This could not have been written earlier than A.D. 384.

It was stated at the beginning of this article that Eunomius had been a martyr to his cause, and so he was destined still to be. But it was not till 391 that the Emperor condemned him to banishment to Mœsia. The barbarians, however, drove him from them; and he was brought to Cæsarea, much to the annoyance of the Christians there, who resented the presence amongst them of the enemy of their lost Basil. He died at his birth-place, Dacora in Cappadocia; and his tomb was visited there.

LITERATURE.—The *Apologeticus* of Eunomius in 28 sections is edited by H. Canisius in *Lectiones Antiquæ*, Ingolstadt, 1601–04, i. 172 ff. The beginning and epilogue are in Cave's *Hist. Lit.*, London, 1688, i. 171, Lat. tr. by W. Whiston, in his *Eunomianismus redivivus*, London, 1711. His Ἔκθεσις τῆς πίστεως in the Codex Theodosius is edited by Valesius, in his notes on Socrates, Paris, 1668; by Baluze, in the *Nova Collectio Conciliorum*, Paris, 1683, i. 89; and by Ch. H. Rettberg in his *Marcelliana*, Göttingen, 1794. This is the best edition. See also F. Oehler's ed. of Gregory's 13 Books against Eunomius, in vol. i. of the *Works of Gregory of Nyssa* (Halle, 1865); C. R. W. Klose, *Gesch. und Lehre des Eunomius*, Kiel, 1833; W. Kölling, *Gesch. der arian. Häresie*, Gütersloh, 1875–83; J. Rupp, *Gregors des Bischofs von Nyssa Leben und Meinungen*, Leipzig, 1834; J. A. Fabricius, *Bibl. Græc.*, Hamburg, 1804, ix. 207 ff.

W. MOORE.

EUNUCH.—The operations of castrating males and of spaying females were probably practised on animals earlier than on human beings; and desexualization has always been far more commonly performed on males than on females. Castration of horses was known in Vedic India, as is shown by the frequent occurrence of the proper name *Vadhryaśva* ('He who has castrated horses'), and the repeated mention of the ox beside the bull (*e.g.* *Rigveda*, I. xxxii. 7, X. cii. 12; cf., further, Zimmer, *Altind. Leben*, Berlin, 1879, pp. 231, 226). Homeric Greece was plainly acquainted with the castration of animals (cf. ἔνορχα μῆλα, *Il.* xxiii. 147), and the custom of gelding horses is recorded for the Scythians and Sarmatians by Strabo (p. 312).

1. Methods and purpose of castration.—The most primitive method of castration seems to have been by crushing the testicles, mentioned in *Atharvaveda*, VI. cxxxviii. 2, and implied in a long series of words meaning 'castrated' and connected with bases denoting 'crush' and the like.

Here belong Lat. *capo*, 'capon' (Gr. κόπτω, 'strike'); Old Ir. *molt*, 'wether' (Old Church Slav. *mlatŭ*, 'hammer'); Swab. *raun*, 'gelding' (Skr. *ru-*, 'shatter'); Alban. *treθ*, 'castrate' (Lat. *trudo*, 'thrust'); Gr. θλαδίας, θλιβίας, 'eunuch' (θλάω, θλίβω, 'crush'); Skr. *vadhri*, Gr. ἔθρις, 'eunuch' (Skr. *vadh-*, 'strike,' 'shatter'); O.H.G. *barug*, 'castrated hog,' Old Church Slav. *bravŭ*, 'wether' (Lat. *ferio*, 'strike'). It is also evident, from *Atharvaveda*, VI. cxxxviii. 2, 4–5, that, besides crushing or splitting the testicles with stones, or with a peg, the penis might also be split.

Besides crushing, cutting was also employed, as is shown by such words as Gr. τομίας, 'eunuch' (τέμνω, 'cut'); Lat. *castro*, 'castrate' (Skr. *śās-*, 'cut'); Old Ir. *lún*, 'wether' (Skr. *lu-*, 'cut'); Skr. *nirasṭa*, 'castrated (Skr. *aśri*, 'edge,' 'knife'). The operation of dragging the testicles from the scrotum seems to be implied in Gr. σπάδων, 'eunuch' (σπάω, 'drag'; cf. Skr. *muṣkābarha*, 'castrater' [lit. 'he who puts the testicles outside'], *Atharvaveda*, III. ix. 2); and, if O.H.G. *urfūr*, 'castrated,' Anglo-Sax. *áfýran*, 'castrate,' are connected with Gr. πῦρ, 'fire,' the application of hot iron to the testicles may likewise have been employed (on all these terms, see Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, p. 919; Hirt, *Indogermanen*, do. 1905–07, pp. 291, 658).

A survey of the terms just given shows that castration of human beings was performed in Europe only where Oriental influences were present; and in this case linguistic evidence is not contradicted by any facts thus far known. The reasons for the castration of animals were doubtless the same in early times as they are to-day: greater docility (notably in horses and oxen) and increased savouriness of meat (as in capons).

Turning to the subject proper of the present art.—the castrated human male, or eunuch—it may be noted that the terms for 'eunuch' give, with perhaps a single exception, no clue as to the reason for the institution of castration. The sources of Skr. *vadhri* and of Gr. θλιβίας, ἔθρις, τομίας, and σπάδων have already been given. The best known term of all, εὐνοῦχος, is of uncertain signification.

The old etymology, found as early as the *Etymologicum Magnum*—ἀπὸ τοῦ τὴν εὐνὴν ἔχειν καὶ ἐπιμελεῖσθαι καὶ φυλάσσειν—and still advanced by Tylor (*EBr*[11], art. 'Eunuch'), by which the word means 'bed-warder,' merits no consideration. Perhaps the best suggestion is that advanced by Jensen, *ZA* i. [1886] 20, who regards εὐνοῦχος as a loan-word from the Sem., comparing Heb. חָנוּךְ, חָנִיךְ, 'trained,' 'tried,' 'experienced' (cf. Syr. *mᵉhaimnā*, 'eunuch' [lit. 'trustworthy,' 'trusted'], and see Lewy, *Sem. Fremdwörter im Gr.*, Berlin, 1895, p. 75).

The Heb. term for 'eunuch' is סָרִיס, which is probably to be regarded, with Jensen, *ZA* vii. [1892] 174, note 1, as borrowed from Assyr. *ša rêši* (*rîši*), 'he who is the head *or* chief,' particularly as this would explain all the offices and duties performed by the סָרִיס in the OT (cf. Zimmern, *ZDMG* liii. [1899] 116, note 2).

EV is, therefore, correct in rendering סָרִיס by 'officer' or 'chamberlain' in the majority of its occurrences, reserving 'eunuch' for passages in which this is obviously the meaning (*e.g.* 2 K 9^{32} 20^{18} = Is 39^{7} $56^{3f.}$; some passages, as Jer 29^{2} 34^{19}, are equally susceptible of either rendering; in any case it seems unnecessary to accept Cheyne's suggestion [*EBi* 1427] that two words originally distinct have been fused in סָרִיס). The precise nature of the operation performed on the ancient Sem. eunuchs is uncertain, but from the antithesis, in Dt 23^{1}, of פְּצוּעַ־דַּכָּה וּכְרוּת שָׁפְכָה (LXX θλαδίας, ἀποκεκομμένος) it is evident that both crushing of the testicles and ablation of the penis must have been among the methods employed (cf. also the Vulg. rendering of the passage, 'eunuchus, attritis vel amputatis testiculis et absciso veretro').

2. Physical and mental effects of castration.—If castration is performed on a child, and if proper precautions are taken, the operation is not, surgically speaking, a very serious one, although the mortality is enormous among the unfortunate children castrated by African slave-dealers for the Oriental market. After puberty the operation becomes much more grave. In the case of boys, castration prevents the development of the secondary sex-characteristics—the growth of the beard

and of hair on the body, and the change of the larynx, the eunuch voice thus approaching the female *timbre*. Males castrated in adult life naturally have the same secondary sex-characteristics as other men. Data are lacking with regard to the castration of girls, though analogically there should be no pubic or axillary hair, and no characteristic development of the pelvis and breasts. Oophorectomy after puberty is commonly alleged to result—though the secondary sex-characteristics remain—in a certain approximation to the male type, as in the quality of the voice and in the growth of hair on the face. Castration of the male does not immediately result in loss of *libido*. On the contrary, the castrate can for some time—at least a year—have sexual intercourse and emit a quasi-semen (probably the secretion of the prostate gland). Accordingly, in the degenerate days of the Roman Empire, eunuchs were regularly made, soon after reaching puberty, for the sensual gratification of Roman dames, particularly 'quod abortivo non est opus' (Juvenal, *Sat.* vi. 365 ff.; cf. Seneca, *de Matrimonio*, ed. Hase, p. 429; Martial, *Epigr.* vi. 2; *Thousand Nights and One Night*, tr. Payne, London, 1882–84, i. 368). Later, however, erections occur much more seldom—almost never after 18 months from the operation—and there is no sensation of seminal ejaculation. In the female oophorectomy usually annihilates the sexual impulse, but there are many exceptions, for in some females *libido* is increased after removal of both uterus and ovaries.

Surgically, castration is generally performed to relieve disease of the testicle, bladder, and prostate gland in the male, and of the ovaries and uterus in the female. In males it is also often done to relieve urinary weakness (retention of urine, etc.). Oophorectomy for ovarian disease of the female hastens the physical changes usually ascribed to the menopause, unless, as is often done, a small portion of ovarian tissue is left *in situ*, or is engrafted upon the uterine body.

The operation of castration affects the body chemistry (metabolism) very strongly. The phosphates in the urine and the carbonic acid in the expired breath diminish, while the weight of the body increases. Many spayed women grow fat and dyspeptic. Congestion to the head and thorax and excessive perspiration appear and may continue for years. Melancholia is developed in a large percentage of cases, together with loss of memory, irritability of temper, impairment of vision, nightmare, insomnia, and skin affections.

On mentality castration appears to produce no essential change. It is true that eunuchs are usually inclined to be malevolent and unscrupulous, that they are apt to be either extremely abased or inordinately haughty. Yet this is due not so much to the physical results of the operation as to the fact that by the hand of their fellow-men they have been put outside the pale of normal humanity, and they feel a not unnatural resentment, accentuated by the aloofness usually felt by all who are marked off, by mental or physical peculiarities, from the ordinary mass of mankind. Nowhere, perhaps, has the mixture of native ability and acquired malignancy been more strikingly exemplified than in the case of Āghā Muḥammad, who, castrated in early life by 'Ādil Shāh, was able to overthrow the Zend dynasty in Persia and, in 1796, to found in blood the Qājār house (cf. Horn, *GIrP* ii. 594–596). But that cruelty is an accident, and that mental and spiritual powers are unabated, is proved by the famous instances of Origen and Abelard (*qq.v.*).

Certain peoples are reported to have practised the excision of one testicle only, as is recorded of the Hottentots by Kolben (*Beschreib. des Vorgebirgs der guten Hoffnung*, Frankfurt, 1745, p. 147). Their motive was to prevent the birth of twins, an event of such ill omen to many peoples (see TWINS); and, Kolben adds, no woman would marry a man unless his left testicle had been excised in childhood, the operation being performed at intervals of eight or nine years on all who might be of the proper age. In Ponape, one of the Caroline Islands, the left testicle is extirpated with a sharp bamboo at the age of seven or eight (on Niuatabutahu, in the Friendly Islands, the age is 12–14), the purpose being to avoid orchitis; and the man on whom this has been performed is deemed particularly handsome by the girls (Finsch, *ZE* xxii. [1880] 316).

The general function of eunuchs was to serve as a superior sort of slave, particularly—in view of their sterility—as guardians of the harîm. It would appear that the castration of human beings was first suggested by analogy with that of animals (cf. Xenoph. *Cyrop.* VII. v. 60–65)—it was supposed to make men more tractable as slaves, and, by depriving them of the distractions of family life, to render them more faithful to their masters. But, effective as this proves in the case of animals, it is far otherwise in the case of man; and the history of the eunuch system is one stained by vilest intrigue and darkened by utter corruption.

3. Birthplace and diffusion of the practice.—Where castration started is an unsolved question, but the tradition recorded by Ammianus Marcellinus (XIV. vi. 17), that it was instituted by the legendary Semiramis, would seem to point to the Mesopotamian region as its first home. Eunuchs were early known in Assyria, where they apparently acted as generals and governors (Jensen, *ap.* Manitius, *ZA* xxiv. [1910] 109, note 1; cf. esp. Klauber, 'Assyr. Beamtentum,' *LSSt* v. 3 [1910], p. 117). They were in Israel at least as early as the reign of Jehu (2 K 9^{32}), and in Persia (Brisson, *de Regio Persarum Principatu*, ed. Lederlin, Strassburg, 1710, *passim*), in Greece by the time of the Persian wars (Herod. viii. 105), in Egypt during the XXth dynasty (1202–1102 B.C.; Rawlinson, *Hist. of Anc. Egypt*, London, 1881, ch. xxii.), in Ethiopia (Ac 8^{27}), in India at an early date (*Mahābhārata* III. cl. 46); they exercised an evil power at the courts of Gordianus III., Constantius, Honorius, and Arcadius (Gibbon, *Decline and Fall*, chs. vii., xix., xxxii., xxxiii.); and they were introduced into China in the 8th cent. B.C. (cf. Stent, *Chines. Eunuchen*, Leipzig, 1879).

4. The eunuch priest.—Far more important in the present connexion—and far more difficult—is the problem of the origin of the eunuch priest. The Ephesian Artemis was served not only by virgins, but by eunuchs, the name of the latter—Μεγάβυζοι (i.e. **Bagabuxša*, 'having salvation through the Deity' [Justi, *Iran. Namenbuch*, Marburg, 1895, p. 57])—betraying their Oriental origin (Strabo, p. 641); and the priests of Atargatis were also eunuchs (*ERE* ii. 166 f.). A goddess called Hecate—probably an amalgamation of the great mother-goddess of Asia Minor—worshipped at Lagina (the modern Ileina, 2 hours north of Stratonica, Caria), had among her servants eunuchs and *hierodouloi* (Gruppe, *Gr. Mythol. und Religionsgesch.*, Munich, 1906, p. 263); and the eunuch priests of Cybele are universally known (*ERE* iv. 377).

The names applied to the eunuch priests of Cybele and Attis—βάκηλοι and γάλλοι—are of unknown signification. The latter word was derived by the Greeks and Romans (e.g. *Etymolog. Mag.*, s.v.; Ovid, *Fasti*, iv. 361 ff.) from the river Gallus in Phrygia, but the stream was more probably so called in honour of some deity; and the attempt to connect γάλλος with Heb. גַּל, 'roll,' is merely fantastic (cf. Gruppe, 1542, note 2).

It is in the cult of Cybele (*q.v.*) that the question of the origin of the eunuch priest must centre. That Attis (*q.v.*), her male partner, castrated him-

self was the subject of very divergent conjectures in ancient times (*ERE* ii. 217; Gruppe, 1542 f.); yet it must be remembered that to ancient religions the problem of origins is in great measure indifferent, the chief duty being minute conformity to traditional rites (cf. Hepding, *Attis, seine Mythen und sein Kult*, Giessen, 1903, p. 98).

The castration of a god is familiar from the Gr. legends regarding Uranos and Kronos (Gruppe, 356, 1114, note 1), although these seem to have little in common with the story of Attis. The foundation of the myth of the mutilation of Uranos and Kronos is probably one 'of the violent separation of the earth and sky, which some races, for example the Polynesians, suppose to have originally clasped each other in a close embrace' (Frazer, *Attis, Adonis, and Osiris*, London, 1907, p. 237; Lang, *Custom and Myth*, do. 1884, p. 45 ff., and *Myth, Ritual, and Religion*, do. 1887, i. 299 ff.; for a convenient summary of the Polynesian myth, see *ERE* iv. 175[a]). Gruppe (1112) is inclined to explain the stories as borrowed from a Sem. source given by Philo Byblius, as quoted by Eusebius, *Præp. evang.* I. x. 12, but Gruppe's explanation, that the series—'Επίγειος (Αὐτόχθων); El, Demarus; Uranos, Kronos, Zeus—represents three periods, viz. unrestricted production, absolute cessation of production, and the orderly and regulated production of like from like (as is the case in the organic world), seems far less likely than the interpretation advanced by Lang and Frazer. But, if the myths of the mutilation of Uranos and Kronos are cosmogonic, it seems equally evident that the origin of the legend of the self-castration of Attis was ætiological, so that, as Frazer declares (p. 221), 'the story of the self-mutilation of Attis is clearly an attempt to account for the self-mutilation of his priests, who regularly castrated themselves on entering the service of the goddess.'

But why, granting Frazer's explanation of the myth of the self-mutilation of Attis, did the *galli* emasculate themselves? First of all, the *galli* were priests of Cybele, a mother-goddess. The cult of this divinity, especially at Rome, is fairly well known (*ERE* ii. 217 f.; and esp. Hepding, *op. cit.*). Here we may note particularly that the self-castration of the *galli* took place probably on 24th March—the third day of the annual festival in honour of the Great Mother—the *dies sanguinis*, which typified the grief of Cybele for the death of Attis, and on which her devotees, headed by the *archigallus*, gashed their bodies with potsherds or slashed them with knives to bespatter the altar and the sacred tree with their blood (cf. Frazer, 223, with references, to which may be added the quotations from Ambrosiaster by Cumont, *RHLR* viii. [1903] 423, note 1). We also learn much concerning the *galli* from the Latin accounts of their processions (*e.g.* Lucret. ii. 600 ff.; Ovid, *Fasti*, iv. 181 ff.).

Here one feature must be deemed peculiarly significant, even though little attention seems thus far to have been given it by those who have studied the Attis-Cybele cycle—the *galli* wear female garb.

After his castration Attis wore female clothing (Lucian, *de Dea Syr.* xv.). Varro (*Men.* cxx. [ed. Büchelerl]) describes the *galli* as 'partim venusta muliebri ornati stola'; Arnobius (*adv. Gentes*, v. 17), as wearing 'volucra mollium velamenta lanarum'; and the pseudo-Cyprian (*ad Senatorem ex Christiana religione ad idolum servitutem conversum*, 9), as clad 'tunicis muliebribus.' Most important of all in this connexion is St. Augustine (*de Civ. Dei*, vii. 26), who expresses his scorn of the *galli*, who, in their processions, were to be seen 'madidis capillis, facie dealbata, fluentibus membris, incessu femineo.' Small wonder that satirists and Christian apologists even charged the *galli* with being sodomites (Martial, *Epigr.* III. lxxxi. 3–6; Justin Martyr, *Apol.* i. 27)—a charge that was renewed by Rosenbaum (*Gesch. der Lustseuche im Alterthume*, Halle, 1845, p. 120), though there seems to be no certain evidence for the accusation.

In like manner those who castrated themselves in honour of the Syrian Astarte of Hierapolis also wore women's clothing. After performing the mutilation upon themselves, they ran through the city, carrying in their hands the severed parts, which they cast into some house; and the inmates were required to furnish the newly castrated with female attire and female adornments, which were worn by the eunuchs for the remainder of their lives (Lucian, li.).

Outside of Asia Minor the eunuch priest is rare, although Frazer (p. 225, note 4) has succeeded in collecting a few instances.

Among the Ba-aundi and Ba-bwende of the Congo many youths are castrated 'in order to more fittingly offer themselves to the phallic worship, which increasingly prevails as we advance from the coast to the interior' (Johnston, *JAI* xiii. [1884] 473, and *The River Congo*, London, 1884, p. 409). In the western part of the Bellary District of Madras, and in the adjoining portions of Dharwar and Mysore, men who are born eunuchs or in some way deformed are sometimes dedicated to a goddess named Huligamma. They wear female attire and might be mistaken for women. Also men who are, or believe themselves to be, impotent will vow to dress as women in the hope of recovering their virility (Fawcett, *JASB* ii. [1890–92] 331, 343 f.). In Pegu, at a feast called the 'collock,' 'some Women are chosen out of the People assembled, to dance a Dance to the Gods of the Earth. Hermaphrodites, who are numerous in this Country, are generally chosen, if there are enow present to make a Set for the Dance' (Hamilton, *New Account of the East Indies*, Edinburgh, 1727, ii. 57 f.).

What, then, is the origin of the eunuch priest, dedicated to a goddess of fertility and clothed in female garb? Leaving out of account the African usage, which is probably connected with religious sodomy—a custom also widely spread among the ancient Semites and the American aborigines—and likewise dismissing as fantastic the theory reported by Hippolytus (*Refut. omnium hær.* v. 17), on Naassenian authority, that by his castration Attis was raised to 'the celestial essence, where, they say, there is neither female nor male, but a new creation, a new man, who is androgynous,' we may note the principal explanations that have been advanced.

Gruppe (1542–1546) supposes that the self-castration of the *galli* was to secure chastity (cf. Hepding, 162), in conformity with an ascetic desire to renounce the joys of the world, although the idea of the marriage of Cybele and Attis still survived in the practice of burying the severed parts in the earth or in subterranean chambers sacred to Cybele. Westermarck (*MI* ii. 414) suggests that the eunuchization may have been due to 'the idea that the deity is jealous of the chastity of his or her servants,' his basis being a theory of Lactantius (*Div. Instit.* i. 17): 'Deum mater et amavit formosum adolescentem, et eundem cum pellice deprehensum exsectis virilibus semivirum reddidit; et ideo nunc sacra eius a gallis sacerdotibus celebrantur' (further references in Gruppe, 1542, note 3). To say, with Jeremias (in Chantepie de la Saussaye, *Lehrbuch der Religionsgesch.*[3], Tübingen, 1905, i. 361), that 'self-castration is the dedication to the goddess [Astarte]. The castrates are dedicated to the divinity like the Vestals,' is an ambiguous platitude. Frazer (p. 223 f.) conjectures that the self-castration of the *galli*, like the self-gashing of the other devotees, was intended to strengthen the dead Attis for his resurrection.

'Wrought up to the highest pitch of religious excitement, they [the *galli*] dashed the severed portions of themselves against the image of the cruel goddess. These broken instruments of fertility were afterwards reverently wrapt up and buried in the earth or in subterranean chambers sacred to Cybele, where, like the offering of blood, they may have been deemed instrumental in recalling Attis to life and hastening the general resurrection of nature, which was then bursting into leaf and blossom in the vernal sunshine. Some confirmation of this conjecture is furnished by the savage story that the mother of Attis conceived by putting in her bosom a pomegranate sprung from the severed genitals of a man-monster named Agdestis, a sort of double of Attis.

If there is any truth in this conjectural explanation of the custom, we can readily understand why other Asiatic goddesses of fertility were served in like manner by eunuch priests. These feminine deities required to receive from their male ministers, who personated the divine lovers, the means of discharging their beneficent functions: they had themselves to be impregnated by the life-giving energy before they could transmit it to the world.'

Hepding, who, like a number of other scholars, derives the self-mutilation of Attis from the Semites (pp. 128, 161 f., 178, 217), attributes it in part to the anæsthesia-producing frenzy of the general character of the orgiastic rites (pp. 129 f., 160 f.); but this is only a partial explanation, applicable, indeed, to the gashing with sherds and

knives, but hardly sufficient to account for the great act of self-castration. He is, however, probably correct in maintaining (p. 127 f.) that this characteristic was introduced subsequent to the time of Herodotus, whose account of the Attis myth (iv. 76) contains no intimation of any orgiastic gallic rites.

Yet all these theories seem inadequate, especially as they do not account for the subsequent donning of female dress and for the general adoption of feminism. The only explanation which seems to fit the facts is that of Farnell (*CGS* iii. 300 f.):

'Even the self-mutilation necessary for the attainment of the status of the eunuch-priest may have arisen from the ecstatic craving to assimilate oneself to the goddess and to charge oneself with her power, the female dress being thereupon assumed to complete the transformation.'

The assumption of women's garb by certain classes of effeminate priests is wide-spread (see above, p. 70, and cf. Frazer, 428 ff.), and in the case before us it may have been furthered by the principle of impersonation often associated with dress (see above, pp. 51ᵇ, 65ᵇ). It seems probable that the *galli*, as devotees of the Great Mother, first donned the garments of her own sex; and that later, to make the resemblance between themselves and their divinity as close as possible, they removed the organs which had rendered them conspicuously not of her sex, and whose ablation made them approximately similar to her. Another contributing factor may perhaps have been that they were thus also assimilated to her virgin attendants of true female sex.

If the explanation here favoured is correct, there would be an interesting analogue in the present writer's suggestion regarding the origin of the Australian operation of *ariltha* (*ERE* iii. 666ᵇ). Moreover, just as in the case of female circumcision (*ib.* 669), there seems to have been a later, reverse tendency to make the female and male types of the devotees of Cybele more alike by amputation of the *mammæ* (Arnobius, *adv. Nationes*, v. 13 f.; cf. also Gruppe, 1545, note 5, whose explanation, however, seems scarcely plausible).

Even within the history of Christianity sporadic instances of self-mutilation have occurred. Of these the best known is that of Origen, who later bitterly repented his un-Christian act, to which he had been led by his incorrect exegesis of Mt 19[12], combined with his anxiety to avoid all scandal in his association with his pupils (Euseb. *HE* vi. 8). In similar fashion

'Leontius made himself an eunuch to avoid suspicion in his converse with the virgin Eustolium: but he was deposed from the office of presbyter for the fact, and it gave occasion to the Council of Nice to renew the ancient canon against such practices; so that, when the Arians afterward ordained him bishop of Antioch, the historians [Socrates, *HE* ii. 26; Theodoret, *HE* ii. 24] tell us, the Catholics generally declaimed against his ordination as uncanonical' (Bingham, *Antiquities of the Chr. Church*, ed. R. Bingham, Jr., Oxford, 1855, ii. 47 f.).

This form of mutilation is, as is well known, the characteristic which gives its name to the fanatical Russian sect of Skoptzy ('castraters'—the writer's rendering, 'circumcisers,' in *ERE* iii. 667ᵇ, is wrong), who also, in addition to mutilation of the female genitals, amputate one or both of the breasts (cf. E. Pelikan, *Gerichtlich-medizin. Untersuchungen über das Skopzenthum in Russland*, tr. Iwanoff, Giessen, 1876). St. Augustine (*de Haer.* xxxvii.), it is true, states that 'the Valesians castrate both themselves and their guests, thinking that they should in this way serve God'; but the existence of these Arabo-Christian heretics is too doubtful for their practices to be considered here, and the Council alleged to have been held in Achæa about the middle of the 3rd cent. to condemn them appears to be equally dubious (cf. Hefele, *Hist. des conciles*, Fr. tr., Paris, 1907 ff., i. 164).

The Skoptzy have not been the only ones who have castrated women. According to Athenæus (xii. 11 [p. 515]), Adramytis thus mutilated women in Lydia, 'using them instead of male eunuchs'; but the most interesting instance is that declared to exist among some Central Australian tribes.

On the authority of Purcell (*Verh. der Berliner Gesellsch. für Anthropol., Ethnol. und Urgesch.*, 1893, p. 288), which is not, however, substantiated by Spencer-Gillen, the operation of *euriltha*, or spaying, is performed on certain selected girls from 10 to 12 years old. The older men prepare a long roll of emu feathers with a loop of hair at the end. This is thrust into the vagina and is left there for some days, after which the old men pull it out, thus tearing away part of the womb. Three days later a small stone knife is inserted, and the neck of the womb is cut horizontally and vertically, the down of geese or eagle-hawks being then introduced, and lumps of fat being used as salve. When the wound is healed, the operation of female circumcision (described in *ERE* iii. 667 f.) is performed. The alleged purpose of this female castration is to prevent the women from bearing children to foreign tribes, and to save them from being encumbered by infants when going through dry and barren country; but, in view of the fact that the Australians do not know that procreation is connected with the sexual act (*ERE* iii. 666ᵇ), this explanation must be accepted with reserve. Milucho-Maclay (*ZE* xiv. [1882] 26 f.) describes a girl who had undergone this operation as having only slightly developed hips, breasts, and *mons Veneris*, and with some hairs growing on her chin. The purpose is said to be the furtherance of prostitution. The same authority was told by E. P. Ramsay, curator of the Sydney museum, that the well-known explorer MacGillivray had seen at Cape York a woman oophorectomized to prevent the birth of dumb children, she herself having been born dumb. Similarly, Roberts (cited by Bischoff in Müller's *Archiv für Anat., Physiol., und wissenschaftliche Medizin*, 1843, p. clix f.) records having seen female eunuchs in India; here again these women, whose age was about 25, approximated in lack of pelvic development, etc., very closely to the male type.

5. Castration as a punishment.—Attention has already been drawn in the artt. CRIMES AND PUNISHMENTS (vol. iv. pp. 251ᵇ, 255ᵇ, 256ᵇ, 266ᵇ, 304ᵇ; cf. also ETHICS AND MORALITY [Celtic], III. § 7), to castration as a punishment. Except in Frisian law, where this was inflicted on a robber of a temple, being preliminary to the penalty of death, emasculation was normally a punishment for rape and similar crimes; and occasionally, as in Welsh law, it was inflicted only when the criminal could not pay the heavy fines required.

In Egypt, castration was the penalty for adultery (Post, *Bausteine für eine allgem. Rechtswissensch.*, Oldenburg, 1880–81, i. 208), while in India a Śūdra who committed adultery with the wife of an Ārya, or who insolently made water on a high-caste man, suffered amputation of the penis (Manu, viii. 282, 374); and a Brāhman who dishonoured the bed of his teacher had, as one of the three modes of death offered him, the option of himself amputating his penis and scrotum, and of then advancing, holding them in his hand, to the south-west (the direction of Nirṛti, 'Destruction') until he should fall dead (Manu, xi. 105). Similarly, those who have sexual relations with women of other castes than their own (excepting, of course, lawful marriages with women of lower castes), who cause animals to be killed, or who violate their teacher's wife, are punished, according to *Mahābhārata*, XIII. cxlv. 52 f., in their next incarnation by being born *klība* (which may mean either 'eunuch,' 'impotent,' or even 'hermaphrodite'). The laws of Alfred the Great (ii. 25) punished by emasculation a servant who raped a female servant (*MI* i. 251), and all male relatives of a Chinaman condemned for treason were doomed to death, excepting the young boys, who were castrated for service in the Imperial palace (*ib.* i. 45, with references).

6. Social and religious status of eunuchs.—The social status of the eunuch has always been of the lowest. (In the following references to Skr. texts it should be noted that the words *klība*, *vadhri*, *ṣaṇḍha*, etc., are somewhat ambiguous in meaning, denoting both 'eunuch' and 'impotent.') The *Mahābhārata* (VIII. xlv. 25) is very explicit here:

'Mlechchhas [barbarians, non-Aryans] are the dirt of humanity; oil-men are the dirt of Mlechchhas; eunuchs are the dirt of oil-men; and they who appoint Kṣatriyas as priests in their sacrifices are the dirt of eunuchs.'

A eunuch, or 'long-haired man,' is neither man nor woman (*Śatapatha Brāhmaṇa*, V. i. 2. 14, iv. 1. 1 f., XII. vii. 2. 12; cf. *Atharvaveda*, VI. cxxxviii. 2; *Mahābhārata*, V. clx. 115; and the

references given by Bloomfield, *SBE* xlii. 538 f.), and there is reason to believe that they ministered to unnatural sensuality (R. Schmidt, *Beiträge zur ind. Erotik*, Leipzig, 1902, p. 211). They could not inherit property (*Āpastamba D.Ś.* II. vi. 14. 1; *Gautama D.Ś.* xxviii. 43; *Vāsiṣṭha D.Ś.* xvii. 53 f.), and were to be maintained by the king, who was to take what would have been their inheritance if they had been normal men (*Vāsiṣṭha D.Ś.* xix. 35 f.). They were excluded from the *śrāddha*, or sacrifice to the *manes* (Manu, iii. 165), of which they were unworthy (*ib.* iii. 150), even as they were unfit for the ordeal by sacred libation (*Nārada D.Ś.* i. 332). No Brāhman might eat of a sacrifice performed by eunuchs (Manu, iv. 205 f.), nor might he consume any food prepared by them (*ib.* iv. 211; *Vāsiṣṭha D.Ś.* xiv. 2; *Āpastamba D.Ś.* I. vi. 18. 27; 19. 15) or accept alms offered by them (*Vāsiṣṭha D.Ś.* xiv. 19). They were forbidden to serve as witnesses (*Nārada D.Ś.* i. 179), and were deemed incapable of keeping a secret (*Milindapañha*, IV. i. 6). In contempt for their effeminacy, they might not be struck in battle (Manu, vii. 19), a special penalty being imposed for killing them (*ib.* xi. 134; *Gautama D.Ś.* xxii. 23). Being sterile, and so essentially ill-omened, the very sight of them was defiling (Manu, iii. 239 f.), and they were forbidden to be near the king during his consultations (*Mahābhārata*, XII. lxxxiii. 55), while the neat-herd Gañjā laments (Temple, *Legends of the Panjâb*, Bombay, 1884–1900, ii. 396):

'When I was in my mother's womb, eunuchs danced at the door; and so I am lame, and have no hair on my head.'

A eunuch might not be converted (*Milindapañha*, IV. viii. 53), nor might he be ordained (*Mahāvagga*, i. 61), and a *bhikkhu* was forbidden to castrate himself (*Chullavagga*, v. 7). Eunuchs were permitted to marry (Manu, ix. 79, 204; cf. 'Muslim' section below). Dancers, who are of low caste in India, were castrated (*Mahābhārata*, III. xlvi. 50), and the dancing of eunuchs is already referred to in *Atharvaveda*, VIII. vi. 11. In the *puruṣamedha*, or human sacrifice of the Vedic period, a eunuch was the victim offered to Misfortune [*Pāpman*] and —in this case the victim being neither of Brāhman nor of Śūdra caste—to Prajāpati (*Vājasaneya Saṃh.* xxx. 5, 22).

Among the Hebrews the eunuch was excluded from the assembly of the Lord (Dt 23² [Heb.]), though in the prophetic period the eunuchs that kept the Sabbath and, holding to the covenant of the Lord, pleased Him were to receive, in His house and within His walls, 'a memorial and a name better than of sons and of daughters; I will give them an everlasting name, that shall not be cut off' (Is 56³⁻⁶), while from the earliest days of the Church the eunuch has been freely admitted as a layman (Ac 8²⁷ᶠᶠ·). The question of the ordination of eunuchs has been more perplexing, for, as in the Jewish ritual, only the physically perfect should minister at the altar—a rule which is firmly observed by all Catholic communions. One born a eunuch might be ordained, as was Dorotheus of Antioch (Euseb. *HE* vii. 32), and so might one who had been castrated by a barbarian master, as was Tigris of Constantinople (Socrates, *HE* vi. 15; Sozomen, *HE* viii. 24); but not those who emasculated themselves from pretence of piety or from fear of committing fornication (Gennad. *de Eccl. dogmat.* lxxii.; First Nicene Council, can. 1; Second Arles Council, can. 7; cf. Bingham, ii. 45–48; the rulings have become part of Canon Law). The whole matter is summed up in the *Apostolic Canons*, xxi.–xxiv.:

εὐνοῦχος εἰ μὲν ἐξ ἐπηρείας ἀνθρώπων ἐγένετό τις, ἢ ἐν διωγμῷ ἀφῃρέθη τὰ ἀνδρῶν, ἢ οὕτως ἔφυ, καί ἐστιν ἄξιος, γινέσθω [sc. ἐπίσκοπος].

ὁ ἀκρωτηριάσας ἑαυτὸν μὴ γινέσθω κληρικός· αὐτοφονευτὴς γάρ ἐστιν ἑαυτοῦ καὶ τῆς τοῦ Θεοῦ δημιουργίας ἐχθρός.

εἴ τις κληρικὸς ὢν ἑαυτὸν ἀκρωτηριάσει, καθαιρείσθω, φονευτὴς γάρ ἐστιν ἑαυτοῦ.

λαικὸς ἑαυτὸν ἀκρωτηριάσας ἀφοριζέσθω ἔτη τρία· ἐπίβουλος γάρ ἐστι τῆς ἑαυτοῦ ζωῆς.

Already in the Roman Empire both Domitian and Nerva had forbidden castration (Sueton. *Domit.* vii.; Dio Cass. lxvii. 2, lxviii. 2), and this prohibition was repeated in the Digest (xlviii. 8. 4. 2—'nemo liberum servumve invitum sinentemve castrare debet).' Such has also been the position of the Church, the only exception being the practice of castrating boys to preserve their voices, notably for the papal choir. The authorities cited by St. Alfonso Liguori (*Theol. mor.* IV. iv. no. 374) make the custom dependent on the question whether the public welfare promoted by the sweet singing of the *castrati* was of sufficient magnitude to render licit a grave mutilation. St. Alfonso himself inclines to the negative, and the whole practice was definitely condemned by Benedict XIV. (*de Syn. dioces.* XI. vii. no. 4 f.). Since that time there have been no *castrati* in the service of the Church, although the utterly indefensible custom of having male sopranos on the Italian operatic stage lingered on until late in the 19th century. Marriage of a eunuch was declared invalid by the Constitution *Cum frequenter* of Sixtus V. (28th June 1587).

7. **Ethical bearing of castration.**—The ethical problem of castration has recently come to the front in the question of the sterilization of certain classes of criminals and defectives. The operation, called vasectomy, consists in making an incision into the scrotum and severing the *vas deferens*, the wound being closed by the contraction of the cremaster muscle, and no further medical attention being required. (A similar, but more difficult, operation on the female is oophorectomy by dividing the Fallopian tubes.) The result of vasectomy is sterility, although *libido* is not impaired, and the sexual act may be performed just as before the operation, except that there is no emission of semen. Besides preventing the procreation of offspring likely to inherit the defective or criminal traits of their parents, vasectomy is said to put a stop to such vices as onanism, and it is declared to be absolutely without prejudice to the physical or mental health of the patient (cf. *Journ. Amer. Med. Assoc.*, 4th Dec. 1909; *Maryland Med. Journ.*, Sept. 1910; *Med. Record*, 11th Feb. 1911; *Pearson's Mag.*, Nov. 1909). The operation is widely advocated in the United States, and laws providing for it have been adopted by many individual States. Of these an excellent type is one passed in New Jersey, 21 April 1911 (although up to the date of writing [April 1912], no provision whatever has been made for its enforcement), 'to authorize and provide for the sterilization of feeble-minded (including idiots, imbeciles, and morons), epileptics, rapists, certain criminals, and other defectives.'

After stating that the Board of Examiners shall consist of a surgeon and neurologist, appointed by the Governor by and with the advice of the Senate, and acting with the Commissioner of Charities and Corrections—their duties being 'to examine into the mental and physical condition of the feeble-minded, epileptic, certain criminal and other defective inmates confined in the several reformatories, charitable and penal institutions in the counties and State'—the law proceeds as follows:

'The criminals who shall come within the operation of this law shall be those who have been convicted of the crime of rape, or of such succession of offences against the criminal law as in the opinion of this board of examiners shall be deemed to be sufficient evidence of confirmed criminal tendencies.

Upon application of the superintendent or other administrative officer of any institution in which such inmates are or may be confined, or upon its own motion, the said board of examiners may call a meeting to take evidence and examine into the mental and physical condition of such inmates confined as aforesaid; and if said board of examiners, in conjunction with the chief physician of the institution, unanimously find that procreation is inadvisable, and that there is no probability that the condition of such inmate so examined will improve to such an extent as to render procreation by such inmate advisable, it shall be lawful to perform such operation for the

prevention of procreation as shall be decided by said board of examiners to be most effective; and thereupon it shall and may be lawful for any surgeon qualified under the laws of this State, under the direction of the chief physician of said institution, to perform such operation; previous to said hearing the said board shall apply to any judge of the Court of Common Pleas, of the county in which said person is confined, for the assignment of counsel to represent the person to be examined, said counsel to act at said hearing and in any subsequent proceedings, and no order made by said board of examiners shall become effective until five days after it shall have been filed with the clerk of the Court of Common Pleas, of the county in which said examination is held, and a copy shall have been served upon the counsel appointed to represent the person examined, proof of service of the said copy of the order to be filed with the clerk of the Court of Common Pleas. All orders made under the provisions of this act shall be subject to review by the Supreme Court or any justice thereof, and said court may upon appeal from any order grant a stay which shall be effective until such appeal shall have been decided. . . .

No surgeon performing an operation under the provisions of this law shall be held to account therefor, but the order of the board of examiners shall be a full warrant and authority therefor.

The record taken upon the examination of every such inmate, signed by the said board of examiners, shall be preserved in the institution where such inmate is confined, and a copy thereof filed with the Commissioner of Charities and Corrections, and one year after the performing of the operation the superintendent or other administrative officer of the institution wherein such inmate is confined shall report to the board of examiners the condition of the inmate and the effect of such operation upon such inmate. A copy of the report shall be filed with the record of the examination.'

Such measures, while approving themselves very generally to purely secular views of the State and to such medical men and sociologists as consider only the physical side of humanity, are not, however, such a panacea as they appear at first sight. Indeed, from the merely secular side it is only too obvious how readily vasectomy lends itself, in the unscrupulous hands that will, unfortunately, be ready in multitudes, to 'race suicide' and to the most unbridled licentiousness, which then need fear no 'trouble' in the shape of children.

The problem does not appear thus far to have been considered by the Protestant clergy, at least officially; but the Roman Church has devoted considerable study to it, and a lively controversy has been waged, pending decision from the Vatican, in the *Eccles. Rev.* (xlii. [1910] 271–275, 346–348, 474 f., 599–602; xliii. [1910] 70–84, 310–329, 356–358, 553–558; xliv. [1911] 679–705; xlv. [1911] 71–77, 85–98; cf. also *ZKT*, 1911). The results of this discussion may be summarized as follows:

No one can licitly submit to the operation of vasectomy (1) to avoid the procreation of children, (2) to avoid the procreation of degenerates (the way to avoid this is to abstain absolutely from coition, since every sexual act for mere voluptuous pleasure is mortal sin), or (3) to avoid onanism (see St. Thomas Aquinas, *Summa*, IIª. IIªᵉ. quæs. lxv. a. 1, *ad* 3; cf. also the citations from Gennadius, the Councils, and *Apostolic Canons*, above, p. 583). The only cases in which vasectomy is licit are for the cure of grave pathological conditions, such as severe erethism arising from disease. Vasectomy is a grave mutilation, and grave mutilations are licit only to save the life of the patient on whom they are performed. But, as proposed by the laws under consideration, vasectomy destroys organs created by God for the propagation of the race, a duty incumbent on man—unless vowed to a life of chastity, even in the married state—toward (1) God, that creatures may come into being to praise Him in this world and to enjoy Him in eternity; toward (2) nature, for the continuance of the race; and toward (3) society, for its strengthening and continuation. The gravest diseases, *e.g.* leprosy, do not constitute an impediment to marriage. Vasectomy cannot, therefore, be performed on the willing. From this it follows that no surgeon can licitly perform vasectomy; nor can the State licitly enact it, for it has no licit right to create impediments to marriage, nor can it mutilate the innocent (under which category the feeble-minded and epileptics certainly come), while in the case of criminals it would compel them, should they perform the sexual act after vasectomy, to commit mortal sin, whereas before the operation the act would not necessarily be sinful.

It may be suggested that what the State can and should do is to confine degenerates and defectives until cured, if they are curable; or, if incurable, for life; that the perils which, waiving entirely theological considerations, may arise from the legalizing of vasectomy have not been duly recognized; and that it is at least open to question whether, in the case of rapists and other criminals, vasectomy does not come within the ban of the Eighth Amendment to the Constitution of the United States, which explicitly declares that 'cruel and unusual punishment' shall not be inflicted.

LITERATURE.—The principal references are given in the course of the article. To these may be added H. H. Ploss, *Das Kind*², Leipzig, 1884, i. 340, ii. 418; C. Rieger, *Kastration in rechtlicher, socialer und vitaler Hinsicht*, Jena, 1911; P. J. Möbius, *Über die Wirkungen der Kastration*, Halle, 1903. (G. Pinot's *Étude médico-légale sur la castration*, Lyons, 1894, is valueless.) The writer's thanks are due to Dr. Ernest M. Lyon, of Newark, N.J., for assistance in the surgical portion of the art., and to Dr. Arno Pöbel, of Johns Hopkins University, for the references to the Assyr.-Bab. eunuchs.

LOUIS H. GRAY.

EUNUCH (Muslim).—In general every mutilation of men and beasts was forbidden by the Prophet (*e.g.* al-Bukhārī, *al-Dhabā'iḥ wal-ṣaid*, 25). Moreover, if we may trust Muslim tradition, Muhammad expressly enjoined his followers not to make themselves or others eunuchs. One day Uthmān ibn Maẓ'ūn asked permission from the Prophet to castrate himself that he might not be tempted to commit fornication. But this was strongly disapproved by Muhammad. 'He who castrates himself or another does not belong to my followers,' he said, 'for castration in Islām may consist only in fasting' (see *Mishkāt al-maṣābīḥ*, a collection of the most authentic traditions, tr. A. N. Matthews, Calcutta, 1809, i. 151). It is also related that Muhammad said: 'Let him who cannot marry betake himself to fasting; this will be for him like castration' (al-Bukhārī, *Ṣaum*, 10). These and other sayings of the Prophet are repeated in various forms in the accredited collections of Muslim tradition.

But, although castration is thus strictly forbidden by Muhammadan law, slaves who had undergone this operation were highly appreciated in Muslim countries, and the value of a eunuch was always much greater than that of another slave. This appreciation has caused the continuation of this evil in a great part of the Muslim world; for the slave-traders in the Sudan and elsewhere, who castrated their young slaves for exportation, could expect enormous profits in consequence of this cruel mutilation. During the stay of J. L. Burckhardt in Upper Egypt in the autumn of 1813, the eunuchs who were carried from the Sudan to Egypt had been castrated either in Borgo (west of Darfūr), or in a certain village near Siūt chiefly inhabited by Christians. The operators in this latter place were two Coptic monks, who received the victims (little boys between the age of eight and twelve years) into their house immediately after the arrival of the caravans. Their profession was held in contempt even by the vilest Egyptians (J. L. Burckhardt, *Travels in Nubia*², London, 1822, pp. 294–296). In the *Arabian Nights' Entertainments* it is told that slaves were also, notwithstanding the legal prohibition, sometimes punished with castration by their Muslim owners (e.g. *The Thousand and One Nights*, ed. by W. H. Macnaghten, Calcutta, 1839, i. 324–330; cf. Burckhardt's remark on the castration of captives by Ghālib, the Sharīf of Mecca [*Travels in Nubia*, p. 296]).

Eunuchs were employed by the Muslims either as guardians of the women in the harīms of princes and in the houses of men of high rank and great wealth, or as guardians in sanctuaries. For the latter purpose they were sent as presents, especially to the great mosques at Mecca and Medina. In Cairo a holy relic, the so-called shirt of Muhammad, was guarded by a eunuch, who was sent for that purpose from Constantinople (see A. von Kremer, *Aegypten*, ii. 88).

Burckhardt, Lane, von Kremer, and other travellers in Muslim countries have observed that eunuchs, on account of the important and con-

fidential offices which they filled, were generally treated with great consideration. They were never employed for lower services, and were called usually *Agha* (*i.e.* 'master,' 'lord'). 'I used to remark in Cairo,' says Lane (*The Thousand and One Nights*, London, 1859, i. 57), 'that few persons saluted me with a more dignified and consequential air than these pitiable but self-conceited beings.' It is related by Burckhardt that many of the lower classes at Mecca kissed the hands of the eunuchs of the great mosque on approaching them; their chief was a great personage, entitled to sit in the presence of the Pasha and the Sharīf (Burckhardt, *Travels in Arabia*, London, 1829, i. 288–291). Often eunuchs at the court of Muhammadan princes became men of great influence and power. A well-known example of such statesmen was Kāfūr al-Ikhshīdī, a castrated negro, whose biography is contained in Ibn Khallikān's biographical dictionary (tr. de Slane, Paris, 1843–71, ii. 524–528). He reigned in the 10th cent. A.D. over Egypt and Syria, and public prayers were offered up for him from the pulpits, not only in all the cities of his dominion, but even at Mecca.

Extraordinary as it may appear, the grown-up eunuchs often married, and the legal consequences of such marriages (*e.g.* in the case of divorce) are earnestly discussed in the Muslim law books.

By the time of Burckhardt (1813–1814) the custom of keeping eunuchs had greatly diminished in Egypt as well as in Syria. Undoubtedly by the abolition of slavery the last eunuchs will soon disappear from Muslim territory.

LITERATURE.—Muradja d'Ohsson, *Tableau gén. de l'empire othoman*, Paris, 1820, iii. 302–304; E. Quatremère, *Hist. des sultans mamlouks de l'Égypte*, Paris, 1837, i. 2, p. 132; A. von Kremer, *Aegypten*, Leipzig, 1863, ii. 87–89; C. Snouck Hurgronje, *Mekka*, Hague, 1889, ii. 24.

TH. W. JUYNBOLL.

EUPHEMISM.—*Introductory.*—As far as concerns the religious aspect of the word, 'euphemism'[1] may be defined as the use of names or words of good omen (εὖ, 'well,' φημί, 'I speak') instead of those of evil omen (though in practice it also includes the use of enigmatic words), the object being to avoid the dangers which are inherent in the use of the latter. The being thus named is flattered and conciliated and does not do harm, or he does not know that he is being referred to. Euphemism is thus in speech what propitiatory rites towards evil or demoniac beings are in act. In primitive thought, and surviving into much higher culture, a name is regarded as part of the personality of the being—god, spirit, or man—who bears it; or it is even identical with its owner's soul.[2] Hence, according to the magical view of the universe so commonly entertained, knowledge and use of a name are bound to affect the owner of that name. It may bring him within the power, or force him to do the bidding, of him who utters it. But, on the other hand, when carelessly uttered, it may bring its owner unpleasantly near, or draw his attention to, or bring him into contact with or possession of, the utterer. Obedience by a spirit or demon to the pronouncing of his name was only on compulsion; and he was always watchful for any opportunity of falling upon him who spoke his name 'in vain.' Thus there was danger for the latter in using carelessly the names of dangerous beings. It brought them near, and they had an objection to their names being mentioned. In all cases the use of names is hedged about with many restrictions. Any tabued spirit, person, animal, or thing is apt to receive a circumlocutory or euphemistic name. Great precautions are taken by savages against disclosing their personal or secret names; hence many of them are known by nicknames or circumlocutions, and nothing is more common at certain times than a change of name, often by way of deceiving spirits, *e.g.* those which cause sickness. In many cases a wife may not call her husband by his name, and *vice versa*. Thus the Zulu wife addresses her husband as 'father of so and so,' and the Hindu wife as 'the man of the house,' 'the master.' Or, again, relations who are generally tabu to each other, *e.g.* a man and his mother-in-law, must not utter each other's name. Names of chiefs, kings, or priests are similarly avoided. In all such instances the freakish names, epithets, or circumlocutions which are actually used are euphemistic. But the prohibition extends much further; for if, as often happens, any of these names should be the word used for any object or should occur as part of such a word, another word or a circumlocution must be used for such an object—a practice which gives rise to a constant change of language in some tribes. Further, many words used by men are tabu to women, and *vice versa*; or they may not be spoken in women's hearing, another word, akin to a euphemism, being used.

The beings whose names are generally avoided and a euphemism strictly so-called used in their place, by way of flattering, conciliating, or propitiating them, or of concealing the fact that they are being mentioned, are certain gods, supernatural beings of various kinds, the dead, and animals. Euphemisms are also used for death, or for various things, places, or actions. But it cannot be said that the practice is of universal application, since the actual names of such, or of equally evil beings, etc., are frequently used.[1]

1. **Divinities.**—As to divinities, the adulatory epithets by which they are characterized, and by which attention is called to their virtues or honorific characteristics, may be looked upon as euphemistic or as serving the same purpose as actual euphemisms. Among the Greeks it was thought unlucky to use the names of the divinities of the under world, because of their connexion with death; and it has been conjectured that the designation of the god and goddess of Hades as ὁ Θεός and ἡ Θεά may be due to such a motive (Farnell, in *Anthrop. Essays*, 1907, p. 91 f.). But much better known examples from Greek soil are the titles given to the dreaded Erinyes by those who feared to use their real name. They were called the *Eumenides* (*q.v.*), 'the well-meaning,' 'the kindly,' or 'the soothed ones'—a name said to have been first given them after the acquittal of Orestes when their anger had been soothed. Another title of the same group of goddesses was 'the venerable goddesses,' σεμναὶ θεαί (Paus. i. 28. 6, ii. 11. 4). Among the Romans the name of the daughter of Faunus was tabued, and she was called *Bona Dea*, 'the good goddess' (Servius, on *Æn.* viii. 315). Similarly, among the Sioux the male water- or earth- divinities are called 'grandfathers,' and the female 'grandmothers' (*11 RBEW*, 1894, p. 438); and in India, Siva, the god of destruction, is 'the gracious one.'

The Heb. custom of substituting the vowels of *Adonai*, 'Lord, or *Elohim*, 'God,' for those of יהוה, the Tetragrammaton or Sacred Name (*JHWH*), as a sign to the reader to pronounce Adonai or Elohim instead of the mysterious Name, arose from fear of uttering carelessly this sacred name. These substitutions are, therefore, of the nature of euphemisms, and resemble the Bab. usages with regard to the secret names of gods (Lenormant, *La Magie chez les Chaldéens*, Paris, 1874, p. 41). The Jewish custom is connected with the Third Commandment (Ex 20[7]). A similar usage is found in the words which take the

[1] Some writers, including even George Eliot and Mrs. Gaskell, have made the curious mistake of using the word 'euphuism' where 'euphemism' was intended.

[2] In many languages the same word stands for 'name' and 'soul.'

[1] The opposite practice to giving euphemistic names is found in the wide-spread custom of calling a child by an opprobrious name in order to turn away the attention of dangerous spirits from it. Cf. art. EVIL EYE.

place of the Divine name in expletives, exclamations, etc., in popular speech—Eng. *'od's* (*'od's bones*); Germ. *potz* or *kotz* (*potz tausend*); Fr. *bieu*, *guieu* (*sangbieu*), and the like.

2. Supernatural beings.—Much more common is the use of euphemisms for the names of spirits, demons, fairies, etc. Thus in India the spirits of young men dying without becoming fathers are called *pitris*, 'fathers'—a euphemistic name to which they are least entitled—by way of propitiating them (Monier-Williams, *Rel. Life and Thought in India*, 1883, p. 243 f.). Hindus, who believe that the ghost of some Musalmāns becomes a malignant *rākṣasa*, conciliate it by addressing it as *Mamdūḥ*, 'the praised one' (Crooke, *PR*[2] i. 252). The Arabs and Syrians address the *jinn*, who are in all respects like our fairies (see FAIRY), as *mubarakīn*, 'ye blessed,' or 'blessed ones' (Lane-Poole, *Arabian Society in the Middle Ages*, 1883, p. 37; Hanauer, *Folk-Lore of the Holy Land*, 1907, p. 202). In modern Greece the Nereids, who also correspond to our fairies, are called generally in a euphemistic manner τὰ ἐξωτικά, a name also applied to *Lamiæ* and other supernal powers. Other names, corresponding to 'the Eumenides' and equally conciliatory, are ἡ κυρᾶδες, 'the Ladies'; ἡ καλοκάρδαις, 'the kind-hearted ones'; τὰ κουρίτσιά μας, 'our maidens'; ἡ καλαῖς ἀρχοντίσσαις, 'our good Queens'; ἡ καλλικυρᾶδες, 'our good Ladies'—a name corresponding to αἱ κυρίαι νύμφαι of classical times. Other names are 'outsider women,' 'lucky ones,' 'friends,' or 'brothers.' 'Seizure' by the Nereids is described as ὥρα τὸν ηὗρε, 'an [evil] hour overtook him' (*FL* viii. [1897] 275; Lawson, *Modern Gr. Folklore and Anc. Gr. Religion*, Cambridge, 1910, pp. 132, 143; Dozon, *Contes albanais*, Paris, 1881, p. xxi; Garnett, *Greek Folk Poesy*, 1896, ii. 446). For similar propitiatory reasons, and in order to secure their good offices, the fairies, whose temper is uncertain, are called in Lowland Scotland 'the good folk,' 'the good neighbours,' 'the good ladies'; in Shetland, 'guid folk *or* neighbours'; in the Highlands, *daoine coire*, 'honest people'; and *daoine sith*, 'the people of peace'; in the Isle of Man, 'good people'; in Ireland, 'good people,' 'the gentry,' 'the gentlemen,' or simply 'them';[1] in Wales, *Tylwyth Teg*, 'the fair folk' (Keightley, *Fairy Mythology*, 1900, pp. 164, 351, 363, 397; Scott, *Minstrelsy*, 1839, p. 216; Sikes, *British Goblins*, 1880, p. 123; Rhys, *Celtic Folklore*, Oxford, 1901, *passim*). These names correspond with the title *bonnes dames* given to the mediæval fées—a title probably borrowed from the adopted Roman name *dominæ* given to a group of Celtic goddesses. Certain Teutonic titles for elves are of a euphemistic nature—'das stille Volk,' 'die guten Holden' (*holdo*, a kind or favourably disposed being); cf. Norse *Lieblinge*; Lithuanian *balti z'mones*, 'honest folk' (Grimm, *Teut. Myth.*, 1880–88, pp. 452, 456, 1416; Simrock, *Handbuch der deutsch. Myth.*[6], Bonn, 1887, p. 426). Keightley also refers (p. 495) to a similar title among the Yoloffs of Africa for a race of beings corresponding to fairies, whom they call *Bakhna Rakhna*, 'good people.'

These titles are generic. On the other hand, as many *Märchen* show (*e.g.* 'Tom-Tit-Tot,' 'Whuppity Stoorie,' 'Rumpelstiltskin,' etc.), to know and pronounce the individual name of a fairy brings him within one's power (see *CF*, 26 ff.). The common name for a Brownie, 'Robin Goodfellow,' which seems to be euphemistic, is both individual and generic. 'Hobgoblin' is probably another instance of this conciliatory attitude expressing itself in a friendly diminutive of a proper name, if *Hob*=Robert. Other examples are found in Teutonic names for different sprites, in which occur diminutives of Heinrich, Joachim, Walter, *e.g.* Heinzelman, Hinzemännchen, Chimke, Wolterken, Wouters (Grimm, 503 f.). The *ignis fatuus* regarded as a sprite is also called familiarly 'Will o' the wisp,' 'Jack o' lanthorn,' etc.

In most European languages the devil is commonly spoken of by a variety of euphemisms and softened titles, which have a tendency to degenerate into slang, but which show the fear of using such a name of dread import. In Scotland 'the good *or* guid man' (cf. 'the guid man's croft'= the part of a farmland left uncultivated because dedicated to the devil) probably expresses the devil's tenancy of hell ('guid man'=tenant). Other names are 'Clootie,' 'Auld Hornie,' 'Sandy,' or 'the de'il.' In the Hebrides such names as 'the brindled one,' 'the black one,' 'the great fellow,' 'the nameless,' are found (*FL* x. [1899] 265). English names are 'Old Nick,' 'the Old Gentleman.' In Germany we find *Meister Peter*, *Peterchen*, *Meister Sieh-dich-für*, *Deichel*, *Gott sei bei uns*, etc.; in France, *diacre*; in Italy, *ceteratojo* (cf. Grimm, 987, 1004, 1606; Farmer-Henley, *Slang and its Analogues*, 1890 ff. *s.v.*).

3. Death and the dead.—For similar reasons such ill-omened names as death, the region of the dead, and also the personal names of the dead are generally avoided, and replaced by euphemisms. Death, being personified, or regarded as the work of spirits or evil-disposed beings, would, if mentioned directly, be apt to draw dangerous attention to him who spoke it. There was probably also the idea of the dread contagion of death (which forced all who handled the dead to be under tabu for a time), working even through the name (name and thing named being one). And, similarly, to refer to a dead man by name would tend to bring his spirit near the living. Among the Ainus figurative words are used for death, *e.g.* 'sleeping,' 'resting,' 'leaving the world behind' (Batchelor, *Ainu of Japan*, 1892, p. 212). Both in Melanesia and in Polynesia there is an unwillingness to speak directly of death, and the usual word for death, *mate*, is used only of the death of an animal or as a term of abuse.

Brown (*Melanesians and Polynesians*, 1910, p. 404) gives the following euphemisms for death: *ua maliu*, 'he has gone'; *ua usu fono* (of an orator), 'he has gone to the council'; *ua gasoloao* (of a chief), 'the titles have passed away,' or *ua taapeape'pāpā*, 'the titles are scattered about.'

In S. Africa, to die is 'to go home,' or 'not to look on the sun again,' or 'not to be here,' or 'to go away,' 'to return to one's fathers' (Macdonald, *JAI* xx. [1891] 121; Casalis, *Les Bassoutos*, Paris, 1859, p. 258). Among the Baganda, when a twin dies (an unlucky event), it is said that the child has 'flown away' or 'gono to gather firewood,' and the death of a king is described as 'the fire is extinguished' (Roscoe, *The Baganda*, 1911, pp. 103, 125). When a sheep dies, lest its spirit should cause a woman to fall ill, she simply says, 'I am unable to untie such a sheep' (*ib.* p. 289; cf. the saying in the Hebrides when a cow dies, 'it is lost'). In Burma, to die is 'to return' (*i.e.* to a state of bliss [Forbes, *British Burma*, 1878, p. 71]). Among the Chinese, dying is expressed by such phrases as 'to enter the measure' (*i.e.* the coffin), 'to leave the body,' 'to pass away,' while the coffin is euphemistically called 'boards of old age' (Friend, 'Euph. and Tabu in China,' *FLR* iv. [1881] 80 f.). In Japan, 'recovery' is used instead of 'death,' and 'clod' for 'tomb' (Aston, *Shinto*, 1905, p. 255). Among the ancient Jews and Greeks, as with many modern races, 'sleep' is a euphemism for death (Heb. שָׁכַב, LXX κοιμᾶσθαι, 'to lie down'), and is constantly used: 2 S 7[12], 1 K 2[10], 2 Es 7[32]; *Iliad*, xi. 241; Soph. *Electra*, 509 (cf. Herkenrath, *Stud. zu die griech. Grabschriften*, Feldkirch, 1896). St. Paul speaks of τῶν κοιμωμένων and τοὺς κοιμηθέντας διὰ τοῦ Ἰησοῦ (1 Th 4[13f.]); and these phrases passed readily into Christian thought, so that

[1] Cf. the Slavic custom of referring to a demon not by his name, but as 'he' or 'himself.' It is met with elsewhere. 'He,' 'himself,' are often used in Celtic regions as titles of respectful address instead of a superior's name.

'sleep' became almost an equivalent for death rather than a euphemism. 'To sleep in peace,' to 'fall asleep in Jesus,' are common phrases in Christian epigraphy from early times, and *receptus ad Deum, de seculo recessit* (both also classical: cf. *inter deos receptus est* [*recedo* = 'to die']), *natus est in æternum, in pace decessit*, and the like, are found on early Christian tombs. While they are euphemistic, they express the joyful hope of the Christian. In the everyday speech of ourselves 'to pass away,' 'he is gone,' and the like, are used for death (cf. 'to pass out' or 'over,' used by Spiritualists); and in the north-east of Scotland 'he was taken away' means 'he died.' In Germany, death is known as *Freund Hein*, and dying is expressed by a variety of euphemisms—'departing' (in various forms; cf. Gr. *οἰχόμενος = θανών*), 'faring out,' etc. Our 'to join the majority' occurs in German, and is derived from the Gr. phrase *ἐς πλεόνων ἱκέσθαι* (cf. the Heb. euphemisms, 'gathered to his fathers,' 'go to his fathers,' 'sleep with his fathers,' etc.).

The reluctance to mention the dead individually or collectively by name is universal among savages and survives in folk-custom (see DEATH AND DISPOSAL OF THE DEAD [Introd.], vol. iv. p. 441[b]). Consequent euphemisms are numerous. Thus, among the aborigines of Victoria a dead man was 'the lost one,' 'the poor fellow that is no more' (Stranbridge, *TES* i. [1861] 299); and among the Abipones he is 'the man who does not now exist' (Dobrizhoffer, *Abipones*, 1822, ii. 273). S. African tribes say 'ye who are above' (Macdonald, *JAI* xx. 121). The Roman *Di Manes*, 'the good *or* kindly gods' (from *manus*, 'good'), applied to the gods of the under world or to the departed, is probably euphemistic; and perhaps the Gr. *οἱ ὑποχθόνιοι, οἱ κάτω ἐρχόμενοι, οἱ ἐναγισμοί*, 'those below,' or 'those who have gone below,' are of the same nature. *οἱ πλέονες*, Lat. *majores*, Eng. 'the majority,' are all circumlocutions for the dead. In Scots folk-speech 'them that's awa' expresses a similar reluctance to refer directly to the dead as such. In Japan the old word *mono* applied to the dead means 'the beings,' and is euphemistic (see *ERE* iv. 611[a]). Offended spirits in China are addressed by a euphemism, e.g. *shêng jên*, 'sagely person.' Similarly the region of the dead or of the devil is the subject of euphemistic expressions instead of the word 'hell'—'the ill place,' 'the bad place,' or even, as in the Hebrides, 'the good place.'

4. Diseases.—Among savages, diseases are frequently personified or controlled by spirits, and in either case they are sometimes referred to euphemistically, by way of avoiding such a direct reference as might cause them to afflict the speaker, and also in order to flatter them. In Fiji the word 'leprosy' must not be applied to any one in good society who is suffering from it; and 'many ingenious shifts are resorted to in order to express the meaning without using the word' (Thomson, *The Fijians*, 1908, p. 259). Among the Dayaks, smallpox is not referred to directly, but as 'jungle-leaves,' 'the chief,' 'fruit'; or they ask, 'Has he left you yet?' (St. John, *Forests of the Far East*, 1862, i. 62). In India, the name of the smallpox-goddess, Sītalā, is itself a euphemism, 'she that loves coolness'; but she is also called 'queen of the world,' 'the great mother,' etc. Similarly, the cholera-goddess is 'lady of the flux,' *Olā Bibi* (Crooke, *PR*[2] i. 126; cf. *ERE* ii. 485[a]). In the Cyclades, plague is 'the pardoned disease,' epilepsy is *γλυκύ* or *τὸ καλό*, smallpox *εὐλίγια*; and in Greece, smallpox is *συνχωρεμένη*, 'the indulgent' (Bent, *The Cyclades*, 1883, p. 74; Crooke, i. 126). Among the Slavs, the demon of fever is called 'aunt,' 'godmother,' by way of making her friendly. The Teutons call disease 'the good,' 'the blessed'; pestilence is 'gossip,' apoplexy 'the blessed,' whitlow 'the unnamed' (Grimm, 1154, 1157, 1656).

5. Animals.—The same custom applies to using the names of animals whose ravages are feared, as well as to other more harmless animals—in the latter case perhaps a survival of some religious tabu in the cult of animals. In Angola, the lion is spoken of as *ngana*, 'sir,' and would punish any one who did not so call him (Monteiro, *Angola and the River Congo*, 1875, ii. 116). In Algeria, the same animal is called *Johanben-el-Johan* (Certeux and Carnoy, *L'Algérie trad.*, Paris and Algiers, 1884, p. 172); and the Bechuanas of S. Africa name it 'the boy with the beard' (Conder, *JAI* xvi. [1887] 84). Among various peoples of Malaysia, the tiger is called 'grandfather,' 'the wild animal,' 'lord,' or 'ancestor,' or, as in Sunda, 'the whiskered one,' 'the honourable one,' etc. In Sunda, the boar is 'the beautiful one.' The Malays also call the elephant 'grandfather,' and beg him not to destroy them, his grandchildren. When catching an alligator, they condole with him and call him 'Raja,' 'Datu,' and 'grandfather'; and in Sarawak the Kenyahs call the crocodile 'the old grandfather' rather than refer to it by name. In all such cases calamity or illness would follow non-observance of these euphemisms (Marsden, *Sumatra*, 1811, p. 292; Mouhot, *Trav. in Indo-China*, 1864, i. 263; Skeat, *Malay Magic*, 1900, pp. 150, 153, 157; St. John, i. 19; Hose-Macdougall, *JAI* xxxi. 186; Frazer, *GB*[2] i. 462). For similar reasons, and lest the dreaded animals should appear, snakes in India are called by various euphemisms—the cobra is 'the good snake' or 'good lord'; and 'worm,' 'insect,' 'rope,' 'creeping thing' are other reptile euphemisms. Similarly among the Cherokees, when a man is bitten by a snake, he is said to be 'scratched by a briar,' lest the feelings of the animal should be hurt (Mooney, *19 RBEW* [1900] pt. i. p. 295). Tigers are called 'the dog,' 'the beast,' 'the jackal,' etc., especially when they are being hunted. Other animals are also denoted euphemistically (Crooke, *PR*[2] i. 275, *TC*, 1896, iii. 249; *FL* viii. 285; *NINQ* i. 70, 104, v. 133). In Syria, the serpent is addressed as 'Thou blessed one' (Hanauer, 202). Similar respectful titles are addressed to the bear by the Finns—'forest apple,' 'golden light foot,' 'old man,' etc., while the Lapps call it 'the old man with the fur coat' (see the *Kalevala, passim*; Tylor, *Early Hist. of Mankind*, 1865, p. 145).[1] Similar forms are used by the Esthonians and Swedes for the bear; and by all these peoples and also generally in Germany the wolf, especially at certain seasons, is called 'grey-legs,' 'golden-tooth,' 'the vermin,' etc., while the fox is 'long-tail,' 'blue-foot,' etc. (Thorpe, *Northern Myth.*, 1852, ii. 83 f.; Tettau and Temme, *Die Volkssagen Ostpreussens*, Berlin, 1837, p. 281; Frazer, i. 454 f.). Similarly, the Sioux call the beaver (or possibly water-monsters) 'water-person' or 'water person female' (*11 RBEW*, p. 439).

6. Euphemisms of occupation, etc.—Some of the above examples have shown that animals while being hunted are spoken of euphemistically, the object being apparently to deceive them by a kind of make-believe, so as to render their capture easy, while at the same time it is sought to avoid falling into their power. In many parts of the world a similar custom is observed while hunting, fishing, or pursuing certain occupations in particular places or at particular times. But here the custom is not confined to the name of the animal or object sought after, but extends to various beings, people, places,

[1] For similar respectful terms addressed to the bear among Ainus and North Asiatic peoples, see *ERE* i. 249, 503.

or things which might be mentioned in conversation. They are either not spoken of for the time being, or they are referred to under some other name, circumlocution, or euphemism. By this elaborate make-believe, men have thought to deceive the spirits or animals or any other being who might be listening, and who, recognizing them or their intentions, would attack them, or avoid and escape them. Thus, if, while hunting, men call themselves, or the animal hunted, or their weapons, by other names, they reckon on deceiving the animal and so obtaining an easy prey. Or, again, if the animal is spoken of in a flattering euphemism, it may be so pleased that it will allow itself to be slain. In other cases, where names of objects or people, allowable at other times, are tabu at certain times or in certain places, there is obviously a fear of disturbing harmful agencies to whom they might be obnoxious. Here, again, the words used are euphemisms of pretence. The beings and creatures swarming around man, whether spirits or animals, are credited with intelligence and understanding, but only up to a certain point. They are weak enough to be open to flattering terms, or ignorant enough not to see through man's elaborate pretences.

Two examples may suffice. Martin (*Descr. of the W. Islands*[2], London, 1716) refers to the custom of the Lewismen, when visiting the sacred Flannan Islands for fowling, of avoiding certain words and employing others in their places—*vah*, 'cave,' for *claddach*, 'shore'; *cruey*, 'hard,' for *creg*, 'rock'; *gaire*, 'sharp,' for *gort*, 'sour,' etc., while the islands themselves must be spoken of only as 'the country.' Similarly, the camphor-gatherers of the Malay Peninsula, while engaged in their task, must speak the *oassa kapor*, or 'camphor language,' because otherwise the spirit in the trees would not be propitiated, and they would not find the object of their quest. Rice is called 'grass-fruit'; gun is 'far-sounding,' etc. In Borneo, and for similar reasons, the same phenomenon is met with, and camphor is here spoken of as 'the thing that smells' (Skeat, 212 ff.; Furness, *Folk-lore in Borneo*, Wallingford, Penn., 1899, p. 27). Among the Bangala no man is addressed by his own name while fishing, but as *mwele*, to hide his identity from the spirits (*JAI* xxxix. [1909] 459). For many other examples, see also Frazer, i. 451 ff. note A, 'Taboos on Common Words.'

7. **Certain religious, customary, or unusual actions or things are also spoken of euphemistically**, and for reasons similar to those already referred to. Thus, in Samoa, circumcision of a peculiar kind had a recognized name, *tefe*, but in ordinary speech *tafao* was used as a euphemism (Brown, 382 f.). In Fiji, cannibalism, which had a religious aspect, was hedged about by many tabus and had euphemistic names. The trunk was *na vale ka rusa*, 'the house that perishes'; the feet, *ndua-rua*, 'one-two'; or such a desired portion of human flesh as the breast of a virgin was *sese matairua*, 'spear with two points' (Thomson, 104). Among the Yorubas, human sacrifice is euphemistically called 'basket-sacrifice,' because the victim is enclosed in a basket (Ellis, *Yoruba-speaking Peoples*, 1894, p. 105). In the Hebrides, the fire of a kiln is called *aingeal*, not *teine*, because the latter is dangerous and 'ill will come if it is mentioned' (*FL* x. 265); just as, in Scandinavia, fire was sometimes called *hetta*, not *eld* or *ell* (Thorpe, ii. 85). Among the Baganda, when twins were born—an unusual but important event, because they were the gift of the god Mukasa—the midwife, in announcing the birth to the father, did not use the tabued word 'twins,' but 'he has given you,' or some such phrase (Roscoe, *Baganda*, 1911, p. 65).

8. **Euphemisms of etiquette.**—Etiquette also demands that, in speaking to a superior, particular names or phrases should be used instead of those ordinarily employed. Thus, in China, when a ruler wishes to take a place at an archery meeting and is unable to do so, he should decline on the ground of being ill, and say, 'I am suffering from carrying firewood.' Mencius thus excused himself, and it has been adopted from the manner in which a peasant would speak, as a term of mock humility. This is only one example out of many customary in China (*SBE* xxvii. [1885] 101). Similarly, in Samoa, words of an opposite meaning instead of those supposed to be objectionable were used in speaking to chiefs (for a long list of these, see Brown, 380 ff.). For the same reason ill-omened words are generally avoided in conversation; 'good omen words,' in the Cantonese phrase, being used, as many of the above examples have shown. Thus Helladius says that the Athenians were careful not to use words of ill-omen; so they called the prison 'the chamber,' and the executioner 'the public man' (Phot. *Bibl.*, ed. Bekker, 1825, p. 535). The underlying idea is that by mentioning ill-omened words the action may be itself produced. Survivals of this—but now no more than a shrinking from the use of words calling up disagreeable associations or unpleasant things—are common in civilized life among ourselves. But the old and primitive conception of the connexion between name and thing named, and of the power of the name to produce the effect or to cause the presence of spirit, animal, etc., when the name is spoken, is seen in certain proverbs, the full meaning of which is not realized by those who use them: *e.g.* 'Talk of the devil and you will see his horns,' 'Speak of the wolf and you will see his tail.'

9. **Slang and euphemisms.**—Euphemistic language may become merely poetical, and, while it has a different origin from slang, it is also closely connected with it and easily degenerates into it both in English and in foreign languages. The euphemistic names of the devil have in many instances become merely slang expressions, though sometimes used by those who think them softer than such a 'swear-word' as 'devil'; or they have given rise to other slang names. 'The dickens,' 'the deuce,' 'deuce take it,' 'the old boy,' etc., and some of the euphemisms already cited for 'devil,' are examples of such changes. Many people also use slang euphemisms for oaths—'dash,' 'blow,' 'confound,' etc.; while there are many slang expressions for death—'to kick the bucket,' 'to take an earth bath,' 'to go to Davy Jones' locker,' etc.—which in an earlier age would have been euphemisms pure and simple. See Farmer-Henley, *Slang and its Analogues*, 8 vols., 1890 ff.; J. C. Hotten, *Slang Dictionary*, 1859; A. Barrère and C. G. Leland, *Dict. of Slang, Jargon, and Cant*, 2 vols., 1885.

LITERATURE.—There is no work dealing exclusively with the subject, but see R. Andree, *Ethnogr. Parallelen und Vergleiche*, Leipzig, 1889; E. Clodd, *Tom Tit Tot*, London, 1898, p. 125 ff.; J. G. Frazer, *GB*[2], 1900, i. 403 ff., 451 ff.; H. Friend, *FLR* iv. [1881], 'Euphemism and Tabu in China'; B. Thorpe, *Northern Mythology*, London, 1852, ii. 83 f.; E. B. Tylor, *Early Hist. of Mankind*, London, 1865, p. 123 ff.; S. Ehrenfeld, 'Euphemism,' in *JE* v. [1903] 267 f.

J. A. MACCULLOCH.

EURIPIDES, the last of the three great Greek tragedians, is a figure of high importance in the history of Western thought, as well as in that of literature. The present article will say nothing of his life (*b.* before 475, *d.* 406 B.C.), his artistic technique, or his numerous plays (88, of which 18 genuine and one suspect are extant), except in so far as they directly illustrate his ethical and religious position.

The real outlook of a dramatist, for instance, is shown far more by his choice of subjects, and the kind of character that he makes (to use the technical term) 'sympathetic' or 'unsympathetic,' than by the definite sentiments he puts in the mouth of his characters. We may, therefore, notice that Euripides has whole plays upon such subjects as the immorality of the traditional gods (*Ion*, *Auge*, *Melanippe*, *Danae*, *Alope*); the problem of the unjust government of the world (*Bellerophon*, *Troades*); the wickedness or insanity of the 'sacred duty of revenge' (*Electra*, *Orestes*, *Alcmaeon*; cf. *Medea*,

Hecuba, etc.). He once treats the statesman sympathetically (*Philoctetes*); mostly he dwells on the crimes of statecraft (*Iphigenia in Aulis*, *Hecuba*, *Troades*, *Palamedes*), which he associates with such horrors as the persecution of suppliants at an altar (*Heraclidæ*, *Supplices*, *Andromache*), or, when backed by superstition, with human sacrifice (*Heraclidæ*, *Hecuba*, *Iphigenia in Aulis*, etc.). His virgin-martyrs and his champions of the oppressed stand out against this background of statecraft. He treats often of cruelty and injustice done to women, especially barbarian women (*Medea*, *Hecuba*, *Andromache*), and to children (*Heracles*, *Andromache*), and sometimes of the women's frantic revenge (*Medea*, *Hecuba*; cf. *Ion*). He has plays on the wise woman (*Melanippe*), the strong and bold woman (*Meleagros*), the wife faithful to death (*Protesilaus*, *Alcestis*; cf. *Supplices*); on women in love, innocently (*Andromeda*, perhaps *Iphigenia in Aulis*), or with some guilt or trouble (*Hippolytus*, *Sthenebœa*, *Cressæ*; also *Æolus* and *Pasiphae*); and on their jealousy and revenge (*Ion*, *Medea*, *Andromache*). He has a great play entirely on the evil of war (*Troades*); two on the beauty and the horror of ecstatic religion (*Bacchæ*, *Cretes*); one in which the hero is a slave, though he proves to be of princely birth (*Alexandros*); and one dealing largely with the contrast of practical and contemplative life (*Antiope*). This is clearly an unusual and characteristic list of subjects.

Euripides as an artist deserves a much fuller treatment than he can receive here. In general, his characteristic is the combination of a highly conventionalized style with an extraordinarily free and original intellect. His technique is as severe as his thought is unconventional. His adherence to the archaic traditional forms of the religious ritual from which drama probably arose—prologue, contest-scene, messenger, epiphany of god or hero—is as marked as that of Æschylus, and forms a strong contrast with the more 'natural' style of Sophocles. His extreme pursuit of σαφήνεια, 'clarity,' makes his speeches often too precise and self-conscious, his scenes too sharply separate and articulate, for modern taste. On the other hand, the persistent thoughtfulness and keenness of his criticism of life alienate those who like poetry to be conventionally poetical.

In his religious and philosophical ideas, though Euripides is not an adherent of any definite school, he can safely be called the poet of the Sophistic movement. A σοφιστής is one who 'makes wise,' an educator; and the Sophistic movement is that great effort towards knowledge and enlightenment which transformed the half-savage Greece of the 6th cent. B.C. into the Greece of Hippocrates, Thucydides, and Plato. Different sophists, of course, emphasized different sides of σοφία; but in its negative aspect the movement was largely one and indivisible. In an age saturated with superstition the first condition of real enlightenment is a drastic rejection of spiritual and intellectual fetters. Criticism attacks first what is immoral or revolting in the accepted beliefs, next what is merely stupid or improbable.

Now, Greek religious belief was never, except in some special communities (Orphic, Pythagorean, etc.), organized into a definite orthodoxy. It rested on innumerable local rituals conforming to a few main types, and explained by traditional stories. Naturally, therefore, while most of the sophists probably agreed with Hecatæus that 'the traditions of the Greeks are many and absurd,' there was no great body of positive doctrine which attempted to replace all the rubbish that was being destroyed. The Sophistic movement was, on the whole, agnostic. It urged men to look for evidence, to use their understanding and their moral sense. But it must always be remembered that the rejection of traditional theology in Greece proceeded almost as much from the craving for a more satisfying faith as from purely critical or scientific causes. This can be seen best by the history of Orphism and the great growth of mystic religions in the emancipated 4th century. And Euripides, being by profession not a dogmatic philosopher, but a philosophic dramatist and student of character, sensitive to all the highest thought of his age, reflects its aspirations quite as much as its denials.

Attempts have been made to show a special connexion between Euripides and the doctrines of particular philosophers (Anaxagoras: the sun as a χρυσέα βῶλος [*Phaethon*, 771, 783; *Or.* 983]; Protagoras: the ἄνθρωπος μέτρον [*Aiolos*, 19, *Phœn.* 499]; Diogenes of Apollonia: the worship of Αἰθήρ [fr. 941, 877; Ar. *Ranæ*, 892], the soul as air [*Hel.* 1013 ff.; *Tro.* 884–86, γῆς ὄχημα = νοῦς βροτῶν]; Heraclitus, Hippocrates, Prodicus, and, in his political theories, Antiphon; cf. Dümmler, *Proleg. zu Platon's Stadt*, 1891, pp. 10 f., 20 ff.; the Orphics: fr. 912, 472, and 638, 833); but the affiliation of each doctrine is often doubtful, their use is almost always dramatic, and the doctrines of no one school can be said to preponderate. On such problems as the existence of the gods, the moral government of the world, the survival of the soul after death, Euripides is full of questions and contradictions, but pronounces no personal judgment.

A question that vexed the age was whether the world is governed by Intelligence (Ξύνεσις), or, more crudely, whether the gods were ξύνετοι, *i.e.* were they like reasonable parents knowing what is in man's heart, or, as the traditions would have it, incalculable creatures ready to punish savagely all who broke their irrational tabus? (The question between monotheism and polytheism gives as little trouble to Euripides as to most Greeks; he uses the singular and the plural indifferently: τὸ θεῖον, in any case, was one.) Euripides at times (*Hip.* 1105) 'has in his secret hope the belief in some great Understanding' (Ξύνεσίν τινα). He is represented as actually praying to Ξύνεσις in Ar. *Ran.* 893. But he sometimes finds the facts against him (*Hip. l.c.*; cf. *Iph. in Aulis*, 394*a*; *Her.* 655). Hecuba's often quoted lines (*Tro.* 884 ff.),

'Base of the world and o'er the world enthroned,
Whoe'er thou art, unknown and hard of surmise,
Cause-chain of things (ἀνάγκη φύσεος) or man's own reason, God,
I give thee worship, who by noiseless paths
Of justice leadest all that breathes and dies,'

express a belief, frequently repeated and denied elsewhere, in the rule of the world by Justice, but in the play the belief is quickly falsified by the event. Cf. the *Bellerophon*, where the righteous hero questions Zeus on this point, and for answer is blasted by a thunderbolt.

If one is to try to conjecture Euripides' own view, it would perhaps be that unknown forces and influences do exist, which shape or destroy man's life, and which may perhaps be conceived as in some sense personal (δουλεύομεν θεοῖς, ὅ τι ποτ' εἰσὶν οἱ θεοί [*Or.* 418]), but that morally they are less good than man, who at least pities and tries to understand. At times, indeed, he deliberately denies the 'miserable tales' of the poets: 'if the gods do shame, they are no gods' (*Beller.* 292); 'God, if He be indeed God, hath need of naught' (*Her.* 1345). Yet, not only are his mere mythological gods (*Ion*, *Heracles*, *Electra*) represented as very poor characters, but even the gods of the *Hippolytus* and *Bacchæ*, who clearly represent real forces, if not quite real persons, are by human standards evil. In the magnificent closing scene of the *Troades* he seems to pierce behind all the gods of the poets, first to the primeval worship of the dead who may

still love us, then beyond that to a great refusal of all false comfort, an acceptance of the darkness that is God and more than god.

About immortality, Euripides frequently falls into surmise (fr. 638, 833, 'Who knoweth if this life be verily death, and our death life to those that are gone?'; cf. *Phœnix*, fr. 816, *Hip.* 191), and thoughts of an impersonal immortality (*Helene*, 1013: 'The mind [νοῦς] of the dead, though not alive, hath consciousness [γνώμη] immortal, being plunged into the immortal æther'; cf. the 'other shapes of life' in *Ion*, 1068, *Med.* 1039).

Next to the supernatural, sexual morality is the great field for tabus and unreasoning judgments. Euripides' treatment of all such questions is by modern standards high and austere, but shows both sophistic and romantic bias. He treats with sympathy, though with condemnation, the love of married women for men not their husbands (*Phædra*, *Sthenebœa*; cf. *Med.* 635 ff.), but shows no tenderness for men in the same situation. He treats of love within the forbidden degrees (Canace and her brother in the *Æolus*), and even, as a case of heaven-sent madness, of that between Pasiphae and the Bull-god. He often treats legends of the children born of a god and a mortal woman (Creusa, Melanippe, Alcmene, Auge), always making the woman sympathetic and the god hateful, or, at least, suspect and imperfectly justified. Unlike Sophocles and Æschylus, he appears to have no tolerance of pæderastia, which he attributes only to the bestial Cyclops and, as a primeval sin, to Laius. (Ganymedes is mentioned in lyrics.)

Two social institutions of the 5th cent. especially provoked the criticism of sophists—slavery, and the subjection of women. Both had increased with the rapid expansion of city life and commerce. Slavery is never expressly condemned as 'contrary to nature' in our remains of Euripides, though he probably shared this view; but his interest in the question is shown by the innumerable references to it. The influence of slavery is very bad, and most slaves are cowardly and untrustworthy (*El.* 633; fr. 86, etc.). Yet 'many slaves are better men than their masters' (fr. 511). 'Many so-called free men are slaves at heart.' 'A man without fear cannot be a slave.' More important than these abstract statements, which are naturally put as a rule into the mouths of slaves, is the frequent presence of 'sympathetic' slaves (esp. *Alexandros*, see above). The blind devotion of a slave is shown in the *Iph. Aul.* and the *Ion* (cf. *Helene*, 726 ff.). The women of Euripides are famous; they are more prominent in his plays than the men, more closely studied, and treated with more sympathy. Yet, magnificent as his heroines are, they suggest strange conclusions about the real Athenian women of the 5th century. They are apt to be loving, courageous, clever, and often intellectual; but very ignorant and untrained, discontented, and instinctively ready to unite against the man who injures one of them. They are the slaves of their emotions, and turn quickly to treachery and crime (Creusa, Phædra, Electra, as well as the barbarians Medea and Hecuba). Even Iphigenia (*Taurica*) and Alcestis have their weaknesses. On the other hand, Hecuba in the *Troades* is extraordinarily noble, and so are the various virgin-martyrs. It is one of Euripides' chief glories as a dramatist that he scarcely ever indulges in an ideally 'sympathetic' stage character any more than in stage villains. His strong sympathy with women made him understand them too well to draw them in the conventional man-attracting poses. This enables Aristophanes to represent him as a great enemy of the sex, who has discovered its secrets and betrayed them to the world (*Thesmophoriazusæ*).

Two other questions which vitally interested Euripides were: (1) Is virtue teachable or purely innate? and (2) Is the current conception of a happy life, with its insistence on the possession of a wife and children, correct? On the first he speculates several times, on the whole laying much stress on 'noble birth' (εὐγένεια), if only it is of the true inward sort (fr. 52, 617; *El.* 551, etc.). He generally exalts σοφία, which with him not only means wisdom or 'culture,' but covers such qualities as 'gentleness' or 'mercy' (*El.* 294; *Or.* 491, etc.; *Alc.*, 606, etc.); while ἀμαθία denotes brutality and cruelty (*passim*; cf. the uses of γνώμη, σωφρονεῖν, etc.). Yet he believes greatly in the virtues of 'those in the mean,' especially the free peasants who keep no slaves (αὐτουργοί: cf. *El.*, first half; *Suppl.* 244; *Or.* 920). At times (*Bac.* 393, 428 ff., 1005 ff. (?); *Suppl.* 218; *Hec.* 1192) his characters even denounce the inadequacy or falseness of conventional σοφία. About children, and the intense happiness and more intense sorrow which they are apt to bring, he writes with peculiar interest (*Med.* 1090 ff.; fr. 571, 908, etc.); and he makes a wonderful use of children in his most poignant scenes (*Alc.* 394 ff.; *Andr.*, first half; *Med.*, *passim*, esp. 1270 ff.; above all, *Tro.* 700–800).

We must always remember that Euripides was in the first place a dramatist and poet, only in the second a philosopher. His habitual subject-matter was the heroic saga, which uses supernatural machinery as a matter of course; and, though he cannot keep his mind from criticism, both moral and intellectual, of this subject-matter, his main business was not criticism: it was the writing of tragedy. Further, we must not suppose that a 5th cent. Greek, who rejected superstition and tried to follow σοφία, thereby possessed at once a scientific view of the world. He was only one of the pioneers who eventually made such a view possible. Euripides' habits of often opening with a prologue spoken by a supernatural being, and closing with the appearance of some god or hero in the air, who founds the ritual on which the play is based and explains its αἴτιον (or legendary origin), belong rather to his technique than to his religion. In the development of Greek stage-craft they have their natural place (see note in J. E. Harrison, *Themis*, 1912, pp. 341–362), and theories which explain them away should be read with caution. There are real difficulties, and each case requires separate treatment, but in general we ought probably to realize (1) that an epiphany was an integral part of the old *sacer ludus* from which tragedy is derived, and was usual in Æschylus. (This can be proved from the fragments.) Euripides only stiffened the convention and introduced improved machinery. (2) The epiphany is often beautiful and effective even by our standards; in other cases we must try to imagine what the effect may have been when the mechanical device was new and impressive, and the figure in the Divine mask corresponded with the ordinary man's instinctive expectations, and was not in the faintest degree inherently ridiculous. The thought of Euripides is in many ways so extraordinarily advanced, not only for his own age but for any succeeding age, including even that of the 'Encyclopædists' (*q.v.*) and the present day, that it requires an effort to realize that in other respects he was probably, to our ideas, quite primitive and simple-minded. He was mystic as well as rationalist; and, while rejecting the Olympian mythology and the pretensions of the Delphian priests, it is surprising how often he falls back on some approach to the more primitive strata of religious thought.

Apart from his sheer force of intellect and skill as a playwright, Euripides' distinction as a poet lies partly in a sincerity which often makes him

spoil the harmony of his work rather than be content with mere make-believe, and partly in a lyrical gift which can transmute into beauty his most grisly representations of human suffering; but most of all in his unequalled emotional power. It is doubtful if any later dramatist has been born to dispute his right to the tremendous title awarded him by Aristotle, who calls him, in spite of various faults, 'clearly the most tragic of the poets' (*Poet.* 1453*a*, 30).

LITERATURE.—See esp. U. von Wilamowitz-Möllendorff, *Euripides' Herakles*, Berlin, 1889, Einleitung; K. Dieterich, art. 'Euripides,' in Pauly-Wissowa; W. Nestle, *Euripides, der Dichter der griech. Aufklärung*, Stuttgart, 1901, also *Die philosoph. Quellen des Euripides*, Leipzig, 1902; P. Masqueray, *Euripide et ses idées*, Paris, 1908; P. Decharme, *Euripide et l'esprit de son théâtre*, Paris, 1893; A. W. Verrall, *Euripides the Rationalist*, Cambridge, 1895, also *Essays on Four Plays of Euripides*, do. 1905, and *The Bacchantes of Euripides*, do. 1910; G. Norwood, *The Riddle of the Bacchæ*, London, 1908; G. Murray, Introd. essays to his *Euripides*, London, 1902 (= vol. iii. of *Athenian Drama*, ed. G. C. W. Warr), and his trr. of the *Trojan Women*, *Electra*, etc., London, 1902–10; and the articles in the Histories of Greek Literature (Bergk, Croiset, Mahaffy, Jevons, Murray; also in Gomperz, *Greek Thinkers*, Eng. tr. 1901).

GILBERT MURRAY.

EUROPE.—We have seen (artt. AFRICA, ASIA, and ETHNOLOGY, §§ 8 and 10) that the Caucasic division of mankind was evolved most probably in North Africa, whence it ranged in remote times eastwards into Asia and northwards into Europe. The latter continent was first reached by now vanished land connexions, in company with the late large Pliocene or early Pleistocene fauna whose remains—elephant, hyæna, rhinoceros, hippopotamus, cave-bear, sabre-tooth lion or tiger—are found in association with those of early man in many parts of South and West Europe. We thus get a vast antiquity (estimated by some authorities at three or four hundred millenniums) for the first arrivals, the men of the *Palæolithic*, or *Old Stone*, *Age*, which nearly coincided with the *Ice Age*, that is, with pre-, inter-, and post-glacial times. All were apparently of somewhat uniform long-headed type, but showed steady progressive developments, both in physical and in mental respects, from the rude *Chellian* and *Moustierian* to the more advanced *Solutrian* and *Madelenian* epochs.

The *Old Stone Age* was followed without any clear intermission, certainly without any marked break or hiatus (now rejected by all leading palethnologists), by the *Neolithic*, or *New Stone*, *Age*, which had also a very long duration, estimated by Sir W. Turner for Scotland alone at perhaps a hundred millenniums. For a long time Neolithic man was also of the same long-headed type, which in the Cro-Magnon race of Dordogne reveals physical characters that may be called 'European' in the modern sense of the term. Moreover, Quatrefages, who connects all the human remains, both of the Old and of the New Stone Age, with 'the white type,' identifies the Cro-Magnon with the tall, long-headed, fair-skinned, and blue-eyed Berbers (Hamites) who still survive in various parts of Mauretania. To these Neolithic Afro-Europeans are also credited the megalithic monuments—dolmens, menhirs, cycloliths, triliths, barrows, galgals, nuraghi, talayots—which are strewn over Iberia, Gaul, Britain, Denmark, and Sweden, and which in North Africa range from the Atlantic seaboard to Tripolitana. It follows that the men of the Stone Ages form the substratum of the present inhabitants of South and West Europe, and that they are, for the most part, of North African origin.

But before the close of the New Stone Age the uniformity of the long-headed type was disturbed by the advent of numerous short-headed peoples, both in the North-west (Furfuz, Belgium) and in the South (Lozère, Lower Rhone Valley). These everywhere intermingled with the earlier long-headed type, and later became continually more numerous, until, 'towards the close of the Neolithic Age in France, the round and medium types became eight or ten times more numerous than the long in certain parts' (P. Salmon, *Races humaines préhistoriques*, p. 39). In Britain the earlier long barrows are occupied exclusively by long-heads, the later round barrows chiefly by round-heads, whence Thurnam's dictum: 'long barrow, long skull; round barrow, round skull.' In France Paul Raymond, who separates the northern short-heads from the southern long-heads by a diagonal drawn from Cohentin to the Maritime Alps, has recently discovered several short-heads commingled with long-heads in the sepulchral cave of Lirac (Départ. Gard), and infers that

'vers la fin de la période néolithique vivaient dans le sudest de la France des populations dolichocéphales qui présentaient les caractères de la race des Baumes-Chaudes [Cro-Magnon type], avec les variations que leur avait imprimées le croisement de brachycéphales immigrée' (*Revue préhistorique*, Jan. 1906, p. 38).

As these Southern short-heads appear to have penetrated inland by the Rhone Valley from the south coast, they too may have come from North Africa, where a very ancient short-headed race, representing the Libyans proper and ranging into the Canary Islands, still forms the substratum in Tunisia and Kabylia, and is declared by Collignon to be remarkably like the short-headed brown French type:

'Si l'on habillait ces hommes de vêtements européens, vous ne les distingueriez pas de paysans ou de soldats français' (*L'Anthrop.*, 1897, p. 424).

It is generally admitted that the more numerous Northern short-heads came from Asia, probably by the Danube route, in the Bronze Age some four or five thousand years ago. These ranged over a vast area in East and Central Europe, and many passed westwards through Brittany into Britain, where they had been preceded by the Afro-Europeans of both Stone Ages. Other Asiatics of a long-headed type arrived, also in the Bronze Age, or perhaps even earlier, by a northern route, and occupied the Baltic lands and Scandinavia, where they are now represented by the North Germans and Norsemen, of tall stature, fair or florid complexion, and blue eyes—Linné's typical *Homo Europæus*. Lastly, another branch of these Asiatics, following a southern route through Asia Minor, passed into the Balkan region, and thence into the peninsulas of Greece and Italy, where they had been preceded by the men of the Stone Ages from North Africa.

We thus see that Europe was first settled in the south and west by North African Hamites, who came later to be known as *Pelasgians* in Greece, *Ligurians* in Italy, and *Iberians* in Spain; in the east and north by Asiatics, who may now be called *Eurasians*, since their original domain comprised the whole of the Steppe-lands between the Carpathians in Europe and the Pamirs in Central Asia (Schrader). They are also commonly called *Aryans*, because all the Eurasians spoke various diverging dialects of the long extinct Aryan stock language. But it is obvious that, strictly speaking, 'Aryan' can be only a linguistic and not an ethnical expression, since it was seen above that the Eurasians were not of one but of two distinct physical types—short-heads and long-heads. Hence, when we speak of 'Aryans,' we really mean very mixed populations of a roughly uniform Caucasic type, and of uniform Aryan speech.

It is more important to note that these Eurasians, coming in the Bronze Age, and consequently more highly cultured, and equipped with better weapons for warfare, everywhere conquered the ruder Afro-European Hamites, imposed their Aryan languages

on them, and in the process merged with them into various mixed ethnical groups, which differed from each other in accordance with their different constituent elements. Thus was brought about in remote pre-historic times the Aryanization of Europe, which was so complete that, excluding the much later intrusion of the Finno-Tatar languages, the only non-Aryan form of speech still surviving in Europe is *Basque* (*q.v.*), which is spoken by scarcely 600,000 natives of the Western Pyrenees, and which represents all that remains of the old Iberian language, and is distantly related to the Berber (Hamitic) still current nearly everywhere in North Africa (G. von der Gabelenz, M. Gèze, Morris Jones, and others). Other survivals may have been the Pictish of Britain, since Prof. J. Rhŷs thinks that 'Picts and Iberians belonged to one and the same family which I have ventured to call Ibero-Pictish' (*Academy*, 26th Sept. 1891); and the Pelasgians of Greece, whom W. Wachsmuth calls 'ante-Hellenic,' and of whom Herodotus writes that, according to some evidence, *ἦσαν οἱ Πελασγοὶ βάρβαρον γλῶσσαν ἱέντες* (i. 57). For Homer these Pelasgians were *δῖοι* (*Il.* x. 429; *Od.* xix. 177); for Herodotus 'barbarians' (*loc. cit.*), and for Dionysius Hal. (i. 18 f.) 'Greeks' (*τὸ τῶν Πελασγῶν γένος Ἑλληνικόν*). Such apparently contradictory statements simply mean that, during the course of ages, the pre-Aryan inhabitants of Europe were gradually absorbed and assimilated by the Asiatic intruders of Aryan speech.

This rapid outline explains and agrees with the three great ethnical divisions proposed by Ripley, Sergi, and other leading ethnologists for the historical European populations. These are (1) the tall, fair, long-headed northern type, for which de Lapouge reserves Linné's *Homo Europæus*, and to which Ripley applies the term 'Teutonic,' because the whole combination of physical characters 'accords exactly with the descriptions handed down to us by the ancients.' Thus Tacitus: 'omnibus truces et caerulei oculi, rutilae comae, magna corpora, et tantum ad impetum valida' (*Germania*, iv.).—(2) The central zone of medium-sized round-heads with light brown or chestnut hair, brownish skin, and grey or hazel eyes, the Celts or Celto-Slavs of Broca, the Ligurians or Arvernians of Beddoe, and whom, for want of a better name, Ripley calls *Homo Alpinus*, though also comprising the Slavs of the eastern plains. These are the short-heads both from Africa and from Asia, who may be supposed to have joined hands in the central European uplands, where are met the most pronounced round skulls (*hyperbrachycephalic* in Tirol and Switzerland).—(3) The southern zone of undersized, pale, black-eyed, and black-haired long-heads, who are the primitive Afro-European element in Greece, Italy, Sicily, Sardinia, Corsica, Iberia, West France, and Britain, and are now generally identified with the above-mentioned Pelasgians, Ligurians, and Iberians, who were afterwards modified by Aryan interminglings, but are grouped together by Sergi, Keane, and Ripley as 'Mediterraneans.'

All the present Aryanized inhabitants of Europe, that is, the vast majority, may now be conveniently tabulated in accordance with these three anthropological divisions as follows:

1. Homo Europæus (Teutons): Swedes, Norwegians, Danes, Icelanders, Frisians, North Germans, Dutch, Flemings, most English, Scotch, and Irish, most Normans and Walloons.
2. Homo Alpinus (Celto-Slavs): most French, Bretons, and Welsh, South Germans, Swiss, Tirolese, Austrians, Russians, Lithuanians, Poles, Czechs (Bohemians), Croatians, Servians, Dalmatians, Montenegrins, some Albanians, Bulgarians, and Rumanians.
3. Homo Mediterraneensis (Ibero-Liguro-Pelasgians): most Iberians (Spaniards and Portuguese), Provençals, Italians, Sards, Corsicans, Sicilians, Epirots (South Albanians), and Greeks.

On the linguistic basis the groupings naturally vary with the different views taken by philologists regarding the order in which the various members of the Aryan family branched off from the extinct mother-tongue. On this point there is still little accord, although, keeping to Europe, it is now generally allowed that, of the six recognized branches, Hellenic, Slavic, and Lithu-Lettic are more closely related one to the other than they are to the Italic, Teutonic, and Celtic. We thus get two main divisions—an eastern and a western—which, with their numerous sub-groups, may here be tabulated:

Aryan Linguistic Family: European Section.[1]

Eastern Division	*Hellenic branch*:	Æolian, Dorian, Ionian, Attic, Romaic, Old Illyrian, Albanian.
	Lithuanic branch:	Lithuanian, Lettic, Pruczi (Old Prussian).
	Slavic branch:	Old Slavic, Great Russian, Little Russian, Bulgarian, Slovenian, Servo-Croatian, Czech (Bohemian), Polish, Polabish, Lusatian, Slovak.
Western Division	*Italic branch*:	Latin, Oscan, Umbrian, Italian, French, Spanish, Portuguese, Romansch, Walloon, Rumanian.
	Teutonic branch:	*Low German Group*: Gothic, Old Norse, Icelandic, Danish, Swedish, Frisic, Platt-Deutsch, Dutch, Anglo-Saxon, English.
		High German Group: Old, Middle, and New High German, Thuringian, Swabian, Swiss, Tirolese, Austrian.
	Celtic branch:	*Q Group*: Old Irish, Irish, Gaelic (Erse), Manx.
		P Group: Welsh, Cornish (extinct), Low Breton.

Besides the already mentioned Basques, the only non-Aryans now in Europe are the Baltic and other Finns, the Lapps, Samoyeds, and Magyars of Hungary, now assimilated to the normal European type but still speaking a Ugro-Finnic language, the Osmanli Turks, also largely Europeanized but not Aryanized, and lastly a few Kirghiz (Turki) and Kalmuk (Mongol) nomads in Astrakhan. All these arrived from Asia in relatively late historic times, and can in no sense be regarded as European aborigines. Respecting the Finns—about the others there is no question—it is important to note that the views formerly held regarding a western extension of the Finnic race over the whole of Europe and the British Isles are now exploded.

'Despite the fact that all the Finns are distinctly round-headed, they were identified first with the long-headed cave-men, who retreated north with the reindeer, as was the favourite hypothesis, and then with the early neolithic races who were also long-headed. Elaborate but now forgotten essays were written by learned philologists to establish a common origin of the Basque and the Finnish tongues, which have nothing in common, and half the myths, folklore, and legendary heroes of the western nations were traced to Finno-Ugrian sources' (Keane, *Man Past and Present*, p. 334).

In fact, recent research has shown that the advent of the Finns in Finland itself dates only from about the new era, and the men of the Bronze Age in this region were not Finns but Teutons (A. Hackmann, *Die Bronzezeit Finnlands*, 1897, *passim*). Tacitus (*Germ.* xlvi.) does not know whether his *Fenni* (Ptolemy's Φίννοι) were Germans or Sarmatians (Slavs); but the reference to the children's cradles suspended from the branches of trees shows that they were the Σκριθίφινοι of Procopius (*de Bell. Goth.* ii. 15), and the Scride-Finnas of King Alfred (*Orosius*, i. 12), that is, the *Lapps*, who are still always called Finns by the Norwegians.

During the slow process of fusion between the Afro-European indigenes and the Eurasian intruders, their religious notions also became necessarily intermingled, so that the pre-Christian forms of belief were all of a mixed character like those described in art. ABORIGINES. Even after the fusion, further interminglings took place through

[1] For details, see art. Ethnology, § 10.

infiltrations from Egypt and Persia, and, more especially, from the Semitic world. Nor were these later influences confined to the contiguous Hellenic and Ægean lands, but were carried by the Phœnician seafarers westwards to Iberia and the British Isles, where they are reflected in the national legends and even in the very language of the Celtic-speaking natives of Ireland, e.g. *Bal Dhia dhuit*, 'God Baal to you'; and there is a district near Cork which is still called *Beal-atha-magh-adhoir*, 'Field of the worship of Baal.' Elsewhere this Baal-cult was associated with phallic rites, as in Phœnicia.

To discriminate between all these heterogeneous elements is no longer possible, though it seems safe to say that the higher forms—the Olympian deities and personifications of the natural forces—came in with the more cultured Eurasians, and were by them superimposed on the rude animism and the chthonic gods of the Afro-Europeans, while the mysteries and degrading rites of the Cabiri, of Dionysus, Astarte, and the worshippers of Mithra and Isis (these twice expelled from Rome), were admittedly of Oriental origin. Thus the compound forms *Dyaus-pitar*, Ζεῦ-πάτερ, *Dies-piter* (Jupiter), show at once that Jove was already dominant *before* the Aryan dispersion, and consequently came in with the Eurasians, by whom his supremacy was spread north, through Lithuania (*Diewas*) to Scandinavia (*Týr*), Germany (*Zio*), and west to Britain (A.S. *Tíwesdæg*, Eng. *Tuesday* = 'day of Tíu') and Ireland, where *dia* retains all the associated meanings—'sky,' or 'heaven,' 'day,' and 'god.' On the other hand, Jove's counterpart, the goddess *Ertha* (*Herthus*, *Earth*), was clearly an Afro-European divinity, since she was worshipped with human sacrifices (not customary with the Vedic and other proto-Aryans), and has been identified with Rhea, Ops, Demeter, Cybele, and other distinctly chthonic divinities. But she was early added by the Eurasians to their pantheon, for Tacitus tells us (*Germ.* xl.) that the Angli (Continental English) 'Herthum (variant *Erthum*), id est, Terram matrem, colunt.' He adds that the rites observed in her honour on an island in the ocean (Rügen?) concluded with the sacrifice of the attendant slaves, whom the lake in her hallowed grove (*castum nemus*) 'swallowed up.' With this should be compared the orgies practised by the Corybantes in honour of Cybele, daughter of Terra, or Terra herself, in Phrygia and Thrace, whence her worship passed into Greece (Eleusinian mysteries), and thence into Italy, where her shrine was annually cleansed by the waters of the river Almo, just as Ertha's chariot and raiment were cleansed in the above-mentioned lake at the foot of a high cliff which to this day is called 'Hertha's rock.' The Italic 'Ertha' was called *Bona Dea*, and her non-Aryan origin is admitted, as is also that of the Irish chthonic goddess *Mórrigan*, the 'Great Queen,' who has been identified with Cybele.

That human sacrifices, apparently unknown in the Aryan cradle-land, were everywhere practised by the Eurasians in their new western homes, that is, were adopted from their Afro-European predecessors, is evident from Cæsar's account (*de Bell. Gall.* vi. 16) of the frightful holocausts in Gaul, and from many other less familiar indications. From Tacitus we learn (*Germ.* ix.) that 'deorum maxime Mercurium colunt, cui certis diebus humanis quoque hostiis litare fas habent,' this Mercurius being the Wodan or Odin of the Germans and Scandinavians (as seen in the English *Wednes-day*), and the Greek Ἑρμῆς, who, Herodotus tells us, was specially worshipped by the Thracian kings (v. 7). In Rome, sexagenarians were called *senes depontani*, 'old bridge-castaways'; because old people, when a bridge was finished, were thrown into the water as a sort of bridge-toll to appease the offended river-god for this intrusion on his domain. The tribute had to be paid not once only, but every year, and it was a function of the Vestal Virgins to throw the *depontani* into the river. Later, for the living victims the so-called *argei*—rush or straw figures—were substituted as the *priscorum virorum simulacra*. The statement that the 'sexagenarii de ponte dejiciebantur' occurs in Festus, quoted by Ihering in *The Evolution of the Aryan*, p. 356. An echo of the practice, which appears to have been wide-spread, survives in the Wendland district of Hanover on the Elbe, formerly inhabited by Slavs (Wends), but now by Low Germans, who declare that their exhortation, *kruup unner, kruup unner, de Welt is di gram* ('creep under, creep under, to thee the world is [now] grim'), 'was once used as a prayer [encouragement] when the old people were thrown from the bridge into the water' (*ib.*). Bridge-building was a matter of such importance to the community that a priest called a *pontifex*,[1] or 'bridge-maker,' was appointed to superintend the works, and he gradually became the head of the priestly order, the Pontifex Maximus—a title which still survives as that of the Roman Pontiff, whence Longfellow's

> 'Well has the name of *Pontifex* been given
> Unto the Church's head, as the chief builder
> And architect of the invisible bridge
> That leads from earth to heaven' (*Golden Legend*, v.).

We are told by Tacitus (*Germ.* xxxix.) that the Semnones, who occupied a vast domain between the Elbe and the Oder, opened their national assemblies with horrible barbaric rites at which a human victim was immolated *publice*, that is, on behalf of the people. Even *satī*, or widow-burning, which was post-Vedic in India and unknown to the Greeks, Romans, and Celts, was practised both by the Slavs and by the Germans. After her husband's death the wife mounted the pyre—not, however, as an act of heroic devotion and a voluntary immolation, as amongst the later Hindus, but because she had, *nolens volens*,

> 'to share the fate of all the other possessions which were sent into the grave of a deceased man, perhaps under the impression that he could make use of them in the other world; perhaps because the idea that they should fall into other hands was repugnant to him. Besides his weapons, his horse, his slaves, and his bondmen, his wife also was sent after him' (Ihering, *op. cit.* p. 31).

In Greece we hear little of human offerings, which seem almost excluded by Herodotus, who asks (ii. 45): 'If even animals, except bulls, swine, calves, and geese were unlawful, κῶς ἂν οὗτοι (the Hellenes) ἀνθρώπους θύοιεν?' It was far different in Norseland, where the custom was universal till the introduction of Christianity, and was even observed, or at least threatened, by way of retaliation, by the first converts in Iceland. In the year 1000, the champions of the old faith having offered up two men to the gods, calling upon them not to let Christianity overrun the land, the Christians retorted that they too would make an offering of two men.

> '"The heathens," they said, "sacrifice the worst men, and cast them over rocks or cliffs; but we shall choose the best men, and call it a gift for victory to our Lord Jesus Christ"' (Craigie, *The Religion of Ancient Scandinavia*, p. 58 f.).

In the same spirit, but on the opposite side, the Norwegian king Olaf Tryggvason (998) threatened a great immolation, saying:

> 'I will not choose thralls or criminals, but will select the most distinguished men to give to the gods' (*ib.* p. 58).

So in Denmark, at the great national gathering held every nine years, a holocaust was made of ninety men, with as many horses and dogs. In the Swedish chronicles it is recorded that one of

[1] Walde (*Etymol. Wörterb. der lat. Sprache*[2], Heidelberg, 1910, p. 598 f.) holds that the *pontifex* was the 'performer of holy things.' The question is fully discussed in art. BRIDGE, vol. ii. p. 855.

the early kings was made a 'burnt-offering' to Odin in order to end a famine caused by his slackness in keeping up the sacrifices, while another king immolated nine of his sons in succession to Odin, to obtain long life for himself. Lastly, it is related in the *Guta Saga* that the people of the island of Gotland

'sacrificed their sons and daughters and their cattle. All the land had its highest sacrifices with folk (=human beings), as also had each third (of the country) by itself' (*ib.* p. 57 f.).

For the western Celtic world reference has already been made to Cæsar's account of the inhuman Gaulish holocausts made in huge wickerwork images on special occasions. But at all times such offerings were customary. People stricken with illness, engaged in warfare, or exposed to other risks,

'offered, or promised to offer, human sacrifices, and made use of the Druids as their agents for such sacrifices. Their theory was that the immortal Gods could not be appeased unless a human life were given for a human life. In addition to these private sacrifices, they had also similar human sacrifices of a public character' (Anwyl, *Celtic Religion*, p. 50 f.).

Such rites must have also prevailed in Britain, as may be inferred from the incident mentioned by Nennius, who tells how Vortigern, when building a fort, was much annoyed by the spirits running off with the stones, and was advised by the Druids to kill a fatherless boy and sprinkle his blood upon the foundations of the building. So in Ireland such offerings were not merely threatened, as in Iceland, but actually practised by the early Christians. Some of the legendary underground fiends that went about at night pulling down the walls of churches erected during the day were so troublesome that it was found necessary to revive the old heathen methods of protection, by burying alive a man, woman, or child under the foundations.

'Tradition says that St. Columba, thus tormented, buried St. Oran, at his own request, under the monastery of Iona' (Bonwick, *Irish Druids*, p. 90).

It matters little whether this actually occurred or not, since the mere mention of it as a possibility shows that the early Christian writers were aware of the pagan custom, for which there is in any case abundance of collateral evidence.

Thus in the *Dinnsenchus* it is stated that to Crom Cruach, the chief Irish deity, his votaries offered 'the first-born of all offspring and the first-born of their children'—probably a Phœnician practice (cf. Dt 12[31]). In an old poem on the *Fair of Tailtenn*, St. Patrick is described as preaching against the burning of firstlings; on the summit of Sliabh Crooabh, 'Hill of the Deadly Spear,' there is a ruined altar where the victims of the gods were immolated; and the early Christian Culdees (*q.v.*), the successors of the pagan Druids, are strongly suspected of having offered human sacrifices.

If the proto-Aryans adopted these revolting practices from the Afro-European aborigines, which seems scarcely open to doubt, they made ample amends by the introduction of two social institutions—monogamy and patriarchy—which in pre-Christian times helped more perhaps than all else to raise the ethical standard to a higher level in Europe than in any other part of the world. No doubt the Eurasians were not all monogamists at first, since polygamy was lawful and practised by their rulers. But the great bulk of the immigrants were monogamists, whether on principle or because they could not afford the luxury of many wives. Moreover, the marriage relation received religious sanction, which was even compulsory in certain cases, and already in pre-historic times the whole of Aryanized Europe appears to have been monogamous. The business part of the transaction varied considerably; in Rome the bride brought the *dos* to her husband, while the Germans and Slavs brought the dowry, the *Brautgabe*, to the bride, that is, bought her, as we see in the case of Vladimir the Great (988), who forcibly abducted an undowered Byzantine princess, and then paid her relations for her; cf. Tacitus: 'dotem non uxor marito, sed uxori maritus offert' (*Germ.* xviii.). But such details made little difference; and, when we find monogamy the rule amongst the early Eurasians and later universal, we recognize in the fact the same moral conception of the marriage laws

'which places them so far higher than all contemporary nations of antiquity. In this respect the Aryans are proved to have been a civilized nation of the first rank' (Ihering, *op. cit.* p. 30).

No less beneficial was the patriarchy, with descent through the male line, which everywhere superseded the earlier and ruder matriarchy, with descent through the female line, and for the first time established the family, as now understood, on a solid foundation, by the marriage contract. Recently Lamprecht has proved (*Deutsche Gesch.* i. [1890]) that long before the dispersal the proto-Aryans had reached the patriarchal state through the matriarchal, which implied the absence of marriage, and under which the children belonged to the mother, the father not being considered because unknown. With the introduction of marriage the maternal yielded to the paternal right, and to the father, who now asserts himself, belong the children and the mother herself. It was under this *patria potestas* that the Eurasians entered Europe, where, consequently, no trace now survives of the primitive *matria potestas*. The *paterfamilias*, whose antiquity is shown by the archaic form *familias* for the later *familiæ*, ruled supreme, and in Rome enjoyed the power of life and death over all the household—over the *famuli*, that is, the slaves or servants (cf. the Oscan *famel*=*famulus*, and *famelo*='family'). It was his interest to maintain order amongst these *famuli*, with whom were included his own wife and children, and thus was gradually organized the family circle, as we now see it, throughout the Aryan world. This could never have been under the matriarchal system, which prevailed amongst the early Eurafricans, as it still does amongst many primitive peoples. We see the results in the high esteem in which the domestic virtues were held by the Romans under the kings and during the Republic (Lucretia, Virginia), and by Germans in the time of Tacitus, although here the picture may be somewhat heightened as an object lesson for the decadent Romans under the Empire. Still it is a beautiful picture applicable even to present times ('Numerum liberorum finire . . . flagitium habetur'), and concluding with the memorable words '*plusque ibi boni mores valent* quam alibi bonae leges' (*Germ.* xix.).

In *GB*[2] (vol. i. p. viii) Frazer writes that 'the superstitious beliefs and practices which have been handed down by word of mouth are generally of a far more archaic type than the religion depicted in the most ancient literature of the Aryan race.' So true is this, that all folklorists now admit that the whole of Europe was choked with such rank undergrowths before the arrival of the Eurasians, who, so far from eradicating them, added greatly to their number by fresh importations from Central Asia. Here and there it is possible to distinguish between the old and the new, as in the case of certain spells and spooks characteristically European, but in most instances it would be futile to attempt to draw any dividing line between western and eastern popular notions, which might have sprung up on any soil. Thus witchcraft, lycanthropy, the evil eye, and wind-raising range from Ireland with little interruption to Malaysia, and hence might have been either brought with them by the proto-Aryans or else picked up in their new homes. Even the strange observance of the fire-dance, which from its very nature might be supposed to be restricted in time and place, was already known to the ancients and practised by the Hirpini (Sabines), as it also was by the now extinct

Catawbas of North America, and still is by the Bulgarians, the Japanese, the Hindus, the Tahitians, and the Fijians of the Central Pacific Ocean. Similarly, all sorts of fire-myths are met with, from the Promethean in Hellas to that of the extinct Tasmanians, who had no fire at all until two natives, standing on a hill, threw it about like stars.

'After this no more was fire lost in our land. The two blackfellows are in the clouds; in the clear night you see them like stars. These are they who brought fire to our fathers' (Brough Smyth, *Abor. of Vict.*, Melbourne, 1878, ii. 461).

A closer parallel is the wax effigy of a person, by means of which he was done to death at a distance—a practice found almost everywhere in Europe. The process as described by Ovid (*Ep.* vi. 91)—

'Devovet absentes, simulacraque cerea figit,
Et miserum tenues in jecur urget acus'—

is exactly the same as that adopted by the hapless Princess Caroline to encompass the death of the Prince Regent.

'She made a wax figure as usual, and gave it an amiable addition of large horns; then took three pins out of her garment and stuck them through and through, and put the figure to roast and melt at the fire. . . . Lady —— says the Princess indulges in this amusement whenever there are no strangers at table; and she thinks her Royal Highness really has a superstitious belief that destroying this effigy of her husband will bring to pass the destruction of his Royal person' (S. Clerici, *A Queen of Indiscretion*, F. Chapman's English ed. 1907).

So in Ross-shire the rudely shaped image of the person aimed at

'is stuck all over with pins and thorns and placed in a running stream. As the image is worn away by the action of the water the victim also wastes away with some mortal disease. The more pins that are stuck in from time to time the more excruciating agony the victim suffers. Should, however, any wayfarer discover the *corp* (effigy) in the stream, the spell is broken and the victim duly recovers' (Haddon, *Magic and Fetishism*, p. 20).

In the Isle of Wight the plan is to put a slug under a flower-pot, fix it there with a pin or a needle, and leave it to die, when the victim also is sure to die.

'Our early Teuton forefathers,' remarks F. York Powell (in *Religious Systems of the World*, London, 1901, p. 279), 'were influenced by *anthropomorphism* and *animism*, and thought that inanimate objects, as stones, stars, and the elements, and organisms such as trees, fishes, birds and beasts, were possessed of spirits akin to their own.'

From this root-idea, which belongs to all primitive systems (see art. ETHNOLOGY, § 9), sprang those countless hosts of invisible beings, some good, some bad, some harmless, who have throughout the ages filled the upper, the terrestrial, and the lower regions, and whose numbers were greatly increased by the ancestor-worship which was highly characteristic of the proto-Aryans. As these immigrants failed to sweep away the lower forms of animism (see above), so the Christian system not only left the spirit-world untouched, but enlarged it with Lucifer and his fallen angels, and with those δαιμόνια πολλά and πνεύματα ἀκάθαρτα whose name was 'Legion' (Mk 5[9]). Satan and Beelzebub were also recognized, and, demonology having thus received a new lease of existence, it is not surprising that it should continue to flourish throughout Christendom down to the present day. Its name is still 'Legion,' as we read in the *Life and Works of Robert Burns* (ed. R. Chambers, 1851, p. 10), where Betty Davidson, who lived in the family,

'had the largest collection in the country of tales and songs concerning devils, ghosts, fairies, brownies, witches, warlocks, spunkies, kelpies, elf-candles, dead-lights, wraiths, apparitions, cantraips, giants, enchanted towers, dragons, and other trumpery.'

Nor does this exhaust the list, which further includes banshees, leprechauns, cluricauns, good people (*Duine Matha*), tylwyth-teg or Fair Family, tylocthod, Cyweraeth, morrigans, phookas, pixies, spooks, spectres, sprites, nickers or water-kelpies, bogles or bugils, bug-bears, bug-a-bos, goblins, hobgoblins, fays, ogres, duzes, dwarfs, lubber-fiends, pucks, trolls, nissens, damhests, damavoi, rotri, korils, korigans, naiads, nymphs, dryads, sylphs, wer-wolves, vampires, and no doubt many more local and personal *Gespenster* and 'familiar spirits' (cf. Socrates), so that some parts of Europe are said to be more thickly peopled with these invisible spirits than with human beings. And Sir Conan Doyle writes (*Sir Nigel*, 1908) that

'in those simple times [14th cent.] the Devil raged openly upon the earth; he stalked behind the hedge-rows in the gloaming; he laughed loudly in the night time; he clawed the dying sinner, pounced upon the unbaptized babe, and twisted the limbs of the epileptic. A foul fiend slunk ever by a man's side and whispered villainies in his ear. . . . How could one doubt these things, when Pope and priest, scholar and king were all united in believing them, with no single voice of question in the whole wide world?'

Then, as the majority of the spirits were dangerous or ill-disposed, all kinds of devices were naturally invented or developed to thwart their designs and the machinations of those supposed to be in league with them (see artt. DEMONS AND SPIRITS). Thus arose those otherwise unaccountable charms (*carmina*), spells, incantations, divinations, reading of horoscopes, fortune-telling, ordeals, duels, and especially that sinister belief in witchcraft (*q.v.*) which broke out again and again throughout mediæval times, and led to the perpetration of unspeakable horrors by religious and other fanatics. It is scarcely three centuries since James I., the author of a special work on *Demonology*, put two hundred wretched victims of the craze, along with a noble and learned physician, to a horrible death on the charge of having 'raised the wind' against the coming of his Norwegian bride. Whoever wants to understand the full essence of this frightful blend of foulness and ferocity should read Cantù's official revelations of the witchcraft mania, which did not receive its death-blow till the judges of the ecclesiastical courts were themselves struck at by their victims under torture (see Manzoni, *I Promessi Sposi*, Turin, 1827).

Fear in high places thus removed one great evil, but left others which still persist, and all of which have a religious basis. Such is the *duel*, which is the last surviving form of the *ordeal* in Europe. Its great antiquity is shown by its archaic Latin form *duellum*, of which *bellum* is a much later modification (cf. Hor. *Od.* III. v. 38, 'pacem duello miscuit'). The ordeal itself, that is, the A.S. *ordál*, the Germ. *Urteil*, and Lat. *judicium Dei*, persisted under various forms from the earliest times far into mediæval Europe, as seen in Shakespeare's *Richard III.* i. 2, where allusion is made to the test of touch to which suspected murderers were subjected. At their contact the wounds of their victims were supposed to bleed afresh. The close association of these ordeals with early religious beliefs, as pointed out in art. AUSTRALASIA, is clearly illustrated in the pagan Anglo-Saxon *corsned*, under which an accused person was required to swallow a piece of bread or cheese execrated by the priest. If he did so easily, he was innocent; if with an effort, guilty: and it may easily be supposed that, in persons of weak nerves, the awe of the surroundings might produce the effort, even in the case of guiltless persons. In Christian times the *corsned*, like the fire, water, and so many other unpleasant ordeals, was still continued, the consecrated wafer being now substituted for the execrated bread (see, further, artt. DUELLING, ORDEAL).

A still more striking instance of the fusion of the old and new systems is afforded by the mixed or muddled religious notions prevalent amongst the European gypsies, more especially those of Hungary and Austria, who have for some generations been nominal Christians, mostly Roman Catholics, but also Orthodox Greeks in some dis-

tricts. But none of them is quite clear about the presiding deity, though the prevalent idea is that the dethroned ruler, the *baro puro dewel*, 'great old god,' has long been dead, and that the world is now governed by his son and successor, the *dikno tarno dewel*, the 'small young god,' *i.e.* Jesus Christ. Another theory is that the first still lives, and has only abdicated in favour of the second. Others, again, hold that the old god is really dead, but that the younger is not his son, but the son of a carpenter, having, like Jupiter, usurped the throne on which he is now seated. He controls the elements, and is not a beneficent deity, since, like Saturn, he 'devours his children,' *i.e.* allows them to die. He also has fits of spite and anger, when he sends down thunder and lightning, snow, rain, and hail, which destroy their crops, burn their villages, and cause many other disasters. These gypsies can scarcely be said to have any religion properly so called. They do not worship the old or the new god, they have no kind of rites or ceremonies, and their *beng*, or devil, is borrowed from the Christians. But

'they believe in omens and prognostications; they give credit to the existence of ghosts and spectres, are afraid of the pernicious influence of the evil eye, and object to having their portrait taken lest they might be bewitched' (Featherman, *Dravido-Turanians*, p. 604).

In these respects the eastern gypsies differ in no way from their western kindred, or from the great bulk of the uneducated classes in every part of Europe. The Irish peasantry have endless magic cures for rheumatism, jaundice, whooping-cough, toothache, and other ailments.

Edith Wheeler tells (*Occult Review*, iv. [Nov. 1906]) that the jaundiced are 'mended' by being taken three times over water running south. The whooping-cough is stopped by taking the patient to a child that has never seen its father, and letting it breathe three times over the sufferer and 'the cure will work.' On a headland in Co. Clare there is an old altar, and near it a pool of fresh water and a 'bed of stones'—the saints' bed—to which the pilgrims come and walk round three times; and, if a child of stunted growth be carried round in the same way and then dipped in the pool, it will grow up properly, if the little fishes come to the top of the water.

So in Co. Mayo there is a well from which no woman, though perishing with thirst, would dare to draw water until certain rites are performed with a new-born babe, else it would turn to worms and blood. In the same district another well is visited by women who come to pray for the sick. 'They go round the well seven times on their knees, while telling their beads. If at the conclusion of their devotion any living thing is seen in the well their prayer is answered. I have seen a poor woman kneeling for hours over the well with hands clasped, and gazing with agonized anxiety into the clear water' (Sir H. Blake, in *Man*, 1901, no. 11).

Here is an Irish charm for the toothache: 'May the thumb of chosen Thomas in the side of guileless Christ heal my teeth without lamentation from worms and from pangs,' again showing the blend of old pagan and Christian traditions. The strange keenings of professional mourners at funerals are also very ancient, and certainly pre-Christian, if not pre-Aryan.

Certain observances, which later acquired a religious character or became associated with magical agencies, were originally of a purely practical nature. Such were the totem and tabu (see art. AUSTRALASIA); so also the inspection of the entrails of birds and cattle for divination purposes in Greece, Rome, and Etruria had a similar utilitarian object, as already recognized by Democritus, who thought that not the pleasure of the gods, but the healthiness of the climate and the richness or poverty of the soil, were indicated by the condition of the intestines of the animals living in the district:

'pabuli genus, et earum rerum, quas terra procreet, vel ubertatem, vel tenuitatem; salubritatem etiam, aut pestilentiam extis significari putat' (Cicero, *de Div.* ii. 30).

This view is rejected by Cicero but adopted and revived by Ihering (*loc. cit.*), who concludes generally that all such auspices—the study of the *exta*, the flight and song of birds, *i.e.* the 'avium voces volatusque,' as in Tacitus, *Germ.* x., the feeding of poultry (*tripudia*), and so on—

owe their origin to practical, essentially secular purposes. The religious idea was in the beginning utterly foreign to them, and has been added, as was the case with so many other primitive institutions, after they had lost their original and practical meaning.'

Those who reject this explanation can take refuge only in the notion that in remote antiquity the people believed that the deity revealed himself in the belly of an ox ('interesse deum singulis pecorum fissis') (Ihering, p. 370). This is, in fact, the natural evolution of such practices, since primitive man must at first have been much more concerned with the quest of food and other material considerations than with costly and elaborate religious ceremonies (see, further, artt. DIVINATION).

Some of the methods of divination are of great age, and may well have been brought by the proto-Aryans from their Asiatic homes. Such is that of the early Germans which is described by Tacitus, *Germ.* x., and is exactly like one practised by the Scythians, as in Herodotus, iv. 67. The ancient oracles have long been silent, but their voices, the messages from above, seem still to linger in the thunder-cloud, in the lightning-flash, in the soughing of the winds, and especially in the church bells, which, like the holy water, are potent, when blessed, to dissipate foul weather and to scare the evil spirits riding in the gale.

It is the blessing, the consecration, which endows the bell, the Agnus Dei, the scapular, and other such talismans with their *mana*, their supernatural virtue (see artt. MELANESIA and AUSTRALASIA), and has caused Hartland to declare that 'all religion is saturated with magic.' Certainly the belief in magic influences is still universal in Europe, and Haddon does not hesitate to declare that 'four-fifths of mankind, probably, believe in sympathetic magic' (*op. cit.* p. 2). By *sympathetic* is meant what Frazer calls *contagious* magic, which requires, if not actual contact, at least some material connexion between the person and the object operated upon. A few hairs, nail-parings, a drop of blood, clothes, personal ornaments, anything will suffice, not only to cause death, but also to produce any other desired effect. Thus in England

'a girl forsaken by her lover is advised to get a lock of his hair and boil it; whilst it is simmering in the pot he will have no rest. In certain parts of Germany and Transylvania the clippings of the hair or nails, as well as broken pieces of the teeth, are buried beneath the elder tree which grows in the courtyard, or are burnt, or carefully hidden, for fear of witches' (*ib.* p. 3).

To this, perhaps, may be due the strange objection some people have to being overshadowed by an elder-tree, one of which the present writer had to remove from his garden to oblige a superstitious neighbour.

All kinds of magic processes are adopted as counter-charms against the baneful effects of the evil eye (*q.v.*), the dread of which is universal in Italy. Any reputed *jettatore*—and Pope Pius the Ninth himself was one—causes a general stampede should he appear in a crowded street, and, 'ever since the establishment of the religious orders, monks have had the special reputation of possessing the fatal influence' (*ib.* p. 34). It is perhaps the very oldest superstition of which there is distinct record. It was known not only to the Greeks and Romans (Plutarch), but even to the early Egyptians, one of whose most common amulets was the so-called 'Eye of Osiris.'

'These mystic eyes were worn equally by the living and the dead as amulets; it being natural, from the associations of homœopathic magic, that representations of the eye itself should have been considered potent amulets against its malign influence' (*ib.* p. 35; cf. also *ERE* iii. 432 f.).

And of Cond of the 'Hundred Battles,' a legendary Irish hero, it is related that he always kept his right eye closed, because its glance was found to be fatal to any one falling under its baneful influence.

As a rule, any one might practise magic if only he or she knew how. But there were specialists —medicine-men, shamans, Druids, magicians, sorcerers, wizards, witches, wise women, and others—who transmitted their lore to their disciples. All had to undergo a severe probation, in which long fastings provocative of visions seem to have played the chief part. Amongst the Finns and Lapps they were constituted in societies or colleges which, like those of the Roman and Etruscan augurs and haruspices, exercised considerable influence even in political matters. But after the suppression of the order of Druids (*q.v.*) by the Emperor Claudius, such societies were never reconstituted in Aryan Europe, and their place was later taken by the Christian hierarchy. Nevertheless, C. G. Leland refers to some such association that still persists in Tuscany, which, however, is shrouded in much mystery. Its professors, mostly women, are said to meet in secret and, like the Anatolian Yezidis, to observe some old-time rites, and to dispense charms and spells to their followers (*Etruscan Roman Remains in Popular Tradition*).

It may be mentioned in this connexion that the term *sacerdotes* occurs more than once in Tacitus (*Germ.* x., xi.), although we learn from other sources that the Germans had no distinct order of priests like the Celtic Druids. Thus Cæsar states positively (*de Bell. Gall.* vi. 21) that the Germans 'neque Druides habent . . . neque sacrificiis student.' Yet Tacitus calls his *sacerdotes* 'ministros deorum,' and adds that they kept order and controlled the proceedings in the public assemblies. On the other hand, we know from the sagas that amongst the pagan Scandinavians there was no distinct priestly caste, but that the priestly and civil functions were vested in the same person—the king, earl, or district chief, spoken of as 'ruler of the sanctuaries,' or *goði*, from *goð*, 'god,' like the English 'divines' from root *divus*, *deus*. It appears, also, that women, to some extent, acted as priestesses, although their precise relation to the priestly chiefs is not clear. The office was hereditary, and, as the *goði* was both a chief and a priest,

'the name did not disappear with the adoption of Christianity . . . though it naturally lost its religious associations and thenceforward denoted only the recognized leader in the various districts' (Craigie, *op. cit.* p. 66).

About the Celtic Druids, their status and functions, much diversity of opinion still prevails, the reason being that the term itself covers three different classes, at least in Gaul and Britain. By Cæsar these are all merged in one, the Druidic as opposed to the military order; but they are carefully distinguished by Diodorus, Pliny, and especially Strabo (after Posidonius), who speak, as we still do, of the Druids proper, the *vates* (seers), and the poets (bards). The Druids were rather philosophers and theologians than priests, though they had to be present at the sacrifices. They taught Pythagorean doctrines, and the immortality of the soul through transmigration, to their disciples gathered in caves and secluded groves where tree-cult may have still survived, and where, in any case, high honour was paid to the oak and to its parasite the mistletoe, the emblem of love, which still plays a part in our Yule-tide festivities. Cæsar (*de Bell. Gall.* vi.) says that these *arcana* came to Gaul from Britain, whither the Continental Druids resorted to complete their education. So in later times the first dawnings of the new learning came also from Britain and Ireland (Pelagius, John Scotus Erigena, founder of the Scholastic philosophy). The true priests were the *vates*, who performed the sacrifices which, till suppressed by the Roman Emperors, were marked by features of a peculiarly atrocious character. They practised divination

'by the slaughter of a human victim, and the observation of the attitude in which he fell, the contortions of the limbs, the spurting of the blood, and the like,' this being 'an ancient and established practice' (Anwyl, *op. cit.* p. 46).

Lastly, the *bards* (*q.v.*) were minstrels and poets, often retainers of powerful chiefs, whose heroic deeds they sang, thus stirring up fierce rivalries between neighbouring clans and septs. But they were also peacemakers, and would at times step in between hostile tribes, and, like the Sabine women, induce them to stop the fight. A volume would scarcely suffice to state the contradictory views held regarding the Irish Druids, bards, brehons (legislators), ollamhs (teachers), and others, all of whom, according to the bias or ignorance of the writers, receive indiscriminate praise or vituperation as priests, philosophers, astronomers, minstrels, poets, learned doctors, law-givers, or physicians, or else as charlatans, impostors, astrologers, sorcerers, necromancers, magicians, and so on. Eugene O'Curry, who knew them best, declares that

'there is no ground whatever for believing the Druids to have been the priests of any special positive worship';

while E. Ledwich tells us confidently that

'the Druids possessed no internal or external doctrine, either veiled by symbols, or clouded in enigmas, or any religious tenets but the charlatanerie of barbarian priests and the grossest gentile superstition' (*Antiquities of Ireland*, quoted by Bonwick, *Irish Druids*, p. 35). Cf. also MacCulloch, *Rel. of Anc. Celts*, 1911, *passim*.

Hence Bonwick (p. 23) shrewdly remarks that

'it is as easy to call a Druid a deceiver as a politician a traitor, or a scientist a charlatan, and a saint a hypocrite.'

One thing is clear, that Druidism was not removed by Patrick, who rather

'engrafted Christianity on the pagan superstition with so much skill that he won the people over to the Christian religion before they understood the exact difference between the two systems of beliefs; and much of this half pagan half Christian religion will be found, not only in the Irish stories of the Middle Ages, but in the superstitions of the peasantry of the present day' (*ib.* p. 29).

The Finns and Magyars call for no special reference, since the former have long been Lutherans, the latter Roman Catholics. But the Lapps, although now also Christians, still cherish many old heathen notions. At one time they were noted shamanists and magicians, and the expression 'Lapland witches' became proverbial, although there were no witches but only wizards in the country. Their idea of an after-life is extremely crude, and many still bury, instead of banking, their money, in the belief that it will be found useful in the next world.

EUSTATHIUS.—Eustathius, bishop of Sebaste in Armenia, was regarded as the apostle of monasticism in the northern part of Asia Minor. Probably he was the author of a work on the ascetic life attributed to St. Basil (*Constitutiones Asceticæ*, see Garnier's Introd. to the Benedict. ed. of St. Basil's works). For these reasons he

deserves more generous treatment than he has generally received at the hands of ecclesiastical historians.

Eustathius appears to have been the son of a bishop, Eulalius (Soz. iv. 24. 9; Socr. ii. 43. 1), and was born about A.D. 300. He was the pupil of the heresiarch Arius in Alexandria (Basil, *Epp.* 223, 224). He does not appear to have been profoundly influenced by his master's dogmatic teaching. He acquired, while in Egypt, a great admiration for the lives of the early hermit ascetics. On his return to Asia Minor he commenced to practise asceticism in a manner which brought him into conflict with his father, Bishop Eulalius (Socr. ii. 43. 1), and earned him a reputation as a dangerous man (Basil, *Ep.* 223). He gathered round him a considerable band of disciples, known as Eustathians, who perhaps exaggerated his ascetic practices and teaching. They, though apparently not Eustathius himself, came under the censure of the Council of Gangra (341?). There is no suggestion that they were regarded as dogmatically unsound; what was objected to was the severity and uncatholic nature of some of their forms of asceticism, and the extreme, puritanical narrowness of their efforts to make the clergy in general conform to their standard. Eustathius himself must either have been opposed to this exaggeration of his teaching or must have disassociated himself from his followers, for, in or about A.D. 356, he became bishop of Sebaste. A few years later his intimate friendship with St. Basil began (Basil, *Ep.* 223).

He was at this time noted as an able preacher, a man of exemplary life (Soz. iii. 14. 36), and a leader of 'very excellent monks' (viii. 27. 4). He founded his ξενοδοχεῖον, a great house for strangers and hospital for the sick, in Sebaste (Epiph. *Hær.* lxxv. 1), and placed it under the charge of monks. This was the model of St. Basil's more famous institution in Cæsarea. Although he lived through the stormy period of the Arian and semi-Arian controversies, his interest in dogmatic questions appears to have been small. He probably believed that some satisfactory middle way could be discovered, and wished to be left in peace to perform his practical work. He signed, without apparently realizing his inconsistency, the creeds of Ancyra (A.D. 358), Seleucia (359), Constantinople (360), and Lampsacus (364) (see ARIANISM). It was this indifference to the importance of the dogmatic issues at stake that was the cause of his quarrel with St. Basil. The great metropolitan was not the man to spare an opponent, and Eustathius has suffered in the estimation of ecclesiastical historians by the account which is given of him by his former friend, after the rupture. We last hear of Eustathius, then an old man, in Basil's *Ep.* 263, written A.D. 377, and we may suppose that his death took place shortly after this date.

JAMES O. HANNAY.

EUTHANASIA.—*Introductory.*—Euthanasia may be defined as the doctrine or theory that in certain circumstances, when, owing to disease, senility, or the like, a person's life has permanently ceased to be either agreeable or useful, the sufferer should be painlessly killed, either by himself or by another.

The discussion of the subject, especially from the standpoint of Applied Ethics, is exceedingly difficult for several reasons. In the first place, it may easily be misconstrued as a mere recommendation of suicide or of the wholesale murder of aged or infirm people. Secondly, the effect of such a doctrine on weak or unbalanced minds, incapable of weighing aright the conditions which may be held to render death more desirable than life, is very apt to be pernicious. Thirdly—and this is the greatest difficulty of all—there are obvious and important obstacles in the way of any practical application in a modern civilized community. In order to make euthanasia in any sense a legal proceeding, one would be obliged to encounter, not merely prejudices or even time-honoured religious beliefs, but the healthy and moral feeling that human life is too sacred and valuable to be taken except under a few very definite conditions. In other words, euthanasia would constitute a new form of justifiable homicide, and, unless most strictly regulated, would lead to an appalling increase in sundry forms of crime already far too common. Thus, if it were legally recognized that an infant afflicted with an incurable hereditary disease, or with idiocy, might be put to death, a new excuse for infanticide—terribly prevalent, as is well known, in the case of illegitimate children—would at once be provided. Suicide also—for the most part a mere act of insanity, rashness, or cowardice—would be likely to become more common than it now is if, for instance, persons suffering from a disease known or supposed to be incurable were rather encouraged to take their life than discouraged from such a procedure.

On the other hand, we can hardly refuse to recognize that an application of the doctrine of euthanasia would provide a solution for many grave problems which the modern State is obliged to face. Take a single example, already incidentally mentioned. In all communities a great number of children are born seriously defective in body, or mind, or both. Although a certain proportion of these can be cured by proper medical attention, many cannot, by all the resources of modern surgery and medicine, be made normal; and this applies especially to those who are more or less completely idiotic. Many of these unfortunates are not so obviously abnormal as to make their condition plain to a casual observer, and, especially among the poorer classes, they are frequently treated almost as fully rational beings and allowed to mingle with the community at large and even to propagate their kind. The only substitute for euthanasia here is segregation and training, an able argument for which was put forward some years ago by an eminent worker in that field, M. W. Barr, of the Pennsylvania School for Feeble-minded Children.[1] This writer draws attention to the excellent results produced, within his own experience, in a large number of cases, by industrial training in properly-conducted institutions. His claim is that the feeble-minded can be made actually useful, as many of them have considerable physical skill, and that their lives are far from unhappy under such conditions. But he freely admits that it is only by careful segregation and training that such results can be accomplished; and this obviously involves heavy expense of all sorts, including the diverting of the abilities and energies of a number of physicians, etc., from other fields of activity. Whether, even in the most favourable cases, the result is adequate may be questioned; and this leaves out of account many individuals whose mental disabilities afford little or no hope of any considerable improvement. A carefully controlled system of euthanasia, on the contrary, would eliminate the more hopeless cases at once.

But in the very necessity of control lies the

1 *IJE* viii. 481.

great, if not the fatal, difficulty. Supposing all objection removed to the taking of life otherwise than in battle, self-defence, or capital punishment, there would still remain the fact that life is, so to speak, a valuable asset, and the question as to where, in any conceivable community, an authority could be found competent to decide whether a given individual deserved to live or not, and to carry out the decision in practice. Apart from all purely moral considerations, if we treat the matter as one of mere calculation, it is obviously most difficult, if not impossible, to judge whether a helpless cripple, known to possess considerable intellectual powers, is or is not more of a burden to the community by reason of the constant attendance he will require than of benefit to it because of his possibilities of brain-work. And, even were this difficulty overcome, we should still have to deal with the vexed question of the limits of the State's functions; for by no means all thinkers, even of those farthest from extreme Individualism, are disposed to allow to any State such wide authority in matters of life and death. Thus Sidney Ball, a writer of rather decided Socialistic tendencies, holds that 'the real danger of Collectivism is . . . that it would be as ruthless as Plato in the direction of "social surgery."'[1] When to these theoretical difficulties are added the certainty of most emphatic opposition from all religious bodies, the protests—less worthy of respect, but still to be reckoned with—of the more squeamish kind of humanitarianism, and the great likelihood, already referred to, of abuse in practice, it is obvious that any extended application of this doctrine is, at present at least, out of the question. This goes a long way to account for the extreme paucity of literature on the subject in recent times. So far as the present writer is aware, no important work by any modern author deals at any length with the topic.[2] And, as a matter of historical fact, euthanasia has never been put into practice. We intend in the remainder of this article to give a brief account of certain approximations to it which have existed or still exist, and of the views of those writers—mainly ancient—who have upheld some form of it.

1. Non-civilized communities.—One of the most noteworthy features of savage and barbarian, as opposed to civilized, society is the relative unimportance of the individual as compared with the community. This is seen, for example, in the frequency of various forms of human sacrifice, which apparently shock no one, and are often accepted quite calmly by the victim himself; in the absolute obedience of most, if not all, savages to the elaborate and often irksome tabus affecting marriage, the obtaining, preparation, and consumption of food, and other essential acts of life; and, most clearly of all, in the practice of a sort of crude euthanasia. This is generally the result of economic forces. When the available food-supply is limited, the numbers of the community must also be kept within bounds; and, if the population becomes too large, the least necessary members are simply got rid of. These are generally young children or very old people (cf. artt. ABANDONMENT AND EXPOSURE, vol. i. p. 3). Perhaps the most striking example of this primitive application of economic laws, regardless of individual feelings, comes from the South Seas, where infanticide—usually a matter for the individual or the family[3]—was actually enforced by law under the native chiefs.

'The Polynesians,' says R. L. Stevenson, a competent and sympathetic observer, though not a professed anthropologist, 'met this emergent danger (of famine) with various expedients of activity and prevention. . . . Over all the island world, abortion and infanticide prevailed. *On coral atolls, where the danger was most plainly obvious, these were enforced by law and sanctioned by punishment.* On Vaitipu, in the Ellices, only two children were allowed to a couple; on Nukufetau, but one.'[1]

That this arose from no callousness on the part of the natives is very clearly shown by the instances he gives of their almost absurd fondness for children. It would be quite wrong, again, to accuse of wanton cruelty those tribes who kill or abandon aged people who are no longer able to get food, or to march, if the tribe is nomadic. To give an ancient example of an island race following this custom—

Ælian tells us[2] that among the Sardinians men of advanced age used to be killed with clubs by their own sons 'because they considered it disgraceful that a man should continue to live when exceedingly old (λίαν ὑπέργηρων).'

Neither these Sardinians nor their modern parallels are to be condemned for cruelty to infants or old people. The proceeding, revolting enough to our feelings, arises from a simple perception of the fact that the necessities of life are too scarce for those members of the tribe to be fed who cannot supply themselves and will never, or not for a long time, be able to do so. The methods of getting rid of them—clubbing, leaving to starve, and the like—are often brutal; this, however, is not deliberate cruelty, but is due partly to the inability of the undeveloped mind to realize another's sufferings, partly to quasi-religious beliefs. Thus, the horror of shedding the blood of a member of the tribe goes far to explain the seeming inhumanity of leaving a helpless person to starve, rather than killing him quickly.[3]

Such 'social surgery' we may call the public application of euthanasia. With regard to its private application, it should be noted that suicide is rare among uncivilized peoples as a rule, and naturally we do not get examples of savages killing themselves as a result of an abstract belief that death is better than life, generally or in particular cases. To call it unknown among savages is, however, as erroneous as the opposite view that it is more common among them than among civilized peoples.[4] Some races, as the Andamanese and Central Australians, seem never to have heard of it; others believe it will be punished in the next world (Dakotas, Kayans), or treat it as an offence against the chief or king (Dahomey); while others regard it as an indifferent, or at most a foolish, action (Accra, Pelew Islanders, Chippewayas), or even as conducive to future happiness (Eskimos of Davis Strait). Some cases may be classed as genuine euthanasia. Thus, among the Karens of Burma,

'if a man has some incurable or painful disease, he says in a matter-of-fact way that he will hang himself, and he does as he says.'[5]

But, on the whole, the natural love of life is strong in savages, although, as we have seen, the vague sense of the importance of the community may at times overpower it.

2. Greece.—Passing now to ancient civilization, we have to note in the case of the Greeks a twofold exemplification of principles which may be roughly identified with euthanasia: first, in the practice of certain States; second, in the precepts, often actually followed, of not a few philosophers.

(1) For many reasons—not least among them being the reverence of the Greeks, on the whole, for old age—we hear little of old people being put

[1] 'Moral Aspects of Socialism,' *IJE* vi. 313. For Plato's views, see below, p. 600.

[2] One or two writers have used the word 'euthanasia' to mean simply 'dying well,' *i.e.* in such a manner as to conduce to happiness hereafter. This has, of course, nothing to do with the present subject.

[3] *E.g.*, among the Wa-Giriama of Brit. E. Africa 'women will sometimes, after deserting their husbands, kill their children to avoid having to hand them back to their father' (*JRAI* xli. [1911] 24). This apparently is done with impunity.

[1] *In the South Seas*, 1901, pt. i. ch. v.

[2] *Var. Hist.* iv. 1.

to death. There is, however, a curious story[1] that, in Kos,

'very old men come together garlanded as if to a banquet, and drink hemlock (*κώνειον* [the famous narcotic poison ?=*Conium maculatum*]), when they realize that they are incapable of doing anything useful to their fatherland.'

Passing over this case of voluntary euthanasia, which may or may not be genuine—for Ælian clearly thinks more of edification than of historical verity, and Strabo is doubtful about it—we must next consider that State which, more than any other, claimed and exercised absolute power over the lives of its citizens—Sparta. Plutarch[2] gives us the following information:

'The father had no authority to rear his child, when born, but brought it to a place called the Leschê; here the elders of his tribe sat and examined the infant. If it were well-made and strong, they bade him rear it, and apportioned to it one of the 9000 allotments of land; but, if it were feeble and ill-shaped, they sent it to the so-called Place of Casting-out ('Αποθέτας)—a chasm near Mt. Taygetos,—considering that for a child ill-suited from birth for health and vigour to live was disadvantageous alike for itself and for the State.'

By this rigid elimination of weaklings, combined with a rough kind of eugenics,[3] Sparta endeavoured, and for several generations successfully, to maintain a high standard of physical efficiency. Other States were less scientific; generally speaking, the parents of a child could choose whether or not they would rear it; if for any reason it was not thought desirable to let it live, it was simply exposed, with certain precautions, one gathers, to keep its ghost from being troublesome. Examples of this are wearisomely frequent in New Comedy, and are often found in earlier drama.[4] But this is not euthanasia; it is a mere shirking of parental responsibility. Also, it did not necessarily result in the death of the infant, which might be found still alive, and in such a case became, it would seem, the absolute property of the finder.[5]

As to suicide, Plato[6] appears to be in accordance with popular feeling when he mentions as justifiable causes intolerable pain or disgrace. We hear very little of it among the Greeks, from Homer down to the end of the Persian Wars. In a somewhat doubtful passage of the *Odyssey* (xi. 271 ff.), Epikaste (=Jocasta) hangs herself on learning of her unconscious incest; but the suicide of Ajax seems to belong to the non-Homeric tradition. One curious instance, which reminds us of Hindu *satī*, is the self-immolation of Euadne on the pyre of her husband Kapaneus;[7] while, among historical examples, we may cite the suicide of Pantitas, one of the two Spartans who survived Thermopylæ, as a result of his disgrace;[8] and of Themistocles, to avoid fighting against his fellow-countrymen.[9] But in Athens at least, although the regular form of capital punishment was enforced suicide, self-destruction in general was looked upon with disfavour, perhaps from fear of the dead man's ghost; at any rate, the right hand of the corpse was severed before burial,[10] with which custom we may compare the mutilation (*μασχαλισμός*) of a murdered man by his slayers.[11]

(2) The philosophers, and especially the later schools (Stoic, Epicurean, etc.), were interested chiefly in the question of suicide; of euthanasia in other forms we hear little. Plato, however, whose model State is to a great extent an idealized form of the constitution of Sparta, is in favour of a somewhat ruthless application of the principles under discussion to weakly children and also to invalids.

'The children of inferior parents, and any maimed offspring of the others, they (the Guardians) will secretly put out of the way (*κατακρύψουσιν*) as is fitting,'[1]

are his words on the subject; and a later passage seems also to sanction abortion (*μάλιστα μὲν μηδ' εἰς φῶς ἐκφέρειν κύημα μηδὲ γ' ἕν* [*ib.* 461 C]) in the case of a woman not of the approved age-class for child-bearing. Not dissimilar views were held by Aristotle,[2] in whose ideal State maimed children are not to be reared, and abortion may occasionally be practised. Later, however, the prevalence of exposure drew forth strong protests against the custom from Musonios[3] (1st cent. A.D.). With regard to other applications of euthanasia, Plato considers that invalids ought not to be kept alive by an elaborate regimen, but allowed to die, as they are quite unable to attain to the higher developments of either mind or body.[4] Cf. art. SUICIDE.

3. Rome.—With regard to the Romans, there is almost nothing to add. Their philosophy was borrowed entirely from Greece, and was for the most part either Stoic or Epicurean. The former school inspired most of the famous suicides, such as Cato of Utica; hence Shakespeare's references[5] are really to the results of a foreign teaching. Infanticide and abortion are also offences of comparatively late date. Neglecting myths, mostly of palpable Greek origin, one hears of the former as early as the comedies of Plautus[6]—but the characters in these are Greek; and it is under the Empire[7] chiefly that we hear of wholesale avoidance of maternal responsibility. The *potestas* of the father, however, was supreme, and without his formal recognition of a child it was not reared.

5. Judaism.—It is to the credit of the Jews that we hear nothing of such practices among them, owing partly to their strong desire for offspring,—causing them to rear even a child blind or otherwise helpless from birth,—partly to their regard for human life, and partly to the fact that the *patria potestas* did not, at least in the times of the later kings, extend to life and death.[8] Suicide, though not formally prohibited,[9] seems to have been rare; the denunciations of it which we find in Josephus (*BJ* III. viii. 5) and in various Rabbis are not based on anything in the OT.

6. Christianity.—Christianity, however, soon after its inception, set its face sternly against all forms of self-destruction. The NT, indeed, does not expressly forbid it, and several of the early Fathers justify it in a few cases; but from St. Augustine[10] onwards the Sixth Commandment has been regarded as covering suicide as well as murder, while St. Thomas Aquinas (*Summa*, II. ii. 64, 5) denounces it as (1) unnatural, being contrary to the charity which every man bears towards himself; (2) an offence against the community; (3) a usurpation of God's power to kill and make alive—arguments of which the second is Aristotelian,[11] and the first derived, it would appear, ultimately from Plato (*Laws, loc. cit.*).[12] Other forms of euthanasia are equally opposed to orthodox Christianity, at least as heretofore stated, owing to its enormous emphasis on the value of the individual. It is

perhaps from this source that Islām borrows its prohibition of suicide.

The practice of modern civilized States is for the most part in accordance with this doctrine, even where not actually dictated by it. Thus, the medical profession traditionally keeps a patient alive as long as possible, although an exception has sometimes been made in cases of hydrophobia, where, as readers of George Macdonald will remember, smothering used formerly to be resorted to.[1] The law of murder, again, does not take any account of the physical or mental condition of the victim; and suicide is a legal felony. Theoretical writers are less uncompromising. Thus Sir Thomas More represents suicide as occasionally practised in Utopia—indeed he may be regarded as a euthanasiast.

'But yf the disease be not onelye uncurable, but also full of continuall payne and anguishe; then the priestes and the magistrates exhort the man, seinge he is not hable to doo anye dewte of lyffe, and by overlyvinge his owne deathe is noysome and irkesome to other, and grevous to himselfe, that he wyl determine with himselfe no longer to cheryshe that pestilent and peineful disease,' etc.[2]

Among the morbidities of the inferior type of pessimist we may note a tendency to glorify voluntary death, as in the well-known lines of Thomson (*City of Dreadful Night*, xiv.):

'This little life is all we must endure;
The grave's most holy peace is ever sure,'

and the following lines. But the greatest member of that school, Schopenhauer, regards it as defeating its own ends,[3] since it is not a denial but an assertion of the will to live, the great obstacle to moral freedom. Hume's famous Essay was directed against the elder objections to it, and declared it to be no dereliction of duty, human or Divine. Despite the classical argument of Kant,[4] most writers on Ethics would probably agree in substance with Paulsen[5] that to refrain from it in great bodily or mental anguish may be heroic, but is no definite duty: 'Heldentum ist nicht Pflicht.' But, as has been already remarked, euthanasia in general has received little if any discussion. See, further, art. SUICIDE.

EUTYCHIANISM.—See MONOPHYSITISM.

EVANGELICAL ALLIANCE.—This is an association of Evangelical Christians of different countries and speaking different tongues, united for the avowal and promotion of Christian union and the advancement of religious liberty. It owed its origin to a wide-spread and growing desire in Protestant Christendom for closer fellowship among true believers holding to the same essentials of faith, and desirous of bearing visible witness to their obedience to the Lord's prayer, 'that they all may be one; as thou, Father, art in me, and I in thee' (Jn 17^{21}). The union of Christians of different denominations in the formation of some of the great Foreign Mission Societies, as the London Society and the American Board of Commissioners for Foreign Missions, and in the work of the Bible and Tract Societies as well as in the great Conventions, had demonstrated the possibility of the Alliance.

1. **Organization.**—The Alliance was organized at an enthusiastic meeting in Freemasons' Hall, London, August 19–23, 1846. Other meetings had prepared the way, especially those held in Glasgow, August 1845; in Liverpool, October 1845; and in London, February 1846. The Convention in London, August 19, 1846, adopted the name and defined the Alliance as a 'confederation.' It was attended by 800 delegates, representing 50 denominations. Among those who took an active part were the following divines from Great Britain: Revs. Edward Bickersteth and Lord Wriothesley Russell (Anglicans); Dr. P. Steane and Hon. Baptist W. Noel (Baptists); Drs. Thomas Binney, J. Angell James, Leifchild, and John Stoughton (Independents); Drs. Jabez and W. M. Bunting and William Arthur (Methodists); Drs. Chalmers, Candlish, Guthrie, and Norman MacLeod (Presbyterians). America was represented by Drs. Samuel H. Cox and William Patton; Germany, by Dr. F. W. Krummacher and Professor Tholuck; France, by Revs. Adolphe Monod and Georges Fisch; Switzerland, by Professor La Harpe and M. Lombard.

The British branch, having its office at 7 Adam Street, Strand, London, has been the most active, and deferred to as the parent branch. Other branches were established in Germany, France, Switzerland, Holland, Denmark, Sweden, Italy, Hungary, Greece, the United States, Canada, and among the Protestant missionaries of India, Japan, and other mission lands.

2. **Aims.**—The primary aim was to give expression to the substantial unity existing between Evangelical believers and to cultivate brotherly love. The Alliance is a voluntary association, not intended to create a new ecclesiastical organization. It is a union of Christian individuals, not a union of Churches. It claims no legislative or disciplinary authority, and disavows all thought of interfering with the loyalty of members to their respective denominations. The secondary aim, the spread of the principles of religious toleration, was incorporated in the proceedings of the first Conference, and given more full expression in resolutions passed at the General Conference at Paris, 1855. The Alliance is the only association which has made this a distinct aim of its organization.

The doctrinal basis of the Alliance is set forth in nine articles adopted at the London meeting of 1846, which are as follows:

(1) The divine inspiration, authority, and sufficiency of the Holy Scriptures.

(2) The right and duty of private judgment in the interpretation of the Holy Scriptures.

(3) The Unity of the Godhead and the Trinity of the Persons therein.

(4) The utter depravity of human nature in consequence of the Fall.

(5) The incarnation of the Son of God, His work of atonement for the sins of mankind, and His mediatorial intercession and reign.

(6) The justification of the sinner by faith alone.

(7) The work of the Holy Spirit in the conversion and sanctification of the sinner.

(8) The immortality of the soul, the resurrection of the body, the judgment of the world by our Lord Jesus Christ, with the eternal blessedness of the righteous and the eternal punishment of the wicked.

(9) The divine institution of the Christian ministry, and the obligation and perpetuity of the ordinances of Baptism and the Lord's Supper.

These principles, while they were not framed to do so, actually exclude the Unitarians (art. 3), the Friends (art. 9), and the Roman Catholics (artt. 2, 6). The motto of the Alliance expresses well its spirit: *Unum corpus sumus in Christo*—We are one body in Christ.

[2] *Utopia*, pt. ii. ch. vii. 'Of Bondemen, sicke persons,' etc. (p. 122, Cambridge ed.).

[3] *Essay on Suicide*; cf. *Die Welt als Wille und Vorstellung*[3], Leipzig, 1844, 1, § 69.

[4] Kant regards self-preservation as 'the first, if not the highest, duty of man,' and says of suicide: 'The destruction of the moral subject in oneself is tantamount to a driving out of the world, so far as in one lies, of Morality itself.' He adds that it involves the despising of man in general (*homo noumenon*) as represented in one's own person.

[5] *Ethik*, ii. 161 ff.

3. Modes of operation.—The Alliance has sought to accomplish its work mainly in three ways: through the Week of Prayer, General Conferences, and efforts to put a stop to religious persecution.

(*a*) *Annual Week of Prayer.*—This institution was first proposed at a meeting of the Alliance at Manchester, 1846, in a resolution urging 'the friends of the Alliance throughout the world to observe the first week of January as a season for concert in prayer on behalf of the objects contemplated by the Alliance.' Some years later the Alliance broadened its programmes in answer to an appeal from English and American missionaries in India. The British branch issues this year (1912) its 65th programme of topics. These topics have included Union with Christ, Thanksgiving for various benefits, and Prayer for Home, City, and Foreign Missions, for nations and their Rulers, for the Y.M.C.A. and Schools, for the Family, the Observance of the Lord's Day, and other subjects. The Week of Prayer, observed in cities and hamlets in all parts of the Christian world and in missionary territory, has, without a question, exercised a profound influence in promoting the spirit of brotherly love and cordial co-operation among ministers and laymen of the different Protestant communions.

(*b*) *Conferences.*—National or Local Conferences have been held every year by the British branch, and biennially by the American branch, 1875–1893 (with several intermissions). The international or General Conferences, ten in number, have been held in London, 1851; Paris, 1855; Berlin, 1857; Geneva, 1861; Amsterdam, 1867; New York, 1873; Basel, 1879; Copenhagen, 1884; Florence, 1891; London, 1896. The meetings have been called by agreement of the branches, and the entertainment of the delegates and the carrying out of the programme have been left to the branch within whose bounds the Conference met. The topics discussed have included: reports of the religious condition of the nations; the conflict of Christianity with infidelity, Romanism, and superstition; the practical and humanitarian enterprises of the Church; Christian education and revivals. The London Conference in 1851 probably included representatives of more Protestant denominations than had ever sat together since the Reformation. The Conference in New York was the most largely attended and widely influential religious gathering held up to that time in the United States. The large number of foreign scholars and ministers who attended it was incomparably above the attendance of foreign delegates at any convention of any kind held up to that time in the Western World. This result was largely due to the efforts of Dr. Philip Schaff, who made four journeys to Europe to present invitations to attend the meeting and to arouse interest in it.

The Alliance has received the recognition of crowned heads and of the President of the United States. Frederick William IV. of Prussia authorized the invitation to meet in Berlin, was present at one of the sessions, and accorded a reception to the members at Potsdam. The King and Queen of Denmark, the Crown Prince and Princess, and the King and Queen of Greece attended some of the meetings of the Copenhagen Conference. The President of the United States, Mr. Grant, and the Vice-President, Mr. Colfax, by their signatures endorsed the objects of the Alliance and the invitation to the meeting in New York; and President Grant, surrounded by the members of his Cabinet, gave the delegates to the New York Conference a reception at the White House. The then king of Italy sent a cordial letter of greeting to the Conference in Florence.

(*c*) *Opposition to persecution.*—In its earliest period an eloquent appeal was made by Merle d'Aubigné in behalf of the German Lutherans of Russia, and at the same time an appeal was made for the oppressed Armenians. Early cases of successful intervention were the release, through an appeal to the Grand Duke, of the Madiai family of Tuscany (1852), imprisoned for reading the Bible and holding religious meetings; and the release (in 1863) of Matamoras, Carrasco, and their friends in Spain, who were thrown into prison and condemned to the galleys for the same reason during the reign of Isabella. The Alliance interceded for the Methodists and Baptists in Sweden (1858), and through a delegation (in 1871) to the Czar, then sojourning at Friedrichshafen on the Lake of Constance, it sought relief for the Lutherans of the Baltic Provinces. Again in 1874 it sought the Czar's good offices for the Baptists of Southern Russia, and in 1879 it sent a deputation to the Emperor of Austria in behalf of certain Christians in Bohemia, and the request was granted. It helped to secure from the Sultan (1856) rights for the missionaries in Turkey, and has made efforts to secure relief for the Nestorians in Persia, the Stundists in Russia, and other persecuted Christians.

The influence of the Alliance can be traced in the formation of the Pan-Presbyterian Alliance, the Pan-Anglican Synod, and the Pan-Wesleyan Conference, and in the Federation of the Churches of Christ in the United States, which held its first meeting in New York in November 1905, representing 18,000,000 communicants belonging to 35 denominations officially represented.

LITERATURE.—*Conference on Christian Union, Narrative of Proceedings of the Meetings held at Liverpool, Oct. 1845*, London, 1845; *Annual Reports* of the British Branch, London, 1846 ff., and of the American Branch, New York, 1867 ff. The *Proceedings of the General Conferences* have been issued in the tongues spoken at the places of meeting, and for the most part in English reproduction, viz. those of London, Paris, Berlin (Germ. ed. by K. E. Reineck, 1867), Geneva (French ed. by H. Georg, 1861), Amsterdam, New York (ed. P. Schaff and S. Irenæus Prime), Basel (Germ. ed. by C. J. Riggenbach; Eng. ed. by J. Murray Mitchell), Copenhagen (only in Danish, ed. Vahl, 1886), Florence (Eng. ed. by R. A. Bedford), London (the Jubilee vol., ed. A. J. Arnold). Brief but not altogether satisfactory histories of the Alliance may be found in the Alliance vol., New York, 1874, by James Davis, secretary of the British branch, and in the Jubilee vol., London, 1896, by A. J. Arnold. See also *Life of Philip Schaff*, New York, 1897, pp. 252–274, 332 f., 350 ff. Special documents have been issued from time to time by the British and American branches. The more notable of the latter are *The Narrative of the State of Rel. in the U.S.*, by Henry B. Smith, presented to the Amsterdam Conference, 1867; *Report on the Alliance Deputation to the Czar of Russia*, 1871, and *The Reunion of Christendom*, by P. Schaff, 1893, his last literary work, which was presented to the council of the Alliance held in connexion with the Columbian World's Exposition in Chicago, 1893. The art. 'Allianz, Evangelische' in *PRE*[3] i. 376, by E. C. Achelis, pronounces an unfavourable judgment on the Alliance as having departed from its original aims, and carrying on 'a hostile separatistic propaganda.' It declares that the Alliance reached the height of its history at the Berlin Conference in 1857, and that, as a religious organization, it has no longer any significance in Germany. This is not the place to enter upon a consideration of the conditions which call forth a judgment so partial and unjust. The British branch issued a monthly, under the title *Evangelical Christendom*, 1847–1899, *The Evangelical Alliance Quarterly*, 1899–1906, and again a monthly, *Evangelical Christendom*, 1906 ff.

DAVID S. SCHAFF.

EVANGELICALISM.—The name given, in English-speaking lands, to a movement of revival which has borne other names in other parts of Christendom. This movement is usually traced to Holland, where it began as Cocceianism or Federalism, being so named from its foremost representative, Cocceius († 1669), professor at Leyden, whose theology was called 'Federal' on account of the prominence given in it to the conception of religion as a covenant (see COVENANT THEOLOGY). The next phase was Pietism (*q.v.*), the principal representatives of which were Spener († 1705), who operated chiefly by prayer-meetings,

known as *collegia pietatis*; A. H. Francke (1663–1727), professor at Halle, where he founded the orphanages which still flourish in that academic centre; and J. A. Bengel (1687–1752), the Pietist of South Germany, and author of the well-known *Gnomon*, which may be taken as an index of the devotion to Biblical studies characteristic of the movement. Out of Pietism rose Moravianism, associated with the name of Count Zinzendorf (1700–1760), the passionate lover of Christ and inaugurator of those foreign-mission efforts for the extent and success of which the Moravian Church has so distinguished a name (see MORAVIANS). Methodism, the next phase, was evolved from Moravianism as obviously as the latter was from Pietism. In many respects it is the most remarkable phase of all; and it would be a pleasure to follow the course of its development, first in Great Britain and then in America, where it has achieved phenomenal success; with its great leaders, the two Wesleys and Whitefield, and their many notable successors; with its divisions and reunions; its open-air preachings and camp-meetings; its class-meetings and local preachers; its hymnody and its zeal for education; but all these topics will be dealt with in art. METHODISM.

1. In the Church of England.—The Anglican Church might have retained Methodism within itself, for the original leaders were most unwilling to go out; but different counsels prevailed. After a time, however, there arose within the State Church a number of clergymen who imitated the zeal and efficiency of the Methodists, and earned the name of 'Evangelicals.'

Among these, in the latter part of the 18th cent., the most conspicuous figure was the Rev. John Newton (1725–1807). After a wild youth, spent at sea, he underwent as thorough a conversion as any Methodist, and no Methodist could have had less scruple in making his religious experiences public. Though over forty before being settled in a parish of his own, at Olney in Buckinghamshire, he immediately unfolded an earnestness and force of character which could not fail to make him a centre of influence; and from the time when he was translated to the Church of St. Mary Woolnoth, in Lombard Street, London, in 1779, he exercised, without the name of bishop, a more than episcopal sway over those within the State Church who were coming under the influence of the revival. Before leaving the country, he had won as a convert the incumbent of a neighbouring parish, the Rev. Thomas Scott (1747–1821), who was shaken out of Socinian views and out of the habits of a careless life by hearing Newton preach. At first this adherent fought against his convictions; but, Newton wisely refraining from being drawn into controversy with him, he at last shut himself up with his Bible for three years, determined to discover what was the religion taught in this oracle and to hold to it alone. From these studies he emerged with the conviction that the Evangelical system was the only true gospel; and so convinced was he that a creed obtained as his had been must be the correct one, that he wrote an account of his experiences under the title of *The Force of Truth* (1779)—a book which gained an enormous circulation, and of which John Henry Newman said that he almost owed to it his soul. If Scott was able to prove the new tenets to be Scriptural, another adherent of the school, Joseph Milner (1744–97), undertook to prove, in his *History of the Church of Christ*, that they were the doctrines of the Apostolic Age, of the Reformation, and of the great founders and theologians of the Church of England. The Evangelicals claimed to stand in the footsteps of the Fathers; it was the official Church which had lapsed into error through worldliness and indolence.

But the Evangelical doctrines had the good fortune to secure a means of propagation far more rare and effective than that of either a Biblical expositor or an ecclesiastical historian. While living at Olney, Newton had for a neighbour the poet Cowper (1731–1800); and to the gentle bard this strong man of God became a hero and Greatheart. The literary tribe have persistently represented Newton, indeed, as a tyrant, who drove the poet distracted; but Cowper's insanity was in the blood; he had been in confinement before Newton ever saw him; and, although even this strong friend could not finally rescue him from his fate, he redeemed him from himself and furnished him with employment, by which he was made, in the intervals of his disease, a useful and a happy man. Besides enjoying his collaboration in the writing of the Olney Hymns, Newton suggested other themes for his muse, which drew from him not a few of his happiest efforts; and thus, for the peculiar beliefs and sentiments of Evangelicalism, there was secured the benefit of musical and imperishable expression; for there is no more complete or accurate representation of them than is to be found in Cowper's verse.

In prose, also, the new way of looking at Christianity was to receive brilliant expression from a layman. This was at the hands of William Wilberforce (1759–1833), who, having been turned from a life of frivolity during a tour in Switzerland with Isaac Milner, brother of the ecclesiastical historian, carried his newborn enthusiasm into the business of Parliament, of which he was a member, and into the upper ranks of English society, of which he was an acknowledged leader. To this society his statement of the Evangelical position was addressed, as was shown by its full title, *A Practical View of the prevailing System of professed Christians in the higher and middle Classes of this Country contrasted with real Christianity*; and the grace, the frankness, and the humour of its style made it acceptable in circles into which religious literature seldom penetrated.

But Wilberforce rendered to Evangelicalism a still more important service by leading its accumulating numbers in a crusade against the Slave Trade. In this he enjoyed the support of a section of the community in which the new views had made remarkable progress—the members of the upper middle class, engaged in banking and similar occupations. Of these there happened to be such a concentration in the suburb of Clapham that the whole Evangelical party was sometimes styled 'the Clapham Sect.' Taking this nickname and converting it into a title of honour, the genial historian of Evangelicalism, Sir James Stephen, has, under this caption, in his *Essays in Ecclesiastical Biography* (London, 1907, vol. ii.), penned captivating sketches of such men as Henry Thornton, Granville Sharp, Lord Teignmouth, and Zachary Macaulay, who not only stood by Wilberforce in his prolonged and laborious campaign against slavery, but were distinguished in many other walks of philanthropy. For Evangelicalism had reached and tapped the springs of active beneficence. To whatever it may have been due—whether to the Calvinistic doctrines, believed by Evangelicals, or, as they might rather themselves have said, to the work on their spirits of the Spirit of God—the adherents of the new views not only believed, but turned their beliefs into practice. It was a maxim with them that every one to whom the good news had come was bound, according to his powers and opportunities, to impart it to others. Their first efforts, accordingly, were to propagate the gospel both by personal testimony and by corporate action. They visited the poor, they tended the sick and dying, they instructed the ignorant,

they founded schools and colleges, they not only sought out candidates for the ministry, but bought advowsons, in order that parishes might be manned with clergymen of the right sentiments, the force operating behind these efforts being the solemn sense of their own responsibility as well as of the danger and the destiny of those in whose behalf they were exerting themselves. The Church Missionary Society and the Religious Tract Society came into existence in 1779, the British and Foreign Bible Society in 1804. Far, however, from the endeavours of the Evangelicals being confined to the souls of men, they were directed from the first to the body also; and soon philanthropies were devised for prisoners, for children and women working in mines, for the blind, the deaf and dumb, the paralytic, and, in short, for every form of human misery. Wilberforce was succeeded in the next generation by Lord Shaftesbury (1801–85), who, in Parliament, was the unfailing advocate of the poor and needy, and, after a life of unwearying philanthropy, exclaimed, on his death-bed, that he was sorry to quit a world in which so much misery still existed. Through his influence with Lord Palmerston, this nobleman secured for the Evangelicals a fair share of the influential offices in the Church. In one of the universities, Evangelicalism fought its way to power through the weight of the personality of Charles Simeon (1759–1836); and the first heads of the Evangelical divinity halls, founded at Cambridge and Oxford, both rose to be bishops. In the latter half of the 19th cent. the party profited by throwing itself into the revivals which passed over the entire kingdom, coming from American sources; and a centre for the quickening of the spiritual life was provided in conferences, held annually from 1875 at Keswick.

Though, for more than a hundred years, a large and influential party in the Anglican Church, Evangelicalism has never succeeded in permeating that communion completely. W. E. Gladstone, while crediting it with the high merit of pervading the Church as a whole with the preaching of Christ crucified, showed, in an article published in 1879 and republished in *Gleanings of Past Years* (1879–97), that it had manifested a singular incapacity for retaining its own more gifted children, these going off to the left or the right, when they reached maturity. The rise of the Broad Church party in the early half of the 19th cent. furnished evidence of aspirations and needs which Evangelicalism was not satisfying; and the same was still more manifested by the phenomenal development of the High Church and Ritualistic party, which has not yet suffered any check, and has in recent decades eclipsed all rivals. Those who have themselves passed from Evangelicalism to Ritualism are wont to regard the one movement as a preparation for the other, which is, they say, its natural completion. But this is a sanguine view, in which Evangelicals will by no means concur; and a historian will be more likely to recognize in Ritualism a recrudescence of the Anglicanism of King Henry VIII. and Queen Elizabeth, while in Evangelicalism he sees a revival of the Puritanism which long struggled inside the Anglican communion, before it was driven forth into dissent. At the present time the strength of the Evangelical party is estimated by G. R. Balleine at fully a fourth of the entire Church; and the proportion might be reckoned higher if the Anglican Church in the United States and the Colonies were included.

2. In English Nonconformity.—By the Dissenting communities of England it might be contended that, in its essence, Evangelicalism was among them not only before it appeared in the State Church, but even before it was seen in the form of Methodism. Long before the conversion of John Wesley, hymns had been composed by Isaac Watts (1674–1748), which became as truly the language of the revival as those of Charles Wesley, and have even yet lost none of their virtue. Philip Doddridge (1702–51) was preaching and teaching at Northampton the views of Divine truth embodied in his work entitled *The Rise and Progress of Religion in the Soul*, which became a handbook of experience for all, in whatever denomination, touched by the spirit of the revival; and Matthew Henry (1662–1714), in a Presbyterian manse at Chester, had penned a commentary on Holy Scripture, in which mother-wit and common sense are combined with thorough apprehension of the gospel. In fact, such instances point back to a connexion of Evangelicalism with the Puritanism of the 16th and 17th cents., which could, in all probability, be demonstrated also to have lain behind the Cocceianism of Holland, from which, in accordance with the custom of Church historians, the rise of our movement has been traced.

In the Dissenting communities, however, as a whole, as well as in the State Church, in the beginning of the 18th cent. there prevailed a spirit of coldness and deadness. Among the Presbyterians the temperature had sunk so low that not a few of their churches had become the meeting-places of Unitarians. Respectability and solemnity were the attributes to which alone even the better congregations aspired, whereas enthusiasm was among them a name of reproach. It was no wonder, therefore, that the first manifestations of Methodism were beheld with repulsion and alarm, or that the utterances of uncalled and uninstructed earnestness were received with suspicion. As, however, it became manifest that, by such rude and unusual means, the lost children of England were being redeemed from savagery, and publicans and harlots transmuted into saints, the opposition of good men gave way, and the dignified friends of decency and order began to learn the methods of their more ardent neighbours. Great was their reward. Their places of worship, which had been, in most cases, barely holding their own, were filled to overflowing, and larger buildings had to be erected; those who were being saved were daily added to their numbers; and a new joy pervaded the exercises of the sanctuary. From this time onwards, both Baptists and Congregationalists may be regarded as having been captured by Evangelicalism; and to this fact they owe their rapid internal development, as well as their missionary zeal. The London Missionary Society was founded in 1795, and enjoyed, in the century that followed, the services of some of the most eminent missionaries of all time; while the two denominations fully participated in all the home missions and philanthropies which were the new births of the age.

From generation to generation both of these denominations were amply supplied with preachers by whose lips the doctrines of Evangelicalism were interpreted with learning and eloquence; but it may be enough to dwell for a little on the names of two of them, one belonging to each of the denominations, by whose ministries the Evangelical situation was beneficially influenced in the latter half of the 19th century. Charles Haddon Spurgeon (1834–92) was of Congregational extraction, but he joined the Baptists in early life. He was soundly converted in emerging from boyhood, and had scarcely surmounted that period of life when he began to preach, the originality and force of his recent experience giving direction to his efforts, as they never ceased to do all his days; for he said himself that he always preached with

the expectation of conversions; and, it is believed, he was not disappointed. Though he had not enjoyed the advantages of academic training, he was throughout life a keen and unwearied student of the subjects likely to help him in preaching, Greek included; and he founded a theological college, of which he was president, delivering lectures on preaching to his students which are esteemed among the best ever produced on the subject. His capacity for business and the warmth of his heart enabled him to carry on a large orphanage; and he maintained, besides, an extensive system of colportage for the circulation of Evangelical literature, and especially his own sermons, which were published every week and sold in thousands. The tabernacle built for him, in South London, held 5000, and was always full, serving, indeed, for a whole generation as a rallying-point for Evangelicals from all corners of the globe. In it was upheld the banner of Evangelicalism, the doctrines of which were preached with clearness, fullness, and spiritual power. In later life, Spurgeon came to believe that the younger ministers of his denomination were forsaking these truths; and, in consequence, he separated himself from the Baptist Union. But the officials of that body denied his accusations, or at least refused to endorse them.

The other leader of Evangelical Nonconformity, R. W. Dale of Birmingham (1829–95), was more open to new light and more inclined to learn from others. He used to speak with earnest conviction of the need for a reconstruction of Protestant theology. At some points he was in sympathy with the Broad Church, especially with Maurice. With him he believed in the creation of humanity in Christ; like him he held strongly by the sacredness of secular life; and, with him, he disbelieved that the wicked would live for ever in torment. Yet he gloried in the peculiar doctrines of Evangelicalism, such as the death of Christ as the ground of divine forgiveness, justification by faith, and the supernatural work of the Holy Spirit in redemption; and equally did he value the Evangelical *ethos*, as he called it—its passion for Christ and for the souls of men.

3. In Scotland.—It was fortunate for Evangelicalism that it was mediated for Scotland through the big brain and big heart of Thomas Chalmers (1780–1847). In England it has sometimes exhibited a somewhat petty aspect. It is impossible, for example, to read of the developments at Cheltenham by which Frederick William Robertson was driven away from his early associations into the Broad Church without recognizing that Evangelicalism could be narrow and unlovely, deservedly bringing down on itself the nickname of 'the hard Church' given to it by R. H. Hutton. But Chalmers (*q.v.*) could not have been the founder of a hard Church. His humanity was broad; he had passed through an intellectual before experiencing a spiritual awakening; he had a distinctly philosophical mind, which delighted in tracing facts to their causes; and his position as an academic teacher could not but intensify this natural bent. Still he was profoundly practical. Among the documents of Evangelicalism there is not one more important than the address he sent to his parishioners at Kilmany when quitting that rural parish, in 1815, for the city of Glasgow. Reviewing the years he had spent among them, first as an opponent and then as an apostle of Evangelicalism, he fixed on this as the essential point—that Evangelicalism works; it actually realizes the righteousness and holiness which his early preaching had utterly failed to produce. Afterwards he was always speculating on the reason for this, and he found it in 'the expulsive power of a new affection.' He did for theology, in his academical prelections, exactly what Schleiermacher was doing for it at the same time in Germany, though these two knew nothing of each other; that is to say, instead of beginning with the mysteries of revelation and coming down from these to human experience, he took his stand on experience and then rose to the supernatural facts without which such experience could not have been enjoyed. His dogmatic consisted of two parts—first, the disease; then, the remedy.

There had, indeed, been an Evangelical party in the Church of Scotland before Chalmers appeared upon the scene; and, outside of the State Church, the doctrines of the gospel had been preached to growing numbers by the ministers of the Secession and the Relief denominations; but it was by the mighty voice of Chalmers that the new views secured the attention of his countrymen as a whole. In the courts of the Church his influence grew apace, till the 'Moderates,' on the opposite side, saw their predominance vanishing. In their straits they sought and obtained the assistance of the civil courts, by which the reforming party was so limited and thwarted that, in 1843, it quitted the State Church and organized itself outside as the Free Church of Scotland.

The virtue of the Evangelical principles by which the Free Church was inspired was made visible by the rapidity with which it not only erected churches, manses, and schools all over the land for its own necessities, but threw itself into mission work of every kind, both at home and abroad. All the foreign missionaries had joined the outgoing movement; and not only were they provided for, but the Church was ready to rise to opportunities, as these presented themselves, to extend its operations. Similarly, the home mission problem was attacked with such vigour that even in Glasgow, where the growth of the city has been phenomenal, the increase of the means of grace has kept pace with that of the population; and at the present moment measures are being organized for meeting the wider needs disclosed by the recent developments of labour. For these missionary and philanthropic exertions the Church was strengthened by wide-spread revivals of religion in 1859–60, 1874, 1881, and 1890, with which the ministers and members associated themselves sympathetically. This also enabled the Church, under the leadership of Principal Rainy (1826–1906), to meet and survive not a few keen theological controversies, of which the most serious was that on Biblical Criticism introduced by Professor Robertson Smith (1846–94). As this scholar recognized the Bible to be the word of God, the only rule of faith and duty, and appealed with full personal conviction to the *testimonium Spiritus Sancti internum*, his views met with a tolerant and patient hearing from his fellow-countrymen, and were, to a large extent, accepted without injury to Evangelical faith.

Meantime the two denominations mentioned above outside the State Church, after uniting in 1847 to form the United Presbyterian Church, had been pursuing a similar course, growing in the same convictions and being educated by similar providences. They outran the Free Church in the development of worship, by adopting earlier the use of hymns and the assistance of organs; and they were earlier in the adoption of a Declaratory Act (1879; the Free Church Act was passed in 1894), by which the Confession of Faith was modified in the direction of a more cordial acknowledgment of the divine love to all men and a less gloomy view of human nature and its destiny. But this branch of the Church excelled particularly in enthusiasm for foreign missions; and, when it and the Free Church united in 1900, there was an

expansion within the united Church of this species of Evangelical sentiment.

At the Disruption of 1843 those who remained in connexion with the State were the so-called 'Moderates,' who had stood in opposition to the Evangelicals in the same way as, on the Continent of Europe, the Rationalists had faced the Pietists. But from the first there had been left in the State Church a considerable amount of Evangelical sentiment; and this has grown with time, being favoured by such spirits as Norman Macleod (1812–72) and Robert Flint (1838–1911); and a sign that it is strongly represented among the younger men of light and leading may be seen in the cordiality with which these are now seeking union with those from whom they were separated in 1843. There are few men of mark at the present day in any of the ecclesiastical bodies in Scotland who would be averse to being designated 'Evangelicals.'

4. In America.—An additional proof of the suggestion made above, that the true source of Evangelicalism is to be sought in English Puritanism rather than in the Continental movements to which it is usually traced, is supplied by the fact that in America it arose earlier than it did in England. The date of John Wesley's conversion is 24th May 1738, but as early as 1734 occurred the first of those awakenings which took place at Northampton, in New England, through the preaching of Jonathan Edwards (1703–58), which spread astonishment and awe far and near, and was heard of even in England. In fact, it is known that John Wesley had himself read an account, penned by Edwards, of the experiences in America before anything of the kind had occurred under his own preaching. In later times, influences from German Pietism, from Moravianism, and from English Methodism entered into the religious life of the United States; yet in the revivals which have, from the time of Jonathan Edwards, formed an outstanding and frequently recurring feature of American Christianity, the impulse has always been a native one; and America has, in this particular, been in a position to give to Europe rather than to receive from it. Very remarkable awakenings were experienced in Kentucky and the neighbouring States from 1796 onwards; and in 1857 the whole country was pervaded by a similar movement, which spread thence to Ireland and Great Britain. Not infrequently have such movements had their origin in schools and colleges, and so marked has been their influence upon the young that some psychological observers in America are declaring conversion itself to be a manifestation of puberty. In the early revivals there were physical accompaniments, sometimes of a singular and alarming character; but these have tended to disappear with the progress of time. In the same way, at first, the experiences were looked upon as altogether divine; but, as they became commoner, it was recognized that human agency also had a part to play. Thus, by the setting apart of time for prolonged religious exercises, the mind could be interested in spiritual things, and, by the bringing together of large numbers for a common purpose, social influences could be generated. Certain persons, it was discovered, had the power of awakening appeal or of bringing the hesitating to decision. It was found, in short, that revivals could, to a certain extent, be manufactured; and thus a new danger had to be guarded against, that of merely mechanical excitement passing itself off as religion, or even of revivalism becoming a trade and falling into unworthy hands.

The Puritan religion of New England had originally a national or municipal character. The township and the congregation were identical, all the inhabitants being communicants. But, as population multiplied, it became apparent that there was a growing discrepancy between these two magnitudes; and Edwards became the protagonist of the earnest view that only those should be admitted to the Lord's table who had undergone a religious change, of which evidence was supplied by a consistent life. Indeed, he became the victim of this contention; for so much antagonism was provoked by his severity that he was driven from his pastorate at Northampton and had to betake himself to a mission to Indians; though he did not continue under a cloud, being appointed in 1758 president of Princeton College (see art. EDWARDS). But the demand for a distinct personal experience, of which an account could be given, became more and more general, and the frequent occurrence of revivals, by which this was promoted, fostered a general dependence on this mode of acquiring religious experience, to the disparagement of the regular work of the ministry and the influence of the family. Against this a protest was raised by Horace Bushnell (1802–76), one of the most original of American thinkers, who, in 1846, in a little work entitled *Christian Nurture*, recalled attention, with marked success, to the slower and less exciting processes by which many are brought into the Kingdom.

Still, in spite of drawbacks, the revivals were gifts of infinite value to the Church in America. One of them is said to have added to the Church more than a million members; and devout observers have noted that they seemed to be granted when the country stood on the verge of any particularly trying period, in which new tasks had to be faced or new hardships borne. It was by means of the enthusiasm generated in these seasons of special grace that the Church in America rose to the efforts rendered necessary by the developments of the country's history and the course of Providence; and the Evangelicalism of the United States was not behind that of England or Scotland in the variety or extent of the forms of sin and misery with which it was able to cope. America has all the philanthropies of Europe; and in some spheres, such as the Sunday School and the Young Men's Christian Association, it has specially excelled. But the great task of the Christianity of the country has been the provision of ordinances for the ever-extending population. Failure at this point would have been fatal. But the Church has nobly risen to the occasion, the Methodist and Baptist denominations distinguishing themselves by the zeal and heroism with which they have accompanied the pioneer and settler into the wilds of the West and the South, and helped to lay the foundations of Christian civilization. In spite of the phenomenal growth of the population, the provision of ordinances compares favourably with that of Europe.

Jonathan Edwards was a profound metaphysician and theologian as well as a revivalist; and in his works the seed was sown of a vast theological and philosophical activity which has accompanied the more practical efforts of American Christianity, not a few of those who succeeded him in developing the New England Theology, as it is called, combining, like himself, the characters of metaphysical theologian and powerful evangelist. Edwards' speculations were all directed towards the practical end of reconciling Calvinism with the gracious invitation to all sinners of which he was the mouthpiece; and the ablest of his successors moved in the same sphere. It must, however, be confessed that, in some of the speculations indulged in, any practical aim was difficult to discern; but at the present time there is a return to the best element in Edwards' theology—that dealt

with in his great work, *A Treatise concerning Religious Affections* (1746).

5. **On the Continent.**—While these phases of the Revival movement were disclosing themselves in the English-speaking countries—and for a complete view the Colonies of Australia, South Africa, and Canada would also require to be taken into account—other phases of what was substantially the same movement were manifesting themselves on the Continent of Europe. These were in part derived from Great Britain or America. Thus, a visit paid by one of the brothers Haldane—laymen, who had founded the Congregational body in Scotland, in protest against the reigning Moderatism—led to an outbreak of spiritual life at Geneva in 1817, which spread to neighbouring cantons and produced interesting and influential personalities, such as César Malan (1787–1864), Merle d'Aubigné (1794–1872), and A. R. Vinet (1797–1847). This influence penetrated to France, and a visit of Robert Haldane to Montauban had similar results among the students there. A Free Church came into existence in France, as it had done at more than one point in Switzerland; and here also striking personalities rose to take the direction, such as Adolphe Monod (1802–56) and E. D. de Pressensé (1824–91).

In Germany a decided quickening of spiritual life dates from about the commencement of the 19th cent.; but, the name 'Evangelicalism' not being available on account of its being forestalled for another purpose, this is termed the 'Awakening' (*Erweckung*; so the term *Réveil* in France). As to the origin of this movement, Germans are not themselves very clear. Tracing so many new beginnings to Schleiermacher, they naturally incline to derive this also from him; but its real sources were humbler. It was a re-filling of the channels of Pietism; it sprang out of the prayer-meetings held by Moravians and other 'quiet ones in the land' who were in sympathy with them. Its leader in the beginning of the 19th cent. was Baron von Kottwitz (1757–1843), who flitted about Berlin, holding conferences and succouring the poor and needy; and, in the next generation, his place was filled by Tholuck of Halle (1799–1877), who brought the movement back to science and to public life. In touch with Tholuck were not a few of the most prominent scholars of his own generation, and his disciples were legion in both the pastorates and the professorial chairs of Germany. He himself reckoned that the movement culminated in the forties of his century; but its influence was prolonged in what used to be called the 'Mediating School' of theologians; and it survives still in numerous forms, of which perhaps the most distinctive is the Deaconess movement, which has grown to extraordinary dimensions, and is inspired mainly, though not exclusively, by this type of piety.

JAMES STALKER.

EVE (חַוָּה, *Ḥawwah*; LXX Ζωή, Εὔας; NT Εὔα; Aq. Αὔα; Symm. Ζωογόνος; Vulg. *Heva*).—The name in J for the first woman (for the narrative, see ADAM). Gn 3^{20} explains it by saying that she was called *Ḥawwah*, because she was the mother of all living (חַי, *ḥay*). *Ḥawwah* is connected with the same root, but probably means 'Life' rather than 'Living' (RVm 'Living *or* Life'), or 'Life-giving' (Symm. as above). W. R. Smith (*Kinship and Marriage*[2], London, 1903, p. 208) connects *Ḥawwah* with *ḥayy*, 'clan,' *Ḥawwah* being a personification of the idea of kinship thought of as consisting in descent from a common mother. An ancient interpretation adopted by Wellhausen and some other modern scholars gives *Ḥawwah* the meaning 'serpent,' and finds in Genesis a trace of the primitive belief that earthly life originated in a serpent, as, in some forms of the Babylonian cosmology, all things spring from Tiāmat, the primeval dragon. Zimmern (*KAT*[3], p. 438) suggests that the Eve narrative has been influenced by the Bab. myths of the goddess Ishtar. Skinner (p. 85 f.) writes, with regard to the connexion between the name *Ḥawwah* and Semitic words for 'serpent':

'Quite recently the philological equation has acquired fresh significance from the discovery of the name חות on a leaden Punic *tabella devotionis* . . . of which the first line reads: "O Lady *ḤVT*, goddess, queen . . .!" Lidzbarski sees in this mythological personage a goddess of the under-world, and as such a serpent-deity; and identifies her with the biblical Ḥavvah. Ḥavvah would thus be a "depotentiated" deity, whose prototype was a Phœnician goddess of the under-world, worshipped in the form of a serpent, and bearing the title of "Mother of all living."' Cf. also the OT Ḥivvites.

Probably the references to Eve in Gn 3^{20} and $4^{1.25}$ do not belong to the most ancient form of the Creation story, but to a later stratum of J (so C. J. Ball, 'Genesis,' in *SBOT*). In the older story (Gn 2^{23}) the man names the first woman *'Ishshāh* (the ordinary Heb. word for 'woman,' because she was taken from a man, *'īsh*; or, better, as the LXX and Sam., from her husband, *'īshāh*). But this derivation is not accepted by modern scholars, who derive *'ishshāh* from *'nsh*, 'to be soft *or* delicate,' and *'īsh* from *'ysh*, 'to be strong,' unless, indeed, *'īsh* is a primitive noun, independent of any verbal root (cf. *Oxf. Heb. Lex.*, pp. 35, 61).

P (Gn 1^{27} 5^{2}) states that mankind was created in two sexes, and tells us that each of the antediluvian patriarchs begat daughters (ch. 5), but says nothing about their wives. In 7^{13}, however, P refers to the wives of Noah and of his three sons. The first woman mentioned by name in P (11^{31}) is Sarai (Sarah); J had already named Lamech's wives, Adah and Zillah, and his daughter Naamah ($4^{19.22}$).

A characteristic feature of the Eve narrative is the sentence (4^{1}) referring to the birth of Cain, קָנִיתִי אִישׁ אֶת־יהוה. Unfortunately these words are very obscure, and the text may be corrupt. The RV tr. is 'I have gotten a man with the help of the Lord' (similarly LXX, Vulg., Symm.). Another tr. is 'I have gotten a man, even Jahweh' (Gr. tr. in *Hexapla*; Luther), understood as expressing Eve's belief that the Messiah supposed to be promised in Gn 3^{15} had now been born—a mere curiosity of exegesis.[1]

Cheyne (art. 'Adam and Eve,' in *EBi*) maintains that the authors of the Biblical narratives did not put them forth as either purely historical or purely allegorical, but as stating a kernel of fact in a symbolic setting.

The NT interpretation of the narratives is given in the following passages. In Mt 19^{6}, Mk 10^{9}, our Lord uses Gn 1^{27} 2^{24} to enforce the sanctity of marriage. In 2 Co 11^{3} the beguiling of Eve by the

[1] For a full discussion of the meaning of את־יהוה, see König (who defends the RV tr.), 'Der Evaspruch in Gn 4^{1},' in *ZATW*, 1912, pp. 22 ff., 232 ff.

serpent is used as an illustration of the possible seducing of the Church, the bride of Christ, from her Divine Spouse, probably by the devil. On 1 Co 11[3-16], 1 Ti 2[13. 14], and for the expansion of the narratives by Jewish, Christian, and Muhammadan legends, see ADAM.

'The Book of Adam and Eve,' also called 'The Conflict of Adam and Eve with Satan,' extant in an Ethiopic version (Eng. tr., S. C. Malan, London, 1882), was written in Arabic or Syriac by an orthodox Christian of the 5th or 6th cent. A.D. Starting after the Fall, it expands the narrative of Adam and Eve, and in a less degree the account of the patriarchs down to Abraham, and summarizes the history down to the Advent.

LITERATURE.—J. Skinner, 'Genesis' (*ICC*, Edinburgh, 1910), p. 85 f.; A. Jeremias, *The OT in the Light of the Ancient East* (Eng. tr. 1910), i. 221, 321–333; E. G. Hirsch, in *JE* v. 275 f., where the Rabbinical and Muhammadan legends concerning Eve are summarized.

W. H. BENNETT.

EVIL.—See GOOD AND EVIL.

EVIL EYE.—I. The supposed influence.—'Evil eye' is the common English term for an influence the belief in which may justly be described as both primeval and universal, and which is in many countries as current to-day as it was in prehistoric times. Its equivalent may be said to exist in every written language, living or dead: Gr. *βασκανία*, whence Lat. *fascinum*, hence modern English, French, Spanish, Portuguese—*fascination*; German—*böser Blick*; Neapolitan and Sicilian—*jettatura*, *mursiana*, and *fascino*. *Fascino* applies to the act as well as to the effect, and consequently, by development, to one of the best known protectives against it. An idea so widespread cannot but have its more common descriptive and colloquial alternatives, such as *malocchio* in Italian, Spanish, and Portuguese, *mauvais œil* in French. By Shakespeare and in English dialects the act implied is forcibly expressed by the verb 'over-look'—'over-looking' used in a well-understood sense, wholly distinct from the literal form meaning 'surveillance' (see *OED*). The word 'evil' is still a household word among English peasantry, though, except in theology, becoming obsolete in literature (*HDB*, *s.v.* 'Evil'). Many diseases of man and beast are so called; *e.g.* 'king's evil,' 'breast evil,' 'udder evil,' 'quarter evil,' and others. In some dialects the word is habitually contracted into 'ill,' and this household word for sickness keeps alive one of its original meanings, viz. sickness or misfortune caused by an evil eye. Bacon (Essay ix., 'Of Envy') says there is a belief in a power of working evil which is ejaculated upon any object it beholds, that has existed in all times and in all countries. Notwithstanding modern science and education, this belief is as strong as ever it was; and, if this were the place, endless authentic stories might be adduced to prove it.

The root conception of the very earliest ages, and still everywhere held by superstitious people, is that certain individuals have the power, by some considered demoniac, whether voluntary or not, of casting a spell or producing some malignant effect upon every object, animate or inanimate, upon which their eye may rest, especially when exercised upon the victims of their displeasure. There does not appear, however, at present, or, so far as recorded, in the past, to be any sort of belief in the power of the eye to produce any good or desirable influence upon the person or thing upon which it may rest, except that doubtful one known as 'love.' From the earliest times the eye *per se* has been supposed to work only evil, and to have a wholly maleficent effect. In Ps 33[18. 19] 34[15] and elsewhere, the effect described is not the direct influence of the eye for good, but must be understood to be the product of a distinctly voluntary and beneficent power, the word 'eye' in these cases being used to denote a personal surveillance. On the 'lifting up upon' of Nu 6[26], Delitzsch (*Babel u. Bibel*, 1905, p. 33 f.) says this is the opposite of the evil eye, the same in meaning as 'make His face to shine upon.' Its supposed manifestations have given rise to many divergent ramifications, finding their expression in more or less descriptive definitions; and these in their turn have further branched out and acquired conventional meanings, which at first sight seem to have no connexion with the original idea of the 'evil eye.' Such, for example, is our Eng. word 'envy,' meaning *malignant* or *hostile feeling* that may be said to arise from natural jealousy—as in 1 S 18[9], where Saul 'eyed David.' It is obvious how close is the connexion here between the definition and the fact denoted. The classic *invideo* describes most accurately what we mean to-day by 'over-look'—'to gaze with evil intent' (see Trench, *Syn. of NT*[8], 1876, pp. 83–106). The Lat. *invidia* not only denotes the feelings connected in our minds with 'envy,' but is to-day an alternative word for the modern Italian *malocchio*.

The Heb. word (קִנְאָה) expressing 'envy' signifies also the evil eye, that is, the natural selfishness, the inbred tendency of humanity, the covetous irritation of unattainable desire. In Scripture, envy and the evil eye are synonymous (Bacon, *loc. cit.*). One of the characteristics of envy is 'to desire the attainment of . . . equality or superiority by the particular means of others being brought down to our own level, or below it' (Butler's Sermon on 'Human Nature,' i. 12, note). So rooted was the belief in this fell influence of the malignant look that in the earliest times every human mischance, all sickness, and whatever was undesirable in life, was looked upon as the certain result of the fatal glance of some person or animal, not necessarily inimical by intention, as will appear later. This conviction remains to the present day among many people, even in England, as strong as ever, while in more backward countries and among so-called savages it is universal and undoubted. In Italy and Southern Europe generally the belief is more prevalent than in more northern countries, and consequently more in evidence. At the present moment, in many parts of England, there are always one or more persons who believe themselves, and are commonly believed to be, slowly dying from being 'over-looked.' This is particularly the case when the disease is at all obscure, and most of all in 'decline,' as *phthisis* is so often called.

Quite recently the present writer knew a respectable, well-to-do farmer who could not be persuaded that his progressive illness was natural senile decay, but maintained to the very last that he was the victim of malignant evil-working on the part of an enemy. Instances of this kind are constantly being reported in local newspapers, and might be multiplied to any extent. A cottager's pig is ill or dies, and at once the conclusion is that it has been spitefully over-looked. A crop is blighted, the cows lose their milk, a horse becomes lame, an accident happens, or any unexpected adversity—it is at once set down as the result of set purpose achieved by some enemy. The evil eye is the cause, and all the inventions of incantation and the magic called 'black art' are but so many reinforcements or helps to quicken the effect of that mysterious influence. Hawker (of Morwenstow), a devout believer, wrote (Aug. 1864): 'The Evil Eye is again at work here. One of my Ewes died yesterday and the ram is taken ill' (C. E. Byles, *Life and Letters of R. S. Hawker*, London, 1905, p. 489).

The evidence to be alluded to later, found upon the earliest known monuments of Babylonia, the cradle of civilization, as well as upon those of Egypt, proves conclusively the importance of the belief, and not only that the dread influence was all-powerful over the living, but that devices many and curious were adopted to protect the dead, and to guard their bodies against it. Ptah, the father of the gods, brought forth all the other gods from

his eye, and men from his mouth—a practical rendering of the ancient belief that, of all bodily emanations, those from the eye were most potent. The passages in Scripture referring to the evil eye, such as Dt 28[54. 56], Is 13[18], Lk 11[34], Pr 23[6] 28[22], Mt 6[22. 23] 20[15], Ps 92[11], etc., prove how prevalent the belief was in the ancient East. Among Jews, Muhammadans, Hindus, and all Orientals at the present day it is as firm as ever (see Westermarck, 'The Magic Origin of Moorish Designs,' in *JAI* xxxiv. [1904] 211). Pr 23[6] ('Eat thou not the bread of him that hath an evil eye,' etc.) is a maxim which holds to-day as firmly as when it was written; and even the suspicion of being the possessor of the evil eye causes people in many countries to avoid a person, or, if that is impracticable, to adopt some of the recognized precautions against it. Hawker, whenever he met one whom he suspected, placed his fingers in the position so well known to Neapolitans (Byles, p. 65). Nowhere—not even among savages—are more precautions used than in Naples, where on the appearance of a reputed *jettatore*, a word or signal is passed; and even in a crowded street there is at once a stampede into shops, entries, or anywhere out of sight and so out of danger, notwithstanding the fact that every one has about him some charm or antidote. Even the mention of the word *fascino* or *jettatura* is enough to cause some to decamp (for a curious instance of this, see Elworthy, *The Evil Eye*, 17).

The antiquity of the belief in the power of the evil eye, as well as its constant persistence, is proved by abundant evidence. In the times of ancient Greece, and in all the subsequent ages, the earliest, the latest, the most familiar, the most constantly portrayed in art of all the possessors of the evil eye, has been the gorgon Medusa, whose fatal glance turned to stone all who beheld her awful face. She was at first depicted in a more or less conventional manner, with staring eyes, wide, grinning mouth, showing wolf-like fangs, and a protruded tongue split down the centre. This was the typical archaic form, and to her fearful ugliness was attributed her baneful influence. The story once started evidently developed rapidly, for at a very early period a parallel version seems to have taken root, and henceforward until comparatively recent times the two ran on concurrently. First the face lost its extreme hideousness, and by degrees, easily traced in ancient art, it became at last in Roman days just as lovely as it had been frightful, while the story grew to match. She was said to have been beautiful at first, and then to have been punished by being changed into a hideousness so terrible that whoever looked upon her was turned to stone (see 'Solution of the Gorgon Myth' in *Folklore*, xiv. [1903] 212 ff.). The belief that her baneful influence arose from her fearful hideousness continued to hold its full force, while, at the same time, the story had developed in the opposite direction to such an extent that her power of *fascinating*, *bewitching*, or *entrancing* was held to be the result of her matchless beauty; yet with all this development the belief has ever remained that the baneful effect sprang from the eyes alone. Thus we see the process by which these terms applied to women in our day derive their meaning. Many Græco-Roman and Etruscan Medusæ are beautiful, but have a sort of horror-struck, agonized expression (see Elworthy, *Horns of Honour*, 61 ff.).

Many theories have been put forward respecting the Medusa and the legend of Perseus—all more or less mythical and speculative. The other famous exploit of Perseus, the rescue of Andromeda, is doubtless still more mythical; by some it is said to be the classic form of the fight between the sun-god of Babylon (Merodach) and Tiâmat, the dragon or power of darkness (cf. Job 9[13]). Horus slaying the dragon in several forms on Egyptian paintings is but another version; the myth also appears in the fight between Michael and the dragon, and again is perpetuated by St. George on our modern coinage. The representations of Perseus and St. George in art are almost identical, except that the former rides the winged Pegasus, while in some 16th cent. reliefs St. George is represented in plate armour. The panic-stricken lady on the rock, instead of being in the classic nudity of the figure where Perseus is the hero, is dressed in the hoop and farthingale of the Renaissance, in sculptured marbles at the Louvre and Palermo Museums.

Domestic animals of all kinds have ever been specially susceptible of dreaded fascination. The 'ornaments' of Jg 8[21] (AVm 'like the moon') were none other than the protective charms, some crescent-shaped brasses, some blue glass beads or disks, such as may be seen to-day upon the camels' necks. Young animals of all kinds are now, as ever, thought to be specially liable to injury. Virgil's shepherd (*Ec.* iii. 103) says, 'Nescio quis teneros oculus mihi fascinat agnos.' Plutarch (*Symp.* v. 7) says that certain men's eyes are destructive to infants and young animals. Cows and horses everywhere are to-day subject to the malignant eye, as, indeed, are all kinds of domesticated animals. In the time of Elizabeth, eye-biting witches were executed in Ireland for causing diseases among cattle. One effect of the evil eye on cows to-day is to cause them to lose their milk; this is believed by practically all peasantry in all countries. In the Hebrides it is so well understood as to have a special word (*toradh*) to denote it. If a stranger looks admiringly on a cow, the people believe she will waste away from the evil eye, and they offer him some of her milk so that the spell may be broken (Maclagan, *Evil Eye in the W. Highlands*, 122 f.).

Turks and Arabs have the same belief as to their horses and camels; seldom are any seen harnessed without some protective amulet upon them. In Morocco 'the havoc which the evil eye makes is tremendous. The people say that it "owns two-thirds of the burial ground"' (Westermarck, *loc. cit.*). In Naples the horses, especially those of the street *carrosselli*, are provided with a perfect battery of protective charms; and even in England the apparently useless brass ornaments on horse harness are but the unconscious survival of the self-same idea; each is an amulet, and many of them preserve their undoubted pagan origin. The sun and moon together or separate are among the commonest. In London (May 25, 1905) the present writer saw a horse in a contractor's cart with his head ornamented with blue and red braid, and any number of crescents, suns, and other highly polished brasses on the harness.

The Finns, Lapps, and all Scandinavians are firm believers in the evil eye. In the West of England the baneful influence of envy or ill-wishing is evidenced in the common remark upon any tragic occurrence, bereavement, or serious misfortune, such as a widow being left unprovided for: ''Tis a *wisht* thing for her, sure enough!' Of course, *ill-wisht* is what is understood, but so common is this phrase that 'wisht' is now the accepted and usual word for 'sad.'

The possessors of this power, considered as among the chief agents of mischief-making persons, were mostly females; hence the prevalence (over *wizard*) of the female name of *witch* in English, and its synonyms in other languages. Their spells, incantations, and wicked performances are *witchcraft* (It. *strega*, *stregoneria*). Sorcerers were both male and female, but mostly the latter. This was so in Babylonian times as much as at present. In Jewish, Greek, Roman, and Arabian literature it is clear that sorcery was specially the work of women (on this see *HDB*, *s.v.* 'Magic').

Plutarch, a devout believer, tells us many apt stories (*Symp.* v. 7), and says that the voice, the odour, the breath, are emanations which may easily injure those susceptible to them, pro-

ducing a wonderful effect, such as the influence of love by the eyes. He says that envy exerts an evil influence through the eyes, and affirms that most direful results are the product of envious looks, which pierce like poisoned arrows. Moors of Morocco still hold the same beliefs (Westermarck, *loc. cit.*). Hindus believe that an invisible spirit is born with the child, and that it is necessary for the mother to keep one breast tied up for 40 days, feeding the child with the other only, by which means the spirit is starved to death. If the child is fed from both breasts it will grow up with the evil eye. Muhammadans are, perhaps, even more fearful of its effects than the Hindus; and texts from the Qur'ān, as in all other countries of Islām, are used as amulets. The legend of the elephant-headed god is the outcome of this belief. Sani, the Hindu Saturn, had been left out of the invitation to the gods to rejoice at the birth of Gaṇeśa, son of Śiva and Pārvatī; he appeared on the scene in a rage, and with the first glance of his eye he caused the child's head to drop off. The other gods instantly cut off the head of a young elephant and stuck it upon the infant's body; hence Gaṇeśa is frequently thus represented.

In Calcutta it is held that a portion of all food bought in the market should be thrown into the fire to avert *nazar* (the native term). It is usual in some parts for a mother to blacken her child's face with a burnt stick to preserve it during the day from the evil influence. Natives of India put *kajal* (lamp-black) on their eyelids, believing that they are thereby protected against, as well as incapable of casting, the evil eye. This blackening of the eyelids, usual all the world over, is not merely a piece of female vanity, but a veritable protective.

The Targum gives a wider reading to Gn 42, explaining that all the sons of Israel went out by one door, lest the evil eye should have sway over them as they went out to buy. Again, Ex 30[8] is rendered 'and looked with the evil eye after Moses.'

Much is said on the subject by A. Goodrich-Freer (*Outer Isles*, 73), Marion Crawford (*Pietro Ghisleri*, 1893, ii. 30), H. Norman (*The Far East*, 1895), and H. G. M. Murray-Aynsley (*Symb.*); while the whole subject is dealt with very exhaustively by Frohmann, *de Fascinatione*.

2. The possessors.—A power so baneful and so steadfastly credited would inevitably lead to much speculation and contention as to the personality of those possessing it; hence arose a multiplicity of canons by which they might be known.

Any abnormal physical peculiarities, whether of beauty or of ugliness, have always been sure evidence of the dread power in all ages associated with the supernatural, with the demons and the powers of darkness. Even the gods were believed to possess it, and to use it when wishing to injure. Juno was particularly so credited; and for this reason Mercury the messenger was provided with a safeguard in his *caduceus*, lest he might be hindered in his flights by the envious eye when on errands for rival deities. Fear of anything uncommon seems to be part and parcel of the nature of all living creatures. All those among the ancients who in any way surpassed conspicuously the common standard, as, for instance, in athletic or physical strength or size, were dreaded as possessors; and so, on the other hand, any one specially defective, particularly a dwarf; the latter, if hunchbacked, was dreaded still more. Squinting or differently coloured eyes were always certain marks of what is now a *jettatore*. In India and in Italy a squinter (*guercio*) is *ipso facto* considered a *jettatore*. We English unconsciously preserve the same idea, for we say 'So-and-so has a "cast" in his eye'—a word purely technical in this sense, and implying the same meaning as the It. *jetare*, 'to cast or throw.' In Armenia very blue or green eyes are evil.

Many animals, particularly those with remarkable eyes, *e.g.* the serpent and the fox, were undoubted possessors of the evil eye. The peacock, Juno's own bird, full of eyes, the symbol of the most envious and ill-natured of the deities, has always been, and still is held to be, a potent mischief-maker. Many well-educated people in England and elsewhere are shocked if peacocks' feathers are put up as ornaments, or even if they are brought into a house; death or at least some evil is believed to be the consequence. The grasshopper's prominent eyes gave it in classic days so evil a reputation as to lead to a certain proverb: 'mantis te vidit' was the exact counterpart of our English, 'Thou art over-looked.' Tycho Brahe would not proceed on his way if a hare crossed his path. The hare is on the Græco-Italian Vase, 2079, Naples Museum, as an emblem of ill-luck. Very much superstition still attaches to the hare; doubtless its prominent eyes are the cause. The Irish thought it cast the evil eye on their cattle; therefore they believed hares to be witches, and consequently there used to be a general slaughter of them on May Day. The hare is still believed in some parts of England, *e.g.* in Somerset, and especially in the Isle of Man, to be the favourite animal into which the witches change themselves (see LYCANTHROPY). Kalmuks regard the rabbit with fear and reverence. Even to-day in Devonshire, fishermen will not pronounce the word 'rabbit,' but describe the animal by some roundabout method (*Devon Assoc. Trans.* 1896). Pregnant Chinese women must not look on a hare lest its eye falling on them should cause the child to be born with a hare-lip. Fishermen almost everywhere avoid mentioning by name not only the hare and rabbit, but also the pig, salmon, trout, or dog, and go out of their way to find some other word. Old gamekeepers do not speak of a fox to each other; it is always a 'thing.'

Pliny (*HN* viii. 34) says that near the source of the Nile is found a wild beast called the *catoblepas*, 'an animal of moderate size . . . sluggish in the movement of its limbs, and its head is remarkably heavy. Were it not for this circumstance, it would prove the destruction of the human race; for all who behold its eyes fall dead upon the spot.'

In Brazil there is a tradition that there is a bird of evil eye which kills with a look. A hunter once killed one of these birds and cut off its head without the eye being turned on him. He killed game thereafter by turning the evil eye upon it. His wife, not dreaming of its destructive power, turned it towards her husband and killed him, and then accidentally turned it towards herself and died at once. The toad's bright eye has always been held to be maleficent. At Bishopsteignton a few years ago lived a reputed witch. Whenever she wished to injure a neighbour she placed a toad at his door, so that when he opened it he might find the toad looking at him, and so receive its first glance.

Snakes have always had a reputation for having the power to fascinate, and there are many marvellous stories of the way in which they hypnotize frogs, birds, and other animals until they seem unconsciously to submit to being swallowed. One kind in particular, *Bucephalus capensis*, is so noted.

At the time of the Black Death in England it was currently believed that even a glance from the sick man's distorted eyes was sufficient to infect those on whom it fell. To this Shakespeare refers in:

> 'Write, "Lord have mercy on us," on those three;
> They are infected; in their hearts it lies;
> They have the plague, and caught it of your eyes'
> (*Love's Labour's Lost*, v. ii. 419 ff.).

Slatin Pasha describes the Khalif's dread of the evil eye. A Syrian blind of one eye was not allowed near him a second time. He declared 'nothing can resist it; illness and misfortune are all caused by the evil eye.' Saul was probably believed to possess it (1 S 18[9]). Heliodorus implies that most, if not all, individuals have it; he says: 'When any one looks at what is excellent with an envious eye, he fills the surrounding atmosphere with a pernicious quality and transmits his own envenomed exhalations into whatever is nearest to him' (*Theag. and Char.* iii. 7). Plutarch says that the Thebans had this faculty so powerfully that they could destroy not only infants, but strong men. Cretans and Cypriotes have had this reputation from ancient times, and retain it even at the present day. So also in Morocco 'whole families have a bad reputation on account of their eyes. People with deep-set eyes, and those whose eyebrows are united over the bridge of the nose, are particularly dangerous' (Westermarck, *loc. cit.*). Pliny says that the Thibii and others possessing the fatal power have a double pupil in one eye, and in the other the figure of a horse, while some have two pupils in each eye; and that in Africa there are families who can cause cattle to perish, trees to wither, and infants to die. Especially the Triballi and Illyrii have such a power of fascination with the eye that they can kill those on whom they fix their gaze. Cicero (Plin. *HN* vii. 2) also declares that 'feminas omnes ubique visu nocere quæ duplices pupillas habeant.' Horace (*Ep.* I. xiv. 37) speaks of the evil power of the 'oculus obliquus.' Bacon (*loc. cit.*) and Frohmann (*de Fascinatione*, p. 11) repeat the same thing. Ovid mentions the double pupils, and says that the Rhodians and Telchines injured whatever they looked at (*Met.* vii. 365 f.). The Greek islanders still in heart worship Fascinus.

Some persons are reputed to have the dread power over special persons or objects. In Italy

there are many stories of those known as *jettatori di bambini*, who are of all the most dreaded by mothers, and so are carefully shunned. Another class are supposed to have the faculty of obstruction—such are said to have a *jettatura sospensiva*. If any such person is met on the way to an enterprise, or on setting out on a journey, nothing will succeed, the business will fail, there will be an accident, one must return and give it up for the day.

Pope Pius IX. was confidently affirmed to have the evil eye, and his successor Leo XIII. was said to have it still more; it will probably become part of the reputation of the present Pontiff. It is, moreover, a well-known fact that all ecclesiastics are more or less suspected, especially monks. The murder of King Humbert was confidently ascribed to the *jettatura* of Leo XIII. The Russian peasant is convinced that his or her priest has the evil eye (Norman, *All the Russias*, 1902, p. 44).

In Abyssinia the reputed possessors are called *budas*; they are also magicians, who can work evil at will on any one whose name is known, by taking a certain reed, which the practitioner bends into a circle and places under a stone. At that moment the victim is taken ill; if the reed snaps in bending he will certainly die. All blacksmiths are looked upon as *budas* (Bent, *Sacred City of the Ethiopians*, 1893, pp. 63, 212); cf. our legend of Wayland Smith. These moderns are most likely the descendants in name and reputation of the *Budini* of Herodotus, who refers to them (iv. 105) as evil-minded enchanters; he says that one day in every year they changed themselves into wolves—but he himself did not believe it (see LYCANTHROPY). St. Augustine believed in wer-wolves (see his *de Civ. Dei*, xviii. 18; see also Pliny, *HN* viii. 39).

Not only have the evil-disposed the fatal power, but it is possessed by some involuntarily and much to their own sorrow. Woycicki (*Polish Folklore*, translated by Lewenstein, p. 25) mentions an unhappy Slav who, with the most loving heart, was afflicted with the evil eye, and in sheer desperation blinded himself that he might not be the cause of injury to his dear ones. Cases of involuntary fatal power are related as existing still in England and elsewhere (Mabel Peacock, *Daily News*, Aug. 13, 1895), so that mothers will not venture to expose their infants to the look of their own father. No longer ago than 1901 a farmer of Somerset was said 'to have the evil eye so bad' that if he looked on his own cattle they died. Dt 28^{54} is held by Frohmann, the most voluminous writer on the subject, to be a distinct confirmation of the possession of this terrible influence acting against the will of the possessor. Among the Bhuiya and Bhuiyār of India, children born on Saturday have the evil eye, and there are special spells to obviate it (Crooke, *TC* ii. 84, 97).

Perhaps no phase of this superstition is more generally wide-spread than that relating to the danger arising from praise or admiration to the object of it. 'Laudet qui invidet' was believed devoutly by the Romans; it is held and acted on, if unconsciously, among the English to-day, and still more commonly among those belonging to other nations. The conventional or national words uttered instinctively on receiving compliments seem to reflect the notion that danger exists, and that protection must be sought by appeal to a higher power, *e.g.* 'Mashallah!' 'Grazia a Dio!' 'Glory be to God!' 'Lord be wi' us!' Little gratitude is expressed, and certainly no Christianity, but simply a desire to avert the evil expected. This was so strongly felt by the Romans that it became customary even for the speaker of praise or compliment to accompany his speech with the words, 'præfiscini dixerim,' freely translated, 'Fend evil I should say.' In Italy the custom in a like case is to say, *Si mal occhio non ci fosse*, 'No evil eye take effect.' In England it has always been recognized as a rule of good manners not to over-praise; but few reflect that it springs from the old danger (rather than from politeness) lest the speaker should himself fascinate the object of his admiration; for those who were highly praised by others, or even by themselves, were liable to be blasted (Elworthy, *Evil Eye*, 13). In the Hebrides this belief is very strong. Miss Goodrich-Freer writes of horses falling down as if dead (soon after being admired)—the work of the eye (*Outer Isles*, 233). A Highland minister's wife, whose child had been much admired, said, 'Oh, dear, something is sure to happen to that child; I hope she has not given it the Evil Eye!' (Murray-Aynsley, *Symb.* 140). Narcissus was thought to have fascinated himself, hence his untimely fate; so also Entelidas, who wasted away in consequence of his own admiration of himself. From these old legends we learn why to-day it is not so much ill-mannered as directly impious and dangerous to boast of one's belongings, or to praise oneself. Lane (*Mod. Egyp.*, ed. 1895, p. 258) says a modern Egyptian is thereby alarmed, and will reprove one who is over-praising him; he will say to him, 'Bless the Prophet.' If, then, the envier obeys, saying, 'O God, favour him,' no ill effects will be feared. In England, 'bad luck,' it is thought, is certain to follow undue praise or boasting: this is well within the experience of all of us.

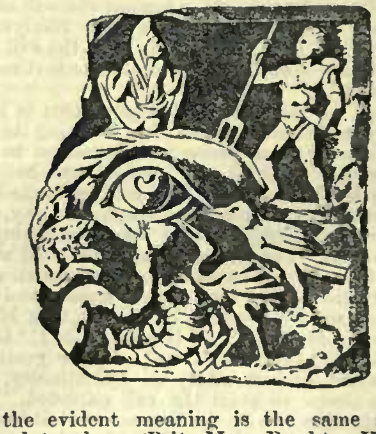
'Only yesterday I was saying I had not broken anything for years, and now I have let fall this old glass that belonged to my grandmother! As I was letting loose a favourite dog I said to a friend, "Of all the dogs I ever had, this is the most intelligent, and he will grow up to be a treasure." Half an hour later he picked up a poisoned rat in the road, carried it about ten yards, ran half a mile farther, and died!' (1895).

Just as the hunchback is believed to have the evil eye, so, when his influence has been counteracted, he is thought to be a defender against the malign influence of others; hence, it is said, a notable one gets his living at Monte Carlo by waiting outside the Casino that players may touch him for a consideration, in the belief that so doing will bring luck, *i.e.* prevent evil influence. Luck or good luck is but a negative result depending on the absence of evil or malevolent opposing influence. A very common amulet, made of mother-of-pearl, silver, lava, or other materials, is a *gobbo*, or hunchback, to be found everywhere, even in Moscow, dressed in Russian clothes. An Italian who was wearing one under his waistcoat, having actually received the price agreed, could scarcely bear to part with it; and at last declared that all his good fortune was gone. He died shortly afterwards.

3. Protectives.—A fear so wide-spread and so deeply rooted could not but lead to the invention of innumerable means by which the dread influence could be counteracted. The direct emanations from the eye are the most to be avoided, and the first glance falling upon the susceptible object is the most injurious: if that can be averted or met by some antidote, no harm will be done. It has been shown (Elworthy, *Evil Eye*, 170 ff.) that the devices upon the heads and shields of warriors were originally intended to attract, and so to counteract, the first glance of the adversary in battle. Thus has arisen all that is now understood as heraldic blazonry.

The secondary effects of the evil eye—or of envy, which the term includes—have been produced by many different methods of enchantment, incantation, and mystic rites, under the name of the 'Black Art.' These have been met by analogous acts, so that both bane and antidote fall more properly under the subject of MAGIC; but, inasmuch

as many of these acts are confined exclusively to the counteracting of the fatal glance, it is needful to refer to them here at some length. All authorities and all experience agree that to neutralize the look it is essential to attract it towards something striking, by way of diverting it from the object liable to injury. Hence arose the use of bright, shining ornaments of all kinds—of glittering helmets and fantastic head-dresses. Some have even held that this was the origin of the wearing of sparkling gems. The masks of actors, it is maintained (Boettiger, *Kleine Schriften*, 1837-8, iii. 402; Lobeck, *Aglaoph.*, 1829, ii. 973), were first adopted to prevent injury to the persons of those who were necessarily much exposed to the gaze of possible enemies. 'Everything that was ridiculous and obscene was supposed to be inimical to the malignant influence of fascination by the oddness of the sight' (Dodwell, *Class. Tour*, 1819, ii. 34); hence we find that the amulets that were most potent were of this character. Nothing attracts curiosity like obscenity, so amulets of a phallic character have been in all ages the most common, all the world over. Indeed, some writers contend that this is the basis of all protective amulets (J. G. R. Forlong, *Rivers of Life*, 1883). Foremost in this class must be placed that known by classic writers as *turpicula res* (Varro, *de Ling. Lat.* VII. v. 99). For a full description, see Payne Knight's *Worship of Priapus*, 1866, pt. ii. p. 152; Jahn, 'Ueber den Abergl.'; Frohmann, p. 5. Specimens of this amulet, both to be worn on the person and for household suspension, are to be seen in the British and many other Museums.



Amulets against the evil eye are of three classes (for distinction between amulets and talismans see Elworthy, *Evil Eye*, 121): (1) those intended to attract upon themselves the malignant glance, such as were worn on the outside of the dress, or such as were sculptured, painted, or otherwise exposed in or upon houses or public buildings, etc.; (2) all those endless objects worn on or concealed beneath the dress for the purpose of averting evil; (3) written texts from the Scriptures, Qur'ān, or other sacred writings; cabalistic figures and magic formulæ, either in appropriate covering, or carved, painted, or otherwise displayed on houses.

The *turpicula res* was so much in use amongst the Romans that it came to be known by the name of *fascinum*, as in Hor. *Epod.* viii. 18. On this Frohmann (*de Fasc.* p. 5) remarks at length in unquotable language. In fact, *fascinum* became the popular Latin name for *membrum virile*, and survives as *fascino* in modern Italian. Where our present day conventions perceive nothing but obscenity, the ancients saw only the *summum* of everything indispensable to combat successfully the most terrible danger. With them 'fascination was destruction, death—the phallus was life' (Tuchmann, *Mélusine*, ii. [1896] 103). The survivor and obviously less obscene part of the *fascinum* is still to be seen in the ordinary silver charm worn by Roman infants, and known as *mano in fica* (see Elworthy, *Evil Eye*, 152, 256). Its analogue among ourselves survives in the coral and bells of our childhood. Most of the objects worn by the ancients as amulets were generally emblems or symbols (defined in *Evil Eye*, p. 117) of a god, to whom the wearer tacitly appealed by the display of his or her attribute. The amulets denoting one of the four lascivious gods were by far the most common. Of these Priapus, called also Fascinus, according to Lucian, was the special patron of *lascivia*, and the phallus was his special emblem. Infinite in number and in variety of obscenity are the emblems of Priapus, for in all ages and countries his cult seems to have held a prominent position. In Babylonia, Egypt, India, Greece, Rome—among the ancients everywhere—he was in striking evidence, outwardly displayed on the person and in the house. The phallus was consecrated to Osiris, the protector of Egypt. To-day his cult is prominently visible among all savages and so-called Nature-worshippers, while in symbols and cryptic forms it is represented by more civilized people, even by the English. In most museums of antiquity are to be seen specimens of the grosser kind of phallic amulets. That of Naples, containing the remains of Pompeii, shows the greatest number; and few are without specimens of the *turpicula res* before alluded to (on this see Knight, *op. cit.*; Jahn, *op. cit.*; Montfaucon, *Ercolano e Pompeii*; King, *Gems*, 1860, and *Gnostics*, 1864; and Elworthy, *Evil Eye*, 134 ff.). A singular example of obscene Greek fancy is to be seen in a small terracotta (W. 78, Read) at the Brit. Mus., obviously intended as a protective. It consists of two phalli personified, in the act of sawing an eye. Pompeii presents numerous specimens still *in situ*. From mediæval times many are to be found in monastic carvings, *e.g.* the *Shela na gigs* in Ireland, in Glasgow Cathedral, and elsewhere. Publicly exhibited obscene carvings of the Middle Ages were mostly intended as a protection against the evil eye. Cf. art. CHARMS AND AMULETS (Greek), in vol. iii. p. 435 f.

Next to phallic subjects and their developments, perhaps the commonest was a representation of the eye itself, either alone or combined sometimes dramatically with other well-known protective symbols. The best known ancient example is the *uza*, or Eye of Osiris, on most Egyptian coffins or sarcophagi. A good example is on a large wooden sarcophagus in the middle of the Egyptian room at the British Museum. A great eye was carried in Egyptian funeral processions, and, along with the winged scarab, a blue *uza* was placed over the incision made at the embalming of the body as a protector of the dead. Blue and red are everywhere protective colours in Europe, Palestine, India, and throughout the East; in England and all over the world they are the favourite colours for horse ornaments.

The eye as a defence against the evil eye is a good instance of *sympathetic magic* (on this see *HDB*, *s.v.* 'Magic'). As a protective amulet it was certainly used by the Phœnicians, Etruscans, Greeks, Romans, and is used to-day by Turks, Arabs, Nubians, Italians, Russians, and many others. Inghirami (*Pitt. di Vasi Etruschi*, 1852, ii. 164) gives a shield having an eye proper in the centre, as the only device; also (*ib.* iv. 400) Hercules nude has a large eye on each breast and on each thigh, to protect him from the malignant glance of the enemy. A striking shield on a Greek vase in the British Museum has the club of Hercules in the centre, with a large eye upon the appendage beneath (see pl. xix. in Millingen, *Painted Gr. Vases*).

In modern Italy any glass bead or stone having a marking at all like an eye is carefully preserved as an amulet. Bellucci of Perugia has a great number of such, many set in silver and much worn. Ancient Egyptians ornamented their pottery with an eye as a special feature, often in combination with surrounding accessaries. Maspero (*Egyp. Arch.*[5], 1902, p. 245) gives a notable example: three fish having one eye common to all, alternating with three lotus flowers. A remarkable sculptured scene with the eye as the central object is the famous Woburn-relief, first published by Millingen in *Archæologia*, xix. 70, and here reproduced. In

this the evident meaning is the same as that referred to above (Brit. Mus. Read.). Here the eye is being attacked by several hostile animals and by a gladiator, while above it is a man in

Phrygian cap in a well-known indecorous attitude of mocking contempt. This attitude is still practised literally and habitually by Italian sailors against adverse winds, and within the writer's knowledge in England both in act and in words to match. Other curious instances of the eye being attacked by a ring of enemies are found on many ancient gems (see Elworthy, *Evil Eye*, 130), but perhaps the most curious is that (*ib.* 131) where the eye is surrounded by seven symbolic figures, representing the seven powerful and beneficent deities who in turn preside over the days of the week.

This amulet, therefore, provides a protection for every day. Several compound gem amulets having the eye as the centre surrounded by inimical protectors are shown and fully described in *ib.* 130.

The accumulation or piling up of protective agencies is an old-world custom (see Lanciani, *Athenæum*, April 25, 1891). Examples of its prevalence exist in the numerous *disci sacri* of Græco-Roman times, 350 B.C., discovered chiefly at Taranto. One notable specimen is to be seen at the British Museum, and one other at Naples, while two are in the Ashmolean. These have been fully dealt with in the *Soc. Antiq. Trs.* 1898, and more particularly in the present writer's *Horns of Honour*.

The same accumulation of, and unwillingness to ignore, protectives are still in evidence in the dedications of abbeys and churches, *e.g.* to St. Michael and All Angels, to certain Apostles conjointly, to two or more Saints, and, lastly, to All Saints, that none be omitted.

The Gorgoneion already described not only preserves the earliest evidence of the dread of the Evil Eye, but has also been in all ages one of the most favoured amulets against it. Especially has it survived as one of the commonest devices upon the door-knockers, not only of Pompeii, but of modern Naples and all the cities of Europe; thus becoming, even to-day, a potent protector of the house against every new-comer. Birmingham little dreams how persistently she aids in maintaining an ancient myth. One of the most potent of protectives is the *horn* in its various shapes and developments. In modern Italy, especially in Naples, it is so much in use that the word 'horn' has become generic; every kind and description of prophylactic charm against *jettatura* is 'un corno.' The phrase 'non vale un corno' is equivalent to our 'not worth a fig.' On close analysis both phrases are found to bear an identically phallic signification (see HORNS). Plutarch (*Symp.* v. 7) declares that objects fixed up to ward off fascination derive their efficacy from the strangeness or ridiculousness of their forms, which attract the mischief-working eye upon themselves. The same effect is aimed at in the numerous grotesque devices found upon ancient gems. *Grylli*, a quasi-technical term, though included in 'corno,' is the name of all amulets of this comic description. In modern Italian, *grillo* is not only a cricket or grasshopper (a potent protector, because *per contra* a possessor of the evil eye), but also a caprice of fancy, said to be a classic survival. 'Idem [Antiphilus] jocosos nomine Gryllum deridiculi habitus pinxit, unde id genus picturæ grylli vocantur' (Pliny, *HN* xxxv. x. 37).

The likenesses and statues as well as the symbols and emblems of the beneficent gods all continue, both singly and in combination, to be protective amulets against the same danger. The wheel, ladder, club, knife, hook, serpent, fish, snail, cock, lion, pig, dog, elephant, frog, lizard, and many other animals, may all be seen as regular articles for sale in Rome, Berlin, Moscow, Paris, and elsewhere, simply as charms. In Naples and Italy generally they are openly declared to be sold as specifics against the evil eye.

The Scripture *tĕphillim*, called 'phylacteries' in the NT, are combinations of an object to be worn conspicuously and a hidden writing enclosed within it. Their Greek name proclaims their purpose as protectives, while the Hebrew *tĕphillim* ('prayers') indicates more clearly their contents (*HDB*, *s.v.* 'Phylacteries'). The Jews are still devout believers in the evil eye, and hence preserve many objects in their ceremonies of a prophylactic nature; among these is the *mezûzāh*, avowedly a literal fulfilment of Dt 6[9]. Strict Jews' doorposts still exhibit this valued safeguard. Persians as well as Jews wear tassels, or *ṭallith*, which have a mystic prophylactic meaning (see *HDB*, *s.v.* 'Fringes').

Luck if analyzed is really the absence of misfortune, *i.e.* of evil wishing, whereby desires and natural expectations are frustrated. Damœtas who, according to Theocritus (*Idyll.* vi. 39), admired his own beauty reflected in the water, knew of the probable consequence, and used the well-known remedy against fascination, spitting three times on his breast. Spitting is a protection against many misfortunes. In Bulgaria it is believed that spitting protects against fascination and also against perjury at a trial.

Many objects besides those already noted, believed to be potent against the evil eye generally, are in some parts held to be specific against certain effects of it. The crescent—symbol of the moon, Ištar, Isis, Hathor, Artemis, Diana, and the Virgin Mary—is everywhere a potent amulet. Along with the sun, it is to be seen on great seals and coats of arms, even episcopal. As a separate amulet, it specially appeals to all those powerful deities for protection, but in Sicily the horned shell called *cacazzi di luna* is worn by children and others against toothache, always considered as the result of maleficence. There also the *operculum*, everywhere a protective amulet from the natural eye upon it, is a certain specific against sore throat (*male di gola*); so also a little wooden cross tied to a piece of crystal is good against sore throat. Small gold earrings are worn by *carbonari* and others, avowedly to ward off the *malocchio*; and our own navvies and showmen wear them for the like purpose, not merely for ornament. A double triangle of silver, a viper's skin in a bag, a silver ring called 'di S. Biaggio,' and many other objects are specifics against various maladies. Many special Sicilian amulets *contro la jettatura* were exhibited by Pitré at the Palermo Exhibition, 1903:

1. A piece of red cloth. Red everywhere is inimical to witchcraft of all kinds, and is constantly used, from Donegal to Japan, both alone and as a strengthener of other amulets against the evil eye. Our plough horses and our recruits alike wear red and white ribbons, and the Kirghiz ornament their horses with bright colours to keep it off. The material on horses is always woollen or worsted. Charms in Italian and Sicilian shops are always tied with red woollen braid or painted red; horns on butchers' shops are always painted red and white.

2. *Virticciu* (Sicilian), *fusajola* (Ital.), the perforated whorl used in spinning. This is but one example of perforated amulets,

of which also the holed stones used everywhere as protectives are another (see Elworthy 'Perforated Stone Amulets,' Paper at Brit. Assoc. 1902, pub. by Anthrop. Inst. in *Man*, 1903, no. 8).

3. *Testa d'agghia* (Sicilian), *aglio* (Italian), stalk of garlic. Alike in Italy, in Greece, and in India may be seen garlic bulbs tied with red worsted. In parts of Greece the mere utterance of the word for 'garlic' is considered a protective, just as 'corno' is in Naples (Murray-Aynsley, 144).

4. *Chiave masculina.* The key everywhere, but always the solid, never the tube key known as *feminina.*

5. *Zabara* (Sic.), *agone* (Ital.), agate—from its likeness to the eye.

6. *Sachetto di sale.* Salt is used as a protective against the evil eye by Jews for their children (Zangwill, *Children of the Ghetto*[4], 1893, p. 190); cf. putting salt on the tongue as part of the Rom. Cath. rite of baptism. Modern Jews put 'a bit of coal' into a child's pocket to ward off the evil eye (*ib.*). So in Ireland, a prisoner carries a piece of coal in his pocket to protect him from the evil eye at his trial. On a child in Corfu was a small silk bag, containing salt, charcoal, a nail, and a clove of garlic.

7. *Ferro di cavallo*, tied with red worsted. The horseshoe to us is perhaps the most familiar of all amulets against the evil eye. It is explained as being merely the conventionalized form of the moon emblem. The Turkish horseshoe, unlike that of Britain, is always shaped like the Byzantine crescent. Power is cumulative; so iron, the bane of witchcraft, is further reinforced by association with the horseshoe (cf. Elworthy, *Evil Eye*, 217).

8. *Anello di chiodo di ferro.* All rings are amulets, but silver ones, Diana's own metal, above all. In Italy the rings sold specially *contro jettatura* are all silver, and frequently augmented by a suspended horn, hand, or flower.

9. *Graccaluora* (Sic.), *gratugia* (Ital.), a common tin grater. At Taormina in 1903 a small tin grater, a spider crab, and a horseshoe, tied together with red braid, were fixed over the door of a house of the better class in a main street.

10. *Fili di seta colorati*, silken threads binding up nine slips of paper on which are cabalistic writings. Threads have always been held to be powerful, both in working enchantments and in countervailing them. The *fattura della morte* (Elworthy, *Evil Eye*, 58) has threads wound in and about the nails and pins to increase the power of the whole. The witch knots her cords to work strangling on her victims; so the Jew and the Persian knot their fringes to guard against witchcraft (see 'Magic' in *HDB*). Threads of many colours, as a charm against fascination, are mentioned by Persius (*Sat.* ii. 31).

11. *Cavaduzza marina*, Hippocampus tied with red braid, specially protective against the *fattura della morte*—invoice of death, a much dreaded spell (Elworthy, *Evil Eye*, 57). The sea-horse is also known in Sicily as a protection against malarial fever.

12. *Nastro giallo intrecciato*, plaited yellow ribbon (braid) shaped to represent the sea-horse. Yellow is also a protective colour. Gubernatis (*Rev. di Trad.*, p. 202) writes: 'per non essere colto da jettatura, si tenga un pezzo di lana gialla, visibile sul vestito che si indossa.' (On the efficacy of coloured threads and ribbons, see Petronius, *Sat.* 131; Story, *Castle St. Angelo*, 211; Jahn, 'Abergl.,' p. 42; Rhys, 'Sacred Wells in Wales,' *Cymr. Soc.*, Jan. 11, 1893; *Hygiene*, Nov. 17, 1893, p. 398; Murray-Aynsley, *Symbols*, p. 142.)

A conspicuous amulet in the Pitré collection was a cow's hoof attached by a red woollen tape to a rapier marked 'contro la jettatura' (on the efficacy of iron as a protective see Elworthy, *Evil Eye*, 221). A curious object for the same avowed purpose is *pettini de telaio*, which is known to us as the sleigh or reeds of a loom.

13. *Carta repiegata sulla quale sono scritti 2 scongiuri Siciliani contro nemici ignoti ed favore di persone cari.* This folded paper is to be worn as both an amulet and a talisman.

14. A boar's tusk mounted in silver with a lobster's claw attached, described as *contro le stregherie.* The tusk is everywhere a protective amulet; even in England it is worn by wild beast showmen to protect them from their savage charges. Tigers' and lobsters' claws mounted with silver rings, etc., are worn as charms by Sicilians, Indians, Japanese, and Greeks in Smyrna. Their efficacy comes from their horn-like shape. Amongst the Jews in Jerusalem the number and variety of charms against the evil eye are equally surprising, and the same remark applies to Russia, Moscow in particular. Miss Goodrich-Freer gives a list of the objects on a necklace from Jerusalem, and the words of a special adjuration even more potent than any, to be worn in a bag hung round the neck: male frog, shoe, comb, stove, lock, dog, pigeon, pestle, hammer, axe, sabre, key, scissors, mallet, pick-axe, camel, pistol, hen, coffee-pot, etc. Every one of these and many more may be bought in Naples, Palermo, and Moscow separately as well as combined (see *Folk-lore*, June 1904, p. 186).

15. Egg (shell filled with wax) stuck with pins and a nail; this is the *fattura della morte*, or 'death charm.' On this subject the mass of evidence is enormous, and the belief in it as a work of Sympathetic Magic is universal. To-day in Somerset and Devon, in the Isle of Man and the Highlands, it is practised as in Italy, as may be seen in the *corp creidh* at the museum at Oxford. The same means are practised to-day as in ancient Thebes and in the Middle Ages. Lytton (*Last of the Barons*) says that Friar Bungay was employed by Jacquetta, mother of Elizabeth Woodville, to make a wax figure to imitate Neville, earl of Warwick, into which she might stick pins so as to cause the Earl's death. An object, evidently of charred flesh, was recently found suspended in a chimney in Somerset, analogous to that described in Elworthy, *Evil Eye*, p. 55 n. (on Sympathetic Magic, see Tylor, *Prim. Cult.*[3] i. 112 ff.; also 'Cucina della strega,' *Corriere di Napoli*, Aug. 9, 1895). To counteract this evil-working artifice, so widely practised, red braid is considered a speciality. To prevent evil-wishers from injuring them, Sicilians wear a *sachetto continente uno spago con molti nodi*, by means of which the evil-worker's schemes are counteracted.

In Italy, Scandinavia, Judæa, China, Japan, and all over the world, every ill that flesh is heir to being the direct result of malignant influences or machination, there are specifics for each to ward them off or to cure. Each trade usually has its own favourite amulet, used singly or in combination (for details see *Evil Eye*). Some, however, deserve to be noticed here. Rome still holds to its own proper children's amulet—the silver *mano in fica* (see *Evil Eye*, p. 256) keeps alive the classic *fascinum* as truly and effectually as do the coral and silver bells of our childhood. Naples, however, utilizes a veritable pantheon for her children's protection, in a combination of many symbols, each of which appeals to one or other of the old pagan deities, and all against dread fascination. A silver ornament, plain on the side worn next the skin, is known as the *cimaruta*, or sprig of rue, represented by three branches, each of which is composed of one or more prophylactic charms (see Günther, *FL*, 1905, p. 132 ff.). The Herb of Grace has ever been held in high esteem, from the time of Pliny down to the present. Pawnbrokers of Florence regard it with especial favour as a protector against the *malocchio.* In most of their shops a pot of growing rue is to be found. In India, rue (*sudāb*) is used in various ways as a charm against the evil eye, as it is in Persia (Jackson, *From Constantinople to the Home of Omar Khayyam*, New York, 1911, p. 119), while the Beriya of India employ *Acacia arabica* (Crooke, *TC* i. 247). True specimens of the *cimaruta* are now scarce, and none is genuine unless of hall-marked sterling silver—which applies equally to the Roman *mano in fica*; all amulets appealing to the moon-goddess must be in her own true metal. Where the story of Ulysses remains enshrined in local topography, of course Parthenope figuratively and literally plays a conspicuous part; consequently, as *all* amulets are 'corno' or 'corna' in Neapolitan, so all of a special class are known as *sirene.* The latter are mostly house amulets for suspension, and are of two classes—a single figure, sometimes as a siren, *i.e.* simply a bird with human head; or more commonly a crowned female whose body ends in a double fish-tail instead of legs, and with silver bells hanging beneath. Others have the same figure in combination with double sea-horses. A siren of this fish-tailed kind—probably an importation from Naples—is embossed on a panel on an old house at Newcastle-on-Tyne. Another favourite house amulet is the sea-horse itself, *cavallo marino.* All Neapolitan house-amulets of this kind are of silver, and ornamented with bells precisely like our old corals, etc. A pendant silver amulet, against the evil eye—a crowned female, ending in a fish with bells, precisely analogous to the *sirene*, said to be German of the 17th cent.—is pictured in the *Connoisseur*, Jan. 1905, p. 56.

It is doubtful at what epoch *bells* (see GONGS AND BELLS) were first used in Europe. The shaking of metal as a means of calling is of extreme antiquity. The clashing of bronze was characteristic of the worship of Demeter. She was called Ἀχαία (the noisy one) from the clanging of cymbals and drums at the searching for Persephone. It is said that the famous Gong of Dodona (see A. B. Cook, *Journal of Hellenic Studies*, 1902, p. 5) consisted of a string of bells, and gave rise to a Greek proverb, which lasted a thousand years—comparing a talkative person to the Gong of Dodona. At the Temple of Jupiter Tonans bells hung down almost to the doors. The use of bells probably came in pre-historic ages from the Far East, and they always have borne a prophylactic character—especially if they were used against the evil eye. This is implied in Ex 28[33]. The colours, too, alternating with the bells, had also their pro-

tective value, and have it still, particulerly red. Their form, the slit ball, was probably that still to be found in Neapolitan amulets, on Russian horses, on Madeira oxen, and on the coral and bells of our infancy, one of the oldest and most enduring of patterns. Bells on horses and on cattle have been used in all ages—always as protectives. On farm teams in the West of England quite recently a so-called 'housing,' or row of five or six loud-jangling bells, ornamented *de rigueur* with red worsted fringe, was carried above the collar of the leader. The noise was often deafening; the purpose was to drive away evil spirits, while the red colour attracted and so absorbed the first glance of the evil eye. Bells in church towers are not originally intended as calls to prayer, but rather as a preparation for it, by driving away evil spirits, to whom the noise is a terror. The bells of two neighbouring churches, both within sight of the present writer, are rung specially on their respective Saints' Days 'to drive the devil over to the other parish.'

'The sea-horse occurs on many early crosses in the east of Scotland, notably at Aberlemno and Meigle' (*Reliquary*, Oct. 1895, p. 251). Miss Goodrich-Freer says: 'In the Hebrides *caoil-brechan*, water ragwort, called "armpit" flower of St. Columba, is placed in byres, etc., to protect cattle from the same. The cock is sacred to keep off evil spirits' (on this see Elworthy, *Horns of Honour*, 93). In India the excrescences of the Bombax, or cotton tree, are considered protectives; and the tree has the like reputation in Mexico, where it is common. The usual shop amulet of butchers in Naples is a pair of cow's horns, painted red and white, over the door; but, in addition, very many of the better class have a stag's head with branching horns affixed to the inner wall. Many have other objects suspended, such as a horseshoe with a single pendent horn tied with red (see HORNS). Macaroni and provision dealers frequently have several curiously combined amulets hung up inside their shops. Laundresses usually have a glove filled with sand, the thumb and two middle fingers sewn in, so as to make the *mano cornuta*. The sun and moon combined are a common finial for the silver *spada* worn by women in their hair; some have a flower, bird, or piece of coral. Written texts, cabalistic signs (such as the well-known Solomon's seal) of many descriptions are also potent protectors against the dreaded influence. Many are of a double character, *i.e.* possessing power as visible amulets, but with special virtue from the nature of their contents. Magic squares, still worn in modern Italy in bronze, were certainly well-known to the ancient Romans, many in terracotta having been found, with numbers arranged precisely as they are to-day. In Scotland, written charms against various ills are still common (*Folklore*, xv. [1904] 350). In Teneriffe it is the custom to scatter mustard-seed through the house after a birth to keep off witches and the evil eye. The Dāngi of India, in similar fashion, burn mustard and pepper, the Dom garlic and pepper on a Tuesday or a Saturday, and the Khairwa salt and pepper (Crooke, *TC* ii. 251, 329, iii. 224). Iron, as being a well-known scarer of demons, is employed to avert the evil eye among the Thāru (*ib.* iv. 393); and the Armenians spit on a stone and turn it under, or make cakes of dough, wet them with water, and throw them into a fire, the evil eye being broken as the cakes crack asunder (Abeghian, *Armenischer Volksglaube*, p. 126 f.). Elsewhere an effort is made to ward off the evil eye by giving a depreciative name to a child, as among the Indian Rāji (Crooke, *op. cit.* iv. 214), though among the Golapūrab this is resorted to only when the first child of a marriage has died (*ib.* iii. 427).

Besides all this multiplicity of concrete objects, there is an endless multitude of incantations, of verbal and ritualistic charms, used for the like purpose, too numerous to be more than referred to. Sayce (*Rel. of Anc. Bab.*[3], App. iii.) gives a long list of magical texts. Abra-Melin also gives a vast number of magical squares, formed of letters, for warding off or producing all sorts of evil.

EVIL-SPEAKING.—See SLANDER.

EVOLUTION (Biological).—In the history of biological thought the term 'evolution' has had more than one meaning. It has, however, been more especially used to denote those views on the interrelation of living things which imply the conception of the mutability of species, now so closely associated with the name of Charles Darwin (1809–82).

1. The idea of the transformation of species, of the origin of new forms from pre-existing ones, is old; it is to be found in the teachings of many of the Greek philosophers. Aristotle devotes some attention to it, and his writings doubtless express in large measure the opinions generally prevalent in learned circles during the time in which he lived. He taught that there had been a continuous succession of animal forms, during which the older and less perfect had gradually given rise to the younger and more perfect, themselves in process of giving rise to yet more perfect forms. Life itself arose through the direct metamorphosis of inorganic matter. Plants came early in the succession; for, though endowed with powers of nourishment and reproduction, they have neither feeling nor sensibility. Later came the plant animals or zoophytes; and still later the animals proper, gifted with sensibility and even, to some extent, with powers of thought. Highest of all is man, the one form capable of abstract thought. The process of Nature is a struggle towards perfection, the expression of a perfecting principle inherent in the universe. The result is a gradual evolution from the lower to the higher, owing to the resistance offered by matter to any change of form from that which the perfecting principle seeks to impose upon it. At the back of the perfecting principle is the Efficient Cause; though, whether this Efficient Cause gave the original impulse and thenceforward remained outside the operations of Nature, or whether it is all the time constantly at work, is a question which Aristotle raises without being able to resolve.

In his conception of the processes of Nature, Aristotle had advanced as far as the existing state of knowledge would allow. Though inexact in detail, the idea of progressive change in the organic world stands out clearly enough. But he was unable to point to any natural agency through which change might be brought about. Curiously enough, he considers in one passage

a crude form of the survival of the fittest which was advanced by Empedocles, though only to reject it. Perhaps he was too deeply impressed by the feeling of design in Nature to sift out the argument for natural selection dimly foreshadowed in the writings of the earlier philosopher. Moreover, the facts at his disposal were insufficient to force him to pay attention to the great amount of variation normally found among living things or to realize its significance.

In the teaching of Aristotle are summed up the contributions of the Greeks to the problems of evolution, and, as Osborn has said, they

'left the later world face to face with the problem of causation in three forms; first, whether Intelligent Design is constantly operating in Nature; second, whether Nature is under the operation of natural causes originally implanted by Intelligent Design; and, third, whether Nature is under the operation of natural causes due from the beginning to the laws of chance, and containing no evidences of design, even in their origin' (*From the Greeks to Darwin*, ch. iv.).

2. The acute and speculative minds of Greece had in large measure formulated the problem of evolution, and for many centuries it rested much where they had left it. The learning of Europe passed into the hands of the Christian Church, where it became a means of extolling the glory of God rather than a pursuit to be followed for its own sake. It was in the order of things that a firm belief in another and better world should draw men's attention from the earthly seat of a sinful and transitory life, and the check thus exerted upon natural curiosity produced its inevitable result in the stagnation of natural knowledge. It is true that some of the more liberal minds in the Church, notably Augustine and Thomas Aquinas, endeavoured to reconcile the teaching of the Greeks with the Mosaic cosmogony, but eventually the precision of the first chapter of Genesis conspired with the inclination of the faithful to behold in the manifold variety of Nature incontrovertible evidence of the manifold power of the Creator. It was only after the lapse of many years that the weakening of the authority wielded by the Church, helped largely by the renaissance of Greek learning, lent a fresh stimulus to curiosity, and enabled men to put aside the temptations of a future life and to devote themselves to the discovery of the world in which their lot was cast. But it was long before definite progress was made with the idea of evolution. In the early revival of science, men were more attracted to the study of the inorganic, where matter was more stable, and where the phenomena encountered were less likely to suggest the derivation of one form of matter from another in orderly sequence. In the provinces of zoology and botany, where these problems are more likely to arise, the naturalists were for long too busy with absorbing into their classifications the facts continuously streaming in to devote much attention to the philosophy of their subject.

3. Starting with the great miscellaneous compilations of Aldrovandus and Gesner in the 16th cent., the process of arrangement gradually took shape through the labours of Ray and others till it reached a definite stage in the monumental work of **Linnæus** (1707–78). The problem of species had been discussed before Linnæus, but it was the *Systema Naturæ* which by its comprehensive and logical arrangement insisted upon the question of the way in which species were related to one another. Linnæus himself, though a man of science, was a good Christian, and held to the Church's teaching of the separate creation of each species of plant and animal. In his later work he allowed himself a little more latitude, and admitted that in certain cases new forms might have come into being through crosses between the original species. But the change so brought about was held to be a degenerative one, tending to obscure the perfection of the original type as it had issued from the mint of the Creator. It was the classification of species that interested Linnæus—the demonstration of criteria by which the vast variety of animal and plant forms could be definitely separated one from another. How these differences might have come about was a question in which he was not greatly interested. Nevertheless, his notable attempt to fix the limits of natural species inevitably forced the botanist and the zoologist to inquire more closely into the nature of species itself.

4. Contemporary with Linnæus lived another great naturalist, who, perhaps more than any one, should be regarded as the father of modern evolutionary thought. In most respects the mind of **Buffon** (1707–88) contrasted sharply with that of Linnæus. Though no less insistent upon exact description as a first necessity in science, he held that the mere accumulation of facts was not an end in itself, but that the scientific mind was fulfilling a proper function in combining and generalizing upon the facts which it had brought to light. For this reason Buffon's writings abound in speculation, and were full of suggestion for many who came after him. To determine precisely the credit due to Buffon in the development of the conception of evolution is a matter of extreme difficulty, for his own standpoint apparently underwent considerable changes during different periods of his life. Like Linnæus, he started with a belief in the fixity of species, each enjoying the attributes with which it was immutably endowed by the Creator. With the riper knowledge that came from his studies in comparative anatomy, we find him questioning the perfection of the plan upon which an animal is built. In his famous dissertation upon the pig he points out that this animal cannot be regarded as formed upon an originally perfect plan, but that it evidently has parts which, though well formed, are of little or no service to it. In fact, it may be regarded as a compound of other animals. From this position it was not a great step to a belief in the frequent mutability of species, and to the conception that the members of a group of species showing family resemblance may have been derived from a common ancestor, some by becoming more perfect, others by degeneration. So might the horse and the ass, so even man and the ape, be related to one another. Yet, after forcibly advancing the claims of a common descent, Buffon will suddenly remember the susceptibilities of his neighbours, and protest that, after all, it cannot be so, since there has been vouchsafed to us a direct revelation that all animals have issued in pairs, completely formed, from the hands of the Creator. How far this attitude was ironical is difficult to say, nor need it greatly concern us here. There is little doubt that in his inmost mind he believed in the mutability of species, and held that changes in animal and plant form could be directly brought about by changes in their environment, and that these changes could become hereditarily fixed. Buffon's great service to the progress of thought lay in his suggestiveness. He questioned the orthodox notions as to the relation of species to one another, and from the width of his learning, the acuteness of his intellect, and the charm of his style he put his questions in such a way that no man thenceforward could afford to ignore them.

5. The seed sown by Buffon soon began to bear fruit, and within a few years **Erasmus Darwin** (1731–1802) in England and **Lamarck** (1744–1829) in France each put forward a theory of evolution. Each accepted the doctrine of the mutability of species, and each adopted almost the same hypo-

thesis to explain how the transformation of species might be brought about. Buffon had expressed the opinion that a change in the external surroundings in which animals lived might directly influence their form. Both to Erasmus Darwin and to Lamarck a changed environment was at the bottom of specific change. And the reaction was an indirect one. The changed circumstances of its life led to an alteration in the habits of an animal; and the altered habits, by causing increased use of some organs, together with decreased use of others, eventually resulted in a change of form. Such changes of form brought about by increased use or disuse of organs—'acquired characters,' as they are now generally called—were assumed by Erasmus Darwin and Lamarck to be inherited. The net result of a permanent change in the environment was a permanent alteration in form, though this was reached only indirectly through a change in the animal's habits. Unless the animal reacted to the altered environment by an alteration in its habits, a change in form could not take place. Evolution was effected only through the co-operation of the animal's nervous system.

6. Though they excited much attention, the views of Erasmus Darwin and Lamarck failed to secure a firm hold on men's minds. At the English Universities, scientific studies were at a low ebb, and the authority of the theologians, including the acute and gifted Paley, was directly hostile and sufficiently powerful to prevent the new doctrines from percolating far. In France the great weight of the learning of Cuvier (1769–1832) was cast into the scale against Lamarck, and the younger generation probably grew up to regard him as little better than a madman. The doctrine of the transformation of species implied a unity of plan running through the animal kingdom. To this idea Cuvier, who stoutly upheld the orthodox view of the separate creation of species, was vigorously opposed. He contended that there were several perfectly distinct plans or types upon which different groups of animals were built, and that these different types could not be related to one another. There were instances in which animals built upon one plan might show apparent resemblances to those which were built upon another, but careful anatomical analysis showed that in reality the resemblance was one of analogy only. His great knowledge of comparative anatomy enabled Cuvier to crush his opponents, for it was not until the rise of modern embryology that the fundamental unity of plan common to the great animal groups came to be clearly perceived.

7. Comparative anatomy, as it then existed, was ranged on the side of special creation as opposed to the gradual evolution of species. But another study was already coming into greater prominence. The year (1830) that witnessed the victory of Cuvier over the Lamarckians in the Academy of Sciences at Paris witnessed also the publication of the first volume of Lyell's *Principles of Geology*. In that work was set forth what came to be known as the uniformitarian doctrine in geology—'the principle that the past must be explained by the present unless good cause can be shown to the contrary.' Lyell pointed out clearly and forcibly that the formation of the rocks in past ages could be referred to the operation of causes similar to those now at work, and that there was no valid reason for assuming the interpolation of a series of cataclysmal changes such as Cuvier had advocated. By showing that natural causation is competent to account for the non-living part of the globe, Lyell strengthened the hands of those who were trying to show that it could also account for the living. Moreover, the uniformitarian doctrine in geology provided another strong argument for the evolutionist. Palæontology had arisen as a serious study, and in the hands of Cuvier and his pupils had already undergone considerable development. It had been perceived that, on the whole, the different strata of the earth's crust contained different and distinctive collections of fossil forms, and Cuvier had sought to explain this through a series of world catastrophes which blotted out animal life, followed by a series of separate creations which re-peopled the earth with new and distinctive fauna. By abolishing the catastrophe the geologist brought the naturalist face to face with the problem of explaining the connexion between the fossil forms of life and those still living, and, as the science of palæontology developed and fresh discoveries were made, it came to be more clearly seen that the distribution of these various fossil forms in time accorded well enough with the idea that there existed a genetic continuity between them, but that it was not easily to be reconciled with any other hypothesis.

8. The development of the natural sciences during the earlier half of the 19th cent. was rapid, and by the middle of it the evolutionist was able to set forth a goodly array of arguments on his side. In Germany, theories of the transformation of species had excited considerable interest. Through the writings of Oken, Treviranus, von Baer, and others, scientific opinion in that country may be said to have been not only familiar with the idea, but also in large measure sympathetically disposed towards it. In England, on the other hand, isolated as she had been from the solvent action of the Napoleonic wars, scientific opinion was largely represented by men of sincere and orthodox religion, to whom the idea of the mutability of species, and all that it implied, was unwelcome and even repugnant. Indeed, it was not until 1844 that the existing arguments for evolution were actually brought together by Robert Chambers, whose work on the *Vestiges of the Natural History of Creation* ran through many editions and excited very considerable discussion and controversy. A brief presentation of these arguments will show that the case for evolution was forcibly stated before 1850, and it is not easy to understand why scientific men in England were not more early sensible of their weight.

(1) *Argument from the general presumption of science against 'supernatural' explanations of phenomena.*—The whole tendency of scientific discovery is to eliminate the miraculous as an element in the causation of natural phenomena, and to regard this causation as having from the earliest times been operative in the same way as we see it now. With the accumulation of facts in the physical sciences the principle of the continuity of natural causation had become so firmly established, through the discoveries of Newton and other great natural philosophers, that it was accepted as axiomatic by those who worked at these branches of knowledge. In deciding, therefore, between two rival theories to account for the causation of the organic world, it was obvious that the presumption was in favour of the one which postulated a continuous and orderly process of natural change, as against that which explained the phenomena by the sporadic intervention of an alien and incalculable force.

(2) *Argument from uniformitarianism in geology.*—The influence of the rise of modern geology, with its doctrine that the past is to be explained by the present, has already been pointed out, and its bearing upon the question of organic evolution as opposed to a series of special creations is sufficiently obvious without further remark.

(3) *Argument from homologies in vertebrates.*—The studies of the comparative anatomists, begun

in the 18th cent. and so brilliantly developed by Goethe, St. Hilaire, Cuvier, and others, had clearly demonstrated that the parts of the skeleton of vertebrates could all be reduced to a common plan. Widely different in appearance as were the wing of a bird, the fin of a whale, and the hand of a man, the anatomist was nevertheless able to demonstrate that there was an intimate correspondence between them, so that the separate parts of the one could be clearly recognized, though greatly modified, in the other. Nor were these homologies confined to the vertebrates; for even at this time cases had been worked out among such groups as the insects and molluscs. Such homologies were obviously in harmony with a theory which implied community of descent through a process of gradual evolution.

(4) *Argument from the variability of existing species.*—Though the study of variation had not yet made much headway, there was one group of facts which pointed clearly to the possibility of species being capable of permanent modification. The various domesticated races of animals offered evidence that certain species were capable of modification, and that such modification could be transmitted. Whatever the origin of the variability, its existence at any rate was positive proof that species could undergo transformation.

(5) *Argument from the sequence of types in palæontology.*—As the fossiliferous strata of the earth came to be more fully explored, it was seen that a rough order was apparent in the succession of the new forms brought to light. The more recent the strata, the higher the types, and the more nearly approximating to living species; while, conversely, the older strata were characterized by a simpler fauna and by the absence of the higher and more specialized types. Though the general import of the sequence of types was unmistakable, the evidence, as it existed in the middle of last century, was for special cases imperfect and often apparently inconsistent. Whole groups of animals might suddenly disappear at the close of a geologic period, and be suddenly replaced by other distinct groups of closely related species, without the appearance of intermediate forms. Such facts were naturally insisted upon by the opponents of the evolutionary doctrine, and its supporters could make little retort beyond alleging the imperfection of the geological record. It may be said that, though palæontology gave a general support to the idea of evolution, the records existing in the earlier half of last century were too scanty to afford that detailed evidence without which it could hardly be admitted as a cogent witness for the evolutionist. More recently, of course, the position is greatly changed; and the palæontological discoveries of the latter part of the 19th cent. have not only gone some way towards filling up clamant gaps in the record, but in certain cases, notably those of the horse and the elephant, have brought to light very beautiful and complete series in which the evolution of an existing animal can be clearly traced back to a geologically remote and widely different ancestor.

(6) *Argument from persistent types in geology.*—Though the palæontological record exhibits on the whole a progressive series of animal forms through the successive geologic strata, there are cases in which a species has remained constant over vast lapses of time. Crocodiles indistinguishable from those now living occur early in Mesozoic times, while the shells of certain primitive molluscs and brachiopods still existing are found as far back as the Silurian. Though clearly not a positive argument for evolution, such facts as these are evidently not what would be expected on the rival theory of successive cataclysms and special creations; and, as such, they have carried weight in favour of the former alternative.

(7) *Argument from the Recapitulation Theory.*—The study of comparative embryology was founded by von Baer in the earlier part of the 19th cent., and it was clearly pointed out by him that the early embryos of different animals belonging to allied groups are far more alike than are the adults. Thus the early embryos of a bird and of a fish are to the human eye very much alike, and during the course of its development the embryo bird exhibits such piscine characters as gill-clefts. With the course of development the fish-like characters eventually disappear, until the unmistakable avian form is established. But the fact that the animal higher in the scale tends during its embryological development to recapitulate, as it were, the ancestral history of the race to which it belongs appears more natural on the theory of evolution than on that of special creation. Through the work of F. M. Balfour and others in the latter part of the 19th cent., the study of comparative embryology was largely developed, and many striking instances of recapitulation were added to those previously known. At the same time it must be stated that fuller knowledge has shown that embryological development is no sure guide to ancestral history. Nothing is more certain than that, on the evolution theory, the ancestors of birds were toothed creatures. Yet in no case hitherto investigated in birds is there an embryonic stage in which tooth-germs are present; and numerous other examples could be given in which, during the development of the individual, no traces occur of structures which its ancestors, according to the theory of evolution, must at some time have possessed.

(8) *Argument from rudimentary organs.*—The researches of the comparative anatomists had revealed in many forms the presence, in an undeveloped state, of organs which in allied forms were obviously of use to their possessors. Small teeth had been found in the fœtus of the whalebone whale, traces of hind limbs in certain snakes, small and imperfect additional toes in the splint bones of the horse—all obvious imperfections in the general plan of the animal in which they were found. Chambers made use of these imperfect structures as an argument against the hypothesis of special creation. Their existence alone condemned the idea of a special creation for each organic form, seeing that they, 'on such a supposition, could be regarded in no other light than as blemishes or blunders' (*Vestiges*[4], p. 202). Yet, though discordant with the idea of special creation, they became intelligible and instructive on the hypothesis of a genetic connexion between the different forms of animal life. For, on that hypothesis, horses must be descended from ancestors with more than one toe, baleen whales from whales with teeth, and snakes from reptilian forms with limbs. Not only was the rudimentary organ explicable on these lines, but it might even give a clue to the past history of the forms in which it occurred.

9. From all this it is clear that the idea of evolution had been fully and critically discussed during the earlier half of the 19th cent., and that the arguments for it had been gathered together and forcibly set forth before 1850. Yet it had failed to take root. Nor was this altogether due to religious prejudice. A great obstacle in the way of accepting the evolutionary idea was the difficulty of conceiving a natural process by which it could come about. The suggestions of Buffon and the theories of Erasmus Darwin and of Lamarck all lacked compulsion, nor did the ascription of the process to an innate perfecting principle, as

with Aristotle, succeed in investing it with more than a purely academic interest. It was not until **Darwin** and **Wallace** jointly formulated their views in 1858 that a working factor was felt to have been found. In the following year appeared *The Origin of Species*, a work which has influenced human thought more profoundly than any other book of modern times. In that work, Darwin summed up the existing arguments for evolution, and at the same time clearly and convincingly demonstrated a factor by which progressive changes would be brought about. This factor was 'Natural Selection, or the Preservation of Favoured Races in the Struggle for Life.' The idea was not entirely a new one. It had been formulated by Wells in 1813 and by Matthew in 1831, but in both cases it had been thrown out rather as a suggestion in connexion with a small class of facts than as a principle of the first importance and of general application. The greatness of Darwin lay in his appreciation of the profound importance of the principle he advocates, in his patient accumulation of facts, and in his masterly handling of them when brought together.

To Darwin, as later to Wallace, the first hint of natural selection had come from the reading of Malthus' *Essay on the Principle of Population* (London, 1798). The main theme of Malthus was the tendency of population to outrun the available food supply, and stress was laid upon the inevitable struggle for existence that arose unless this tendency was somewhat checked. Malthus concerned himself solely with his own species. For him the struggle was an unpleasant fact, a source of human misery of which some mitigation was much to be desired. What was to Malthus a fact of mainly economic significance became to the wider vision of Darwin a phenomenon of deep philosophical import. For, with a struggle for existence once granted, the logical outcome was the working factor in evolution for which naturalists had long been searching in vain. But to complete the argument two further co-operative factors are needed, and these were demonstrated by Darwin in the Principle of Variation and the Principle of Heredity. According to the former, no two animals or plants are quite alike; but even the offspring of the same parent or parents tend to vary, in greater or less degree, both from them and from one another. According to the latter, the peculiarities exhibited by parents tend to be transmitted to their offspring, to some in greater, to others in less intensity. In other words, offspring are never exactly like their parents, but nevertheless tend to resemble them more than they resemble other members of the same species or variety. If such is the normal condition of a population of living things, and if upon them is imposed a struggle for existence induced by over-multiplication, it follows necessarily that a progressive change will take place in that population. For, since its members are not all alike, some will possess variations through which they will be better equipped than others for survival in the competitive struggle for existence; and these will, therefore, tend to leave more offspring than their less advantaged brethren. These offspring will tend to resemble their parents in exhibiting the favoured variation in greater intensity than their parents; moreover, they will be still more greatly favoured in the struggle, and will tend to leave offspring of whom some will possess the advantageous variation in even greater intensity. The process is a cumulative one. Automatically, the struggle for existence leads to the more favoured variations surviving to become the parents of the next generation. And, as through the principle of variation some of the offspring will show the advantageous variation more marked than in the parents, it follows that this variation must become gradually piled up by small accretions at each generation, until a definite change of type has been brought about. To this automatic process, by which those showing the more favourable variations were picked out for parentage, Darwin applied the term 'natural selection.'

In *The Origin of Species* Darwin's performance was twofold. First, he brought together once more the various arguments for evolution, supplementing them with examples drawn from his own great stores of knowledge, and making use of a new argument in the geographical distribution of animals. Secondly, he endeavoured to show how, through this newly discovered factor of natural selection, evolution might be brought about. That he succeeded in his endeavour, in spite of the most strenuous opposition, is now well known. A few years had to elapse after the publication of *The Origin of Species* before the new doctrine of evolution through natural selection was generally accepted by scientific men, and much vigorous controversy was at first engendered in the clash between the old order and the new. Nevertheless, the new doctrine rapidly won its way in spite of the prejudices it was bound to arouse; and the fact that it has already been accepted for some years in all spheres of thought is not a little due to the pens of **Ernst Haeckel** in Germany, and of **T. H. Huxley** in Great Britain.

10. Though Darwin himself regarded natural selection as the main factor in evolutionary change, he did not consider it to be the only one. He attributed some influence to the effects of use and disuse which he considered to be inherited, thus following the teaching of Erasmus Darwin and of Lamarck (cf. art. ENVIRONMENT). Moreover, he was struck by a class of facts which offered great difficulties in the way of explanation in terms of natural selection. For, to be affected by natural selection, variation must have a utility value, whereas this can hardly be supposed to be the case for a large proportion of those highly ornamental characters which are confined to the male sex, and are generally intensified during the breeding season. It is difficult to ascribe any value, in the struggle for existence, to the tail of a peacock or the plumes of a bird of paradise. Indeed, it might be fairly argued that the reverse is the case, and that such characters as these are actually an impediment to their possessors in the struggle. The difficulty was appreciated by Darwin, who eventually accounted for them on the hypothesis that the more brilliant and attractive males would be preferred by the females. Thus the æsthetic sense of the latter would gradually bring about changes in the males through a process of sexual selection (cf. Darwin's *Descent of Man*). This theory has not met with such general acceptance as that of natural selection, and has been definitely rejected by some authorities. Among these is **A. R. Wallace**, who regards the brilliant ornamentation found in certain males simply as an indication of superabundant vitality. It is in virtue of this extra vitality that such males would be more likely than others to mate successfully and leave numerous offspring. By associating this apparently useless beauty with the utilitarian property of vigour, Wallace seeks to explain it upon grounds of natural selection alone.

11. The influence of *The Origin of Species* resulted in the production of vast quantities of literature on evolution during the remainder of the 19th century. In certain branches of biology, notably in those concerned with morphology, embryology, mimicry, geographical distribution, and palæontology, great numbers of new facts were added; and, on the whole, they may be said to

have resulted in a strengthening of Darwin's position without contributing much of novelty to his argument. Perhaps the most interesting additions in this respect have been the essays of **Romanes** and **Gulick** on the importance of isolation, whether geographical or physiological, in the formation of incipient species; and **Pearson's** suggestion of reproductive selection. Pearson pointed out that, if any particular character were definitely associated with greater fertility, that character would tend to establish itself in a population without the help of, and perhaps even in spite of, natural selection.

12. Among the controversial questions which Darwin's work brought prominently forward, none attracted keener interest than that dealing with the transmission of the effects of use and disuse. Darwin always believed that such effects could be transmitted, and in this matter he was supported by Spencer, Haeckel, Cope, and many others. There were some, however, to whom Lamarckianism made no appeal, but who considered that natural selection in itself was sufficient to explain all transformation of species. Of this school, sometimes termed the Neo-Darwinian, **Weismann** has been the chief exponent, and he rendered considerable service to the progress of genetic science in challenging the evidence upon which the alleged transmission of 'acquired characters' rested, and in showing that it generally broke down under critical examination (cf. art. PANGENESIS).

13. Brief mention may here be made of a theory of evolution which regards inheritance as a form of memory; it was independently developed by the physiologist Hering and by **Samuel Butler**.

14. Darwin clearly perceived that a true theory of evolution must be based upon an accurate knowledge of the facts of heredity and variation, nor did he less clearly perceive that such knowledge was in his time practically non-existent. In the 6th edition of *The Origin of Species*, the last published in his lifetime, we find him writing that 'the laws governing inheritance are for the most part unknown'; and, again, that 'our ignorance of the laws of variation is profound.' He himself never ceased to accumulate facts and to make experiments bearing upon these matters, and it was largely due to his intimate acquaintance with the great body of facts so patiently brought together that he owed his remarkable sanity of judgment on doubtful questions where direct proof was for the time impossible. But in this work he had few followers, owing largely to the very brilliancy of his achievement. By suggesting in natural selection an acceptable factor through which the transformation of the species might be brought about, he had placed the idea of evolution on a firm basis. It was no longer an upsetting speculation but a definite theory which none in future could afford to neglect. And it was the doctrine of evolution that primarily seized upon men's minds, rather to the momentary exclusion of natural selection; for here was a promise of a clue to that orderly arrangement of the vegetable and animal kingdom towards which the students of natural history had long been striving. If evolution was a true story, it ought to be possible to build up a classification of animals and plants in such a way as to establish the genetic connexions among them. All living things, however aberrant they might seem, should find a place in the single great family tree which the doctrine of evolution postulated. To the construction of that family tree the labours of almost all naturalists were directed during the first few decades after the publication of Darwin's book, and, whether anatomist, embryologist, or palæontologist, this was the central thought in the mind of each. In the countless speculations that ensued as to the past history of living things, it was tacitly assumed that the necessary variations could have occurred and could have been transmitted; but, as different workers made different assumptions, it was not unnatural that widely discrepant views were forthcoming as to the pedigrees of the various groups. The origin of the vertebrates, for example, was traced by various authors to the polychæte worms, to the nemerteans, to the arthropods, and to the enteropneusts; and, as each author usually supported his views with much ingenuity and some little warmth of feeling, the time and labours of most biologists were fully occupied with these engrossing controversies. As time went on, however, and facts accumulated, the doctrine of evolution became firmly established in spite of differences of opinion as to the exact course which it had taken. As the glamour of pedigree-making wore off, the minds of naturalists gradually turned to other problems.

Though the majority of naturalists at this time were testing the theory of evolution by the facts of embryology and comparative anatomy, there were, nevertheless, some who attempted to test the theory of natural selection. In this case the study was that of Adaptation (*q.v.*). If the various characters of animals have arisen through the operation of natural selection, it is evident that the theory demands that they should be of value to their possessors in the struggle for existence. If, on the other hand, it was found impossible to ascribe to them any utilitarian importance, the case for their formation through the operation of natural selection was obviously weakened. Through the observation of animals in their natural surroundings, supplemented, where necessary, by carefully devised experiments, it was hoped that light would be thrown upon this problem. In many cases these hopes were abundantly fulfilled. Numbers of creatures, more especially insects, which at once arrested attention in the collector's cabinet by their striking and often bizarre appearance, were found in life to harmonize so closely with some feature of their external surroundings as to become practically invisible—an obvious advantage, whether for avoiding over-close attention on the part of enemies or for lulling prospective prey into a fancied sense of security. To the form and colour of the leaf insects, of the twig-like 'looper' caterpillars, of the spiders which resemble bird droppings, and of a host of other creatures, it would be difficult to deny a utilitarian value. Nor need utility be confined to those cases where the colour leads to concealment. Conspicuously coloured insects are often endowed with properties disagreeable to a would-be enemy. The sting of a wasp and the unpleasant taste of the black and yellow cinnabar-moth caterpillar are of the nature of 'warning colours,' and there is experimental evidence to show that enemies who have once had experience of them are careful to avoid them subsequently. Another large group of cases is that included under the head 'mimicry.' Many insects, especially among the Lepidoptera, are conspicuously coloured, and are yet lacking in nauseous or hurtful properties. But it frequently happens that such butterflies resemble more or less closely other more abundant species to which there is reason for assigning some disagreeable property. It was first suggested by Bates in 1862 that the conspicuously coloured innocuous insect acquired an advantage by mimicking the conspicuously coloured noxious insect, since its enemies would be likely to confuse it with the latter, and to let it alone. If, therefore, the persecuted form varies sufficiently in the direction of the nauseous form, it would have a better chance of preservation through the agency of natural selection. Bates'

idea was subsequently extended by Fritz Müller to include the many instances in which several nauseous species tend to resemble one another. Müller suggested that in such cases the toll taken by young birds in educating their palate, by being distributed over several species, would fall more lightly on each separate one, and in this manner all would profit by exhibiting a common warning coloration.

15. With the ideas then current as to the nature of variation, natural selection offered the most plausible explanation of these remarkable cases of resemblance. A new note was struck by Bateson in 1894, when he pointed out that, while the results attained by the study of embryology and of adaptation could be brought into harmony with the doctrine of evolution and the theory of natural selection, they nevertheless offered no explanation of the origin of specific differences. Each assumed a vague capacity for indefinite variation on the part of living things—a plasticity through which natural selection was able to mould them in this direction or in that, according as was best suited to the course of the author's argument. Bateson insisted on the importance of the study of variation, if further progress was to be made with the problem of species. Naturalists had hitherto given themselves unlimited credit in dealing with variation, whereas they ought first to have inquired what variations actually did and what did not occur. By the systematic collection of facts Bateson was able to show that in many cases variation is certainly of a discontinuous nature. Definite variations are constantly found as part of a population living and presumably breeding together, in the absence of any intermediate forms. As examples may be mentioned the normal orange and the paler yellow form of clouded yellow butterfly (*Colias edusa*), the red and blue of the red underwing moth (*Catocala nupta*), the blue and the scarlet varieties of the common pimpernel (*Anagallis*), or the ordinary brown and the violet-green *valesina* form of the silver-washed fritillary (*Aglaia paphia*)—examples which might be almost indefinitely multiplied.

The existence of such cases is difficult to explain on the view of evolution usually current. In the first place, it is not easy to account for the existence of both forms, on the theory of the survival of the fittest. For, if one of the forms is better fitted to its surroundings than the other, why does the other continue to exist? And, if both forms are equally fitted, how comes it that the one has been evolved from the other? For, where the incipient variety has no advantage over the normal form, it is clear that its becoming established cannot be through the agency of natural selection. Again, if, in the course of evolutionary change, the new variety which is to replace the old one arises through the gradual accumulation of small differences, how is it that, when the new and the old are bred together, there does not result either in the first or in subsequent generations a long series of intermediate forms? For this certainly does not occur in, at any rate, the great majority of cases. In spite of the commingling of the germ-plasms, the characters remain sharply differentiated from one another. Discontinuity in variation and in heredity was evidently not to be reconciled with the idea of the formation of species and varieties by the gradual accumulation of minute variations, whether through natural selection or through some other process. The key to the understanding of these phenomena was given by Mendel's work on the heredity of characters in peas (see art. HEREDITY). The result of these experiments, and of many others carried out on the same lines, has been to provide a new conception of the nature of variation and of the process of heredity, thus necessitating some modification in our views as to the manner in which evolutionary change is brought about.

16. Under the stimulus of Mendel's discovery, fresh developments are so rapid that any account of the position to-day with respect to the problems of evolution must necessarily be incomplete. Ideas have gone once more into the melting pot, and as yet it is too soon to forecast clearly what is to be the currency of the near future. Nevertheless, in connexion with evolutionary problems there are certain points which seem to stand out more clearly, and of these one concerns the nature of variation.

Variations are of two kinds—those which are heritable, and those which are not. The latter are for the most part reactions of the organism to its environment, and can play no direct part in the course of evolutionary change, although indirectly they may, by establishing traditions, exert a not inconsiderable influence upon the trend of evolution in the higher animals, and more especially in man. For the moment, however, they may be left out of account. Heritable variations are those which can be represented in the germ-cells. Corresponding to a transmissible character there is a definite something in the minute germ-cells. This something is called a 'factor,' though what these factors are, whether of the nature of ferments or of a different nature, is not at present clear. Generally speaking, however, if, in either one or both of the germ-cells from which an individual is formed, a given factor occurs, then the individual will exhibit the character corresponding to that factor. Moreover, the factor may be handed on from generation to generation, and may pass through crosses of a complicated nature, without apparently undergoing alteration. If present in any individual, the character corresponding to it will, as a rule, appear. If it is not present, the character will not appear. There is reason to suppose that these factors with their attendant manifestation of a given character can pass from body to germ-cells and from germ-cells to body without alteration, much as a chemical atom or radicle can pass unchanged from one compound to another. In other words, the basis of heritable variation is a material one, which is subject, in transmission, to definite ascertained laws. And, unless a variation can be represented by one of these factors, it cannot be transmitted, and cannot therefore play any direct part in evolution. Such, at any rate, is the view to which recent experimental work has led (cf. art. HEREDITY).

We have, therefore, to distinguish between two kinds of variations, viz. those directly due to the environment, and those which are innate, owing their existence to something specific in the germ-cells from which the individual sprang. The former have been termed 'fluctuations,' and the latter 'mutations'; and, though the terms are not free from objection, they may conveniently be made use of. In deciding to which of the two classes any given variation belongs, the only test available is that of its heredity. If it can be experimentally shown to follow the laws of heredity, it is of the nature of a mutation; if, however, it cannot be shown to follow these laws, it must be regarded as a fluctuation. Heredity is a mode of analysis enabling the investigator to decide between these two kinds of variation, and it is at present the only test that can be made use of.

Since the characters of varieties depend on the presence of the appropriate factors in the germ-cells, it is clearly in the germ-cells that the origin of these variations is to be sought. Speaking generally, a new variety comes suddenly into being. This is perhaps to be seen most clearly in the case

of certain plants introduced into culture from distant habitats. Neither of the Chinese primulas (*Primula sinensis* and *P. obconica*) is known to show in its native wild state the profusion of form and colour varieties characteristic of the cultivated forms. The historical evidence points to the different varieties having arisen as 'sports' from the wild forms when placed under cultivation in countries remote from their original habitat. The sweet pea offers another instance of the same story. The original purple form first reached England from Sicily at the end of the 17th century. Not long after its introduction, a red and a white variety are recorded in addition to the purple, and by the middle of the 19th cent. several other shades of purple and red were in existence. But the enormous number of varied forms, both in colour and shape, now to be seen are of recent origin, and in some cases, *e.g.* that of the dwarf 'Cupid,' it is certain that they originated in California, from seed sent out there to be grown on. Such examples as these are typical of the experience of the horticulturist. The new variety springs into being suddenly and for no apparent definite reason. Once it has appeared, it is a matter of a few years only to fix it so that thenceforward it breeds true to type. Nevertheless, the tendency to 'sport' or mutate is evidently increased by a sharp change in the environment, such as is to be obtained by transferring it from one country and climate to another. Precisely why this should be is not at present known, but there is reason to suppose that the environmental change leads to abnormal divisions in the ripening germ-cells, and that these abnormal divisions are the starting-point of the new variety.

In a true breeding thing the processes of cell-division by which the germ-cells ripen are symmetrical, and the germ-cells themselves are all alike, in that the factors contained by each are the same, both in point of number and of quality. Should, however, certain of the cell-divisions be abnormal, they must result in an asymmetrical distribution of the factors to different germ-cells, so that some contain one or more factors in excess of the normal, and others one or more factors less than the normal. If two germ-cells each with a factor less than the normal come together, the resulting individual will be completely lacking in a factor possessed by the original form and will breed perfectly true to that state. And, indeed, the evidence from experimental breeding points to the majority of domestic races of animals and plants having arisen in this way (cf. art. HEREDITY). The new form comes into being through the loss of this or that character from the original wild, and this loss must be supposed to be dependent upon the elimination of the appropriate factor or factors somewhere in the cell-divisions which give rise to the germ-cells. Less commonly the new form must be regarded as possessing one or more factors in addition to those present in the form from which it sprang, and it is possible that this is due to the formation, through a process of asymmetrical division, of certain germ-cells with more factors than the normal, and to their subsequent union to produce an individual of a new type.

When once the new variety has arisen, natural selection decides whether it is to persist with or to replace the form from which it sprang. Since the difference between it and the normal depends upon a definite and clear-cut distinction, and since that distinction is respected throughout the hereditary process, the variety, having once arisen, cannot, as Darwin once thought, be swamped by continual crossing with the normal form. On the contrary, as G. H. Hardy has shown, a population mating at random, and containing a definite proportion of the new form, will, in the absence of natural selection, retain its constitution. Provided that it is equally fertile, the new form will hold its own even though present in very small numbers, and the population will remain in a position of stability. Positions of stability are exceedingly numerous, and exist when the equation $q^2=pr$ is satisfied, where p and r are the numbers of the pure breeding individuals of the type and variety respectively, while $2q$ is the number of hybrid individuals. If, however, the variety be favoured by natural selection, though only in a slight degree, it will gradually supplant the original form until the latter is eliminated. Moreover, the process must be a rapid one. If a population contains ·001 per cent of a new variety, and if that variety has even a 5 per cent selection advantage over the original form, the latter will almost completely disappear in less than 100 generations. Cases of this sort are not unknown to actual experience. Sixty years ago the dark *doubledayaria* form of the common peppered moth (*Amphidasys betularia*) was known only as a rare variety. To-day it has almost entirely ousted the normal form in many parts of England and of the Continent.

17. Considerations of this nature have a bearing upon a class of facts which at first sight are not easy to understand. Speaking generally, a natural species is distinguished by its homogeneity. Colour varieties are numerous in the domestic rabbit; in the wild rabbit they are rare. On a scheme of evolution based upon the mutational nature of variation, it is this homogeneity that offers difficulties in interpretation. But, if the wild form be supposed to possess even a slight selection advantage over the various other colour forms, the rarity of the latter becomes more comprehensible. They may arise; but, with the conditions adverse, though ever so little, they must tend to disappear.

18. There is another aspect of species which is not so generally taken into account. Most species—using the word in the Linnæan sense—are seen, when examined closely, to consist not of a single form, but of a number of slightly different, though perfectly distinct, forms. This was clearly brought out in the middle of the 19th cent. by the French botanist Jordan and others. Jordan showed, for example, that the Linnæan species *Draba verna*, the common whitlow grass, can be analyzed into more than 200 forms, each of which is sharply marked off from any other by habit, shape of leaves, etc., and can be bred true from seed. Such is also the case, though generally to a less extent, with many other species. Moreover, it has been shown by experimental breeding that in some cases these varieties—or 'elementary species,' as they have been termed—differ from one another in the same way that domestic varieties differ. They follow in heredity the Mendelian law of segregation, and the differences between them must be supposed to depend upon the presence or absence in their constitution of specific factors for the characters in which they differ from one another. When, as often happens, many of these elementary species are found together, it must be supposed that no one of them has any selection advantage over the rest. Were the conditions of life to alter so that one form was favoured above the others, even to a slight extent, that form would tend rapidly to supplant all the others; and it is conceivable that this may already have happened in many cases of species which exhibit relatively few varieties.

19. The problem of *what constitutes a species* is one that has vexed the minds of many naturalists and philosophers; but, in spite of all that has been written upon it, the problem is yet unsolved. The classification of species at present in vogue is an

extension of the Linnæan system, and is mainly based upon external features either of structure or of colour. In most cases these differences are accompanied by the phenomenon of sterility between even closely allied species, though this is not necessarily so. There are cases, such as those of the horse × ass cross and the horse × zebra cross, in which well-formed offspring are produced, but in which the latter are themselves sterile. In some groups of animals, again, hybrids between acknowledged species have been shown to be fertile when inbred or when crossed back with one of the parent species. This is the case with various forms of oxen and buffalo, and especially with the duck and pheasant tribes, where crosses between birds classified as belonging to different genera have been proved to produce fertile offspring. For the systematist, however, whether botanist or zoologist, it is the external features that matter, for upon them he has to base his classifications. But instances are becoming more numerous in which it has been shown that two species founded in this way are fertile together. Whether they are to be regarded as one species or two depends upon whether the criterion made use of is the external features or whether it is sterility. On the whole, it may be said that there is a general consensus of opinion in favour of the latter. If, then, the phenomenon of sterility lies at the root of the problem of species, it becomes of the first importance to form a clear conception of the causes to which sterility is due. There is no doubt that in some cases it is due to mechanical causes, as, for example, where there is great disparity in size, or for some other reason. But the sterility that is associated with species is of a different nature. The germ-cells may come into intimate contact, fusion may occur, and development may even proceed for some way; yet the process stops short of the production of offspring. There would appear to be some incompatibility, probably of a chemical nature, preventing two healthy germ-cells from giving rise to a new individual. Everything seems to point to the problem of species resolving itself into a problem in chemistry, but the present state of knowledge does not permit of more definite statement.

Darwin clearly recognized that the phenomena of sterility could not be explained in terms of natural selection. For the gradual acquisition of sterility on the part of certain individuals cannot be conceived of as advantageous either to those individuals themselves or to the rest of the species. The most natural view of the origin of sterility is to regard it as having arisen through some abrupt physiological change in the organism—a change which at bottom must probably be conceived of as chemical. Sterility is of the nature of mutation; and, if we look upon it as the essential characteristic of species, we must also regard mutation as the bridge between one species and another. The mutational change upon which the sterility depends may become associated with other characters either before or after it first arises. Such associations of characters are not infrequently met with as the facts of heredity are coming to be more carefully studied. External features would then serve to distinguish the new species from that out of which it had arisen, but its origin must be sought in the origin of the fundamental sterility which it shows towards the parent species. Beyond the fact that it is a process initiated in the germ-cells, almost nothing is known at present of the conditions under which a mutation arises. Until such knowledge is forthcoming, that most important link in any theory of evolution—the problem of the nature of species—must remain unsolved.

LITERATURE.—The number of works in the English language dealing with the subject of Evolution from the biological point of view is enormous, and only a very few can be mentioned here. In addition to the classic works of Darwin, Huxley, and Spencer, the following will be found of interest: W. Bateson, *Materials for the Study of Variation*, London, 1894; S. Butler, *Evolution, Old and New*, do. 1879; R. Chambers, *Vestiges of the Nat. Hist. of Creation*[4], Edinburgh, 1845; E. D. Cope, *The Primary Factors of Organic Evolution*, London, 1896; A. H. Lovejoy, 'The Argument for Organic Evolution before "The Origin of Species"' (*Popular Science Monthly*, 1909); J. T. Merz, *History of Scientific Thought in the Nineteenth Century*, vol. ii., Edinburgh, 1903; T. H. Morgan, *Evolution and Adaptation*, London, 1903; H. F. Osborn, *From the Greeks to Darwin*, New York, 1895; A. S. Packard, *Lamarck: his Life and Work*, London, 1901; K. Pearson, *The Grammar of Science*[2], London, 1900; E. B. Poulton, *Essays on Evolution, 1889–1907*, Oxford, 1908; G. J. Romanes, *Darwin and after Darwin*, London, 1892–97; R. Semon, *Die Mneme*, etc.[3], Leipzig, 1911; K. Semper, *The Natural Conditions of Existence as they affect Animal Life*, London, 1881; A. C. Seward (editor), *Darwin and Modern Science*, Cambridge, 1909; J. A. Thomson, *The Science of Life*, London, 1899; H. de Vries, *The Mutation Theory*, Eng. tr., London, 1910–11; A. R. Wallace, *Darwinism*, London, 1889; A. Weismann, *The Evolution Theory*, Eng. tr., London, 1904.

R. C. PUNNETT.

EVOLUTION (Ethical).—As its title implies, this article is concerned with ethics as explicable only by the processes of evolution. Until the rise of the science of biology, psychologists, in seeking to explain the constitution of the human mind, assumed it to be different in kind from the animal mind, and postulated certain innate entities and faculties whose analysis would furnish the key to character and to all mental operations. A history of the various theories of the nature and foundation of morals lies outside our province, but, as briefly indicating points of difference between them and the theory summarized in this article, it may be stated that they are mainly resolvable into what are known as the Utilitarian and the Intuitional. The Utilitarian—which Hume was the first among the 18th cent. philosophers to formulate (the doctrine itself is as old as Socrates), and of which Bentham and the Mills are the chief modern exponents—defines virtue as that which is approved, and vice as that which is condemned, the sole standard of morality being utility, whose aim and end is 'the greatest happiness of the greatest number.' Spencer incorporated Utilitarianism into his *Principles of Ethics*, but held that it tends to become wholly altruistic, and modified it by giving play to the egoistic also. The Intuitional, of which Butler is the most famous expositor, and James Martineau the representative modern upholder (see his *Types of Ethical Theory*[3], Oxford, 1866), assumes that there is in each individual a faculty of innate or immediate cognition and perception of what is good or evil, true or false, this intuitive faculty acting without the intervention of reason or the guidance of experience.

A death-blow was dealt to methods of introspective interpretation by the publication of Herbert Spencer's *Principles of Psychology* (London, 1855) and *Principles of Ethics* (do. 1879–1892), and of Darwin's *Descent of Man* (do. 1871), notably in its chapters on 'Comparison of the Mental Powers of Man and the Lower Animals.' Extending the comparative method, which had justified its application in other directions, to the psychical, biology has demonstrated fundamental identity between the mental apparatus of the lowest and highest organisms, and has shown, to quote Baldwin's cogent words, that 'the development of mind in its early stages, and in certain directions of progress, is revealed most adequately in the animals' (*Story of the Mind*, London, 1899, p. 35). It has abolished the ancient and artificial lines of mental demarcation denoted by the terms 'reflex action,' 'instinct,' and 'reason,' and shown that in stimulus from without and in response from

within, involving adaptation to needs, lies the explanation of processes linking man, animal, and plant. Mental progress is the result of the activity of fundamental and permanent instinctive impulses (inherited tendencies of which the nervous apparatus is the vehicle) which supply the driving power whereby all mental activities are sustained. From these impulses the complex faculties of the most highly developed minds have their source. 'They are the mental forces that maintain and shape all the life of individuals and societies, and in them we are confronted with the central mystery of life and mind and will' (W. McDougall, *Introd. to Social Psychology*, London, 1908, p. 44).

In the behaviour of the lower organisms there is manifest the potentially psychical 'faint copy of all we know as consciousness in ourselves' (Francis Darwin, *Presidential Address*, Brit. Assoc. 1908). The glandular leaves of the *Drosera* or sundew, and the bladders of *Utricularia*, or bladderwort, entrap the luckless insect which alights on them, and assimilate it for their nourishment. The amœba withdraws its pseudopods when touched, and engulfs the soft organisms on which it feeds. And thus the instinctive impulses might be tracked along the entire line of psychical evolution, the instinctive yielding to the rational in such degree that, in Ray Lankester's phrase, the animal becomes more 'educable' (*Kingdom of Man*, London, 1907, p. 23),

'for if we neglect the psychical aspect of instinctive processes, it is impossible to understand the part played by instincts in the development of the human mind, and in the determination of the conduct of individuals and societies, and it is the fundamental and all-pervading character of their influence upon the social life of mankind which alone gives the consideration of instincts its great practical importance' (McDougall, *op. cit.* p. 30).

They are the fundamental impulses of nutrition and sex, which, Wundt contends, men and animals alike possess 'to form the inalienable foundation of human society as well as of animal association' (*Ethics*, 'The Facts of the Moral Life,' p. 129).

The classification of instincts lies outside the province of this article, and it suffices to refer only to the gregarious or social instinct as the essential factor in ethical development. Man, as a solitary animal, is unknown to us. 'It is not good that the man should be alone' (Gn 2[18]), and Aristotle follows the writer of the Book of Genesis when he says that 'he who is unable to live in society must be either a beast or a god: he is no part of a State' (*Pol.* i. 2. 14). 'A man not dependent upon a race is as meaningless a phrase as an apple that does not grow upon a tree' (Leslie Stephen, *Science of Ethics*, London, 1882, p. 91); and individual and racial obligation and morality are as interdependent as the personal and the social are inseparable and correlate. The unending struggle for life—'and there is no discharge in that war' (Ec 8[8])—is a dominant factor in bringing about, on the one hand, individual dependence at maturity in the case of solitary animals, as, *e.g.*, the eagle, cat, and lion; and, on the other hand, collective dependence among social animals, as, among invertebrates, the ant and bee, and, among vertebrates, *e.g.* non-raptorial birds, sheep, horse, dog, and man. Turning to the ant, as corresponding in position among insects to the position of man among mammals, there is, says McCook, 'no trait in emmet character more interesting than the entire devotion of every individual, even unto death, to the welfare of the community' (*Ant Communities*, London, 1909, p. 191). The maxim *salus populi suprema est lex* governs alike ants and men.

Speculating on the social habits of our earliest-known ancestor, *Pithecanthropus erectus* (see art. ANTHROPOLOGY in vol. i. p. 563 f.), who, in expert opinion, represents the stage 'immediately antecedent to the human and yet at the same time in advance of the simian,' we have only analogy to guide us concerning primitive human unions. Arguing from the strength of 'the feelings of jealousy all through the animal kingdom, as well as from the analogy of the lower animals, more particularly of the anthropoid apes,' Darwin formulated the theory that aboriginal man 'lived in small communities, each with a single wife or, if powerful, with several, whom he jealously guarded against all other men' (*Descent of Man*, ch. xx. p. 901). Without question, in one form or another, the family is the social unit, impetus to personal and permanent association being given by the longer period of infancy in the human as compared with that period among the higher mammals (it may be remarked that the larvæ of the ant pass through a prolonged babyhood involving incessant parental care), because the condition of helplessness and dependence strengthens the self-sacrificing instinct of the parent, supremely that of the mother, who, in nourishing her offspring, gives all and receives nothing. John Fiske, who in this matter was preceded by Anaximander two thousand years ago, treats this fully in his *Century of Science*, London, 1899, pp. 100–122.) Hence, in the satisfaction of the physical needs of the child there are developed solicitude, love, self-denial, courage, and—greatest of all—the sympathy out of which the strands of family life are woven, strands multiplying in number and strength until they bind together gentes or groups of the same blood-brotherhood, clan, or totem, these aggregating into tribes which are the foundation of the nation, the patriotism engendered by which is the family bond 'writ large.' One and all are the outcome of social heredity. 'Society is the school in which men learn to distinguish between right and wrong' (Westermarck, *MI* i. 9), and in this lies the key to the nature and origin of the judgments which make up the ethical codes of every age and race. These judgments are wholly subjective, being the outcome of emotions whose beginning and impulses are social. For Nature supplies no standard by which to govern conduct; from obedience or disobedience to her laws invariable consequences follow, but these have no element of the ethical; they are neither rewards nor punishments. The earth may be 'filled with violence' (Gn 6[11]), her 'dark places' may be 'full of the habitations of cruelty' (Ps 74[20]), but 'seedtime and harvest, and cold and heat, summer and winter, and day and night shall not cease' (Gn 8[22]).

Moral concepts have their basis in feeling, not in reason; moral emotions, as Westermarck argues, fall into the two classes of disapproval or indignation, and approval, each belonging to a wider class of emotions which he calls 'retributive,' disapproval being manifested in anger and revenge, and approval in 'retributive kindly emotion,' including gratitude (*op. cit.* i. 21). This assumes organization within the group, which in turn demands an altruistic, rather than an egoistic, individual.

'It is the extension of the application of natural selection to groups rather than its direct application to individuals that has given birth to morals. Morality has arisen because it is socially useful; that is the Darwinian account' (Baldwin, *Darwin and the Humanities*, London, 1910, p. 64).

As J. A. Thomson says, 'progress depends on much more than a squabble around the platter' (*Darwinism and Human Life*, London, 1909, p. 92); and Darwinism recognizes that mutual aid has modified the rigour of the struggle in both the animal and the human. Stripped of a certain coat of exaggeration, the numerous stories of help

rendered by one animal to another are not to be dismissed as 'travellers' tales.' For example, in his account of the habits of the viscacha, a S. American rodent, Hudson says that, when one of the burrows is destroyed and the viscachas are buried alive, other viscachas will come from a distance to dig them out (*Naturalist in La Plata*, London, 1892, p. 311).

The degree in which the social and sympathetic impulses have been developed is the measure of the relative place in intelligence reached by man and animal. 'Union is strength,' and the strength is made effective by restraint and subjugation of self-assertion to the interests of the community. An ethical code has warrant and permanence only in the degree in which it secures the healthy interplay of regard for self and for others, and, wherever this is defied in wilfulness or weakness, natural selection, extending its operation from individuals to groups, secures the survival of the fittest, who possess an ethical value in maintaining the health of the social organisms. The weak and wilful, those who detach themselves from the communal life, go under. The solitary animal fights for its own hand; the social animal must be altruistic if the herd is to survive; its tendencies towards self-regardfulness are restrained by communal action whose one end is the common weal. 'That which is not good for the swarm is not good for the bee' (Marcus Aurelius, vi. 54), and the converse is equally true. 'Morality is the sum of the preservative instincts of a society, and presumably of those which imply a desire for the good of the society itself' (Leslie Stephen, *op. cit.* 208). Society being possible only by the compliance of each member with what the community sanctions as necessary to its welfare, or abstinence from what it forbids as inimical thereto, it follows that, in the prohibition or permission of certain acts, we have a fundamental constant, a moral quality in acts which, however much they vary in character, cumulative experience pronounces to be harmful or helpful to the community—in plain language, right or wrong. The means vary, but the end to be achieved is the same, and the achievement is by co-operation. Social acts have a quantitative, not a qualitative value, because man everywhere is psychically, as well as physically, fundamentally the same. His monogenetic origin, with good evidence, is assumed; so is his enormous antiquity, which supplies a sufficient period for the modifications into varieties, and for the different degrees of civilization to which these, be they white, yellow, red, or black, have attained. Man being, at the core, the same everywhere, observation of what, at first sight, seem his vagaries brings home how superficial are the changes which time has wrought since he came to express his philosophy—for such it was in the making—of things. He remains, in the bulk, as his intermittent outbursts of fury and savagery everywhere evidence, a creature of instinctive impulses inherited from his animal ancestry; as an emotional being, his antiquity is dateless; as a reasoning being, he is a late and somewhat rare product. But whatever he has evolved in thought and put into action has justified its existence, because it has responded to some need. It has had, little as might be discerned, some 'soul of goodness' impelling to what, for the time being, seemed to secure the common weal.

Since both religion and ethics are social in origin and, therefore, institutions subject to the law of development, there is no state in man's history on which we can put our finger and say: Here he became a religious and a moral being. It is, therefore, necessary to recognize, as main factors, the impulses to social order which communal life postulates as the primal sources of moral codes. If 'society is the school,' then, as Westermarck adds, 'custom is the headmaster,' and with the ferule of tabu he has kept every race *in statu pupillari*.

'The idea of sin as the individual or national transgression of moral law is extremely modern. In primitive times there was no such individual act and no such moral law. The only misconduct was a breach of custom, the violation of tabu' (Ames, *Psychology of Religious Experience*, London, 1910, p. 131). 'Custom is one of the earliest shapes in which duty presents itself to the consciousness of the savage' (F. B. Jevons, *Introd. to Hist. of Rel.*, London, 1896, p. 190). 'Little by little and, as it were, by stealth, custom establisheth the fact of her authority in us' (Montaigne, *Essays*, i. 136, Dent's Temple ed.). In their derivations both 'ethics' and 'morals' witness to their origin. The one is from ἠθικός, a modification of ἦθος, custom, usage, manners; the other from *mos, moris*, pertaining to manners, therefore to conduct.

Be man savage or civilized, the reluctance to defy or to depart from the usual, the fear of being called 'eccentric,' *i.e.* 'out of the circle,' is in his bones. Conservatism is a permanent force; and it is impossible to overrate either the authority or the value of custom as a factor in conduct. Identity of belief and practice makes for unity and stability, and the force of tradition acts as social cement. To what particular and local causes the great body of customs, infinite in variety, and, not seldom, irrational or inconsequential, is due remains an insoluble problem, because of the remoteness of the social conditions under which they arose. We have only to observe how, among intelligent persons, some chance occurrence will excite or paralyze action, to see, *a fortiori*, how, among unintelligent people, some casual event, followed by fortune or the reverse, will cause this or that line of conduct to be made a rule of life, and obedience thereto to become a rule of conduct, a part of the customary law, of the community. Imitation—'the prime condition of all collective social life' (McDougall, p. 326)—whether in creeds, codes, or clothes, has been a powerful element in the conservation of the decrees of custom. To both savage and civilized are applicable the lines which Henry Sidgwick composed in his sleep:

'We think so because all other people think so:
Or because—or because—after all, we do think so:
Or because we were told so and think we must think so:
Or because we once thought so and think we still think so:
Or because, having thought so, we think we still think so.'

Closely linked with imitation is the influence of suggestion in swaying judgment and conduct, sometimes for good, but, perhaps, as often for evil. The crowd, unquestioning, will believe what each member of it, detached from his fellow, would reject as a fable. Hence, frequently, the worthlessness of collective evidence and judgment; hence, too, often, the valuelessness of concurrent testimony even from men of scientific training as to the validity, say, of so-called spiritual phenomena when, expecting to witness the same, they meet in séances. Hence the aberrations when some dominant idea takes possession of the undisciplined, with mischievous results akin to the epidemic delusions of the Middle Ages, or the corybantic displays of hysterical revivalists, or the terrorism of the Apaches of Paris and the hooligans of London and other crowded centres.

Travelling along the line of least resistance, the general attitude of civilized communities, in which the primitive is persistent, towards innovations explains the conservatism of the savage. So heavy was the weight of the dead hand of custom that the nameless reformer who ventured to resist it must have been shaped in no common mould. For to challenge was to insert the thin edge of the wedge of disruption; it was to assume that he who defied was wiser than his fathers, or, committing rank blasphemy, wiser than the deified ancestors, the traditional framers of the tribal

code. What long pre-rational ages of stereotyped acquiescence prevailed is witnessed by the fact of the small part that reason still plays in conduct; the emotions as, primarily, the outcome of the instinctive impulses which are the bases of mental activities show themselves dominant and persistent. 'The progressive state is only a rare and an occasional exception'; and, where the wisest are not supreme, there stagnation rules (see Bagehot's *Physics and Politics*[8], London, 1887, pp. 41, 211). But an ounce of example is worth a ton of exposition.

Herodotus (iii. 38) narrates how 'Darius asked certain Hellenes for what price they would eat their fathers when they died, and they answered that for no price would they do so. After this he summoned those Indians who are called Callatians, who eat their parents, and asked them, in presence of the Hellenes, for what payment they would burn the bodies of their fathers when they died; when they cried aloud and bade him keep silence from such words. Thus then these things were established by usage, and I think Pindar spoke rightly in his verse when he said, "Custom is the King of all."'

Fifteen centuries later, a traveller in High Albania tells us: 'For all their habits, laws, and customs, the people, as a rule, have but one explanation: "It is the custom of Lek," the law that is said to have been laid down by the chieftain Lek Dukaghin. Lek is fabled to have legislated minutely on all subjects. Of himself little is known. He has left no mark on European history—is a purely local celebrity—but that "Lek said so" obtains more than the Ten Commandments. The teachings of Islâm and Christianity, the Sheriat and Church law, all have to yield to the Canon of Lek' (M. E. Durham, *High Albania*, London, 1909, p. 25). There is an Albanian proverb which says, 'It is better that a village should fall than a custom' (*ib.* p. 259); and the priests say that, in spite of all their efforts, their parishioners all regard the shooting of a man as nothing compared with the crime of breaking a fast or eating an egg on a Saturday (*ib.* 104). Compare with this the story which Erasmus told four hundred years ago: 'I have just heard that two poor creatures are to be murdered in France because they have eaten meat in Lent' (Froude's *Erasmus*, 1894, p. 360); and a passage from Smollett's *Travels through France and Italy*, 1766 (Letter xxv.): 'A murderer, adulterer, or sodomite will obtain easy absolution from the Church, and even find favour with society; but a man who eats a pigeon on a Saturday without express licence is avoided and abhorred as a monster of reprobation.' How all the ages meet in their assumption of moral qualities in acts which have no bearing on character—the confusion of *malum in se* with *malum prohibitum*—is further seen in comparing a passage which Aulus Gellius (*Noctes*, x. 23) quotes from Cato, that it is for the husband to condemn and punish his wife if she has been guilty of any shameful act, such as drinking wine or committing adultery, with W. G. Palgrave's account of the Wahhaby moral code, in which the great sins are paying Divine honour to a creature and smoking tobacco, while murder, adultery, and false witness are 'merely little sins' (*Journey through Central and Eastern Arabia*, London and Cambridge, 1865, ii. 370).

The literature of the subject of the tabu is enormous, and here it must suffice briefly to refer to that wide-spread institution as a continuous and effective factor, even among the civilized, often in unsuspected form, in human conduct. In *Psyche's Task* (London, 1909), Frazer has shown, in a series of cogent examples, how 'by virtue of his absurdities' man secured stability for the fundamental bases of society, government, private property, marriage, and regard for human life. The belief that dire results will follow breach of rules as to things forbidden is the most powerful deterrent that superstition has begotten. Curses and charms, and all other apparatus of the sorcerer, are more effective than the prosaic bogey, 'Trespassers will be prosecuted,' and the would-be evil-doer is kept in check by the fear that some horrible disease will follow the stealing of his neighbour's yams; or that he may go hag-ridden for the rest of his life, if he stealthily removes his neighbour's boundary-mark. The belief that irregular sexual relations will disastrously affect the fertility of the crops is a check on incontinence, and therefore an encouragement to the formation of orderly connexions. The belief that the ghost of a slaughtered man will wreak vengeance on the tribe to which the murderer belongs creates a feeling that shapes codes embodying ideas of the sanctity of human life. Orestes was driven from one land to another, not so much because he had killed his mother, as because of the peril to others brought by him who was pursued by the Erinyes.

In their ultimate analysis the codes of every age and people are found to deal with human relations. 'Pure religion and undefiled before God and the Father is this, to visit the fatherless and widows in their affliction, and to keep himself unspotted from the world' (Ja 1[27]). Murder, theft, lying, slander, unchastity, these are offences of man against his fellows. Of the 'Ten Words,' familiarly known as the 'Ten Commandments,' seven are concerned with social duties. In a document centuries older than the Hebrew code, the *Instruction of Ptah Hotep*, the author 'devotes his work entirely to the principles of charity and duty to one's neighbour' (tr. B. G. Gunn, 1908, p. 33); and the essence of the teaching of Confucius, 'the purest of any in the world,' is—'Act socially' (*Confucian Analects* (tr. Giles, 1907, p. 27).

Sociality is looked upon by the Kaffirs as the essential virtue. The children play in great bands. To loaf about alone would be regarded as a highly penal offence, and every child regards eating in secret as a base act. 'Occasionally a child seems devoid of social tendencies, and in this case a witch-doctor is sent for to cure the child' (Dudley Kidd, *Savage Children*, London, 1906, pp. 72, 119). Among the Euahlayi tribe of Australia the mother's crooning song is, 'Kind be, do not steal; do not touch what to another belongs; leave all such alone; kind be' (K. Langloh Parker, *The Euahlayi Tribe*, London, 1905, p. 54). Papuan youths are thus admonished: 'You no steal, you no borrow without leave. If you take dugong harpoon and break it, how you pay man? You got no dugong harpoon. Give food to father and mother. Spose old man ask you for food or water, spose you not got much, you give half. Never mind if you and your wife go without [cf. Mt 10[42]]. When your brothers (i.e. clan brothers) are fighting, you stand side by side. No stay behind to steal women' (A. C. Haddon, in *Agnostic Annual*, 1907, p. 62).

In early social stages, acts of mutual help are restricted to the community. Among existing savage peoples, as the Comanches, Kalmuks, and others, the man who steals from strangers wins admission to higher rank. Speaking of the ancient Germans, Cæsar says that 'robberies beyond the bounds of each community have no infamy, but are commended as a means of exercising youth and lessening sloth' (*de Bell. Gall.* vi. 23). 'Ought' was originally the preterite of 'to owe,' but moral obligations long remained intra-tribal, and the life-struggle which at the outset compelled this, among even the highest civilized communities, has yielded but partially and tardily to a wider sympathy and benevolence which are the fruits of a closer intercourse between, and therefore enlarged knowledge of, peoples—partially and tardily, because racial differences appear to be too deeply engrained to warrant hope that white, yellow, and black will ever be linked in a world-embracing sympathy. (For numerous examples of the distinction between intra-tribal and extra-tribal misdeeds, see Westermarck, ii. 20–24.)

There never has been, probably there never will be, a uniform, unalterable standard of right and wrong, applicable through all times for all men.

'The moral world is as little exempt as the physical world from the law of ceaseless change, of perpetual flux. . . . We can as little arrest the process of moral evolution as we can stay the sweep of the tides or the courses of the stars' (*GB*[3], London, 1911, 'Taboo and the Perils of the Soul,' Pref. p. vi f.).

Since the migration of primitive man from a common cradleland, the different environment has been operative in dividing the race into permanent varieties. Sociological differences have resulted, and, since ethics is a branch of sociology, there inevitably arise the contradictions, varieties, and, often, repellent elements whose presence would otherwise perplex the student of the astoundingly complex codes and customs of the world.

'The study of moral advancement is no tracing out of a single straight line, but rather the following of a very winding curve' (L. T. Hobhouse, *Morals in Evolution*, London, 1906, i. 37).

In ethics, as in biology, there is not continuous progress, but adaptation, which sometimes involves retrogression, and adjustment on a lower level.

The sea-squirts, lancelets, and rotifers have their correspondences in degenerate races, in the decline and fall of civilizations whose types of manliness we cannot hope to excel, whose codes embody precepts which are sufficing rules of life, and whose art we may emulate, but can never hope to surpass. The moral standard is the measure of civilization in the highest, and that not a commercial, sense which a community has reached, and that standard advances *pari passu* with it. Hence, even in the course of a few years, changes so momentous that what is approved or tacitly connived at in one generation is condemned and punished in a later. For the code does not create the ethic; it can only embody what, after ages of sore testing, man has felt to be best for man—a result attainable only when acts have their foundation in sympathy disciplined by judgment. We need not travel outside the history of our own criminal code for examples of the relativity of morals, and of their advance along the lines of social evolution.

At the beginning of the 19th cent. there were more than two hundred offences on the statute-book for which death was the penalty. Among these were the cutting-down of young trees, shooting rabbits, and stealing five shillings worth of goods from a shop. Men and women were hanged for sheep stealing, for forgery, and for uttering spurious coin; but they might buy and sell slaves and flog them to death without breaking the law (for further examples, see Hobhouse, *op. cit.* i. 112; G. W. E. Russell, *Collections and Recollections*, London, 1898, pp. 85–87; and Lecky, *Hist. of England in the 18th Century*, do. 1892, vii. 316).

In the later part of the 16th cent. Sir John Hawkins, captain of a slave ship named the *Jesus* (!), gave some of his profits to the founding of Chatham Hospital. He would have made a larger gift, but he explained that 'so many of these wretched creatures, starved or suffocated, had died on the voyage, and they that were left grew into such weakness that it was only by God's grace we were enabled to barter them.' It was not till 1807 that Parliament abolished trading in slaves, and other twenty-six years passed before slavery was abolished in British colonies, the slave-owners receiving twenty million pounds as compensation. The collective conscience had passively acquiesced in what had gone on unquestioned for centuries; only as the moral tone became loftier were such shameful things redressed. The recency of codes that shock us bids us 'nurse no extravagant hope' of an ethical millennium. A survey which embraces the habitable globe shows that 'there are few that be saved.'

Civilization, as Lecky says (*Hist. of European Morals*[9], London, 1890, i. 150), has, 'on the whole, been more successful in repressing crime than repressing vice,' and the primal passions need small incitement to baneful activity. The race is to the swift, the battle to the strong; vast areas of the world remain the arenas of ceaseless turmoil and rapine by tribes whose sole business is fighting—tribes of the marauding type of the Highlanders of two centuries ago, only less barbaric than those of Persian Baluchistan described by a *Times* correspondent (12th July 1911):

'To-day the total population does not probably exceed 200,000, and not 20 per cent are engaged in agriculture. On the other hand, the majority of adult men carry arms of some sort, and find in rapine and violence more congenial means of livelihood. They are mostly of Arab extraction, with a strong admixture of negro blood, but their language is a dialect compounded of Baluch and Persian as well as Arabic; and the ruling class, if any class can be so described in a country where there is no law but that of the strongest, claims to be of Baluch origin, though the real Baluch of British Baluchistan looks upon his mongrel kinsman of Mekran with some contempt. Every district and almost every village has its chief, of varying importance according to the number of *tufenkchis*, or retainers armed with rifles, whom he can muster. These chiefs alone live in mud forts enclosing more or less spacious dwelling-houses of sun-dried mud. The rest abide in squalid huts built up of the ribs of the date-palm branch, and covered with date-palm matting. There are no recognized laws, and the only protection which life and property enjoy is derived from the blood-feud system, which has prevailed from time immemorial. Blood-feuds involve the whole tribe or family in the individual quarrel of any member, and are thus apt to make those responsible for originating them light-heartedly very unpopular with their own people. To this extent they act as a deterrent upon gratuitous violence. Hence, probably, the relatively small amount of bloodshed that accompanies the raids upon which these people are perpetually engaged. The life of every chief is a continuous game of petty intrigue and treachery and predatory warfare, which he plays against his fellows, and of which the stakes, by whomsoever won, are invariably paid by the lesser fry.'

But, while such social chaos, of which the foregoing is a type, prevails, checking optimistic theories of progress, be it remembered that even in the blood-feud—the *lex talionis*—lie germs of social justice.

The transfer of ethics from a social to a supernatural basis was effected in the dim past, when the administration of law became vested in the chief or medicine-man, round whom sanctity gathered, and who was held to derive his authority from the deified ancestors of the tribe. What he did was believed to be done by their aid and in their name; the laws were their laws; and disobedience, as sin against them, was punished here, and in common belief, hereafter. Thus religion

'fixed the yoke of custom thoroughly on mankind.' It 'put upon a fixed law a sanction so fearful that no one could dream of not conforming to it' (Bagehot, *op. cit.* p. 57). 'There is no common wealth where there is not some mixture either of ceremonious vanity or of false opinion, which as a restraint serveth to keepe the people in awe and dutie. It is therefore, that most of them have such fabulous grounds and trifling beginnings, and enriched with supernaturall mistyries' (Montaigne, *Essays*, 'Of Glorie,' Tudor Translations ed., London, 1892–93, ii. 361).

But every institution has served some useful purpose; it has corresponded with some necessity, else it could never have come into being, or survived; and in rude and turbulent times, when men's passions and emotions needed restraint to prevent excesses, the belief that wrongs committed against their fellows were sins against all-powerful gods who were 'angry with the wicked every day' (Ps 7[11] AV) arrested the course of many an evil-doer. And to this day, wherever the moral tone is lower, and savage instincts are dominant, that belief is a necessary and, often, effective check. In the slow evolution of man from 'the ape and tiger' stage, it seems probable that many ages will elapse before the consciousness of what is due to others, so that no one life shall be the worse through the acts of another, will be the ruling motive of conduct. 'Evil is wrought' not only 'by want of thought, as well as want of heart,' but by ignorance, the mother of so much wrong, and by an accompanying lack of imagination. It is the absence of this which prevents a man from putting himself in the place of those whose actions he may, without warrant, condemn, and deprives him of that sympathy which is the social cement. On the other hand, it is by this faculty of imagination that man has devised instruments of cruelty and torture, and methods of crime which have made him lower than the brute.

Viewed from the standpoint of evolution, the assumed dependence of morals on theology (which, as a body of dogma, is a different thing from religion) is injurious thereto, because the authority of an ethical code is weakened in the degree in which it is bound up with creeds whose truth is questioned, and which, as knowledge advances, become obsolete. Examples of this mischievous connexion are supplied by witchcraft, to give up belief in which, John Wesley contended, was to surrender belief in an infallible Bible, wherein is commanded, 'Thou shalt not suffer a witch to live' (Ex 22[18], cf. Dt 18[10]); and by the justification of the custom of determining guilt or innocence by ordeal given in Nu 5[11ff.]. Moreover, the codes of both savage and civilized peoples show that the quality of actions which are held to be sins against supernatural beings is determined by the conceptions entertained regarding those beings. On the lower plane of these sinful acts are omissions of ritual, withholding of offerings, and other offences which have no relation to conduct.

'The gods of the Gold Coast are jealous gods, . . . jealous of the adulation and offerings paid to them; and there is nothing they resent so much as any slight, whether intentional or accidental, which may be offered them' (Ellis, *Tshi-speaking Peoples of the Gold Coast*, London, 1887, p. 11; cf. Ex 20[5]). In Australian legend, the god Atnatu expelled man from heaven to

earth for neglect of his ceremonies. He made no moral law, but his ritual law as to circumcision and whirling the bull-roarer must be obeyed. In the *Iliad* (xxiv. 66), Zeus says to Hera that Hector was dearest to him of all mortals, 'because he nowise failed in the gifts I loved. Never did my altar lack seemly feasts, drink-offerings, and streams of sacrifice; even the honour that falleth to our due.' Speaking of the modern Greek, J. C. Lawson says: 'In the mental attitude of the worshipper, there is little change since first were written the words, δῶρα θεοὺς πείθει, "Gifts win the gods"' (*Mod. Gr. Folkl. and Anc. Gr. Rel.*, Cambridge, 1910, p. 57). 'With the gods, clearly, nothing goes for nothing. Each blessing has its price. Health is to be had, say, for a calf; wealth, for a couple of yoke of oxen; a kingdom, for a hecatomb' (Lucian, *de Sacr.* 2). Among offences against a supernatural being is that of mentioning his name, or, *per contra*, as in the list of Divine names called *indigitamenta*, it was of immense importance to know the correct name (Warde Fowler, *Religious Experience of the Roman People*, London, 1911, p. 119). How the nature of the offering acceptable to the gods is ruled by the conception of the offerer is seen in the advance from sacrifices of 'thousands of rams' to the social acts of doing justly and loving mercy (Mic 6[7f.]). For the highest moral law is 'expressed in the form, "Be this," not in the form, "Do this"' (Leslie Stephen, *op. cit.* 148).

The comparative method, to which reference was made at the outset of this article, has justified its application to inquiry into the evolution of the moral sense. It has imported order into a realm of speculation and inquiry, where hitherto confusion and chaos ruled. It has made clear the fundamental uniformity of human nature, showing by what like motives the most unlike acts are prompted. It has thrown light on the darkling mysteries which invested what seemed the inscrutable problem of the origin of evil and of the unending and awful tale of human wrong, bloodshed, and tyranny. It explains what part, for the time being, institutions and customs which to the higher moral consciousness are repellent and arresting forces, such as slavery, infanticide, the exposure of infants, blood-feuds, polygamy, polyandry, duelling, torture, the killing of the aged and sick, and cannibalism, have played in social evolution, as subserving what the community believed essential to the welfare of the whole. It has proved that our moral codes, like our theological creeds, are conditioned by the accident of birth, of heredity, and of surroundings. To the fundamental doctrines of Evolution—unity and continuity—it has brought its 'cloud of witnesses.' A survey of the codes and customs of all ages and peoples shows that they are man-made social products; that they are before all creeds and dogmas; that they derive their authority solely from their proved utility; and that they have their origin as the outcome of social needs, increasing their force and securing their permanence because of their adjustment to altered ideas and requirements. Conscience has followed the laws of mental and moral development, and the theory of a definite, rigid, and absolute ethic is a fiction. Montaigne puts the matter with his usual shrewdness: 'The lawes of conscience, which we say to proceed from nature, rise and proceed of custome' (*Essays*, i. 112). It follows that, except in the sense that sin is rebellion against, and attempt to thwart, the universal order, the term is inapplicable. Sin, in essence, is therefore the anti-social.

LITERATURE.—In his *Origin and Development of the Moral Ideas*, London, 1906–8, ii. 747–824, E. Westermarck gives the full titles and dates of about 3000 books bearing on the subject of this article. Here, space permits reference only to the more important which, in addition to those already cited above, should be consulted: S. Alexander, *Moral Order and Progress*, London, 1896; J. J. Atkinson, *Primal Law* (in A. Lang, *Social Origins*, London, 1903); J. M. Baldwin, *Social and Ethical Interpretations in Mental Development*, New York, 1897; B. Bosanquet, *Psychol. of the Moral Self*, London, 1897; H. J. Bridges and others, *The Ethical Movement*, London, 1911; W. K. Clifford, *Lectures and Essays*, London, 1886; G. L. Dickinson, *The Meaning of Good*, London, 1907; H. Ellis, *The Criminal*, London, 1895; G. Gore, *Scientific Basis of Morality*, London, 1899; T. H. Huxley, *Evolution and Ethics*, London, 1894; D. Hume, *Inquiry concerning the Principles of Morals*, London, 1751 (many later reprints); G. Le Bon, *The Crowd*, London, 1903; D. G. Ritchie, *Philosophical Studies*, London, 1905; R. A. P. Rogers, *Short Hist. of Ethics*, London, 1911; G. J. Romanes, *Mental Evolution in Animals*, London, 1883; W. M. Salter, *Ethical Religion*, London, 1905; H. Sidgwick, *The Methods of Ethics*, London, 1901; Boris Sidis, *The Psychology of Suggestion*, London, 1903; Adam Smith, *Theory of Moral Sentiments*, London, 1759 (reprint, 1887); H. Spencer, *Principles of Ethics*, London, 1879–1892; J. A. Thomson, *The Bible of Nature*, Edinburgh, 1908; W. Trotter, art. 'The Herd Instinct,' in *The Sociological Review*, July 1908; E. B. Tylor, *Primitive Culture*[4], London, 1903; M. F. Washburn, *The Animal Mind*, New York, 1908; C. M. Williams, *Ethics founded on Evolution*, London, 1893; W. Wundt, *Ethics* (Eng. tr., London, 1897–1901).

EDWARD CLODD.

EXCOMMUNICATION.—See CURSING AND BLESSING, DISCIPLINE.

EXECUTION OF ANIMALS.—Belief in kinship between man and animals is universal amongst the lower savages. Their daily, close association with the untamed creatures of hill and jungle impresses upon them similitudes pointing to community of origin and character. Animals move and breathe; they 'certainly seem even to talk' (Im Thurn, *Among the Indians of Guiana*, 1883, p. 351); they are moved by the same passions, securing food by wit and cunning, and mates by strength and violence; they manifest the phenomena from which man derives his conception of spirit; they cast shadows and reflexions; they appear in man's dreams, which to him are not merely 'true while they last,' but actual happenings affecting his waking life. Did space permit, a large number of examples of this primitive psychology could be cited, but the few that follow have the greater weight in being drawn from races above the lowest plane.

One of the septs or sub-tribes of the Kachāris of Assam show traces of their belief in animal descent by going into mourning, fasting, and performing certain funeral rites when a tiger dies (Endle, *Kachāris*, 1911, p. 23). To the Indians of Guiana 'all objects, animate and inanimate, seem exactly of the same nature except that they differ in the accident of bodily form,' and 'have spirits which differ not at all in kind from those of men' (Im Thurn, 350). To the Blackfeet Indians the question 'whether animals have mind and the reasoning faculty admits of no doubt, . . . for they believe that all animals receive their endowment of power from the Sun, differing in degree, but the same in kind as that received by man and all things animate and inanimate' (McClintock, *Old North Trail*, 1910, p. 167).

Hence logically follows belief in the responsibility of the animal for its actions, and punishment for its misdeeds. The Bogos kill a bull or cow which has caused the death of a man; the Maoris killed the pig that strayed into one of their sacred enclosures, as 'in Mohammedan E. Africa, a dog was publicly scourged for having entered a mosque' (Westermarck, *MI* i. 253). Among the Malaccans the buffalo that kills a man is put to death, as under the Hebrew code: 'If an ox gore a man or a woman, that they die, the ox shall be surely stoned, and his flesh shall not be eaten' (Ex 21[28]; cf. Gn 9[5] 'And surely your blood of your lives will I require; at the hand of every beast will I require it, and at the hand of man'). The animal, being regarded as a moral agent, is thus made subject to penal laws whose basis rests on the same motive as that determining all laws of the kind, namely, the resentment of society to acts inimical to its welfare and protection. In his *Theory of Moral Sentiments* (1887 ed.), Adam Smith remarks that

'the dog that bites, the ox that gores, are both of them punished. If they have been the cause of the death of any person, neither the public nor the relations of the slain can be satisfied unless they are put to death in their turn; nor is this merely for the security of the living, but, in some measure, to revenge the injury of the dead' (p. 137).

This explanation, which Westermarck accepts in *MI* (ch. x.), largely accounts for the persistence of the practice of dealing with animals as criminals throughout mediæval times, and even down to the present century.[1] Sufficient warrant for the punishment of animals as criminals would be found in the Hebrew enactment quoted

[1] The *Echo de Paris* of 4th May 1906 reported the condemnation of a dog to death for complicity in a murder committed at Délémont, in Switzerland.

above, as forming an integral part of writings long held to be plenarily inspired; and further support would be derived from the long prevalent belief that animals as well as men could be possessed by demons. 'The period immediately embracing the Christian era saw a vast development of the idea of dæmons or genii' (*EBi*, art. 'Demons,' i. 1070), chiefly due to the influence of Chaldæan on Jewish mythology, and hence the impregnation of the Gospel narratives with that belief, as, *e.g.*, in the reference to Beelzebul, and in the story of the swine of Gerasa (Mk 3^{22} $5^{1ff.}$). Precedent for cursing animal and plant occurs in the sentence pronounced on the serpent in Gn 3^{14}, and on the barren fig-tree, although itself blameless, since, as Mark (11^{13}) adds, 'the time of figs was not yet.'[1] Nor must the influence of the belief in witchcraft and in the metamorphosis of men into animals, as in the superstitions of vampires and werwolves, be overlooked. In these may be found cumulative causes accounting for the permanence of primitive codes which add to the manifold proofs of the survival of primitive ideas, and of the preservation of traces of the earlier stages in man's mental as in his physical structure.

In a chronological list of prosecutions, with resulting excommunications (or, perhaps, more correctly, anathematizations) and execution of animals, given in E. P. Evans, *Criminal Prosecution and Capital Punishment of Animals* (London, 1906), to which work this article is expressly indebted, 194 instances, ranging from A.D. 824 through eleven centuries onwards, are cited; and these may represent only a small proportion of cases of which no record exists. Of the total number thus reported, some in minute detail, 46 are prosecutions against insects; 37 against pigs; 24 each against horses and mares, and against goats, dogs, and she-asses; 16 against cows and bulls; and the remainder against rats and other vermin, snails, etc.

Birds are absent from the list, but there are amusing examples in the commendation of a pastor, Daniel Greysser, of Dresden, by Augustus, Duke and Elector (1559), for having 'put under ban certain sparrows for their extremely vexatious chatterings and scandalous unchastity during the sermon'; and in the anathematizing of swallows by Egbert, Bishop of Trèves, for their sacrilegious defilement of his head and vestments with their droppings when he was officiating at the altar (Evans, pp. 28, 128). The larger percentage of trials of insects in Evans' list may be explained, not so much by the belief in Beelzebul, as by the special ravages wrought by them on crops and fruits. Wholesale destruction of these ubiquitous pests was impossible, and the only weapon to be wielded against them, as in the case of locusts which devastated Botzen in 1338, was excommunication by 'inch of candle,' and anathematization 'in the name of the Blessed Trinity, Father, Son, and Holy Ghost.'

Belief in the magical power of the word and of the curse links together the lower and the higher cultures. Of this the annals of mediæval criminology teem with proof. Even in the Old Testament the prophet Malachi (3^8) warns the people suffering from the plague of devouring things that even conjuration and commination would be unavailing if the tithes to the priests were in arrear. Sometimes the laity were admonished to see in their troubles the anger of the Almighty for this and more serious sins.

The method of procedure in the prosecutions was as elaborate as in any modern criminal trial. The machinery of magic was made effective by the process of law and its attending quirks and quiddities. Counsel were engaged for the prosecution and the defence.

In a 16th cent. trial of weevils, which, twice within a generation, had ravaged the vineyards of St. Julien, their advocate, in reply to the prosecuting counsel's demands for sentence of excommunication, pleaded that the weevils could not thus be banned, because they are outside the pale of the Church; that the Creator would not have commanded them to 'be fruitful and multiply' without giving them the means of subsistence; and that the complainants by their sins had brought on themselves this wrath of God. Rejoinders follow, till the ecclesiastical judge pronounces the weevils guilty, and admonishes them to depart from the vineyard and fields within six days, under penalty of excommunication. As to how the transfer, as in similar cases of condemnation, was effected, the records are silent. Forensic ingenuity comes out in a 15th cent. trial of insects, known as *inger*, which had devoured crops in the district of Lausanne, when the culprits have partial justification as 'irrational and imperfect creatures,' so called because there were none of that species in Noah's Ark. It has further example in a trial of Spanish flies, which were acquitted with a caution because of their small size 'and the fact that they had not yet reached their majority.' In the trial of some caterpillars, whose capture was difficult, a formal citation to appear in court was posted on trees in the infested district—a method which has modern correspondence in the affixing of a writ upon the mast of a ship against whose owner damages are claimed.

As shown above, pigs are prominent as homicides, and as offenders in other ways, in the archives of animal trials. The freedom which permitted them, as scavengers, to run wild in the streets of mediæval towns, as, in fact, they do to this day in many Italian towns, partly accounts for facilities in devouring infants and children. In 1394, one was hanged at Mortaigne for having eaten a consecrated wafer; and in a case of infanticide the pig was accused of eating the flesh, 'although it was Friday'—perhaps tempted thereto by the demon that possessed it, since, as remarked above, the belief that pigs were especially instruments of the devil was strengthened by the narrative of the Gerasene swine. A few cases may be quoted from the records. In 1386, the tribunal of Falaise condemned a sow to be maimed in the head and forelegs (the *lex talionis* is enforced here) and then hanged for having torn the face and arms of a child and caused its death. It was dressed in man's clothes, and executed in the public square. In 1457, a sow was sentenced to be hanged for the murder of the five-year-old son of one Jehan Martin of Savigny, and her six sucklings were charged as accomplices. As their owner refused to go bail for their future good conduct, they were forfeited to the Seigneurie. The reverse occurred when, on the sentencing of a she-ass to death (1750), the inhabitants of the commune bore written witness to her virtuous career, and her pardon and acquittal followed.

Concerning trials and condemnation of other quadrupeds, we find the execution on the common gallows of an ox which killed a villager of Moisy in 1314; of a red bull which killed 'with furiosity' a Beauvais lad of fourteen (this was on the 16th May 1499); of the burning of a mare for homicide by decree of the parliament of Aix (1697); while a humorous variation of the grim records is supplied in the burning of a cock at Basel in 1474 'for the heinous and unnatural crime of laying an egg.' Belief in the impossible being the creed of the superstitious, the fable of the *œuf coquâtre* had such wide credence that a French savant, M. Lapeyronie, read a paper before the Academy of Science in 1710 to disprove it.

LITERATURE.—Nearly all the works treating of the subject of this article are in French or German, and are catalogued by Evans (*op. cit.* pp. 361–371). The most exhaustive is Gaspard Bailly, *Traité des monitoires, avec un plaidoyer contre les insectes*, 1668; see also E. Westermarck, *Origin and Development of the Moral Ideas*, London, 1906–08, i. 249–282; Countess E. Martinengo-Cesaresco, *The Place of Animals in Human Thought*, London, 1909, pp. 347–351; G. G. Coulton, *A Mediæval Garner*, London, 1910, p. 678 f.; R. Chambers, *Book of Days*, London, 1865, i. 127 ff.; and Pausanias, *Description of Greece*, tr., with a commentary, by J. G. Frazer, London, 1898, ii. 371. For primitive peoples, see A. H. Post, *Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894–95, ii. 231, and the references given there.

EDWARD CLODD.

[1] But upon any theory the interpretation of this incident is difficult (see the Comm.).

EXISTENCE.—See BEING.

EXORCISM. — See DEMONS AND SPIRITS, MAGIC.

EXPEDIENCY.—That character of an action which, in its positive aspect, combines practicability with effectiveness for the end sought, and, in its negative aspect, implies indifference to other characters, especially moral characters. Generalized, it denotes regard for the expedient as determining conduct or as a principle of action.

Expediency bears a threefold relationship to moral values: it may be indifferent to them; it may oppose them; it may be identical with them. The first relationship obtains only where there is a range of conduct recognized as neither moral nor immoral, as held by the Stoics and by Kant (cf. ADIAPHORISM). In such ranges expediency is the only rational governing principle; it becomes, in fact, identical with reason or sound sense. Where the moral value of a given range of conduct is unknown there is opened a similar opportunity for

resort to expediency. Indeed, the principle of probabilism is, in effect, nothing more than this. Even tutiorism relies upon a kind of expediency, though in this case, since the moral and not the appetitive or personal end is sought, it is a moral expediency—that is to say, the judgment as to moral safety amounts to a judgment that the conduct chosen is the most practicable and effective for the moral standard in the long run.

The antagonistic relation of expediency to morality can occur only in systems which discriminate sharply the ethical obligation from the ethical good—that is, where the 'right' and the 'good' are not necessarily identical. For expediency in conduct only means adopting the most direct means for the end in view. Presumably that end is always (subjectively at least) the good. But, if no other obligation than the realization of this good be recognized, then the expedient means must necessarily be the right means. Intuitional ethics, however, recognizing a moral imperative independent of invariable benefit, and a moral value in action apart from the end of the action, naturally distinguishes actions governed by the sense of right from those dictated by mere practicability. The latter may (though they need not) conflict with the former; and the fact that there are many ends of human desire the attainment of which is not, *per se*, immoral, yet which lend themselves readily to attainment through actions that violate the canons of righteousness, has given a derogatory connotation to the term 'expediency' as designating these means.

It is doubtless the failure on the part of the intuitionists to recognize the twofold regulation of conduct involved in their double reference to a moral sense and an objective good that has led to their reproach of single-principled systems, such as the utilitarian, as endeavours to moralize mere expediency. It is, of course, a fact that systems based only upon a recognition of the objective good as the governance of conduct do determine the righteousness of an action by its expediency to this end; but it is sufficiently evident that, recognizing no conflict between the sense of duty and the realization of the good, right conduct must always be expedient conduct. If the only moral value is the end in view, any means to its attainment is justified. Even Machiavellianism would be beyond criticism if there were no lurking incongruity in the difference of code assigned to prince and citizen.

It is but fair to note, however, that the utilitarian is forced in practice to resort to a kind of expediency differing from moral certainty as much as does the general rule of tutiorism. Such an end as the happiness of the greatest number can only be an object of approximative judgments. Every specific action must be gauged by a kind of calculus of chances of benefit, and in adopting any given estimate a problematical course is being pursued. Granted that the course chosen be the morally plausible one, still the lack of certainty makes its adoption a matter of expediency—moral, to be sure, in motive, but not necessarily so in result. It is, in other words, expedient for the individual to pursue a course which shall justify his moral sense even if it defeat the true moral good as a result of his ignorance. This is a kind of converse to the rule of intuitional ethics that the expedient course to the attainment of benefit is to be condemned if it run counter to the moral sense. Of course, in effect intuitionalism merely sets up an indirect end of action—the integrity of moral feeling,—which is made paramount over its ostensible end—the attainment of objective good.

EXPERIENCE (Religious).[1]—*Definition.*—The word 'experience' has two meanings. It signifies practical acquaintance gained by trial or experiment, and also the fruit of the knowledge so obtained. It has, therefore, a twofold religious sense—indicating both the present consciousness of communion with the spiritual and the wisdom accumulated by verification of spiritual facts derived from the inner and outer worlds.

I. *RELIGIOUS EXPERIENCE IN GENERAL.*—Self-analysis reveals the existence of phenomena which the religious man explains as being due to fellowship between God and man. To him spiritual conflict, aspiration, intuition, and the sense of dependence on the unseen are explicable only on the assumption that there is 'some superhuman Power at work within us, lifting us above the narrow limits of our private and particular existence, renewing us and also transforming our relations to our fellowmen' (Eucken, *Christianity and the New Idealism*, 1909, p. 4).

1. Spiritual experience and subjectivism.—It must not be assumed that this method involves a lapse into subjectivism. Experience is not the mere reflex of psychical states, whether intellectual, emotional, or volitional. It is grounded in what Eucken calls the 'life-process itself.' And, when this 'life-process' is examined, it is found that it is not merely subjective, but clothed with a trans-subjective character, inasmuch as the psychical states of the individual are unified and brought into relation with those of others (so that he realizes himself to be a member of a spiritual commonwealth), by the operation of a transcendent spiritual life which is immanent within him. The question has often been asked, Do we, when we speak of spiritual experience, mean that of the individual or that of society? It is possible so to press the antithesis as to give rise to a false alternative. The individual cannot be separated from society, and treated as though he lived *in vacuo*. On the one hand, no one can interpret the spiritual experience of others except in the light of his own. On the other hand, the spiritual experience of the individual is closely linked up with that of others. That which seems to us to be our own peculiar possession has in great part come to us along many channels, *e.g.* heredity, environment, and education. Individual experience cannot, therefore, be isolated, or so purified of the influence of others as to become no more than the individual's own concern.

2. Reality and independence of the spiritual life.—Is the spiritual life truly the Divine life in man, or is it simply the fruit of ordinary psychological processes, extended, it may be, to loftier heights and deeper depths, but still self-originated, and wholly independent of any Power that is not ourselves? We shall endeavour to show that, while it manifests itself through, and utilizes, all the resources of the personality, yet its source is outside of us. For (1) it is a transmuting and unifying power. It is continually working the materials of our human nature into higher forms, creating a new reality out of the old, and resolving the inner antagonism of flesh and spirit. It 'holds forth new ends for our endeavour,' and 'holds before us a regenerated world in the light of which it passes judgment on things as they are,' so that human nature is continually striving to rise above its own level, and to become a 'new creation' (Eucken, *op. cit.* 7). It is difficult to see what resources there are in man himself for the production of this result, the achievement of which 'demands from

[1] For experience in the general philosophical sense, see EMPIRICISM, HUME, KANT, LOCKE, PHILOSOPHY.

us so much toil and sacrifice, such a complete revolution of our being, such a shifting of our life-centre, that it is impossible to think that any natural impulse towards happiness would have led us to it' (*ib.* 9). To the Stoic subjugation of the lower nature by the higher we can attain, but that is the mutilation, not the redemption, of the personality. But to remould all our impulses and passions—not merely to destroy their antagonism, but to bring them into the service of the life of the spirit—is a vastly different task, and one for which the natural man is unequipped. (2) History, properly interpreted, is a struggle for the supremacy of the spiritual life. Underlying all the external events and movements of history are spiritual forces which have provided men with their deepest motives and most potent energies, and linked them together in the fellowship of a hidden life. That inner antagonism which is found in the life of the individual is manifest also in history, and is being resolved by the gradual fulfilment of spiritual purpose. No merely naturalistic hypothesis is sufficient to explain this phenomenon. The evolution of natural forces will not yield the teleological unity of the spiritual life. If an immanent teleology can be traced in history, it is because of the indwelling in man of a spiritual life which has a reality and independence of its own. Thus, from the standpoint of the individual and of history, we are led to the conclusion that spiritual experience is not the mere outcome of subjective psychical states, but has objective reality in fellowship with the Divine life. It is important to notice that the presence of the Divine life in man, as a controlling power, is not destructive of moral freedom, but rather emphasizes and enlarges it. The pre-condition of moral growth is voluntary self-surrender, which brings us increasingly under the liberating influence of the spiritual life. But self-surrender involves conflict and choice. Man is a personality, not an automaton, and has to win his way through to the freedom which chooses the good alone (Aug. *de Civ. Dei*, xxii. 30). Only by struggle and discipline can he attain to willing conformity with the Divine will, and a conscious and ever-increasing participation in the fullness of Divine life.

3. Personality and the spiritual life.—The conception of a transcendent spiritual life, immanent in man, raises very important questions affecting both Divine and human personality. Two dangers must be guarded against. On the one hand, the Divine must not be so identified with the human as to be robbed of all objective reality. On the other hand, the action of the Divine upon man must not be so conceived as to impair his moral freedom. Each of these antagonistic modes of thought ends in the obliteration of the line of demarcation between the Divine personality and the human. The transition from the idea of the Divine immanence to that of Pantheism is made with fatal facility. There can be no doubt that the Hegelian philosophy has, in the hands of some of its exponents, tended in this direction, despite the safeguards which they have endeavoured to set up. These tendencies have been specially characteristic of Mysticism, which is defined by Inge as 'the attempt to realize in thought and feeling the immanence of the temporal in the eternal, and of the eternal in the temporal.' Properly apprehended, it is neither irrational nor destructive of the will, but history shows that it has often been pushed to extremes, and has made for the destruction of the self by the absorption of the human personality into the Divine. Mysticism has indicated three ways in which union with God may be achieved (Inge, *Christian Mysticism*, 1899, pp. 356-368).—(1) *Essentialization*. According to this theory there is a Divine spark in every soul, which is part of the essence of the Deity. Eckhart holds that it is 'so akin to God that it is one with God, and not merely united to him' (cf. Inge, 359). The identification becomes complete in so far as man climbs the *scala perfectionis*. (2) *Substitution*. Man is utterly corrupt and needs the 'substitution of the Divine Will, or Life, or Spirit, for the human' (*ib.* 364). It is clear that, unless they are carefully qualified, both these theories may tend to lessen the value of human personality. The realization of our essential nature, conceived of as a spark of the essence of the Deity, and the substitution of the Divine will for the human, may easily mean the absorption of our personality in God's. The true method of Mysticism is that of (3) *transformation*. The Divine enters into us in ever-increasing fullness, as we are fitted to receive it, and union between God and man is not so much a consummated act as a transforming process. At the same time it is well to remember that, as Inge points out, all three views represent aspects of the truth:

> 'If we believe that we were made in the image of God, then in becoming like Him we are realizing our true idea, and entering upon the heritage which is ours already by the will of God. On the other hand, if we believe that we have fallen very far from original righteousness, and have no power of ourselves to help ourselves, then we must believe in a deliverance from *outside*, an acquisition of a righteousness not our own, which is either imparted or imputed to us. And, thirdly, if we are to hope for a real change in our relations to God, there must be a real change *in* our personality,—a progressive transmutation, which, without breach of continuity, will bring us to be something different from what we were' (p. 366).

What is the authority of mystical states? For the mystic himself they have absolute authority, and he demands no further confirmation. For those who have not experienced them, they 'overthrow the pretension of non-mystical states to be the sole and ultimate dictators of what we may believe' (W. James, *Varieties of Religious Experience*, 1902, p. 427).

4. Psychology of religious experience.—The attempt to connect religious experience with some particular faculty of the mental life has broken down. Faith, which is regarded as the organ of religious experience, is not a separate faculty, but the surrender of our nature to that in which it discerns the promise of the satisfaction of our deepest needs. To discuss adequately the process whereby the surrender is brought about would carry us far afield. It must suffice to insist that personality has the unity of an organism, not that of a bundle of sticks, and that, if faith is to be justified, it must spring out of the necessities of the whole personality. To ground faith only in the speculative reason is to impoverish the spiritual life, and to degrade religious belief into a mere form of intellectual knowledge. This leads to an attempt to explain away those phenomena of religious experience which cannot be rationalistically interpreted. At the same time there are elements of knowledge in faith. The school of which Schleiermacher is the chief representative, which makes faith the product of feeling, fails to solve the problem, because, as J. Caird says, 'to place the essence of religion in feeling is self-contradictory, for a religion of mere feeling would not even know itself to *be* religion' (*Introd. to Phil. of Rel.*, 1880, p. 170). That feeling is a vital element in spiritual experience is undeniable, for the religious life finds its highest manifestation in the emotion of love. But, however blind love may be in its lowest forms, in its highest it must discover a moral ground for the selection of its object, and this cannot be done without the aid of reason.

There is another class of writers who emphasize the place of the will in religious belief, usually associating the will with feeling. This is the view of W. James, who contends that our beliefs

are the product of our 'willing nature,' including not only deliberate acts of will, but 'such factors of belief as fear and hope, prejudice and passion, imitation and partisanship, the circumpressure of our caste and sect' (*The Will to Believe*, 1897, p. 9). He would have us take our life in our hands, and make the great venture of faith by deliberately willing to accept the validity of those religious impulses and feelings which 'work.' From James's standpoint, it is no objection to this theory that it sets up an inconstant standard, for he accepts a pluralistic interpretation of the universe. But an objection of another character is not so easily evaded. We are entitled to ask, What is the standard whereby we determine the 'workability' of our beliefs? To say that a belief 'works' is to presuppose a standard of 'workability'—which cannot be arrived at without the aid of reason.

The problem of faith can be solved only when the unity of personality is kept steadily in mind. The reason must gather its materials and sift them, deriving them from no narrow sphere, but from the whole range of knowledge, thought, and feeling, including spiritual instincts and intuitions. The judgment thus arrived at can be made effective only through the emotions and the will. Knowledge does not pass into belief without a decisive act of will, in which emotion is a powerful determining factor—in the sphere of religion, adoration, fear, or love. Thus the whole personality is called into activity before the transition can be made from knowledge to belief. Even yet we have not fully traced the process whereby religious faith is reached. The belief which is the mere outcome of rational, emotional, and volitional processes falls short of faith. And here we are driven back once more upon the reality of that Spiritual Life which, while it transcends man, is immanent within him. To use the language of religion rather than that of philosophy, the Spirit of God entering into us illumines our reason, purifies and quickens our emotions and intuitions, and strengthens our will, so that we are enabled to make a whole-hearted and whole-minded surrender to our beliefs, and all the consequences which come in their train. Faith is, therefore, of ourselves, yet not of ourselves. It is not of ourselves in so far as it is the product of the quickening activity of the Spirit of God; it is of ourselves in so far as it is the rational, willing, and loving response of our whole personality to the power of God.

5. Religious experience and the subliminal self.—Modern psychologists lay great stress on the subliminal self, and by some it is regarded as the organ of religious experience. James holds that the discovery of the subliminal self marks the greatest advance which psychology has made. Myers uses the term to

'cover *all* that takes place beneath the ordinary threshold . . . of consciousness;—not only those faint stimulations whose very faintness keeps them submerged, but much else which psychology as yet scarcely recognises; sensations, thoughts, emotions, which may be strong, definite, and independent, but which, by the original constitution of our being, seldom emerge into that *supraliminal* current of consciousness which we habitually identify with *ourselves*. . . . I conceive also that no Self of which we can here have cognisance is in reality more than a fragment of a larger Self,—revealed in a fashion at once shifting and limited through an organism not so framed as to afford it full manifestation' (*Human Personality*, 1907 ed., pp. 13–15).

James has proposed as an hypothesis

'that whatever it may be on its *farther* side, the "more" with which in religious experience we feel ourselves connected is on its *hither* side the subconscious continuation of our conscious life' (*Varieties*, p. 512).

Following up the line thus opened, Sanday has laid it down

'that the proper seat or *locus* of all divine indwelling, or divine action upon the human soul, is the subliminal consciousness' (*Christologies*, 1910, p. 159).[1]

[1] For criticism of James's and Sanday's views, see *ERE* iv. 53.

This department of psychology is as yet too undeveloped to enable us to arrive at any conclusion approaching definiteness. It is impossible to avoid the use of spatial terms, but such an expression as '*locus* of all divine indwelling' must be received with caution. If God is active in man, He must, above all, be present in that region in which the life of fellowship with Him is consciously lived. His activity may, indeed, penetrate deeper, and it will explain many of the phenomena of the religious life if we believe that the Divine Spirit is present in the hidden depths of our personality, seeking to order our impulses aright. But it does not follow from this that the subliminal self is to be regarded as the peculiar organ of the religious life. It would seem as though it plays as important a part in the development of the artist and mechanic as in that of the saint:

'Religion draws its sustenance from the deep soil of accumulated social experience, and from the wide-spreading roots of individual inheritance and impressionability. The subtle, powerful influences of imitation, suggestion, and subconscious habits operate in religion, giving it stability and intensity. It is by this means that the racial ideas possess such urgency, objectivity, and formative power. They are the result of the long arduous struggles of mankind. It is no wonder that they have been proclaimed with prophetic zeal, and obeyed with tragic devotion. But every interest of society moves forward by the aid of similar forces. In respect, then, to the operation of subconscious elements, religion is not unique. It stands in the normal relations characteristic of all other genuine social interests' (Ames, *Psychol. of Relig. Experience*, 1910, p. 295).

II. *CHRISTIAN EXPERIENCE.*—In the NT we find ourselves in a very different atmosphere from that of philosophy. Its dominant note is not speculation but certainty, and its emphasis is not on the abstract but on the concrete. Spiritual religion is focused in a historic revelation. God has spoken to the world through His incarnate Son, Jesus Christ, whose teaching, life, death, resurrection, and ascension, with the consequent outpouring of the Holy Spirit, are all shown to stand in a vital relationship to spiritual experience.

This connexion is not elaborated in the Synoptic Gospels as in the other NT writings. This is what might be expected, since the Synoptists set out to give a simple record of the earthly ministry of Jesus, and rarely yield to the temptation of reflexion upon the events. Nevertheless, even they afford sufficient material to establish the distinctive features of Christian experience. Jesus Christ is set forth as the Mediator of a new revelation of God to men. He reveals God as Father, and calls on men so to live that they may be the sons of their Father in heaven, and thus receive the Holy Spirit. Israel had already apprehended the Divine Fatherhood in relation to the nation, and even to the individual Israelite through the mediation of the nation; but in the Gospels it is declared to be universal, and is represented as being actually manifested in Jesus Christ, in whom the filial relationship was perfectly realized and exemplified. The purpose of Christ is to reveal and to restore to men their sonship, and to initiate them into a higher spiritual order—the Kingdom of God, or Heaven. Of this Kingdom He is the supreme Mediator. He bids men come to Him, take His yoke upon them, and learn of Him, if they would find rest for their souls (Mt 11[28f.]). His blood is shed unto remission of sins (26[28]); and, though crucified and buried, He is risen from the dead, and is with His people even unto the consummation of the age (28[20]), and will be the final Judge of all. It is not possible to trace here the development of this teaching in the other NT writings. It must suffice to indicate its main content and implications.

1. The Incarnation and Christian experience.—The Incarnation is a concrete revelation of that which lies at the basis of spiritual experience—

union between God and man. It is the revelation of an eternal affinity between Spirit and Nature, between God and man. Some Unitarians, no less than Trinitarians, prefer the doctrine of Athanasius to that of Arius, on the ground that the former conserves the truth of a union of God with humanity. The NT, however, does not regard the Incarnation as a mere illustration of union between God and man, but as the ground of its realization. It is not simply the revelation of an eternal affinity between the two, but the initiation of a new spiritual process, whereby that affinity is consciously realized by man—a process based not on imitation, but on fellowship in a hidden life, mediated to us by Jesus Christ. 'The law of the Spirit of life in Christ Jesus' liberates us from 'the law of sin and death,' endues us with a moral dynamic, begets in us 'the mind of the spirit' which is 'life and peace,' and leads us into the realization of an affinity with God, which is so close that we are called His sons (Ro 8[1-17]).

2. Christian experience and the death, burial, resurrection, and ascension of Jesus Christ.—The death, burial, and resurrection of Jesus Christ are regarded in the NT both as objective acts, standing in a real relation to Christian experience, and as symbolizing processes to be reproduced in us. Objectively Christ's death and resurrection are related to deliverance from sin and guilt, and the birth of the new life in the soul. The sense of sin has always been a characteristic mark of Christian experience. Theories of the Atonement lie outside our purview, but it is beyond dispute that the NT sets forth the Cross as the ground of reconciliation, and as that which brings deliverance from the power of sin and the paralysis of guilt—in short, that which makes fellowship with God possible. The Resurrection is regarded as the pledge of the perpetual presence of Christ in the world as the Mediator of the Divine life. It might, however, be contended that an ascended Christ is transcendent, but the Resurrection and Ascension are interpreted in the NT in the light of Pentecost. The Spirit is 'the Spirit of his Son' (Gal 4[6]). 'The Lord is the Spirit' (2 Co 3[17]). The 'Living Christ' is not a mere synonym for the posthumous influence of Jesus. He is present by His Spirit in the hearts of those who love Him, and the Christian hope of immortality is grounded not in speculation, but in participation in His immortal life. But the death, burial, and resurrection of Jesus are also taken by St. Paul as typifying certain inner experiences of the Christian.

'I have been crucified with Christ; yet I live; and yet no longer I, but Christ liveth in me' (Gal 2[20]). 'We were buried therefore with him through baptism into death: that, like as Christ was raised from the dead through the glory of the Father, so we also might walk in newness of life. For if we have become united with him by the likeness of his death, we shall be also by the likeness of his resurrection' (Ro 6[4f.]).

This is not a mere description of a mystical doctrine of *necrosis*. The spiritual experience has its basis in historic facts, by the aid of which it is initiated. The crucifixion and burial of the old self and the resurrection to newness of life are achieved only by means of the spiritual energies liberated in the death and resurrection of Jesus.

3. The filial consciousness, fellowship with Christ, and the indwelling of the Spirit.—The content of Christian experience may be variously described in these three ways, each of which emphasizes a different aspect of the truth. The filial consciousness is marked by freedom from the spirit of fear and bondage (Ro 8[15]); fellowship with Christ by victory over sin (1 Jn 3[6ff.]); and the indwelling of the Spirit by the discernment and assimilation of Christian truth (1 Co 2). The underlying experience is one and the same. To abide in Christ is to be begotten of God (1 Jn 3[6-9]), and to be led of the Spirit is to be a son of God (Ro 8[14]). We have access to the Father, in the Spirit, through the Son (Eph 2[18]). The three aspects are unified by St. Paul: 'And because ye are sons, God sent forth the Spirit of his Son into your hearts, crying, Abba, Father' (Gal 4[6]).

'The one God, Father, Son, and Spirit reveals and communicates Himself; the living Christ invested with the concrete personality of the historical Jesus is the *content*, but since the withdrawal from sight of the historical Jesus, the Spirit is the *mode* in which God shows and gives Himself. It depends on religious temperament and spiritual discernment whether this revelation and communication of the one God will be conceived more vaguely as the operation of the Spirit or more vividly as the presence of the living Christ' (Garvie, *Studies in the Inner Life of Jesus*, 1907, p. 454).

But the NT does not conceive of the indwelling of the Spirit as begetting the filial consciousness, apart from the apprehension of the historical Jesus.

'The Spirit of God, which illumines, is the Spirit of the Lord, and the enlightenment is according to its content nothing else than the saving knowledge of Jesus Christ, that is, not of a principle, which He brought into the world, but of His historical person. If, accordingly, these two moments coincide, the perfect knowledge of Jesus Christ and the enlightenment by the Spirit of God, then indeed they are logically related to one another in such a way that the enlightenment springs out of the knowledge of Jesus Christ, not in the reverse way, that a man might have in the enlightenment of the Holy Spirit, which might occur independently of Christ, the principle of the knowledge of Christ' (Kaftan, quoted by Tasker, *Spiritual Religion*, 1901, p. 133).

4. The witness of the Spirit and the inner light.—The Methodist doctrine of the witness of the Spirit has been expounded in art. CERTAINTY (Religious), vol. iii. pp. 325–331. It may be well here to distinguish between it and the Quaker doctrine of the inner light. The witness of the Spirit is conceived of as operating *ab extra*, the inner light *ab intra*. The former is a development of Christian experience, the latter is its presupposition. The inner light has been compared with the Stoic σπερματικὸς λόγος and *anima mundi*.

'By this Seed, Grace, and Word of God, and Light wherewith we say everything is enlightened, and hath a measure of it, which strives with him in order to save him . . . we understand not the proper Essence and Nature of God, precisely taken, . . . but we understand a Spiritual, Heavenly, and Invisible Principle, in which God as Father, Son, and Spirit dwells: a measure of which Divine and Glorious Life is in all men, as a seed which of its own nature draws, invites, and inclines to God; and this some call *Vehiculum Dei*' (Barclay, *Apology*[8], 1736, p. 137 f.).

It is from this substance that the inward birth arises (Barclay, *op. cit.* 139). It is not to be inferred from this that Christ dwells in all men by way of union and 'inhabitation'; but He is present as in a seed, and 'He never is nor can be separate from that holy, pure Seed and Light, which is in all men; therefore it may be said in a larger sense that He is in All' (*ib.* 143).

Further, this light is not to be identified with any natural faculty such as reason or conscience. Neither is it subject to man's control.

'He must wait for it: which comes upon all at certain times and seasons, wherein it works powerfully upon the Soul, mightily tenders it and breaks it; at which time, if man resists not, but closes with it, he comes to know salvation by it' (*ib.* 141 f.).

Barclay strongly denies that this doctrine is in any way derogatory to the historical revelation of Jesus Christ. He holds it to be 'damnable unbelief' on the part of any one not to believe the Gospel when it has been declared. The remission of sins is obtained only on the ground of the sacrifice of Christ, but it may extend to those who have no knowledge of Christ's work.

'Many may come to feel the influence of this Holy and Divine Seed and Light, and be turned from evil to good by it, though they know nothing of Christ's coming in the flesh, through whose obedience it is purchased unto them. . . . The History then is profitable and comfortable with the Mystery, and never without it; but the Mystery is and may be profitable without the explicit and outward knowledge of the History' (*ib.* 141 f.).

5. Individual and collective experience.—What is the relation of the spiritual experience of the

individual to that of the whole society of Christian disciples? The two extremes to be guarded against are the individualism which forgets the organic character of Christian experience, and the authority which eliminates individuality and variety by demanding conformity to a fixed type. Ritschl holds that the Divine life is not a direct gift to the individual, but is mediated to him through his membership in the kingdom of believers. It seems to be more true to the NT and to the facts of experience to represent the individual as coming into immediate fellowship with God in Jesus Christ, and as verifying or correcting his deductions, not merely by reference to the authoritative dicta of the Church, but by spiritual fellowship with those who are partakers of a like experience.

'The basal principle of individual experience' is 'saved from excess by the correction given through the experience of others. . . . In an effective practical fashion the experience of the whole church is brought to bear upon the isolated feelings of the separate member' (H. B. Workman, in *New History of Methodism*, 1909, vol. i. p. 29).

6. Christian experience and philosophy.—The Ritschlians distinguish between theoretical judgments and judgments of value. The validity of Christian experience is to be judged by pragmatic, not by theoretic tests. Ritschl and Herrmann deny that theology needs the sanction of metaphysics. They hold that religious knowledge has no need to be brought into harmony with theoretic knowledge. Kaftan, however, writes:

'The sphere of thought peculiar to the Christian faith, and the sphere of thought identified with the rational knowledge of things, cannot be wholly apart from one another: it must be possible to combine them so as to make a whole' (*The Truth of the Christian Religion*, p. 11, quoted by Mozley, *Ritschlianism*, 1909, p. 27).

What Ritschl means by value-judgments may be seen from his statement that 'we know the nature of God and Christ only in their worth for us' (*Justification and Reconciliation*, Eng. tr., 1900, p. 212). There can be no ultimate divorce between theoretical and religious knowledge. Truth, though many-sided, must be one, and the spiritual and rational universes must finally coincide. But it is not to be assumed that Ritschl conceived of two kinds of knowledge, mutually exclusive and irreconcilable. His emphasis on value-judgments was due to the fact that his interest was practical rather than metaphysical. It seemed to him that they offer the one method of approach to religious truth. And as such they undoubtedly vindicate themselves by enlarging our vision and deepening our sense of certainty. But it is necessary to go further than Ritschl, and to recognize that their authority is greatly increased if they are viewed in the light of all our knowledge, and verified or corrected thereby. The theory of value-judgments embodies, at any rate, two important truths. (1) Experience is a vital factor in the solution of the truth problem. The higher we ascend in the scale of truth, the more scanty does theoretical evidence become, and the more dependent are we on practical motives. (2) Speculation cannot yield an intimate knowledge of the nature of God. Such can be won only by experience—the realization of God's worth *for us*. The inner meaning of the Christian revelation can be apprehended only by those who have experienced its worth in their own lives (cf. 1 Co 2^{13-16}). To sum up, value-judgments stand for

'the recognition that proof cannot mean in theology exactly what it means in natural science, but that in theology knowledge must be a matter of personal conviction arising from individual experience.' They are 'the assertion of the presence of the personal element in all knowledge, the protest against excessive intellectualism, the understanding that truth is perhaps not quite so rigid and fixed as in our conceptions we have been inclined to represent it' (Mozley, *op. cit.* 110).

7. Christian experience and doctrine.—Christian doctrine is the outcome of the interpretation of the historical facts of the gospel in the light of Christian experience. The facts of the historic revelation are established independently of experience, which of itself cannot prove their reality, but, once they are given, confirms and interprets them. Doctrine cannot be evolved out of experience alone. The birth, life, teaching, death, resurrection, and ascension of Jesus Christ are facts dependent upon the attestation of history, but no adequate doctrines of the Incarnation, the Person of Christ, the Atonement, the mediatorial work of Christ, and immortality can be formulated unless the facts are approached and interpreted by Christian experience. The doctrine of the Trinity is an outstanding instance of a dogma springing out of the necessities of the experience which is grounded in the facts of the Christian revelation. The eschatological doctrines of Christianity are in a different category. They are based not on historic facts but on revelation, and can be neither deduced from nor confirmed by experience, except in so far as the final principles of judgment are seen to be operating here and now. It is in the development of the doctrines which relate to the new life in Christ that experience exercises the most potent influence. Conversion, regeneration, justification by faith, sanctification, assurance, are phenomena of the inner life, and, however fundamental their relation to the historic revelation, can be translated into doctrine only by the aid of experience. Both the hope and the justification of theological progress lie in the advance which Christian experience is gradually achieving. Doctrines are tentative, not final, efforts to state the truth, and cannot rise above the level of the experience which formulates them. Progress in doctrinal expression will be made in so far as the Church penetrates more deeply into the treasures of wisdom and knowledge that are hid in Jesus Christ (Col 2^{3}).

8. Christian experience and history.—As has been shown, Christian experience is based by the NT writers on the historical revelation of God in Jesus Christ. The Ritschlians distrust the mystical side of the religious life, and hold that the Christian knows God and communes with Him through the apprehension of the inner life of the historical Jesus. This view, while it places a necessary emphasis on the historical side of the revelation, does less than justice to the mystical side of NT teaching. The experience initiated by the apprehension of the inner life of Jesus may be developed in fellowship with the living Christ, without any sacrifice of objective reality, or subservience to merely subjective processes. At the other extreme are those who separate the Christ of faith from the Jesus of history. In some instances the historicity of Jesus is denied, and it is held that the Gospel is but a representation of a wide-spread 'Christ-myth' which reflects humanity's struggle for God. The attack on the historicity of Jesus cannot be said to have met with any success, and many of the parallels, so confidently advanced, between the details of the Gospel narrative and mythology, break down on analysis (see Carpenter, *The Historical Jesus and the Theological Christ*, 1911, ch. i., and St. Clair Tisdall, *Mythic Christs and the True*, 1909). In other quarters the conception of the heavenly Christ is regarded as the outcome of a process of gnosticizing which has taken place round the form of Jesus of Nazareth, who, as some think, was the embodiment of a Divine humanity, or, as others believe, merely a well-intentioned, but more or less misguided, Jewish apocalyptist. But such theories are beset with difficulties that are insuperable. (1) They do not explain how the gnosticizing process came to centre in the crucified Jesus of Nazareth, nor do they help us to understand why from earliest

days Christian faith has sought its nourishment not in a mystic gnosis, but in the knowledge of the historical Jesus, whom it identifies with the heavenly Christ. (2) Facts of consciousness which are the product of speculation and reflexion, however valid they may seem to the experient, cannot claim the authority and certainty of a revelation which centres in a great historic fact. (3) 'Whenever the Church has treated the historic record with indifference, it has invariably fallen either into scholasticism or mysticism. . . . Christianity, when scholastic, lacks inspiration; when mystical, it lacks reality and balance' (Forrest, *The Christ of History and of Experience*, 1897, p. 335).

LITERATURE.—In addition to the books referred to above, the following may be mentioned:—R. Eucken, *The Life of the Spirit*, London and N.Y. 1909; A. Caldecott, *Philos. of Religion*, London, 1901; J. Caird, *Introd. to Philos. of Religion*, Glasgow, 1880 (new ed. 1889), also *Fundamental Ideas of Christianity*, do. 1899; W. James, *Pragmatism*, London, 1907; W. R. Boyce Gibson, *God With Us*, London, 1909; H. M. Gwatkin, *The Knowledge of God*, Edinburgh, 1906; W. R. Inge, *Faith and its Psychology*, London, 1909; J. H. MALDWYN HUGHES.

EXPIATION AND ATONEMENT.

EXPIATION AND ATONEMENT (Introductory and Primitive).—The entire subject of expiation and atonement is inextricably involved with that of sin (*q.v.*), and with the propitiation (*q.v.*) of the Divine being or beings angered by such sin, whether the propitiation be by sacrifice, fasting, penance (*qq.v.*), or any other means. The concepts of expiation and atonement are, however, neither synonymous nor even necessarily connected; the latter involves a far higher type of religious development than does the former. Even on the human plane, the desire to placate an offended fellow-man by no means implies of necessity a wish to be at one with him; the averting of wrath is not inherently prompted by love either for or in the offended. It is true that—from motives of fear as well as of love—there may be a desire not merely to appease, but also to win the favour of, the being appeased; but such desire is accidental, not essential, to the concept of expiation, whereas it forms the inmost kernel of the concept of atonement.

The broad principles motivating expiation may be summed up in fear of Divine anger (cf. ANGER [WRATH] OF GOD) at sin, which, in the words of the Westminster Shorter Catechism (qu. xiv.), is 'any want of conformity unto, or transgression of, the law of God'—a definition which, *mutatis mutandis*, will apply to the lowest as well as to the highest systems of religion.

In the lower stages of religion, what we may conveniently call 'sin' does not necessarily imply infringement of a moral law; it may be merely a violation of an unmoral custom (*q.v.*) or of a nonmoral tabu (*q.v.*); it may be one of omission as well as of commission; it may be voluntary, involuntary, or unwitting; it may be grave, or venial, or of any intermediate grade; it may offend various classes of worshipful beings—ghosts, godlings, deities, and the like; it may be entirely physical or ritual. In all such cases of offence, some sort of expiation becomes necessary—some penance must be undergone to placate superhuman beings, just as some surrender of self is needful to appease offended human kind.

It seems safe to conclude that, at its lowest level, expiation is non-ethical, and that non-ethical ideas remain connected with expiation, to a greater or less degree, in relatively advanced religious systems, while in some—notably in Buddhism (see 'Buddhist' section, below)—the concept is nonexistent; while in others—as in Muhammadanism (see 'Muslim' section, below)—expiation degenerates into a crass question of debit and credit. The non-ethical aspect seems to characterize the entire Polynesian and Melanesian area, where expiation appears to be simply an endeavour to placate offended ghosts and deities. Yet it must be remembered that, with the exception of the Australians, few of these peoples have as yet been studied with a view to ascertaining their ethicoreligious principles—a failure particularly lamentable, since with so many of them the old system of beliefs has practically vanished for ever. Yet it is at least significant that even so competent an observer as Codrington makes no mention of any ethical feeling underlying such sacrifices as are made in Melanesia for the purpose of propitiation (*Melanesians*, Oxford, 1891, p. 127), though it is perfectly evident that the Melanesians and Polynesians had many ethical principles of a high order (see above, p. 516 f.).

In Africa, also, the non-ethical form of expiation is the more usual. As a type may be taken the Shilluk of the Egyptian Sudan. When a Shilluk is seized with a disease as a result of some offence that he has committed, a propitiatory sacrifice is offered, with an appropriately sad and humble frame of mind, to appease the angered worshipful being; and, should the sick man recover, his restoration to health is attributed to the intercession of Nykang (the apotheosized first king of the Shilluk) with Cuok, the 'Great Spirit' (Hofmayr, *Anthropos*, vi. [1911] 121).

In like manner, among the Bantu Wajagga, a sick man inquires of his sorcerer as to the origin of his illness; and, if it be from an offended ghost, this is appeased, according to the sorcerer's directions, either with the sacrifice of a sheep, ox, etc., or with a libation of honey, meal, milk, and the like (Fassmann, *Anthropos*, iv. [1909] 576).

A distinct form of expiation is the rite of confession. Outside Christianity (see PENANCE), confession has been most commonly known from the Assyro-Babylonian, Egyptian, Hebrew (see these sections of CONFESSION; and for a divergent rendering of the Egyptian confession—more accurately 'repudiation'—of sins, see above, p. 478[b]), and

Parsi (see 'Parsi' section, below) religions. Yet it occurs elsewhere, as among the Eskimos (*q.v.*), the Aztecs and Peruvians (see 'American' section, below; cf. also Waitz, *Anthropologie der Naturvölker*, Leipzig, 1860–77, iv. 129 f., 462 f.), the Dénés (*q.v.*), and the Iroquois (*q.v.*). Here only the Hebrew and the Parsi, together with the Aztec and Peruvian, confessions are prompted by real ethical considerations, from their earliest known history; but the Parsi *patēts* are of very late date, while, in the case of the Aztec and Peruvian confessions, there is a possibility (though merely a possibility) that they have been transmitted in too ethical a setting. The Assyro-Bab. confession is, at least originally, largely devoted to ritual offences; and the Egyptian 'repudiation' has no indication of any real sense of sin and repentance —at the most, only attrition is indicated by it (see also 'Egyptian' section, below).

Africa also knows confession. Among the Kikuyu, east of Lake Victoria Nyanza, sin is the violation of some law, custom, ceremony, rite, or prescription, and consists of three parts: *mogiro*, 'prohibition'; *noki*, 'violation'; and *sahu*, 'punishment.' Of this, Fr. Cayzac says (*Anthropos*, v. [1910] 311):

'Sin is essentially remissible; it is enough to confess it. Ordinarily, this is done to the "sorcerer," who expels the sin by a ceremony whose principal rite is a simulation of vomiting (*kotahikio*, derived from *tahika*, "vomit").

There is also a private, non-ritual confession: a man has just committed adultery; his accomplice forbids him to speak of it. If she had said nothing, the man would not have sinned; but, since she has spoken, he has sinned. . . . The man, in this case, then makes a private confession of his act to some friend, and this confession renders him immune against *sahu*.'

Confession is also practised by the Mkulwe (German East Africa), but only by adults, who must perform the rite publicly, fully, and sincerely. Confession is made by all assembled in case of severe illness, or difficult delivery, or before crossing a dangerous stream; individual confession, when the father of the household is starting on a journey.

The confession for severe illness begins: 'The illness is grave. Let us see; perhaps there are sins among the kin. Let him who has sins confess them; let us confess well; let us not confess with double heart. Forgive me, gracious God! I have no other sins than . . . (adultery, breaking of vows, falsehood, theft, etc., as the case may be). I have no other sins at all. I am poor; protect me, gracious God! All my sins are gone forth with the wind!' With the last words the person confessing casts towards the west splinters of wood and bits of straw, that his sins may be carried away by the wind even as the sun sinks in the west, never to return. If the sick man mends, it is attributed to the perfection of the confession; otherwise, it becomes necessary to get a doctor to consult the spirits, in order to discover who is concealing some of his sins, and thus hindering the recovery of the patient (Hamberger, *Anthropos*, iv. [1909] 309–312).

And yet, non-ethical as these African forms of expiation appear to be, it has been declared that the African possesses a real concept of conscience.

Thus Schneider (*Relig. der afrikan. Naturvölker*, Münster, 1891, p. 19 f.) writes: 'The negro is guided at every step by religious conscientiousness (*religiöse Gewissenhaftigkeit*), though, unfortunately, he is very often not led to true morality. . . . His morality is not based upon self-made, secular, and human principles, but upon religious, erroneous though they may often be. What bonds and binds him is not "the categorical imperative of self-ruled reason," but another, higher will, which proclaims to him his religion. . . . The misinterpretation of evil as a power of Nature only fetters, but does not utterly destroy, the sense of responsibility and guilt. No impulse of conscience (*Gewissen*) is alien to the negro; he experiences heaviness and distress of conscience, and comfort and joy of conscience. His constant thought and endeavour is to know and to fulfil the wishes of those invisible powers on whose interference he believes his weal and woe to depend; he knows no worse misfortune than to offend the spirits or fetishes; fear of their anger can plunge him into irremediable dejection; to make them again propitious is the chief matter of his care and his endeavour, and to this end he burdens himself . . . with the most painful renunciations. As he fears the anger of the spirits for his sins, so, with a quiet conscience, he counts upon their help and heartily submits to the ordeal, trusting in their miraculous intervention for the saving of innocence. His prosperity appears to him to be the reward for his good conduct towards the Invisible Ones, and every evil to be a punishment for offending them' (cf. also the 'Egyptian' sections of CONSCIENCE, and ETHICS AND MORALITY).

LITERATURE.—In addition to the authorities cited in the text, see the lists appended to the following series of articles.

LOUIS H. GRAY.

EXPIATION AND ATONEMENT (American).—The conception of expiation is already fundamentally present in the primitive effort to placate evil and to propitiate powers that are or may become unfriendly. Sacrificial rites of all sorts are designed to such ends, the notion being that the worshipper can purchase favour by his sacrifice. Where the sacrifice, in place of a mere offering of goods, involves physical suffering on the part of the donor, we may fairly regard the rite as expiatory—as an effort to make good the punishment which the propitiated power is wont to inflict.

Rites of this type are common among the American Indians. One of the most interesting examples is that given by E. F. Im Thurn (*Indians of Guiana*, London, 1883, p. 368):

'Before attempting to shoot a cataract for the first time, on first sight of any new place, and every time a sculptured rock or striking mountain or stone is seen, Indians avert the ill-will of the spirits of such places by rubbing red-peppers (*Capsicum*) each in his or her own eyes. . . . The extreme pain of this operation when performed thoroughly by the Indians I can faintly realize from my own feelings when I have occasionally rubbed my eyes with fingers which had recently handled red-peppers; and from the fact that, though the older practitioners inflict this self-torture with the utmost stoicism, I have again and again seen that otherwise rare sight of Indians, children and even young men, sobbing under the infliction.'

The same propitiatory notion underlies the severe tortures which the Plains Indians of North America were accustomed to undergo on the eve of going to war, though doubtless here the ethical motive of putting to test the warrior's fortitude also bears a part. A typical description is given by de Smet (*Life, Letters, and Travels*, New York, 1905, p. 255 f.):

'Among the Sioux, as among the Aricaras, warriors preparing for an expedition undergo a very rigorous fast of several days. They have for this purpose a "medicine" lodge, where they spread a buffalo robe and plant a red-painted post: at the top of the lodge is tied a calf-skin containing all sorts of devices. There, to obtain the aid of the Great Spirit, they pierce their breasts, pass leather cords through, attach themselves to the post, and dance thus several times around the lodge to the sound of the drum, singing their warlike exploits and flourishing their war-clubs over their heads. Others make deep cuts under their shoulder-blades, run cords through the gashes, and drag two great buffalo heads to an eminence about a mile away from the village, where they dance until they drop senseless. A last offering before setting out consists in cutting off little pieces of flesh from different parts of their bodies, which they offer to the sun, the earth, and the four cardinal points, to render the Manitous, or tutelary spirits, of the different elements favourable.'

From rites such as these, designed to compound an offence feared or expected, to rites meant as compensation for an offence already given is but the step of reason. Possibly an intermediate case is the acceptance of punishment not with a sense of having offended, but merely as a means of averting a calamity already falling—such as the case of Black Coyote who, after several of his family had died, in obedience to a dream sacrificed seventy pieces of skin from his body to save the remainder (*14 RBEW*, pt. 2 [1896], p. 898). In this instance we have vicarious sacrifice, with no apparent sense of fault; yet expiation readily develops into penance, with the penitential conviction of sin accompanying it, and sometimes into penance viewed as a punishment and acts of compensation viewed as atonement. An excellent instance of this complex sort is the penalty for murder among the Hurons as described by Father Brébeuf (*Jesuit Relations*, ed. Thwaites, Cleveland, 1896–1901, x. 215–223). Not only must the murderer and his family give *compensation*, in the form of presents (as definitely determined as the Anglo-Saxon *wergild*), but he must also give *satisfaction* —probably conceived as a placation of the angry dead. Brébeuf thus describes it:

'The dead body was stretched upon a scaffold, and the murderer was compelled to remain lying under it and to receive upon himself all the putrid matter which exuded from the

corpse: they put beside him a dish of food, which was soon filled with the filth and the corrupt blood which little by little fell into it; and merely to get the dish pushed back ever so little would cost him a present of seven hundred porcelain beads . . . ; as for the murderer, he remained in this position as long as the relatives of the deceased pleased, and, even after that, to escape it be had to make a rich present.'

War among the Indians was but an expansion of the primitive blood-feud, of which the above ceremony represents a sort of commutation, as is proved by the fact, noted by Brébeuf, that, 'if the relatives of the dead man avenge themselves for this injury by the death of him who gave the blow, all the punishment fell on them.' Much of the difficulty in maintaining an Indian peace lay with the relatives of the war-slain whose *manes* had not yet been appeased by the death of a foeman. Thus the Assiniboins explained to Father de Smet (p. 1128) their horrible cruelty in slaughtering a whole encampment of unprotected women and children of their Blackfeet enemies, declaring that 'they satiated themselves with cruelty to satisfy the *manes* of their deceased parents and kindred.' Certainly, if captives were spared or adopted, it was usually because the losses of the captors had been negligible in the conflict.

The conception of pollution or uncleanness, with the corresponding need for ceremonial purification, obtains far and wide in the Indian world; but the fasts, purgations, and ordeals which marked the purifying are hardly to be regarded as in a strict sense expiatory; they are of the nature of a cure rather than of a penance. We find, however, that the Indian was more than receptive when the notion of penance, as expiation of sin, was once laid before him. At all events, there is a general unanimity of the Jesuit teachers to the effect that their aboriginal converts were singularly ready to confess and do penance for their faults, often outdoing what the Fathers required of them. The statement, 'they accused and condemned themselves, and pronounced their own sentence, which they carried out' (Thwaites, xxxiii. 33), represents not a particular case but a common attitude.

Le Jeune in the *Relation* of 1640 (*ib.* xviii. 173–177) describes at length one of the rather numerous instances in which a convert had espoused a pagan, and had later come repentant to the Fathers. 'We assembled the principal Christians to ascertain what action would be taken in this matter,' he writes. 'They summarily decided that he should be driven away and forbidden ever to live again with the Christians.' To this severity the Fathers objected, the young man being merely asked publicly to confess his sin. This he did; but more than this, he came in private to his confessor, saying: 'My Father, I have so deeply regretted my fault that I have not dared to approach any Christian since my return; I would not dare even to look at them. I was told, indeed, that you would chide me if I returned to Saint Joseph; but I have come, nevertheless, to see you. I assure you that, since I left this woman, I have fasted every day,—eating only once a day and not more,—so much have I grieved for offending God. I have not dared to take shelter in the cabins of the Christians; I pass before them in silence, with bowed head; I shall go and see them when I have confessed.' Le Jeune adds: 'I carefully examined his behaviour; I found him so little guilty before God that I shuddered within myself for some time with a holy horror. It is true that he had taken this young girl, having already given his word to another: it is true that he lived with her as if they were married, and that was the offence. But it is true also that his fear of offending God and his respect for his baptism had prevented him from touching her, although he was urgently solicited to do so—desiring that she should become a Christian before showing her the evidences of his affection. This, in my opinion, is what passes wonder—to be in the fire, and not be burned; to do an act almost innocent before God, and patiently to bear the penance for it before men.'

The same readiness to confess and do penance is recorded by the Spanish friars in Mexico. There, moreover, the idea had developed independently before the advent of Christians, as is illustrated by the explicit account given by Sahagun (*Hist. gén.*, Paris, 1880, I. xii.; cf. art. COMMUNION WITH DEITY [American], in vol. iii. p. 741). And, indeed, the whole temper of the Aztec religion is that of a deep and unescapable sense of sin—with which a reader of Mexican annals can hardly fail to sympathize. Something very similar among the Peruvians is indicated by Garcilasso (*Royal Commentaries*, ed. Paris, 1830, II. xiii.) in the spirit in which the Inca laws were obeyed. The Inca ruler being regarded as Divine, the laws of the empire were viewed as Divine ordinances, the violation of which was sacrilege.

'Hence,' he says, 'often enough, those who knew themselves culpable, condemned by conscience, went voluntarily to proclaim to the judge their secret faults; for their belief that the soul condemns itself led them to believe that their sins were the cause of all the ills which befell the state—maladies, deaths: unprosperous seasons; disgraces, general or particular. To prevent, therefore, that their private faults should cause their lord to send other ills into the world, they wished to expiate their sin by death.'

There was, in fact, no distinction between crime and sin; every offence was an offence against the Inca, who was himself immune from fault simply because of his Divine origin and sanction (cf. *ib.* II. xii.–xv.).

Garcilasso (VI. xi.) records that in certain tribes the priests were accustomed to fast for the welfare of the community. This is a wide-spread custom among the Indians, being intimately associated with the mystic notion that dream-revelations of importance to the people were to be obtained by such means (see *14 RBEW*, pt. 2 *passim*). The idea of vicarious atonement is, in fact, never very far beneath the surface in a society whose morals are still on the group basis, distributing responsibility to all the relatives of the offender. A quaint development of this notion is detailed in the *Jesuit Relations* (ed. Thwaites, xxxii. 305) by Père Lalemant:

'After the fathers and mothers have confessed, they make such of their children as are fit to receive the sacrament go to confession. But, as regards those who have not sufficient discernment, their mothers bring them to the confessors and relate in their presence their petty acts of naughtiness, and make them ask for a penance, which they themselves perform for their little ones.'

For the final development of this idea of vicarious sacrifice, in its native form, we must turn to the mythologies of the Indians. There we find—among the Iroquois, the Algonquins, the Sioux, the Pawnees, and many others—various developments of the conception of a demiurgic being modelling this world as a habitat for man after the plan of the world which is above the skies and which was before the earth was. This being is at times (as with the Iroquois) a cosmic titan, slain in the making of the earth, so that its body becomes the source of the life of the vegetable and the animal realms, and thus of man himself, who reverences the nourisher of life. At times (as in the legends of Hiawatha) an historical or legendary chieftain, conceived as a benefactor who has won for his people some such gift as the knowledge of agriculture, is identified with the cosmic sacrificial demiurge—thus giving a vicarious turn to the heroic life. Possibly the dominance of the theanthropic conception throughout Mexican religion is but a continuation of the same fundamental conception—of a god dying for mankind (see esp. J. N. B. Hewitt, 'Iroquoian Cosmology,' *21 RBEW* [1903], p. 133; D. G. Brinton, *Myths of the New World*³, Philadelphia, 1896; cf. art. INCARNATION [American]).

LITERATURE.—In addition to the authorities cited in the article, see list appended to COMMUNION WITH DEITY (American).

H. B. ALEXANDER.

EXPIATION AND ATONEMENT (Babylonian).—I. Personal gods and demons.—To understand the intricate system of purification from sin in Babylonian religion, it is necessary to start from the unique conceptions of the Sumerian[1] religion regarding the relation of the individual to the gods. The Sumer.-Bab. religion possesses a

[1] The entire structure of Bab. religion is essentially non-Semitic, and borrowed from the primitive inhabitants of Mesopotamia, viz. the Sumerians.

pantheon extraordinary in its ability to represent every element of Nature in its hierarchy, and many abstract ideas as well. The earliest religious literature of the Sumerians represents the social aspect of religion as distinguished from the individualistic. The public worship, in which the entire community joined to sing liturgies in the temples, in praise of the great gods, is apparently older than those forms of worship which touch more closely the individual, which belong to the realm of magic and were excluded from the temple-worship from first to last. But the individual who, by the socialist nature of early worship, felt himself lost in the sight of the gods in the great public liturgies expressed his need of a more personal religion by adopting a personal god, his protecting genius.[1] Each man lived under the protection of his personal god, a good spirit which dwelt in his body, or whose Divine presence permeated his being. Proper names in both languages often refer to this idea.[2] The deity whose name figures in the proper name of any individual is not always his protecting genius. He felt free to choose some other. Usually each individual adopted a god and his consort as his personal gods, so that the Babylonians[3] spoke more often of 'my god and goddess.'[4] So long as the personal god dwelt in a man, he felt himself in communion with divinity, but the evil demons (originally ghosts) often overpowered the protecting spirits and drove them from the body. 'His god is departed from his body, his thoughtful goddess stands afar,' says the priest of one who has fallen to the powers of evil.[5] Ordinarily sickness or any trouble physical or spiritual is regarded as a sign of possession by the demons (see DEMONS AND SPIRITS [Assyr.-Bab.]). It is likely that in the first stages of this religion the demons were regarded as taking the initiative without any cause whatsoever. Thus in the earliest known text of this kind we have the following:

'Namtar,[6] like a god invincible, from on high entered,
He brought headache upon a man
. . . .
To his hand his hand he extended,
To his foot his foot he extended,
This man is the son of my hand, son of my foot is he.'[7]

2. Conceptions of sin.—But only the primitive stages of the religion attribute the flight of the protecting spirits solely to the hostile attacks of the demons. Man himself becomes a factor, and begins to reflect upon his own conduct as a possible cause for the flight of his gods. The first notion of sin is here ritualistic, grossly materialistic.

'When he walked the streets, has he trodden upon a libation poured out? Has he set his foot upon improper water? The water of unclean hands has he seen? A woman of impure hands has he met? A maiden of impure hands has he seen? A woman of poisonous witchcraft has his hand touched?'[1] 'Ban by drinking from an unclean cup (?) (Marduk) dissolves.'[2] 'Ban by having touched a man accursed (Marduk) dissolves.'[3] 'Food (unclean) I have eaten, waters incanted (?) I have drunk, refuse of my god unwittingly I have eaten, rubbish of my goddesses unwittingly I have trod upon.'[4]

The ethical conception of sin and the moral element in religion begin to develop at an early period, if we may judge from the religious aspect in which injustice and violation of civil laws were regarded. Yet it may be safely asserted that ethics and religion were originally independent of each other in Babylonia.[5] The moral transgressions which bring about estrangement between man and his gods are mentioned at great length in the *Śurpu* series:

'Has he failed to deliver the captive, and the bound not set free? Was *yes* in his mouth and *no* in his heart?' 'The boundary of justice has he gone beyond?' Man is inherently prone to sin: 'Who has not been negligent, who has not committed frivolity?'[6]

3. Condition of the sinner.—Corresponding with the advance made in the conception of sin,[7] there are distinctly different conceptions of the condition of the sinner in the various stages of the cults of expiation. The reader will have inferred from the preceding paragraphs that the earliest state of sin was regarded as one of demoniacal possession.[8] Whether disease, sorrow, and calamity were conceived of as due to the attacks of the demons, the machinations of witchcraft, the evil eye, or what not, the actual state of man was described as one of demoniacal possession. Thus in a ritual against a disease we have the curse:

'Evil ghost,[9] evil *alu*,[9] evil *utukku*,[9] evil man, evil eye, evil mouth, evil tongue from the body of the man, son of his god, may they depart.[10]

The technical term for a man in demoniacal possession is *papḫalla* = *muttalliku*,[11] lit. 'one tossing to and fro.' Also the ordinary word for 'sick,' *marṣu*, may be used in a wider sense quite synonymous with 'demoniacal possession.' The man whose protecting gods had deserted him is *lù tu-ra* = *amelu marṣu*.[12] The Sum. word *tur* is probably connected with the root *tar*, 'to curse,' and represents the man as under the curse of the demons. The Sem. root *marāṣu*,[13] indicates a condition of pain and misery, and, unlike the Sumerian, has no magical significance. Another Sum. word, *gig*, is often employed to denote the misery of a sinner.[14] The fundamental idea of this root is 'unclean,' 'worthless.' Sumerian, therefore, in each case employs a term based upon the religious aspect of the case. A sinner is one cursed by the demons, made unclean by the evil spirits so that his gods can no longer dwell in his body. The sinner is often described as one who has a *curse*, for which the technical word is *mamitu* in Semitic.[15] The root of this word, *emû*, Heb. המה,[16] means 'to speak with a rumbling voice,' probably referring to the ventrilo-

1 Sum. *dingir-ni*, Bab. *ili-šu*. More often a man is called 'son of his god,' *dumu dingir-ra-ni* (earliest mention in *Cun. Texts from Bab. Tablets in Brit. Mus.* [*C.T.*] iv. 4*a*, 28), or Bab. *mar ili-šu*.

2 Sum. *Ur-den-zu*, 'servant of the Moon-god'; *Ur-dutu*, 'servant of the Sun-god'; *Lù-dba-ù*, 'man of the goddess Bau'; *Gin-dda-mu*, 'maiden slave of Damu'; *dIšḫanna-ama-mu*, 'Išḫanna is my mother'; Bab. *iluMarduk-naṣir*, 'Marduk protects'; *iluEnzu-imguranni*, 'Sin has blessed me.' See esp. Krausz, *Götternamen in den bab. Siegelcylinderlegenden*, Leipzig, 1911.

3 We employ the word in the sense of *inhabitants of Babylonia* attached to the established religion.

4 References to men who have no protecting god are found (*C.T.* xvii. 14 K. 8386. 7, 23, 104), but these are seized upon by disease at once.

5 *Surpu*, v. 11. One passage represents the protecting god as a man's shepherd, whom the devils seized upon for food.

6 One of the seven demons.

7 *C.T.* iv. 4; see *Babyloniaca*, iii. [1910] 16. The best example of the idea of a soul being wilfully attacked by the demons is the series of incantations known as *Maḳlu*, tablet 1, where the individual attributes his afflictions to the machinations of wizards and witches, one of the most common sources of evil, and the so-called *Utukku limnûti* series, *C.T.* xvi. (tr. by Thompson, *Devils and Evil Spirits*, London, 1903–04). For an example of a man wilfully attacked by restless souls from hell, see King, *Bab. Magic and Sorcery*, 1896, no. 53 = Langdon, 'Bab. Eschatology,' in *Theol. Essays in Honour of C. A. Briggs*, New York, 1911, p. 159. See esp. Morgenstern, *Doctrine of Sin*, 6–21.

1 IV. R. 26, no. 5; cf. *C.T.* xvii. 38.

2 *Šurpu*, iii. 19.

3 *Ib.* 115.

4 IV. R. 10*a*, 28–34. The 'refuse of my god,' *ikkib ili-ia*, and the 'rubbish of my goddess,' *an zil ištariia*.

5 Morgenstern, 2. Dhorme (*Rel. assyr.-bab.* 211 ff.) takes the opposite view. At any rate, the references to moral sin in the rituals of expiation and atonement are found only in the late period.

6 King, *Bab. Magic*, no. 11, obv. 10.

7 For a detailed statement of the Bab. conceptions and technical terms for 'sin,' see SIN (Bab.).

8 Schrank, *Bab. Sühnriten*, 42.

9 One of the seven devils.

10 *C.T.* xvi. 13*a*, 45–48.

11 V. R. 50*b*, 8; *C.T.* xvi. 2, 38.

12 *C.T.* xvi. 4, 149; see Brünnow, *Classified List*, Leyden, 1887, no. 1074.

13 Prt. *imruṣ*, to be distinguished in Assyrian from *marāṣu*, prt. *imras*, 'to be firm, strong.'

14 Translated into Semitic by *marāṣu*.

15 For 'curse,' Sumerian employs *sag-ba* or simply *sag*. *Sag* means lit. 'the throwing,' from the root *sig*; and *ba* means 'to speak,' lit. 'to cast a spell by words.' Another Sumerian technical term is *nam-erim*, the fundamental idea of which is uncertain.

16 The derivation is fixed by *C.T.* xvi. 83, 177, where a demon is called *mutámû*, 'one who utters a rumbling voice,' and rendered in Sum. by *nam-erim*.

quist.[1] A demon or a witch casts the *mamit* upon a man, or the *mamit* falls upon him as the result of any kind of sin. The individual sometimes represents his condition in more ethical terms in the later stages of the religion. 'May the sickness of my body be removed, may the weariness of my flesh be driven away.'[2] 'Calling and no answer have encompassed me.'[3] 'From the days of my youth much have I been bound with torment. Food I eat not, weeping is my nourishment.'[4] Often the gods (both personal gods and others) are said to be angry with the sinner and to have turned away from him. 'His god and goddess are enraged with him';[5] 'The goddess has turned away from me.'[6]

4. Methods of expiation.—Since the fundamental concept of sin is essentially one of demoniacal possession or of a ban and curse, which enfold man like a great net, the method of overcoming the demons or the curse must be magic. It would be not incautious to say that no religion ever existed in which the entire scheme of atonement is so thoroughly based upon magic. No analysis of the ritual of atonement could possibly convey to the reader an adequate idea of its complexity, its comprehension of all the vital elements in a natural and cultured religion, or the extreme beauty of some of its forms. To restore the protecting gods to a man's body, or to restore a man to his protecting gods, is the essential object of the atonement. It follows, then, that he will be restored to favour with all the gods. To free man from the devils, to loosen the ban cast upon him by the powers of evil, is the problem in the ritual of atonement.

Power to overcome the demons and the ban is obtained through the curse given to the priests by Ea, god of Eridu, the ancient seat of the cult of fresh water. Inherently there is no difference between the curse hurled upon man by the demons and wizards and the curse of salvation uttered by the priests in the name of the water-god. The superiority of the latter lies in the superior mystic power of the god himself.

5. The curse.—The technical term for the curse of expiation is *šiptu* in Semitic, a word borrowed from the Sum. root *šib*, 'to cast, hurl.'[7] Ordinarily the rituals employ the term *nam-šub*, lit. 'the casting, throwing.' We do not possess material from the primitive period to give us an insight into the precise origin of the mystic spell revealed by the water-god, but the act of *casting* a spell of Divine power probably consisted in uttering words attended by conventional movements of the hands.[8] This supreme magical formula was known as the curse of Eridu, and had power not only to overcome the bans of the demons, but also to consecrate any object whatsoever.[9] As in the Christian Church the consecrating formula employed for conveying mystic power to the elements of the mass is preceded by the sacred history of its institution, so in the Bab. rituals the curse of Eridu is employed only after the account of its legendary institution. Ea, the water-god, is said to commission his son Marduk with his own power over the demons. Marduk is represented in the person of the magician (Âšipu), whose words are, therefore, really those of the water-god.[1]

The following passage is the earliest known source for the ritual of expiation, and is employed against headache:

> 'Go, my son Marduk, this man the son of his god pacify.
> Bread at his head place, rain-water at his foot place.
> Smite the headache.
> The words of the curse of Eridu utter.
> Of his limbs the ache allay.
> May the headache ascend to heaven like smoke.
> Into the beneficent hand of his god restore the man.'[2]

'The words of the curse of Eridu' have not been recorded on tablets. It may well be that they constituted a sacred formula revealed only by oral instruction in the schools.[3] The word *mamit* (Sum. *sag-ba* and *nam-erim*), which, as we have seen above, often denotes the curse of the demons, may also be used for the curse of the gods. 'With the curse of the earth-spirits[4] I curse thee,' says the priest of incantation to the demon.[5] A quasi-philosophic conception of the curse of Eridu is found among the schoolmen: 'Curse, Curse, concept[6] not to be transgressed.'[7] The consecrating, delivering curse belongs to the water-god only, or to the gods connected with fresh water, as Marduk, son of Ea, Ninahakuddu, daughter of Ea.[8] The curse was then personified, and a hymn (King, *Bab. Magic*, 61) refers to the curse as created with the gods.

6. Curse without ritual.—Only in the later period do we find the priests of incantation depending wholly upon the curse to banish the powers of evil and bring about reconciliation with the gods.[9] The process here may be described as purely intellectual magic. The priest proclaims himself as commissioned by Ea; and, after describing the demons at great length (it was necessary to obtain a clear idea of the nature of the ban before it could be cursed), finally utters the curse of Eridu, following it by an oath that the demon is cursed.[10] This secondary curse, 'Verily, thou art named,'[10] may be sworn to in the name of any number of gods or sacred objects,[11] and serves only as an assertion that the priest has really discovered the name of the demon to be cursed.

7. The ritual elements.—In the ordinary ritual of atonement water, bread, grain, plants, and animal sacrifices are introduced. The reader will note the passage cited above in § 5, where bread and water are placed at the head and feet. In the primitive ritual, water was undoubtedly employed as a means of purification, and applied in one way or another before the curse of Eridu was uttered. The priest seeks to drive the demons into the water, the bread, the grain, or whatsoever element may be employed. When he utters the curse the evil passes into the water, which is then taken away into 'a clean place' or thrown in the byways. Such water, bread, etc., were regarded as

[1] Still another technical term is *arrâtu*, 'curse'; the verb is *araru*, Heb. ארר. The Sum. for *arrâtu* is *aš*, 'ill-will'; and the verb *aš-bal*, 'hurl the ill-will.' Note the idea of *hurling*, *casting*, the basis of all the expressions for cursing in Sumerian.

[2] King, *Bab. Magic*, no. 1, rev. 45.

[3] *Ib.* ii. 3.

[4] Haupt, *Akkad.-sum. Keilschrifttexte*, Leipzig, 1882, 116, 17-20.

[5] IV. R. 29** 14, *zinû itti-šu*.

[6] IV. R. 10*a*, 53, *eliia isbusu*; cf. Craig, *Religious Texts*, Leipzig, 1895, i. 13, 5=ii. 7, 8.

[7] So first Paul Haupt.

[8] Morgenstern supposes that the idea of *casting* refers to the sprinkling or throwing of water; but this is highly improbable. None of the terms employed has any reference to water; on the other hand, they almost universally refer to the casting of *words*.

[9] Thus water is consecrated with mystic power by repeating the holy curse over it (IV. R. 22*b*, 12).

[1] Sumerian possesses other words for *šiptu*, viz. *tú*, *mŭ*, *én* *sag-ba*, and *nam-erim*. Of these the two latter may refer either to the curse of life uttered in the name of the gods, or to the curse of the demons (see above, § 3). Both *tú* and *mŭ* refer to a method of speaking. The original idea inherent in the word *én* is obscure (see Langdon, *Sum. Gram.*, Paris, 1911, pp. 213, 268).

[2] *Babyloniaca*, iii. 16.

[3] Probably the formula was simply *zi den-ki-ka-ge ge-pad*, 'By the being of Ea thou art named.'

[4] Anunnaki, spirits of the nether sea, who guard the waters of life in Hades.

[5] *C.T.* xvi. 12, ii. 3.

[6] *Uṣurtu*, 'outline,' the form or concept of a thing.

[7] *C.T.* xvii. 34, 1.

[8] Called 'lady of the curse' (Haupt, *Akkad.-sum. Keilschrifttexte*, 105, 32, and cf. *Babyloniaca*, iii. 28).

[9] As in *C.T.* xvii. 34-6 and the *Utukku limnûti* series.

[10] Lit. 'thou art spoken against' (*tamâta*; Sum. *ge-pad*, 'be thou named').

[11] *C.T.* xvi. 13*a*.

extremely dangerous and capable of exercising a ban upon any one who touched them or even looked at them. On ancient seals the sinner is often represented bringing a goat as an offering, and not infrequently the rituals mention lambs of sacrifice, which appear to have been divided between the priests and the gods. At any rate, neither the blood of the victim nor the sacrifice itself plays any essential rôle in the mystery of expiation.[1] The technical term for putting the elements to the body is *teḫû* (Sum. *teg*), and for removing them *kuppuru* (Sum. *gur*).[2] The bread, water, plants, etc., into which the curse had driven the powers of evil, are called *takpirtu*. *Kuppuru* then developed the sense of 'purge,' 'purify,' *atone*.[3]

8. Scape-goat.—Expiation by means of the scape-goat[4] is often met with. Ea says to Marduk:

'Go, my son Marduk. A man has been seized upon by a ban. Take a scape-goat. Its head to his head put. The king son of his god atone.[5] The venom (of the ban) into its mouth (of the scape-goat) may be cast. May the man[6] be pure, be clean.'[7]

In another ritual a small pig is dismembered, and its parts are applied to the patient, who is washed in holy water and incensed with the censer.[8] In this ritual the pig is said to be a *substitute*[9] for the man. In another ritual the scape-goat is called the image of the man (*nig sag illû*).[10]

9. Sympathetic magic.—In certain rituals, especially those of the fire-cults (*Maḳlu* and *Šurpu*), small images of the sorcerers who have put a man under a ban are destroyed in fire; or tamarisk, dates, onions, etc., are torn and thrown into the fire, attended by prayers that the ban and those who have worked it may likewise perish. In these cases the prayer is said by the patient, and the priest utters the curse of Eridu.

10. Penitential prayers and confession.—Gradually a more ethical element is worked into the rituals of expiation by requiring the sinner to repeat a psalm of adoration to one or several of the gods while the priest performs various acts of the ritual. These prayers are commonly known as 'Prayers of the lifting of the hand,' a scene often represented on seals of the classical period. It is precisely here that the Babylonian religion reaches its highest spiritual development. 'My heart is distressed and my soul faileth. I cry unto thee, O lord in the pure heavens. Faithfully look upon me, hear my supplication,' says the penitent in a prayer to the moon-god.[1] 'May my sin be undone, my frivolity forgotten. May the good genius, the good spirit walk beside me. May evil mouth and tongue stand aside. Before thee I will walk and sing thy praise.' So run the closing lines of a prayer to the god of the new moon.[2] It is probable that sinners read a tablet of their sins before the gods, and that the tablet was then broken in sign that their sins were forgiven. This form of the ritual finally freed itself from magic, and the sinner depended entirely upon confession and prayer in the so-called penitential psalms. The significant act of atonement in this form of the ritual is the appeal of the sinner to various gods to intercede for him with the god whose anger he wishes to appease. Forgiveness is here expressed by the phrase 'remove my sin,' or 'turn thy face unto me,' or 'may thine anger return to its place.'

It will be seen that Bab. religion identifies sin and disease in all its stages, and that atonement and reconciliation depend largely upon magic. The atoning power of sacrifice is a negligible factor, and in any case is not original. The ritual tended to the production of a beautiful literature, and in many cases to symbolic acts of great spiritual power. Finally, the ritual led up to penance and prayer, in which appeal is made directly to the gods.

LITERATURE.—K. L. Tallqvist, *Die assyr. Beschwörungsserie Maqlu*, Leipzig, 1895 (=*Acta Soc. Scient. Fennicæ*, vol. xx. no. 6); H. Zimmern, *Die Beschwörungstafeln Šurpu*, Leipzig, 1900, also *Ritualtafeln*, Leipzig, 1900; J. Morgenstern, *The Doctrine of Sin in the Bab. Religion*, Berlin, 1905; W. Schrank, *Bab. Sühnriten*, Leipzig, 1908; C. Fossey, *La Magie assyrienne*, Paris, 1902; M. Jastrow, *Die Religion Babyloniens und Assyriens*, Giessen, 1905 ff., chs. xvi.–xvii.; L. W. King, *Bab. Magic and Sorcery*, London, 1896; P. Dhorme, *La Religion assyr.-bab.*, Paris, 1911, p. 282 ff.

S. H. LANGDON.

[1] References to the use of blood as a means of expiation are rare. In *C.T.* xvii. 5, 51 the blood of a pig is applied to the side of a bed on which a sick man lay; and in Zimmern, *Ritualtafeln*, no. 26, iii. 20, the blood of a kid is mentioned.

[2] See *ExpT* xxii. [1911] 320–325.

[3] In addition to the special article in *ExpT*, *l.c.*, regarding *kuppuru*, the Babylonian technical term for 'atone,' the present writer would make the following explanatory statement, which must be categorical here. Students of Hebrew who naturally look to Assyriology for a definite statement regarding the meaning of this word should remember that the Babylonians translate the Sumerian word *gur* by *kuppuru*. Now there is not the least doubt that the technical word for 'atone' in Sumerian means 'turn away, remove.' In regard to *kuppuru* the writer is of the opinion that, although the Babylonians employed this word with emphasis upon the *removing* of the objects which had magically absorbed the curse and the uncleanliness, the root meaning involves both the ideas of *cover* and *remove*. The Babylonian ritual gives us, we think, the clue for fixing upon this Semitic conception of atonement from which both Babylonian and Hebrew started. We take the root *kapāru* to mean fundamentally, 'wash away with a liquid'; *apply* and *wipe away* are two concepts inherent in this root, and, although Babylonian appears to have lost almost completely the idea of applying or covering, yet Hebrew has apparently retained traces of it, certainly in Gn 32[21].

[4] The technical word for 'scape-goat' is *mašḫuldubbû*. On the entire subject of the scape-goat in Babylonian religion, see *ExpT* xxiv. [1912] 9.

[5] *U-me-te-gur-gur*=*kuppir*, i.e. 'take the scape-goat away.'

[6] Here the king.

[7] Haupt, 105.

[8] In this ritual [*C.T.* xvii. 6], fourteen baked cakes are placed at the outer gate of the house.

[9] *Pûḫu*.

[10] *C.T.* xvii. 37, K. 4859. There is another reference to the scape-goat in Craig, *Religious Texts*, i. 18. 8. A scape-goat is also used to purify a sanctuary; and he who carries it away to the fields is unclean for seven days (*RAssyr* viii. [Paris, 1911] 49). Likewise in another ritual, for freeing a house from a ban, he who carries away the water used in the handwashings is unclean seven days (IV. R. 59, no. 1, rev. 8).

EXPIATION AND ATONEMENT (Buddhist).—In the sense in which these terms are used in Christian theologies, the ideas of expiation and atonement are scarcely, if at all, existent in Indian religions. This holds true especially of Buddhism, constructed without dependence on a deity, and profoundly influenced by the Indian theory of *karma* (*q.v.*). According to the theory of *karma*, as current, it is generally agreed, just before the rise of Buddhism, the fate of a man's soul, in its next birth, was determined by the man's *karma* (lit. 'doing') in this birth. The soul was supposed, in this stage of the theory, to be a very minute creature residing in the cavity of the heart, and resembling in every respect (except in size and in the absence of a soul within it) the visible man. Like a man's, its outward form was material, consisting of the four elements and heat; like a man, it had anger, desire, quality, and other mental traits.[3] This hypothesis of a soul was rejected by Buddhism; but in other respects it adopted and systematized the *karma* theory, and made it one of the foundation-stones of its ethical theory. *Karma* became for it an inexorable law, working by its own efficacy, subject to no Divine or human interference, and resulting in an effect following without fail upon every deed, word, and thought. As to what effect followed on what deed opinions differed (see KARMA). But on the main fact of *karma* all Buddhist schools are agreed. They held that the *karma* and its *vipāka* (the act and its result) were inextricably interwoven; that no exception by way either of expiation or of atonement was either possible or desirable; and that the contrary doctrine, an explaining away or denial of *karma*, was pernicious, immoral, a bar to religious progress.

[1] King, *Bab. Magic*, no. 6, 60–62.

[2] *Ib.* 31–34.

[3] See Rhys Davids, 'Theory of the Soul in the Upanishads,' in *JRAS*, 1899.

The passages in the canonical books in support of the above doctrine are so numerous that only a small selection can be given.

In *Sutta Nipāta*, 666, the Buddha is reported as saying: '*Karma* is never destroyed, not any one's.' So also an elder[1] is made to say, at *Thera Gāthā*, 144: 'The *karma* a man does, be it lovely, be it evil, that is his inheritance, whatsoever it may have been that he has done.' At *Aṅguttara*, i. 286, it is said: 'Of all woven garments, brethren, a hair shirt is known as the worst. In hot weather it is clammy, in cold weather chilly; it is ugly, evil-smelling, grievous to the touch. Just so, brethren, of all the doctrines commonly known among those of the recluses, that of Makkhali of the Cow-pen is the worst; for that foolish one is of opinion that there is no *karma*, no action, no energy.'[2]

Yet, notwithstanding this uncompromising attitude as to the result of any act done, there are two cases in early Buddhism in which, at first sight, there seems to be some mitigation possible. The first is where a *bhikkhu* is forgiven for a breach of a by-law of the community; the second is in the matter of a *patti-dāna*, or transfer of merit.

The rules as to the first case are translated in *Vinaya Texts*, ii. 339 ff. and iii. 61–65. Stated quite shortly, they amount to this. If a breach of the rules had been reported to the local chapter, the chapter could, under certain conditions, suspend the offender from certain privileges. On his submission, a motion could be brought forward, at a subsequent meeting of the chapter, for rehabilitation. By leave of the chapter the offender was brought in, and, on his acknowledging his offence, the chapter, through the mouth of the mover of the motion, 'took the offence back' (as the standing expression is). Sometimes the Buddha himself, without the matter being laid before a chapter, 'took back' an offence (see, for instance, *Saṁyutta*, i. 128). But in all such cases the offence, it should be noted, is purged only as regards the Order. The law of *karma* is not broken. The *karma* of the offence will work out its inevitable result independently of the fact that the offence, so far as the Order is concerned, has been expiated.

The other apparent exception, the *patti-dāna*, or transfer of merit, is interesting as showing development in doctrine. The belief is not found in the Nikāyas themselves, only in the commentaries upon them.[3] In the latter, however, it is taken so completely for granted that it must have grown up some considerable time before they were written in the 5th cent. A.D.; and, if the present writer's note in *Questions of King Milinda*, ii. 155, be correct, the idea (though not the technical phrase for it) must be as old as the *Milinda*, that is, probably, as old as the 2nd cent. A.D. *Patti* means 'attainment,' 'accomplishment.' To have done a good deed was to have attained the good result that would inevitably follow. By the law of *karma* that result would accrue to the benefactor (to him who has done the good act) either in this or in some future birth. The doctrine of *patti-dāna* (lit. 'gift of the *patti*') was that the benefactor could so direct the *karma* that it would accrue not to his own benefit, but to that of some one else whom he specified. That this amounts to an interference by human will in the action of *karma* cannot, we think, be disputed. And, if the merit of a good action can be thus transferred, it would seem to follow logically that the result of an evil deed could also be transferred. All this brings us very nearly, if not quite, to the Christian doctrine of atonement, of the imputation of righteousness. The Buddhist might deny this; and would point out, quite rightly, that such transfer of merit was supposed possible only in the case of certain good actions of a minor sort. In fact, the *patti-dāna* is most frequently found in the colophons to the MSS, the copyist giving expression to the pious hope that the merit of his having completed the copy may redound to the advantage of all beings. And in other cases, in the stories told in the commentaries, the act of which the merit is transferred is usually the gift of a meal to a *bhikkhu*, the placing of a white flower at the foot of the monument to a departed *arahant*, kindness to animals, or some such simple act of piety.

It is noteworthy that the transfer of merit is usually from a good Buddhist to a non-Buddhist, and that the latter is usually a friend or relation of the benefactor. There is no instance of a good Buddhist desiring or accepting any transfer of merit to himself.

EXPIATION AND ATONEMENT (Christian).—**1. Scope of the article.**—It is the purpose of this article to trace the history of the doctrine of the Atonement on Christian soil, to distinguish and classify its most important forms, to show their historical antecedents and relations, and to estimate their significance.

The word 'atonement' may be used in two senses: either as a synonym of reconciliation (at-one-ment), or to denote the 'satisfaction or reparation made for wrong or injury, either by giving some equivalent or by doing or suffering something which is received in lieu of an equivalent' (*Cent. Dict.*). It is in the latter sense that the term has been commonly employed in theology. By the Atonement is meant the satisfaction made by Christ for the sins of humanity, however that satisfaction may be conceived in detail. Since the purpose of Christ's atoning work is to reconcile sinners to God, it is not unnatural that some modern theologians should have returned to the original meaning of the word, and maintained that in theology also the true meaning of atonement is reconciliation rather than satisfaction. Such an identification of the process and the result is, however, a departure from the historical usage; and in what follows we shall understand the word in its more technical sense as signifying the action taken by Christ to bring about reconciliation between God and man, rather than the reconciliation itself.

In the sense in which the Atonement has been commonly understood in later theology, both Roman Catholic and Protestant, namely, as an objective satisfaction made by Christ to the Father to secure the forgiveness of man, the doctrine was first clearly formulated by Anselm in the 12th cent. in his famous tract *Cur Deus Homo*. Long before this time, however, the death of Christ had been made the subject of explicit reflexion by Christian theologians; and the answers which they gave to the question why Christ died on Calvary form the necessary introduction to the history of the doctrine of the Atonement. These answers begin within the NT itself, and the rich material which is there contained has proved the point of departure for later speculation.

2. The Biblical basis.—The conceptions which the NT writers bring to the interpretation of the death of Christ fall into five main groups.

(1) The simplest answer finds a sufficient reason for Christ's death in the fact that it took place in fulfilment of OT prophecy. This is the explanation given by St. Peter in Ac 3[18], where no attempt

[1] On the technical meaning of this epithet, see ELDER (Buddhist).
[2] Cf. the note in Rhys Davids, *Dialogues of the Buddha*, London, 1899, i. 76.
[3] *Jātaka* Com. ii. 112; *Dhammapada* Com. 161, 402.

is made to explain why the suffering was necessary. It is enough to know that it was foretold in the sacred book in which the Divine will for man is revealed (cf. Lk 24[25f.]).

(2) A more speculative interpretation is suggested by Jesus' own words in Mt 26[28]. Here the Master compares His death to a covenant-sacrifice sealing the relation between the disciples and God under the new dispensation, as the Paschal lamb marked the union between the Israelites and God under the old. This conception is most fully developed in the Epistle to the Hebrews, where the death of Christ is regarded as at once the fulfilment and the abrogation of the OT sacrificial system. As the High Priest of the New Covenant, Jesus enters the Holy of Holies (*i.e.* the immediate presence of God), not with the blood of bulls and of goats, but with the perfect sacrifice of His own life-blood (He 9[11-28]), and hence exhibits a type of the true spiritual sacrifice with which alone God is well pleased (13[15f.]). This sacrificial conception underlies the Anselmic doctrine of the Atonement, though in association with other ideas drawn from a different source.[1]

(3) A third interpretation, also suggested by Jesus' own words (Mk 10[45]), sees in the death of Christ a ransom or purchase price by which His disciples are delivered from the bondage into which they have been brought by sin. The comparison is suggested by the provision made in the Law for the enfranchisement of slaves upon the payment of certain specified sums of money, or by the familiar custom of the ransom of prisoners taken in war. What these money payments accomplished in delivering those in bondage from temporal captivity, that the death of Christ is conceived to effect in securing the deliverance of transgressors from the deadlier bondage of sin (cf. 1 Co 6[20] 7[23], 1 P 1[18f.], Tit 2[14], Eph 1[14]). This idea re-appears in the later history, in the Patristic interpretation of the death of Christ as a ransom paid by God to Satan.

(4) A different explanation again is that which interprets Christ's death after the analogy of the bloody expiation exacted by justice from those who have been guilty of wilful sin (*e.g.* 1 K 2[31]). The idea of expiation through suffering is a very ancient one. Where a wrong has been done for which the ceremonial system affords no remedy, atonement must be made by the death of the offender or his substitute. This conception finds striking expression in 2 S 24 (cf. 1 Ch 21), where David's sin in numbering the people is atoned for by a pestilence in which seventy thousand of the people perish. It is the pre-supposition of the well-known passage in Is 53, in which the stripes of the righteous servant are the means by which the wicked are healed. In the NT it has its most signal illustration in the Pauline conception of the Crucifixion as the voluntary acceptance on Christ's part, as a result of His self-identification with humanity, of the consequences in suffering, shame, and death to which their own sin had made them liable. This conception re-appears in the later history, in the various forms of the so-called Penal Theory of the Atonement.[2]

(5) In the theology of St. Paul, however, this interpretation of the death of Christ is only one side of his teaching. It is not the death conceived by itself alone which has redemptive significance to St. Paul, but the death as a part of the entire process of the Divine self-identification with humanity, which makes it possible for believers here and now to become partakers of the Divine life of the Christ, and so sharers in His triumph and resurrection. To St. Paul, Christ is not simply the passive Sufferer; He is the conquering Lord, and the benefits both of His suffering and of His conquest are mediated to His disciples by the mystic union with Him which is brought about by faith.

The connexion between the death and the incarnation of Christ is made even closer in the Fourth Gospel. To St. John the suffering of Christ is but an incident in that self-identification of the Divine Word with humanity which constitutes His true redemptive work. It is not the death so much as the life of Christ that has saving power, and Calvary is important not so much for the specific function which it fulfils of itself, as because it is the supreme proof of the completeness of our Lord's subjection to all the conditions of human life.

The contrast just suggested is of importance for the later history. As we follow the interpretation of Christ's death through the centuries, we find two main types of thought predominating. According to the first, the death of Christ is an incident in His incarnate life; according to the second, it is the end for which incarnation takes place. The former is characteristic, on the whole, of the theology of Greek Catholicism; the latter, of that of Roman Catholicism and of Protestantism.

3. The Atonement in Greek theology.[1] — In order to understand the interpretation of Christ's death in Greek theology, we have to bear in mind the general conception of redemption, of which it forms a part. To the Greek, unlike the Latin, the supreme evil from which man needs to be delivered is not guilt, but corruption. Through sin, humanity becomes subject to the law of death. The mind is darkened through ignorance, and the entire nature, as mortal, is destined to destruction. What is needed for the salvation of man, therefore, is not simply forgiveness, but a new transforming power which shall enlighten the mind by the revelation of truth, and transform that which is corrupt and mortal into incorruption. Such a Divine and transforming power entered humanity through the Incarnation. In Christ very God Himself became man, that by partaking of the limitations and sufferings of His human children He might transform them into the likeness of His glorious and Divine life. In the well-known words of Irenæus, 'He became what we are, that He might make us what He is' (*adv. Hær.* v., Preface ['Ante-Nicene Fathers,' ix. 55]).

This conception of redemption finds its classical expression in Athanasius's tract on the Incarnation of the Word (Eng. tr. in 'Nicene and Post-Nicene Fathers,' 2nd ser., iv. 36 ff.). Discussing the problem of redemption, Athanasius asks why it was necessary for man's salvation that God should become man, and answers that it was because thus only could man receive the new life which was the indispensable condition of his salvation. If it were simply a question of guilt, forgiveness might suffice if there were adequate penitence, but forgiveness alone could not deal with the radical corruption of nature which had been produced by sin (vii. 2-4). For this the Incarnation alone was the remedy (xiii. 7). In the Incarnation, Christ became partaker of a complete human experience. He shared our sufferings and limitations; He died the death which was our just due, and so opened the way for us to a share in His Divine and glorious life (viii.). As, when a great king takes up his abode in a lowly village, all the houses share the honour which is conferred by his presence, so all humanity shares the benefits of the Incarnation, and for all a way of salvation and hope is opened (ix. 3, 4). This way of hope is provided through the Resurrection, in which the power of Christ over death is made manifest, and the promise of a like immortality assured to all who put their trust in Him (xxx.-xxxii.). The convincing proof of this victory is found in the fact that Christians—even the weakest of them—no longer fear death, but 'leap to meet it,' preferring it to life on earth (xxviii. f.).

[1] Cf. Ménégoz, *Théol. de l'Ep. aux Hébreux*, p. 231.

[2] On the connexion between the ideas of expiation and of sacrifice, cf. the illuminating discussion of G. F. Moore (art. 'Sacrifice,' in *EBi* iv. 4232 f.).

[1] The references to the Atonement in the ante-Nicene Fathers are discussed by Oxenham (*Catholic Doctrine of the Atonement*, pp. 114-140), and Scott Lidgett (*Spiritual Principle of the Atonement*, p. 420 ff.).

It is clear from this brief review that the death of Christ holds a very different place in this theology from that which it does in the later teaching of the Western world. To Athanasius, as to St. John, death is an incident in the saving work. It is the Incarnation as such that is redemptive. The death takes place because it is a part of the common lot of humanity, which the Redeemer must share. It is described in Biblical language as the payment of a debt (xx. 2), but no theory of its efficacy is given in detail, nor is any of the analogies suggested in the Scripture pressed to its legitimate conclusion.[1]

So far as we find explicit reflexion upon the death of Christ in the Greek Church, it follows the line of the third figure above referred to. In the writings of Origen[2] and of Gregory of Nyssa, as of Irenæus[3] before them, the death of Christ is interpreted as a ransom paid by God to Satan in order to secure the redemption of humanity, which has been brought under his dominion by sin. The theory is differently developed by different writers. Sometimes the right of Satan to the possession of his captives is admitted, and the death is interpreted as a ransom due to the devil on grounds of justice;[4] in other cases this right is denied, and the method actually followed is explained on grounds of fitness, or of God's graciousness in being unwilling to take by force that which was rightfully His.[5]

Gregory of Nyssa regards the deliverance of man as having been secured by deception on God's part, Satan being deceived by the humble appearance of the Redeemer into supposing that he had to do with a mere man, and finding too late that the Deity whose presence he had not perceived escaped his clutches through the Resurrection. This deception he justifies on the ground that it was only paying the devil his due, since he 'effected his deception for the ruin of our nature'; but God, 'Who is at once the just, and good, and wise one, used His device, in which there was deception, for the salvation of him who had perished, and thus not only conferred benefit on the lost one, but on him, too, who had wrought our ruin' (*Great Catechism*, ch. 26, Eng. tr. 'Nicene and Post-Nicene Fathers,' 2nd ser. v. 495).

Fanciful as this theory appears to us to-day, it exercised a great influence, and continued for many centuries to be the prevailing interpretation of the death of Christ. From the Greeks it passed to the Latins, numbering among its adherents such men as Augustine,[6] Gregory the Great,[7] Bernard of Clairvaux,[8] and Peter Lombard.[9] Often the presentation is extremely fanciful, as when Gregory compares our Lord's humanity to the bait placed upon the hook of His divinity (*Moralia*, xxxiii. 7, Eng. tr., Library of Fathers, Oxford, iii. 569), or when Peter Lombard describes the Cross as a mouse-trap baited by our Lord's blood (*Liber Sententiarum*, III. Dist. xix. 1). Yet, it would be a mistake to regard this theory as a mere idle speculation. To the men who held it, it expressed a genuine conviction, and the fact that it secured the endorsement of such teachers as Origen and Augustine shows that it had its roots deep in experience. It is the most signal illustration of the dualistic conception of the world which played so great a rôle in the early history of Christianity—a conception which led in the realm of speculation to the various mediating theories of a Demiurge or Logos, and in the world of practice to monasticism and the ascetic life. To the early Christian theologians, Satan and his angels were very real existences, and a redemption which delivered mankind from the power of the devil was the supreme need of man.[1]

Yet, important as is the place held in history by the theory of a ransom to Satan, it would not be true to say that it is the only point of view represented in the Greek Church. The Greek theology, like that of the later Church, had its different schools of thought, and no single formula can express the point of view completely. If there had been no other influence at work, the study of Scripture, with its varying interpretations of our Lord's death, would have prevented uniformity of statement. So we find different theologians using different figures, and even the same theologian varying his language at different times. The germs of the Moral Influence Theory are found in Irenæus (*adv. Hær.* v. i.), and of the Satisfaction Theory in Origen (*in Num.* hom. xxiv. 1; cf. hom. *in Joann.* xxxviii. 20). Tymms[2] finds in Gregory of Nazianzus anticipations of the Governmental Theory later developed by Grotius; while Origen, in his profounder teaching, regards even the Incarnation itself as but a sort of picture-teaching, through which the Divine Logos prepared the way for that higher insight into truth which constitutes man's true redemption.[3] Thus all the points of view which reappear in the later history are found in germ in the Greek theology.

4. The Atonement in Latin theology.—Latin theology took over from the Greeks the conception of salvation through incarnation; but, in contrast to the Greeks, the Latins found the evil from which man needed deliverance not so much in corruption as in punishment. Where the Greeks thought of God as the Ultimate Reality, the Latins regarded Him as the Supreme Lawgiver or Judge. Hence the death of Christ acquired in Roman theology an independent significance which it did not possess in that of the Greek Church. It was the Divinely appointed atonement for the guilt of man's sin, and incarnation took place primarily in order that this atonement might be wrought. While this theory first finds clear and consistent expression in Anselm's *Cur Deus Homo*, it has its antecedents in the earlier history. Among these may be mentioned Augustine's development of the concept of original sin in his anti-Pelagian writings, and the application of the concept of satisfaction to the problem of forgiveness by Tertullian and Cyprian.

Augustine agrees with Athanasius in his concept of sin as inherited corruption. He differs from the Greek theologian in the emphasis which he places upon the guilt of this sin. It is not mortality, as such, from which man needs to be

[1] Athanasius speaks of the death on the cross, in Pauline fashion, as necessary, in order that Christ might 'bear the curse laid upon us' (xxv. 2); but the context shows plainly that his interest lies along other lines. He tells us that a public death was necessary in order that the Resurrection might be openly established (xxiii.); that the outstretched hands on the cross typify the bringing together of Jews and Gentiles (xxv. 3, 4); that it was fitting that He die in the air, since the purpose of His death was to defeat the prince of the power of the air (5, 6). It is clear that the death, as such, apart from the Resurrection in which it issues, holds no central place in Athanasius's thought. On Athanasius's teaching, cf. Moberly, *Atonement and Personality*, pp. 348–365.

[2] On Origen's view, cf. Scott Lidgett, 432 ff.; Oxenham, 134 ff.; Moberly, 315 ff.

[3] On Irenæus, cf. Scott Lidgett, 430 ff.; Oxenham, 130; Moberly, 343 ff.

[4] So by Augustine, *de Trinitate*, bk. xiii. ch. xiv.

[5] Cf. Irenæus, *adv. Hær.*, bk. v. ch. i.

[6] *de Trinitate*, bk. xiii. chs. xii.–xv.

[7] *Moralia in Librum Job.*

[8] 'Tractatus ad Innocentium II. Pontificem contra quaedam capitula errorum Abaelardi' (*Ep.* 190).

[9] *Liber Sententiarum*, III. dist. xix.

[1] An interesting parallel to the theory of a ransom to Satan is found in Marcion's view that the death of Jesus was a price paid to the God of the Law by the God of grace, in order to secure the redemption of sinners (cf. Burkitt, *The Gospel History and its Transmission*, London, 1906, p. 298 ff.). Tymms (*The Christian Idea of Atonement*, 1904, p. 22) finds in Marcion 'the truest precursor of Anselm in the Ante-Nicene period.'

[2] *Op. cit.* p. 31. The passage in question (wrongly cited by Tymms as xlii. 48) occurs in *Orat.* xlv. 22, where Gregory, after rejecting both the idea that the death of Christ was due to Satan, and that it was required by the Father, accounts for it as necessary to secure the accomplishment of the Divine plan of salvation (οἰκονομία); cf. Ullmann, *Gregorius von Nazianz, der Theologe*, Darmstadt, 1825, p. 456 f.

[3] Cf. W. Adams Brown, *Essence of Christianity*, 1903, p. 66 f.

delivered so much as the separation from God, which is the judicial consequence of his sin. Through the fall of Adam all mankind has become guilty in God's sight, and is justly exposed to His wrath and curse. So great was the guilt of this sin that it has involved all his descendants in a common doom, and, apart from Christ's redemption, even infants dying in infancy are justly condemned to eternal punishment.[1]

A further preparation for Anselm is found in the development of the theory of satisfaction by the earlier Latin theologians, notably Tertullian and Cyprian. According to their teaching, it is possible for man by good works to make satisfaction to God for the sins which he has committed. Tertullian (*de Baptismo*, xx.; cf. *de Oratione*, xxiii.) holds that such satisfaction should precede baptism, while Cyprian contends that it is a remedy for sins committed after baptism (*de Lapsis*, 36). While they did not apply the concept of satisfaction to the death of Christ, their teaching undoubtedly prepared the way for Anselm's theory by making men familiar with the world of thought in which it moves,[2] and, in connexion with similar ideas which had grown up independently on German soil, provided the forms through which his doctrine found natural expression.[3]

Anselm's theory, as is well known, is set forth in his treatise, *Cur Deus Homo*.[4] The title explains the purpose of the book. The words *Cur Deus Homo* should be translated, 'Why a God-man?' not, as they are often rendered, 'Why did God become man?' It is the problem of Christ's Person that engages Anselm's thought. He wishes to know not simply why incarnation took place, but why Christ must unite in a single person the two natures, Divine and human. Why could not God or man alone have answered the purpose just as well? Why was it necessary that there should be a God-man? The answer, in a word, is that it was necessary in order to make possible the Atonement. Only thus could a person be constituted who could render to God the satisfaction necessary for man's sin, and so make possible the redemption which he desired.

The work, which takes the form of a dialogue between the writer and his disciple Boso, begins with an examination of objections to the doctrine of the Atonement, as well as of earlier theories which Anselm rejects as inadequate. Among these is the theory of a ransom to Satan. Anselm finds no reason in justice why God was under any obligation to Satan, in the case of man, which prevented Him from redeeming him by force, if that were necessary (bk. i. ch. vii.). In contrast to this view, Anselm maintains that Christ's Atonement concerns God and not the devil. Man by his sin has violated the honour of God and defiled His handiwork. It is not consistent with the Divine self-respect that He should permit His purpose to be thwarted. Yet this purpose requires the fulfilment by man of the perfect law of God, which by his sin man has transgressed. For this transgression, repentance is no remedy, since penitence, however sincere, cannot atone for the guilt of past sin (bk. i. ch. xx.); nor can any finite substitute, whether man or angel, make reparation. Sin, being against the infinite God, is infinitely guilty, and can be atoned for only by an infinite satisfaction. But this no finite creature can pay (bk. i. ch. xxi.).

Here, then, is the situation: either man must be punished and so God's purpose fail; or else finite man must make an infinite satisfaction, which is impossible. There is only one way of escape, and that is that some one should be found who can unite in his own person the attributes both of humanity and of infinity. This consummation is brought about by the incarnation of Christ. In Christ we have one who is very man, and can therefore make satisfaction to God on behalf of humanity, but who is at the same time very God, and whose person therefore gives infinite worth to the satisfaction which He makes (bk. ii. ch. vii.).

But why, it may be asked, the necessity for the death of Christ? Why could not the life alone atone? Here we reach the most original part of Anselm's theory. The life of Christ, according to Anselm, however perfect, is not available for the purpose of satisfaction, because, as man, Jesus' duty is to do right, and, when He has done all, there is no merit to spare. Not so with His death. This, which, in the case of other men, is the judicial consequence of sin, is, in the case of Christ, the sinless God-man, a work of supererogation—a voluntary offering or sacrifice not due to God, which He freely gives in exchange for the forgiveness of man. This death voluntarily borne when it was not due is the infinite satisfaction which secures the salvation of man (bk. ii. chs. x. and xiv.).

The analogy between this theory and that of a ransom to Satan is obvious. In each case man's deliverance is secured by the acceptance, on the part of the one whose rights need to be conserved, of a substitute which he considers an equivalent in value. But, in the former case, it is the devil whose rights need to be protected; in the latter, it is God. In the former case, again, the satisfaction which is offered, while great in value, is not necessarily infinite, since Satan, as creature, is himself a limited being, whereas in the latter case it is the essence of the theory that the satisfaction rendered should be of infinite value. So far as the infinity of Christ enters into the former theory, it is as an element in the deception which is practised upon Satan. Had he perceived our Lord's Divinity, he would never have consented to the substitution. Humanity was the bait, Divinity the hook, on which Satan was caught. In Anselm's theory, on the other hand, it is Divinity which gives the atoning sacrifice of Christ the priceless worth in God's eyes, through which alone man's redemption is made possible.

There is so much in Anselm's theory which, from our modern point of view, is fanciful and unreal that it is easy to overlook its true significance in the history of doctrine. This is to be found in its clear perception of the fact that that which gives value to the death of Christ is not its penal quality as suffering, but its moral quality as obedience. Christ is not punished for our sins, as in the later Penal Theory; His death is rather a precious gift brought to God, having its value in the spirit of self-sacrifice by which it is inspired. Thus, in spite of the later connexion between Anselm's theory and that of the Reformers, the two belong to distinct types. Anselm's theory, as Ménégoz[1] has rightly shown, is a development of the sacrificial theory of the Epistle to the Hebrews, and has close points of contact with the later ethical satisfaction theories. The Reformers, on the other hand, reject the alternative, which is the major premiss of Anselm's argument, and deny that satisfaction can ever be admitted as a substitute for penalty. This fundamental difference has been obscured by the familiar usage which classes Anselm's and the Reformation theories together as theories of satisfaction.

Few treatises of equal length have exercised so great an influence on the history of thought as the *Cur Deus Homo*. Apart from its influence in Protestantism, of which we shall speak presently, it provided the theoretical basis for the practice of indulgences, which in Anselm's time had already begun to assume substantial proportions. Through the death of Christ, there is laid up a store of supererogatory merit which is available for the remission of the penalties incurred for sins committed after baptism. The administration of this deposit is entrusted to the Church, and is exercised by her through the penitential system. The whole conception of works of supererogation, which fills so great a rôle in the theology of the later Roman Catholicism, has its most signal illustration in the death of Christ. What Christ did in voluntarily submitting to a death which was not His due, gives an example which the saints are to imitate, who thus by their good works increase the store of merit which the Master has begun.

In the later Roman Catholic theology the theory

[1] In his treatment of the death of Christ, Augustine follows the lines laid down by earlier theologians. While different points of view appear in his writings, the theory of a ransom to Satan may be taken as his prevailing view (*de Trinitate*, bk. xii. x.–xv.; cf. Scott Lidgett, 435–441).

[2] Cf. Harnack, *Dogmengeschichte*, iii. 341 (Eng. tr. vi. 54).

[3] On the influence of the Germanic law on the doctrine of satisfaction, cf. Harnack, iii. 288 ff. (Eng. tr. v. 323 ff.).

[4] Eng. tr. by Deane (*St. Anselm*, Chicago, 1903, p. 178 ff.). On Anselm's theory, cf. Harnack, iii. bk. ii. ch. vii. 4 (Eng. tr. vi. 54 ff.); G. Blot, *Étude comparative de l'idée de satisfaction dans le Cur Deus Homo de St. Anselme et dans la théol. antérieure et postérieure*,

[1] *Op. cit.* p. 231; cf. p. 237.

of Anselm is modified at two points. In the first place, the conception of supererogatory merit is extended beyond Christ's death to take in His life of service. In the second place, the principle of strict equivalence, so fundamental to Anselm, is abandoned in favour of a theory which makes the efficacy of the Atonement depend upon the gracious acceptance of God rather than upon its own inherent merit. The first of these changes meets us in the theology of Thomas Aquinas;[1] the second is characteristic of the Scotist theology, and gives rise to the so-called Acceptilation Theory of the Atonement.[2] Both changes have their parallels in the theology of Protestantism.

Contrasting the theology of the Roman with that of the Greek Church, we are struck by the greater prominence of the legalistic element in the former. The older realistic conception of salvation is not denied; it is, indeed, the assumption of the later development, but its significance is altered. Baptism and the Eucharist lose their central position as the sacraments *par excellence*, and become part of a complicated system in which penance and indulgence are the controlling elements. The Eucharist is no longer, as in the Greek Church, a mystic rite through which we become partakers of the incorruptible nature of the Divine Christ; it is the repetition of the sacrifice of Christ upon the cross, and a means of increasing the store of merit which is available for the remission of sins.

Yet here, again, we must beware of too hasty generalizations. In the Roman Church, as in the Greek, many points of view were represented, and no single type of thought adequately expresses the wealth of teaching which its theologians present. In the theory of Scotus, as in the earlier teaching of Gregory of Nazianzus, we have a recognition of principles which reach their full development in the Governmental Theory of the Atonement. Abelard, in his commentary on Romans,[3] anticipates, with a clearness which is remarkable, the later Moral Influence Theories; while in the writings of the mystics, as in Origen's teaching of old, all external media fall away, and salvation is sought and found in the immediate vision of God.[4]

5. The Atonement in the older Protestant theology.—Great as is the importance of the doctrine of the Atonement in Catholic theology, its importance in Protestantism is even greater. To the Catholic theologian the Atonement forms the basis of the whole system of ecclesiastical machinery upon which man's salvation is supposed to depend. To the Protestant it is his warrant for rejecting this machinery as superfluous. Through the atonement of Jesus Christ the price of man's redemption has been paid once for all, and henceforth nothing remains but to appropriate the benefits of this accomplished salvation through faith.

The central importance thus given to the doctrine appears in the language by which it is described. In Protestantism the Atonement and redemption are frequently used as synonyms. Thus the Westminster Confession (iii. 6) speaks of the elect who have 'fallen in Adam' as being 'redeemed by Christ,' whereas the context makes it plain that the reference is to the Atonement.

[1] *Quæst.* XLVIII. art. i.: 'From the beginning of his conception Christ merited eternal salvation for us.' Cf. the following context, where the merit of the life is contrasted with the merit of the death.

[2] *i.e.* the theory that Christ's death owed its efficacy, not to any inherent value which constituted it an exact equivalent for the punishment due from man, but to the good pleasure of God, who was graciously pleased to accept it. On Scotus's view of the Atonement, cf. Seeberg, *Die Theol. des Johannes Duns Scotus*, Leipzig, 1900, p. 281 ff.

[3] iii. 22-26. To Abelard the Cross is the supreme revelation of the love of God, and the means through which a corresponding love is brought about in man.

[4] On the doctrine of the Atonement in the theology of modern Roman Catholicism, cf. Oxenham, *op. cit.* pp. 271-300.

G. B. Stevens' work, entitled *The Christian Doctrine of Salvation*, is really, as an analysis of its contents shows, a treatise on the doctrine of the Atonement; and James Denney, in *The Atonement and the Modern Mind* (London, 1903), says of the Atonement that

'for those who recognise it at all it is Christianity in brief; it concentrates in itself, as in a germ of infinite potency, all that the wisdom, power, and love of God mean in relation to sinful men' (p. 2). So much is this the case that, 'when we speak of the Atonement and the modern mind, we are really speaking of the modern mind and the Christian religion' (*ib.*).

No doubt it is true that not all Protestants carry their emphasis so far. Where the mystic conception of Christianity is made prominent, the older Greek thought, in which incarnation is the central reality, lives on. Thus, to Luther, as to Athanasius and to St. John, the death of Christ is only the culmination of that self-identification with humanity through which we are freed from our bondage into the glorious liberty of the children of God. In Christ we see the revelation of the gracious Father, and are conscious of our own adoption as sons. In Christ we see our present Deliverer, the One who has fought the battle against sin and death and come off victor, and with whom even now we may live and reign in heavenly places. Important as are the sufferings of Christ on our behalf—and no one knew how to paint more vividly than Luther the pain and tears of the Redeemer—they are only a part of a work of redemption which is as varied and many-sided as humanity's needs.[1]

This recognition of the wider aspect of Christ's redeeming work has never been altogether absent from Protestant theology. If there were no other cause, the Bible itself would have compelled a wider outlook. Yet, almost from the first, the death of Christ became the central point upon which the thought of Protestantism was fixed, and in which the redeeming love of God was seen supremely manifested. This central position was due to the fact that it was interpreted not as satisfaction, but as punishment, and hence given a substitutionary significance even greater than that attributed to it in the Anselmic theory.

We may illustrate this changed point of view in the case of Calvin. Calvin, like Luther, takes over many of the presuppositions of the Anselmic view. While denying any absolute necessity on God's part for the death of Christ, he holds with Anselm that, if man is to be redeemed, it must be through the Incarnation and its resulting Atonement. This is necessary because of the infinite guilt of man's sin, which has so 'utterly alienated' mankind from the Kingdom of Heaven that 'none but a person reaching to God can be the medium of restoring peace' (*Inst.* II. xii. 1). Such an efficient Mediator is found in the Person of Christ alone, the Incarnate Redeemer, through whose atoning death the price of man's forgiveness is paid and a way of salvation made open. So far Calvin agrees with Anselm, but in his conception of the nature of the atoning work he differs from him. This he interprets not as a meritorious satisfaction accepted as a substitute for punishment, but as the vicarious endurance by Christ of that punishment itself. While Calvin denies 'that God was ever hostile to Christ or angry with him,' yet in His Divine providence He suffered His Son to go through the experience of those against whom God is thus hostile. In His own consciousness, Christ 'bore the weight of the Divine anger, was smitten and afflicted, and experienced all the signs of an angry and avenging God' (II. xvi. 11). The descent to hell is to Calvin no mere synonym for the experience of death or the entrance to the under world; it involves a literal bearing in the soul of the 'tortures of condemned and ruined man' (*ib.* 10).

In order to understand this change of emphasis, we have to recall Calvin's conception of God. To Calvin, retributive justice is of the essence of Deity. It is not simply a question of God's honour, which cannot be satisfied without the obedience which He has commanded; it is a question of His holiness, which is in eternal opposition to sin. God is gracious indeed, in the sense that He desires to forgive; but this grace or mercy can be exercised only if justice is satisfied, and justice requires, in every case, a punishment commensurate to the sin; hence the necessity for giving the death of Christ penal significance. In Him, God the Father has graciously provided a substitute to

[1] On Luther's view of the Atonement, cf. Köstlin, *Luthers Theol., in ihrer geschichtl. Entwickl. und ihrem inneren Zusammenhange*[2], Stuttgart, 1883, ii. 402 ff. (Eng. tr. by Hay, *The Theology of Luther*, Philadelphia, ii. 388 ff.).

take the place of guilty men, and so make possible a forgiveness which is at the same time consistent with justice.

It would be unjust to Calvin's views to ignore the ethical aspects of Christ's suffering. Like Anselm, he refers more than once to the part which Christ's obedience had in bringing about man's salvation; nor did this obedience begin with His death. In Ro 5[19] St. Paul teaches that the ground of pardon which exempts from the curse of the Law extends to the whole life of Christ. From the moment when He assumed the form of a servant, He began, in order to redeem us, to pay the price of deliverance (II. xvi. 5). Thus, the modern conception which sees in the death the culmination of the life-work of Christ is already anticipated in the *Institutes*.

In the later Calvinistic theology the close connexion between the death and the life of Christ is no longer maintained. The obedience of Christ is separated from His suffering as having a distinct significance. It is the means through which Christ fulfils our righteousness, and so merits for us the reward which we are ourselves unable to earn; even as His death is the payment of our penalty, and so the means of securing our forgiveness (cf. *Westm. Conf.* viii. 5; A. A. Hodge, *The Atonement*, p. 248).

But it is in its view of the means by which the connexion is made between the atoning work of Christ and those for whose benefit it was accomplished that Protestantism differs most signally from Catholicism. In the Calvinistic theology this connexion is brought about by the Divine decree. God who, from all eternity, foreordained the atonement of Christ, determined also those who should receive its benefits; and in due course, through His Holy Spirit, creates in them the new life which Christ has merited by His obedience. Infinite as is the value of Christ's atoning work, it avails for those, and for those only, for whom, in the Divine plan, it was determined from the first (see, further, art. ELECTION).

With the rise of Arminianism (*q.v.*) this doctrine of limited atonement became a subject of increasing protest. Men who had no difficulty in accepting the Calvinistic doctrine of atonement as substitutionary punishment shrank back appalled from the conception of an arbitrary limitation of its scope. In order to reconcile their view of the limited effects of the Atonement with a belief in the universal love of God, they took refuge in a theory of the will which gave man himself the power to accept or to reject the mercy offered in Christ, and hence made him the arbiter of his own destiny. This conception of a universal atonement, limited in its results by man's freedom, has become characteristic of Arminian theology, and has not been without its influence in Calvinistic circles as well.

But the Penal Theory was subjected to even severer criticism by the Socinians.[1] They attacked the entire conception of substitutionary punishment, which was the premiss of the traditional theory. According to the *Racovian Catechism* (§ v. ch. 8), punishment and forgiveness are inconsistent ideas. If a man is punished, he cannot be forgiven, and *vice versa*. Under the theory of distributive justice, punishment, being a matter of the relation between individual guilt and its consequences, is strictly untransferable. But if, for argument, it be granted that this is not the case, then God is clearly unjust if, having received an infinite atonement, He does not forgive all. What kind of a God must He be, it is asked, who, when one drop of Christ's blood would have sufficient value to atone for a world's sin, yet suffered His own Son to endure such needless torture?[2]

[1] The Socinian view is most fully set forth in the writings of Faustus and Lælius Socinus, collected in the *Bibliotheca Fratrum Polonorum* (6 vols., Amsterdam, 1626). Its official statement is found in the *Racovian Catechism* (1605, Eng. tr. by Rees, London, 1818).

[2] It is interesting to note that a similar objection was made by William Pynchon, a New England Puritan, in his *Meritorious Price of Our Redemption* (London, 1650)—a book which Foster describes as 'the first outbreak of the independent spirit of Congregationalism. . . . The book was first burned and afterwards refuted by order of the General Court, and Mr. Pynchon found it convenient to return to England, where he died' (*Genetic Hist. of the New England Theology*, Chicago, 1907, p. 16 f.).

So far as their positive teaching was concerned, the Socinians held a form of the Moral Influence Theory, Christ's death being regarded as a declaration of God's love and an incentive to lead men to seek salvation through Him; but their great importance is historical rather than constructive. It was as a result of their criticisms that Hugo Grotius wrote his well-known work on the *Satisfaction of Christ*, in which for the first time the so-called Governmental Theory of the Atonement found systematic expression. This theory has exercised so extended an influence that it needs careful consideration.

Grotius himself is apparently unconscious of any departure from the traditional view. As the title of his book implies,[1] he proposes to write a defence of the orthodox view of the satisfaction of Christ against Socinian objections; yet it needs only a superficial survey of his work to show how profoundly he has been influenced by the arguments which he opposes. He begins by denying, with Socinus, the applicability of the category of distributive justice to the atoning work of Christ. But he differs from Socinus in substituting therefor the category of public justice. God does not, indeed, deal with men as a judge, who administers strict justice in the individual sense, but He does deal with them as a governor who is obliged to conserve the interests of the common welfare. In the course of His rectoral justice He may relax the law if sufficient cause appear, provided it can be done without danger to the interests of public justice (ch. iii. [Eng. tr. p. 72 f.]). This is what actually happens in the atonement of Christ. Christ's death is a substitute for punishment, a suffering inflicted by God and voluntarily accepted by Christ, which works upon men by moral influence (cf. pp. 107–109) in order to conserve the ends of righteousness. Such suffering on Christ's part is necessary, since forgiveness on the basis of repentance alone might be misinterpreted by men and lead to grave carelessness (ch. v. [p. 102 f.]). It is no more inconsistent with God's justice than any other suffering on the part of the innocent for the guilty. The Socinians themselves admit that such suffering is a part and a consequence of our common relationship as members one of another (ch. iv. [pp. 82, 85]). The Governmental Theory simply draws the conclusion which naturally follows from this premiss.

We have already pointed out the fact that certain features of the Governmental Theory were anticipated in the Greek Church in the teaching of Gregory of Nazianzus. In the Latin Church it has its analogies both in the Scotist theory of the *Acceptilatio* and in the Moral Theory of Abelard. It agrees with the Scotist view in its denial that punishment is necessary to satisfy any inherent need of God's nature. It differs from it, however, in that it conceives God as governor, and as being under a constraint, as real as, if different in kind from, that which moved the Deity of distributive justice. The governor, unlike the judge, may temper justice with mercy, but the motives which lead him so to temper it are never arbitrary, but are found in the state of society itself, of which he is the guardian and the ruler. The Governmental Theory agrees with the Moral Theory in that it conceives the nature of the Atonement as determined by the moral effects which it is designed to promote; but it differs from the latter in the fact that the motive to which the Atonement appeals is conceived as fear rather than as love. In Christ's death, men see what will be their fate if they do not repent, and so are moved to repentance and faith.

In the extent and permanence of its influence upon Protestant thought the Governmental Theory is comparable with the Penal Theory alone. Among thoughtful Arminians it has practically supplanted the older Penal Theory, and is declared by Professor Miley[2] to be the only theory of the Atone-

[1] *Defensio fidei Catholicæ de satisfactione Christi*. The work was written in 1638, and is printed in vol. iv. of the Amsterdam ed. of 1679 (p. 293 ff.). An Eng. tr. by F. H. Foster appeared in the *Bibliotheca Sacra* for 1879, and was reprinted in Andover in 1889.

[2] *Systematic Theology*, New York, 1894, ii. 169.

ment logically consistent with Arminian principles. But its influence is by no means confined to Arminianism. Through Jonathan Edwards (*q.v.*) and his successors it has passed over into Calvinism and has been widely held, not only by New England Congregationalists, but also by the New School Presbyterians, with whom they have been closely affiliated. Albert Barnes has left on record, in the introduction to his well-known treatise on the Atonement (Philadelphia, 1859, p. 4), the difficulty which he felt with the older form of the doctrine, and the relief which was afforded to his mind by the Governmental Theory. Those Calvinists, trained in the older orthodoxy, who have shared Barnes' sense of difficulty with the legal categories of the older theories have commonly found their relief where he did.[1]

6. The Atonement in modern Protestantism.—With the growing acceptance of modern critical methods we find an increasing disposition to emphasize the moral and spiritual elements in the atonement of Christ and, in particular, to relate His death more closely to the life-work of which it forms a part. While the older theories still live on in Protestantism, and some of the most able expositions both of the Penal and of the Governmental Theories have been written within the last half-century, the pre-suppositions upon which they rest in their older form have been gradually undermined. The conception of God as a being with whom justice is necessary and mercy optional, so characteristic of the older Calvinism, has been largely abandoned. The notion of atonement as satisfying some mysterious necessity in God, apart from the realization of the redemptive purpose which Christ has revealed as His supreme aim, appears increasingly unsatisfactory. Even where the fact of the Atonement is still heartily accepted and the death of Christ made central in Christian teaching, we find the effort to get a conception of it which shall relate it more closely to the principles and ideals that have made themselves controlling in other departments of Christian theology.

A potent influence in bringing about this change has been the new view of the Bible. It was characteristic of the older discussions of the Atonement that, whatever might be the particular view advocated, whether Legal or Governmental or Moral, it was identified without question with the teaching of the Divine word.[2] With the breaking down of the older mechanical theories of inspiration, such an easy identification is no longer possible. It is clear that what we have in the Bible is a series of parallel and, in part, differing interpretations, rather than a single consistent dogmatic theory; and no one of the later interpretations can claim exclusive Biblical authority for itself.

The recognition of this diversity of view-point has sometimes been made an excuse for abandoning altogether the attempt to frame a consistent doctrine. A distinction is drawn between the *fact* of the Atonement, faith in which is essential, and the *theory*, as to which men may differ without loss; and even theologians who along other lines would be the first to repudiate the Roman doctrine of an implicit faith have, in the case of this particular doctrine, declared themselves frankly agnostic.[1] But such an attitude, however convenient as a temporary resting-place, is difficult to maintain for any length of time. If the Atonement is permanently to retain in Protestantism the strong hold which it has hitherto had upon the faith of Christians, it must be related to the world of thought in which modern men are living, and shown to be as capable of explanation and defence in the moral and spiritual terms which have become controlling for our modern thought of God as in the legal and judicial categories so familiar to the older theology. It is characteristic of recent works on the Atonement that they attempt such a re-translation. This attempt is not confined to the members of any particular party or school of thought. It is as noticeable in the case of those who still hold the substance of the older theories as in those who reject them. An example in point is R. W. Dale's well-known treatise on *The Atonement.*[2]

Dale's book is interesting as the most serious effort which has been made in recent times to retain a penal significance in the death of Christ, while avoiding the artificiality and legalism of the older statements. It is not easy to give a brief account of the author's discussion, but the essence of it consists in the fact that he conceives the death of Christ as the suffering justly inflicted upon Christ as the voluntary representative and head of the race, in order to satisfy the eternal law of righteousness which is one in essence with the will of God.

'The only conception of punishment,' he writes (p. 383), 'which satisfies our strongest and most definite moral convictions, and which corresponds to the place it occupies both in the organisation of society and in the moral order of the universe, is that which represents it as pain and loss inflicted for the violation of a law.'

If the older theologians were at fault in their treatment of the Atonement, it was not, says Dale, in their insistence upon the penal element in Christ's sufferings, but in their arbitrary limitation of its effects, and, above all, in their failure to give adequate expression to the moral and spiritual side of the relationship which constitutes Him, not only the substitute, but the head and representative of the race (p. 433).

Even more striking, as an example of the effort to translate an older theory into modern terms, is Scott Lidgett's suggestive book, *The Spiritual Principle of the Atonement, as a Satisfaction made to God for Sins of the World.*[3] Lidgett agrees with Dale in his conception of the nature of punishment, but he differs from him in finding the necessity for penal satisfaction in the very nature of fatherhood itself.

'Of course,' writes Lidgett (p. 268), 'the magnanimity of fatherly love raises it above the treasuring up and the exact vindication of merely personal wrongs. But, in the case of true fatherhood, what is personal stands for something that is more than personal. In dealing with a disobedient and rebellious child, the father has to do justice to his own character and will as an authority over the child—an authority representing the ideal of what the child should become, and guiding him on the way to its realisation. He has to assert the sanctity of the law which has been broken, and to secure its recognition. He has to bring home to the child the consciousness of wrongdoing. All this is the work of punishment. It is most truly in the interests of the child himself. . . . The punishment which has been inflicted by the father is made the very means of uttering the conversion of the child.'

Both Lidgett and Dale, in common with the older Protestant writers on the Atonement, agree that that which gives the death of Christ its saving power is its penal quality, or, in other words, the suffering which Christ endured as our substitute or representative. This principle is, however,

[1] On the later history of the Governmental Theory, cf. Miley, ii. 158 f.; F. H. Foster, Introd. to his tr. of Grotius, pp. xii–lvii; McLeod Campbell, *The Nature of the Atonement*, p. 65 ff.; and esp. Park, *The Atonement*, Boston, 1863; a collection of Discourses and Treatises by Edwards, Smalley, Maxey, Emmons, Griffin, Burge, and Weeks, illustrating various phases of the so-called 'Edwardean' (*i.e.* Governmental) Theory of the Atonement.

[2] This is especially noticeable in the discussion between Socinus and Grotius. On either side the Biblical proof is given a place of central importance.

[1] So Horton, in *Faith and Criticism*, New York, 1893, p. 187 ff.; cf. Dale, *loc. cit.* 3; Scott Lidgett, 490 ff.

challenged by an increasing number of writers, who deny that there is anything redemptive in suffering as such, and find the essence of Christ's atoning work in its moral quality as obedience. We may illustrate this position in the case of two works which have exercised a potent influence upon recent English thought concerning the Atonement. The first is McLeod Campbell's *Nature of the Atonement*;[1] the second, Horace Bushnell's *Vicarious Sacrifice.*[2]

Campbell's interest, as the title of his book implies, centres in the question of the nature of the Atonement, or, in other words, the question, What is the quality in Christ's sufferings and death which gives them value for God and fits them to promote the redemptive ends which they are designed to serve? The older Protestant theology, both in its Penal and in its Governmental form, found this atoning quality in the pain of Christ's sufferings considered as pain. In the Penal Theory this pain was regarded as satisfying a demand in the Divine nature itself; in the Governmental Theory, as necessary to provide an example to influence men. Neither of these answers seems to Campbell satisfactory. The Penal Theory is unsatisfactory, since it interposes between man and God an obstacle which is unreal. The Governmental Theory is unsatisfactory, since the motive on which it relies, being that of fear rather than that of love, is inadequate to produce that spiritual transformation which it is the object of the theory to secure. Both failures are due to the lack of a consistent application of the Biblical principle concerning the condition of forgiveness. This condition, according to Campbell, is repentance, and repentance alone. The difficulty in the way of God's forgiving sin is not that there is any barrier on His part to be cleared away which penitence cannot remove, but that, as a matter of fact, men do not truly repent; and this, in turn, is due to the fact that no motive has yet been brought to bear upon them strong enough to overcome their existing sinful habits and desires. In this condition of things Campbell finds the key to the true nature of the Atonement. What is necessary, if mankind is to be saved, is that some man shall be found who shall estimate at its full heinousness the significance of human sin, shall accept in filial reverence and submission the consequences in suffering and pain which this sin has inevitably brought in its train, and so shall set in motion those moral influences by which other men, following his example, shall be drawn to a like repentance. This is what happens in the atonement of Christ. In the spirit in which He met His suffering and death we have the supreme revelation of the true attitude which man should take toward sin. Christ on the cross identifies Himself by sympathy with suffering humanity. He utters in reverent submission His Amen to God's judgment of sin, and so, for the first time, exhibits in the most impressive way the condition upon whose fulfilment alone forgiveness depends (p. 117).

Campbell's critics have objected that in substituting for the older doctrine of vicarious punishment his newer teaching concerning vicarious repentance, he has simply replaced one difficulty by another. They argue that the conception of vicarious penitence is no easier to hold than that of vicarious punishment; indeed, it is less easy, since repentance as a personal act of the individual is strictly untransferable, whereas punishment, being inflicted by another, may conceivably be visited upon a substitute. Such a criticism, however, does not touch Campbell's main contention. He is not concerned primarily with the problem how the benefit of Christ's repentance can be transferred to others, but rather with the question what condition must be fulfilled if man is to be forgiven at all. This he maintains to be repentance pure and simple, and in this contention he has been followed by not a few leading writers on the doctrine who differ from him at other points.[1]

To the question how the penitence of Christ avails for others, Campbell has a very simple answer. It is by the moral influence of His example. There is in every one of us the conviction that we ought to repent if only we knew how. In Christ we have presented to us the ideal penitent. As He identifies Himself with our sin, so in faith and trust we identify ourselves with His repentance, and through this self-identification there is gradually wrought in us that moral transformation which enables us in our turn to repeat Christ's supreme condemnation of sin, and so to enjoy that full forgiveness which God is ever ready to grant to genuine repentance (p. 153).

This conception of the death of Christ, as primarily efficacious through the moral influence which it exerts upon those who witness it, finds classic expression in the second of the books referred to, Bushnell's *Vicarious Sacrifice.* The problem which Bushnell sets himself to solve is that of the possibility and the nature of substitution in religion; and the conclusion to which he comes is that in the case of a moral and spiritual religion, like Christianity, this is possible only in the sphere of the moral and spiritual relationships, of which the family rather than the law-court or the civil government gives us the most helpful example. In love, Bushnell discovers a vicarious principle, involving, on the one hand, the self-identification of the lover with the object loved, and, on the other, a corresponding transformation of the one loved through the response of his spirit to the new moral influences of which he is thus made the subject. He illustrates this principle in the case of motherhood, of friendship, and of patriotism, and finds in it the revelation of a universal law which goes back, in the last analysis, to God Himself. All good beings, he maintains, are in the principle of vicarious sacrifice (i. 53), and a cross is in God's perfections from eternity (i. 73).

Upon the fact of this law of sacrifice, valid both for God and for man, Bushnell bases his doctrine of the Atonement. In the sufferings and death of Christ the Holy God identifies Himself in sympathy with the sins and sufferings of His human children, feels in His own experience the burden of the painful consequences which have been brought upon them by their misdeeds, and through the revelation of His self-sacrificing love calls forth on their part that corresponding love for Him which makes possible their forgiveness and ultimate restoration. All the old sacrificial symbols which are so deeply inwrought into the NT language and which were so efficacious in the older revival preaching are, according to Bushnell, simply symbolical ways of illustrating this profound truth (i. 449 ff.).

In contrast to the theory of McLeod Campbell, where emphasis is laid on the value for God of Christ's sufferings, that of Bushnell is sometimes described as purely subjective (so, most recently, by Stevens in his *Christian Doctrine of Salvation*). There is a certain plausibility in this description, in that in Bushnell's case, as in that of Abelard before him, interest centres in the manward rather than the Godward aspect of Christ's work; but, if by the term 'subjective' it is meant to describe a theory which conceives it possible to express the full significance of Christ's work in terms of human experience alone, the characterization is plainly misleading. To Bushnell, as well as to Campbell, the Atonement is a matter which concerns God as well as man, and that which gives Christ's sufferings their redemptive power is the fact that in the form of a human experience they reveal to us what from the beginning has been God's own attitude towards human sin.[2]

[1] *The Nature of the Atonement in Relation to Remission of Sins and Eternal Life*[6], London, 1886.

[2] *The Vicarious Sacrifice grounded in Principles interpreted by Human Analogies*, 2 vols., New York, 1891.

[1] *e.g.* R. C. Moberly and W. L. Walker.

[2] The Godward aspect of the Atonement is more fully developed in vol. ii. of the *Vicarious Sacrifice.* Here Bushnell propounds a theory of the Divine self-propitiation through suffering in which the analogy of human experience is used to illustrate the nature of God's attitude towards sin. The volume,

Both Bushnell and Campbell are concerned primarily with the Atonement as it affects the relation between God and the individual; but, from the first, it has been recognized that the work of Christ has a larger meaning. It was designed not simply to save individuals, but to redeem humanity, and has as its result the establishment of the Kingdom of God among men. One of the most striking features of modern thought regarding the Atonement is its emphasis on this wider social significance. Apart from the Governmental Theory, to which we have already alluded, this emphasis takes two forms. The first, which is more prominently represented among Anglican theologians, regards the Church as an institution, as the continuation of the Incarnation, and emphasizes the connexion between the Atonement and the Sacraments. The second, more ethical in its conception of salvation, takes its departure from the social nature of personality, and finds the primary object of Christ's death in the creation of a community in which the bond of union is the acceptance of his principle of self-sacrificing love. We may take Moberly's suggestive book on *Atonement and Personality*[1] as an example of the first type, and Ritschl's *Justification and Reconciliation*[2] as an example of the second.

So far as his conception of the Atonement itself is concerned, Moberly agrees with Campbell in finding its essence in penitence (p. 110). Like Campbell, he maintains that a perfect repentance, if it could be found, would constitute an adequate atonement. Like Campbell, again, he denies that such repentance is possible to man alone. But what is not possible for man alone is possible for the God-man. In the sinless Christ we have one in whom God's ideal for humanity has been for the first time realized, and in His perfect obedience and penitence an adequate atonement for the sin of humanity has at last been made.

But how are the benefits of the Atonement to be imparted to others? It is at this point that Moberly finds Campbell's view inadequate. The moral influence on which Campbell relies he finds not enough. There must be a real identity, if the atonement which Christ makes is to be really ours (p. 405). This identity Moberly secures through his doctrine of the Holy Spirit. In the Spirit, Christ Himself enters humanity and becomes the basis of its higher life.

'The Spirit of the Incarnate Christ, [is] made, through the Incarnation, the Spirit of Man' (p. 203). 'He is the subjective realization within, and as, ourselves, of the Christ who was first manifested objectively and externally, for our contemplation and love, in Galilee and on the Cross. He is more and more, as the Christian consummation is approached, the Spirit within ourselves of Righteousness and Truth, of Life and of Love. He is more, indeed, than within us. He is the ultimate consummation of ourselves' (p. 204). Only through this indwelling Spirit who is 'Christ in the man' (p. 227) is it possible to realize what true personality means.

But where and how do we actually find this mysterious union realized among men? Moberly answers—in the Church. In organized Christianity with its sacramental system we find the sphere and instrument of the Spirit's influence, nay, more, the Spirit Himself become incarnate in the lives of living men.

'The Church, then, is, in fact, the Spirit of Christ, communicated to the spirits of those who recognize, and believe in, His Person and work; it is the disciples of Christ, made Christian in very deed by participation in the Spirit of Christ' (p. 259).

Like Moberly, Ritschl emphasizes the social significance of the Atonement; but, in place of the mystic bond of an identity of nature mediated through the Sacraments, he puts the ethical conception of community of purpose. According to Ritschl, the purpose of God is not primarily the salvation of individuals as such, but their union in the redeemed society of the Kingdom of God. But this is possible only as there is revealed to men an end at once simple enough and far-reaching enough to transcend all legal and limited ideals, and reinforced by motive power strong enough to secure its inner appropriation in spite of every obstacle. Such a revelation is given to us in the life-work of Christ. In him we see One whose life was dominated from the beginning to the end by the principle of trust in God and love for others, and who, in this trust and love, found a power able to make Him victor over obstacles otherwise insuperable. As such a moral conqueror, He becomes to others the pledge of the possibility of like victory in their case, if only they in turn accept His life-purpose in similar love and trust.

This is the meaning of Ritschl's much-discussed teaching concerning the Church as the object of the Divine justification (vol. iii. ch. ii. 20 [Eng. tr. p. 108 ff.]). By this he means not simply that the life of faith, upon which the Reformers based their assurance of the forgiveness of sins, carries with it inevitably devotion to that universal purpose of love which Jesus has revealed as the will of the Father; he means that the experience of forgiveness itself is possible only as a man makes Jesus' wider social purpose his own. The life of trust and the life of service are not two independent elements in the Christian life; they are two aspects of one and the same experience. As Jesus fulfilled His own true relation to His Father through His willingness to suffer even death itself for the sake of His brothers, so His disciples in their turn realize their true relation to their Father by following Him in like devotion.

It is in the light of this conception that we are to understand Ritschl's view of the Atonement. In his chapter on the 'Person and Life-work of Christ' (ch. vi.) he criticizes the older Protestant treatment of the work of Christ on the ground that it separates things which belong together. It contrasts the sufferings and death of Christ, as an evidence of His humiliation, with His resurrection and second advent, as the proof of His exaltation. But, according to Ritschl, this contrast is misleading. The priestly work of Christ is not something apart from His kingly work—a condition which must be fulfilled in order that that may be accomplished. It is itself an element in that moral victory over sin and death which evidences His Divine power and constitutes Him the world's Redeemer. The sufferings of Christ have not merely ethical value as a price paid by Christ to God for the redemption of man. They have religious value as a revelation of God's purpose towards man, and, above all, as an assurance of that Divine power which is able to make man the victor over the worst foes. As such a revelation, they are harmonious with His whole life-work—a necessary condition of the accomplishment of His purpose, namely, the establishment of God's Kingdom among men.[1]

So we see the latest German thought about the Atonement turning back to the point of view of the earliest Greek theology, and trying to gain a conception of Christ's redemption which shall represent it less as a single act performed once for all in the death upon the cross than as the natural outworking and consummation of the meaning and purpose of His entire life.

which was composed eight years after the first, was originally designed to take the place of its third and fourth sections, but the advice of friends led to the abandonment of the plan, and the two versions stand side by side as vols. i. and ii.

[1] London, 1901.

[2] *Die christliche Lehre von der Rechtfertigung und Versöhnung*, 3 vols., Bonn, 1870–74; 3rd ed. 1888–89 [Eng. tr. of vol. iii. by Mackintosh and Macaulay, Edinburgh, 1900].

[1] In his suggestive book, *The Cross and the Kingdom, as viewed by Christ Himself and in the Light of Evolution* (Edinburgh, 1902), W. L. Walker follows Ritschl in bringing out the close connexion between the Atonement and the Kingdom of God (cf. esp. p. 271 ff.).

7. Summary and conclusion.—As we look back over the history which we have thus briefly passed in review, we are struck by the great variety of opinion represented in our survey.[1] Whether we consider the Atonement from the point of view of its nature, its object, its necessity, or the means by which it is made practically effective in men's lives, we find differences of view so striking as to make any attempt at harmony seem hopeless. The atoning character of Christ's death is now found in its penal quality as suffering, now in its ethical character as obedience. It is represented now as a ransom to redeem men from Satan, now as a satisfaction due to the honour of God, now as a penalty demanded by His justice. Its necessity is grounded now in the nature of things, and, again, is explained as the result of an arrangement due to God's mere good pleasure or answering His sense of fitness. The means by which its benefits are mediated to men are sometimes mystically conceived, as in the Greek theology of the Sacrament; sometimes legally, as in the Protestant formula of imputation; and, still again, morally and spiritually, as in the more personal theories of recent Protestantism. Surveying differences so extreme, one might well be tempted to ask, with some recent critics, whether, indeed, we have here to do with an essential element in Christian doctrine, or simply with a survival of primitive ideas whose presence in the Christian system constitutes a perplexity rather than an aid to faith.

Yet, such an opinion, however natural, would be misleading. The differences which we have discussed are not greater than may be paralleled in the case of every other Christian doctrine. When we isolate any doctrine from its environment, it is easy to represent it as a record of inconsistencies and contradictions; but, when we look below the surface and consider the underlying causes of the changes in question, we find it necessary to revise so superficial a judgment. These causes have to do with the conception of God and of His relations in the world. Where God is conceived, as in the old Greek theology, in physical or metaphysical terms, as the absolute Spirit, immutable and incorruptible, who saves man by making him partaker of his own immortal life, the Atonement necessarily becomes a mere incident in the life of the Incarnate One, and the type of thought represented by Athanasius is the result. Where, as in the theology of Roman Catholicism and the earlier Protestantism, God is conceived primarily as Governor or Judge, dealing with men in terms of justice, either private or public, legal phraseology becomes the natural expression of religious faith, and the various substitutionary theories, whether in the form of satisfaction or of penalty, are the result. Where, on the other hand, as in modern times, the ethical and spiritual categories are controlling, the Atonement will in like manner be given an ethical and spiritual interpretation; and the various questions as to its nature, its necessity, and its effects will be answered along the lines followed by the later Protestant writers whom we have passed in review. The attitude which one will take towards any of the specific questions under discussion will be determined in the last analysis by his answer to the underlying question, Which of these general ways of conceiving God is, on the whole, most adequate to express the Christian view?

LITERATURE.—1. On the history of the doctrine in general, cf. the relevant sections in J. C. Baur, *Die christl. Lehre von der Versöhnung*, Tübingen, 1838; W. F. Gess, *Christi Person und Werk*, Basel, 1870 ff.; A. Harnack, *Dogmengeschichte* [Eng. tr., *Hist. of Dogma*, 1894–9]; F. Loofs, *Dogmengeschichte*[4], Halle, 1906; F. Nitzsch, *Dogmengeschichte*, Berlin, 1870; H. N. Oxenham, *Catholic Doctrine of the Atonement*, London, 1865; A. Ritschl, *Rechtfertigung und Versöhnung*[4], Bonn, 1895–1902, vol. i. [Eng. tr. 1872], vol. iii. [Eng. tr. 1900]; J. Rivière, *Dogme de la rédemption*, Paris, 1905; G. Thomasius, *Christi Person und Werk*, Erlangen, 1886 f. Cf. also J. Scott Lidgett, *Spiritual Principle of the Atonement*, London, 1901, pp. 419–88; R. C. Moberly, *Atonement and Personality*, do. 1901, pp. 324–412; G. B. Stevens, *Christian Doctrine of Salvation*, Edinburgh, 1905, pp. 136–261.

2. On the Biblical basis of the doctrine, besides the relevant sections in the Biblical Theologies and Dictionaries of the Bible, cf. A. Cave, *The Scriptural Doctrine of Sacrifice*[2], Edinburgh, 1890; T. J. Crawford, *The Doctrine of Holy Scripture respecting Atonement*[3], do. 1875; R. W. Dale, *The Atonement*, London, 1875 ([14]1892), pp. 65–264; J. Denney, *The Death of Christ; its Place and Interpretation in the NT*[2], London, 1902; C. C. Everett, *The Gospel of Paul*, Boston, 1893; E. Ménégoz, *La Théologie de l'épître aux Hébreux*, Paris, 1891; G. F. Moore, art. 'Sacrifice,' in *EBi*; Ritschl, *op. cit.* vol. ii.; W. Sanday, *Priesthood and Sacrifice*, London, 1900.

3. Systematic treatises: besides the works mentioned in the body of the article, cf. A. Barry, *The Atonement of Christ*, London, 1871; R. S. Candlish, *The Atonement, its Efficacy and Extent*, Edinburgh, 1867; W. N. Clarke, *Outline of Christian Theology*, do. 1898, pp. 321–362; D. C. Davies, *The Atonement and Intercession*, do. 1901; C. Wardlaw, *The Extent of the Atonement*, Glasgow, 1830; J. M. Wilson, *The Gospel of the Atonement*, London, 1899; *The Atonement in Modern Religious Thought; a theological Symposium*, do. 1900; S. Plantz, art. 'Vicarious Sacrifice,' in Hastings' *DCG*.

W. ADAMS BROWN.

[1] An interesting attempt to classify the different theories of the Atonement according to scientific principles has been made by D. W. Simon, in his *Redemption of Man* (Edinburgh, 1889, p. 6 f.). Cf. also Stevens, *Christian Doctrine of Salvation*, p. 174.

EXPIATION AND ATONEMENT (Egyptian).—No certain trace of any rite or ceremony analogous to the Sem. atonement-sacrifice (*kippûrîm*) or the Gr. piacular expiation can be found in Egyp. religion so long as it was uninfluenced by Sem. observances. The close connexion with Palestine, which began in the time of the XVIIIth and reached its height under the XIXth and XXth dynasties, resulted in the temporary introduction of many Sem. deities into the Egyp. pantheon; and with them, no doubt, came many Sem. religious observances, among them that of the atonement-sacrifice. But the anti-Semitic feeling, which was brought about by the national resistance to the Assyrians in the 8th and 7th cent. B.C., resulted in the expulsion of the Sem. deities, at any rate from the official pantheon; and with them went their cult-observances. Any trace which may be found of the *kippûrîm*-rite in Egypt is probably to be regarded as of this Sem. origin (as was certainly the rite of burnt-offering), and dating from this period of Sem. religious influence. The Egyp. conception of sacrifice does not seem to have included any idea of expiation for sin. The Egyptian placed fruit, cakes, and cooked meat on a mat before the painted and robed figure of his deity, and burnt incense before it, in order to feed him, please him, and ward off his wrath in case the offerer had offended him by doing something wrong. But this idea of wrong-doing was probably rather that of *crime* than of *sin*. The Egyptian does not seem to have had the same idea of *sin* as the Semite, and the *sin-offering* was, therefore, probably unknown to him originally. When he sacrificed from fear of the Divine wrath, it was

because he had committed a crime 'against the king's peace' or that of the god, not because he had 'sinned' in the Bab. and Jewish sense, or even in the less emphasized Greek sense. Wickedness for him was a sin against society rather than against God. But the gods would punish such wickedness, and so were propitiated, if necessary, by pacifying sacrifices. H. R. HALL.

EXPIATION AND ATONEMENT (Greek).—The word 'atonement' belongs to Christian theology, and inevitably suggests that conception of sin and its remedy which is peculiar to Christianity. Writers on the religion of Greece have either omitted any distinct treatment of this topic, or have discussed it (like Nägelsbach, *Homer. Theol.* and *Die nachhomer. Theologie des griech. Volksglaubens*) from the Christian standpoint. Yet, if 'sin' be used as a general term for conduct which tends to destroy the natural bond between man and his god, and which consequently is followed by manifestations of Divine anger, it is possible to discuss the conception of sin in Greek religion; and by a similarly broad definition we may speak of expiation for sin as that process by which the sin is removed, the anger of the god appeased, and the natural relation of god and man restored. In the present article sin is treated only in so far as is necessary to make clear the remedy for it. Further, the special rites for appeasing Divine anger will be treated in the art. PROPITIATION (Greek).

Some ethical content is almost inevitably connected with our conception of sin and its expiation. In Greece, however, defilement (μίασμα), which may have nothing to do with a man's moral conduct, was frequently regarded as the cause of Divine anger. Although we must assume that rites of purification had originally no moral content, yet no sharp line was ever drawn between physical, ritual, and moral purity, and it is necessary to consider the expiation of sin by rites of this character. Again, any disregard of what is due to the gods is an exhibition of man's neglect or self-assertion, which may be considered as sin against the gods. Such acts are a *lèse-majesté* demanding punishment, though sometimes the latter may at least be lessened by expiatory rites. It will be noted that this conception of sin goes with the belief in the gods as Divine rulers, which is emphasized in the Homeric poems. Thirdly, the time came when morality so far rested on a religious basis that transgression of moral principles was punished by the gods. To break a moral law became a sin against the gods when the sanctions of religion were added to morality—in other words, when it became the function of the gods to punish wrong-doing. At this point, and perhaps only at this point, the Greeks clearly recognized the connexion between morality and religion. The certainty of Divine punishment for sin was emphasized in their literature from Homer to Plutarch; and, if the moral ideas were often different from ours, or if religion did not enforce all the precepts of Greek morality, the fact remains that the sinfulness of immorality was generally recognized. As to the Divine punishment of sin there was no doubt; whether expiation had any utility for the sinner was a question not so easily answered.

It appears that the expiation of sin must be considered from these three standpoints: (*a*) the purification from the taint of evil, (*b*) the allaying of Divine anger caused by intentional or unintentional disregard of what is due to the gods, and (*c*) the restoration of a man who has transgressed some moral law to harmony with the gods. The emphasis on these points of view varies, but from Homer onward they are all three present.

1. Pre-Homeric period.—For the period which precedes that in which the Homeric poems were composed our knowledge of religion has made some progress in recent years, but not sufficient to shed much light on the present question. All that we can affirm with any confidence is that the early Greeks, like other primitive peoples, undoubtedly practised rites to drive away evil spirits, and that from these rites arose many later practices, the object of which was to remove some taint of evil. In so far as the evil was the cause of Divine anger and separated men from communion with the gods, it may perhaps be called 'sin,' and its removal the expiation of sin. The idea that evil itself is a substance which can be absorbed in a specially prepared fleece (Διὸς κώδιον), or removed by some potent cleansing material like blood or clay, or instilled into a person who can bear it out of the city, is perhaps nearer to the facts than is our thought of evil spirits. In a period much later than the one under consideration, the *Thargelia*, a festival of Apollo at Athens, included a peculiar rite in which one or two men (φάρμακοι) were first fed at the public expense, then beaten with branches and leeks, and finally put to death. The connexion with Apollo was not very marked; it seems rather to be an ancient rite which had to do with the safety of the ripening crop. Nor does it presuppose the Divine anger, though doubtless more stress was laid on such a ceremony in time of famine or pestilence, when men felt that their gods were angry with them. It was primarily a means of removing any taint of evil which might bring danger to men or destruction to their ripening crops. Because rites of this character were out of line with the development of Greek religion from Homer onward, it is perhaps safe to regard them as survivals from a very early period. In themselves they shed little light on the present question, except as they indicate that men feared the possible anger of their gods, and possessed means to remove the cause of such anger, if not to allay the anger itself. Still these rites of riddance (ἀποτρόπαια) must be taken into account as the source of later purificatory rites, and perhaps as the starting-point of propitiatory sacrifice.

2. In the Homeric poems.—In contrast with the earlier ages, for which the evidence is largely based on inference, the picture of religion in the Homeric poems is clear cut and reasonably complete. But, strange as it may appear at first sight, while the account of sin and its punishment is definite enough, there is no mention of rites of expiation, no word for 'expiation' or 'atonement,' nor even any distinct form of worship designed to propitiate the anger of the gods. Any direct reference to sin as a sort of defilement demanding purification—a taint dangerous because it invites either evil spirits or the wrath of the greater gods—is avoided. It is true that Agamemnon's army purified themselves after the plague which Apollo sent (*Il.* i. 313 f.), and that, after the death of the suitors, Odysseus purified his palace with fire and sulphur (*Od.* xxii. 481-494); in the same spirit, Hector feared to approach the gods with the stain of battle on his hands (*Il.* vi. 266). In none of these cases, however, is it clear that the defilement was itself a possible cause of Divine anger.

But, while the view of sin as a defilement is avoided, the place of sin in the economy of the world is definitely given. The gods are supreme rulers, governing the world in accordance with moral principles; any slight to their dignity is sin, and any infraction of the moral law they uphold is sin. And sin, *i.e.* such action as provokes the anger of the gods, is all but inevitably followed by punishment. It remains only to add that the Divine anger may also be aroused by some injury to a favourite of the gods, as when Odysseus

blinded Polyphemus the Cyclops and incurred Poseidon's anger; the apparent inconsistency between such private anger and anger at some moral (or religions) wrong is explained at once by the fact that the gods are rulers, with children and favourites among men.

The conception of sin as an affront to Divine rulers which provokes their anger is illustrated by Ajax's boast that he had saved himself from the sea against the will of the gods (*Od.* iv. 504), whereupon Poseidon shattered the rock on which he had found safety; or by the recklessness of Odysseus' followers in eating the cattle of Helios (*Od.* i. 7–9, xii. 379); or by the affront to Athene when the city of Troy was sacked. In this last instance Agamemnon thought to allay the anger of the goddess by sacrifices, for he did not recognize that the purposes of the gods are not lightly changed (*Od.* iii. 143 ff.). The omission of sacrifices that were due to the gods brought down their wrath on Calydon (*Il.* ix. 533 ff.), and prevented the departure of Menelaus from Egypt (*Od.* iv. 469 ff.). In such cases it was necessary to make good the omission as promptly as possible. Menelaus must go back and offer the sacrifices; Agamemnon must restore Chryseis to her father, the priest of Apollo (*Il.* i. 98 f.). Often, however, it was impossible to undo the evil, in which case men might seek to propitiate the anger of the gods, but with little or no hope of success. So the companions of Odysseus foolishly thought to set right the slaughter of Helios' cattle by vowing to build him a splendid temple, and to dedicate many valuable votive offerings (*Od.* xii. 345 ff.). The sacrifices offered to the gods under these circumstances did not differ from the ordinary ones; but, inasmuch as sacrifice always expressed man's desire to gratify the gods by paying them their due, it might propitiate their anger. Probably the same thought lay behind the vow to bring votive offerings, though such costly gifts might be regarded as the effort to expiate a sin. But from the Homeric point of view neither gifts nor sacrifices had much efficacy; the affront to the gods was certain to bring punishment.

The result of transgressing moral law was much the same; for the gods hate wickedness, and honour just and right deeds (*Od.* xiv. 83 ff., xvii. 485 ff.). Naturally the wrong deeds which gods punished were other than the crimes against human law. In particular, the suppliant, *i.e.* the traveller outside his own country who threw himself on the mercy of the gods, was thought to be under their special protection (*Od.* ix. 479, xiii. 213). No human law punished oath-breaking, but this was a crime against the gods (*Il.* iv. 235, 270 f., xix. 264). The suitors for the hand of Penelope broke no law of man; so much the more the gods permitted their high-handed insolence to develop until it demanded punishment at their hands (*Od.* xv. 329, xx. 215, xxii. 39 f.). And the sin of Aegisthus in marrying Clytæmnestra was primarily a sin against the gods that protect the family; nor could any sacrifices and votive offerings—perhaps sacrifices of thanksgiving—win him the Divine favour (*Od.* iii. 273 ff.).

From the standpoint of the Homeric poems, sin, whether moral transgression or direct affront to the gods, received its due punishment. It was natural for men to seek to allay the anger of the gods, but there were no rites specifically for this purpose, and men had no assurance that their efforts in this direction would meet with any success. The only expiation for sin, strictly speaking, lay in the effort to set right the wrong that had been done.

3. In later Greek history.—While all three conceptions of sin and expiation are found in the later and better known periods of Greek history, the first to develop seems to have been the thought of sin as *a pollution which demanded purification.* In connexion with the spread of the worship of Dionysus early in the 6th cent B.C., a new emphasis was laid on purification. Undoubtedly rites of this character originated in the effort to free men from the taint of evil—in other words, from the dangerous influence of infecting evil spirits. It seems that the Dionysus religion, like the more organized Orphic religion, developed these rites to secure relief from those evil influences which separated man from the divinity. In the 5th cent. some of the rites had been adopted by the State religion, while others were branded as superstition.

The question with which we are now concerned is whether the evil banished by purificatory rites ever gained a moral content, which certainly it did not have at first, or whether impurity in itself provoked the anger of the greater gods, so that its removal could in any sense be called expiation. The second point is more easily answered than the first. Although rites of purification originated quite independently of the greater gods, a connexion was established before the 5th cent. B.C., so that these rites became a part of the State religion. The murderer was banished because he was hated by the gods (Sophocles, *Œd. Tyr.* 95 ff., 236 ff., 1519; cf. Antiphon, *Tetral.* i. 1. 3 and 10; Thucyd. i. 126). On shipboard he was a source of danger to his fellow-passengers; and, when sacrifices were offered to the gods, his presence made the worship unacceptable (Antiphon, *Herodes*, 81–83). Purifications were performed before every religious festival, for any impurity would provoke Divine anger. The more dreadful the cause of the impurity, the greater the Divine curse, so that, for example, the murder of Cylon and his companions demanded peculiar and effective rites of purification. Moreover, the rites themselves came under the worship of Zeus Meilichios, whose statue, erected after great bloodshed at Argos, was distinctly an expiation for that sin (Pausan. II. xx. 1). The ordinary practice of purification, however, was the removal of a possible cause of Divine anger, rather than the expiation of any sin.

It is clear that most of the rites of purification have nothing to do with any real sin. Contact with death, sickness, and birth demands a purification which has no moral significance. Probably the same is true of purification for manslaughter, though at Athens it was permitted only in case of justifiable homicide. At the same time, all shedding of human blood must have been regarded as a kind of wrong, for which some expiation was welcome. The restoration of the murderer to his place in society involved two elements, viz. an adjustment with the family of the murdered man (often a money recompense), and a religious purification; both these demands would be regarded as expiation just in so far as the murder was felt to be a sin. Herodotus (vi. 139) tells how the Lemnian Pelasgians cruelly murdered their Athenian wives and children; and, when a plague came upon them, they were informed by the Delphic oracle that they must pay whatever penalty the Athenians might demand. A similar answer was made to the inhabitants of Apollonia when they sought relief from a plague which followed the blinding of Euenius (Herod. ix. 93 f.; elsewhere, i. 167, Herodotus uses for this process the phrase ἀκέσασθαι τὴν ἁμαρτάδα). Although purification for manslaughter did not originate in the religion of the Olympian gods, we must conclude that it was brought into connexion with that religion; and the Delphic oracle encouraged the belief that murder was a polluting sin against the gods, which demanded expiation.

Further, it would seem that the ritual purity demanded, for example, by the Eleusinian mysteries

was at times carried over into the ethical field. Most of the evidence for this view may be questioned, since it comes through Christian writers (*e.g.* Tert. *de Præscript.* 40: '[diabolus] ipse . . . expiationem delictorum de lavacro repromittit'; cf. *de Bapt.* 5); yet it is probable that men did come to the mysteries with a feeling of guilt from which they sought relief (Diod. Sic. V. xlix. 6; Schol. ad Aristoph. *Pax*, 277; cf. also Plato, *Polit.* 364 C: ἀδίκημα . . . ἀκεῖσθαι). Although rites of purification commonly had no element of expiation, sometimes the pollution involved a feeling of guilt for which these rites provided relief by expiation.

That it was a sin *to neglect the gods or to offer them any direct affront* was recognized in later times as clearly as in the Homeric poems. And in later practice, as in the epic picture of society, the expiation of such sin consisted, first, in setting right one's attitude toward the gods; secondly, in appeasing the Divine anger. A mythical example is found in the legend of the Trojan war: Agamemnon pursued a hind into the sacred precinct of Artemis; no expression of humble repentance was sufficient to set the matter right, but Iphigeneia must be sacrificed to the goddess to satisfy her anger before the Greeks could sail. It was an affront to Apollo for Crœsus to test the truthfulness of the Delphic oracle; in this case rich gifts were sufficient to atone for the sin and appease Apollo's anger (Xenophon, *Cyrop.* VII. ii. 19). A plague fell on the inhabitants of Phigaleia; the Delphic oracle explained it as the result of the neglected worship of Demeter, and it ceased when that ancient cult was restored (Pausan. VIII. xlii. 5). To kill Cylon and his companions at the altar of Athene was an affront to the goddess for which it was necessary to seek an unusually potent means of atonement (cf. also Herod. vi. 91 f.).

Ordinarily, anything like an affront to the gods was the act of some individual, while the anger of the gods was visited on the State; it was, therefore, the business of the State to deal with the matter, first by punishing the individual, and, secondly, by appeasing the Divine anger. Such acts were the mutilation of the *hermæ* at Athens, and the profanation of the mysteries. Regular courts existed to punish individuals who were responsible for the profanation of religious objects. And to appease the anger of the gods the State had recourse to special rites of propitiation [which will be discussed in the article under that heading]. Here it should be noted that the punishment of the individual was the only expiation (in distinction from propitiation) which could be offered.

The third point of view from which the Greek conception of sin may be regarded is found in *the Divine government of the world.* The Homeric conception that moral law received the sanction of the gods is found in later literature from Hesiod (*Erga*, 333 f.) onwards. 'That old saying, "The doer suffers"' (Æsch. *Choeph.* 306), expresses the Greek view of the inevitableness of punishment (cf. Sophocles, *Œd. Tyr.* 863 ff., *Electra*, 209 ff.; Euripides, *Electra*, 1155). For any expiation which should do away with inevitable punishment, Greek thought found no place. On the other hand, the punishment itself was sometimes regarded as an expiation of the guilt. So the death of Laius' murderer was to 'loose,' *i.e.* undo, the effect of the original deed (Sophocles, *Œd. Tyr.* 100 f.); so the chorus pray that Orestes' deed, a just manslaughter, may 'loose' the blood of long past murders (Æsch. *Choeph.* 803 f.; cf. Eurip. *Her. Fur.* 40). It is not difficult to see how this principle works out in the case of Œdipus. In Sophocles' *Œdipus Tyrannus* the king is self-willed, quick to anger, relying on his own great powers; after years of suffering the same man appears in the *Œdipus Coloneus*, his temper chastened and brought into harmony with the will of the gods, for in the results of his unwitting sin he has made his expiation for it. More commonly, however, the penalty for a grave sin was death; the law was satisfied, *i.e.* expiation was made, but at the expense of the man's life.

The idea of *penance* finds no place in Greek religion, nor are there any practices by which some self-inflicted penalty may take the place of the full consequences of sin. The word 'expiation' naturally refers to some process by which the sinner may free himself either from some of the results of sin, or from the sin itself, or from both. We have seen that the idea of sin was never clearly developed and unified in Greece. Along with other forms of pollution to be removed by purification there was included the pollution due to some evil deed; at times purification came to be a sort of expiation. An affront to the gods was sin; costly gifts might expiate such sin, though here it is simpler to speak of Divine anger and its propitiation. Finally, for sin as moral wrong-doing there was no expiation other than full punishment, since the punishment of sin was regarded as something unchanging and absolute.

ARTHUR FAIRBANKS.

EXPIATION AND ATONEMENT (Hebrew).

—I. In AV 'expiation' occurs only once, Nu 35[33] marg. ('and there can be no expiation for the land' after a murder 'except by the blood of him that shed it'; see further below), and 'expiate' in Is 47[11] marg.: in RV this tr. of Nu 35[33] is brought into the text; 'to make expiation for' occurs also in RV in Dt 32[43], and 'expiated' in the marg. of 1 S 3[14], Is 6[7] 22[14] 27[9]. In all three passages the Heb. word used is *kipper*. 'Atonement' occurs in the priestly laws of the OT for *kippûrîm*, a subst. cognate with *kipper* (as in the 'Day of *Atonement*'); and 'to make atonement' regularly in the same laws for *kipper*. In AV of the NT 'atonement' occurs once only (Ro 5[11]), for καταλλαγή; in RV it does not occur at all, 'reconciliation' being substituted for it in Ro 5[11] on account of other compounds of ἀλλάσσω being, even in AV, rendered by 'reconcile' and 'reconciliation.'

In both AV and RV, it should further be premised, 'atonement' means always, not *amends* or *reparation*, which is the sense the word has acquired in modern English, but 'at-one-ment,' or *reconciliation*, which is the sense in which both 'atone' and 'atonement' are regularly used by Shakespeare, and other writers of the same age: e.g. *Othello*, IV. i. 234, 'I would do much to *atone* them,' *i.e.* to reconcile them; and *2 Hen. IV.*, IV. i. 221, 'If we do now make our *atonement* (reconciliation) well, Our peace will, like a broken limb united, Grow stronger for the breaking'; *Rich. III.*, I. iii. 36 (see further examples in Aldis Wright's *Bible Word-Book*, London, 1866, *s.v.*).

It will be apparent from this preliminary synopsis that *kipper* is the Heb. word corresponding to both 'make expiation' and 'make atonement'; our first step, therefore, must be to examine this word,

with its cognates, and try to ascertain what ideas are associated with it.

2. The primary meaning of *kipper* is uncertain, and, with our present knowledge, cannot be made the starting-point of an investigation. In Arabic the corresponding word, *kafara*, means to *cover*, being used, for instance (Lane, *Arab. Lex.* 2620), of clouds *covering* the sky, or of the wind *covering* a trace or mark with dust; and formerly it was customary to derive the senses of *kipper* from this, as though the meaning were properly to *cover* sin (so, though with reserve, and allowing it to be uncertain, the present writer in 1902, in *HDB*, art. 'Propitiation'). In Syriac *kĕphar*, and esp. the Pael conjug. *kappar*, means to *wipe*, or *wipe away* (as to *wipe* the mouth, to *wipe away* tears, the stain of sin, etc.); and W. R. Smith (*OTJC* [1881], 438 f., more briefly *OTJC*[2] [1892], 380 f.) explained the senses of *kipper* from this, supposing it to denote properly the *wiping away* of sin. Recent progress in Assyriology has, however, thrown new light upon the word. In its Assyr. form, *kuppuru* (with a derivative, *takpirtu*), it is now known to occur repeatedly in a ritual connexion in Assyr. texts; and, though the primary idea expressed by the term is still disputed among experts,[1] it seems clear that in actual usage it expresses the idea of *ritual purgation*: by certain specified ceremonial acts a priest is directed, for instance, to 'purge' or 'purify' a king (*šarra tukappar*), a sick person, or a house.[2] The ceremonies prescribed are largely, it should be noted, of a magical nature; and their supposed effect is to remove diseases, and especially to expel the demons who were regarded as the cause of both these and other troubles in those whom they possessed (see above, p. 638[a]). The word is used in a much deeper sense in Heb. than in Assyr.; but the applications in the two languages are sufficiently kindred to leave no doubt that there must be some ultimate connexion between them. Whether, in the remote age in which the Hebrews and the Assyrians separated from each other, the word had already acquired a ritual signification, which was afterwards developed along different lines in the two languages, or whether (Zimmern) the word was *borrowed* by the Hebrews from the Assyrians at a later date, and the ritual sense then attaching to it was afterwards modified independently by the Hebrews, it is hardly possible at present [1912] to determine; but, in one way or the other, the Heb. and Assyr. applications of the word must have sprung from a common origin.

It will be convenient in the sequel to indicate the action denoted by the verb either by the inf. *kappēr*, or by the post-Biblical subst. *kappārāh*.

3. The following are the general ideas expressed by *kappēr*. Either the guilt of sin or the stain of some ritual (non-moral) 'uncleanness' rests upon a man: the appropriate *kappārāh* expiates the guilt, or ritual stain, clears the offender, and at the same time appeases the Divine anger, which the sin has aroused, and effects the 'at-one-ment,' or reconciliation, between God and man. The means by which the *kappārāh* operates is usually some ritual ceremony, especially a sacrifice in which *blood* is shed. The effect might be thought of as produced mechanically; but, as religious ideas became more spiritualized, it was seen that the rite must depend for its efficacy upon the moral state of the sinner, upon his penitence and desire for pardon. A particular case was the guilt of bloodshed, which (according to ancient ideas) had to be avenged by the kinsmen of the murdered man, and which, moreover, was regarded as both implicating the murderer's clan and polluting the land in which the blood was shed. For wilful manslaughter there was no sacrificial *kappārāh* in Israel; but the payment of a *kōpher*, or expiation-price for a life, though recognized by the law only in certain exceptional cases, seems to have been a well-known practice (see § 7).

Kipper, whatever its primary physical meaning may have been, seems to have been in early use in Israel with the idea of *ritual purgation* attaching to it; it then gradually acquired the more definite ideas of *expiation, purification from sin, propitiation*, and *reconciliation*, just referred to.

4. Let us now examine in greater detail the use of *kipper* in the OT. We may begin with the non-priestly parts. It is doubtful whether it occurs in any passage with its presumed primary meaning; but, if the text is correct, it will do so in Is 28^{18} ('And your covenant with death shall be *disannulled*,' where the idea of annulment, or obliteration, might be derived either [see § 2] from that of *to cover* or from that of *to wipe out*); but *kuppar* here is very probably an error for *huphar* (from *pārar*), the word ordinarily used of annulling a covenant.

In the other non-priestly passages of the OT in which the word occurs the subject is sometimes a *lay* Israelite, sometimes God; the object is usually the guilt, but occasionally it is the offender.

In Gn 32^{20} Jacob, fearing (v.[7]) to meet Esau, lest (v.[11]) he should slay both himself and his family for the wrongs he had formerly done him, says 'I will *kappēr* his face with a present.' Here the meaning *might* be either '*cover* his face' with a present, the figure being that of a person whose eyes are blinded by a gift so as not to notice something (cf. Gn 20^{16} and Job 9^{24} [though the Heb. word is not the same], Ex 23^{8}), or (W. R. Smith, *l.c.*) '*wipe clean* the face,' blackened by displeasure, as the Arabs say similarly 'whiten the face'; but, in view of what has been said above, it is more probable that the word is borrowed from the ritual terminology, and that the meaning is 'I will *appease* his face with a present' (LXX, ἐξιλάσομαι τὸ πρόσωπον αὐτοῦ—ἐξιλάσομαι being the word by which LXX almost always render *kipper*).

In Ex 32^{30} Moses, after the sin of the golden calf, when about to go up to the mount to God, says, 'Peradventure I shall *make expiation* for your sin'—viz. by appeasing God's wrath, either by intercession (v.[31]) or, as some think, by offering to die for the people himself (v.[32]). As in Gn 32^{20}, the term is borrowed from the priestly terminology; but evidently no priestly ceremonial is implied by its use.

1 S 3^{14}, 'The iniquity of Eli's house (the sins of his sons) shall not be *expiated* by sacrifice or offering (*minḥāh*) for ever,' is a clear allusion to expiation by sacrifice.

5. The four following passages, all dealing with expiation for the guilt or pollution occasioned by *bloodshed*, should be considered together:

2 S 21^{3}. David, inquiring about the cause of a long and continued famine, is told by the oracle, 'Upon Saul and upon his house there resteth blood [so read with LXX], because he slew the Gibeonites,' to whom the Israelites had sworn protection (Jos $9^{15.20f.}$). Thereupon David asks the Gibeonites, 'What shall I do for you? and wherewith shall I *make expiation*, that ye may bless the inheritance of Jahweh?' They reply that it is no matter of silver or gold between themselves and Saul or his house, nor have they power to put any one to death in Israel. David thereupon offers to do for them whatever they wish; and they ask for two of Saul's sons, and five of his grandsons, that they may 'hang them up to Jahweh in Gibeon [so LXX].' Their request is granted, and they do this. The Gibeonites are now satisfied: the injury done to them by Saul is expiated; Jahweh's anger also is appeased, and He is reconciled to His land. The narrative sets before us vividly the feeling in Israel in David's time on the subject. The guilt of the blood shed by Saul rests upon his family; and its penal consequences affect the entire nation. The answer of the Gibeonites shows that, whatever the law in Israel at the time might be, expiation could be made for a murder either by a money-compensation (the 'blood-wit,' or ποινή [see § 7]), or by the principle of life for life (Ex 21^{12}), and

[1] Zimmern (*Beiträge zur Kenntnis der bab. Relig.*, 1896, p. 92; *KAT*[3], 601 f.) supposes its primary meaning to be to *wipe away* ('*abwischen' von Schmutz*); and the word certainly occurs in the sense of 'wiping away' a tear in *KB* vi. 78, line 20. S. H. Langdon (*ExpT* xxii. [1911] 320 ff.) contends that its primary meaning is to *remove*. C. F. Burney (*ib.* p. 325 ff.) and C. J. Ball (*ib.* p. 478 f.) argue, largely from the evidence afforded by a syllabary, that it means properly to *be bright*, or, in the causative conjug. *kuppuru*, to *make bright*. The theological import of the word, as used in the OT, is, however, unaffected by the question of its primary, *physical* meaning; for it is doubtful if this was at all present to the Hebrews when they used it in a ritual or theological sense.

[2] See the collection of passages given by Langdon, *ExpT* xxii. 320 f. and 380 f.; and the texts translated by Zimmern, *op. cit.* (see Index, *s.v.* 'Kuppuru').

the surviving kinsmen of the murdered man might decide which they would accept. The Gibeonites choose the latter.

Dt 21^{9}. A man is found murdered; the murderer cannot be traced; and the guilt of his blood rests upon land and people. The elders of the city nearest the spot on which the murdered man was found, it is enjoined, are in such a case to perform a symbolical ceremony, slaying a cow (representing the murderer) over running water, and washing their hands over it, to symbolize their own innocence. The ceremony having been duly performed, they are to pray to God in these words: 'Our hands have not shed this blood, neither have our eyes seen it. *Expiate*[1] (or *Declare expiated*), O Jahweh, thy people Israel, whom thou hast redeemed, and lay (=leave) not innocent blood in the midst of thy people,' after which it is added, 'And the blood(-guilt) shall be *expiated* for them.' Jahweh does not 'expiate' the guilt by a priestly ceremony; but, satisfied with the ceremony which the elders have performed, He regards it as 'expiated,' and nó longer treats His people with disfavour.

Dt 32^{43} (at the end of the Song attributed to Moses). Jahweh, it is said, will 'avenge the blood of his servants, and will render vengeance to his adversaries, and *expiate* his land, his people' [read, with LXX, *the land of his people*]. The land of Canaan has been polluted by the blood of Israelites slain by their foes: the pollution will be removed by the blood-revenge wrought upon the enemy by Israel.

Nu 35^{33} (in P's law of homicide: a passage which, though belonging to P, does not prescribe any priestly ceremony). 'And ye shall not pollute the land wherein ye are [viz. by allowing the murderer to live]; for blood, it polluteth the land; and no *expiation can be made* for the land for the blood that is shed therein, save by the blood of him that shed it.'

6. We now come to passages from the prophets.

Is 6^{7}. In his vision, Isaiah's 'iniquity is taken away,' and his 'sin *expiated*,' by the seraph touching his lips with the hot stone from the altar.

Is 22^{14}. For their untimely merriment in presence of the foe, the prophet pronounces sentence against the people of Jerusalem in these words: 'Surely this iniquity shall not be *expiated* for you until ye die, saith the Lord, Jahweh of hosts.' Cf. 1 S 3^{14} above.

Is 27^{9} (post-exilic). The 'iniquity of Jacob will be *expiated*' only by Israel's altogether abandoning idolatry, making the stones of (idolatrous) altars into pounded chalk-stones, and discarding entirely *'ăshērîm* and sun-images.

Is 47^{11} (addressing Babylon), 'Therefore shall evil come upon thee, which thou shalt not know how to charm away [but read probably שחדה, *to bribe off*, for שחרה]; and mischief shall fall upon thee, which thou shalt not be able to *propitiate*' (fig. for *arrest*, *avert*; cf. '*expiare* signa' [Cic. *Div.* ii. 130]).

Jer 18^{23} (in a prayer against his foes), '*Expiate* not their iniquity, neither blot out their sin from before thee: but let them be made to stumble before thee; deal thou with them in the time of thine anger.'

Ezk 16^{63} (in a promise of restoration of favour), 'When I *expiate* thee (clear thee from guilt), in regard to all that thou hast done.' The figure is suggested by the priestly terminology: Jahweh produces directly, and by His own free grace, an effect which the priest produces by means of a sacrifice.

Ps 65^{3}, 'Iniquities are too strong for me, As for our transgressions do *thou* (emph.) *expiate* them.'

Ps 78^{38}, 'But he is compassionate, he *expiateth* iniquity, and destroyeth not.'

Ps 79^{9}, 'And deliver us, and *expiate for* our iniquities, for thy name's sake.'

In the next two passages the term is used figuratively.

Pr 16^{6}, 'By kindness and faithfulness iniquity is *expiated*; and by the fear of Jahweh men depart from evil.'

Cf. the teaching of Ben Sira, Sir 3^{3}, *ὁ τιμῶν πατέρα ἐξιλάσεται ἁμαρτίας*; ^{30}, *καὶ ἐλεημοσύνη ἐξιλάσεται ἁμαρτίας*; 35^{3} [Swete, 32 (35) ^{5}], *εὐδοκία κυρίου ἀποστῆναι ἀπὸ πονηρίας, καὶ ἐξιλασμὸς ἀποστῆναι ἀπὸ ἀδικίας*; also 34^{19} [Swete, 31 (34) ^{23}], *οὐκ εὐδοκεῖ ὁ ὕψιστος ἐν προσφοραῖς ἀσεβῶν, οὐδὲ ἐν πλήθει θυσιῶν ἐξιλάσκεται ἁμαρτίας.*

Pr 16^{14}, 'The wrath of a king is (as) messengers of death (*i.e.* it threatens death); but a wise man will *propitiate* it,' viz. by prudent and conciliatory behaviour.

2 Ch 30^{18-19}, 'The good Jahweh *expiate* (clear from guilt) every one that setteth his heart to seek God, though he be not cleansed according to the purification of the sanctuary.'

Dn 9^{24}, 'Seventy weeks are determined upon thy people and upon thy holy city, to finish transgression, and to make an end of sins, and to *expiate* iniquity, and to bring in everlasting righteousness,' etc., *i.e.* to bring in an age free from all sin.

7. It is now necessary to consider the subst. *kōpher*. *Kōpher* (RV, except Am 5^{12}, always 'ransom') is the *expiation-price for a life*, the money offered for the life of a murdered man to appease his kinsmen's wrath, the ποινή, or 'wergild,' so common among uncivilized and semi-civilized nations (see BLOOD-FEUD, vol. ii. p. 720 ff.). As the allusions to it show, the *kōpher* must have been an institution familiar to the Hebrews: but in Hebrew *law*, from the earliest period in which we know it, the principle, in the case of murder, was life for life (Ex 21^{12}, 'He that smiteth a man, so that he die, shall be put to death'); and in P the acceptance of a money-compensation is strictly prohibited (Nu $35^{31.32}$, no *kōpher* to be accepted for the life of a murderer; v.^{33}, murder can be 'expiated' only by the death of the murderer); it was admitted only in the case of a man being killed by a vicious ox, in which case, if the victim's kinsmen were content, the owner might pay such a ποινή as they might fix (Ex 21^{30}, 'If there be laid on him a *kōpher*, he shall give for the redemption of his life whatsoever is laid upon him'). The *kōpher* is also mentioned in the following passages:

1 S 12^{3}. Samuel, in protesting his integrity as a judge, asks, 'Of whose hand have I taken a *kōpher*?'—*i.e.* a bribe to spare a murderer's life. Cf. Am 5^{12}, 'Ye that afflict the just, that take a *kōpher* (a bribe to spare a murderer's life), that turn aside the needy in the gate (from their right).'

Is 43^{3}, 'I have given Egypt as thy *kōpher*, Ethiopia and Seba instead of thee' (Egypt represented poetically as the 'ransom' which Jahweh gives Cyrus in lieu of Israel).

Ps 49^{7}, 'No man can redeem [notice 'redemption' in Ex 21^{30}, above] a brother from death, or give God a *kōpher* for him,' *i.e.* a price sufficient to save his life.

Pr 6^{35} (said of an injured husband, who will accept no price to spare the life of an adulterer), 'He will not regard any *kōpher*; neither will he be content though thou give many bribes.'

Pr 13^{8}, 'The *kōpher* of a man's soul (life) is his riches.'

Pr 21^{18}, 'The wicked is a *kōpher* for the righteous; and the treacherous (cometh) instead of the upright.' Cf. Is 43^{3}; and Pr 11^{8}, 'The righteous is delivered out of trouble, and the wicked *cometh in his stead*.'

In Job 36^{18} the discipline of sickness, and in 33^{24} the penitence brought about by it, are regarded poetically as the *kōpher*, or price, for which God will spare a man's life.

Ex 30^{12} (P). A half-shekel is to be paid by every one, at the time of a census, as the *kōpher* of his life, 'that there be no plague among them, when thou numberest them,' as might be apprehended (cf. 2 S 24) on such an occasion. In v.^{15} the half-shekel is said to be given to *make expiation* for their lives, and in v.^{16} it is called *expiation*-money.

Cf. the two following passages, in which, though the word *kōpher* is not used, the idea is present, and the verb *kipper* is used exactly as in Ex 30^{15}, just referred to:—

Nu 8^{19}. The Levites are 'given as a gift to Aaron and to his sons (*i.e.* to the *priests*) from among the children of Israel,' to perform for them menial duties about the sanctuary, and 'to *make expiation* for the children of Israel: that there be no plague among the children of Israel, through the children of Israel coming nigh unto the sanctuary.' The lay Israelites, in approaching the holy vessels, etc., would do so, according to the representation of P, at the risk of their lives (Nu 18^{22} $1^{51.53}$): the 'Levites,' doing it in their stead, prevent Jahweh's wrath from manifesting itself in a plague (cf. Ex 30^{12}, just cited), and are therefore said to 'make expiation' on their behalf.

Nu 31^{50}. The army which had returned from the war against Midian without losing a man bring as an offering to Jahweh the jewels which they had obtained from the spoil, 'to *make expiation* for their lives before Jahweh.' This may have been either because (v.^{49}) they had been numbered (cf. Ex 30^{12}), or because they had all returned alive from the war; in either case, the spoil is an expiatory offering for lives which, though they *might* have been forfeited, had been preserved. The narrative, as it stands, is not historical; but the passage exemplifies the feeling on the subject which prevailed.

The *kōpher* was thus the *expiation-price of a life*. The word is particularly associated with *kipper* in Ex $30^{12.15}$ and Nu 35^{31-33} (§ 5). For blood shed in murder there is, according to the law, no 'expiation,' save by the death of the murderer. No *kōpher*, therefore, will save his life; but it will, in certain cases, save other lives. At the same time, the allusions appear to show that, in actual practice, a money-*kōpher* might be both offered and accepted. In this connexion, 2 S 21^{3-6} (§ 5) should also be noticed. Though the term *kōpher* is not used, the silver and gold with which the Gibeonites will have nothing to do would be properly described as a *kōpher*; but the only *kappārāh* which, in reply to David's offer, the Gibeonites will accept is the lives of Saul's sons and grandsons.

8. We come, lastly, to consider the use of *kipper* in the *priestly* passages of the OT, *i.e.* in Ezk 40–48, in P, and in 1 Ch 6^{49}, 2 Ch 29^{24}, Neh 10^{33}. In these the subject is always either the *priest*, or (Lv 1^{4} 17^{11}; and, in passages already considered, Ex $30^{15.16}$, Nu 31^{50} 35^{33}) an offering of some kind;

[1] We now speak only of 'expiating' an *action*; but, for the sake of preserving the connexion, it is used here (and sometimes in the sequel) in its old sense, which it shares with the Lat. *expiare*, of purifying a *person* from guilt or pollution—properly by religious ceremonies.

the object is never the *guilt* (as in many of the passages cited above), and indeed, as a rule, is unexpressed, the usual expression being to *make expiation for* (or *on behalf of*) a person or (see § 9(*a*)) thing; the means is a *sacrifice*, except in the few cases in which some other act, or offering, is regarded as having an expiatory force.

(*a*) Of the *blood* of sacrificed animals (as containing the 'soul,' or life, Dt 12[23]): Lv 17[11] (in the 'Law of Holiness'), 'I have given it to you upon the altar to *make expiation* for your souls (lives); for the blood, it *maketh expiation* by means of the soul (life), which is in it.'

(*b*) Rarely of the *burnt*-offering: Lv 1[4] (generally: 'and it shall be accepted for him to *make expiation* for him'); 14[20] 16[24] (on the Day of Atonement, after the principal ceremonies are over, when Aaron comes out of the tent of meeting, and offers a burnt-offering to 'make expiation' for himself and his people); also sometimes when prescribed in conjunction with a sin-offering (see § 8(*c*)). Cf. Ezk 45[15-17].

(*c*) Most frequently of the *sin*-offering: Ex 29[36. 37] (to *make expiation* for the altar of burnt-offering at its consecration: so Lv 8[15], Ezk 43[20. 26]); 30[10] (for the altar of incense, on the annual Day of Atonement); Lv 4[20. 26. 31. 35] 5[10.] * [18] † (for sins consisting in any act prohibited by Jahweh, committed in ignorance or inadvertence by either the community or an individual); 5[6] (for withholding evidence in a court of law, for touching the carcass of any unclean animal, or any uncleanness of man, and for taking a rash oath such as would imply a lack of reverence for Jahweh); 6[30] (on a point of ritual; so 10[17]); 8[34] (for Aaron and his sons at their consecration; the sin-offering not expressly mentioned); 9[7] * (when the high priest enters solemnly upon his duties, for himself and the people); 12[7.] * [8] * (for the 'uncleanness' arising out of childbirth); 14[19. 31] * (after purification for leprosy); 15[15.] * [30] * (after the cessation of unclean issues in man or woman); 16[6. 10. 11. 16-18. 30ff.] (on the Day of Atonement, for Aaron and his house, for the goat sent to Azazel, for the Holy of holies [v.[16]] 'because of the uncleanness of the children of Israel, and because of their transgressions, even of all their sins,' for the tent of meeting, v.[16] [here = the Holy place], 'that dwelleth with them in the midst of their uncleannesses,'[1] for the altar of burnt-offering [v.[18f.]] 'to hallow it from the uncleannesses of the children of Israel,' for the other priests, and for the whole people); 23[28] (on the Day of Atonement); Nu 6[11] * (at the close of the purification of the Nazirite, when rendered unclean by a person dying suddenly beside him); 8[12] * (at the dedication of the Levites); 15[24f.] * [28] (for unintentional sins; cf. Lv 4); 28[22] (on each day [see v.[24]] of the feast of unleavened bread); [30] (on the feast of weeks); 29[5] (on New Year's Day); [11] (on the Day of Atonement); Ezk 45[20] (for the sanctuary, on the first day of the 1st, and [LXX] of the 7th month—the *two* days of annual purification and atonement, prescribed by Ezekiel); 2 Ch 29[24] (for all Israel, at the purification of the temple by Hezekiah, as described by the Chronicler); Neh 10[33] (the people agree to make provision, among other things, 'for the sin-offerings to *make expiation* for Israel'): cf. 1 Ch 6[49].

(*d*) Of the *'āshām*, or *guilt*-offering (which was prescribed for cases in which an injury had been done to the rights of another person: if the injury could be estimated in money, the value *plus* one-fifth was returned to the injured person, and the *'āshām* was offered as an acknowledgment of the sin against God): Lv 5[16. 18] 6[6] (for different cases of fraud and sacrilege—withholding Jahweh's sacred dues, and breaking generally His commands; perjury in the denial of betrayal of trust, robbery, exaction, misappropriation of lost property, and similar offences); 7[7] (on a point of ritual); 14[18. 21. 29] (in the ritual of purification for leprosy); 19[22] (for illicit intercourse with the female slave of another man); Nu 5[8] (for wrongful possession of lost property, etc.; cf. Lv 5[16. 18] 6[7]).

(*e*) Of the 'ram of installation' (מִלֻּאִים)—a species of *peace*-offering, offered at the consecration of the priests (Ex 29[18-20. 31-34]), the blood of which was sprinkled upon the priests and their garments—and seemingly, also, of the cakes of bread eaten by the priests with it (Ex 29[33]). Cf. Driver, *Exodus*, Camb. 1911, *ad locc.*

(*f*) Of the blood of a bird (*not* offered in sacrifice), to be sprinkled upon a house infected with leprosy, after it has been pronounced clean by the priest, to 'un-sin' it (Lv 14[49. 52]; see § 9(*d*)), and 'make expiation' for it (v.[53]).

(*g*) *Kipper* is also predicated generally of the *meal*- and *peace*-offering (together with the burnt- and sin-offering) in Ezk 45[15. 17].

(*h*) Of Aaron, when, by kindling incense from the fire on the altar, and carrying it rapidly among the people, he appeased Jahweh's anger, and arrested the plague (Nu 16[46f.]).

(*i*) Of Phinehas, when he slew with the sword two conspicuous offenders, and thereby 'turned away' Jahweh's wrath from Israel, and stayed the plague (Nu 25[13]).

See also Ex 30[15. 16], Nu 8[19] 31[50] (cited in § 7), and Nu 35[33] (see § 5).

9. The following facts respecting the use of *kipper* in Ezk and P ought to be noticed:—

(*a*) Though the object of *kipper* is usually an individual or the community, it is sometimes a *material* object, or an animal—in particular, the altar of burnt-offering (Ezk 43[20. 26], Ex 29[36. 37], Lv 8[15] 16[18. 20. 33]); the altar of incense (Ex 30[10b]); the sanctuary (Ezk 45[20], Lv 16[16. 20. 33]); a house infected with leprosy, on the occasion of its purification (Lv 14[53])[1]; the goat sent to Azazel (Lv 16[10]).—(*b*) The verb is a denominative,[2] meaning to *perform an expiatory ceremony* for (or on behalf of) a person or thing: the object follows in the *accus.* only in Lv 16[20-33], Ezk 43[20. 26] 45[20] (each time of a material object).—(*c*) It is followed by 'and it shall be forgiven him (them),' in the case of the *sin*-offering, Lv 4[20. 26. 31. 35] 5[10. 13], Nu 15[25. 28] (cf. v.[26]); and in the case of the *guilt*-offering, Lv 5[16. 18] 6[7] 19[22].—(*d*) It is closely associated (but only when predicated of the *sin*-offering) with 'to be clean' (טָהֵר) or 'to cleanse' (טִהַר): Ezk 43[26], Lv 12[7. 8] 14[20. 52. 53] 16[19. 30], Nu 8[21b], cf. 2 Ch 30[18b]; 'to sanctify': Ex 29[33. 36. 37], Lv 8[15] 16[19], Nu 6[11]; 'to free from sin,' or 'un-sin' (חִטֵּא): Ezk 43[20. 22. 23a], Ex 29[36], Lv 8[15], all of the altar of burnt-offering (EVV, very inadequately, and obliterating altogether the distinctive idea of the Hebrew, 'cleanse' or 'purify'); Ezk 45[18], of the sanctuary (EVV 'cleanse'); Lv 14[49. 52] [see v.[53]], of the leprous house (EVV 'cleanse'); Nu 8[21a], of the Levites (RV 'purified themselves from sin').[3]

10. *Kappōreth*, 'mercy-seat' (LXX mostly ἱλαστήριον; Wyclif, 'propitiatory'), though it has been supposed to mean properly a *cover* or *lid* (cf. § 2), can hardly, when the use made of it is considered, be dissociated from *kipper*. As a derivative of *kipper*, *kappōreth* would mean properly *expiation*, and then (cf. *pārōkheth*, a thing that *shuts off*, of the *veil* in front of the Holy of holies) an *expiating thing*, or *means of expiation*. The blood was the actual means of expiation in the Levitical system; but the term may have been applied to the 'mercy-seat,' as being the means of bringing the blood as near as possible to Jahweh on the Day of Atonement. Even if *kappōreth* did originally signify *lid*, it is difficult not to think that the associations of *kipper* must have been felt to attach to it (König: *Sühndeckel*). The word occurs in Ex 25[17-22], Lv 16[14. 16], and elsewhere (but, except 1 Ch 28[11], only in P).

11. From all that is stated, or may be inferred, it is probable that the primitive ideas of expiation and propitiation among the Hebrews were very similar to those of other primitive nations (p. 635 ff.); but that, as was the case with other primitive ideas and customs, they were developed by the Hebrews along their own lines, made the vehicle of important religious truths, and more and more spiritualized. Early passages implying the idea of appeasement are 1 S 26[19] (where David says, 'If it be Jahweh who hath incited thee against me, let him accept [Heb. *smell*] an offering' [*minḥāh*]), 2 S 24[21. 22. 25] (burnt- and peace-offerings offered to appease Jahweh's anger [v.[1]] for David's census, and to stay the plague), Gn 8[21] (where Jahweh 'smells' with satisfaction the 'soothing odour' of Noah's burnt-offerings, and promises no more to curse the ground for man's sake); but neither in these passages nor in 1 S 3[14]

* Together with a *burnt*-offering.

† Lv 5[7-13] is the continuation of 4[1-35].

[1] With this annual expiation of the sanctuary, cf. the noticeable parallel in the ritual for the purification of the shrine of Nebo on the 4th and 5th days of the Bab. New Year's festival, published by Dhorme (*RAssyr* viii. [1911] 48 f.), and (in part) translated into English by R. W. Rogers, *Cuneiform Parallels to the OT*, 1911, p. 197 (cf. Langdon, *ExpT* xxii. [1911] 380 f.). In this ritual (to describe it briefly), the priest of incantation first sprinkles the shrine with water 'from a well of the Tigris and a well of the Euphrates,' and burns incense in it; then the head of a male sheep is cut off, and with its body he purges (*ukappar*) the house, and recites incantations to exorcize it; after this he carries away the body, and casts it into the river Nala (cf. Lv 16[16. 20-22]).

[1] Cf. '*expiare* forum' (Cic. *Phil.* i. 30; *pro Rab.* 11).

[2] But whether it is derived directly from *kōpher* is uncertain. *Kōpher* is the expiation-price for bloodshed *only*; the use of *kipper* is much wider. Perhaps, however, *kōpher* was once used more widely.

[3] The Hebrews understood 'sin' in a wider sense than we do, and applied it to objects and actions to which we should not attribute it (cf. § 13).

(where the word *kipper* is used; see § 4) is any special form of sacrifice adopted; the ordinary burnt- and peace-offering suffices. But, though the special applications of *kipper* found in Ezk. and P will be of later growth, the word itself, as a technical ritual term, must have been in early use in Israel; it appears already in Isaiah and Deut., if not in Gn 32^{20}, in senses derived to all appearance from its ritual use. As the preceding synopsis will have shown, in Ezk. and P *kipper* is especially associated with the *sin*-offering, of which it designates the most distinctive and characteristic operation; it is also frequently, though not so characteristically, predicated of the *'āshām*, or '*guilt*-offering,' the sacrifice prescribed for cases in which some right or due, whether of God or man, had been withheld. The sin- or guilt-offerings are not mentioned in any legislation before those of Ezk. (40^{39} 42^{13} 44^{29}) and P; but they appear to be presupposed in 2 K 12^{16} [Heb. ^{17}]; and the *idea* implied in the *'āshām* is already clearly recognized in 1 S $6^{3ff.}$, where the Philistines, anxious to make some reparation to Jahweh for their desecration of the ark, and to appease His anger, are represented by the Hebrew narrator as sending to Him an *'āshām*—though it is one which consists not in a sacrifice, but in golden images symbolical of the plague-boils which Jahweh had sent upon them. Of the *burnt*-offering, offered alone, *kipper* is predicated in P only in Lv 1^4 14^{20} 16^{24}, on the ground, probably, that, though not a proper expiatory sacrifice, it was a mark of the worshipper's devotion, and, being offered 'for his favour (acceptance) before Jahweh' (Lv 1^3 לִרְצֹנוֹ), and accepted (וְנִרְצָה לוֹ) accordingly, moved Him to regard him graciously and to overlook his moral insufficiency (cf. Gn 8^{21} etc., cited above; and also Job 1^7 42^8). Elsewhere in P, *kappēr* is attributed to the burnt-offering only when it is prescribed in conjunction with the sin-offering (see the passages in § 8 (*c*)), for the purpose, as it seems, of enhancing the significance of the latter. In Ezk $45^{15.\,17}$, in an enumeration of the principal sacrifices to be provided in the restored Temple to 'make expiation' for the people, the peace-offering, and even the unbloody meal-offering, are included; but probably the expression is intended to refer only to the sin- and burnt-offering.

12. The *kappārāh* is specially the function of the *blood*[1]—though not, except in Lv 14^{53} (§ 8 (*f*)), of blood as such, but of the blood of an animal slaughtered 'before Jahweh' (Lv 1^5, etc.), and offered upon the altar. (In the normal ritual, the only exception is Lv 5^{11-13}, where a person who cannot afford even a couple of small birds [vv.$^{7-10}$] is allowed to offer *meal* as a sin-offering.) Thus in the sin-offering the blood was not, as in the other sacrifices, thrown from a bowl against [not, as EVV, *sprinkled upon*; see Comms. on Ex 29^{16}, Lv 1^5] the sides of the altar of burnt-offering; it was applied to specially sacred places—to the horns (Lv $4^{25.\,30.\,34}$ 8^{15} 16^{18}), or side (5^9), of the altar of burnt-offering, or to the horns of the altar of incense, and sprinkled before the veil ($4^{6f.\,17f.}$), or, on the Day of Atonement, before and upon the mercy-seat itself ($16^{14.\,15}$). Notice also the application of the blood to various parts of the altar of burnt-offering at its consecration in Ezk 43^{20}, and of the Temple at its two annual purifications in Ezk 45^{20}; in the ritual for purification from leprosy, the blood, both of a bird (not killed sacrificially) and of the guilt-offering, was applied to the person to be cleansed (Lv $14^{5-7.\,14.\,25}$), and the blood of the slain bird was sprinkled on the leprous house (14^{51}); the blood of the 'ram of installation' also is sprinkled upon the priests and their garments (Ex $29^{20.\,21}$). Among primitive and semi-primitive peoples the idea that blood, as charged with latent life, possesses a mysterious potency, was, and still is, widely diffused; it may form a sacramental bond uniting men between themselves or with their God (cf. W. R. Smith, *Rel. Sem.*² 312–20, 336–50, 400); it is powerful, especially when shed in sacrifice, to protect against disease, misfortune, and death (Curtiss, *Primitive Semitic Religion To-day*, Lond. 1902, p. 181 ff.; cf. Driver, *Exodus*, Camb. 1911, pp. 90, 253, 411), to remove uncleanness and the stain of sin, and to restore to 'holiness' (see BLOOD, vol. ii. pp. 715–719, especially 719; Moore, in *EBi*, art. 'Sacrifice,' col. 4217–9). Blood, as the seat of life, was too sacred to be used as food (Dt $12^{16.\,23f.}$), but it was so much the more potent as a sacramental agency; in Lv 17^{11} (quoted above, § 8 (*a*)) its expiatory efficacy is expressly ascribed to the 'life' that is in it. And its purifying and sanctifying efficacy was the greater, when it was the blood of an animal consecrated—as in the cases contemplated in Lv 17^{11}—by being sacrificed upon the altar, and especially when it was that of the sin-offering, which was brought (symbolically) nearer to Jahweh than that of other offerings. No doubt, also, later the idea would arise that the 'soul,' or life, of an innocent animal involved in the blood was likely to be the more suitable and the more acceptable as an offering to God, as being the purest and most immaterial gift that could be offered to Him.

13. The *effect* of the *kappārāh* is a purification, usually from sin, but sometimes (Lv 12. 14. 15, Nu 6) from merely ceremonial defilement—ritual and moral defilement being not clearly distinguished by the Hebrews (cf. the use of חִטֵּא, to 'un-sin,' of the altar, a leprous house, or other material object [§ 9], and of a person after the purely physical 'uncleanness,' occasioned by contact with a corpse [Nu $19^{12.\,13.\,19.\,20}$]). The aim of the priestly legislation is to maintain, by a detailed and comprehensive ceremonial, the *ideal holiness* of the theocratic community; and the *kappārāh* is the primary means by which this is effected. Sometimes cleansing (moral or ceremonial) is expressly mentioned as the effect of the rite (see § 9; and note esp. Lv 16^{30} 'On this day shall expiation be made for you to *cleanse you*; from all your sins *ye shall become clean* before Jahweh'). As prescribed on behalf of the priests (Ex 29^{33}, Lv 9^7) and Levites (Nu $8^{12.\,21}$), before entering upon their sacred duties, it is a readily intelligible rite of preliminary expiation. Enjoined for a *material* object, the altar or the sanctuary (§§ 8, 9), its aim is to secure, or to preserve, its holiness: the altar prior to its consecration, as the work of human hands, is regarded as affected by a natural uncleanness, which has to be removed; the sanctuary, frequented by a sinful and unclean people, is contaminated by them, and requires periodical purification; the leprous house is conceived as tainted by sin; and the 'scape-goat,' offered by the sinful people, must be purified before it can discharge the solemn functions assigned to it.

On the part of God, the effect of the *kappārāh* is more particularly specified—at least in the sin- and guilt-offering—as *forgiveness* (Lv $4^{20.\,26.\,31.\,35}$ $5^{10.\,13}$, Nu $15^{25.\,26.\,28}$, Lv $5^{16.\,18}$, and, after graver offences, 6^7 19^{22}). In view of the constant teaching of the prophets that there was no merit or value in sacrifice as such, and that repentance and amendment of life are the indispensable conditions of God's pardon and favour, the forgiveness, we may reasonably suppose, would be understood, at least by the more spiritual Israelites, to be conditional on the penitence of the offender, though this is not stated in the laws as explicitly as might have been

[1] In the Assyr. ritual, it may be noticed, blood is rarely mentioned in connexion with *kuppuru*, and no stress is laid upon it (above, p. 640ᵃ).

expected (*confession* is enjoined only in Lv 5^{5} 16^{21}, Nu 5^{7}: on the formulæ prescribed for use in later days, see below, p. 660 f., and *HDB* i. 201^{b}).

What, however, are the sins expiated by the *kappārāh*? According to Lv $4^{2. 13. 22. 27}$ $5^{15. 18}$, Nu 15^{24-29} (cf. v.^{22}; Ezk 45^{20} 'for him that *erreth*'), only such as are committed in 'error,' *i.e.* through ignorance or inadvertence, unintentionally: sins committed with a 'high hand' (Nu $15^{30f.}$), *i.e.* presumptuously, in defiance of God's will, cannot be expiated; whoso doeth them is to 'bear his iniquity,' and to be 'cut off from among his people.' On the other hand, some offences, including even grave ones, which can hardly be anything but intentional (Lv $5^{1. 4}$ 6^{2-4} 19^{20-22}), may be expiated by a sin- or guilt-offering; and, so far as the *words* of Lv 16^{16} go, *all* transgressions of any kind are expiated on the Day of Atonement. This, however, cannot be the intention of the passage: the Day of Atonement is designed partly to clear the *nation*, as a whole, from the sins of individuals which were clinging to it, partly to clear *individuals*, in so far as they were penitent; but it is inconceivable that it could be intended to clear individuals from unrepented sins. The Mishna (*Yōmā*, viii. 8–9) is careful to teach explicitly that its ceremonies are ineffectual unless accompanied by repentance (see below, p. 660). In spite of Lv $5^{1. 4}$ 6^{2-4} 19^{20-22}, the general scope of the *kappārāh* must have been to make expiation only for venial and unintentional sin, or, in the case of graver sins, after sincere and heartfelt repentance.

14. What, lastly, it may be asked, is the most prominent idea expressed by *kipper*? The ideas of expiation, purification from sin, propitiation, and 'at-one-ment,' or reconciliation, are intimately connected; one and the same rite effects them all; and all, if not included in, are at least immediately suggested by, *kipper*. The oldest rendering of *kipper* that we have is that of the LXX, who express it all but uniformly by *ἐξιλάσκομαι*, with *ἱλασμός* and *ἱλαστήριον* for its derivatives. Ἱλάσκομαι is a well-known Greek word, construed from Homer onwards with an accus. of the deity (or person) propitiated. In the LXX, however, to 'propitiate God' is never said, any more than it is said in the Hebrew: the construction of *kipper* is to *make expiation* (or *propitiation*) *for* a person—usually absolutely, with at most the addition sometimes of *before God* (Lv 6^{7} $14^{18. 29. 31}$ 15^{30} 19^{22}, Nu 31^{50}). The difference marks a distinction between the heathen and the Biblical points of view; though the idea of propitiating God may be involved in the phrases used in the OT, it is much less prominent than in heathen writers. The expiatory rite has, no doubt, as its ultimate object the restoration of God's favour, and the worshipper's forgiveness; but there is not the same thought of directly appeasing an angry deity as would be implied if the deity were the direct object of the verb. In the normal sacrificial system, *kipper* is never spoken of as allaying Jahweh's anger; it is so described only in certain exceptional cases (§ 8 (*h*, *i*); cf., as *averting* it, Ex 30^{15}, Nu 8^{19} 31^{50}, § 7). Hence, though the idea of propitiation is, no doubt, involved in *kipper*, it must not be unduly pressed; and the idea most distinctively conveyed by the word was probably that of 'expiation.' Still, as LXX rendered *kipper* by (*ἐξ*)*ιλάσκομαι*, and, as *ἱλάσκομαι*, *ἱλασμός*, and *ἱλαστήριον* are used in the NT, in very important passages, of the redemptive work of Christ (He 2^{17}, 1 Jn 2^{2} 4^{10}, Ro 3^{25}), it is to be regretted that in EVV the corresponding words should be rendered 'atonement' in the OT and 'propitiation' in the NT, and that thus a significant link, connecting the NT with the OT, should be lost to English readers.[1]

15. A few words must, in conclusion, be said with regard to the famous prophecy, Is 52^{12}–53^{12}, in which, though the term *kipper* is not used, the idea of expiation is nevertheless clearly present. The prophet here draws a picture of Jahweh's Servant, ideal Israel, describing his exaltation after an antecedent period of humiliation and persecution ending in death; the heathen, who were astonished at the spectacle of his suffering, will be not less amazed by his new and unexpected greatness ($52^{14. 15}$ [read *startle* for *sprinkle*]). As the Book of Job shows, suffering was to the Hebrews evidence of sin; and for a while those who witnessed the Servant's sufferings thought that he was suffering for his own sins (53^{4b}); but at last the truth was borne in upon them that he was, in fact, suffering for *their* sins, and relieving them of the penal consequences which were their due ($53^{4a. 5. 6. 8b. 10. 11. 12b}$). Ideal Israel's voluntary sufferings thus bring home to others the sense of their own guilt, and restore them to spiritual health (53^{5}); then, after his soul (life) has been made a 'guilt-offering' (*'āshām*, 53^{15}), he will rise again, see God's 'pleasure' (*i.e.* his religious mission to the world, $41^{1. 4. 6}$) prospering in his hand, and, as a final reward for his voluntary submission to death, be honoured with a place among the conquerors and great ones of the earth (53^{12}). The use of the word *'āshām* shows (see § 8 (*d*)) that sin is here regarded as a *sacrilege*, an invasion of God's honour; the *'āshām* is the expiation made for it, viz. the innocent life of the ideal Righteous Servant. The voluntary sufferings of the Righteous Servant are accepted on behalf of the wicked; and so the prophecy preaches at the same time the doctrine of vicarious suffering.

16. The theological importance of the ideas which thus had their centre in the *kappārāh* will now be apparent. The dim and at first confused ideas of the nature of sin, of its antagonism to the holiness of God, of its effect in arousing His punitive wrath, and of the need of allaying this, first gave rise to expiatory rites. Gradually, the ideas connected with them became cleared: 'sin' and 'holiness,' which were both at first intermingled and confused with non-moral elements,[1] were seen to be exclusively ethical; and so in Israel, where, in the ancient world, spiritual illumination was greatest, expiatory rites became a permanent witness both to the holiness of God, and to the need of means for annulling the penal consequences of sin, and effecting 'at-one-ment,' or reconciliation, with God. As the *kappārāh*-rites threw the stress on the ceremonial side of religion, there was danger that its moral and spiritual side might be overlooked or forgotten; but the prophets guarded against this, by insisting strongly and repeatedly on repentance and amendment of life as the *sine qua non* of the forgiveness and favour of God. The ritual thus 'served as a great educational agency inculcating in the hearts and minds of participants and spectators right conceptions of the sinfulness of man, and the holiness and mercy of the just God' (J. M. P. Smith, *BW*, 1908, p. 217). And so the way was prepared for the use made in the NT of the ideas, and terminology, and symbolism of the *kappārāh*-ritual, in the interpretation of the highest and most perfect of atoning sacrifices, the death of Christ. See EXPIATION AND ATONEMENT (Christian).

EXPIATION AND ATONEMENT (Hindu).—Atonement or expiation (*prāyaśchitta*) forms one of the three principal parts of the sacred law (*dharma*) of India, judicial procedure (*vyavahāra*) and religious custom (*āchāra*) being the other two. It appears that the Indian system of religious atonement for an offence was not originally devised by the Brāhmans, as it goes back to the Indo-Iranian epoch, the penances ordained in the book *Vendīdād* of the Avesta being closely analogous to the penances of the Sanskrit lawbooks. On Indian soil, the *Sāmavidhāna-brāhmaṇa* of the Sāmaveda seems to be the earliest work in which a somewhat detailed exposition of the system of penances is given, but it is to the lawbooks that we have to turn for a full description of the various modes of atonement prevalent in ancient India. The penances for deadly sins are very heavy, and extend even to death. Thus one who has committed the mortal sin of drinking intoxicating liquor is to drink the same liquor when boiling hot; when his body has been completely scalded by that process, he is freed from guilt (Manu, xi. 91). The killer of a Brāhman shall become in battle the target of archers who know his purpose; or he may thrice throw himself headlong into a blazing fire. A Brāhman who has stolen gold belonging to another Brāhman shall go to the king and, confessing his deed, say 'Lord, punish me!' The king himself shall strike him once; by his death the thief becomes pure (Manu, xi. 74, 100 f.). In other penances, fasting is carried to an astonishing extent. Thus the 'lunar penance' (*chāndrāyaṇa*) consists in eating no more than fifteen mouthfuls on the day of the full moon, and diminishing this quantity of food by one mouthful every day for the waning half of the lunar month, until the quantity is reduced to nothing at the new moon, and then increasing it in the same way during the fortnight of the moon's increase. This penance is required to be performed, *e.g.*, for stealing men and women, and for wrongfully appropriating a field, a house, or the water of wells and cisterns (Manu, xi. 164). The cow being the sacred animal of the Hindus, everything coming from, or anyhow connected with, a cow is supposed to be a means of purification. The five products of a cow (*pañcha-gavya*), viz. milk, sour milk, butter, urine, and cow-dung, have to be swallowed, as a part of various penances, *e.g.* of the penance called *govrata*, which consists in following and serving a herd of cows for a whole month, washing oneself with cow-urine, and subsisting on the five products of the cow during that time. Drops of water falling from the horns of a cow are declared to expiate all the sins of those who bathe in them, and even scratching the back of a cow is said to destroy all guilt (*Viṣṇu-sūtra*, xxiii. 59 f.). The Arabian traveller al-Bīrūnī (*c.* A.D. 1030) mentions, as an expiation performed by Hindu slaves on their return from captivity in a foreign country, that they were buried in the dung, stale, and milk of cows for a certain number of days, till they got into a state of fermentation, and were given similar dirt to eat afterwards. The muttering of prayers, and the chanting of songs from the Sāmaveda, constitute a lighter sort of penance. Some of these prayers and songs have special names indicating their purificatory effect. Religious gifts to the Brāhmans are also greatly recommended. A rich man would give his own weight in gold or silver to the Brāhmans; this is called *tulāpuruṣa*, 'a man's weight,' and of this practice several instances are recorded in Indian history. Visiting one of the sacred places of pilgrimage (*tīrtha*) in which India abounds is another favourite mode of atonement. Such pilgrimages, as an atonement for heinous sins committed, are very common even at the present day; nor have the other old forms of expiation disappeared, though fines or dinners given to the caste are now by far the most common sort of penance. Thus, *e.g.*, when a man has been out-casted for travelling into Europe, crossing the sea in a vessel being a heinous sin under the Hindu law, he may be admitted into his caste again if he gives a dinner to the entire caste. An offender, having been tried and found guilty by his caste, is still occasionally addressed with the old Sanskrit formula: *Āchāryaṃ labhasva prāyaśchittaṃ samāchara*, 'Take a spiritual adviser and perform a penance.' In cases of difficulty, some learned Brāhmans are invited to send in a written declaration (*vyavasthā*) in which their opinion of the case and of the particular penance to be inflicted is stated. The offender is re-admitted on performing the penance enjoined by the Brāhmans. This Brāhman interference naturally was far more common in the times before British rule than it is now, and the spiritual power thus exercised by Brāhmans acquainted with the sacred law must have been considerable, especially as they were consulted by Courts of Justice as well, in cases of civil and criminal law. There never was in India a strict line of demarcation between religious and secular law. Offenders, after having been duly punished, might be compelled to do penance in order to obtain readmission into their caste. The kings did not inflict worldly punishments only; they dictated also the penances by which religious offences were to be expiated. In the Hindu kingdom of Kashmir the Mahārāja, as late as 1875, was in the habit of looking after the due performance of the *prāyaśchittas* ordained by the five learned jurists (*dharmādhikārin*) of the country. The readiness of the people to submit to the prescribed course of atonement for their sins was enhanced by a superstitious dread of the tortures of hell and of the pangs to be suffered in future births. Many diseases and natural infirmities were viewed as the consequence of sins committed in a previous existence, lepers, for instance, being required to do penance in order to expiate the crime in a former birth to which their illness was considered to be due, and to avoid being afflicted with the same illness in a future birth. Secret penances (*rahasya-prāyaśchitta*) are also mentioned; they were, and are still occasionally, performed for offences not publicly known.

J. JOLLY.

EXPIATION AND ATONEMENT (Jewish).—1. It is necessary, though somewhat difficult, to draw a distinction between penitence, or repentance, and expiation, or atonement. This differentiation cannot be entirely rigid, for, in dealing with atonement, it is impossible to exclude all references to penitence, and *vice versa*. It may be laid down as a convenient axiom that penitence is the consciousness of sin; atonement, the desire or effort to be free from sin. Penitence must precede atonement, for penitence is an attitude of the mind, while atonement is a subsequent activity of the body, directed towards the realization of that attitude, although sometimes, as will be seen, penitence was in itself an atonement. The question then resolves itself into an examination of the process which a Jew, guided by Rabbinic ideas and direction, would adopt in order to free his soul from the

stain of sin, it being more or less taken for granted that the recognition of his sinfulness has already been awakened in him.

The regular word for repentance is תְּשׁוּבָה, 'returning' (as opposed to מְשׁוּבָה, 'backsliding' [Hos 14^{5}]). The term for 'atone' is כִּפֶּר, the original idea of which was probably 'to wipe out' rather than 'to cover up' (but see König, in *ExpT* xxii. [1911] 232, 378), the כֹּפֶר, 'ransom,' 'bribe,' being the instrument. The ransom to wipe out sin, and purging by means of the blood of sacrifices, gradually gave way to a more spiritual idea. It would not be correct to regard this absolutely as progressive development. Sacrifice was but the outward form of the atonement, a concomitant of the ideal. In course of time it was found possible to maintain the inward process independently of the outward form, but this must not be taken to mean that the idea of physical sacrifice was condemned. In many cases sacrifices were brought without the proper feeling of penitence on the part of the sinner; this abuse was sternly reprobated by the prophets (Am 5^{21-24}, Mal 1^{10} Mic 6^{6-8}; cf. *JE* x. 616) and Rabbis (*Numb. Rabba* xix. § 4 = line 15, outer col., fol. 68*a*, ed. Warsaw, 1868; see also *Tosefta Baba Qamma*, x. 18, cited by Abrahams in *Camb. Bib. Essays*, London, 1909, p. 189; Qimḥi on Jer. 7^{21}; Montefiore, *JQR* xvi. 209; see Maimonides, *Guide*, pt. iii. ch. xlvi.; Friedländer's tr., p. 359; cf. p. 325). But it is an open question whether sacrifice as a means of atonement for sin is categorically repudiated, or whether these denunciations merely refer to the misuse of the practice. On the other hand, the same doubt may be traced in Rabbinic writings and in the Liturgy. It is true that the Prayer-book of all the Orthodox and of some Reform Synagogues contains abundant references to sacrifices and prayers for their restoration as a means of atonement for sin (Singer, pp. 225, 234, but contrast p. 267; see also *JE* x. 628), and that the daily and festival services correspond to the Temple Offices; nevertheless it must be remembered that most of these prayers were composed at a time when the overwhelming calamity was still fresh in the mind of every Jew, and that very often the return to Zion and the rebuilding of the Temple are but other expressions denoting the Messianic age. The thirteen articles of the Creed, composed by Maimonides († 1205), contain no reference to sacrifice (Singer, p. 89), although the tenth and eleventh articles, which deal with God's cognizance of sin and with reward and punishment, naturally imply the doctrine of atonement, and the twelfth makes obligatory the belief in the Messiah. The substitution of prayer and penitence for sacrifice as a means of atonement, as taught by Hosea, Micah, Amos, and Isaiah, was the keystone of the Rabbinic penitential theory; but this did not involve a condemnation of the sacrificial system of the Temple.

The Day of Atonement itself is, of course, the outstanding feature in the Rabbinic scheme of repentance. The cessation of sacrifices naturally magnified its importance, and caused many associations to gather round it. The Synagogue liturgy contains many an echo from the Temple ritual. The humblest Jew in a Russian Ghetto confesses his sins in the identical formula used by kings and high priests. Penitence and atonement occupy so prominent a position in the life of a Jew, as conceived by the Rabbis, that their writings are full everywhere of the necessity and means of obtaining freedom from sin. In particular, the end of Mishna *Yoma* should be studied, but on the whole it will be convenient to examine the treatise on Atonement and Penitence of Maimonides (*Yad*, הִלְכוֹת תְּשׁוּבָה), and to incorporate, where necessary, references from Talmud and Midrash, and finally to consider the Liturgy and Synagogue practices.

2. The Mishnaic atonement consists in a complete repentance, coupled with affliction of the flesh according to the prescribed requirements of the Day of Atonement. If the sin has been against man, restitution must precede everything else. Avowal is also necessary. Death can atone in certain cases. Death-bed repentance is effective, but it is not the highest form of atonement. Fasting, almsgiving, the study of the Torah, submission to stripes—all these can atone; but all forms of atonement depend for their success on the grant of Divine grace.

The Mishna and Gemara *Yoma* deal, in the main, with the ceremonies of the Day, but the concluding sections may here be cited, as referring more particularly to the abstract idea (*Yoma* viii. 8–9). The sin-offering (חַטָּאת) and the offering brought for certain trespasses (אָשָׁם וַדַּאי) are adequate to atone; death and the Day of Atonement are adequate, if there is due repentance; repentance alone is adequate for light transgressions, whether of affirmative or of negative commandments. In the case of grievous sins, pardon is suspended until the advent of the Day of Atonement, which brings the pardon. To one who says, 'I will sin and thereafter repent,' the power of repentance is not vouchsafed. If a man says, 'I will sin and rely on the Day of Atonement to bring forgiveness,' the Day will not bring pardon to him. The Day brings pardon for sins between man and God, but for sins between man and man only if the sinner has previously appeased and made restitution to his victim. This R. Eleazar b. 'Azarya (fl. A.D. 100) deduced from Lv 16^{30}, 'From all your sins before the Lord shall ye be clean,' thus taking חַטֹּאתֵיכֶם with לִפְנֵי ה׳.

R. Aqiba († A.D. 135) said: 'Happy are ye, Israel; before whom are ye purified and who is it that purifies you? It is your Father in Heaven, as it is said in Ezk 36^{25} "And I will sprinkle upon you clean water and ye shall be clean, from all your impurities and from all your abominations will I purify you"; and the verse (Jer 17^{13}) saith, "O thou *Miqwěh* of Israel, O Lord" [*miqwěh* having the double meaning of 'hope' and of 'ritual bath,' the root occurring in the latter sense in Gn 1^{9} 'Let the waters be gathered together']. Just as the *miqwěh* purifies the unclean, so the Holy One, blessed be He, purifieth Israel.' See also *Yoma* 86, quoted in full in art. 'Atonement' in *JE* ii. 280 (this art. is very important).

In the treatise on Penitence, mentioned above, Maimonides summarizes all that is essential in connexion with atonement. (Citations are translated from the Venice ed. of Pietro Bragadino, 1615, and will be marked by the letters *H.T.* = *Hilkhoth Teshubah.*) Reference has already been made to the obligation of avowal. The necessity of public confession is strongly maintained by Maimonides in the opening laws of the first *pereq*. The technical term is וִדּוּי (הִתְוַדָּה, הִתְוַדּוּת), from the root יָדָה, and *Widdui* comes between *Teshubah* and *Kapparah*. The duty of confession is itself a positive commandment, because it is written (Lv 26^{40}), 'And they shall confess (וְהִתְוַדּוּ) their sin and the sin of their fathers,' and this implies verbal confession. If a man, having transgressed any single command of the Torah, be it affirmative or prohibitive, be it in presumptuous sin or in unwilling error, desire to repent, he is bound (חַיָּב) to confess his sin before God (*H.T.* i. 1). The duty of confession was, of course, Biblical in origin, and the triple confession of the high priest (Lv $16^{6.11.21}$, Mishna *Yoma* iii. 8 and iv. 2, vi. 2) was the model which was adopted by private persons, and which still remains in the Atonement liturgy. The formula may be found in any Maḥzor for the Day of Atonement (*e.g.* Davis, vol. ii. 'Atonement,' p. 161, etc.). For the use of individuals it ran thus: 'O God, I have sinned, acted perversely, transgressed before Thee, and I have done . . .

Verily I have repented and am ashamed of my deeds, and I will never return to such an act' (*H.T.* i. 2). The last sentence is, according to Maimonides, the integral factor of the whole confession; and every one who is profuse in confession (special emphasis is laid on this point) is accounted worthy of praise. The Divine name is, of course, omitted; הַשֵּׁם, just as in the Temple formula, representing the Tetragrammaton, which was uttered only by the high priest. No sin-offering could procure pardon without penitence and confession, nor could the infliction of capital punishment suffice to wipe away guilt without these two adjuncts. Moreover, theft, even if restitution had already been made, could be forgiven only if the thief had made public confession and resolved to abandon theft for all time (*H.T.* i. 3). Confession is just as vital in the case of the community; hence the high priest, in sending away the scapegoat, made a public avowal, laying his hand on the head of the goat, because it was to be an atonement for all Israel. But, although the scapegoat was a general national atonement for all sins—light and grievous, presumptuous and unwitting, with or without avowal—yet this was the case only if the sinner repented; without due repentance on the part of the individual the public atonement of the scapegoat was of no avail except for 'light' (קַלּוֹת) transgressions. According to the legal definition, the difference between light and grievous (חֲמוּרוֹת) transgressions lay in the penalty; in the latter category were all sins for which the penalty was capital punishment at the hands of the *Beth Din*, and excision (see CRIMES AND PUNISHMENTS [Jewish]); but vain swearing and perjury, although not subject to this condition, are yet included under the head of 'grievous' (*H.T.* i. 5). The destruction of the Temple has made repentance itself the means of atonement. So powerful is repentance that even on the death-bed of a lifelong sinner it is effective. Further, to those who repent, the Day of Atonement is itself the means of pardon. There are some sins which are forgiven as soon as repentance is exercised, while in the case of others pardon is deferred.

Four main distinctions may be traced (*H.T.* i. 7; *Yoma* 86*a* [Gold. 1021, Rodk. 134]). Thus, if a man repents of a 'light' sin of omission, his pardon is immediate. In the case of a man who repents of a 'light' sin of commission, his repentance suspends his condemnation and punishment, and the Day of Atonement brings his pardon. If a man has committed 'grievous' sins of commission, penitence and the Day of Atonement will suspend his condemnation and punishment, and the chastisement which will be inflicted on him will complete his pardon. In no case can complete pardon be obtained without penance or chastisement (יִסּוּרִין; see conclusion of art. DISEASE AND MEDICINE [Jewish]). The only exception is in the case of blasphemy. By blasphemy (lit. the profanation of the Name) more is understood than the English equivalent implies. It almost includes deliberate atheism (cf. the opposite קַדֵּשׁ אֶת־הַשֵּׁם, 'suffer martyrdom'), and is the only sin to which the distinction of presumption (זָדוֹן) and ignorance (שְׁגָגָה) does not apply (אֶחָד בְּשׁוֹגֵג וְאֶחָד בְּמֵזִיד בְּחִלּוּל הַשֵּׁם [*Aboth* iv. 4; Singer, p. 196]). In the case of a man who has 'profaned the Name,' repented and remained constant in his repentance, passed a Day of Atonement, and suffered the chastisements, his absolute pardon is deferred until his death; but by the effects of repentance, Day of Atonement, and chastisement, his punishment is suspended (*H.T.* i. 6–9).

The principles underlying these differentiations are clear. It is far easier to repair a sin of omission than a sin of commission (see also the footnote in Singer, p. 262); the reality of repentance in the case of a sinner who is guilty of evil practices is tested by time, for he must prove that he has had the power and opportunity to relapse and has not yielded. The greater the sin, the longer is the period necessary to attest repentance. Repentance itself is also more severe and lengthy if the traces of the crime have to be effaced. If the element of chastisement did not enter into the question of pardon, it might lead to a false repentance to avoid punishment.

The question of the reality of penitence is discussed by R. Yehuda in Gemara *Yoma* 86*b* (Gold. 1024, Rodk. 136), and repeated by Maimonides in *H.T.* ii. 1 ff. The decisive test is time and complete opportunity to repeat the offence. With this is also connected the question of validity of death-bed repentance. Maimonides is very decisive. Even if a man has been a sinner all his days and repents in his old age, when all opportunity for sin is gone, in spite of the fact that this is not the highest form of penitence, nevertheless his penitence is a valid atonement. Even if he has sinned all his life and repented only on his death-bed, his sins are all pardoned, in accordance with Ec 12^2 (*H.T.* ii. 2). On the other hand, see *Aboth* ii. 15 (Singer, p. 189): 'Repent one day before thy death' (*i.e.* at once, since thy death may be to-morrow). The difficulty, of course, which the Rabbis felt was how to keep the gates of repentance open to the dying sinner, without, at the same time, making it easy for a man to sin all his life, relying on his last hour to make his peace.

It has already been pointed out that penitence is itself held by the Rabbis to have been a means of atonement; consequently a warning is uttered against the futility of hypocritical atonement. Since the act of repentance had taken the place of sacrifices as the agency by which pardon could be gained, there must be no danger of the means once more being mistaken for the end. Any man who confesses his sins, without the firm intention of abandoning them, is like one who bathes while holding in his hand an unclean insect (שֶׁרֶץ). His bathing will be useless until he abandons the contaminating object (*H.T.* ii. 4). The act of repentance must be a real μετάνοια, 'change of mind,' and must involve a deep recognition of the heinousness of sin. A penitent should be continually praying and giving charity, according to his means. He should flee from temptation, he should even change his name, as much as to say: 'I am now another person, I am not he who did so and so.' He must change all his actions for good; he should exile himself, because exile is in itself an atonement and will involve him in humiliation and affliction which will cause him to become humble and meek in spirit (*H.T.* ii. 5).

It is also praiseworthy to make public confession; for, if a man is too proud to reveal his transgressions, his penitence is imperfect. Here, however, a distinction is drawn. A man should confess publicly sins against his neighbour, but not those against God (*H.T.* ii. 7; *Yoma* 86*b* [Gold. 1024, Rodk. 137]). Penitence and confession, although acceptable at all times, are especially desirable at the period of atonement, that is to say, from the beginning of the New Year (1st Tishri) until the Day of Atonement. (For an investigation of the time and manner of confession, the formula of confession, the manner in which a man must reconcile himself with his neighbour, and the lengths to which he must go, see the last sections of *H.T.* ii. and iii. 5 ff.)

The question of punishment can scarcely be considered here, but eternal damnation requires treatment in so far as it is affected by atonement. The idea of everlasting doom was utterly repugnant to the Rabbis; and, when it was limited to a very small number, great pains were taken to prove that almost every individual or class for whom there seemed no hope was, in fact, sure of ultimate salvation. There was always some mitigating circumstance which had been overlooked, some Scriptural authority to be found. In the end, there were but few, indeed, for whom there was no hope. Maimonides, in his Commentary on Mishna *Sanhedrin*,

gives much attention to the question, and also in *H.T.* iii. 11 ff.; it is in the latter passage that the famous words occur: חֲסִידֵי אוּמוֹת הָעוֹלָם יֵשׁ לָהֶם חֵלֶק לָעוֹלָם הַבָּא, 'the righteous of all nations have a share in the world to come.' It is noteworthy that, when Maimonides proceeds to particularize those who are eternally damned, he is careful to begin each section with 'The following *Israelites*,' because the beliefs which he stigmatizes are frequently held by other religions. Having stated that those of other creeds, holding these beliefs, who live a righteous life have a share in the world to come, he does not want to depart from his pragmatic position. At the same time, there must be no excuse for any Israelite holding these beliefs. In such a case, a Jew may not rely on justification by good works.

There is no atonement for the following classes, if they die impenitent: the Epicureans; those who deny the Torah, the resurrection, the coming of the Messiah; those who cause the multitude to sin; those who separate themselves from the ways of the congregation; those who sin publicly and with a high hand, like Jehoiakim; the betrayers; those who put the Congregation in terror, not for the sake of heaven; those who shed blood; the slanderers; and those who draw back the *'orlah*. Six kinds of Israelites are said to be מִינִין: he who denies the existence of a God; he who says that the world has no guiding power; he who says that the world has two or more guiding powers; he who admits that there is a Lord, but affirms that it is a star or some being endowed with a likeness; he who denies that the Eternal was the first, or the universal Creator; he who worships a star, in order to have an intermediary between himself and the Lord.

The Epicurean among the Jews is he who repudiates prophecy and inspiration in its widest terms ('he who says that there is no knowledge from the Creator that reaches man's heart'): he who denies the prophecy of Moses and the Divine knowledge of human actions. The Jew who denies the Torah is he who says that it is not from God (even one verse or one word), or who says that Moses wrote it on his own authority; so also he who denies the oral Law; who denies its expounders, as, for example, Zadoq and Baithos; who says that the Creator changes one demand for another, or that the present Law, though originally Divine, is now superseded.

All these sinners, as well as the others enumerated by Maimonides (*H.T.* iii. 16–23), but who cannot, through lack of space, be included here, are definitely cut off from the life to come. But this clear statement is at once mitigated by Maimonides:

'Under what conditions are the above-mentioned sinners precluded from the hereafter? If they have died in sin. But, if a man turn from his wickedness and die (at once), then he is a penitent. He is one of those who shall have a part in the coming world, for there is nothing that can withstand penitence. Even a man who has denied the cardinal principle (כֹּפֵר בָּעִיקָר) all his days, and repented at the end, has a share, as it is said (Is 57^{19}), "Peace, peace to the far off and near, saith the Lord, and I will heal him." So too, all the wicked, the sinners and transgressors, when they return, be it openly or secretly, they are accepted, as it is said, "Return ye backsliding children" (Jer 3^{14}); although such a man be still a backslider, since he has returned in secret without making avowal, yet he is received by reason of his repentance' (*H.T.* iii. 24–25).

The obstacles to repentance are dealt with in *H.T.* iv., but in this connexion penitence is not the means of atonement itself, but a necessary preliminary to it; consequently the fourth and subsequent *p^erāqîm*, which deal with different subjects also, may be neglected here. It is important, however, to study carefully the Gemara at the end of *Yoma* 85*b* (Gold. 1019–1033, Rodk. 132–142) and ch. xi. of *Sanhedrin*, *Ḥeleq*, with the commentary of Maimonides (see Lit. at end), and also the other Rabbinic references given in *JE*, art. 'Atonement.' A fair number of Midrashic extracts are given by Rapaport in *Tales and Maxims from the Midrash*, London, 1907, p. 261.

3. It remains to consider the question of atonement from the liturgical and ceremonial point of view, apart, of course, from the Day of Atonement itself, to which special treatment is accorded (see FESTIVALS AND FASTS [Heb.]). The keynote of the Liturgy is the oft-quoted trilogy: וּתְשׁוּבָה וּתְפִלָּה וּצְדָקָה מַעֲבִירִין אֶת־רֹעַ הַגְּזֵרָה, 'Repentance, prayer, and charity avert the evil decree' (Jer. *Taanith* ii. 65, fol. *a*, outer col., line 5 [ed. princ.]=vol. vi. p. 153 of Schwab's tr.; see M. Schuhl, *Sentences . . . du Talmud*, Paris, 1878, p. 91, no. 252). These words are the climax of the additional services for the New Year and the Day of Atonement (see Davis, p. 150; also Heidenheim, *Maḥzor*, ed. Roedelheim, 1859, and others, fol. 24*a*). They are printed in exceptionally large type, and beneath them are added explanatory glosses, viz. צוֹם, קוֹל, מָמוֹן. Fasting is thus associated with תְּשׁוּבָה; קוֹל, corresponding to תְּפִלָּה, may either be an allusion to confession or, more probably, to prayer, while מָמוֹן explains צְדָקָה as = charity, on the basis of Pr 10^2 11^4, which the Rabbis translate 'Charity delivereth from death.' In Rabbinic צְדָקָה, like Syr. *zedq^etha*, always has that meaning, being reserved for 'righteousness.' Mention must also be made of a curious example of Gematria in this connexion. It will be observed that the letters of each of the words צוֹם, קוֹל, מָמוֹן are numerically equivalent to 136, and the three words thus total 408. This corresponds to זאת and explains Lv 16^3, בְּזֹאת יָבֹא אַהֲרֹן אֶל־הַקֹּדֶשׁ, 'With זאת shall Aaron enter the Holy of holies,' *i.e.* he shall make atonement for all Israel by prayer, fasting, and charity.

This theme might be abundantly illustrated: *e.g.*, the conclusion of the Pethiḥāh Seliḥāh for Yoṣer of the Day of Atonement: 'What though our errors be many, yea theft and violence, cause us to turn, O God of our salvation, and annul our wickedness. Repentance and good works are ever as shield and buckler, but it is upon Thy mighty mercies that we rely' (Davis, p. 82). (The main thought is derived from *Shabbath* 32*a*, *Yoma* 87*a*, and *Aboth* iv. 13 [Singer, p. 196, foot].) See also the reference in the Ne'ilāh Service (Davis, p. 263): 'Gates of tears that are never closed,' the same being also said of the Gates of Prayer and of Repentance in *Pesiḳta* xxv. § 4, 157 *a*, ed. Buber, Lyck, 1868.

Reference has been made to the Divine grace as a means of atonement, in the Liturgy; every Seliḥāh Service begins with this idea. Thus the *Pethiḥāh* always ends with כִּי עַל־רַחֲמֶיךָ הָרַבִּים אָנוּ בְטוּחִים, 'For it is on Thy mighty mercies that we rely,' or some similar phrase, in order to lead up to the next Seliḥāh, which is never varied and which begins, 'For it is on Thy mighty mercies that we rely, on Thy charities that we trust' (Davis, pp. 222, 82, 169). A similar idea, a mystic or poetic development, is the mention of the thirteen *middôth*, or Divine attributes (Ex $34^{6 \cdot 7}$), as means of atonement. As instances may be cited the two prayers אֵל מֶלֶךְ יוֹשֵׁב (Davis, p. 258), and the Seliḥāh in the Shaḥarith of the Day of Atonement, beginning שְׁלֹשׁ עֶשְׂרֵה מִדּוֹת (*Seliḥōth*, ed. Proops, fol. 56*b*, no. 105). In the Ne'ilāh Service (Davis, p. 263) this idea has even been pushed so far as to personify, poetically, the *middath hāraḥămîm*, or quality of mercy, and to beseech it to intercede with the Almighty for atonement. This has been eliminated by some modern Maḥzorim, including Davis, by changing the reading (but see Roedelheim text, or Durlacher, *Erech Hatephiloth, Kippour* 2, ed. ii., Paris, 1866, p. 324, where the Seliḥāh occurs in Minḥah). It is, of course, impossible to offer anything more than typical references, since the whole of the vast Seliḥāh and penitential liturgies is replete with passages that might well serve as illustrations. This remark applies to all of the liturgical section of this article.[1]

Jewish theology never contained the idea of original sin, and thus this idea is absent in the scheme of atonement. It has been well shown by S. Levy (*Original Virtue*, London, 1906) that Judaism held the converse idea under the form of זְכוּת אָבוֹת, or the merits of the Patriarchs. The germ of

1 Under this heading belongs the idea of God atoning 'for his Name's sake' (cf. Singer, pp. 57 and 160, near foot).

this idea is old; 'God of Abraham, Isaac, and Jacob' occurs in the 'Amidāh (Singer, p. 44, and Mt 22[32]), and in the Pentateuch (Gn 24[12] 31[53] 32[9]). In the end great stress is laid on the merits of the Patriarchs as a claim on the Divine grace and a means of salvation and atonement. If children are not to suffer for the sins of the fathers, it would seem that they may not benefit by their virtues. But in the Seliḥôth the refrain, 'but we and our Fathers have sinned,' occurs, although this is merely stating a fact, not recording a feeling of helplessness at an accumulation of sin. In any case it is held very strongly that, by the Divine grace, the merits of the ancestors may be accounted to their descendants as atonement for sin (*e.g.* the Seliḥāh אַנְשֵׁי אֱמוּנָה אָבְדוּ [Proops, fol. 68*b*, no. 129]; cf. the Seliḥāh beginning with almost the same words, in the Sephardic rite [Gaster, i. 39 or iii. 30]; the prayer מִי שֶׁעָנָה לְאַבְרָהָם אָבִינוּ בְּהַר הַמּוֹרִיָּה הוּא יַעֲנֵנוּ [Davis, *Atonement*, pt. i. pp. 53–55]; for similar prayers, see Gaster, iii. 28–34). This motive has, of course, no connexion with any idea of a personal mediator or intercessor—an idea not found anywhere in the Liturgy.

As a corollary to the merits of the Patriarchs is the idea of the *'ăqēdāh*, or binding of Isaac. God is prayed to recall the *'ăqēdāh*, and pardon the sin of Isaac's descendants. Every Seliḥāh Service contains an *'ăqēdāh* (*e.g.* Davis, 87–89, 228, 176; see also the beautiful Piyyuṭ of Judah Samuel Abbas in the Sephardic rite עֵת שַׁעֲרֵי רָצוֹן לְהִפָּתֵחַ [Gaster, ii. 106, and Singer, p. 8, § 2, also Gaster, i. 4 ff.]). One of the reasons for the blowing of the ram's horn is that God may recall the *'ăqēdāh* and grant atonement to the seed of Isaac. Among the Sephardim, the seventh day of Tabernacles (*Hosha'ana Rabba*) is more penitential in character than among the Ashkenazim; the ram's horn is sounded and Seliḥôth are said, for this is an additional means of atonement; those who did not completely repent, or whose fate was not adjudged on the previous Day of Atonement, may have a last chance. Seven penitential circuits are made, referring to the three patriarchs, Moses, Aaron, Pineḥas, and David, and their merits are urged as means of atonement (Gaster, iv. 148 ff.).

The Confession was greatly elaborated in the Liturgy (for Talmud see *Yoma* 87*b* [Gold. ii. 1030, Rodk. vi. 140]); three chief formulæ require notice. They are all arranged in alphabetical order, to facilitate recitation by memory. The first two are congregational, and the first person plural is employed throughout. They are, on this account, recited aloud. The first formula is the *'Ashamnu* (Singer, p. 258), and is elaborated at the conclusion of every Seliḥāh Service: אָשַׁמְנוּ מִכָּל־עָם, בּוֹשְׁנוּ מִכָּל־דּוֹר (Proops, fol. 6*b*, or Gaster, iii. 37). The second is the *'al-Ḥēṭ* (Singer, p. 259). This is not recited aloud in its entirety. The third formula cannot be quoted so readily; it is the one intended for private use and silent meditation. Several examples of this kind of *Widdui* exist. There is the beautiful composition of R. Isaac b. Israel in the Sephardic Minḥah for Kippur (Gaster, iii. 225). See also the *Widdui* for Musaph by R. Shem Tob b. Ardutiel (Gaster, iii. 181), and the great *Widdui* by R. Nissim of Babylon (*ib.* 123). For a confession for the reader alone, cf. *ib.* 125. In the long prayer (יְהִי רָצוֹן) which concludes the Seliḥôth for 'Erev Rosh hash-Shanah, a *Widdui* has been interwoven (fol. 24 of Proop's ed., Amsterdam, 1711). The former of the public confessions is repeated at all the five services of the Day of Atonement, the *'al-Ḥeṭ*, however, only at the first four; at Ne'ilāh there is substituted for it a very beautiful prayer, אַתָּה נוֹתֵן יָד לְפוֹשְׁעִים (Singer, p. 267), which should be read very carefully.

Other fasts for atonement may be briefly noticed; the 'Second and Fifth' after the three festivals: the private fast of the bride and bridegroom on the wedding day, because they begin a new life purged of sin (Jer. *Bik.* iii. 65, fol. *b*, cols. *c*, *d* [ed. princ. = vol. ii. p. 386 of Schwab's tr., Paris, 1873–79]); a private fast undertaken in fulfilment of a vow in order to atone for a sin; finally, on the historical fasts Seliḥôth are said, because the calamities which are commemorated were due to sin, and penitence may bring pardon and restoration. On the ninth of Ab, although no actual Seliḥôth are recited, yet the recognition of sin and the prayer for atonement is implied in many of the *Qinôth*. The doctrine of vicarious atonement in the Christian sense finds no place in Rabbinic Judaism, because the Rabbis denied original sin. Man had his two *yeṣers*, but there was no necessity or room for a Messiah suffering for the sins of his people. 'Happy are you, Israel, God it is who purifies you,' said Aqiba (*loc. cit.*). Although passages could be produced which might seem to point to the vicarious idea, such a sense proves, on examination, to be untenable. Other means of atonement—study of the Torah, etc.,—may be found in *JE* ii. 280, outer column.

Reference may also be made to punishment and death as means of atonement. Thus poverty (*'Erubin* 41*b* [Gold. ii. 135, Rodk. 93]), exile (*Sanh.* 37*b*), suffering (*Ber.* 5*a*), can procure it (see DISEASE AND MEDICINE [Jewish]). The death-bed confession (Singer, p. 317, based on *Ber.* 60*a*) is that 'my death may be accepted as an atonement for my sins.' In the Seliḥāh כִּמְלֵאת סְפִי (Proops, *ed. cit.* no. 131, fol. 69*b*; Davis, p. 224) by Mordecai b. Sabbattai, the poet prays:

'May the words of my mouth be a sweet savour before Thee, Rock of Ages, accept my fat and my blood, diminished by fasting, instead of the fat and blood of the sacrifices; may the meditation of my heart that I have laid before Thee, these ten days, be as the sin-offering, the trespass-offering, and the Minḥah' (see Ber. 17*a*, Gold. i. 61).

Baptism can scarcely be said to have been a means of atonement in Judaism. On the eve of Kippūr, after receiving flagellation (see J. Caro, *Shulḥan 'Arukh*, ch. 607, § 6) it became the custom to bathe; but ritual bathing was associated with rather than a means of atonement, though another water-ceremony has been introduced. On the New Year, after service in the place of worship, the congregation repairs to running water, and prays 'that God may cast our sins into the depths of the sea.' The last two verses of Micah, where these words occur, are, with other passages from Scripture, there recited; and it is from Micah that the ceremony takes its name of *Tashlih*, 'Mayest Thou cast' (Abrahams, *Festival Studies*, London, 1906, p. 91; and *JE* xii. 66).

On the eve of the Day of Atonement the ceremony of *Kappōreth* took place (see Oesterley and Box, *Religion and Worship of the Synagogue*[2], p. 445). It consisted in swinging a fowl, afterwards given to the poor as a symbolic atonement. (The origin of this custom, and also the objections raised against it, may be studied in *JE* ii. 282, and vii. 435; see also *Shulḥan 'Arukh*, ch. 605.) Probably the original aim was charity—to provide poor Jews with a meal before the fast began.

LITERATURE.—C. G. Montefiore, in *JQR* xvi. (1904) 209 (very important); *JE*, art. 'Atonement'; cf. *ERE*, art. HERBERT LOEWE.

EXPIATION AND ATONEMENT (Muslim).—The formulæ whereby duties and rights are designated in Islām are identical with those used for debts and credits. Hence the acts prescribed by the code are regarded as debts due from man to God, incurred by acceptance of Islām; other debts may be incurred by undertaking obligations voluntarily or by violating prohibitions. In the third case expiation is necessary; in the second it may be permissible; in the first it has no place.

Man's debts to God are the five daily prayers, fasting in Ramaḍān, payment of alms, and pilgrimage. If he omit to pray at the right time, all he need do is to say an extra prayer at a later time; no 'expiation' (*kaffārah*) is required. There is some question whether one who has temporarily apostatized and been re-converted to Islām ought to make up for all the prayers which he has omitted in the interval, and whether the same obligation is incumbent on one who has been ignorantly brought up, so as to be unaware of the obligations. The majority hold that this obligation does exist (*Fatāwā* of Ibn Taimiyyah, A.H. 1326, ii. 238). 'Payment' of prayer, *i.e.* saying it at the proper time (*adā'*), is distinguished from 'repayment' of this sort (*qaḍā*). Similarly, one who has for any reason omitted to fast should make up for the omission by fasting the requisite number of days out of season. Unpaid alms can also be given when the year in which they should have been paid has elapsed; or they may be taken out of the inheritance. An omitted pilgrimage can be made good by deputy, *i.e.* by paying some one to perform it in a dead man's stead. What distinguishes all these cases from those which follow is that there is no substitution of one performance for another; the identical act is performed, though out of the time, or by another person.

'Expiation' in the case of obligations voluntarily undertaken means the substitution of a different act for the act originally promised. This is not permissible in the case of a vow, but is so in the case of an oath (Ibn Qayyim al-Jauziyyah, *Works*, A.H. 1325, ii. 240). The Qur'ān emphasizes the principle that an oath uttered with full intent may be broken on condition of some act pleasing to God being performed, such act being the manumission of a slave, the feeding of the poor, or, if these be beyond the means of the perjurer, fasting (*Qur.* v. 91); the substituted act is called *kaffārah* (a word borrowed from the Hebrew), and the proceeding itself is called 'profaning of the oath' (*taḥillat al-yamīn* [*Qur.* lxvi. 2], otherwise interpreted as 'loosening of the bond'). The theory that it removes the guilt incurred is rejected by some jurists, on the ground that in many cases such perjury is approved. It does not appear that any oath is exempted from this principle; and the discussions of the jurists are ordinarily confined to the question of the formulæ which constitute 'oaths' and the amount of compensation to be paid by the perjurer. The Prophet is supposed to have said: 'If a man swear to do something, and afterwards find a better course, let him do what is better and make *kaffārah* for the oath' (Yāqūt, *Dictionary of Learned Men*, vi. 116).

Where a debt has been incurred by violation of a prohibition, the latter may take the form of a capital offence or a mild offence. For the former the code provides specific punishments, which may, indeed, be regarded as expiations (*kaffārāt* [Ibn Qayyim, ii. 218]), and are probably so in the sense that they redeem the Muslim criminal from hell-fire; though in the case of the wilful murder of a Muslim some further expiation is required for this purpose. For certain mild offences, *e.g.* the slaughter of wild beasts in the sacred area, the Qur'ān prescribes expiations; they take the form of the sacrifice in each case of a tame animal equal in value to the wild animal killed—a camel for an ostrich, a cow for a wild ass, etc. Where the means of the offender are insufficient, fasting must serve instead. For minor offences, which are not treated in the code, according to one theory expiation is to be found in abstention from capital offences; while another doctrine is that the prescribed ordinances count as expiation for them.

Where in a Muslim's account with God there is a deficit, it appears that this will be expiated by temporary punishment after death; and, indeed, the Ṣūfī Abū Ṭālib al-Makkī argues that the fire will have the effect of cleansing on the soul of believers, owing to their affinity with air and earth, whereas it will merely attract those of unbelievers to itself, owing to their affinity with fire (*Qūt al-qulūb*, A.H. 1310, ii. 150). This view, which is based on one solution of a difficult theological problem (whether the believer will in any case remain for ever in hell), gives the punishment subjective value, but does not make it an objective off-set for the offences; and the writer, in agreement with this, makes the act of fasting itself agreeable to God, and thereby fit to rank with those charitable deeds which otherwise serve as expiations.

As between human beings, expiation of offences is a matter for private arrangement. One who has received an injury may agree to accept expiation, or may prefer to avenge it (if he have the power), or to leave it to be settled at the Last Judgment. Ghazālī gives special treatment to the case where the offence committed is *slander*; unless the slanderer expiates and obtains forgiveness from his victim, some of his good deeds will be transferred to the credit of the latter, or some of the latter's misdeeds transferred to his account on the Day of Judgment (*Revival of the Religious Sciences*, A.H. 1306, iii. 116).

Although the cases of expiation contemplated by the Muslim code are thus strictly limited, certain practices, involving the idea of expiation, survived from pagan times, and certain others are to be ascribed to the natural belief that bad actions of various sorts can be cancelled by acts of supererogation. To the former class belong the sacrifices which the law permits rather than enjoins—such as the offering of two ewes for the birth of a male and one for the birth of a female child, where the number corresponds with the rule in the Law of Inheritance that the male counts as two females. The practice doubtless originally signifies that the life of the animal is to serve as a substitute for that of the child which the god may claim; but the jurists seem unwilling to formulate this theory. The sacrifice which forms part of the pilgrimage ceremony is regarded as winning favour rather than as expiating sin; but, according to a tradition, the weight of the animal is to be put into the scale of the sacrificer's good deeds on the Day of Judgment, and so will serve as an off-set against evil deeds which will be found in the other scale.

LITERATURE.—This has been given in the article.

D. S. MARGOLIOUTH.

EXPIATION AND ATONEMENT (Parsi).—**I. Expiatory prayers.**—The Avestan words *paitita* and *āpereti*, 'expiation,' occur in the *Vendīdād* (iii. 21, vii. 52 [gloss in the Pahlavi tr.], iii. 38 f., viii. 107, xviii. 68) in connexion with the penalties prescribed for various crimes. Neither the Gāthās nor the extant Avestan texts have

preserved for us any expiatory prayer composed in the Avestan language. The *frastuye* prayer incorporated in the Khordah Avesta from *Yasna* xi. 17–xii. 7 is sometimes spoken of as a specimen of the Avestan expiatory prayer; but it is rather a confessional prayer than an expiatory one, containing, as it does, simply a declaration on the part of the faithful that he accepts all good thoughts, good words, and good deeds, and renounces all evil thoughts, evil words, and evil deeds. For the expiatory prayer proper we have to turn to the Pāzand texts of the later period. There is a penitential prayer called *Patēṭ-ī Pashimānī*, composed in Pāzand, the authorship of which is attributed to Dastur Adarbad Mahraspand, the high priest and premier of King Shāpūr II. (A.D. 310–379). In addition to this, there is an abbreviated *Patēṭ* known as the *Patēṭ-ī Khūd*.[1] These expiatory prayers enumerate all sins of commission and omission; those done knowingly or unknowingly, actually committed or merely contemplated; sins pertaining to thought, word, or deed, body or soul, this world or the next; those committed against Ahura Mazda, the Amesha Spentas, or their respective creations; against parents or children, kinsmen or countrymen, friends or neighbours —in short, all sins that it is possible for human beings to commit.

2. Expiation absolves sins.—Fasting from food is prohibited; the only fast inculcated in the Mazdayasnian religion is from sin (*Sad Dar*, lxxxiii. 3–5). The faithful should not commit sins voluntarily (*Mainōg-ī Khraṭ*, lii. 16). Not to sin is better than to expiate sin (*Dāṭistān-ī Dīnīk*, xli. 11). But, if one has sinned through thoughtlessness or otherwise, he should take the first opportunity to atone for it. A sin unatoned for increases every year in dimension, whereas by atonement its growth is stunted, and it withers like a tree (*Sad Dar*, xlv. 5). Owing to a man's sins, he incurs the condemnation of Ahura Mazda; but sincere penance restores him again to the right relation to his heavenly father, and he is forgiven. The efficacy of expiation is such that, whereas the recital of every sacred Gāthā routs one demon, the expiation of one's sins routs every fiend (*Shāyast lā-Shāyast*, xx. 11). The best time for making atonement for one's sins is during one's life (*Dāṭistān-ī Dīnīk*, xli. 10). It is said that men should make it a habit to recite a short penitential formula every night before going to bed (*Sad Dar*, lxxxiv. 1). For who knows but the Demon of Death may capture him while asleep, and he may not rise to atone for his sins in the light of the day? If an individual dies without expiating his sins, his way to heaven is blocked, for it is ordained in the religion of Ahura Mazda that the only means of entering heaven or to escape hell is the making of expiation while living (*Dāṭistān-ī Dīnīk*, xli. 10). The religion of Mazda extirpates all kinds of sins by means of atonement (*Vendidād*, iii. 41, 42, viii. 29, 30). As the sins already atoned for in this life stand cancelled in the book of life, no account is taken of them when the soul approaches the seat of judgment on the dawn of the fourth day after death (*Dāṭistān-ī Dīnīk*, xiii. 2, 3). We are told in another place that such a soul does receive punishment at the Chinvat bridge, but is spared the tortures of hell (*ib.* xli. 8; *Sad Dar*, xlv. 10), and is given a place in *Hameshtagān*, a place specially reserved for the souls whose good and evil deeds are equal (*Rivāyat-i Dārāb Hormazdyār*, pp. 497, 498, Navsari, 1896).

In one of his communings with Ahura Mazda, Zarathushtra sees the soul of king Jamshed in the torments of hell. Jamshed becomes penitent before the prophet, and craves forgiveness. Zarathushtra thereupon asks Ahura Mazda to show mercy to the fallen king. The soul is then removed from hell and sent to *Hameshtagān*. There it remains for a period of one thousand years, and, after further penance and expiation, is forgiven all sins and sent to *Garonmāna* (*ib.* 498–500).

If a follower of Mazda who has sinned apostatizes to another religion and dies without atonement, his soul goes to hell, and remains there till the final Renovation (*Dāṭistān-ī Dīnīk*, xli. 5, 6).

3. The nature of expiation.—True repentance must bring about a change of will. The penitent must resolve to abstain from ever repeating the sinful act (*Dīnkart*, tr. Sanjana, Bombay, 1874 ff., bk. vi. ch. 50). Loud confession with the lips and bathing the face with a torrent of tears are of no avail, if the heart is not affected. If the individual really amends his ways and does not commit the sin any more, his former sin is absolved for ever (*Vend.* iii. 21, v. 26, ix. 50), and is swept away from him even as the mighty wind swiftly sweeps over the plain and carries away with it every blade of grass (*Mainōg-ī Khraṭ*, lii. 18, 19); if not, the first sin comes back (*Sad Dar*, xlv. 11). The soul becomes pure only when the atonement is heartfelt (*Dīnk.* vol. i. p. 9), and is accompanied by a firm resolve on the part of the individual to redeem his past by good deeds in the present and future. Such an expiation washes away all sins and removes future punishment (*ib.* vol. ix. p. 598).

4. Expiation before a qualified Dastur.—Sin is the disease of the spirit, and requires to be cured. The Dastur, or high priest, cures sickness of the soul, even as the physician heals bodily diseases (*Dīnk.* vol. i. p. 9). If one commits a sin, whether through weakness of the flesh or through ignorance, he should penitently approach the Dastur for remedy (*Mainōg-ī Khraṭ*, lii. 17), and confess the sin in his presence (*Patēṭ-ī Pashimānī*, 10). But, if one lives in a place where a Dastur is not found, he should travel to distant lands to find a high priest at least once a year, more particularly on the day Rām of the month Mihr (*Rivāyat*, p. 500). Thus, as far as possible, one should make expiation in the presence of a Dastur (*Sad Dar*, xlv. 2). The Dastur who presides at the confession should himself be righteous. If a layman who is eager to atone for his sins has no faith in the holiness of the priest, or knows him to be wicked, he shall approach others for the purpose (*Rivāyat*, p. 501). A Dastur is guilty of the *margarzān* sin, if he prescribes greater penalties than the guilt of the sinner requires, or if he reveals the secrets of the man who has confessed before him (*ib.* p. 500).

5. Other sources to which one can have recourse for expiation.—The texts mention that, in the absence of a Dastur to officiate at the expiatory rites, any righteous man may take his place, and the penitent may atone for his sins before him (*Sad Dar*, xlv. 8). One may offer one's penitential prayers even before sun, moon, and fire (*Mainōg-ī Khraṭ*, liii. 8); before *haoma* or *baresman* (see BARSOM); before the Amesha Spentas; before Mithra, Sraosha, and Rashnu; or before one's own soul (*Patēṭ-ī Pashimānī*, 3). But the best of all expiations is that accomplished before Ahura Mazda (*Dīnk.* vol. ix. p. 630 f.).

6. Retributive expiation.—The penitent sinner has to perform other duties besides the recital of the *Patēṭs*, the confession of his sins before the high priest, and the sincere atonement wrought within his own spirit. When he sincerely desires

[1] The *Patēṭ-ī Pashimānī* is edited in Pāzand by Edalji Kersāspi Antiā (*Pāzend Texts*, Bombay, 1909, pp. 118–125), and translated by Spiegel (*Avesta übersetzt*, Leipzig, 1852–63, iii. 207–215); the *Patēṭ-ī Khūd* is edited in Pahlavi by de Harlez (*Manuel du pehlevi*, Paris, 1880, pp. 140–151), and in Pāzand by Antiā (pp. 146–152), and translated by Spiegel (pp. 215–219). Mention should also be made of the two other Parsi expiatory prayers: the *Patēṭ-ī Irānig*, edited by Antiā (pp. 134–146), and translated by Spiegel (pp. 219–229) and by Darmesteter (*Le Zend-Avesta*, Paris, 1892–93, iii. 167–180); and the *Patēṭ-ī Viṭarṭakān*, or 'Renunciation for the Dead,' edited by Antiā (pp. 125–134), and as yet untranslated.

pardon, he must be prepared to undergo any corporal punishment, or to pay any amount as penalty, or to perform any other deeds of righteousness that the Dastur may prescribe (*Sad Dar*, xlv. 6; *Dāṭistān-ī Dīnīk*, lxxv. 5). Bodily punishment in this world saves the sinner from future punishment. But, if he does not submit to the penalty in this world, his soul goes to the abode of the *Druj* (*Vend.* viii. 107). The penitent is generally ordered either to arrange a certain number of marriages between the faithful poor, or to offer *zaothra* libations, or to carry certain loads of sweet-scented wood to the fire, or to consecrate *baresman* twigs, or to throw bridges over canals, or to kill noxious creatures such as snakes, frogs, and ants, or to practise other good works as compensation for the wrong he has done (*Vend.* xiv. 1–18, xviii. 67–74; *Dāṭistān-ī Dīnīk*, lxxviii. 17, 19, lxxix. 10, 12; *Mainōg-ī Khraṭ*, liii. 9). The pulling down of the *dakhmas*, wherein lie interred the dead bodies of men, or the killing of the noxious creature Zairimyangura, which kills the creatures of the good spirit by thousands, is also a means of the expiation of one's sins in thought, word, and deed, and is equivalent to the recital of a *Patēṭ* (*Vend.* vii. 51, xiii. 5–7).

7. Inexpiable sins.—The sins of burying or burning corpses, eating dead matter, and sodomy are termed *anāperetha*, 'unatonable' (*Vend.* i. 11, 12, viii. 27). The man who knowingly lets a corpse remain interred in the earth for a period of two years becomes guilty of *anāperetha* (*ib.* iii. 36–39). Ahriman has seduced men into the cooking of corpses—an inexpiable sin, the penalty for which is death (*ib.* i. 16, viii. 73 f.; Strabo, p. 732).

8. Reciting 'Patēṭs' for the expiation of the sins of others.—It is customary among the modern Parsis to hire a priest to recite *Patēṭs* before a dead body as long as it remains in the house. The recital of this expiatory prayer forms an important part of the ceremonials performed in honour of the dead, even after the removal of the corpse to its final resting-place. The relatives and friends of the deceased join in reciting the same prayers for the expiation of the soul which is now embarking on its journey to the next world. They generally keep up this observance daily for at least a month, or in many cases throughout the first year.

If one man has been requested by another to offer penitential prayers for him after he dies, and if he has consented to do so, he should hasten to perform his obligation as soon as he hears of the death of the said person, or, at the latest, on the dawn of the fourth day after death, at the momentous period when the soul approaches the threshold of the celestial world. If the man sincerely recites the *Patēṭ* as he has consented to do, the benefit of it reaches the soul of the deceased at the Bridge (*Rivāyat*, p. 501). If he fails to do so, he is guilty of neglecting his sacred duty towards the dead, and should make atonement (*Patēṭ-ī Pashimānī*, 11).

If a man during his lifetime is unable, for any reason, to recite *Patēṭs* for the expiation of his sins, he may ask the priests to do so for him on payment. But in this case he should himself recite at least the shortest expiatory formula three times a day (*Rivāyat*, p. 501).

LITERATURE.—The sources are indicated in the article. Of modern writers on the subject, the following may be cited: A. V. W. Jackson, *Persia Past and Present*, New York, 1906, p. 387; Rastamji Sanjana, *Zarathushtra and Zarathushtrianism*, Leipzig, 1906, p. 194; D. F. Karaka, *History of the Parsis*, London, 1884, i. 166, 213, ii. 171 f.; V. Henry, *Le Parsisme*, Paris, 1905.

MANECKJI NUSSERVANJI DHALLA.

EXPIATION AND ATONEMENT (Roman).

—The attribute of *pietas*, according to Roman ideas, pertained to all who faithfully and conscientiously discharged the duties they owed to the gods (Cic. *de Nat. Deor.* i. 116: 'pietas est justitia adversum deos'; *de Inv. Rhet.* ii. 66: 'religionem eam quae in metu et caerimonia deorum sit, appellant pietatem'), and who thus lived in perfect harmony with the higher powers (cf. Plaut. *Rud.* 26: 'facilius si quis pius est a dis supplicans, quam qui scelestust, inveniat veniam sibi'; Catull. lxx. 2 ff.: 'homini cum se cogitat esse pium; nec sanctam violasse fidem, nec foedere in ullo divom ad fallendos numine abusum homines' . . . *ib.* 26: 'o di, reddite mi hoc pro pietate mea'). Any one who, on the other hand, had forfeited the *pax deorum* by transgressing the sacred ordinances of the *ius divinum* was said to be *impius*, i.e. outside the laws and covenants regulating legitimate intercourse between mortals and the gods, and was therefore subject to Divine punishment—so far, at least, as he failed to purge himself of his guilt by the proper expiatory acts, and so to regain his former legal relations to the gods. The idea of thus making atonement for transgression (Festus, p. 228: 'piamentum et exsolutio omnis contractae religionis'), and by this means recovering the condition of *pietas*, is denoted by the verb *piare* or *expiare* (the prefix *ex-* is here simply an intensive, as in *exsecrare*), and the corresponding substantive *piaculum* is applied both to the trespass itself, the ritual dereliction (so Gell. x. 15, 10: 'eo die verberari piaculum est'), and the act by which it is expiated (so Macrob. *Sat.* i. 16. 10, 'porco piaculum dare debere'), and in the latter sense, therefore, corresponds exactly to the *multa* of the secular penal code. A more lax (and indeed altogether incorrect) usage of the term *piaculum* is met with in writers (*e.g.* Gell. xvi. 6. 10: 'ostentum enim est et piaculis factis procurandum'; cf. Tac. *Hist.* v. 13: 'prodigia, quae neque hostiis neque votis piare fas habet gens,' etc.) who apply it likewise to expiatory acts designed to assuage the Divine anger manifested in prodigies, *i.e.* unnatural and terrifying occurrences in the external world (see PRODIGIES AND PORTENTS), and speak, *e.g.*, of 'piacula irae deorum' (Liv. xl. 37. 2); for *piare* in its original acceptation is in no sense equivalent to *placare*, while those *qui piantur* are not the gods and their wrath, but sinful men and their conduct.

The ritual transgressions which demanded an expiation are of very diverse kinds. A large number of them consist of offences against the minutely detailed provisions of the ceremonial law (Serv. on *Aen.* iv. 646: 'et sciendum, si quid caerimoniis non fuerit observatum, piaculum admitti'), for the slightest deviation from the ritual directions (the formula for such a deviation is 'non rite factum est'; cf. Liv. v. 17. 2, xxii. 9. 9; Cic. *de Har. Resp.* 23), or even a trifling and insignificant disturbance of a religious act—a sacrifice, or the games—not only rendered the whole ceremony invalid and necessitated its being repeated, but also required to be atoned for by a *piaculum.*

At the *feriae Latinae*, for instance, if, in the distribution of the sacrificial flesh, one of the participators was overlooked (Liv. xxxii. 1. 9, xxxvii. 3. 4), or if in the prayer the name of one of the interested communities was omitted (Liv. xli. 16. 1), it was enough to invalidate the whole celebration; while, as regards the games, Cicero (*de Har. Resp.* 23; cf. Arnob. iv. 31) gives quite a list of the irregularities—manifestly of frequent occurrence—which necessarily entailed an *instauratio* of the proceedings. Thus, if a dancer suddenly stopped dancing, if the flutist ceased playing, if the boy who accompanied the chariot of the gods let go the reins, if the presiding aedile made a slip of the tongue while praying, or spilled some drops of the libation—in all such eventualities, Cicero expressly tells us, not only had the games to be repeated from the beginning, but, in addition, a *piaculum* was required: 'ludi sunt non rite facti, eaque errata expiantur et mentes deorum immortalium ludorum instauratione placantur.'

Similarly, every breach of the rigorous injunctions against doing work during the *feriae publicae*

(such offence was spoken of as *ferias polluere* [Gell. ii. 28. 3; Macrob. i. 16. 9; Serv. on *Georg.* i. 268]) was subject to the penalties of religious law. Thus, if a prætor gave judgment on a *dies nefastus* (Varro, *de Ling. Lat.* vi. 30), if a general issued an order calling out the efficient troops on one of the days of the *feriae publicae* (Varro, *ap.* Macrob. i. 16. 19: 'viros vocare feriis non licet; si vocavit, piaculum esto'), if the farmer chose a feast-day for any of those agricultural operations which the regulations regarding the period of rest did not explicitly exclude as urgent and not to be deferred (Colum. ii. 22. 4; lists of the sanctioned operations in Cato, *de Agri Cult.* 2. 4, Verg. *Georg.* i. 268 ff., Colum. ii. 22, xi. 1. 20)—such actions had to be atoned for by a *piaculum.* There were also numerous possibilities of incurring guilt in the sphere of the *ius manium*—the law relating to the dead and their tombs.

The provisions of this law were violated by such acts as the following: burying the dead within the city (*Lex Col. Jul. Genet.* [*CIL* ii. Suppl. 5439, cap. 73]), removing a corpse from its tomb (Paul. *Sent.* i. 21. 4; cf. *CIL* vi. 1884, x. 8259), omitting to make the requisite purification of the *funesta familia* after a death in their house, or not performing the rite in the prescribed manner (Gell. iv. 6. 8), failing to perform the *humatio* by casting earth (*iniecta gleba*) upon a corpse found unburied (Paul. p. 223; cf. Varro, *ap.* Non. p. 163), or becoming responsible for disposing of the dead in a manner forbidden by the ritual code (Cic. *de Leg.* ii. 57: 'in eo, qui in nave necatus, deinde in mare proiectus esset . . . porcam heredi esse contractam et habendas triduum ferias et porco femina piaculum pati; si in mari mortuus esset, eadem praeter piaculum et ferias').

The laws were specially stringent in regard to acts of encroachment upon things consecrated to the gods. A *res sacra* was inviolable, and to damage it in any way, or to remove from the sacred precincts any object that belonged to the holy place, was a penal offence; thus, the ancient law of the grove at Spoleto begins with the sentence: 'honce loucom ne qu(i)s violatod neque exvehito neque exferto quod louci siet' (*CIL* xi. 4766). If a Roman magistrate or a company of Roman soldiers desecrated the property of a temple, even the temple of a foreign deity, then not only did the actual perpetrators become liable to Divine punishment, but the State likewise had to purge itself, by numerous acts of expiation, of all complicity in the misdeeds of its officials or its soldiery. Thus, *piacula* were offered on the State's behalf after the sacking of Proserpina's temple at Locri by the legate Q. Pleminius in 204 B.C. (Liv. xxix. 19. 9, 21. 4), after a theft committed by Roman troops at the same sanctuary in 200 B.C. (xxxi. 12. 4, xxxii. 1. 8), and after the act of sacrilege perpetrated by the Censor, Q. Fulvius Flaccus, in carrying away the marble roofing of the temple of Juno Lacinia in 173 B.C. (Liv. xlii. 3. 10). But an expiation was no less necessary even when the proprietary rights of the gods were infringed without any evil intent. Thus, the pardon of a criminal who was under sentence of 'consecratio capitis et bonorum' demanded a *piaculum,* because such an act of pardon deprived the deity of something that was legally his (as when absolution was granted to the Horatius who murdered his sister; cf. Liv. i. 26. 13, also Mommsen, *Röm. Strafrecht,* Leipzig, 1899, p. 903), and the *piaculum* required for the soldier who had been devoted to the gods but had survived the battle, as also for the loss of the lance on which the general had stood while pronouncing the formula of devotion (Liv. viii. 10. 12, 14), is to be explained in the same way.

Of the numerous other contingencies in which satisfaction had to be made by acts of expiation, the following examples may be cited: if a widow married again before the expiry of the regular ten-months' period of mourning (Plut. *Numa,* 12); if a slave who, while being conveyed to the place of punishment, met the Flamen Dialis and threw himself at his feet, was nevertheless punished the same day (Gell. x. 15. 10); if a concubine (*pælex*) touched the altar of Juno (Paul. p. 222; Gell. iv. 3. 3); if a person uttered the names of the goddesses Salus, Semonia, Seia, Segetia, and Tutilina (Macrob. *Sat.* i. 16. 8), etc.

In order to form a proper estimate of the Roman practice of expiation, it is necessary to bear in mind the fact that, for the most part, it was concerned not with actual sins against the gods—sins emanating from an irreligious spirit—but with purely formal offences against the letter of the religious law, which was regarded as holy and inviolate, and was not to be altered even when its provisions had become altogether effete and quite irreconcilable with the exigencies of the day. In such cases the only available course was to transgress with open eyes the ceremonial regulations whose observance had come to be impossible, and then to make reparation for the unavoidable impiety by an act of expiation. Such an expiation was not only definitely fixed, alike as to its kind and as to its magnitude, but was in many cases actually performed beforehand, *i.e.* in anticipation of the forbidden action. Thus the farmer who saw himself compelled to undertake any such urgent and pressing work as sowing, hay-cutting, grape-gathering, or sheep-shearing, on a feast-day, simply sacrificed a dog as a prevenient *piaculum,* and thus, as he believed, freed himself from every imputation of guilt (Colum. ii. 22. 4: 'sed ne sementem quidem administrare, *nisi prius catulo feceris,* nec fenum secare aut vincire aut vehere ac ne vindemiam quidem cogi per religiones pontificum feriis licet nec oves tondere, *nisi prius catulo feceris*'). Similarly, the conveyance of a dead body from one place of sepulture to another—even when the *pontifices* had given their consent—could be effected only 'piaculo prius dato operis faciendi' (*CIL* x. 8259; cf. vi. 1884: 'piaculo facto'). Above all, it was quite impossible, in a higher state of civilization, to observe the law against the use of iron for sacred purposes—a law which had come down from the Bronze Age (Henzen, *Acta Fratrum Arvalium,* Berlin, 1874, p. 128), and which, *e.g.,* made it necessary for the Arval Brothers of the Imperial period to offer an expiatory sacrifice on the annual occasion when they made use of iron in having the record of their proceedings carved on the marble slabs of the temple-wall ('ob ferrum inlatum in aedem scripturae [et scalpturae] causa'), as also afterwards ('ob ferrum elatum' [Henzen, 128 ff.]). When, in a sacred grove, the necessary operations of thinning and pruning the branches, or of cutting up and clearing away dead and fallen trees, had to be performed, and when repairs were required in the edifice of a temple, it was impossible to avoid transgressing the ordinances of the *ius divinum* in two ways, *i.e.* both by the act of introducing iron instruments into the sacred precincts, and by that of removing things that belonged to the holy place, viz. branches, trees, and dilapidated portions of the building. It is true that later temple-regulations made express provision for such cases. The statutes of the temple of Juppiter Liber at Furfo, in the country of the Vestini (*CIL* ix. 3513), direct: 'utei tangere sarcire tegere devehere defigere mandare ferro oeti promovere referre fasque est'; while the ordinances of the grove of Spoleto (*CIL* xi. 4766) permit the felling of trees—at least for use at the annual sacrificial feast: 'neque cedito, nesei quo die res deina anua fiet. eod die quod rei dinai cau(s)a [f]iat, sine dolo malo cedre [l]icetod.' But, wherever the rigorous ancient law remained in force, all infringement of it necessarily entailed guilt, and this guilt could be annulled only by a *piaculum.*

Thus Cato the Elder (*op. cit.* 139) records the prayer which the farmer coupled with the expiatory offering called for by the operation of clearing a grove ('lucum conlucare'), and we find here an interesting regulation to the effect that, if the work was interrupted, or if feast-days intervened while it was in process, the sacrifice must be repeated at its resumption. Similarly, the Arval Brothers invariably performed *piacula* when they removed trees that had fallen from age or had been overthrown

by a tempest (Henzen, 136 ff.), though the great sacrificial rite of the *lustrum missum*, which they performed twice in special circumstances, and which Henzen (p. 140 ff.) discusses under the term *piacula*, comes under the head, not of expiation at all, but of lustration. The *piaculum* performed by the Arval Brothers as an atonement for pruning the trees of their grove ('luci coinquiendi et operis faciundi'), and corresponding to the sacrifice described by Cato, was offered annually on the second day of their annual festival, immediately before the principal oblation to Dea Dia (Henzen, 19 ff.). But, as the season of the year in which the festival occurred—the month of May—scarcely seems suitable for the pruning of trees, there is much to be said for Henzen's conjecture that, on the occasion of the annual festival, all operations of the kind requiring to be done during the year were atoned for by a single *piaculum* (p. 22). Such procedure would find a parallel in the sacrifice of the *porca praecidanea* which originally was required *piaculi gratia* (Gell. iv. 6. 8) only from one 'qui mortuo iusta non fecerit' (Paul. p. 223; cf. Mar. Vict. p. 25 [Keil]: 'qui iusta defuncto non fecerunt aut in faciendo peccarunt'), *i.e.* had in some way violated the injunctions of the *ius manium* (cf. also Varro, *ap.* Non. p. 163; Gell. *loc. cit.*). This sacrifice was not only performed at the time when the offence was committed, but was also offered annually before the beginning of harvest; hence the erroneous explanation of the name as if 'antea quam novam frugem *praeciderent*' (Paul. p. 219), while in reality *praecidanea*, as the counterpart to *succidanea*, was the 'porca quae ante sacrificium caeditur'—the idea being that every one had, consciously or unconsciously, committed an offence of the kind during the year, and thus made satisfaction for it in a single act. An account of this ceremony is given by Cato (*op. cit.* 134), who also furnishes valuable particulars regarding the ritual of the sacrifice.

Expiatory sacrifices seem to have been combined also with other important religious ceremonies—*i.e.* a *piaculum* was offered in consideration of all offences that might have been committed, whether consciously or unconsciously, but was performed apart from any particular instance, and by way of gaining a general absolution. There seems at least to be hardly any other explanation of the fact that, at the dedication of the *spolia opima*, not only were sacrifices rendered to Juppiter, Mars, and Quirinus, but a *piaculum* was also offered (Fest. p. 189); while, again, the oblation of the *propudianus porcus*, which was offered in 'sacrificio gentis Claudiae velut piamentum et exsolutio omnis contractae religionis' (p. 238), can be explained most naturally as an inclusive expiation of similar character.

The expiatory rite of the *piaculum*, in the great majority of cases, was an act of sacrifice. Now and again, indeed, the observance of feast-days (*ferias observare*) was prescribed, either as a concomitant of (Cic. *de Leg.* ii. 57), or as a substitute for (Macrob. *Sat.* i. 16. 8), a sacrifice. By way of indemnity for the soldier who had been devoted but had not fallen, it was necessary, in addition to the sacrifice, to present an image not less than seven feet in height, and bury it in the earth (Liv. viii. 10. 12); and the fine 'in tem(plum) Iovis d . . . (denarium) I. d(ato),' exacted, according to *CIL* xii. 2426, for polluting a stream, should also perhaps be regarded as a *piaculum*. The general practice, however, was to offer a *piacularis hostia*. The recipient of the indemnity was, of course, the particular deity whose rights had been infringed: thus the *piaculum* for damaging a sanctuary, or violating its statutes, was rendered to the god to whom the sanctuary belonged; that for breaking the rest enjoined on feast-days, to the deity to whom the feast-day was dedicated; that for violating the *ius manium*, to Tellus (who, along with Ceres, is rightly named by Varro [*ap.* Non. p. 163] in connexion with the sacrifice of the *porca praecidanea*, though Ceres alone is mentioned by our other authorities) and to the Manes. If there was any uncertainty in the matter, and, in particular, if the expiation was required on behalf of the State, the *pontifices* were consulted, and had authority to decide 'quae piacula quibus diis quibus hostiis fieri placeret' (Liv. xxix. 19. 8); if it was found impossible to determine exactly to which deity a *piaculum* was justly due, a sacrifice was offered in accordance with the formula, 'si deus si dea est, quorum illud sacrum est, uti tibi ius est . . . piaculum facere' (Cato, 139). The choice of a victim depended upon the particular deity to whom it was offered. Frequently a deity received as a *piaculum* the kind of animal specially associated with his ordinary worship. Thus Juppiter received an ox (*CIL* xi. 4766), Mars *suovetaurilia* (Liv. viii. 10. 14), Juno a she-lamb (Paul. p. 222; Gell. iv. 3. 3), the Manes a black sheep (*CIL* x. 8259); the cow in calf offered as a *piaculum* by a widow who married again during the recognized period of mourning (Plut. *Numa*, 12) would seem to have been assigned to Tellus, to whom *fordae boves* were sacrificed at the *Fordicidia* (Varro, *de Ling. Lat.* vi. 15; Ovid, *Fasti*, iv. 629 ff.); while the rustic practice of offering a dog as an atonement for breaking the law enjoining rest on feast-days (Colum. ii. 22. 4) finds a parallel in the immolation of a dog at the agrarian festivals of the *Robigalia* (Ovid, iv. 908, 936 ff.; Colum. x. 34. 3) and the *Augurium Canarium* (Fest. p. 285; Philarg. on Verg. *Georg.* iv. 425). But the animal most frequently made use of in expiatory sacrifices—at once the most ancient and the least ostentatious victim—was the pig (*porcus* and *porca*; among the Arval Brothers also *porciliae*), as, *e.g.*, in cases of *pollutio feriarum* (Macrob. i. 16. 10), of violating the laws relating to the disposal of the dead (Cic. *de Leg.* ii. 57), of clearing a grove and removing fallen trees (Cato, 139; cf. Henzen, 22, 135 ff.). The above-mentioned expiatory offerings, the *porca praecidanea* and the *propudianus porcus*, derive their names from this animal.

Not every ritual transgression, however, admitted of expiation. Some offences were beyond atonement, and placed the offender, as *impius*, outside the *pax deum*, so that he became liable to Divine punishment without any legal means of escape; as Cicero (*de Leg.* ii. 22) puts it: 'sacrum commissum, quod neque expiari poterit, impie commissum esto.' But the words with which Cicero continues, 'quod expiari poterit, publici sacerdotes expianto,' do not on a strict interpretation harmonize with the religious practice of the Romans; for here expiation was not effected by the priests at all, but simply came about on the ground of the expiatory sacrifice presented by the offender in the name of the State and the magistrates. The sole function of the priests in this regard was, when consulted by the individual or by the community, to deliver an authoritative judgment as to the possibility of expiating a given offence (*ib.* 37: 'publicus autem sacerdos imprudentiam consilio expiatam metu liberet, audaciam . . . damnet et impiam iudicet'), and as to the kind of atonement required—and it is possibly in this sense that the 'expianto' of Cicero (*ib.* 22) is to be understood. But they had no part whatever in the performance of the expiatory sacrifice offered in name of the community—the earliest exception to this took place in the reign of the Emperor Claudius, who (according to Tac. *Ann.* xii. 8) in 49 B.C. directed 'sacra ex legibus Tulli regis piaculaque apud lucum Dianae per pontifices danda'—nor did it lie with them to pronounce judgment or inflict punishment in connexion with religious offences (cf. Mommsen, 36 f.). Nor could either priest or magistrate exercise any penal procedure against an *impius* who had committed an inexpiable offence, or had failed to make atonement for an offence that was expiable; such offender simply remained subject to Divine punishment, which he could not avert by any subsequent efforts towards reparation (Cic. *de Leg.* ii. 22: 'impius ne audeto placare donis iram deorum'); from the human side, one guilty of perjury, and, as we may assume, every other *impius*, incurred nothing beyond the censor's reprobation (cf. A. Pernice, *SBAW*, 1885, p. 1164 ff.).

In course of time, however, the sphere of ritual transgression came to be encroached upon by the secular element, the ceremonial penalty (*piaculum*) being conjoined with, or in part superseded by, the legal penalty of the fine (*multa*). Every offence committed wittingly and wilfully ('sciens dolo malo') against the *ius sacrum* was, in a strict sense, accounted inexpiable; thus, *e.g.*, the praetor who had knowingly administered justice on a *dies nefastus* was proclaimed inexpiably guilty by the Pontifex Maximus, Q. Mucius Scævola (Varro, vi. 30; cf. Macrob. i. 16. 10); but in the law of the grove of Spoleto (*CIL* xi. 4766: 'honce loucom ne qu(i)s violatod . . . si quis violasit, Iove bovid piaclum datod. sei quis scies violasit dolo malo, Iovei bovid piaclum datod et a(sses) CCC moltai suntod. eius piacli moltaique dicator[ei] exactio est[od]') unconscious and conscious, or intentional, injuries are differentiated by the circumstance that, in addition to the *piaculum* incurred in all cases, the voluntary offence demanded also a *multa*, and to this extent the latter found its way even into the sphere of religious law, while the legally actionable character of the *multa* came to be assigned likewise to the *piaculum*. The juxtaposition of *multa* and *piaculum*, as found in Macrob. i. 16. 9 f. in connexion with the violation of the feast-day repose, is to be explained on similar grounds; and by the municipal law of the Colonia Julia Genetiva (*CIL* ii. Suppl. 5439), *cap*. 73, not only were those who interred a body within the city obliged to pay a fine of 5000 sesterces—for which any citizen might take legal action—and threatened with the removal of the grave, but it was also ordained that, 'si adversus ea mortuus inlatus positusve erit, expianto uti oportebit,' *i.e.* a *piaculum* was required. On the other hand, the law of the grove of Luceria (*CIL* x. 782) enjoined that one who had polluted the grove ('in hoce loucarid stircus ne [qu]is fundatid neve cadaver proiecitad neve parentatid') should be punished either by a fine (which was recoverable at law by any citizen) or by a *multa* of the magistrates ('sei quis arvorsu hac faxit, [civ]ium quis volet pro ioudicatod n[ummum] L manum iniect[i]o estod. seive mac[i]steratus volet multare, [l]icetod'); while by the ordinances of the temple of Furfo (*CIL* ix. 3513) one who rifled the sanctuary was liable only to the *multa* of the aedile ('sei qui heic sacrum surrupuerit, aedilis multatio esto, quanti volet'), nothing whatever being said of an expiation.

Since the Romans, as has been shown in the foregoing, regarded guilt in relation to the gods, and its remission by expiation, from the standpoint of mere legality, it is obvious that penitence, in the sense of a repentant and contrite spirit, and of a course of conduct directed by such a spirit, did not come into consideration at all. This is seen unmistakably in the prayer accompanying the expiatory sacrifice for the *lucum conlucare* (Cato, 139), inasmuch as it contains no expression of regret or apology for the offence against the sacred ordinances, but simply decrees: 'uti *tibi ius est* porco piaculo facere.'

G. WISSOWA.

EXPIATION AND ATONEMENT (Teutonic).—Among the ancient Teutons expiation was the act by which peace was restored between the wrong-doer on the one hand, and the wronged or his kindred on the other. An act of expiation prevented the outbreak of a feud, or put an end to one already going on. It was either a purely private transaction, or else was effected with the co-operation of the legislative community, or in virtue of a legal judgment. In the latter case it falls within the sphere of criminal jurisprudence. That which was rendered by the wrong-doer for the purpose of expiating his violation of the peace was the 'boot' (O.N. and A.S. *bót*, O.H.G. *buoza*, Germ. *Busse*), 'redress,' 'indemnity,' 'atonement.'

1. Intervention of the community.—In pre-historic times expiation and atonement must have been the concern exclusively of the families to which the doer and the sufferer of the wrong belonged, and even in the historical period we still find cases in which the families were reconciled without any intervention on the part of the larger community. Thus the Icelandic sagas tell repeatedly how the murderer made unconditional surrender to the slain man's next of kin, put his freedom and his life unreservedly into the latter's hands, and so made atonement for his crime. If, however, the man-slayer did not take this course, there ensued the family feud, which formed so important a feature of ancient Teutonic life. But, in general, even in the early historical period, the entire legislative community had a share in the business of reconciliation. For the rupture of amicable relations which demanded expiation affected not the injured family only, but also the community at large. It was the community, accordingly, which proscribed the wrong-doer, and thus made him an outlaw. This implied, however, that, when the outlawry was revoked and reconciliation effected, the community could claim a share in the indemnity, and even had the right to fix what the latter should be. In this way arose the practice of exacting fines, systematic regulations regarding which are found in the codes of all the Teutonic peoples. In the earlier period fines were paid in cattle (Tac. *Germ.* 12: 'equorum pecorumque numero convicti multantur'), or in food, or other materials of general utility (corn, linen, etc.). This form was longest retained in Scandinavia, but was subsequently superseded—first of all in Southern Germany—by metals or monetary equivalents. Of such payments the injured party received the largest share, usually two-thirds, while the smaller portion was assigned to the public authority—in particular, to the ruler—or to the common good. The latter portion was the price of peace, the *compositio*, the recompense paid to the community for its share in the re-establishment of peaceful relations.

2. Feud and outlawry.—Expiation presupposes a wrongful act. The party injured by such might be either an individual or a community (sacrilege, treason, desertion). In the former case the culprit ruptured the peace with one of his fellows or with the kindred of the injured person; in the latter, with the community at large. The wronged individual and his kindred had the right of revenge. If the offender was caught in the act 'red-handed,' summary vengeance could be executed upon him; if not, the family of the person injured had the right of feud against the wrong-doer. The feud (O.H.G. *fêhida*; A.S. *fæhð*) was a state of hostility between two families or clans (see BLOOD-FEUD [Teutonic], vol. ii. p. 735). The earliest documents recognize the feud only in connexion with homicide; in later sources it extends also to such offences as the abduction of women, adultery, and gross violation of honour. The exercise of this right lay entirely in the hands of the injured person and his relatives, and to them belonged also the right of fixing the expiation and indemnity by which the two groups might be formally reconciled. If, however, the crime was perpetrated against the community, the criminal was publicly proscribed; he was put out of the protection of the law, and, according to our northern authorities, was accounted *úheilagr*, as *vargr í véum*, 'a wolf in the league,' who was at everybody's

mercy, and whose property any one might seize. This was also done when the cause of the wronged individual was espoused by the legislative community—a practice found among most of the Teutonic peoples as far back as the early historical period. Even then, however, the prosecution of the culprit—*i.e.* the proclamation of outlawry against him—was solely the affair of the injured party, and was sanctioned only in the case of wilful injury. In cases of unintentional injury, the doer, according to the Scandinavian codes, had voluntarily and without delay to make satisfaction to the injured party, or, by the laws of the German tribes, had to maintain by an oath, and with the aid of a compurgator, that his act was really unintentional. But even outlawry was not usually permanent; it was circumscribed both as to time and as to locality, and could always be reversed by indemnity and expiation; while offences not involving feud and outlawry could also be absolved by the payment of compensation.

3. **Conditions of reconciliation.**—The act of expiation involved certain formal conditions. To begin with, it had to take place within a given period, the length of which varied among the different tribes. Then the offender had to present himself almost as a suppliant before the person whom he had wronged, or his legal representative; and, finally, he had to assert upon oath that, had he been the injured party, he would have been satisfied with the indemnity which he now offered. The two parties then took the oath of peace, *i.e.* declared the feud at an end, and sealed their reconciliation by a mutual embrace and the kiss of peace.

4. **Compensation and fine.**—While the right of private vengeance and feud, together with the right to fix the indemnity, remained in force among the northern Teutons till far on in the Middle Ages, among the other Teutonic peoples proscription gave place at an early date to a system of fines. Outlawry was, in fact, resorted to only when such fines were not paid, and even then in a greatly mitigated form. In the earlier period it lay with the wronged individual to decide whether he would adopt the policy of vengeance and outlawry, or accept compensation; subsequently he was compelled to take the latter course. Thus the system of compensation at length carried the day, as we find it in the *Leges barbarorum*, and the Frisian, Anglo-Saxon, and Scandinavian codes. In the various nationalities the measure of the compensation fluctuated in successive periods, but in all cases the extent and character of the injury, and the standing or family of the injured, were important considerations in its assessment. The indemnity for injury to any part of the person was estimated according to the utility of that part in earning a living. The legal tender of such compensation originally consisted of cattle. In this connexion, as was noted above, Tacitus mentions horses and small cattle; according to the Scandinavian codes, the standard of value in fixing compensation was the cow (*kúgildi, kýrlag*). But we often find reference likewise to cloth (O.N. *vaðmál*; Fris. *wede*), and also to corn, butter, and wax. It was only in a later age that animals and produce were superseded by the precious metals, and, among the southern Teutons, by coin. In North Scandinavia the pieces of metal were unstamped, and were paid simply by weight, or in the form of rings (*baugr, bauggildi*). The nature and amount of the indemnity were not, of course, matters of public concern in every case, but were sometimes arranged between the injurer and the injured. The Icelandic sagas in particular make frequent mention of such private negotiations. Thus Gunnlaugr, having stunned the slave of a peasant with a blow, offered a mark as compensation to the master, who, though at first he thought the sum inadequate, finally accepted it (*Isl. Sögur*, ii. 210 f.). But, where the compensation was settled by the intervention of the community—which, as the custodian of law and peace, was, according to Teutonic ideas, conjointly affected by an injury to any of its members—then the community, or its representative, the ruler, received a share of the indemnity (O.H.G. *fridu*, and Fris. *fretho*, latinized as *fredus*; A.S. *wite*). Among some of the Teutonic peoples (N. Teutons and Franks) this *fredus*, or 'price of peace,' was a part of the compensation, and, together with what was given to the injured person, formed the *compositio*, while in other tribes (Saxons, Frisians) it was rendered in addition to the indemnity.

5. **'Wergild.'**—A peculiar form of expiation is found in the *wergild* (O.H.G. *werageld*; Germ. *Wergeld*; O.N. *manngiöld, mannbœtr*), the sum of money which was paid for killing a human being, and which came to be substituted for outlawry. The *wergild*, which was recognized by nearly all the Teutonic codes, might be doubled, or even trebled, in cases where the victim was a man held in special esteem. The family of the slayer and that of the slain had each a part in the transaction. The former was required to produce the legal amount—a practice which was confined to this form of indemnity—while the compensation was likewise received by the relatives of the slain man in a body. Nor was this rule departed from when the man-slayer had fled or was dead. This fact suffices to show that the *wergild* was regarded not as a penalty but as an indemnification. The share which the individual relatives of the person slain had in the compensation was also regulated by law, but the mode of allotment was not everywhere the same. The custom of excluding women from participation was almost universal. The share of the male relatives was computed according to the principle that it must be directly in proportion to their nearness of kin to the slain man. According to the Icelandic sagas, which in this as in many other respects reflect older conditions, the amount of the *wergild* was arranged privately between the families of the individuals involved. When the money had been paid, or, at least, when payment had been legally guaranteed, the reconciliation of the two groups of relatives was consummated in a ceremonial similar to that observed at the termination of a feud. In later times the murderer or his kindred were often required to erect a piacular cross at the scene of the crime.

6. **Indemnity and punishment.**—In cases other than the *wergild*, the compensation was graduated according to the damage entailed by the offence. Loss of property had to be made up by a reparation of equal amount, or by an equivalent in money; an imputation on a person's honour had to be made amends for by a solemn withdrawal, etc. A peculiar form of requital is found among the Franks from the 6th cent. A.D., viz. the 'ban-forfeit,' or the 'king's ban.' This originated with the Merovingian kings, and forms a contrast to the other provisions of the Frankish tribal codes. Here the 'ban' was the sum of money paid to the king by those who did not comply with his decrees. Thus the 'king's ban' partakes of the nature of penalty rather than of indemnity. The latter, we must remember, was not originally a penalty, but simply a payment made in order to recover the protection of the law, and to indemnify the injured party or the community. It was only after the wrong-doer was no longer liable to

proscription, and the wronged was forbidden to avenge himself, that compensation was superseded by punishment and the right to demand punishment, including not only legal penalties but also the private vengeance of which the community acted as the medium. Thereafter the injured party had merely the right to prefer an accusation, and the intervention of his family was disallowed. The penalty was thus no longer a matter for the injured person to decide, but was regulated by law. Then corporal and capital penalties were added to those which consisted of monetary fines.

7. **Human sacrifice.**—In the sphere of religion, expiation took a peculiar form. When a man committed an offence against the gods, he was held guilty of a crime against the community as well, since the vengeance of the offended deity fell upon the community as a whole, so that some—and, in certain circumstances, as *e.g.* famine and storm, even many—of its members were put in peril of their lives. In such cases the deity could be propitiated only by the gift of a human life, and the practice was to immolate the criminal himself. Again, however, such a sacrifice was not a penalty, but an expiatory act. The criminal was first of all declared an outlaw, and thus excluded from the legal union. Thus in Iceland, shortly before the introduction of Christianity, we have the case of a man who was proscribed for sacrilege (*Isl. Sögur*, i. 11); he was thereby numbered among those who were unprotected by law, and could be dealt with as a sacrificial victim whenever such was required. But the sentence of outlawry by the community does not seem to have been pronounced in every case. One who had committed sacrilege was excluded from the legal confederacy without any act of proscription or process of law, and was then treated as a slave or outlaw, by the offering of whose life alone the deity could be propitiated. It is recorded, for instance, that King Oláf Trételgja of Sweden was offered up by his own people during a time of famine, because he had acted perfunctorily as a sacrificer, and was thus a scorner of the gods (*Heimskringla*, p. 37). A crime against the gods, especially when their retribution manifested itself in storm or failure of crops, could be expiated by nothing less than a human sacrifice. If the anger of the gods broke forth at a time when the community had no sacrilegious person within its pale, or did not know of any, attempts were made to assuage the Divine wrath by an oblation of slaves or prisoners of war. When even such victims were not to hand, the person to be sacrificed was discovered by casting lots. It thus appears that among the ancient Teutons human sacrifice (*q.v.*) was not a punishment, but an expiation. Cf. art. CRIMES AND PUNISHMENTS (Teut. and Slav.), vol. iv. p. 304, *et passim*.

E. MOGK.

EXTREME UNCTION.—1. Purpose and efficacy.—By the official teaching both of the Roman and of the Orthodox Greek Church the anointing of the sick and dying is recognized as one of the seven Sacraments. The Council of Trent in its 14th Session deals with the subject at some length. It declares that the Redeemer of mankind, having provided all spiritual aids for the different emergencies of human life, wished also to 'guard the close of life by the Sacrament of Extreme Unction, as with a most firm defence.' It urges the need of such help, on the ground that at the hour of death the assaults of the tempter are redoubled. Hence Christ, it is stated, instituted this unction as 'truly and properly a Sacrament of the New Law.' The rite, we are told, was foreshadowed in the anointing of the sick by the Apostles, spoken of in Mk 6[13], but it was 'promulgated' in Ja 5[14f.]: 'Is any among you sick? let him call for the priests (Gr. πρεσβυτέρους; Vulg. *presbyteros*, AV and RV 'elders') of the church; and let them pray over him, anointing him with oil in the name of the Lord: and the prayer of faith shall save him that is sick, and the Lord shall raise him up; and if he have committed sins, it shall be forgiven him.' In these words are indicated not only 'the matter, the form, and the proper minister of this sacrament,' but also the effect.

'For "the thing signified" here is the grace of the Holy Ghost, whose anointing cleanses away sins if there be any still to be expiated, as also the remains of sins, and raises up and strengthens the soul of the sick person by exciting in him a great confidence in the Divine mercy, whereby the sick man being supported bears more easily the inconveniences and pains of his sickness, and more easily resists the temptation of the devil who lies in wait for his heel, and at times obtains bodily health when expedient for the welfare of his soul.'

In the Eastern Church the principal stress is laid upon bodily healing. Thus the Shorter Russian Catechism simply states that the Sacrament 'consists in this, that the sick man is anointed with oil, while grace is prayed for to heal him.' But the Longer Russian Catechism and the *Confessio Orthodoxa* of Mogilas emphasize also its spiritual effects, the last-named declaring (cap. 119) that, 'though health is not always obtained, nevertheless the forgiveness of sins is always most assuredly thereby received.'

To the Tridentine decree four anathemas are appended. The first condemns those who deny the Divine institution of the Sacrament and declare it to be only of Patristic origin or a human figment. The third and fourth anathematize those who maintain that the ritual of the Roman Church does not fully accord with the text of St. James, as well as those who would allow others than priests to administer the Sacrament. The second runs as follows:

'If any one saith that the sacred unction of the sick does not confer grace, nor remit sin, nor comfort (*alleviare*) the sick, but that it has now lost its virtue (*sed jam cessasse*), as though it were a grace of working cures in bygone days, let him be anathema.'

The view that St. James was not speaking of any truly sacramental unction (cf. Loisy, *Autour d'un petit livre*, Paris, 1903, p. 251) was condemned in 1907 with other 'Modernist errors' in the decree *Lamentabili sane*, no. 48 (Denzinger-Bannwart, *Enchiridion*[10], Freiburg, 1908, no. 2048).

Speaking generally, it may be said that this account of the purport and effects of the Sacrament is in close accord with the teaching of Aquinas and the mediæval scholastics. Some difference of opinion there was between the Thomists and the

Scotists regarding the primary object (*effectus principalis*) for which it was instituted, the former maintaining that it was the comforting of the soul, the latter that it was rather the final remission of venial sins (see Kern, *de Sac. Extr. Unctionis*, pp. 215–240), but the dispute was a metaphysical one and was without much practical bearing upon the popular conception of the Sacrament and its effects.

2. **Ritual.**—In the Church of Rome at the present day the rite of administration is brief and simple. Apart from one or two short and unessential prayers which precede and conclude the ceremony, the rite consists in the anointing of the eyes, ears, nostrils, lips, hands, and feet of the sick person, the following formula being repeated at each unction: 'Through this holy unction and His own most tender mercy, may the Lord pardon thee whatever offences thou hast committed (*quidquid deliquisti*) by sight (by hearing, smell, etc.).' Formerly, in the case of men, the loins were also anointed, and the *Rituale* still retains the formula provided, but in practice this is now always omitted. Only a properly ordained priest can confer the Sacrament validly, and the oil used must be the *oleum infirmorum* consecrated for this special purpose by the bishop on Maundy Thursday. If by some mistake a mineral oil should be used, or if one of the two other holy oils, viz. the chrism or the *oleum catechumenorum*, should be substituted for the *oleum infirmorum*, the validity of the Sacrament would be doubtful. Further, the proposition that in case of necessity, when episcopally blest oil cannot be procured, a priest may validly use oil blessed by himself has been censured so far as concerns the Western Church. On the other hand, permission has long been accorded by the Holy See to the Uniat Greeks to adhere to the ancient tradition of Eastern Christendom, according to which any simple priest who administers the Sacrament blesses the oil himself. That this was also, at least in some localities, the earlier practice in the West seems highly probable.[1]

According to both the present and the former practice of the Western Church, the Sacrament is administered only to those who are suffering from serious illness, and thus at least remotely in danger of death. It may be reiterated, but not in the same illness, or at any rate not unless some new crisis has supervened. Among the Greeks and some other Orientals (it is not now recognized by the Nestorians) the Sacrament of the Prayer-Oil (εὐχέλαιον), as they call it, though a much more elaborate ceremony, requiring when possible the assistance of seven priests, is often administered in maladies of no gravity, and it is received on certain days of the year by persons in normal health as a preparation for Holy Communion. It is consequently very commonly administered in the church, and the forehead, nostrils, cheeks, chin, breast, and both sides of the hands are anointed with a brush or twig, the ceremony being repeated by each priest in turn. The form used begins as follows: 'Holy Father, physician of souls and of bodies, who didst send Thy only-begotten Son our Lord Jesus Christ as the healer of every disease and our deliverer from death, heal also Thy servant N. from the spiritual and bodily infirmity that holds him, and restore him to life, through the grace of Christ,' etc. After this, a number of saints are named, and amongst the rest 'the holy and moneyless physicians Cosmas and Damian' (see Maltzew, *Sakramente*, 493 ff.). The oil used is commonly mixed with wine, and it is blessed by the principal priest present. In practice the Sacrament among the Greeks, as in the West, is often deferred until the sick man is *in extremis*, but the hope of a cure is always entertained. See, for example, Tolstoi's great novel *Anna Karenina*, bk. v. chs. 19–20. In both the Eastern and the Western Church an abbreviated form is sanctioned for cases when the danger of death is imminent.

3. **History.**—As the anointing of the sick with oil was a primitive form of medical treatment (see Is 1[6]; Jos. *BJ* I. xxxiii. 5; Lk 10[34]), and, like all other remedial measures, was peculiarly apt to be associated with religious observances (see ANOINTING, vol. i. p. 549 ff.), it is not altogether surprising that the early history of sacramental unction should be somewhat obscure. It was an observance which would not have provoked controversy by arousing the hostile criticism of pagans, and the faithful had no special reason to draw attention to it, since it was only the Christianized counterpart of customs, medicinal or magical, which every one recognized. Further, the existence of a non-sacramental use of consecrated oil is clearly deducible from the epistle of Innocent I. (*ad Decentium*, 8 [*PL* xx. 559]), from Cæsarius of Arles (*PL* xxxix. 2238), and from the *Vita S. Genovefæ* (ed. Künstle, cc. 38 and 40), the oil being applied to the sick by themselves or by a woman. Moreover, in other cases oil seems to have been employed in charismatic healing (Mk 6[13]), under which we may include the instance mentioned by Tertullian (*ad Scap.* iv.), when Septimius Severus was cured by the Christian Proculus. Nor can we leave out of account the use of oil from the lamps in the basilicas, or oil sanctified by relics, etc. (see *e.g.* Chrysos. hom. 32 *in Matt.* [*PG* lvii. 384]; Cassian, *Coll.* vii. 26 [*PL* xlix. 706]; Greg. Tur. *Hist. Franc.* iv. 36 [*PL* lxxi. 299]). But, just as the healing of Gorgonia after anointing herself with the sacred species of the Eucharist (Greg. Naz. *Orat.* viii. 18, and cf. *JThSt* xi. [1910] 275–279; a Western example of the same outward application of the Eucharistic species seems to be found in Cæsarius of Arles [*PL* xxxix. 2238]) could not be cited as an argument against the sacramental character of the Eucharist at the same period, so this domestic use of consecrated oil does not seem to militate against the existence of an authorized and official sacramental rite of which the priests were the recognized ministers. In this light the letter of Innocent I. to Decentius, A.D. 416 (Denzinger-Bannwart[10], no. 99) seems quite intelligible. Decentius had doubted whether he, a bishop, was free to anoint the sick, seeing that only priests were mentioned by St. James.

Most certainly you are, the Pope replies in substance; 'even the simple faithful are allowed to *use* the blessed oil, and with much greater reason the bishop, who has power to consecrate it, has power to anoint with it and to bless the sick. But such unction ought not to be administered to penitents (*i.e.* those undergoing penitential discipline), for it is a sacred rite (*quia genus est sacramenti*), and, if the other sacred rites are denied to penitents, why should this particular rite be conceded? (*Nam quibus reliqua sacramenta negantur, quomodo unum genus putatur posse concedi?*)'

No doubt, this answer implies that the unction was not then regarded as specially belonging to those *in extremis*, for penitents at the point of death would not have been refused the sacrament of reconciliation and the Eucharist. On the other hand, the formula for blessing the oil which we find in 'Serapion's Prayer-Book' (A.D. 356) is associated by its position in the series with the rites of interment, though its terms clearly specify the restoration of health to both soul and body.

'Send the healing power of the only begotten upon this oil.' God is asked '. . . for a driving out of every infirmity, for good grace and remission of sins, for a medicine of life and salvation, for health and soundness of soul, body, spirit, for perfect strengthening.'

[1] See Magistretti, *Pontificale Ambrosianum* (p. 95), who quotes the decisive words of Bonizo of Piacenza (c. A.D. 1089): 'This *oleum infirmorum* used formerly at all seasons to be consecrated by priests during Mass after the *per quem haec omnia bona creas*. Nowadays, however, it is consecrated only by Bishops, and that on Maundy Thursday, at the same point in the Mass' (*PL* cl. 864).

The *Vita S. Genovefæ* clearly shows that even then (*c.* A.D. 550) it was believed in Gaul that only a bishop had power to consecrate the oil (*forte accidit ut Genovefa oleum non haberet nec adesset in tempore pontifex qui ad praesens oleo gratiam sanctificationis infunderet* [c. 40]). Similarly the *Vita S. Hypatii* (*AS*, 17 June, p. 251) tells us how Hypatius, who was long infirmarian of his monastery, used, when any illness grew serious, to send for the abbot, 'since he was a priest' and Hypatius himself was not, in order that the sick man might be duly anointed. This *Life* is assigned by Bardenhewer to about the year 450. With the 8th cent. the evidence regarding the nature and rite of Extreme Unction grows more abundant. Bede speaks of it in some detail in his commentary on St. James (*PL* xciii. 39), and St. Boniface (about 745) in his Canons orders priests to have the oil for the sick constantly at hand, and to instruct the faithful, when they feel ill, to apply for the Unction. Similarly in the 9th cent. many Councils, beginning with those of Chalons (813), Aachen (836), and Mainz (847), issue various injunctions on the subject, generally making allusion to the Epistle of St. James. The term 'Extreme Unction' seems to occur for the first time in the 15th of the Canons ascribed to Bishop Sonnatius: 'Extrema unctio deferatur laboranti et petenti' (Mansi, x. 599). These Canons may be as early as the 7th cent., but we have no certainty on this point. The name 'Extreme Unction' became common only at a considerably later epoch. It was in all probability suggested by its being the last in order of the unctions a man was likely to receive, but no doubt the association of the Unction with the *Viaticum* and approaching death made the term seem specially appropriate.

LITERATURE.—The fullest and most recent discussion of the subject from the Roman standpoint is that of J. Kern, *de Sacramento Extremæ Unctionis Tractatus Dogmaticus*, Regensburg, 1907, a treatise that has been largely utilized by P. J. Toner, in the *Cath. Encycl.* v. 716–730. An excellently condensed summary of the historical aspects of the case is given by J. de Guibert, *s.v.* 'Extrême Onction,' in the *Dict. apol. de la foi catholique*, i. 1868–1872. See also A. Tanquerey, *Synopsis Theol. Dogmat. Specialis*^{10}, Tournal, 1906, ii. 567–589; C. Pesch, *Prælectiones Dogmaticæ*^{3}, Freiburg, 1909, vii. 249–281; Wilhelm-Scannell, *Manual of Catholic Theology*, London, 1898, ii. 485–493; Lejay, in *RHLR* x. [1905] 606–610; F. Probst, *Sakramente und Sakramentalien*, Tübingen, 1872, p. 373 ff.; M. Heimbucher, *Die heilige Oelung*, Regensburg, 1888; I. Schmitz, *de Effectibus Sacr. Extremæ Unctionis*, Freiburg, 1893; M. Chardon, *Hist. des sacrements*, Paris, 1745; J. Pohle, *Lehrbuch der Dogmatik*^{3}, Paderborn, 1907, iii. 523–548; E. Martène, *de Antiquis Ecclesiæ Ritibus*, Venice, 1788, i. 296–350; W. McDonald, in *Irish Theol. Quarterly*, 1907, pp. 330–345.

As regards the Orthodox Greek Church, see A. v. Maltzew, *Sakramente*, Berlin, 1898, cccxxiii. and 450–553; Petrovskij, *Hist. of the Akoluthia of the Prayer-Oil*, Christianskoje Ctenje, 1903 (Russ.); Rhalles, *On Penance and the Prayer-Oil*, Athens, 1905 (Greek); Jacquemier, 'L'Extrême Onction chez les Grecs,' in *Echos d'Orient*, ii. Apr.–May, 1899.

Of writers unsympathetic to the Roman view may be mentioned the important work of F. W. Puller, *The Anointing of the Sick in Scripture and Tradition*, London, 1904; J. B. Mayor, *The Epistle of St. James*^{3}, London, 1910, p. 370 ff.; W. E. Scudamore, in *DCA* ii. 2000; and Kattenbusch, in *PRE*^{3} xiv. 304–311.

HERBERT THURSTON.

F

FABIAN SOCIETY.—1. Origin and aims.—The Fabian Society, a small but influential body of English Socialists, was founded in 1884. At that time began the revival of Socialism in England which was attributable mainly to two influences. The teaching of Karl Marx was becoming popularized, chiefly through the exertions of French and German refugees; while the crusade of Henry George, whose *Progress and Poverty* (1880) had a remarkable circulation in England, led to the formation of a number of small societies, some of which carried his doctrines much further than he had himself intended, and developed into Socialist organizations. Within three years of one another there were established the Social Democratic Federation, the Socialist League, and the Fabian Society. The first of these was, and remains, saturated with the spirit of Marx, and has had little influence in practical affairs. The League carried on a vigorous agitation for a few years, under the inspiration of William Morris; but it belonged properly to Anarchism, and soon disappeared. The Fabian Society, from the outset, rejected much of the economic teaching of Marx, and very soon discarded also certain Anarchist tendencies which were manifest in its earliest publications. It seems to have owed more to George than to Marx, but its leaders were young men of exceptional capacity, like Sidney Webb and George Bernard Shaw, who combined with propagandist zeal an originality and a lack of reverence for authority which soon gave to the Society a distinctive position in the Socialist movement.

Professor Thomas Davidson had gathered around him in London a little group of earnest men who met in one another's houses, and, under the name of the 'Fellowship of the New Life,' sought to cultivate perfection of individual character. A schism in this Fellowship was the origin of the Fabian Society, when the Socialist section became an independent group and adopted its name as descriptive of its method of action. Accepting the desirability of progress towards Socialism, it concentrated attention upon the manner of achieving that end, and quickly purged itself of the revolutionary attitude which characterized the other Socialist organizations. Socialism could not be attained by a catastrophic class-war, but by gradual adaptation and development of existing institutions through legislative, constitutional, and peaceful action. Moreover, it was unnecessary to wait until the majority of the people placed themselves under the Socialist banner; a small body of zealous and enlightened men, who had made clear to themselves the next steps needed towards the Socialist goal, might influence all parties in that direction. Hence the Society did not organize a political party, but sought to permeate the existing parties and to work out, in a form adapted to English conditions, the administrative changes which would lead in the direction of Socialism. An open Socialist campaign in politics appeared to offer little chance of success, and individualism could not be defeated by any single encounter; therefore it was thought that more could be achieved by indirect action, by working as a leaven in existing parties, by concentrating upon a few changes which would command wide support outside the Socialist ranks, but which led in the desired direction. While thus remaining thoroughly Socialistic in its aims, its method was of a strictly practical, and even opportunist, kind. To its members it gave absolute freedom to choose any means they thought fit for the permeation of all parties and schools of thought; and, though it has latterly shared in establishing the Labour Party, it still has members who belong to the Liberal Party both within and

without the House of Commons, and its emphasis is still upon permeation.

For this avoidance of a sharp encounter and the policy of indirect and detailed activity an analogy was found in the tactics of Fabius Maximus (surnamed *Cunctator*, on account of his seeming dilatoriness), and in the earliest publications of the Society the plan of campaign was indicated by the following motto, the latter part of which will not bear exact historical scrutiny:

'For the right moment you must wait, as Fabius did most patiently when warring against Hannibal, though many censured his delays; but, when the time comes, you must strike hard, as Fabius did, or your waiting will be in vain and fruitless.'

The policy of delay did not, however, mean inactivity, but preparation of plans, training of forces, and seizing of small opportunities. Having no belief in the efficacy of separatist communities apart from the ordinary economic and political life (cf. COMMUNISTIC SOCIETIES OF AMERICA), the Fabians turned their back on Utopianism, and declared that Socialism must be not a withdrawal from existing conditions, but a transformation of them. Rejecting also the naive faith of the revolutionist—that, after a sudden outburst in which the proletariat were to be victorious, society would somehow settle down into an ordered Collectivism—they undertook the more arduous task of educating themselves and others regarding the means by which that social transformation might be achieved.

The standpoint of the Society was explicitly stated in the following 'Basis':

'The Fabian Society consists of Socialists.

It therefore aims at the re-organization of Society by the emancipation of Land and Industrial Capital from individual and class ownership, and the vesting of them in the community for the general benefit. In this way only can the natural and acquired advantages of the country be equitably shared by the whole people.

The Society accordingly works for the extinction of private property in Land and of the consequent individual appropriation, in the form of Rent, of the price paid for permission to use the earth, as well as for the advantages of superior soils and sites.

The Society, further, works for the transfer to the community of the administration of such industrial Capital as can conveniently be managed socially. For, owing to the monopoly of the means of production in the past, industrial inventions and the transformation of surplus income into Capital have mainly enriched the proprietary class, the worker being now dependent on that class for leave to earn a living.

If these measures be carried out, without compensation (though not without such relief to expropriated individuals as may seem fit to the community), Rent and Interest will be added to the reward of labour, the idle class now living on the labour of others will necessarily disappear, and practical equality of opportunity will be maintained by the spontaneous action of economic forces, with much less interference with personal liberty than the present system entails.

For the attainment of these ends the Fabian Society looks to the spread of Socialist opinions, and the social and political changes consequent thereon, including the establishment of equal citizenship for men and women. It seeks to achieve these ends by the general dissemination of knowledge as to the relation between the individual and Society in its economic, ethical, and political aspects.'

This basis, to which every member is required to subscribe, sufficiently indicates the main objects of Fabian Socialism; but it is upon the detailed application of these generalizations to concrete problems of the day that the actual work of the Society has been concentrated. Unlike some other groups of Socialists, it has refused to take sides on subjects which it views as outside its special province, such as religion and marriage. It wastes no time on futile discussions as to the precise form of currency to be used in the future State. But, whenever a political or social problem is being discussed or seems ripe for treatment, it devotes to it careful study, propounds the Socialist solution, and opposes any measure which cannot be brought into harmony with the Socialist principles. Thus, it has rejected peasant proprietorship as a solution of agrarian problems, and co-operative production by self-governing groups of workmen as an alternative to capitalism, the former being simply an extension of landlordism and the private appropriation of rent, while the latter is merely a form of joint-stock individualism. Both perpetuate the conditions which the Fabian desires to extirpate, and, while granting that there are very many questions of Socialist organization that are as yet unsettled, he strives to set the current of reform in a definite direction. Opportunist in the sense of seizing the favourable moment for propaganda, and making the most of existing materials, he is not opportunist in the sense of accepting any kind of solution which comes first to hand. He acts on principle, by advocating measures that appear to be consistent with the Socialist consummation.

2. **Forms of activity.**—In carrying out this method of social transformation the Society has done an unusual amount of educational work of a very practical nature, and may perhaps claim to have brought Socialism into closer relation with present-day problems and institutions than has any other group. Fortnightly meetings for discussion of these subjects are held in London, where the majority of its members reside. An individual or a group of members devotes prolonged study to some single social question, and presents the results to the Society, by which they are again discussed; and, when conclusions have been reached that meet with the general approval of the members, they are printed and widely circulated in the form of penny pamphlets. About 160 of these 'Tracts' have now been published, and, being generally well-informed and severely practical in tone, they, along with *Fabian Essays*, may be taken as the text-books of Fabian Socialism. The educational work has also taken the forms of circulating libraries supplied to trade unions, workmen's clubs, co-operative societies, and similar bodies; of the publication of select bibliographies on social subjects; and of supplying lecturers to various societies and classes; while a small monthly *News* is sent to the members. In this department of its work the Society had no small influence in the foundation of the London School of Economics, now a constituent college of the University of London.

3. **Influence.**—As might naturally be expected, the Society has appealed mainly to the more educated Socialists, and its members are usually of the middle class. It has made little effort to increase its own numbers, except by the encouragement of branches in the Universities; but since 1906, when there were about 1000 members, there has been a relatively rapid increase, until now (1912) there are over 2600, besides many associates who are not committed to the basis, but are interested in the work and subscribe to its funds. Yet its power has been quite out of proportion to its numbers, chiefly because of the exceptional ability of its leaders; and, besides spreading Socialist opinions among the educated middle classes who stood aloof from other Socialist bodies, it has had no small share in influencing the tone of the English Labour movement, and has also occasionally had a marked effect upon political programmes and measures.

4. **Demands.**—The more immediate demands of Fabianism, as indicated in the Tracts, are the following: (1) nationalization or municipalization of the larger public services, such as tramways, railways, lighting, electric-power, liquor traffic, and land, with the gradual extension of the principle to other industries, as it becomes administratively possible. It is not, however, proposed that the State should monopolize industry as against private enterprise or individual initiative further

than may be necessary to make the livelihood of the people and their access to the sources of production completely independent of both. Subject to this condition,

'the freedom of individuals to test the social value of new inventions; to initiate improved methods of production; to anticipate and lead public enterprise in catering for new social wants; to practise all arts, crafts, and professions independently; in short, to complete the social organization by adding the resources of private activity and judgment to those of public routine, is as highly valued by the Fabian Society as any other article in the charter of popular liberties' (*Tract* no. 70, p. 6).

(2) The organization and development of a trained Civil Service, capable of managing the industries and functions taken over by the State, including the co-ordination of the medical and sanitary services, poor-law and other hospitals, under an enlarged public health authority which shall replace much of the private practice by a State service. (3) The imposition of public burdens on the wealthy by such means as death duties and super-taxes. (4) The expansion of public education, raising the age for leaving school, increasing the facilities for poor children to obtain higher education and to enter the universities. (5) Enlarged opportunities for recreation, by means of public parks, playgrounds, and baths. (6) Extension of factory and mines regulation in such directions as will provide not only a national minimum of sanitation and safety, but also a national minimum wage below which the standard of life shall not be permitted to fall.

On the negative side, as against some schools of Socialists, Fabianism repudiates the doctrine of the individual's 'right to the whole produce of his labour,' insisting that wealth is social in its origin and must be social in its distribution, since it is impossible to distinguish the particular contribution that each person makes to the common product. It also rejects doctrines of equal wages, equal hours of labour, equal official status, and equal authority for every one. Such conditions it declares to be not only impracticable, but incompatible with the equality of subordination to the common interest which is fundamental in modern Socialism. While most of the Tracts deal almost exclusively with economic questions, this ethical note frequently recurs; and the Society has issued a few publications on moral aspects of Socialism, besides insisting elsewhere upon the obligation of all to personal service, and the subordination of individual aims to the common welfare. But it does not advocate Socialism as 'a panacea for the ills of human society, but only for those produced by defective organization of industry and by a radically bad distribution of wealth' (*Report on Fabian Policy*, 1896, p. 8).

5. **Criticisms.**—The Fabian Society has been subjected to much criticism both by Socialists and others. Objection has been taken to its indirect, insidious, and underground methods of permeation, which, indeed, were at one time more questionable than they now are. Mr. Shaw boasted in 1892 of the solid advantages they had gained by joining Liberal and Conservative associations and adroitly pulling all the wires they could lay their hands on. This is denounced both by friends and by opponents of Socialism as sailing under a false flag; but latterly the artfulness has taken the more legitimate form of obtaining support for Socialist measures by attempting to convince people that the new reform is only an extension of long-recognized principles. So long as every one knows that the Fabian aim is Socialism, there can be little objection to enlisting even conservative instincts in the cause of a particular change. Indeed, there is no little conservatism in the Fabian conception of utilizing existing institutions; and some of its leaders have such a dread of any form of destruction that they are censured by the more revolutionary Socialists. These not only condemn Fabian opportunism, but sneer at the Society as the cult of the Civil Service, composed of middle-class men, who may naturally be expected to decry the class-war and to work for a bureaucracy staffed from its own ranks.

Other criticism comes from moderate Socialists, who are much more sympathetic towards its aims, but are not satisfied with its methods. While granting that the waiting policy was defensible in the early years of the movement, these critics consider that the Society has retained it even when the time has come to 'strike hard,' and that now it should employ all its resources in furthering an open Socialist campaign in politics. Socialism, it is urged, will be more effectively achieved by making people Socialists than by insidiously attempting to get Socialistic measures adopted without the electorate knowing that they are such. Indeed, it is pertinently asked if there can be much real benefit in securing a few socialized industries, unless there is a wide diffusion of Socialist ideals. Mere nationalization or municipalization is not an end in itself; and, if it is to be of much social service, it must be accompanied by an expansion of the Socialistic spirit, which is best awakened by proselytizing. There seems at present to be no little difference of opinion within the Society itself in this respect. Some urge it to give whole-hearted support to the Labour party, and to exclude from its membership all who will not do so. Others desire the establishment of a Socialist party quite independent of the Labour party. But the dominant opinion remains favourable to complete liberty of the members to act as they please in party politics, and to the traditional policy of permeation, since it is a delusion that all reform must be effected through a single party.

It is also alleged that the habit of limited action has had an enervating effect, while hostility to revolution and the policy of utilizing existing machinery for new functions have tended to an excessive reverence for the present institutions. In particular, it has been complained by H. G. Wells, who was once a member of the Fabian Society, that its insistence upon continuity 'developed into something like a mania for achieving Socialism without the overt change of any existing ruling body' (*New Worlds for Old*, p. 268). This led to the advocacy of public operation of industries, even in small and unsuitable areas, under incompetent boards and councils, with effects that have sometimes tended to discredit Socialism. Hence it is urged that the socialization of industries cannot proceed much further without a reconstruction of administrative areas, and the typical Fabian policy of building Socialism on the foundation of the existing machinery of Government has almost reached its limit. The areas of local government were not created for the operation of industrial enterprises, and are at present ill-adapted to many of them. Recently, however, the Society has devoted some attention to this phase of the Socialist reconstruction, and has issued a number of Tracts under the *New Heptarchy Series*, advocating changes in administrative areas to render them more suitable to the requirements of public trading.

LITERATURE.—The best known literary product of the Society is the volume of *Fabian Essays in Socialism*, London, 1890. Most of the *Fabian Tracts* may still be obtained from the Secretary, 3 Clement's Inn, London, and some of them have been grouped together and reprinted in the volumes of the *Fabian Socialist Series*. G. Bernard Shaw, *The Common Sense of Municipal Trading*, London, 1908; Sidney and Beatrice Webb, *Industrial Democracy*, do. 1901, and *Problems of Modern Industry*, do. 1898, are also distinctively Fabian works. The following contain expositions or criticisms

of Fabianism: Sidney Webb, *Socialism in England*, London, 1890; T. Kirkup, *History of Socialism*, do. 1906; H. G. Wells, *New Worlds for Old*, do. 1908; Brougham Villiers, *The Socialist Movement in England*, do. 1908; J. E. Barker, *British Socialism*, do. 1908.

STANLEY H. TURNER.

FABLE.—Fable originally meant 'a thing said,' and thus a story or narration (as in Horace's 'Mutato nomine, de te fabula narratur' [*Sat.* I. i. 70]); and Dryden wrote 'Fables' of men and women. But in modern English usage the word is mainly restricted to Beast-Fables, or short narratives about animals, having a moral application which is generally expressed in an explicit 'moral' at the end. The fable in this more restricted sense has to be distinguished from the Beast-Anecdote, and especially from the Beast-Satire, in which beasts, by their antics and wiles, parody and satirize the worst qualities of men, as in 'Reynard the Fox' (see MacCulloch, *CF, passim*). There is one further quality inherent in the fable which should be emphasized at the outset for reasons shortly to be given; they appeal largely to the sense of fun; the first thing George Eliot remembered laughing at was one of Æsop's Fables (*Life*, by Cross, 1885, i. 20). A German might, accordingly, on the analogy of *Tendenzroman*, define the fable as a 'Moral-Tendency Beast-Droll.'

Taking 'fable' in this strict sense, its independent and original production is practically restricted to two countries—Greece and India. Sporadic instances occur elsewhere, as in Jotham's (Jg 9[8-15]) and Jehoash's (2 K 14[9]) fables in the OT, or in the fable of 'The Belly and Members' given in Livy (ii. 32), and repeated by Shakespeare in *Coriolanus*, though even here the 'moral' is not explicitly given; but for any large body of fables we have to look to Greece and to India. In the former country they are associated with the name of Æsop; in the latter they can, in many instances, be connected with the *Jātakas*, or birth-stories of the Buddha. The main problem suggested by the fable is the connexion between the two. This, again, is mainly a literary problem, though there can be no doubt that originally fables both in Greece and in India were current among the folk.

The fables known as *Æsop's Fables*, which have spread throughout Europe, can be traced back to a collection in Latin and German published soon after the invention of printing by Heinrich Stainhowel, printed about 1480, and, within the next ten years, translated into Italian, French, Dutch, English (by Caxton), and Spanish. This consists of a *Life* of Æsop (connected with the legend of Aḥiqār [*q.v.*]), four books derived from a mediæval collection of fables known as *Romulus*, a selection of the fables of Avian, some from a previous selection made by Ranutio, others called 'extravagant,' and two collections of rather coarse anecdotes from Poggio and Petrus Alphonsi. The *Romulus* has turned out to be entirely mediæval prose renderings of Phædrus, a Greek freedman of Augustus, who flourished in the early years of the 1st cent. A.D. It contains survivals of Phædrine fables which are no longer extant in verse form, such as 'The Town and the Country Mouse,' 'The Ass and the Lap-Dog,' and 'The Lion and the Mouse.' It may accordingly be said that our *Æsop* is Phædrus with trimmings.

Besides these prose renderings of Phædrus, which form the bulk of the modern European *Æsop*, there exist a number of Greek prose renderings which were, for a long time, supposed to be the original *Æsop*, but have been proved by Bentley and others to have been derived from a metrical collection in choriambics by one Valerius Babrius, tutor to the son of the Emperor Severus, who flourished about A.D. 235, and part of whose fables were discovered on Mt. Athos by Minoides Menas in 1840. Babrius, in his preface, refers to two sources—Æsop for Hellenic fable, and Kybises for 'Libyan' fable; and Jacobs has suggested that the latter collection ran to about one hundred in number, and was derived directly or indirectly from a Sinhalese embassy which came to Rome about A.D. 52. Similarly Phædrus refers (iii., *Proleg.* 52) not only to Æsop but to Anacharsis the Scythian, as his sources; and some of the Indian elements which exist in Phædrus may be due to this source. That there were such Indian elements in Phædrus and Babrius as well as in Avian (who flourished *c.* A.D. 375) can scarcely be doubted after a glance at Indian fable.

In India, fables in the strict sense, *i.e.* humorous Beast-Stories with 'morals,' are found not only in the Bidpai literature, but, much earlier, in the *Jātakas*. These were brought over to Ceylon in the 3rd cent. B.C., and are probably a couple of centuries earlier. They consist of a 'Story of the Present,' in which some adventure of Buddha is told, which reminds the Master of a 'Story of the Past,' which he proceeds to relate, summing up its moral in a *Gāthā* in verse, and then concludes with the connexion of the 'Story of the Past' with that 'of the Present' by pointing out that one of the characters was a previous incarnation of either a disciple or an enemy, while the chief character was a previous incarnation of himself. Now, several of these 'Stories of the Past' are fables in the strict sense of the word, and several are actually identical with some of the most familiar of Æsop's Fables. Jacobs in his *History of the Æsopic Fable* has pointed out thirteen of these, including 'The Wolf and the Crane,' 'The Ass in the Lion's Skin,' 'The Wolf and the Lamb,' 'The Fox and the Crow,' 'The Bald Man and the Fly,' and 'The Goose that lays the Golden Eggs.' Other parallels are given by the same writer between Greek fables and Indian ones that occur in the *Mahābhārata* and in the earlier strata of the Bidpai literature. These include 'The Oak and the Reed,' 'The Belly and Members,' 'The Lion and the Mouse,' 'The Farmer and the Serpent,' 'The Two Pots,' and 'The Cat turned into a Maiden.' The critical problem of the fable is to determine whether the Indian form is derived from the Greek or *vice versa*.

The solution to this problem is given by the thirty fables which occur in the Talmud and Midrashic literature. Except in three or four cases, all these can be paralleled either in Indian or in Greek fable or in both. In the last instance the Talmudic form invariably follows the Indian wherever it differs from the Greek. Thus, in 'The Two Pots' the Talmudic proverb (*Esther Rabba* 2), 'If a stone falls upon the pot, woe to the pot; if the pot fall upon the stone, woe to the pot,' resembles the strophe of the Bidpai, 'Like a stone that breaks a pot, the mighty remain unhurt,' rather than the fable familiar to us. So too, in the fable of 'The Wolf and the Crane,' both Talmud and *Jātaka* have the lion as the animal with the sore throat, and the Jewish form of 'The Belly and Members' is closer to the Indian than to the Æsopic form. The Talmud itself mentions (*Sukka* 28*a*) that Rabbi Joḥanan ben Zakkai (*c.* A.D. 80) knew both the 'Fables of Foxes' and the 'Fables of Kobsim,' and it has been suggested by Jacobs that the latter is a misreading for 'Kubsis,' and thus identical with the Kybises mentioned by Babrius as one of his sources. It is practically impossible that the Greek fables should have been translated into Hebrew and changed by the Rabbis and then taken to India. The process must have been in the reverse order, especially as the *Jātakas* are earlier than the first collection of Æsopic fables made by Demetrius of Phaleron, who founded the

Library of Alexandria about 300 B.C. and there collected Greek proverbs and the sayings of the Seven Wise Men, as well as Æsop's Fables—all from the mouths of the people (Diog. Laert. v. 80).

Quite apart, however, from the Talmudic evidence, the probabilities are in favour of India on general grounds. India is the home of incarnation, and it was, therefore, natural for the Indians to imagine animals acting as men, whose predecessors they were, whereas in Greece such a belief was at best a 'survival,' and was no longer living in the thoughts of the people. The existence of the 'moral' in the fable properly so called may be traced back to the *Gāthās*, which formed the nucleus of the *Jātakas*, the two 'Stories of the Present and Past' being given as explanations of these metrical morals. In earlier Greek literature only eight complete fables are known, with a dozen others only referred to, the latter, however, including 'The Ass's Heart,' 'The Countryman and the Snake,' 'The Dog and the Shadow,' 'The Cat turned into a Maiden,' all of which can be traced to India, though the occurrence of these fables is in most instances earlier than Alexander's invasion.

The possibility of the same fable having arisen independently in the two countries may be at once dismissed. Two minds in different countries may hit upon the same story to illustrate a simple wile of woman or a natural act of revenge, but it is in the highest degree improbable that two moral teachers, trying to inculcate the dangers of the lowly vying with the proud, should express it by the imagery of two pots floating down a stream. In one case, indeed, we have practically absolute evidence of the direct derivation of classical fables from India. There is a fable of 'The Farmer and the Serpent,' in which the farmer receives benefits from the serpent, but he or his son strikes it, which brings the friendship to an end. This occurs both in Latin (*Romulus* ii. 10), derived from Phædrus, and in Greek (Halm, 1852, p. 96), derived from Babrius. Both forms, however, are imperfect, whereas the Indian, given in the *Pañchatantra* (iii. 5), assigns the motive for every incident, and practically combines the Greek in the Latin forms, which are thus shown by Benfey (*Pantschatantra*, Leipzig, 1859, i. 359) to have been derived from it.

But, while the presumption is in favour of India, where both collections of fables contain the same stories with the same morals, it would be hazardous to assume that all the Greek fables came from India. Of those extant in Latin — running to about 260—56, or about one quarter, have been traced with more or less plausibility to India; the remainder, till evidence is shown to the contrary, may be regarded as originating in Greece and connected with the name of Æsop. Very little is known of the putative father of Greek fable. Herodotus (ii. 134) reports that he was, together with Rhodopis, a slave in Samos, which would fix his date at about 550 B.C.; he also reports that Æsop was murdered and that his master's grandson received *wergild* for him by direction of the Delphic oracle. As all this occurred within a century of Herodotus' period, there is no reason to doubt its substantial accuracy. But it does not follow that Æsop was necessarily the author of the Greek fables passing under his name and referred to by Aristophanes and by Socrates, the latter of whom occupied some of his days in prison, while waiting for his end, in putting a few Æsopic fables into verse. The casual way in which references are made to fables in classical Greek literature would seem to imply that they passed from mouth to mouth among the folk, and the problem connected with them in Greece is to account for their being associated with the name of a special person. This was probably due to their humorous colouring, since it is usual for folk-drolls to be associated with special names of persons, as in the case of Pasquil, Joe Miller, Punch, and the like; the folk mind seemingly requires a jest to be associated with a name which has previously elicited guffaws. As Æsop's period was that of the Tyrants, his connexion with the fable possibly consisted in applying it to political purposes. The only fable directly connected with his name by Aristotle (*Rhet.* ii. 20) was of this kind. The association of the name of Æsop with what was practically a branch of Greek (or partly Indian) folklore was thus due to its humorous character in the first place, and then to its political application. Wherever we can trace the introduction of the fable, it is almost invariably associated with political applications. Both the Biblical fables and that in Livy are applied politically. Rabbi Joshua ben Hananiah applied the fable of 'The Wolf and the Crane' to prevent a revolution of the Jews against the Romans (*Gen. Rabba*, lxiv.). Kriloff and his followers made use of the fable in Russia to reflect upon the bureaucracy; and, when Æsop was first translated into Chinese, the officials soon suppressed the edition because they considered the fables to be directed against them.

Throughout the history of the Greek fable a distinction was made between the Æsopic and the 'Libyan' fable; Aristotle makes this distinction, as well as Babrius and the Emperor Julian. Hence it would appear that the Greeks themselves recognized that a certain section of fables had an exotic origin which, with our later knowledge, may be assumed to be, in its ultimate form, Indian. As before mentioned, the Æsopic fables current among Greeks were collected and written down by Demetrius Phalereus, and it was from this collection that Phædrus derived his fables, since he included among them an anecdote about Demetrius himself. His collection contains several that can be traced back to India, so that these must have percolated thence in the wake of Alexander's army, or even at an earlier stage, since 'The Cat Maiden' fable, ultimately derived from India, occurs in Greece, being quoted by the dramatist Strattis about 400 B.C. Whether the Indian forms started the practice of attaching a 'moral' to a fable corresponding to the *Gāthās* cannot be determined.

The earlier history of the fable in India, before it was taken up into the birth-stories of the Buddha, cannot be definitely traced, though it is remarkable that almost all the *Jātakas* containing fables begin with the formula 'Once on a time, when Brahmadatta was reigning in Benares,' and the previous incarnation of the Buddha was in the person of Kāśyapa, the son of this Brahmadatta. It is possible, therefore, that a separate collection of Beast-Fables existed connected with this Kāśyapa, which was incorporated in the *Jātakas* by assuming him to be a pre-incorporation of the Buddha. It was thus easy for the Buddhist authorities to assume that these fables represented the experiences of the Master in his previous lives. Thus the lamb in the fable of 'The Wolf and the Lamb,' and the crane in the fable of 'The Wolf and the Crane,' are both incarnations of the Buddha. The stories, however, probably existed as Beast-Tales among the folk, before they were incorporated into the Buddhist canon.

Thus, both in Greece and in India the fable existed first as a piece of folklore in oral tradition, and was applied to moral purposes by the Buddhists, and to political satire by Æsop and his followers. In India they were written down in order to form part of the Buddhist canon, while in Greece they

were collected by Demetrius in his search for the wisdom current among the folk, whether in the form of proverbs, sayings of wise men, or fables. Fables are thus an interesting and early example of the transformation of oral into written literature.

Very few additions were made to the original stock of fables current in the classical world—in Latin by Phædrus and Avian, and in Greek by Babrius; the former being turned into poor Latin prose (*Romulus*), the latter into equally ineffective Greek prose (collected by Neveletus, 1617). But towards the end of the 12th cent. a couple of sets of new fables made their appearance. Marie de France translated from the Middle English a set of 103 fables, a third of which are unknown to classical antiquity. Many of these also occur in a set of 107 fables with the Talmudic title *Mishle Shu'alim* ('Fox Fables'), written by one Berachyah ha-Naqdan, who has been identified with an English Jew known in the contemporary records as Benedict le Puncteur, mentioned as living in Oxford in 1194. Both these collections contain Oriental elements found in Arabic literature, but their exact provenance has not yet been traced. Stainhowel inserted a dozen or so of them in the fifth section of his *Æsop*; other additions to the fable were made by La Fontaine, mainly from Oriental sources. These include the story of Perrette, who counted her chickens before they were hatched, which Benfey, and after him Max Müller, traced all the way from India to France. Gellert in Germany, Gay in England, and Kriloff in Russia have imitated the Æsopic fable, but their additions have not been accepted by the people, and the European *Æsop* to this day is practically identical with the collections of classical antiquity.

Fable with its explicit 'moral' is thus a highly differentiated form of the Beast-Tale, and it must not be considered remarkable that it occurs in full force only in one or two countries. Anecdotes and tales about beasts are found everywhere—in South Africa (Bleek) and among the American negroes ('Uncle Remus'). An attempt has been made by Sir Richard Burton to trace the fable, properly so called, to Africa, and to suggest that it recalls reminiscences by man of his animal ancestors. The sole basis of this bizarre theory, however, is an Egyptian paraphrase of the fable of 'The Mouse and the Lion,' found in a late demotic papyrus, which also contains Coptic versions of the 'Ritual of the Dead'; and it must, therefore, be summarily rejected. Wherever we find the fable with its distinctive moral, it can be traced either by derivation or imitation to Greece or India.

Yet the conceptions at the root of the fable are primitive enough; they contain almost the first moral abstractions, or at least personifications of the cruder virtues and vices; in them courage is personified by the lion, greed by the wolf, cunning by the fox, innocence by the lamb, etc. Early man may in this way have learnt his first lessons in moral abstraction; to him cunning was foxiness, magnanimity leoninity, cruelty wolfhood. Even to the present day we have no other way of referring to one of the ruling motives in a capitalistic society than by speaking of 'The Dog in the Manger.' Hence the appeal of fables to the primitive mind of children, which is the more direct owing to the absence of any reference in them to the sex-motive. The touch of fun, which forms an essential element of fables, is another attraction for childish minds; on the other hand, the morals they inculcate are not very lofty, since they are necessarily confined to animal qualities. The higher elements of culture—knowledge, love, beauty, consideration for others—are beyond their purview. But the appeal of a fable to the mind of the child remains to-day as strong as ever, and the Æsopic fable is probably, outside of the Bible, the only literature known to practically all Europeans.

Cf. also artt., FICTION, FOLKLORE and REYNARD THE FOX.

LITERATURE.—The above account summarizes a somewhat elaborate *History of the Æsopic Fable*, which forms the first volume of the edition of Caxton's *Æsop*, edited by Joseph Jacobs, London, 1889. This contains a full account of the previous literature and critical investigations by Crusius on Babrius, Hervieux on the Latin Fable, Benfey and others on Indian Fable, Mall on Marie de France, etc., together with connecting links suggested by the editor. His results have generally been accepted by scholars; see, for example, S. Arthur Strong, *Collected Essays*, London, 1912. A more popular account will be found in Jacobs, *Fables of Æsop*, London, 1894. The following works may also be consulted: J. A. MacCulloch, *Childhood of Fiction*, London, 1905; W. W. Skeat, *Fables and Folk-Tales from an Eastern Forest*, London, 1901; J. Jacobs, in *JE* i. 221 f., v. 324. Cf. the Bibliography in MacCulloch, *op. cit.*

JOSEPH JACOBS.

FA-HIAN.—The first Chinese traveller in India. As to his *Record of the Buddhist Kingdom*, see YUAN CHWANG.

FAIRY.—Fairies or elves may be described at this stage as a non-human race, the belief in whom is mainly known as it exists among the Celts and Teutons. There is little difference in attributes, characteristics, and actions between Celtic fairies and Teutonic or Scandinavian elves, dwarfs, and trolls; and much the same cycle of stories and beliefs is common to both. But among other European folk, Slavic or Latin, there are similar stories told of fairy-like beings, while Arabs, Hindus, Chinese, and savages of all regions believe in more or less supernatural beings of whom many things are told which offer a curious parallel to the Celtic and Teutonic fairy superstition. Thus, though the popular idea of fairies is that of a supernatural race existing in the fancy of the folk of North and West Europe, a scientific explanation of the belief must take a wider sweep. And, while the popular idea mainly regards the fairies whose occupation it is to dance in the moonlight, our investigation must also include house fairies and fairies of wood, stream, or other parts of wild Nature.

From the abstract Lat. noun *fatum*, 'fate,' was derived a late Lat. or Italian personal noun *Fata*, equivalent to *Parcæ*. Ausonius uses the word in this sense, speaking of *tria Fata*; and Procopius (*de Bello Goth.* i. 25) makes τὰ τρία Φάτα the Roman equivalent of the Μοῖραι; hence in Romance languages the words for 'fairy,' Ital. *fata*, Span. *hada*, Provençal *fada*, Fr. *fée* (see, for connexion of *fées* and the Fates, § 4). From *fatum* came in med. Lat. *fatare*, 'to enchant,' which became in Fr. *faer*, with a p.p. *faé* (cf. the common phrase in romances, *les dames faés*, 'enchanted ladies'; and a 14th cent. passage, 'les fées ce estoient deables qui disoient que les gens estoient destinez et faés les uns à bien, les autres à mal'). The same sense is found in Scots 'fey.' From *faé* was formed a noun *faerie*, *féerie*, 'enchantment,' 'illusion,' which was adopted into English, but with different senses—(1) the region of the *fées*, (2) the people of fairyland, (3) an individual fairy, with pl. 'fairies.'

'Elf' comes from O.N. *álfr*, A.S. *ælf*; cf. M.H.G. *alp*, 'genius,' pl. *elben*. It is generally connected with Skr. *ṛbu*, 'artisan sprite.' The German word 'elf' was borrowed in the 18th cent. from the same English word.

1. Varieties of fairies.—In the Edda the *Liosálfar* ('light elves') dwell in Alfheim, and are divided from the *Döckálfar* ('dark elves') dwelling underground, who, again, are separated from the *Dvergar* ('dwarfs'), perhaps = the *Svartálfar*, who originated as maggots from Ymir's flesh, and now, in likeness of men, dwell in earth and stones. But the latter can hardly be distinguished from *Döckálfar*, and are sometimes identified with them, or in their proper names the word *álfar* occurs. In folk-belief the distinction between light and dark elves is not clear, and elves are both light and dark by turns, while the widest class is an earth- or under-earth-dwelling race, though there are elves of air or sky. Other kinds are associated with the house, with woods and fields, with waters, and with the mine (scarcely to be distinguished from

dwarfs). Such a division generally holds good for all Teutonic, Scandinavian, or Anglo-Saxon lands, and it corresponds, on the whole, to the Celtic groups of fairies, though the chief class of the latter in Ireland—the *Daoine sidhe*—are not always a small folk. The Celts have also their dwarf-like fairies, as well as house, water, and (to a less extent) woodland fairies. But these divisions hold good in folk-belief all over Europe, both in ancient and modern times. It should be noted also that the dwarfs strictly so called—*dvergar, zwerge, drows, bergmännlein, nains, cluricauns*—are metal-workers, but this is also true of elves in the Edda.

2. **Characteristics.**—Fairies are generally regarded as of a nature between spirits and men, or as spirit beings with the semblance of a body which, to quote Kirk (*Secret Commonwealth of Elves, Fauns, and Fairies*, ed. Lang, 1893), is 'spungious, thin, and defecate.' In many aspects they are like mankind. They have their occupations, amusements, fightings. They marry and bear children. But they have powers beyond those of ordinary mortals, yet like those attributed to medicine-men, sorcerers, and witches. They are regarded as a separate race of superior beings, as many of their titles suggest—'fair *or* still folk,' 'people of peace,' etc.—while in the Edda the *álfar* are a distinct class of beings. They have a king or queen, usually the latter, and the names of some of these are known—Fionnbhar, Aine, Aoibhinn, Cliodna, Miala, Gwion, Huldra, Oberon (=Alberon). There are also single fairies—the Irish leprechaun, the Brownie, etc.—not living in communities. In their dwellings, as seen occasionally by mortals, there is great splendour and luxury. But often all this proves to be mere glamour when the mortal comes to himself (perhaps one source of the fairy glamour conception is to be found in the rude awakening to the grim realities of life after a happy dream experience).

Separate fairy bands are sometimes at enmity; this is already found in old Celtic tales of the *síd* folk (*RCel* xvi. [1895] 275). Frequently fairies are regarded as a diminutive folk, but there is much contradiction on this subject, and many fairies (the *fées* of S. Europe, the Slavic *vilas*, and the *síd* folk of Ireland) are hardly to be distinguished in size from mortals. In the same region some groups of fairies may be tall, others pygmies, but the varying size is sometimes due to their power of changing their form. Once fairies were regarded as small, their smallness would tend to be exaggerated. Usually great beauty is ascribed to female fairies, but certain groups of fairies—dwarfs, kobolds, etc.—are ugly and misshapen. Their clothing is often of a green or red colour, though the Teutonic dwarfs are dressed in grey (cf. the 'elfin gray' in *Tamlane*). They are all intensely fond of music, singing,[1] and dancing (as also are witches), as well as of feasting, and are often represented as spending the whole night in revelry, which has an inevitable attraction for mortals, who are lured into the dance to their own eventual discomfort or worse. No picture is more charming than that drawn by folk-belief of the nightly fairy revels on the greensward. The marks of these form the fairy-rings in which it is dangerous to tread or sleep, and which are also attributed to the witches' 'Sabbat.' This feature may connect fairies with actual rites of an orgiastic character among the folk, performed for purposes of agricultural magic, or with folk-festivals in which music and dancing figure. In part the Sabbat is also connected with these (see Grimm, *Teut. Myth.* 187, 470; Scott, *Minstrelsy*, 213; Delrio, *Disq. Mag.*, 1599-1600, p. 179). The fairies disappear from their revels at dawn, or their power ceases then—a trait shared by other supernatural beings and by witches (MacCulloch, *CF*, 1905, p. 195). They dislike being seen by mortals, and he who looks upon them or their doings is usually brought within their power. They punish with blindness those who possess or have gained the power of seeing them when they are invisible to others, and again their look is of itself sufficient to bewitch. It is also dangerous to enter their domain without due precautions (see § 11).

But it is in their magical powers that the special characteristics of fairies appear. They have the power of invisibility, *e.g.* by wearing a magic cloak or hat, or by means of some herb, *e.g.* fern-seed (see *1 Hen. IV.* Act ii. Sc. 1). This power they could also confer on mortals. Immortality is sometimes ascribed to them, especially in poetry (Ariosto, *Orlando Fur.* x. 47; Beaumont and Fletcher, *Faithful Shepherd*, Act i. Sc. 2), but more usually they are mortal, though gifted with longer life than man (Kirk, 15; Grimm, 458). They have the power of assuming different shapes, or of causing others to do so, or of giving an unreal and valuable appearance to objects of no value (fairy gold), or of putting a spell upon mortals which holds them bound for long periods of time. Their knowledge, especially of the hidden powers of Nature, is often more extensive than man's. The fairy glamour has already been referred to, and it corresponds with their power of making time appear long or short to those mortals who are lured into their company. They have also the power of seeing invisible or hidden things, or of divining where they are. Thus it is easy to see why powers of this kind (divination, second-sight) should be regarded sometimes as fairy gifts to mortals.

Yet, in spite of all their powers, fairies are curiously dependent on men. They seek to reinforce their own race by stealing human children; or they steal young women or women in child-bed, in order to unite with them or that they may nurse their children. In such cases the place of the stolen child or woman is often taken by a fairy (see CHANGELING). They compel women to come and assist at child-birth their females or those whom they have stolen. They fall in love with and marry mortals, or they steal men, usually by luring them into the fairy dance (cf. the luring of men into the Sabbat), or by taking them by fascination or force to fairyland (see an early instance in O'Grady, *Silva Gadelica*, 1892, ii. 204 ff.). The purpose of these kidnappings and unions is to improve the fairy race, to obtain human strength or beauty, or perhaps to share in the spiritual benefits of the religion from which fairies are supposed to be excluded (cf. de la Motte Fouqué's *Undine*, Eng. tr., 1875). On the other hand, men often steal fairy brides. Cattle are also stolen by fairies, an illusory appearance being sometimes left in their place.

There is no doubt that the idea of the fairy theft of mortals is connected with the more primitive and wide-spread idea of the anxiety of the dead to obtain the living by causing their death. In many fairy instances the theft is also connected with death or a death-like state (trance). Or the fairies steal the soul, which then sometimes returns to animate the body. The old belief that death is unreal and accidental survives here, and death and trance are both explained as fairy thefts of the real personality (the soul).

To the fairy midwife motive is attached the wide-spread idea of the fairy ointment with which the midwife has to anoint the child. Accidentally it touches her eye, and gives her the power of seeing invisible things. Ultimately she loses her sight, because she is able to see fairies when they wish to be invisible (see many instances in Hartland, *Science of Fairy Tales*, p. 59 ff.). This is also told of *dracs* and water fairies (Bérenger-Féraud, *Superstitions et survivances*, Paris, 1896, ii. 2 ff.; Rhys, *Celtic Folk-lore*, Oxford, 1901, i. 213 ff.).

Fairies are also tricky with men. They carry

[1] Some folk-songs and lullabies are said to have been learned from fairies (see, *e.g.* *Journ. of Folk-Song Soc.* iv. 3 [1911], 174, and *passim*).

them off by night and make them travel long distances, sometimes using them as steeds; the men when they awake in the morning are more or less conscious of this. The trick is also alleged sometimes as an explanation of 'falling sickness.' It is obviously connected with the phenomena of somnambulism and nightmare, though the belief itself might sometimes be exploited by unscrupulous mortals to explain any mysterious absence on their part.[1] In other ways they torment men (cf. the Poltergeist and the house-fairy when insulted). A favourite trick is to give men gold which turns into worthless articles (but worthless things offered as a reward for human services often turn to gold [Hartland, 48 f., 184; Simrock, *Handbuch der deutschen Mythologie*[5], Bonn, 1887, p. 427]). They are easily irritated, capricious in their character, and given to resentment. More than this, they are dangerous and even cruel, especially when despised or ill-treated, causing injury, illness, madness, or death, usually by a 'fairy stroke' (§ 6). Hence the folk seek to placate them or to flatter them by euphemistic names—'good people,' 'guid neighbours,' 'gute Holden,' 'gentry,' etc. (see EUPHEMISM, § 2).

On the other hand, fairies often assist mortals, especially in return for some small service (articles borrowed, advice given, etc.), and are very generous. This is especially true of the house-fairy, who is sufficiently rewarded with a little milk or food. They give gifts of great value (cf. stories of magic swords, etc.). But these objects are often stolen by mortals from fairyland. Supernatural and magic powers are also given by them to mortals (cf. the gift of prophecy—'the tongue that could not lie'—to Thomas the Rymer; and see Scott, *Demonology*, 1898, Letter 5, *Minstrelsy*, p. 212). They also preside at birth, and confer talents on the child.

Thus the relation between men and fairies is a reciprocal one. Each seeks help from the other. Each harms the other. Men are now contemptuous, now afraid of fairies. Fairies are now friendly, now hostile to men. We may see here the survival of older religious ideas—of gods now kind, now evil, and of benefits rendered by them to men out of all proportion to the attention paid to them. This is an old aspect of sacrifice—*do ut des*.

Fairies in Christian lands are generally regarded as pagans. Sacred names, signs, and things keep them at a distance, and they fear sacred days (see an early instance in Adamnan, *Vita S. Columb.* cap. 9), while a demoniac character is attributed to them. A mass was celebrated in mediæval and later times in the church of Poissy to preserve the land from the anger of evil *fées*, and in the *procès* of Jeanne d'Arc the curé of Domremy is said to have sung the Gospel annually near the Tree of the Fées to drive them off. The fairies mourn over their lost supremacy, as the ancient Nature-spirits are held to have done after the coming of Christianity, while in many folk-traditions the earnest preaching of the gospel is said to have dispersed them. The Church was generally opposed to fairies, associating them with paganism, the devil, and witchcraft. Nevertheless, they have a desire to be saved, and many pathetic stories express this, or their anxiety with regard to their position at the Day of Judgment. In other cases they believe themselves Christians and hope for salvation.

The supernatural lapse of time in the fairy dance or in fairyland, while connected with the excitement and exaltation of the orgiastic dance, is perhaps based upon trance experiences, loss of memory, and the like, in which the person, when he comes to himself, takes up the thread of his life where it was left off, the intervening period being thus short to him. Exaggeration of such experiences—especially since in trance men's pre-conceived notions led them to believe they had been in fairyland, the other world, etc.—would result in the incident of the supernatural lapse of time[1] (see Hartland, 223 ff.). On the other hand, in many fairy stories the opposite experience is found—the consciousness of having spent a lifetime during a moment as a result of a fairy spell. This, combined with the fact of similar trance or dream experiences, points to these as its true source.

3. The origin of fairies.—The folk-explanations of the origin of fairies are various. Sometimes they are regarded as descendants of rebellious angels, cast out of heaven, and doomed to remain in sea, land, air, or underground; or they are supposed to have stopped on the way to hell and remained in these places.[2] This is a Celtic and Slavic belief (Curtin, *Tales of the Fairies*, p. 42; Sikes, *British Goblins*, 1880, p. 134; Ralston, *Songs of the Russian People*, 1872, p. 106), and it may be compared with the Arabic belief that the *jinn* are a pre-Adamite race who rebelled against God and were driven to the distant regions of earth (Lane, *Arab. Society*, 1883, p. 30). Other folk-beliefs regard fairies as souls, *e.g.* of Druids, of infants dying unbaptized, of pre-historic races, or of the dead generally (Keightley, *Fairy Mythology*, 1900, pp. 298, 412; Wentz, *The Fairy Faith in Celtic Countries*, Oxford, 1911, pp. 147, 176). Or they are people who refused to accept Christianity and were cursed (Keightley, 432; Wentz, 169).

The learned have attempted many explanations. Maury (*Fées du moyen âge*) found the *fées* in old Celtic and Teutonic Nature-goddesses, *Matræ*, *Matronæ*, akin to the Fates, Junos, Nymphs, etc., and in a folk-memory of 'druidesses' with magic power, who had been their priestesses. To these the people then gave the names *fata*, *fées*, 'enchantresses,' etc.[3] There is no evidence that such 'druidesses' were priestesses of these goddesses (see MacCulloch, *Rel. of the Anc. Celts*, Edin., 1911, p. 316). Others have seen in them the ghosts of a small and swarthy pre-historic race transformed in popular fancy into an actual supernatural people dwelling underground (G. Allen, 'Who were the Fairies?' *Cornhill Magazine*, xliii. [1891] 338 ff.). Another theory is that which regards them as a folk-memory of a pre-historic small race, dwelling underground, with weapons of stone, and generally hostile to their Celtic conquerors.

This was already hinted at by J. Cririe, *Scottish Scenery*, 1803, by Sir W. Scott, following Dr. Leyden (see *Minstrelsy*, 189, *Demonology*, 102 f.), and by Grimm (p. 459), as a partial explanation of the fairy belief. Its main exponent in later times is D. MacRitchie, with his theory of an earlier pygmy race dwelling in what are now regarded as sepulchral mounds (see his *Testimony of Tradition*, 1890, *Fians, Fairies, and Picts*, 1893; cf. also A. S. Headiam, *NC*, Feb. 1908).

But no one cause can be alleged for the origin of the fairy superstition; and, taking into account the precisely similar characteristics ascribed also to spirits, ghosts, demons, witches, etc., in all parts of the world, we may trace it back to animistic beliefs modified and altered in different ways in different localities, but undoubtedly influenced also in various ways by traditions about older races, by beliefs in ghosts, and by the débris of older myths and religions. We may also regard dreams, trance experiences, and psychic phenomena as formative and moulding influences. W. Y. Evans Wentz has recently sought to prove that 'fairies

[1] The witches' aerial flight to the Sabbat and the aerial transportation of their victims resemble this, as does also the alleged flight of mediums (see MacCulloch, *CF*, 222).

[1] In Ireland a trance is recognized as the presence of the entranced person in fairyland.

[2] This resembles the myth in the Edda of elves of air, and of under-earth.

[3] Cf. also L. Shaw, *Province of Moray*, 1775, p. 287.

exist, because in all essentials they appear to be the same as the intelligent forces now recognized by psychical researchers' (*op. cit.* p. 490), whether these are phantasms of the dead or other orders of beings, acting on men, seen by them, or producing the alleged phenomena which the folk ascribe to fairies. But he attaches too much importance to the evidence of modern Celtic seers, and too little to the phenomena of hallucination. Similar evidence, if rashly accepted, would equally prove the existence of many other mythical beings. Fairies, wherever found, are mythical beings, creations of fancy utilizing existing beliefs, traditions, experiences, and customs. In the following sections the connexion of fairies with earlier divinities, ghosts, or actual races will be discussed.

4. **Fairies as earlier divinities.**—Fairies, as a race of supernatural beings, have many of the traits of earlier divinities; in some instances they may have been originally Nature-spirits or Nature-divinities. In Ireland this is especially true of the *Daoine sidhe*, still associated in popular belief with the Tuatha Dé Danann, the ancient gods of the Irish Celts. Dispossessed by the Milesians—in other words, defeated by the coming of Christianity to Ireland—they retired to the *sid*, or mounds. This is the constant tradition of Irish story, and one class of fairies in Ireland are tall, handsome beings, much more divine than any other class of fairy folk (see CELTS, v. § 3). Specific earlier divinities—Fionnbhar, Aine, Cliodna, Aibell, etc.—are kings and queens of the fairy hosts of different regions. The pagan Celts or the pre-Celtic folk of Ireland may have believed in a race of *sid*-folk other than the Tuatha Dé Danann, with whom the latter were assimilated or became their kings and leaders (MacCulloch, *Rel. of. Anc. Celts*, 65 f.). What is certain is that earlier gods, connected with agriculture and growth, have for centuries been regarded as fairies, while yet preserving some of their divine traits. Other Irish fairies are unconnected with the gods, and others again are lineal descendants of river-, well-, or tree-spirits (MacCulloch, *op. cit.* 43, 173). The Celts of Gaul worshipped *niskas* and *peisgi* (groups of water-divinities), some of whom have personal names, and these are the nixes and perhaps the piskies of later belief (*ib.* 185). Sirens, mermaids, and other fairy beings haunting the waters, the Welsh fairy-brides who emerge from lakes, often accompanied by a venerable old man, and to whom offerings are made—are all alike earlier divinities or spirits. Similarly, Brythonic divinities appear in later legend as fairy-like beings or fairy kings. So also in Italy, some of the older divinities are still remembered, and fairy-like characteristics are ascribed to them (Leland, *Etruscan Roman Remains*, 1892, *passim*), while the domestic Roman gods resemble the Brownie, as already noted by Reginald Scot; the Romans had also their *minuti dei* (Plaut. *Cist.* ii. 1. 45) and their *dei campestri*.

Offerings of food or milk are made to Celtic fairies to appease them; when this has not been done, vengeance is said to have followed. As with sacrifices to gods, it is the invisible essence of the food which is supposed to be taken by them —the *toradh*—the outward appearance being left (Campbell, *Superstitions of the Highlands and Islands of Scotland*, Glasgow, 1900, p. 32).[1]

The northern *álfar* are coupled in the Edda with the Divine *aesir* (cf. the A.S. connexion of *és* and *ylfe*); the dark elves are allied with gods against their enemies, and work for them (Simrock, 424). They have also great magical powers. The general impression which one receives from the older sources is that of the divine character of the *álfar*. And, as Grimm (pp. 179 f., 187, 456) has shown, there was a connexion between the *álfar* and Donar or Thor, as well as with Holda; and he adds (p. 187): 'An intimate relation must subsist between the gods and the elves, though on the part of the latter a subordinate one.' This is also seen in the elf cult. Besides the homely offerings of later folk-custom, in older custom there was the *álfablót*—animal sacrifices to the elves—and in one instance in *Kormaks-saga* the elf-hill is to be reddened with the blood of a bull, and the flesh used as a feast for the elves (Grimm, 448, 1411; Simrock, 426; see also Meyer, *Germ. Myth.*, Berlin, 1891, § 175 ff.).

The activity of fairies and elves at certain seasons—May-day (Beltane) and November-eve (Samhain)—is significant. In the early history of Celts and Teutons these were times of great sacredness. They were festivals, in part orgiastic, and included ritual dances. In so far as fairies are connected with older gods (as in Ireland), it is natural that their power should be more in evidence at these times sacred to the older gods. But in any case, just as ghosts of the dead were active at Samhain, all beings of popular fancy were found to be attracted to these seasonal occasions. And, as dancing was a feature of these festivals, so the fairies are supposed to dance at them (cf. Maury, 39). The striking formula in many tales—that he who has been captured by the fairies through entering into their dances cannot be set free until a year after—points of itself to a recurring festival celebrated annually, the observance of which has been transferred in part to the fairies by the folk who still observed it as a survival.

The three fairies who attend at the birth of a child and foretell its future or give it gifts, and to whom many folk-traditions are attached, are well-known in popular tales from all parts of Europe. They are also the subject of many old tales, especially in the Romance languages, in which they are met by a wayfarer in the forest or coming out of a fountain, and offer him their love, or render assistance in various ways (see stories of them in T. Wright, *Celt, Roman, and Saxon*[2], 1861, p. 285 ff.). In Burchard of Worms' collection of decrees (11th cent.), women are said to have sacrificed to them, spreading a table with meat and drink (Grimm, 1746). In Brittany a table was spread for them at a birth, just as the Romans then placed a couch for Juno Lucina (Maury, 31). They are often called *fées* or *fata*, and are connected with the Parcæ, goddesses associated with birth. Or they are called *Bonnes Dames*, *Dames Blanches*, 'white women,' *Bé Find*, *Bonnes Pucelles*; cf. the names *Bonæ Parcæ* and *Puellæ*, given to the Fates and Nymphs. They are primarily, however, descendants of the Celtic and Teutonic *Matres* and *Matronæ*—goddesses generally represented as three in number, and associated with fertility, with springs and rivers, and also with child-bearing and love (MacCulloch, *op. cit.* 45 ff., 73), though they also continue the functions of the Scandinavian *Nornæ*, the Slavic *Vilas*, and the Roman *Parcæ* with regard to birth, and they are sometimes called goddesses (Grimm, 1400). In modern Greece the Fates play a similar part at the birth of children to that which they played in ancient times (Bent, *JAI* xv. [1886] 393), and in ancient Egypt their closest parallel is the seven Hathors, who presided at birth and played the part of fairy god-mothers (Wiedemann, *Rel. of anc. Egyptians*, 1897, p. 143; Maspero, *Contes pop. ég.*[3], Paris, 1905, p. 76 ff.).[1] All these goddesses and fairies as associated with birth are probably 'refractions of the human "spae-women" (in the Scots term) who attend at birth and derive omens of the child's future from various signs' (Lang, *EBr*[11] x. 134*b*, *s.v.* 'Fairy').

Individual fairies, like Abonde, Viviane, Morgen le Fée, Esterelle, Aril, etc.—so often mentioned in mediæval romances, and some of whom figure as fairy queens—as well as the individual white women or *banshees* haunting hills, woods, or castles, are probably connected with the *Matres* or with individual Celtic or Teutonic or other

[1] This is also true of fairy thefts of cows or corn; the substance is taken and the empty semblance is left.

[1] For the Slavic fairy-like Fates, see *ERE* iv. 626.

goddesses, *e.g.* the Roman Nymphæ as worshipped in Gaul, just as in Romance tales and in popular Italian belief the Roman Orcus has become a wood-fairy or ogre (Grimm, 486; Leland, 75). All these were generally helpful, but occasionally hostile, to men. Generally, too, it may be said that the love of fairies for music and dancing connects them with divinities in whose cult these were common, while the fairy moonlight dance may be a reminiscence of the cult itself, like the witches' Sabbat in another direction. The powers of fairies—shape-shifting, invisibility, magic, etc.—also link them on to the world of the gods.

5. Fairies and the dead.—While the fairy belief cannot be derived merely from a belief in ghosts, since the two exist side by side, the latter forms one of the strands from which the former has been woven. It should also be observed how much is common to the two beliefs. Both fairies and ghosts can benefit or harm the living. Both steal children (see CHANGELING), while both fairy changelings and ancestral ghosts are always hungry. Both can cause death—usually by a 'stroke,' producing a pining sickness—or warn of sudden death. To see them often means death to the seer (see *ERE* iv. 739ᵇ). Both can be avoided or repulsed by the same means (broom and iron tabu, running water, etc.). Both are active on May-day and Hallowe'en, and both have offerings made to them. Both love the night for their revels (dancing on meadows, etc.; cf. Grimm, 830), but both must vanish at cockcrow (as must the witch and vampire [MacCulloch, *CF*, 195]). Both possess enchanted objects of which daring mortals try to rob them. Both dislike untidiness and uncleanness (cf. Curtin, 178). In fairyland and the world of the dead time passes like a dream (see Hartland, 167 f.), while the same tabu with regard to eating fairy food or the food of the dead—in both cases dangerous to mortals—exists (see *ERE* iii. 561 f., iv. 653, and add to reff. there Brown, *Melanesians and Polynesians*, 1910, p. 194; Seligmann, *Melan. of Br. N. Guinea*, 1910, pp. 656 f., 734). The warning not to eat the food usually comes from a mortal imprisoned in fairyland or from the dead person whose rescue from Hades is sought. It may also be noted that in Brittany the whole superstition regarding the dead is exactly like that regarding fairies, both there and elsewhere.

In folk-belief and *Märchen*, fairies are associated with tumuli or burial-mounds. These are sometimes called 'Fairy-hills,' 'Elf-howes,' 'Alfenbergen,' etc.; but they are also believed to be haunted by the ghosts of those buried in them, or at least are associated with these.[1] In certain cases fairies have succeeded the ghostly tenants of the tumulus, forgotten by the folk—a natural result, since any mysterious structure tends to be associated with mysterious beings. In other cases they are merged with them, and it is hardly possible to discriminate rigidly between them, while both are regarded with awe. The Teutonic dwarfs are *unterirdische* (cf. cognate names in other Northern languages [Grimm, 454, 1415]), as are the dead, the *ὑποχθόνιοι, οἱ κάτω ἐρχόμενοι* or *ἐναγισμοί* of Greek belief (see EARTH, § 8). The Hangbuie, who haunted the tumuli and was feared by the Scandinavian howe-breakers, is at once a ghost and a goblin, like the similar tenant of Brynyr-Ellyllon, near Mold, the hill of the goblin or fairy (Windle, *Life in Early Britain*, 1897, p. 113; J. Anderson, *Scotland in Pagan Times*, Edinburgh, 1886, p. 278). Such a confusion is also found in Madagascar, where the graves of the *vazimba* (at once the aboriginal folk and a species of spirits) are regarded with awe (Ellis, *Hist. of Madagascar*, 1838, i. 424).

In many cases fairies and ghosts are one and the same in popular belief. This is true of much of the fairy belief in Ireland (see Wentz, 40, 58, etc.). The Welsh *Ellyllon* are sometimes regarded as souls of the Druids (Keightley, 412); the Teutonic *dvergar* are closely associated with the *náir*, or ghosts, and the *álfar* are probably in part souls of the dead (Grimm, 445 f., 1415; Simrock, 425, 435 f.; Vigfusson-Powell, *Corpus Poet. Boreale*, Oxford, 1883, i. 418; see *ERE* iv. 633; Wright, *Purgatory of S. Patrick*, 1844, p. 89). The Celtic 'fairy hosts,' *sluagh*, though regarded in the Hebrides in some cases as the dead (the 'Furious Host' of Teutonic belief [Grimm, 918 ff.]), are also a kind of fairies hurtling through the air, and resembling the fairy hunt or ride of other Celtic districts (Wentz, 56, 94, 104, 106, 108; Carmichael, *Carmina Gadelica*, Edinburgh, 1900, ii. 330; Keightley, 355, 384, 401, 414, 520). In Brittany the fairy 'washer at the ford' (*kannerezed noz*) is now a *revenant*, and, like the Irish and Highland fairy washer (also occasionally a ghost), warns of approaching death (Le Braz, *La Légende de la mort*², Paris, 1902, i. p. xli). It is interesting to note that Kirk (p. 10 f.) associates the 'co-walker,' or double, seen by second-sighted persons, with the fairies, and equates it with a fairy.[1] The speech of fairies, like that of ghosts, civilized and savage, is said to be a kind of twittering (Kirk, 14; cf. Tylor, *PC* i. 457).

The dead are sometimes associated with fairies in fairyland, and are seen there by those who visit it, and are warned by them not to eat or drink. According to Scottish superstition in the 16th–17th cent., witches were in league not only with Satan but with the court and queen of fairyland, and they saw there many persons known to be dead (Scott, *Minstrelsy*, 207 ff., *Demonology*, 108, 124 f.; Dalyell, *Darker Superstitions of Scotland*, Glasgow, 1835, p. 536 f.). The same idea is found in the Romance writers and in Chaucer, who make Hades into fairyland and change Pluto and Persephone into the king and queen of Faery. Fairyland is also in close association with the Christian Other-world in the ballad of Thomas the Rymer. So, already in early mediæval Welsh belief, Gwyn is king of Faery, and is associated with Annwfn (Elysium) in its later aspect as hell, and hunts the souls of the wicked (MacCulloch, *Rel.* 115). Similarly the water-fairy keeps souls of the drowned in his under water-world (Simrock, 448 f.; Grimm, 496).

The demoniac spirits, with uncertain temper, in whom the West Africans believe, and whom they localize in the air or in natural objects, are ghosts of the dead (Nassau, *Fetichism in W. Africa*, 1904, p. 58), and the Arabic *'afrit*, evil *jinn*, is a name applied also to ghosts (Lane, *Modern Egyptians*, 1846, ii. 41).

In *Märchen* of the 'Dead Wife' cycle, in which a dead mother is recovered from Hades, there is the same incident as in tales of women carried off to fairyland. In both the mother re-appears to suckle her child, and in both she is recovered by her husband, who avoids certain tabus. In the latter series the wife apparently dies, but the 'corpse' is an adult fairy changeling or an illusory appearance. Or, again, the changeling is in effect a double or 'co-walker' (Curtin, 158; see also CHANGELING, § 6; DESCENT TO HADES [Ethnic], § 3). In Ireland the idea is wide-spread that people who die young are taken by fairies; and there is also the belief that the soul is taken, leaving the body dead.

There is one species of fairy which is closely connected with, if not in all cases actually derived from, ancestral or other household spirits—the house-fairy or Brownie,[2] already mentioned as the *Portune* by Gervase of Tilbury in the 13th cent.,

[1] Dawkins, *Early Man in Britain*, 1880, p. 433; *FLJ* v. [1887] 333; Hartland, 231; Kirk, 23.

[1] For the similar Norwegian belief, see Craigie, *Blackwood's Magazine*, cxci. (1912) 304 ff.

[2] For the various names and characteristics of the house-fairy in Germany and Scandinavia, Britain, etc., see Grimm, 500 f.; Bérenger-Férand, i. 33 ff.; Simrock, 450 ff.; Keightley, *passim*. He is the 'lubber fiend' of Milton.

who dwells in house or stable, and loves to do the work of either. He dislikes disorder or laziness; and, where either is shown or the usual offering is not made to him, he is disagreeable to the person responsible. Food and milk are laid out for him, and he usually receives an annual gift of a new hat or coat, though in some instances this causes him to leave the house. He is particularly associated with the hearth, and to some extent corresponds with the mediæval and later familiar spirit who worked for his master and advised him (Calmet, *Traité sur les apparitions*, Paris, 1751, i. 245 f., 260). His analogues are the Roman household *Lar* (see Plant. *Aulularia*, prologue), whose worship culminated at the hearth; the Greek θεοὶ ἐφέστιοι; the Italian *lasio* and *attilio* (Leland, 80 ff., 141 f.); the Slavic *dedushka domovoj*, 'Grandfather of the house,' who haunts the stove; and the Teutonic and Celtic ancestral and household spirits. The close connexion of the ancestral spirit with the house is perhaps partly to be accounted for by the wide-spread practice of house-burial, found among many savage tribes, as well as among the ancient Semites (1 S 25[1], 1 K 2[34]; Jastrow, *Rel. of Babylonia and Assyria*, Boston, 1898, p. 599), among the early Mycenæan folk, and possibly among Greeks and Romans (Reinach, *L'Anthrop.* vii. 327; Plato, *Minos*, 315; Servius, on *Æn.* vi. 151), among the Celts, and possibly the Slavs (Ralston, 326), and among the Hindus (see DOOR). The practice may have arisen in the Stone Age, when men lived in rock-shelters and caves, and buried their dead there. In any case, the house-burial resulted in, and also guaranteed, the presence of the ancestral spirit in the dwelling. In Europe it is probably as the result of ecclesiastical influences that the house-spirit has taken a more or less demoniac form. In some cases the Brownie appears as a small animal, snake, etc.—a trait common to ancestral spirits elsewhere. The main ideas of the house-fairy superstition and of the household-ghost belief, whether savage or more civilized, are the same—the house-haunting, the offering of food, the assistance rendered to the inmates. The relation of house-spirit and house-fairy is well marked in the case of the Slavic *domovoj*, the shaggy, stove-haunting being, kindly when respected, dangerous when neglected. He is closely associated with the older ancestral cult, is honoured along with the ancestors, is called 'grandfather,' and is, when seen, believed to resemble the head of the house. In many of these respects he corresponds to the house-spirit of the northern Chuds and to the Lithuanian *kaŭkas*, domestic spirits about 1 foot high, haunting the hearth (cf. Lasicius, *de Diis Samagitarum*, Basel, 1615, pp. 42, 51, 55; and, for the *domovoj*, *ERE* iv. 626 f.). The Swedish *tomte* or *nissar*, regarded often as ghosts, who act and are treated exactly as the Brownie, may also be compared (Thorpe, *Northern Mythology*, 1852, ii. 93). Sometimes, in fact, the Brownie is regarded as the spirit of a former servant.[1]

The house-fairy becomes a malicious, noisy, tormenting sprite, when neglected or insulted, and is thus again connected with phenomena in which the link between ghost and fairy is seen—those of the Poltergeist, in which furniture, etc., is moved or thrown about, fire is raised, balls of fire float about, the touch of a tiny hand is felt, etc. Some of these are extreme forms of *telekinesis*—the movement of objects without apparent cause, in presence of a medium,—or of the noises, from rappings upwards, in connexion with coincidental phantasmal appearances. The Poltergeist phenomena were known in ancient as well as in mediæval and modern times, and they still occur among savages and civilized men.[2] The phenomena, as yet unexplained, rest on sufficient evidence in certain cases to establish their authenticity. But pheoomena, similar in many of the details, are often attributed to fairies in Ireland, the Highlands, France (the *follets* already mentioned as stone-throwers by Gervase of Tilbury), etc. (see Clodd, *Tom Tit Tot*, 1898, p. 83; Lang, in Kirk, p. li; Curtin, 179; Wentz, 476), also in Germany (where the Poltergeist is half fairy or goblin, half ghost [Grimm, 505]), Russia (where the *domovoj* sometimes acts as a Poltergeist [Ralston, 132]), Greece (where the Nereids [= fairies] throw stones [J. G. Hahn, *Griech. und alban. Märchen*, Leipzig, 1864, nos. 79, 80]), and in Egypt (where the *jinn* [also = fairies] act as the Poltergeist [Lane, ii. 40]). Thus phenomena, whether caused by unseen agency or trickery, or the result of hallucination, are uniformly ascribed to ghosts or to fairies, these being in many respects one and the same.

That the phenomena ascribed to the house-fairy—doing house- or stable-work secretly—may be real in some cases, in the sense of being done by human beings for some private end or under the influence of somnambulism, need not be doubted (see Bérenger-Féraud, i. 114, 137; Lang, in Kirk, p. xxxviii, refers to the 'Brownie of Bodsbeck'). The unexplained work would then be ascribed to house-spirits, and the tradition would be handed down and augmented by every fresh occurrence.

The close connexion between fairies and ancestral spirits is obvious, and there is little doubt that the belief in the latter and the usages regarding them have done much to affect the fairy superstition. Nor is it impossible that the small size attributed to them in many regions may have been suggested by the common belief in the soul as a mannikin, not only among savages but in ancient Greece (on vases the soul issuing from the body as a pygmy), in Egypt (*ka* as a pygmy in bas-reliefs), and in India (*Mahābhārata*, III. ccxcvi. 17).[1] This is in accordance with the belief in the double or 'co-walker' or *ka*, a duplicate of the living person (though not always a pygmy) who at his death 'goes to his own herd,' according to Kirk (p. 10 f.).

6. Fairies as actual people.—The origin of the fairy superstition in the relationships between a small dispossessed race and a taller conquering race has its most convinced exponent in D. MacRitchie (cf. art. DWARFS AND PYGMIES), who connects fairies with Finns, with the Irish Feinn, and the Picts. But the Feinn (*q.v.*) were not dwarfs, nor are they traditionally regarded as fairies; it is doubtful whether Celts ever had relations with Finns, and the Picts may have been a Celtic group. No argument can be based upon the fact that underground dwellings, duns, circles, etc., are ascribed to fairies, for they are ascribed equally to giants, the devil, Picts, and Feinn, just as in Greece the ruins of Mycenæ were ascribed to the Cyclopes. Nor is there any evidence that tumuli were ever dwellings, though there may be a link of connexion between them and dwellings, if they are successors of dwellings, perhaps not unlike them, in which their owners were buried while the living continued to dwell there (§ 5). The existence of a pygmy race in Europe, other and smaller than the pre-Aryan, neolithic folk, is supported by Sergi (*Mediterranean Race*, 1901, p. 233 f.), Kollmann, Dawkins, etc., on evidence furnished by archæological discoveries. Pygmy races are now known to exist in many parts of the world, and they would give rise to a pygmy tradition, as found, *e.g.*, in classical writers and in the folklore of China, Japan, the Ainus, the Malagasy, New Britain, India, Paraguay, and even among the Eskimos, themselves a small people.[2]

---

[1] Besides the house-haunting Brownie, fairies in general are often represented as doing household work for those whom they like.

[2] See Burton, *Anat. of Melancholy*[16], 1836, p. 124 f.; Calmet, i. 254; Girald. Camb. *Itin. Camb.* i. 12; Seligmann, 277; St. John, *Forests of Far East*, 1862, i. 91; H. J. [2] See Tyson, *A Philolog. Essay concerning the Pygmies*, 1690, ed. Windle, 1894, p. xv; *L'Anthrop.* xii. 371 f., xiv. 548; *Ko-ji-ki*, tr. Chamberlain, 1883, pp. 141, 207; Brown, 243;

Such a pygmy race in Europe might well be connected in tradition with fairies. But this is not to say that in all respects they gave rise to the fairy belief. Nevertheless, some characteristics are ascribed to pygmy races which resemble those ascribed to fairies.

Thus pygmies are often feared and propitiated, and they are supposed to have magical powers—a trait shared by all aboriginal peoples. They barter with the taller folk (cf. Grimm, 454, note), giving produce or animals for weapons, utensils, or cultivated food-stuffs (Ling Roth, *JAI* xxv. [1895–96] 266; *L'Anthrop.* iv. 86; Johnston, *Uganda Protectorate*, 1902, p. 516). They are shy of being seen, or of their dwellings being discovered or entered. Invisibility is ascribed to them—probably as a result of their quick powers of concealment (Johnston, 513; *L'Anthrop.* iv. 86; *18 RBEW* i. 480 f.). They dwell in caves or concealed structures, suggesting underground residence. The dwarf people believed in by the Ainus are said to have hidden under large burdocks—a habit recalling that of fairies hiding under mushrooms. Johnston says of the Congo dwarfs: 'Any one who has seen as much of the Central African Pygmies as I have, and has noted their merry, impish ways; . . . unseen, spiteful vengeance; quick gratitude; and prompt return for kindness, cannot but be struck by their singular resemblance in character to the elves and gnomes and sprites of our nursery stories' (p. 516 f.). At the same time he warns against reckless theorizing.

It cannot be denied that many stories about fairies suggest an actual people (cf., *e.g.*, the stories cited in Grimm, 451, 469). The frequent reference to fairies as earth- or mound-dwellers may be reminiscent of fact in some cases,[1] especially when it is found that the Bushmen (dwellers not only in the bush but in subterranean caves) are also called 'Earth-men' (*JRAS* xviii. pt. i.). In many stories, fairies resent mortals building over their subterranean dwellings or mounds—possibly a trait derived from actual experience of incomers being plagued by aborigines lurking in subterranean places over which they had built. On the other hand, it might be derived from fear of aboriginal ghosts haunting the mounds. In some cases, as in 'Childe Rowland,' the fairy-mound is surrounded by terraced circles—the markings of an earlier form of terrace agriculture still seen on hills (Jacobs, *English Fairy Tales*, 1898, pp. 117, 242; Gomme, *Village Community*, 1890, p. 75 ff.). In many tales it is obvious that fairies dislike the civilization of mortals, and flee from it (while themselves possessed of much secret lore), though they sometimes take advantage of it. These facts suggest the dislike of an aboriginal race to the ways of their conquerors, yet their occasional desire to benefit by them. Similarly the incident in many tales of fairies receiving articles left out for them, which they replace by gifts of their own, points to actual methods of barter. Their thefts of produce, animals, etc., and more particularly their kidnapping of women and children, reflect incidents in the contact of conquered and conquering races. The occasional cannibalism attributed to fairies is obviously derived from primitive custom, while their shyness, their retiring before the approach of mortals, easily suggesting invisibility, give the impression of a conquered race avoiding its conquerors. Finally, the dislike of fairies to metal, especially iron, by which they are kept off, or which they cannot pass, is significant, though this dislike is also shared by ghosts and other spirits, witches, *jinn*, etc. The dislike is primarily a human one; and, though the tabu concerns iron, it must first have concerned bronze.

The mystery with which the working of metal was surrounded, and the suspicion which attached to its first use, as well as the supposed result of ill-luck following upon its use, must all have contributed to the curious feeling with which it is regarded in folk-belief. Conservatism in religion prohibits its use in ritual; hence it easily came to be regarded as obnoxious to gods and to all supernatural beings. Thus, by a slight change of thought, it became effective against the inroads of the latter. Bronze was regarded as an apotropæic and a warder-off of pollutions, and this belief attached to it long after iron was introduced (Harrison, *Proleg. to Study of Gr. Rel.*², Cambridge, 1908, p. 591). Any race which did not use metal would also be easily scared by those who did (for an instance from New Guinea, see Hoernes, *Primitive Man*, London, n.d., p. 86). Hence stories in which fairies flee before the establishment of forges. Thus, those who now used metal came to see its power against both stone-using people and supernatural beings. These two, in course of time, would be inextricably mingled in popular thought; and thus the fairy or ghost iron-tabu doubtless contains some reminiscence of the human fear of metal. (See, on the whole subject, Goldziher, *ARW* x. [1907] 41 f., 'Eisen als Schutz gegen Dämonen'; Frazer, *GB*³ i. 344 ff.; Hartland, 306; Bertrand, *La Gaule avant les Gaulois*, Paris, 1891, pp. 226 f., 260 f., 313.)

In so far as the fairy tradition is connected with actual people, it probably goes back to the hostile relations which may have existed between Palæolithic and Neolithic folk, these forming the basis of traditions which may have been handed on to metal-using races (to whom the Neolithic folk were equally hostile) by the captives made by them, and then adopted by them with the necessary changes.[1]

Some support is given to the theory of fairies as an actual race by the fact that in Polynesia, where there is a belief in fairies, the traditions concerning them are probably connected with the relations existing between an aboriginal race driven to the mountains and forests and immigrant conquerors. They are fair-skinned, and have a different culture from the latter, are merry, and fond of dancing and singing, but are shy of being seen, and flee from the approach of daylight. Generally they are harmless, but not always so, *e.g.* they steal the women of the conquerors. Yet, many of the traits ascribed to them are non-human—their tiny size, their spirit nature, the glamour which hides their dwellings from mortals, the parallel alleged between them and ghosts. Other Polynesian fairies, connected with the gods or with the sky and the waters, have no human origin.[2] Thus the Polynesian fairy-belief is also composed of various strands. Similarly, the Arapaho belief in a demon mannikin who shoots invisible arrows which cause illness is possibly connected with traditions of an actual small aboriginal people, though here also an animistic groundwork is clear (Talbot, *My People of the Plains*, New York, 1906, p. 259). African dwarf races also do many such things as are ascribed to European fairies, but this again is probably a result of animistic notions, mingling with actual experience of their characteristics. Many of the traits of the Roman *Fauni* are perhaps due to traditions of an older race which came to be regarded as half-demoniac, half-human (Fowler, *Roman Festivals*, 1899, p. 261; Virgil, *Æn.* viii. 314 ff.).

Allowing for every possibility, an earlier small race does not account for the whole fairy tradition or for its origin. Similar beliefs are recorded elsewhere of other beings—in Japan, foxes; in Greece, nereids or vampires; or, generally, ghosts, spirits, witches, etc. Primitive animistic or even pre-animistic ideas are the true basis of the fairy belief, and have attached themselves indifferently now to groups of imaginary spirits, now to all kinds of supernatural beings, now to actual men. Yet traditions about an actual race may have given a certain definiteness to the fairy creed.

In Scotland the 'fairy-stroke,' which causes death or wasting sickness in men or cattle, is ascribed to 'elf-arrows,' 'elf-darts,' 'elf-bolts,' or 'elf-shot,' thrown by fairies or by mortals in their company compelled by them, or by witches. No wound is seen. This is also a Teutonic belief (cf. the A.S. *ylfagescot*, Germ. *albschosse*, and cognates), and it is found in Ireland.[3] This stroke often caused the real person to be carried off, when a semblance or changeling was left in his place (see CHANGELING). Popular belief has seen these elf-arrows in the flint arrow-heads or axes of pre-historic times, found by the folk; and this belief must have attached to them when their true use was forgotten. (It is also a wide-spread belief—ancient, modern, savage, and civilized—that stone axes are thunderbolts; see Cartailhac, *L'Age de pierre*, Paris, 1877, p. 70 ff.) These flint relics, when found, were worn as amulets, as a preservative against this or other evils. This superstition, which might be regarded as supporting the human origin of fairies, in reality does not do so. The belief that spirits or ghosts can harass

FL vi. [1895] 245; *JAI* xxxi. [1901] 289; Rink, *Tales and Trad. of the Eskimo*, 1875, pp. 403, 470; *18 RBEW* [1899], pt. i. p. 480.

[1] Earlier races may have had underground or semi-underground dwellings (like the winter houses of the Eskimos), of which sepulchral mounds may have been more durable copies.

[1] The opposition was not necessarily between Celtic and pre-Celtic folk, as Celts had also a Stone Age in Europe.

[2] See J. M. Brown, *Maori and Polynesian*, 1907, pp. 80 ff., 285; Clarke, *Maori Tales and Legends*, 1896, pp. 20, 98, 112; Tregear, *JAI* xix. [1890] 120; Gill, *Myths and Songs from the S. Pacific*, 1876, pp. 256 f., 265 f.; Dittmer, *Te Tohunga*, Hamburg, 1907, p. 74 f.; Grey, *Pol. Myth.*, ed. 1906, pp. 209, 212.

[3] For a similar Slavic belief regarding the *Vilas* (=fairies), see Grimm, 436.

the living, or enter them, causing sickness or death, is very wide-spread, and this action of theirs is often thought to be produced by invisible weapons (Dayaks [St. John, i. 179]; Andamans [*JAI* xii. (1882) 160]; Santa Cruz [O'Ferrall, *JAI* xxxiv. (1904) 226, 229]; Amer. Indian [*ERE* iii. 362]). Among the Malays the weapon is not invisible, but, as in the fairy belief, is an old stone relic (Skeat-Blagden, *Pagan Races of Malay Pen.*, 1906, i. 244), and this is also alleged of Japanese spirits (Cartailhac, 40). As man caused death by weapons, so must spirits; but, as they were generally invisible, so must their weapons be. For similar reasons, sorcerers could cause death by invisible bolts (Gulf tribes [Palmer, *JAI* xiii. (1884) 292]; Melanesia [Seligmann, 640]; Araucanians [*ERE* iii. 548b]; Napo Indians [Simson, *JAI* xii. 23]). But, when mysterious stone objects were found, it was easy to believe that they were the missiles of fairies, spirits, etc.

7. Fairies as Nature-spirits.—There is little doubt that, in some aspects, fairies are derived from older Nature-spirits, or from the animistic beliefs which led to the creation of the latter in popular fancy. Their close association with fields, woods, hills, streams, and the sea is suggestive of this, and is significant when taken in connexion with the Nature-worship of the Celts, Teutons, etc. The forbidden cults rendered at trees, wells, etc., became connected with fairy-beliefs as well as with sorcery. Hence it was in forests or at fountains that *fées* appeared (see also the evidence in the *procès* of Jeanne d'Arc). But a consideration of actual instances of Nature-spirit beliefs among savage or barbaric peoples is also suggestive, since such spirits, peopling every part of Nature, so much resemble fairies. The connexion is still more clearly seen when particular groups of fairies are considered—those of the woods or of the waters.[1]

The Teutonic wood-spirit, *Schrat*, always male, and the wood- or moss-folk or wood-wives whose life is wrapped up with that of a tree, and to whom offerings of food were made; the elves who change into trees (Keightley, 93; Grimm, 430 ff., 478 ff.; Simrock, 439 ff.; de la Saussaye, *Rel. of the Teutons*, Boston, 1902, p. 322); the Celtic fairies haunting wood and forest, or dwelling in or on trees (Sébillot, *Folk-lore de France*, Paris, 1904 ff., i. 262, 270); the Roumanian *mama padura*, or forest-mothers, haunting forest glades (Gerard, *Land beyond the Forest*, 1888, ii. 9); the various Slavic woodland beings (*Lješyj*, *Dziwozony*, *Vilas*, *Rusalkas*, etc. [*ERE* iv. 628 f.]); the mediæval *Dominæ*, *Puellæ*, and *Matronæ*, haunting forests, and to whom a cult was paid (Grimm, 286 f.)—all point to earlier tree-, wood-, or forest-spirits or -divinities. The latter are known to all religions and mythologies, savage or civilized. They are (as the Baganda believe) friendly to man if the tree is not interfered with (Roscoe, *Baganda*, 1911, p. 317)—a belief corresponding to that which holds that it is not safe to interfere with trees associated with fairies. A stage midway between the purely animistic and the fairy belief is seen in the W. Finn conception of the *Tapio*, a forest-divinity with a wife and many daughters (tree-spirits), who closely resemble the Teutonic wood-folk (Abercromby, *Pre- and Proto-Historic Finns*, 1898, i. 285), or in the E. African sprites residing in trees, from which they descend to torment men (Baumann, *Usambara*, Berlin, 1891, p. 57); or in the *jinn* who, according to the Gallas, haunt sacred trees (Paulitschke, *Eth. Nordostafr.*, Berlin, 1896, p. 34 f.); or in the demons in human form who haunt trees in Central Celebes (Frazer, *GB*2 i. 183); or in the Australian bush demons, or the Andamanese demons of the woods who do harm to wayfarers (Tylor, *PC*3 ii. 222; Man, *JAI* xii. 159). But tree- or wood-spirits or -gods are often quite detached from these and made anthropomorphic. This was the case with gods like Pan and Silvanus, or the Panisci and the Fauni, or the Satyrs—the three last groups bearing a close resemblance to the woodland beings of the North, and being generally hostile or mischievous to men. To all woodland elves and fairies were ascribed most of the characteristics of fairies in general.

In Teutonic, Celtic, and Slavic lands, as well as in S. Europe, there is a great variety of water-beings of fairy nature—*Merimanni*, *Wassermann*, *Strömkarl*, *Nix* and *Nisse*, *Mümmelchen*, Celtic river- and lake-fairies, *Morgans*, *Rusalkas*, and the mermaids and mermen of all the European coasts. The males among them often appear singly; the females usually in company, youthful and beautiful. All are fond of music and dancing, and are often associated with a gorgeous world below the waters. Offerings are made to them, to render them propitious, or to procure their good offices. They are often regarded as dangerous to mortals. The drowned are their victims, or they clamour for such victims—a reminiscence of human sacrifice. They entice mortals to their watery element, and there destroy them. But a milder aspect is seen in cases where they fall in love with mortals and take or ravish them to their abodes, or, again, where they are thought to guard the souls of the drowned in their domain. In other cases they become wives of mortals on earth, who lose them by not observing a certain tabu. They often come ashore to market, or seek human wives or midwives or nurses, like the fairies of the land (see Simrock, 445 ff.; Grimm, 487 ff.; de la Saussaye, 323; Ralston, 139 f.; Abercromby, i. 157, 270, 309). The beautiful and attractive, as compared with the more fearsome, aspect of water-fairies is connected by Wundt (*Völkerpsychol.*, Leipzig, 1907, ii. 2, 279) with the various emotions set up by moving water. Many of the traits of water-fairies are already possessed by the Sirens, Naiads, and Nymphs (cf. the tale of Hylas), the Celtic *Peisgi*, *Niskas*, and other water-divinities; and in many cases the tales of the water-beings show their divine or semi-divine character. Such beings or water-monsters are universally believed to be hostile to those who trespass on their domain without an offering, or to seize all who fall into the water, or to steal people or lure them to their destruction, or to take those who look into the water, by means of their reflexion (=soul; cf. Narcissus; see *FLJ* v. 319 [Guiana]; Roscoe, 318 f.; Brown, 198; Macdonald, *JAI* xx. [1891] 124; Theal, *Kaffir Folk-lore*, 1882, p. 196). The belief in such beings also gave rise to a belief in a water-world—that of the Greek Nereus and the Nereids, of the Japanese king and queen of the sea (Griffis, *Jap. Fairy World*, 1887, p. 144; *Ko-ji-ki*, p. 120), of the Slavic water-king and his daughters (Ralston, 148). Many savages also believe in similar water-worlds tenanted by supernatural beings (Africa [MacCulloch, *CF*, 112, 256, 260, 267; Ellis, *Yoruba-speaking Peoples*, 1894, p. 70]; Andaman Islands [Man, *JAI* xii. 159]; Guiana [*FLJ* v. 319]). Such water-worlds resemble the land under waves, with fairy denizens, in Celtic folk-belief.

In both Teutonic and Celtic regions there are water-beings who appear as horses or cattle, or in more monstrous forms—the *kelpie*, *afanc*, *each uisge* ('water-horse'; cf. the Australian *Bunyip*, a monster said to have a house full of beautiful things below a pool). These may be regarded as demoniac forms of earlier water-divinities in animal form.[1]

8. The fairy belief as a result of psychic experiences.—Some recent writers attribute the belief in fairies, etc., as well as myths generally, to dream experiences, or to the dreamlike character of waking experiences, common to savages (and therefore to older races of men), in which conceptions not unlike those of dreams, and endowed, like them, with actual objectivity, are produced.[2] Records of actual dreams show appearances of small figures or of figures which change their size (Ellis, 270). This is also true of trance experiences; while in migraine and epileptic aura visions of small creatures are occasionally experienced, and the diminution of objects is a phenomenon of microptic vision. Hence L. Brunton saw here the origin of fairies. In waking hallucinatory experiences, swarms of phantasmal shapes, often dwarfish, have been seen by modern and ancient percipients.[3] Similar hallucinations have

[1] The old cult of Nature-spirits developed in another direction—that of the Cabalistic and Rosicrucian elementals.

[1] They are to be distinguished from the cattle possessed by water-fairies, which sometimes come on land.

[2] K. Abraham, *Traum und Mythus*, Vienna, 1909; Rank, *Der Mythus von der Geburt des Helden*, do. 1909; Laistner, *Das Rätsel der Sphinx*, Berlin, 1889; Ellis, *World of Dreams*, 1911; Wiedemann, *Rel. of Anc. Egyptians*, 179.

[3] Gurney, *Phantasms of the Living*, ii. 196; *Proc. Soc.*

been experienced in hypnotic states, or in drunkenness.[1] Here probably we have another of the roots of the fairy belief. On the other hand, all such states are fruitful of visions of beings already believed in by the percipient. Preconceived notions colour dreams, just as preconceived notions of hell or heaven have caused visions of these regions. Again, any belief in abnormal creatures which is strongly held is certain to produce mental images of them which are confused with reality.[2]

The changeling belief, as far as it concerns adults, may have been partly shaped by the phenomena of alternating personality. The person stolen by fairies is replaced by a fairy, who resembles, but acts differently from, that person. In one Irish instance, the father said of an afflicted daughter whom he believed to be a changeling that she had the 'tongue of an attorney,' the daughter herself being a 'quiet, honest girl' (Curtin, 157). Actual adult changeling stories often read like a transcript of this.

Those who can see fairyland impart the vision to one who is in contact with them (Rhys, *Celtic Folk-lore*, *passim*), just as in Russian folk-tales a dead man will place a sod cut from the churchyard on the head of a living person, who then sees the under world (Ralston, *Russian Folk Tales*, 1873, p. 306). The same belief is found with regard to second-sight—physical contact with the percipient enables another to share the vision; this is also true of clairvoyance (Gurney, ii. 189). Modern experiments in telepathy show that contact increases the power of communication, and cases are on record where the percipient of a phantasm could cause another to see it by touching him (Parish, *Hallucinations*, 1897, p. 94). Thus, what is perhaps an actual psychic fact, experienced by the folk, has been applied to fairy, ghost, and other beliefs.

9. Fairy-like beings outside Europe.—That no single cause peculiar to European lands has operated in the formation of the belief in fairies may be seen from the fact that in every part of the world there are to be found beliefs in a variety of beings, all more or less like the fairies of Europe, with similar qualities, characteristics, and powers.

The Battaks of Sumatra believe in mountain-dwarfs hostile to encroaching mortals, who carry off men or women, or have amours with handsome mortals (*L'Anthrop.* iv. 85 f.). In Formosa, tales are told of a mysterious little people to be seen in the forests, with houses which change into boulders; as well as of goblins living in caves, and causing famine, sickness, and death (*FLJ* v. 143, 149). The Siamese *phi* are spirits dwelling in forests, etc., with many fairy traits (Hardouin, *Rev. trad. pop.* v. [1890] 257 ff.; for Annam, see *ERE* i. 538a, 539b).

Turning to Africa, we find the Baganda believing in elves or sprites called *ngagwe*; and the W. African Bantu in *asiki* seen at night wearing a comb, which, if a mortal can snatch it, will bring him riches (Johnston, 677; Nassau, 299). Callaway compared the Zulu belief in ghosts (*amatongo*) with the Irish fairy creed. They call the living to join them or produce disease or pain in men. They live underground, where the living may visit them and see their dead friends, as the dead are seen among fairies. There is also a belief in a 'Little Chieftainess' with a troop of children, to see whom is fatal (*op. cit.* 226 f., 253). The Malagasy believe in dwarfs who come to houses to get milk, and who have a small voice like birds. Another dwarf, *Kotely*, resembles the Brownie. They also enter houses at night and cook rice; but it is dangerous to prevent their leaving before dawn (Ferrand, *Contes pop. malgaches*, Paris, 1893, p. 82 ff.).

Among American Indians, the belief in tiny sprites of rocks, streams, etc., resembling fairies, is wide-spread. They dance in moonlight; and, when seen, vanish at once. They assist or trouble men; *e.g.*, among the Shoshones they steal infants, leaving a changeling (*NR* iii. 157); among the Ojibwas they attack poultry and cattle, which die, or throw stones into the Indian dwellings; among the Algic tribes they cause sleep by striking men with their small clubs; among the Micmacs they tie people when asleep. Generally their form is that of tiny men. The Musquakie Indians believe in sprites produced by Meechee Manito-ah, who cause melancholy, quarrels, ill-health (Owen, *Folk-lore of Musq. Ind.*, 1902, p. 38 f.). On the Mosquito coast, gnomes are thought to carry off wanderers by night, and are mischievous in other ways. There is also a water-spirit which drowns bathers, and another which has the form of a horse.[1] The Eskimos believe in *ingnersiut*, an underground fairy-like folk (Rink, 460).

In Polynesia the 'Peerless Ones,' daughters of Miru, queen of Hades, come to the dances of mortals and leave at dawn. There are also fairies of sky and fountain, the latter sometimes mating with men. Other fairies, *ponatui*, dwell in the sea, appearing only by night, for the sun is fatal to them. Others carry off mortals, and are much dreaded (Gill, 265 f.; Clarke, 98, 112, 172; Tregear, *JAI* xix. 121). The Melanesian *vuis*, a race of spirits, have many fairy characteristics, and many of them are 'a lesser folk of dwarfs and trolls,' with magic powers, yet easily deceived. In some tales they assist mortals, like our fairies (Codrington, *Melanesians*, Oxford, 1891, p. 152). In Torres Straits a mischievous female bogey called *Dorgai* seduces men, steals children, etc., but she can be outwitted and destroyed (Haddon, *JAI* xix. 323). The Fijians have a race of little gods of the sea, a timid race to whom a secret cult is paid, and who sometimes come ashore. They give immunity from wounds, and are fond of singing. Their songs, like those of some of our fairies, have been recorded (Williams, *Fiji*, 1858, i. 237, 240; Thomson, *Fijians*, 1908, p. 189). In New Britain an order of *tebaran* is called *ingal*, mischievous and annoying sprites. Others are friendly and live around men, or enter their bodies to teach them charms, dances, etc., by which they make a profit. There is also a belief in mermaids, and in their unions with mortals (Brown, 81, 200, 242). In New Guinea there is a belief in an underground folk, *not* the dead, who may unite with mortals, and from whom men steal valuable things; as well as in other beings in the forest or swamp, shy of being seen, and with other fairy habits (Seligmann, 386 f., 646 f.).

The Arunta believe in *iruntarinia*, spirits of the Alcheringa (*q.v.*) age, living in winter in underground caves where there is sunshine, and wandering on earth in summer. They have each a double, the *arumburinga*, which, when the spirit is reincarnated, follows it or dwells with the others. These are not visible to all. The *iruntarinia* are very real to the native, and are dreaded for their power of placing pointing sticks in his body. They are visible only to medicine-men and children born with eyes open, and are like men, but thin and shadowy. They steal from men, and carry off women and imprison them in caves, but to those who can communicate with them they impart sacred ceremonies (Spencer-Gillen^a, 515–521).

The beings which most resemble fairies, however, are the Arab *jinn* or *jān*. They live underground, but also haunt doorsteps and other places, and are usually invisible, though they also appear

1 See *19 RBEW* [1900], pt. i. 330 f., 475 f.; *NR* iii. 497; Dorman, *Origin of Prim. Super.*, Philad. 1881, p. 23 ff.; Boyle, *JAI* xxx. [1900] 265; Wentz, 47; *ERE* i. 806, iii. 362a, 504b; Longfellow, *Hiawatha*, canto 18. Leland thought the Algonquin elves were borrowed from early Norse visitors.

in various forms. They travel about in sandstorms. The *jinn* are arranged in clans, propagate their species, and are subject to laws like mortals. Many are evil and cause sickness, madness, etc., act like the Poltergeist, carry off beautiful women for wives or others as midwives, or their females force men to remain with them for years. Some are friendly to men and even marry them, or by means of talismans men can obtain power over them. Iron, Divine names, etc., are all powerful against them; and, like the fairies, they are euphemistically called *mubarakīn*, 'blessed ones.' Indeed, there is scarcely an article of the fairy creed which does not equally apply to them.[1]

Fairies and *fées* of all kinds[2]—Celtic and Teutonic, Slavic *vilas*, Greek nereids, Arabian *jinn* and *peris*, Hindu *apsarases*, and other supernatural females, like the *dorgai* of Torres Straits, or the *awiri* wife of W. Africa (MacCulloch, *CF*, 330), or the *omangs* of the Battaks (*L'Anthrop.* iv. 85), or the swan-maidens and mermaids of universal folk-belief—carry on amours with men, or marry and bear them children, either on earth or by luring them into their abodes, as the Queen of Faery lured True Thomas. Yet, on the other hand, one of the most characteristic traits of female fairies is their seductive power over men, and the fatal results which follow from amours with them—'the inconvenience of their succubi' (Kirk, 25). This, however, is a feature found even in the case of fairy wives, whether captured by men or not, when the mortal husband breaks a tabu, and was already noted by Gervase of Tilbury (*Otia Imper.* ch. 13; see MacCulloch, *CF*, ch. xii.).

But what is important as illustrating the likeness of various ethnic supernatural beings to our fairies is the fact that precisely similar dangers await him who sees and falls in love with the being who appears in seductive form. The Celtic or Teutonic fairy mistress is dangerous (cf. the Lorelei), but so also is the supernatural mistress of other lands. The unhappy mortal lover is killed, dies, goes mad, or takes to wandering listlessly (νυμφοληψία, 'Peri-stricken' [cf. Keightley, 21]). This was the case with him who had amours with the nymphs and sirens of ancient Greece, like the nereids in modern Greece (Bent, *Cyclades*, 1883, p. 13; Lawson, *Modern Greek Folklore*, Cambridge, 1910, p. 142), as it is the case with him who is lured by the Hindu *rākṣasī* or *churel* (Crooke, *PR*², 1896, i. 253, 269; *ERE* ii. 489ᵇ). So in Japan a youth is slain by the monster, who takes the form of a lovely girl (Joly, *Legend in Jap. Art*, 1908, p. 45). The Arabs have transformed the *ka* which haunts the pyramids into a beautiful nude woman, whose lovers become restless lunatics (Maspero, *Études de myth. et arch. ég.*, Paris, 1893, i. 79).

Similar beliefs are found in Melanesia regarding sea-snakes which take female form, or the *tavogivogi* which appears as youth or girl to entice mortals of the opposite sex. In either case death or madness is the result. Another species of sprites, called in New Britain *toltol*, inflict serious wounds on the sexual organs of their male or female lovers (Codrington, 172, 188 f.; Brown, 197; Lang, in Kirk, p. xxxi; cf. Williams, *Fiji*, 1870, i. 239).

The same ideas are found among the American Indians; *e.g.*, the Yuroks believe in a seductive being who lures men into the forest, changes to a panther, and kills them (*FLR* v. [1882] 99 f.); and the Mayas have stories of the *xtabai* and the *xhoh chaltun* of the forests, who turn into a thorn-bush when the pursuing mortal clasps them. He then speedily succumbs to fever and delirium (*FLJ* i. [1883] 255). For the Central American belief in the intercourse of women with *naguals*, see Brinton, *Proc. Amer. Philos. Soc.*, xxxiii. [Phil. 1894] 29.

Risks were also run by women who had intercourse with Pilosi, Panisci, Satyrs, Fauns, Silvani—the *incubi* and *succubæ* of mediæval times, demons who had amours with women or men. They correspond to the Celtic *dusii*, shaggy demons who sought the couches of women to gratify their desires, and perhaps caused madness (MacCulloch, *Rel. of Anc. Celts*, 355); the Hindu *bhūts*, who abduct women, and other demons who tire out women by their nightly amours, so that they die of exhaustion (Dubois, *Hindu Manners*, Oxford, 1897, ii. 389; Crooke, *PR*² i. 264); the *jinn*, who beget children by women (Curtiss, *Prim. Semitic Religion*, 1902, p. 115); the Maya *ekoneil*, an imaginary snake which sucks the breasts of mothers (*FLJ* i. 256); the Samoan *hotua poro*, which makes women pregnant and causes nightmare (Waitz, *Anthrop.*, Leipzig, 1860, vi. 315); the *kruijt*, a spirit who begets children by women; and the Dayak *buan*, ghosts who carry off women and beget monsters by them (Ling Roth, *Natives of Sarawak*, 1896, i. 308; St. John, i. 174).[1] It should be added that ghosts of the dead can cause conception in women (Brittany [Le Braz, *La Légende de la mort*², ii. 146 and *passim*]; Syria [Curtiss, 115]; Borneo [Wood, *Nat. Hist. of Man*, 1870, v. 508 f.]; Egypt [*ERE* iv. 589ᵇ]; Ovaherero [*ib.* iv. 860ᵃ]; Uganda [Roscoe, 48]; cf. Post, *Ethnol. Jurisprud.*, Oldenburg, 1895, ii. 11, for the Amer. Indian and African belief in monstrous births as products of evil spirits). These beliefs were connected with the erotic hallucinations of hysteria (Ellis, *Psychol. of Sex*, London, 1897-1900, ii. 152 f.), and with erotic dreams in general in which women believed themselves abandoned to sexual embraces, or men thought they had amours with beautiful females. They are also connected with the phenomena of nightmare, as the name as well as its cognates in other languages—*incubus*, *succuba*, ἐφιάλτης, etc.—shows. These are nocturnal spirits which torment men in sleep, while the nightmare personified is in Teutonic belief sometimes the fairy bride or mother.[2] These beliefs are also connected with the idea that the gods could have amours with women.

Thus, when we find that in all parts of the world there exist beliefs either in fairy-like beings or in spirits who act like fairies, while the same precautions are taken against them, the same tabus hold regarding them, the relations between them and men are the same, and the same quasi-cult is rendered to them, we see that the European fairy belief is but a special aspect of a much more widely spread belief in supernatural beings, to whom very much the same characteristics are everywhere attributed, these being probably in no case the result of any one cause. At the same time we are led to discover the real origin of the fairy belief in man's myth-making fancy and his animistic beliefs, and in his applying the conditions of his own life to the creatures of his fancy. These fancies sometimes, however, cluster round the facts of life, actual races being sporadically envisaged as fairies.

10. **Witch and fairy.**—That no one source can be considered as the origin of the fairy belief is seen in the fact that the parallel between witch and fairy is a very close one. The fairy-revel and the Sabbat had much in common, and both owe

[2] Simrock, 437; see Tylor, *PC*³ ii. 189 f.; Bodin, *La Démonomanie des sorciers*, Paris, 1580, p. 109; Grimm, 464; Strahl, *Der Alp: sein Wesen und seine Heilung*, 1833; J. Franck, *Praxeos Medicæ Universæ Præcepta*, Leipzig, 1832, ch. l. 'de Incubo.'

something to reminiscences of earlier sex-festivals with music and dancing (see MacCulloch, *CF*, 223). The wayfarer is attracted into both, and often pays dear for it. He is forced to pipe or dance, and finds himself in the morning worn out, while all that so attracted him has vanished. Both revels and Sabbat must terminate before dawn or cock-crow (see Reuss, *La Sorcellerie*, Paris, 1871, pp. 39, 43, 54, 56, and reff. there). Similarly the beliefs in bodily or spirit transportation through the air on the part of or by witches or fairies—the objective aspect of a trance or drugged condition (see MacCulloch, *CF*, 223; Wood-Martin, *Elder Faiths of Ireland*, 1902, ii. 8, 21; Nassau, 223 [W. Africa]; Seligmann, 401 [New Guinea])—in child-stealing (see CHANGELING), in cannibalism (*CF*, 223; Français, *L'Eglise et la sorcellerie*, Paris, 1910, pp. 68, 119, 145; Sébillot, i. 229; Wentz, 128), in gifts of money which turns to rubbish, in shape-shifting and invisibility, in taking the substance of milk, corn, or of an animal (cf. a similar belief in W. Africa [*JAI* xxix. 23], in E. Africa [Macdonald, *Africana*, 1882, i. 212]; and see Scott, *Demon.*, 82, 223), in the power of killing cattle by mysterious means, or horses by riding them furiously at night, in the force of similar tabus against both—all apply equally to fairies and witches. Both the mediæval Church and 17th cent. Presbyterians placed fairydom and witchcraft under the same ban; and, in their trials, witches were accused of appealing or repairing to fairies and their queen (Dalyell, 536 f.; Scott, *Demon.*, 129, 135, 266, *Minst.*, 207). Witches used for their nefarious deeds elf-arrows, which were manufactured by fairies and the devil, and supplied to them (Pitcairn, *Criminal Trials*, Edinburgh, 1833, i. 191 ff.; Scott, *Demon.*, 135, 235). In popular Scots tradition the elf-queen and the mother-witch, or *Gyre Carline*, are identical. The three *Fées* who are present at births are sometimes three witches, and both groups are associated with the earlier 'wise woman.' Finally, fairies and witches were supposed to ride through the air headed by a Hecate called *Nic Neven* (Scott, *Demon.*, 111).[1]

Beliefs similar to those associated with fairies are also elsewhere connected with the dead (§ 5), or with other beings—in Japan, foxes; or, among savages, spirits of all kinds; in our own and other lands, the devil or demons, or vampires. But the best example is found in the belief in the 'fairy eddy'—a sudden puff of wind or whirl of dust, leaves, etc., in which fairies or witches are supposed to be (Rhys, ii. 590; Ralston, *Songs*, 382; Frazer, *GB*² i. 127). Among the Arabs the *jinn* (in India *shaiṭān*) cause, or travel in, such whirlwinds or sandstorms. In ancient Persia a demon caused the whirlwind (*Bundahiš*, xxviii. 24). In Brittany, the damned, who tried to carry off the wayfarer as fairies carried off men, were seen in such eddies (Le Braz², ii. 239); among the Ainus, whirlwinds are embodiments of evil spirits (*ERE* i. 244); among the Baganda, a dust eddy is believed to be caused by ghosts at play (Roscoe, 282); among the Yoruba, an eddy of wind is a manifestation of a forest-god (Ellis, 79); among the Kurnai, it is thought that Brewin travels in a whirlwind (Howitt, *JAI* xiii. 194); or, as in Fiji and among the Pawnees, the whirlwind is caused by ghosts (Frazer, *GB*² i. 128). With all these peoples much the same methods of avoiding the eddy or of overcoming the beings in it are found; while, comparing these customs with that of attacking a storm with weapons, we see that both eddy and storm were first personified and then believed to contain hostile beings.

Thus, considering the similarity of what is attributed equally to fairies, witches, ghosts, demons, and spirits of all kinds, it is obvious that certain primitive ideas easily attached themselves to all these indifferently, and that the origin of fairies must be sought in no one recent source, but ultimately in very ancient beliefs of man regarding the beings of his imagination. At the same time, we must not omit that which his poetic fancies have lent to the whole fairy belief, for to do so would be to omit what has always been a most vital element in all folk-lore.

The fairies who figure in the earlier romances and in the Renaissance and later poets are in part the creatures of folk-tradition, in part the creations of the poetic imagination, and concern us but little here.[1]

II. Situation of fairyland.—Fairyland as a separate region is variously situated. Most generally it is a subterranean region, sometimes directly below men's dwellings, or within hills and mountains; and to the latter corresponds the mediæval tradition regarding the court of Venus in the 'Venusberg,' of which there were several (Venus here = a fay; see Grimm, 935). We may compare also the Irish tradition regarding the Tuatha Dé Danann and the *sid*, or mounds. The entrance to fairyland was through a cavern (or fairyland was in a cavern), crevice, pit, or wells on tops of hills: the oldest recorded example of this is found in Gervase of Tilbury's story of the Welsh Elidurus, who was taken by two small men through a subterranean passage to fairyland (*Itin. Cambr.* i. 8). In this aspect fairyland corresponds to Hades, as well as to Hell or Purgatory, the entrance to which is also often through a cave or cleft. Both in Teutonic and in Celtic regions, fairies are also associated with tumuli, or with old raths or forts, which are often seen lit up at night (for an early instance, see William of Newburgh, *Historia*, Oxford, 1719, i. 28). Fairyland is also within the waters, and accessible through wells or by diving beneath river or lake or sea (in this corresponding to one aspect of the Celtic Elysium; see BLEST, ABODE OF THE [Celtic]). This dwelling is both that of water-fairies and of other water-beings (§ 7). It is also on islands in lake or sea, which sometimes are seen by the gifted seer (Wentz, 147; Davies, *Mythol. and Rites of Brit. Druids*, 1809, p. 155). Here, again, there is a close correspondence with the island Elysium of the Celts (see *ERE* art. cited). Fairyland may also be all around, a kind of fourth dimensional region interpenetrating ours;[2] or it may suddenly be entered in a mist; or, again, it may be in the air. These various conceptions are connected with the original character of fairies, whether as Nature-spirits or ghosts; and in some instances the abode of older gods has become fairyland.

It is usually dangerous to violate any sacred fairy spot—tree, dwelling, etc.—as it is dangerous to enter the charmed fairy circle, or to cross the night ride of fairies. These are tabus to which many parallels from lower and higher cultures, with respect to sacred places, abodes or haunts of spirits, gods, or ghosts, might be adduced (see Codrington, 177, 218 f.; Seligmann, 184; MacCulloch, *CF*, ch. xi.).

LITERATURE.—There is no work covering the whole ground of the fairy belief, but T. Keightley's *Fairy Mythology*, new

[1] The mediæval writers against witchcraft condemned also fairies and all traffic with them, and the fairy-rings where their revels took place were assimilated to the blasted sward of the witches' Sabbat. This is seen in the trial of Jeanne d'Arc, in whose *procès* witches and fairies are mingled. In several French legends, fairies dance the Sabbat.

[1] See Nutt, *Fairy Myth. of Shakespeare*, 1900; Goyau, *La Vie et la mort des fées*, Paris, 1910; Delattre, *English Fairy Poetry*, Oxford, 1912.

[2] Cf. the New Britain saying regarding *matana nion*, the place of the dead: 'If our eyes were turned so that what is inside the head were now outside, we would see that *matana nion* was very near to us and not far away at all' (Brown, 192).

ed. 1900, is generally useful. Besides the principal collections of *Märchen*, see also W. Bell, *Shakespeare's Puck, and his Folklore*, 3 vols., London, 1852; J. Curtin, *Tales of the Fairies and the Ghost World*, London, 1895; J. Grimm, *Teutonic Mythology*, Eng. tr., London, 1880–1888, ch. 17; Introduction, 'Ueber die Elfen,' to T. C. Croker's *Fairy Legends*, Germ. tr., Leipzig, 1826; E. S. Hartland, *Science of Fairy Tales*, London, 1891; R. Kirk, *Secret Commonwealth of Elves, Fauns, and Fairies*, ed. Sir W. Scott, Edinburgh, 1815, A. Lang, 1893; L. F. A. Maury, *Les Fées du moyen âge*, Paris, 1843, new ed. in *Croyances et légendes du moyen âge*, do. 1896; H. Schreiber, *Die Feen in Europa*, Freiburg, 1842; Sir W. Scott, *Minstrelsy of the Scottish Border*, Introd. to 'Tale of Tamlane,' 1839, *Letters on Demonology and Witchcraft*[4], 1898; W. Y. Evans Wentz, *The Fairy Faith in Celtic Countries*, Oxford, 1911 (a curious mixture of science and credulity). See also the other authorities cited in the article.

J. A. MacCulloch.

FAITH.

FAITH (Christian). — Every act of religious faith shows two sides or aspects—a cognitive and a volitional. It is at once an affirmation of truth and a surrender to the truth affirmed. Apart from the first, it would be blind; apart from the second, without practical significance. The fact that the emphasis is sometimes placed on the one and sometimes on the other leads to two relatively distinct notions of faith. When the volitional aspect is emphasized, we have the notion commonly denoted by the word 'trust' (*q.v.*); when the cognitive, that denoted by the word 'belief' (*q.v.*). It is with faith as belief that we are concerned in the present article. The notion of trust is, indeed, vital for religion, but it has played no part in theological controversy.

1. Scripture doctrine of Faith.—(1) *In Jewish canonical and extra-canonical writings.*—Although there are only two OT passages (Dt 32[20], Hab 2[4]) in which the RV admits the substantive 'faith,' the idea is far from being infrequent. Every word of God comes with a claim to be received as true; to believe it is an act of obedience to God, as unbelief is rebellion and a mark of hardness of heart (Ex 14[11], Dt 1[32], Ps 78[32], Is 7[9]). At the same time, faith is not among the cardinal conceptions of OT religion. What God requires of men is less that they believe His word than that they fear, love, serve, obey, and trust Him. God's word is thought of rather as a commandment to be obeyed than as a message to be believed.

What first brought the notion of faith into the foreground was the loosening of the bond between religion and nationality, and the rise of a propaganda. When Hebrew religion entered, with a claim to universal acceptance, into competition with other religions and became a matter of personal choice, the question whether a man believed in the God of Israel and received His laws and promises as true inevitably advanced into a position of cardinal importance. The initial religious act became one of belief; and persistence in belief, the presupposition of fidelity to God. We can thus understand why in the later Jewish literature the notion of faith should be considerably more prominent than it is in the OT (En 46[7] 58[5], *Apoc. Bar.* 54[5. 16. 21]; Philo, *de Abrah.* 268; 2 Es 5[1] 9[7f.]).

(2) *In the teaching of Jesus.*—Evidence for the increasing importance that was being attached to faith will hardly, however, be discovered in the teaching of Jesus. Often as He uses the word, it is nearly always with the meaning of trust in the power and goodness of God (Mt 17[20], Mk 4[40]). This is the meaning even when He speaks of faith in Himself. What He has in view is not belief in His Messiahship or in any doctrine, but trust in the Divine power that works through Him (Mt 8[10] 9[2] 15[28]). Though He is conscious of bringing a new message, He lays the stress not on the acceptance of His word, but on the doing of it. 'This do, and thou shalt live' (Lk 10[28]). The message is so simple and self-evidencing that the question of believing it hardly comes into view.

(3) *In the writings of Paul.*—It was with the Christian proclamation that the idea of faith really entered on its great career. From the first the gospel was preached, not primarily as a law to be obeyed, but as a message to be believed (Ac 2[44] 4[4]); and the cardinal article of belief, that which included all others, was that Jesus is Lord and Christ. The doctrine of salvation through believing was, therefore, not introduced by Paul; in his controversy with Peter at Antioch he could assume it as common Christian ground. None the less, he marks a decisive stage in its development. He was the first to establish it on a reasoned basis, and to bring the Church to a clear consciousness of the new significance which faith had acquired. This he accomplished by demonstrating the congruence of faith with the nature of the Christian gospel. Since the gospel comes as a revelation of Divine grace and of a righteousness freely offered to guilty man, the fitting response on man's part can only be that of humble and thankful acceptance of the gift. Putting away the proud thought that he can stand on his own merits, he must believe in Him who justifies the ungodly (Gal 3, Ro 4). It is evident that faith as here conceived is a thing of the heart rather than of the intellect. It implies moral earnestness, the sense of sin and need, submissiveness and openness towards God, and is indistinguishable from the trust of which Jesus speaks. Doubtless the Apostle included in his notion of faith the acceptance of what we should describe as doctrine (Ro 10[9]). The grace of God had no meaning for him apart from the redemption drama in which it presented itself to his imagination and thought. Nevertheless, Wrede's assertion (*Paulus*, Tüb. 1904, p. 67), that what Paul means by faith is nothing more than the obedient affirmation of the preaching of redemption, is wide of the mark. In his doctrinal constructions, Paul has no other object than to set forth the sin-forgiving, salvation-bringing grace of God; and at bottom it is this grace he asks men to believe in and to trust.

In vindicating the title of faith to be regarded as the sole and sufficient condition of salvation, Paul considers it exclusively in its relation to justification. What he establishes is justification by faith. Does he think of faith as also the inner spring of the new life? In two or three passages he approaches this idea. He speaks of faith as working by love, and declares that whatever is not of faith is sin (Gal 5[6], Ro 14[23]). But in general the activities of the new life are traced not to faith, but to the transcendent working of the Holy Spirit. The Christian virtues and graces are fruits of the Spirit (Gal 5[22], Ro 8[2]). Our modern method of psychological derivation is foreign to his thought.

Much more important is the question whether faith, as defined in Ro 4, is an adequate description of the religious relation as Paul habitually con-

ceives it. Is the bond that unites the believer with Christ nothing else than trust in the Divine grace manifested in His Cross? The truth is that it is only in connexion with justification that the Apostle thinks of it in this way. In general, the union with Christ appears as something more intimate and close than can be described in ethical terms. The believer has died with Christ and risen with Him; he is in Christ, and Christ lives in him. While this has for Paul a strongly ethical meaning, to interpret it in purely ethical terms, as signifying nothing more than a death to sin and resurrection to righteousness, a reproduction of Christ's mind or spirit in the believer, is to miss its secret. The union he has in view is a mystical union. Like all mystics, he finds the idea of faith inadequate to express the religious relation. Whether he regards this mystical union as only a deeper interpretation of faith, or as something that follows on it, is not easy to decide (Gal 2[20], Eph 3[17]).

(4) *In the Fourth Gospel.*—As compared with that of Paul, the conception of faith found in the Fourth Gospel is distinctly more intellectualistic in character. The writer shows unmistakable affinities with the Greek thinkers. Faith appears as a result of the impression made on the onlookers, not so much by the grace and truth manifested in Christ's words and deeds, as by His miracles. His whole earthly career is presented in the light of a series of Divine attestations of His claim to be the Son of God (Jn 2[11] 4[53] 14[11] 20[31]). Believing and knowing are brought into the closest connexion with each other, are, indeed, treated as identical. Like the Greeks and Philo, the Evangelist attributes a saving significance to knowledge. At the same time, it is far from his intention to exhibit faith as a mere intellectual assent to the proposition, 'Jesus is the Son of God.' Everywhere the ethical factor, perhaps in conscious opposition to Gnostic tendencies, is strongly emphasized. Knowledge is not understood as a predominantly intellectual function; it includes sympathy and kinship with its object, a personal relation to Christ, and is morally conditioned (Jn 6[44] 5[44] 8[43] 7[17]).

Like Paul, the writer of the Fourth Gospel knows of a deeper relation of the soul to Christ than that of faith or knowledge. Everywhere the mystical union is in the foreground: 'I in them, and thou in me, that they may be perfected into one' (Jn 17[23]) —that is the profoundest secret of his piety. It is in virtue of this mystical union that the eternal and Divine life which belongs to Christ as His native possession is imparted to the believer. 'He that abideth in me, and I in him, the same beareth much fruit' (Jn 15[5]). The mystical vein of piety, which passed into Christianity from the Oriental religions, runs side by side with the Hebrew vein, and is suffused with the ethical spirit of the latter.

(5) *In the Epistle to the Hebrews.*—In the Epistle to the Hebrews we find a conception of faith which is modelled on that of Philo. Faith is the vision of the eternal realities of the unseen world—God, His righteousness, His salvation, the better country—the vision of these realities and the conviction that they are more enduring than the things we see and touch (He 11). As such it is the spring of all heroic action. Christ is related to it as its author and perfecter. He is the great example of faith, and through Him the salvation which the saints of the old time could only greet from afar has become a realized fact (vv.[13. 40]). Of all NT conceptions of faith, that of Hebrews is perhaps the broadest.

2. Catholic doctrine of Faith.—We have seen that, from the outset of the Christian community, faith was related to a doctrinal construction of Christ's Person and work. Always it implied belief in His power and dignity as Messiah and Lord, and in the reality of His redemption. If, notwithstanding this, the NT cannot be said to show, except in the latest books, any serious intellectualizing of the notion of faith, the explanation is to be found in the fact that doctrine was still sufficiently simple, ethical, and elastic to serve as a vehicle of the gospel. It still made its appeal less to the intellect than to the heart and conscience. But a time speedily arrived when this in large measure ceased to be true. The passing of the great constructive thinkers, and the Church's experience in Gnosticism of the dangers incident to unfettered speculation, led to the fixing of doctrine as an authoritative norm, the fitting attitude to which was intellectual submission. Nor was this all. More and more, doctrine was elaborated in a direction that removed it from the domain of the heart and conscience into that of the speculative reason. In determining the inner relations of the Trinity and the constitution of Christ's Person, the Church doubtless sought to safeguard what seemed to it vital religious interests. At the same time, such determinations were far removed from the simple truths of the gospel, and the importance attached to them had the result of throwing the latter into the shade. When assent to the creeds was made a condition of salvation, it was inevitable that faith should come to be understood as fundamentally an act of the intellect. By Augustine it is defined as 'cum assensione cogitare' (*de Prædest. Sanctor.* 5), and by Aquinas (*Summa*, II. 2, qu. 2, art. 2) as an act of the intellect which is moved to assent through the will. Three elements were distinguished in it—*notitia*, *assensus*, and *fiducia*; the first two being purely intellectual, and the third having but the slenderest claim to be regarded as ethical. Not only was faith intellectualized; it was conceived in the main as an act, not of insight and independent conviction, but of intellectual submission. The highest mysteries of the faith, being inaccessible to reason, could be received only on the ground of an external authority. Early Scholasticism, it is true, proceeded on the assumption that the doctrines of the Church were capable of being demonstrated to the reason; still the doctrines were first, and reason second. Moreover, the attempt to justify this assumption was in the end abandoned. Faith, in the Catholic conception of it, is authority-faith. And the authority that guarantees the truth of the doctrines is, in the last resort, the Church: 'Evangelio non crederem, nisi me catholicae ecclesiae commoveret auctoritas' (Aug. *contra Ep. Manich.* 6). The Church, therefore, is the real object to which *fiducia*, the practical element in faith, is referred. The notion was still further eviscerated when the Church came to recognize that an intelligent assent to its doctrines was more than could be expected from unlettered people, and to accept a *fides implicita*, or readiness to affirm these doctrines, though not precisely known, as sufficient for salvation.

So emptied of all ethical and religious meaning, faith could no longer sustain the weight of importance that had formerly been attached to it. While it continued to be regarded as indispensable for salvation, the goods of the Christian life were not connected with it in any organic way. The only bond was the external one of merit. God rewarded faith by bestowing forgiveness and infusing love. As the principle of justification, faith was supplanted by good works; as the principle of moral action, by love. One may say that its significance shrank to this, that it represented submission to the Church, and was on that account the condition of participation in the supernatural gifts which the Church dispensed to her children.

It is not to be denied that there were oth-

currents of thought in the Catholic Church. It would be easy to quote from Augustine and Aquinas passages in which faith is based not on authority, but on inner apprehension of Divine truth. Divine things, Augustine asserts, cannot be understood except by the pure in heart, and Aquinas guards against the idea that faith is an arbitrary choice. It presupposes a certain amount of natural trust and natural grace. Still the main drift was as described.

3. Protestant doctrine.—(1) *Luther.* — Luther restored faith to the place it occupies in the theology of Paul. Against the Roman doctrine of justification by works he set the Pauline doctrine of justification by faith only. In the act of believing, the sinner has full assurance of salvation; his assurance is not contingent on the good works he has done or may do, much less on any ceremonial observance. For salvation is a Divine promise; and, as 'without a promise we have nothing to believe, without faith the promise is useless, since it is through faith that it is established and fulfilled' (*de Captiv. Babyl. Eccl.*). Luther even went beyond Paul in making faith the principle not of justification alone, but of the whole Christian life. Its awakening is itself the new birth. Love does not require to be brought in as something additional; it is included in faith. Only believe, and you will do all good works from your own impulse. It is, indeed, from the faith behind them that good works derive their moral quality: 'Dum bonus aut malus quisquam efficitur, non hoc ab operibus sed a fide vel incredulitate oritur' (*de Libertate*).

The new significance attached to faith implies a deepened conception of it. It is no longer conceived as primarily an affair of the intellect. Luther defines it as a 'certa fiducia cordis et firmus assensus quo Christus apprehenditur' (*Commentary on Gal.* i.). It is nothing else than personal trust in the sin-forgiving grace of God; and it is the product not of reason, but of the impression which the Divine word makes on the heart and conscience.

This conception of faith sets up a new standard for doctrine. If doctrine is to be the object of faith, it must embody the gospel, must exhibit Christ in the characters that render Him our Saviour and awaken our trust. Of this Luther was dimly conscious. He saw that we apprehend Christ only in our experience of His merciful will: 'Misereri arguit eum esse Deum et distinguit ab aliis qui non possunt misereri, cum sint miseri; igitur qui miseretur et bonus est, Deus est.' But, though in these words Luther criticized the metaphysical formulæ of the Greek creeds, he did not seriously raise the question whether they fulfilled the requirement he had proposed. They imposed themselves upon him as something sacrosanct; and he was content to leave them unaltered, and to read into them as much evangelical meaning as they could carry.

(2) *The Reformed Church after Luther.*—Far from working out Luther's epoch-making ideas about faith, the Protestant Churches after the Reformation reverted in large measure to the Roman view. The traditional dogmas, supplemented by that of justification by faith, were elevated to their old position. In the object of faith the sum of the *articuli fidei* was included. As a consequence, the existence of a purely intellectual element in faith was again emphasized. While *fiducia* was regarded as decisive for salvation, *notitia* and *assensus* were made to precede it as necessary preliminary steps. More and more the ground of assent was again sought in authority, with this difference that for the authority of an infallible Church there was substituted that of an infallible Bible.

4. Modern discussions.—In the modern period of theology, which may be dated from the Illumination, discussions regarding faith have turned mainly on two points—its cognitive character; and its relation to the historical facts, above all to the fact of Christ.

(1) Every act of faith involves a judgment, an affirmation of truth or of what is regarded as truth. Faith is thus in one aspect *a cognitive process.* What is the nature of this process? On what grounds do the affirmations of faith ultimately rest? Are the grounds on which we affirm the justice or the goodness of God the same in kind as those on which the affirmations of science are based? The question is one which has far-reaching significance for theology; it is, one may assert, the only epistemological question with which theology has any deep concern.

For its theory of religious knowledge, Protestant orthodoxy was indebted to the theologians of the Catholic Church, above all to Aquinas. It distinguished between the knowledge of God which comes to us through the exercise of our natural reason, and a supplement of supernaturally communicated knowledge resting on authority. Eighteenth-century Rationalism, while it allowed the first, rejected the second. For Rationalism, all religious truths were truths of reason. But neither Protestant orthodoxy nor Rationalism thought of subjecting what it called reason to critical analysis.

(*a*) It was Kant who first undertook this task, and his account of reason forms one of the great landmarks in epistemological investigation. As the result of his analysis, Kant distinguished a twofold process in knowledge—that of the theoretical, and that of the practical reason. As theoretical, reason has for its domain the world of sense-experience, and for its instrument the categories—above all, the great category of causality. Within this domain it moves with logical certainty, rising from effect to cause and connecting fact with fact as parts of a single, ordered system. But there its competency ends. When the theoretical reason attempts to transcend the phenomenal world of sense-experience, and to explore, by means of its categories, the ultimate reality which lies behind that world, its incompetence is at once demonstrated by the paralogisms in which it finds itself involved. The transcendent objects with which religion is concerned cannot be established in a theoretical way. To reason as theoretical they are inaccessible. Only through reason as practical, *i.e.* as imposing itself upon us as the law of our conduct, do we attain to any knowledge of the unconditioned. Our religious knowledge comes to us as postulates of our moral consciousness, and the certainty with which we hold it is not a logical but a moral certainty. If our consciousness of being under obligation to obey the categorical imperative of our reason is not to be stultified, we must assume that our will is free, that beyond death there lies an opportunity for approximation to the moral ideal, and that the ultimate power in the universe is on the side of the good.

The Kantian account of knowledge has the great merit of bringing out the fact that our religious affirmations, unlike those of science, are morally conditioned. In other respects, however, it is open to grave objections. It leaves room for no knowledge of God unless as a postulate. Communion with God is possible only in the form that we fulfil our moral duties as God's commands. A theory which so limits the range of religious experience cannot be regarded as adequate.

(*b*) Fruitful as the Hegelian movement proved in many ways for theology, on the side of epistemology it represented a reaction in the direction

of Rationalism. For Hegel, religion was but the forecourt of philosophy, and religious apprehension but an undeveloped form of philosophical. Firm ground is reached only when the highest truth is logically developed from the idea and recognized as a necessity of thought. The distinction drawn by Kant between the theoretical and the practical reason completely disappears.

(*c*) Meanwhile the problem of knowledge was being attacked from another side. Herbart drew attention to the part which feeling plays in cognition. Not only is it involved in all our thinking, but in a particular class of judgments—the æsthetic and moral—it is the determinative factor. De Wette showed that in such judgments what we predicate of an object is not existence but worth. We arrange the objects of our experience in a scale of values, rising from hedonistic values to spiritual, the morally good forming the climax of the series. The idea of 'value-judgments' was taken up by Lotze, and still further developed. More definitely than De Wette he established their basis in feeling and connected them with religion. Faith, he declared, is the feeling that is appreciative of values (*Microcosmus*, Eng. tr.[4] i. 244 f.). Through our feeling for values we reach a knowledge of things as authentic as that given us in science. Nay, it is precisely such faith-knowledge that takes us to the heart of reality; for it is not in the world of forms with which science deals, but in the world of values, that the inner nature of things comes to expression.

(*d*) It belongs to the epoch-making significance of Albrecht Ritschl that he was the first to introduce the 'value-judgment' into theology, and to explain by it the character of faith-knowledge and faith-certainty. According to the Ritschlian view, all religious judgments are judgments of value, or rest on such. They have their ground not, as in the case of theoretical judgments, in the compulsion of perception and thought, but in our feeling for values. Our belief in the personality of God, for example, rests on the fact that we rank ourselves above Nature and claim dominion over it—rank the personal above the impersonal. We proceed on the principle that the highest in rank must be the ultimate in being. The impulse to set the good on the throne of the universe has behind it a feeling for the claim which the good makes on our will. In proportion as we seek the good, we are convinced that our efforts cannot be in vain, but that it is the fundamental law of things, and must assert its right against all resistance. It is the same feeling for values that lies at the basis of the affirmations which faith makes about Christ. The assertion that in Christ God meets us has no other ground than a valuation of the ends for which He lived and of the spirit that breathes through His every word and deed. His holy love authenticates itself to us as the love of the Father for this single reason, that it is the Divinest thing that has come within our experience. Always faith is concerned, not with causal explanation, but with values.

This theory of value-judgments is put forward as an analysis of the actual process of faith-knowing. It rests on the assumption that the certainty of faith is different in kind from the certainty with which we hold a scientific hypothesis. Is this assumption justified? Certainly the objects of faith—God, the Divinity of Christ, the immortality of the soul—do not present themselves to the religious mind as hypotheses, the validity of which has to be tested by the ordinary scientific canons. The assurance with which we affirm them is not measured by our ability to fit them into a causal or logical scheme of things. On all hands it is admitted that a complete theoretical demonstration of their reality is out of the question. From the conservative side we have, indeed, ever renewed attempts to establish Christ's Divinity in a theoretical way, by an appeal to such facts as His miracles, His sinlessness, His superhuman consciousness, and His bodily resurrection. But such a demonstration does not represent the experience in which faith is born, but is purely adventitious. And, even were the facts on which it is built beyond question, it would still remain, when judged by scientific canons, hopelessly inadequate. The truth is that the certainty of faith is not a logical, but a moral certainty. It is rooted not in the intellect, but in the heart and conscience, and is morally conditioned. Its measure is the force of our affirmation of the Good, the Fair, and the True. Faith is the soul's everlasting yea to the Divine realities that appeal to it. If it sets these realities on the throne of the universe, it is because a universe in which they were not central and supreme would be morally intolerable. In the value-judgment theory of religious apprehension the radically moral character of faith-certainty is brought, for the first time, to clear scientific expression.

That judgments of value have to be reckoned with among our cognitive processes is now widely recognized—even by logicians like Sigwart as well as by theologians. Where the Ritschlian epistemology encounters the strongest opposition is in its sceptical attitude towards the speculative reason, and in its demand that the knowledge of faith be kept free from all admixture of speculative elements—in its demand, that is to say, for the extrusion of speculative metaphysics from theology. To many this has seemed equivalent to setting up a double truth, and to a denial of the unity of thought. W. R. Inge, for example, while recognizing the significance of value-judgments for religion, and admitting that we cannot prove that our valuations are anything more than subjective, maintains that there must be a unifying principle in which the different activities of our nature are harmonized as activities of one person, directed towards one satisfying end, and that it is in this unifying experience that faith for the first time comes fully into its own.[1] In other words, faith is securely established only when we have succeeded in building our value-judgments, with all our other knowledge, into a single, coherent system. That the human mind will never cease from the attempt thus to synthesize its knowledge may be regarded as certain. And it would be rash to assert that the syntheses which philosophy offers are without significance for faith. It cannot, however, be admitted that faith is dependent on the constructions of any philosophy. In our Christian religion it is precisely those elements which have been imported from philosophy that have proved themselves the least stable. Christian faith, as distinct from speculative theology, really moves among a few grand, simple, and relatively constant truths; and these truths owe little or nothing to the speculative reason, but are the affirmations of the heart and conscience. While philosophy can render to religion, particularly in the domain of apologetics, a service that is real and indispensable, the idea that it will some day succeed, as Edward Caird hoped, in transforming the moral certainty of faith into logical certainty is purely fantastic.

(2) *To what extent is faith dependent on historical facts, particularly on the fact of Christ?* To state the question in a more general way—What is the medium through which God reveals Himself to the soul? How is the object of faith given?

Traditional theology has always distinguished between a general revelation and a special. The former it regards as given in Nature and in the moral order visible in the life of man. From

[1] *Faith and its Psychology*, pp. 51, 231.

Nature we can rise, by the exercise of our natural powers, to the idea of an almighty and intelligent Creator; from the moral order in human life to that of a righteous Lawgiver and Judge. To general faith, God thus presents Himself as an idea which has been reached through a process of thought. Special revelation, on the other hand, is regarded as consisting in certain 'saving facts' of history, these facts being, above all, the birth into our world of one who was the Son of God, the Second Person in the Trinity, and the atonement for sin He accomplished on the cross. In them specifically Christian faith has its object. While, however, the Incarnation and the Atonement are thought of as facts of history, it is evident that they are not of a kind that can be established by purely historical evidence. They come to us as a speculative construction or interpretation of the Person and work of the historical Jesus, the truth of which is guaranteed in the last resort by inspired Scripture. The immediate object of specifically Christian faith is thus, for traditional theology, not the historical facts of Jesus' life, but a doctrine or series of doctrines; and only when the doctrines have been accepted —whether on authority or as speculatively established—can faith enter. God's special historical revelation is given in the form of doctrine.

(*a*) It was against a historical revelation so conceived that the Rationalism of the eighteenth century directed its attack. Rejecting the traditional doctrines of Christianity, it put in their place the simple and self-evident ideas of reason as the one valid content of religious faith. These ideas—the chief of which are God, freedom, and immortality—are independent of Christ and, indeed, of all history; they are in their nature timeless, the same for every age and every race. For the significance of history, whether in religion or in any other department of human life, Rationalism had little feeling. In this respect the Kantian philosophy of religion marked no advance. For Kant, too, the content of religious faith is given in ideas that are timeless and necessary. The conception of a revelation—whether in Nature or in history—was barred for him by his doctrine of phenomenalism. The world of our inner and outer sense-experience, being merely phenomenal, can yield us no knowledge of the hidden power behind it.

(*b*) In the Hegelian philosophy the significance of history seems, at first sight, fully recognized. There is no more talk of phenomenalism or of the contingency of historical facts. History is exhibited as controlled by the immanent law of reason, and as the medium of a self-revelation of the Absolute. Of this self-revelation, the historical religions constitute a particular mode, Nature, art, and philosophy forming kindred modes. Christianity—which has as its characteristic that Christ is contemplated as the God-man, the realized unity of the Divine and the human—is established as the culmination of the series and the sole absolute religion. But what Hegel gives to history with one hand he takes away with the other. The religious way of envisaging the oneness of the human spirit with the Divine, the finite with the Infinite—as realized, that is to say, in the Person of Christ—is for him but a step on the road to the philosophical. Firm ground is reached only when the historical is left behind, and the highest truth is developed from the idea itself and recognized as a necessity of thought. Ultimately we are left with a rational idea as the sole adequate content of religious faith. To make this clear was one of the motives that led Strauss to write his *Leben Jesu*. He believed that in resolving the Gospel-narrative into a tissue of myth he was doing Christianity a real service, by compelling it to advance from the history-faith of popular religion to the higher faith which receives its object from thought alone. In this epoch-making book, Strauss also brought into the foreground an objection to basing faith on facts of history which had frequently been raised before, though never in so peremptory a fashion. Facts of history are known to us only through human testimony, and human testimony is fallible. How can we build our faith on a foundation that criticism may any day destroy, if it has not already destroyed it? This objection bears with particular force against the traditional conception of a historical revelation, since it is precisely the miraculous facts on which it relies to prove the significance of Christ that are most open to critical attack.

(*c*) Orthodoxy, Rationalism, and Idealistic Philosophy, widely as they differed in many respects, were all agreed in one fundamental assumption, that it is through the appropriation of an idea or doctrine that religion arises. Faith was made dependent for its object on a process of thought. Schleiermacher's importance for theology consists in no small degree in this, that he was the first to break with that tradition. Adopting the method of psychological analysis, he sought to demonstrate religion as a function of the Spirit, independent alike of philosophy, ethics, and dogmatics. Religion, he taught, is the immediate response of the Soul in feeling to the Divine reality which besets it behind and before. This reality is not, however, found in Christ or in any historical fact; it is not even anything moral as such. It is the Infinite, the Eternal, the Whole of things. Religion is the inrushing sense of the Infinite in the finite, of the Eternal in the temporal, our feeling that our time-life is a manifestation and organ of the eternal Whole and absolutely dependent on it. Significance is attributed to Christ only as a prototype of a new mode of such 'God-consciousness.' That Schleiermacher gives an adequate account of the content of Christian faith, few would now contend. None the less his demonstration of religion as an immediate experience of Divine reality, and as independent of the constructions of theology and philosophy, stands for all time.

(*d*) Ritschl learned from Schleiermacher that faith springs up as the result of contact with Divine reality, and that its object, therefore, is not to be sought in any idea or doctrine. But, holding a definitely ethical and Christian conception of God, he could not regard the Whole of things as the field where the soul finds Him. Not in Nature, but only in the historical life of man, can God reveal Himself in His moral working and as the God of our salvation. And, among the facts of history in which He approaches us, Jesus Christ possesses a significance that is not only supreme but absolutely unique. What gives to Christ such significance is not the miraculous facts on which traditional theology relies to prove His Divinity, but the moral and religious traits of His character as they manifest themselves in word and deed. In contact with His moral might and holy love, we feel the hand of God laid upon us, and know that He has drawn near to us to forgive and overcome our sin and to call us into His fellowship and service.

The historical Jesus, and not any doctrine of His Person and work, is for Ritschl the object of faith. What then is doctrine? It is a product of faith, and intelligible only as an expression of what the soul has found in Christ. This need not be taken as denying to the doctrines of the Church any direct religious value. We know that for countless thousands the doctrine of the Atonement has been the one great medium through which they have

apprehended the forgiving and saving love of God. That it does exhibit the holy love of God as manifested in Christ in a powerful and dramatic way, no one with any feeling for reality will deny. This, however, does not affect the question whether it is not something secondary. Behind it lies the historical fact of Jesus dealing with publicans and sinners, His ministry among the weary and the lost. It is from the love which shines out from this ministry that the doctrine of the Atonement derives its living content. The historical reality and not the speculative construction is the primary fact, and the latter cannot be accepted as a substitute for the former.

The Ritschlian view of the historical Jesus as the one ground of Christian faith has been attacked as involving a static conception of revelation. Is not God, it is objected, always revealing Himself to mankind, and in a progressive way? Is He not as active in the present as in the past, and is it not precisely His activity in the present that creates our experience of Him as the living God? Can we regard the Jesus of history as God's last word to us? In order to conserve the constancy and progressiveness of revelation and at the same time to escape the menace of historical criticism, Loisy and Inge, among others, have sought the ground of Christian faith in the living Christ, as He manifests Himself in the Church and the individual soul, rather than in the Jesus of history. The significance of the latter they find in this, that He introduced the movement which in its entirety will constitute a theophany in the life of humanity. It has to be said, however, that the problem which such writers attempt in this way to solve is not that which Ritschl had before him. About the progress of Christian thought Ritschl was not concerned. His one concern was with what he regarded as the fundamental Christian experience, the assurance, namely, that we have a gracious, sin-forgiving God. How can such an experience be reached? In attaching it exclusively to the person of Jesus, Ritschl does certainly give ground for the charge that he denies any other channel of revelation. It would be difficult to deny the fact that many have reached the experience he has in view in other ways than through contact with the historical Jesus. The love of Jesus meets us not only in the written Gospels and in the preaching of the Church, but also in men filled with His Spirit; and, wherever we are brought up before it, it authenticates itself to us as something Divine, and has power to produce within us the assurance that the God of our life is a God of grace. But, while this must be admitted, the history of the Church has made it abundantly clear that Christianity loses its vitality when the Person of its founder is forgotten or obscured. The men and women who have been the driving forces in the Christian community have drawn their inspiration from no secondary source, but from Christ Himself. That in a Christian community there is a power at work which with a certain fitness can be described as 'the living Christ'—an ideal of Christian life and character, as it has shaped itself in the modern mind—is not to be denied. And such a power cannot but possess immense significance for religion, for this among other reasons, that in it God speaks to us in the language of to-day. But can it be accepted as a substitute for the Christ of history? One may assert that the Christ of history, while a child of His time with respect to the forms of His thought, in the essential features of His life and teaching stands above time. A wealth of significance belongs to Him far transcending that of our richest ideals, and a power to awaken and sustain faith in the living God of salvation such as meets us in no other fact of our experience.

W. MORGAN.

FAITH (Greek).—In this article we propose (1) to give some account of religious faith as an actual feature of Greek life, and (2) to indicate the relation between faith and knowledge in Greek philosophy.

I. Faith as a religious force.—(1) *Its nature.*—By religious faith we understand belief coupled with trust in a Divine power. Both these elements enter into the words πίστις and πιστεύειν, although the moral rather than the intellectual notion is prominent in each, especially in the verb (W. R. Inge, *Faith and its Psychology*, London, 1909, p. 3 f.). But, to see the distinctive character of Greek faith, we must turn to its objective aspect. The Greek faith was polytheistic. Its deities were beautiful, and often sublime, conceptions. At the same time—we speak of the national religion rather than of local cults—they were but glorified types of humanity, beings who inspired confidence rather than dread, and with whom the artistic imagination freely played.

(2) *Its history.*—The faith thus described was a living force in Greece till about the middle of the 5th cent. B.C. It is true that in the lyric poetry of the 6th and 7th centuries 'the figure of Zeus dwarfs and obscures all the other divine personalities' (J. Adam, *Relig. Teachers of Greece*, Edinburgh, 1908, p. 83; cf. J. P. Mahaffy, *Social Life in Greece*[2], London, 1875, p. 94). But there is no revolt against the old national faith. The lyric poets 'never advanced even to the most distant hint of atheism, or to a denial that the gods could and did interfere in human affairs' (Mahaffy, 92). Polytheism, gradually purged, indeed, of its grosser elements, was the accepted creed of the Greek poets from Homer to Sophocles. It inspired the masterpieces of the greatest period of Greek sculpture. It was at the heart of every great movement in the formative period of Greek history. Of this, two illustrations may be given. The first is the Apolline cult. The worship of Apollo was, directly or indirectly, a leading factor in the intellectual, moral, social, and political development of the Greeks (for details, cf. L. R. Farnell, in *HDB* v. 145 f.). To take but one instance—the Apolline cult was largely instrumental in introducing and in gradually deepening the vital ethical conception of purification from sin. Our second illustration is from the Persian war. Plato (*Laws*, iii. 699) expressly mentions trust in the gods as one of the great causes of the Greek victory. And the truth of his statement must come home powerfully to every reader of Herodotus. It was faith in the gods that kept Leonidas at Thermopylæ, and the fleet at Salamis (vii. 220, 143). It was this that nerved the Athenians to reject the overtures of Mardonius (viii. 143). And accordingly, when the Athenians appealed to Sparta for aid, they referred to this faith as their own supreme motive: 'We, reverencing Zeus Hellenius, and fearing to betray Hellas, have not accepted the offer of the king' (ix. 7). Finally, Themistocles, addressing his captains after the battle of Salamis, emphatically declares that their deliverance was due, not to themselves, but to the gods (viii. 109), which he would certainly not have done unless he had been sure that he was expressing the uppermost thought of all (E. E. G., *Makers of Hellas*, London, 1903, p. 539). For the above view as to

the power of the traditional faith, cf. also Mahaffy, p. 358.

As Greek faith rested on polytheism, it flourished as long as the latter remained credible. But, about the middle of the 5th cent., rationalism, which had arisen in the Greek colonies of Asia Minor, began to play havoc with traditional belief, and the age of faith was succeeded by the so-called age of illumination (J. Adam, 270 f.; L. Campbell, *Relig. in Greek Liter.*, London, 1898, pp. 208, 295). This corresponds, roughly speaking, to the latter half of the 5th century. On the other hand, the rapid spread of new ideas provoked a reaction, the most notable incident of which was the condemnation and death of Socrates (399 B.C.). Did the national religion ever regain its old vitality? Mahaffy argues (p. 355 ff.) that Grote and others have greatly exaggerated the scepticism of the last period of Greek history. But even he does not maintain that the old polytheistic creed ever again expressed the prevailing religious attitude of thoughtful minds. There was, indeed, much earnest religious life in the following centuries. This is especially true of the Stoic and the Mystic. But their belief does not concern us here, both because it was not properly national, and also because, being pantheistic, it could hardly be said to embrace the element of trust which belongs to a genuine religious faith.

2. Faith and knowledge.—According to our definition, faith is an act at once intellectual and moral. But such a mode of conceiving man's knowledge of God is foreign to Greek thought. Reason alone, according to Greek philosophy, is adequate to the knowledge of God. This view forms an essential part of Aristotle's teaching, but it is in the *Republic* of Plato (511, etc.) that the superiority of knowledge to faith is most distinctly laid down. According to Plato, πίστις is but a stage in the pathway to knowledge, a stage in which the visible and opinable is regarded as true. 'With Plato, Knowledge and not Faith is "the assurance of things hoped for, the test of things not seen"' (J. Adam, 407).

On the other hand, the opposition between knowledge and faith in Greek philosophy is not so absolute as may at first appear. For knowledge, while ascribed to reason alone, is often brought into closest relation with the moral nature. Thus, Pythagoras viewed the pursuit of knowledge as a means to spiritual emancipation (J. Adam, 193 f.); Socrates, again, viewed knowledge as 'a certain overmastering principle or power that lays hold primarily, indeed, of the intellect, but through the intellect of the entire personality' (*ib.* 329). And, similarly, Plato taught that in the conversion wrought by knowledge the character also is involved. It is a revolution in which the whole nature shares (ξὺν ὅλῃ τῇ ψυχῇ, *ib.* 412; Plato, *Rep.* 518 C). Lastly, the figure by which, in the *Symposium*, Plato sets forth the knowledge of God is that of the soul's marriage with her ideal. It is still knowledge, an *amor intellectualis*, with which he professes to deal. But it is obvious how near the conception brings us to the standpoint of Christian faith.

I. F. BURNS.

FAITH (Muslim).—The Muham. term for 'faith' is *īmān*, and he who possesses it is called a *mu'min*, or 'believer.' Sūra xxiii. of the Qur'ān, revealed at Mecca, is called the 'Sūra of the Believers'; it begins:

'Happy now the Believers; who humble them in their prayer; and who keep aloof from vain words; and who are doers of alms-deeds; and who restrain their appetites, save with their wives, or the slaves whom their right hands possess, for in that case they shall be free from blame, but they whose desires reach further than this are transgressors; and who themselves tend well their trusts and their covenants; and who keep strictly to their prayers' (vv.1-9).

In two other Meccan sūras (ciii. 3, lxxxv. 11) they are described as 'those who do things which are right'—a form of expression which occurs very frequently in later sūras. The term 'O ye who believe' is found only in the Medīna sūras. All such are called upon to perform various duties and to exhibit certain qualities. Thus, those who believe are to seek help with patience; to retaliate for blood-shedding; to observe the prescribed fast; to hope for God's mercy should they lose their lives in fighting for Him; to take care not to make their alms useless by indulging in reproaches; to fear God and abandon usury (ii. 148, 173, 179, 215, 266, 278). They are not to fear the infidels (viii. 15); they must help God; obey God and the Apostle (xlvii. 8, 35). They are not to take infidels as their friends; they are to avoid intimacy with persons outside the Muhammadan community; they are to be patient and fear God (iii. 27, 114, 200). They are not to devour one another's substance in frivolities, or to come to prayer when drunk (iv. 33, 46). They are to remember God with frequent remembrance, and to praise Him night and morning (xxxiii. 41). They must not make friendship with foes of the Prophet, or with those with whom God is angry (lx. 1, 13). They must carefully observe their engagements, the rites of God, and the sacred month, and must avoid wine and games of chance (v. 1, 2, 92).

It will be seen that Muḥammad associated the profession of faith with the performance of certain duties, without giving any distinct definition of the term 'faith' itself; but in a tradition it is recorded that he said that faith is belief in God, His Angels, His Books, His Messengers, in the Last Day, and in the predestination of good and evil. This is called *īmān-i-mufaṣṣal*, 'the detailed confession.' A briefer form is: 'I believe in God, His name and attributes, and accept all His commands.' This is called *īmān-i-mujmal*, 'the shortened confession.' These definitions refer to the assent to, and the acceptance of, certain dogmas. Muslim theologians have, therefore, defined faith as intellectual acquiescence (*taṣdīq al-qalb*) in the teaching of Muḥammad. This is faith in its simplest form, to which can be added, in order to make it perfect, the open confession of this belief and the practice of good works as flowing from it. Still, in order to be a believer, nothing beyond the intellectual assent is needed. Let a man have that; then, even though he be an evil-doer, he must be regarded as a believer. An illustration used is that a tree may have neither leaves nor fruit and still it is a tree. Believers, therefore, can be classified into men who believe, confess, and do good works; men who believe, confess, and do some good works; and men who believe, confess, and do no good works. A man who openly confesses, 'There is no god but God, and Muḥammad is the Apostle of God,' and does not really believe it, is at heart an infidel; yet he must be called a believer, for no one can know the secret thoughts of another man, and open confession must be assumed to represent inner belief.

These various views, which lay little stress on the moral effect of faith, are not accepted by the Mu'tazilites, the free-thinkers of Islām, who deny that a man who has committed a great sin can any longer be called a believer. They would not call him an infidel, but place him mid-way between believers and infidels. There are some extreme sects, again, who hold that a believer—one who intellectually assents—however wicked he may be, will not enter hell; but the orthodox opinion is

that, as all believers, even the most perfect, have committed some sin or other, they must enter hell for such shorter or longer time as each case may require. All will finally be saved; for no Muslim, even the most wicked, can suffer eternal punishment, or be annihilated. Paradise is the final goal of all believers. Thus, speaking generally, the most important element in faith is the intellectual assent, which secures to a man the title and position of a believer, whether the moral results of his belief be good, bad, or indifferent.

There are other definitions of the term *īmān*, framed with reference to the grounds on which it is based, or the means by which it is formed. Traditional faith (*īmān fī taqlīd*) is based on the authority of a teacher (*taqlīd*), without any attempt being made to prove its correctness. This is the faith of the unlearned, who have not the ability to search out things for themselves. Those who have the leisure and the necessary intelligence to investigate religious matters, and who then believe, are said to possess faith founded on knowledge (*īmān fī 'ilm*). Faith which rests on the inner vision (*īmān fī a'yān*), or intuition of the mystic, is progressive in its nature. The last stage is attained only when devotion to God is so absolute that the soul is absorbed in God, the great Reality.

Another point round which many controversies have raged is whether *īmān* and *Islām* are the same. The orthodox view is that they are synonymous, and that a Muslim is a *mu'min*, a believer. By others, *Islām* is looked upon as a larger term than *īmān*. It is said that *Islām* signifies belief with the heart, confession with the tongue, and good works done by the various parts of the body. *Īmān* refers to the first of these, and is, therefore, only a component part of *Islām*. The believer who confesses his belief and practises what he believes unites *Islām* and *īmān*; he who does not so confess and practise possesses *īmān* only. On the other hand, he who confesses and acts, without having any real belief, is not a true believer. Those who hold that confession and action are both essential would not consider assent to the teaching of Muḥammad made on a death-bed to be of much value, as the opportunity for confession of belief and action on it would be gone. The term *Islām*, however, lays great stress on such action. The Muslim is a man who is resigned to the will of God as regards the performance of the five practical duties. It is not so much resignation to the providential dealings of God with a man as submission to, and implicit compliance with, the order to fulfil certain duties. So far, this seems to support the views of those theologians who teach that *Islām* and *īmān* must be kept quite distinct. They say, for instance, that works cannot be a part of faith, for a man who believes and confesses and dies before he does good deeds is a believer and enters Paradise, even if he dies before he makes open confession of his faith.

Another question in dispute is whether faith can decrease and increase. Some say that it does not change, and is not affected by sin, or by the omission of religious duties, though such shortcoming will be punished. Others admit that, in the case of the Companions of the Prophet, faith did increase, for new revelations brought fresh truths to them; but, now that the dogmas of Islām are fixed and there is no further development, faith cannot increase. Ash-Shāfi'ī, however, maintained that, if religious duties were neglected, faith would decrease; to this the reply is made that, at certain times, women do not say the stated prayers, or give alms, yet their faith is not thereby decreased. The view of Ash-Shāfi'ī seems, however, to be supported by a verse of the Qur'ān, revealed to encourage the Muslims when an attack on them was imminent: 'Who, when men said to them, "Now are the Meccans mustering against you; therefore, fear them"—it only increased their faith' (iii. 167). The following further distinctions are made by those who agree with Ash-Shāfi'ī: the faith of men and of the *jinn* increases and decreases; the faith of prophets increases only; the faith of angels neither increases nor decreases.

It is usual to divide mankind into two classes: those who believe in the teaching of Muḥammad, and so have faith and are *mu'mins*, or believers; those who do not so believe, and are, therefore, *kāfirs*, or infidels, to which class all non-Muslims belong. These, if they reject the truth after investigation, are not so blameworthy as if they had declined to accept it through sheer obstinacy. Muslims may have defective faith, but can never be called infidels, though they may be called heretics. In this category the orthodox place all those who have tried to bring reason to bear on religion and have striven to put away the incubus of traditionalism. Again, those who give prominence to the idea expressed by *īmān* would say that infidelity proceeds from ignorance of God and His Apostle; but those who lay stress on the technical meaning of *Islām* assert that it proceeds from disobedience to the law of good works, that is, from neglect of the five duties of Islām. Again, those who reject the Qur'ān as a revelation from God are infidels and have no *īmān*.

One day, Abū Sufyān, Abū Jahl, al-Walīd, and others were in the company of Muḥammad and listened to his revelations, but did not believe them. It is said that a veil was cast over their hearts so that they should not understand, and that, 'though they should see all kinds of signs, they will refuse all faith in them, until, when they come to dispute with thee, the infidels say: "Verily, this is nothing but fables of the ancients"' (vi. 25 and Baiḍāwī's commentary).

Again, all who believe in the Divinity of Jesus Christ are infidels. 'Infidels now are they who say God is the Messiah, Son of Mary' (v. 76).

Muḥammad called Christians the 'people of the book,' and was sometimes friendly towards them, but he entirely misunderstood the Christian doctrine of the Trinity. This, and the fact that he had now lost all hope of winning the Arabian Christians over to his side, led him to burst forth in the latest and most intolerant of the sūras, in strong denunciation of Christians, who are to be shunned, and whom believers may not take as friends (v. 56).

At the time of death both the believer and the infidel see their future lot: heaven in the one case, hell in the other. Should the infidel then repent, his faith is not to be considered trustworthy, because, according to some theologians, faith implies good works. If a person is asked whether he is a believer, he should say, 'I am a believer'; he should not say, 'If God willeth, I am a believer,' as, according to the teaching of Abū Ḥanīfa, such a statement would imply doubt as to the reality of the fact of his being a believer; but Ash-Shāfi'ī considers it right to say, 'If God willeth.'

The conclusion of the whole matter is that a believer, though he may be a very wicked man, and may even hold heretical opinions, does not cease to be a believer, for a great sin does not exclude the person who believes from *īmān*, and does not make him an unbeliever. In order to become an infidel, and so be classed with unbelievers, the man must either deny the existence of God, or associate other gods with Him, or deny the divine mission of Muḥammad, or, with reference to things lawful and unlawful, decline to accept the ruling which by 'general consent' (*ijmā'*) of the Muslim world is current.

LITERATURE.—Almost the only considerable treatment in a Western language on 'Faith' in Islām is L. Krehl's *Beiträge zur Characteristik der Lehre vom Glauben im Islām*, Leipzig, 1877, p. 47 ff. O. Pautz, *Muhammeds Lehre von der Offenbarung*, Leipzig, 1898, p. 153 ff., collects usefully the Qur'ānic phraseology. The reader may consult also T. Haarbrücker's tr. of Shahrastānī's *Religionspartheien*, Halle, 1850; L. Krehl, *D. Leben u. d. Lehre d. Muhammeds*, Leipzig, 1884; H. Grimme, *System d. koran. Theologie*, Münster, 1895; M. Schreiner,

'Beiträge zur Gesch. d. theol. Bewegungen in Islam,' *ZDMG* lii. and liii. (1898–99); I. Goldziher, *Die Zâhiriten*, Leipzig, 1884; E. Sell, *Faith of Islam*³, London, 1907, p. 185 ff.; D. B. Macdonald, *Development of Muslim Theology*, New York, 1903; *1001 Nights*, in Burton's or Payne's tr. (Nights 436 ff. [Story of Taiwaddud]); Justice 'Abdur Rahim, *Muhammadan Jurisprudence*, Madras, 1911, pp. 51, 249. EDWARD SELL.

FAITH (Roman).—In this short survey we shall notice (1) the general character of Roman religious faith, and (2) its comparative vitality at different epochs.

1. Its character.—The most distinctive feature of Roman religious faith was its vague and largely impersonal character. This is reflected in the Divine beings worshipped. It is generally agreed that the objects of primitive Roman worship were spirits, *numina*, conceived either as inherent in particular objects—which was probably the earlier mode—or as presiding over particular actions. In their close connexion with things or actions, of which they were an ideal reflexion, such *numina* lacked the attribute of independent personality which belongs to gods. Yet even the acquisition of individual names (such as Fons or Robigus) marked a step towards such independence. By and by certain *numina*—Janus, Jupiter, Mars, Quirinus, and Vesta—stood out from the crowd of lesser Divine beings. These, and possibly a few others, through their importance in ritual and consequent prominence in the minds of the worshippers, became in a sense personal deities. But the personality of even the chief Roman divinities, prior to their amalgamation with the Greek gods and goddesses, rested on little more than a name. Now, it is probable that the earliest Greek conception of spirits was similar to the Roman—they were life potencies rather than persons (cf. J. E. Harrison, *Proleg. to the Study of Greek Religion*², Cambridge, 1908, esp. ch. iv. p. 162, and ch. v.). But, whereas these first shadowy conceptions of the Divine gave place to the richly personal creations of Greek mythology (see art. FAITH [Greek]), the Roman divinities remained, in comparison, vague and formless.

Closely connected with this lack of personality in the objects of worship was the largely impersonal attitude of the worshipper. Apart from the narrow sphere of strictly family worship (for which cf. W. Warde Fowler, *The Relig. Exper. of the Roman People*, London, 1911, ch. v.), each Roman's religion was undertaken by the State. It was reduced to a science, and gradually incorporated in the *jus divinum*, which laid down the exact and elaborate ritual required for maintaining a right relation between the citizen and his deities. At this ritual the private citizen was an onlooker. It was enough for him to be ceremonially clean, and to keep silence. 'In no other ancient State that we know of did the citizen so entirely resign the regulation of all his dealings with the State's gods to the constituted authorities set over him' (*ib.* p. 226). Yet it is not to be supposed that his religion was a mere form. With the problems, indeed, of the personal religious life the typical Roman had little or no concern. But his faith in his country's gods was real, and it was rooted, moreover, in a profound sense of the supernatural.

2. Its decay and the attempt to revive it.—The faith thus described flourished until the time of the war with Hannibal (218 B.C.). But from that time onwards it suffered a rapid decay. This was due in part to the longing for a more emotional religion, which, though not unknown before, grew to painful intensity amid the stress of the Hannibalic war, especially at moments when the national gods seemed powerless to avert disaster. But it was due also, and far more, to the disintegrating influence of Greek philosophy, which was already, in the 2nd cent. B.C., eagerly studied by many Romans. We can indicate only very briefly the effect produced by these and other causes. In the last age of the Republic, while many sought religious satisfaction in new ways—in Pythagorean mysticism, for example, or in orgiastic foreign worships, and in many forms of allied superstition—there was no Roman religion worthy of the name. The ancient forms no longer expressed a genuine belief either among the people or among their rulers. Even the outward fabric was fast decaying. Old cults and old deities fell into partial or complete neglect. Old priesthoods fell into abeyance, or became mere steps in the ladder of political ambition, while on every side the temples were crumbling into ruins (Hor. *Od.* III. vi.; Propert. ii. 6. 35 f., etc.). And, lastly, the age was as conspicuous for immorality as for unbelief (cf., *e.g.*, Mommsen, *Hist. of Rome*, tr. W. P. Dickson, new ed., 1894, bk. v. ch. xi.).

But the national conscience was not dead. We find in writings of the age a profound sense of national ill-being—here the sense of national guilt, there of misery entailed by neglected duty to the gods (Livy, *Præf.*; Hor. *Od.* III. vi., *Epod.* xvi.; Virg. *Ecl.* iv.; etc.). The superstitious extravagances above described were themselves a symptom of spiritual unrest. Now, it was to such feelings that Virgil appealed in his great poem, wherein he reminded the Roman people of their high destiny, and of the way to its attainment—through a *pietas* like that of his hero, the service of the State with the help of the State's deities. And it was to this task that Augustus, the original of Virgil's hero, devoted himself. His revival of the State religion is described by Fowler as 'the most remarkable event in the history of the Roman religion, and one almost unique in religious history' (*op. cit.* p. 428 f.). He did all in his power to reinstate the old religion in the faith and affections of the people, chiefly by the revival of ancient cults, and by a vast work of temple restoration (*Mon. Ancyr.* iv. 7; Livy, iv. 20. 7; Ovid, *Fast.* ii. 59, etc.), while he sought to strengthen his own dynasty by linking it at many points with the restored religious order (cf. esp. Hor. *Carm. Sæc.*). Finally, the religious policy of Augustus was continued by his successors. If, now, we seek to estimate the general importance of the old Roman religion in the early Empire, we may point, among other evidences, to the curious fact that it was against this rather than the philosophy of the Oriental worships of their time that the Christian Fathers directed their keenest ridicule. If we ask, on the other hand, whether as a spiritual force the Roman faith had any real renascence, the question is not so easy to answer. Here it must suffice to add that both in Rome and in the provinces 'the old religion continued to exist for at least three centuries in outward form, and to some extent in popular belief' (Fowler, 429).

See, further, art. ROMAN RELIGION.

LITERATURE.—An ample bibliography will be found in the work of W. Warde Fowler above referred to, and especially in its introductory chapter. I. F. BURNS.

FAITH-HEALING.—A term used to express a belief that in the curing of disease the faith of the sufferer (or of others) is a contributory factor. This faith puts its trust in the immediate action of a super-normal being, acting with or without means. In the strictest sense, therefore, faith-healing may be said to exclude the use of visible means of healing; but, in the wider sense—in the sense, that is to say, in which 'faith-healing' occurs as a historical phenomenon—it admits such means as one factor in the process of healing. The prin-

cipal species are named mental healing, magnetic healing, spiritualistic healing, and spiritual healing. In all, *suggestion* plays a leading part. The most widely spread sub-species of mental healing is that known as Christian Science (*q.v.*), and the strongest form of suggestion is called hypnotism (*q.v.*).

1. History. — Faith-healing is the oldest form of healing in the world, or, at any rate, it grew up side by side with medical practice in its earliest and crudest form, and as its predominant partner. The earliest diagnosis gave as the cause of disease the action of some god or spirit (cf. artt. on DISEASE AND MEDICINE), and, therefore, prescribed a homœopathic cathartic. Thus the 'frenzy' of the Dionysiac mysteries was cured by wild music and wilder dancings. 'The Bacchic women are cured of their frenzy by the use of the dance and of music' (Plato, *Laws*, vii. 790). But the dance was a cosmic dance, and the music was the melodies of Olympus taught by Marsyas (Plato, *Symp.* 215); hence the disease which was of Divine causation was cured by faith working with the use of means which were themselves of a Divine nature. If to music, dancing, and incense were added prescriptions of sundry washings, or abstinence from certain animals and plants as food, this was done for religious, not scientific, reasons. The prescription was directed to the faith of the sufferer, bidding him use that faith in an appeal to the deity who had sent the disease.

But it was not the *morbus sacer*, madness, or epilepsy, alone which faith in the god could cure. From the inscriptions of Epidaurus in Argolis we learn that in the 4th cent. B.C. such diseases as spots on the face, blindness, lameness, barrenness, hernia, snake-bite, baldness, headache, suppuration, phthisis, paralysis, and gout were cured by the power of the god joined to the faith of the sufferer (Dittenberger, *Syll. Inscr. Græc.*[2], Leipzig, 1898, 1901; Fiebig, *Kleine Texte*, no. 79; cf. Herodas, *Mimes*, 4). One point which recurs frequently in the inscriptions from Epidaurus is that the sufferer was put to sleep, in this 'temple-sleep' saw a vision, and in the morning awoke cured. In other words, the priests were acquainted with the power of hypnotism and of hypnotic suggestion. Moreover, it is not hazardous to infer from some of the inscriptions that, during the hypnotic sleep, operations were performed and massage and other remedies applied—in one case, the sleeping patient saw the god and his attendants seize him, cut open his abdomen, and stitch it up; and, when he went away on the morrow cured, 'the floor of the sanctuary was full of blood.' The difference between the practice of ancient times and that of to-day is here made clear. The priest of Asklepios based his surgery on the religious faith of the patient. Modern surgery has, as a rule, contented itself with mechanical methods, and abjured or left out of account the therapeutic power of faith.

The close connexion between faith-healing and invisible causal agents of disease is illustrated by the practice of exorcism.

Josephus tells us (*Ant.* VIII. ii. 5) that Eleazar, trusting in the traditional lore and power of Solomon, in the presence of Vespasian and his sons and chiliarchs and a multitude of soldiers, drew out of the nostrils of a certain man a demon who possessed him, by using a certain root that he had placed in his signet ring. As proof of the departure of the demon, the latter had been ordered in departing to overturn a vessel of water placed handy for the purpose, which was done. On another occasion, Vespasian, when in Alexandria, was moved, under the auspices of Serapis, to cure a blind man by anointing with spittle, and a man with a paralyzed hand by letting him be touched by his foot and garment. Both cures were effected in the presence of a great multitude, and were testified to by them all—especially afterwards, Tacitus adds cynically, when there was no temptation to tell lies about the matter (Tac. *Hist.* iv. 81; cf. Sueton. *Vespas.* 7; Dio Cass. *Hist. Rom.* lxvi. 8; Suetonius adds that the sufferers were instigated by a vision seen in dreams).

It is clear, then, that Christianity came into a world which believed in the power of gods (or heroes), as shown in divination (or prophecy), exorcism, and healing, that is, in processes in which a god and the faith of the sufferer were joint-actors. The title *Soter* was bestowed on all healing gods, such as Apollo, Asklepios, and Zeus himself; and, at the beginning of our era, power of healing was regarded as a necessary activity of every being for whom divinity was claimed.

In the earliest documents of the Christian Church faith-healing is frequently referred to, and is a dominant factor in the acts of healing wrought by Jesus Christ. The centurion's servant was healed because of the faith of his master (Mt 8[13]); a paralyzed man was healed on account of the faith of his friends (9[2]); the woman with an issue was made whole by her faith (9[22]); so were the two blind men (9[29]); and so was the daughter of the Canaanitish woman (15[28]). On the other hand, the lunatic boy's cure was delayed through want of faith (17[20]); and it is significant that the sins of the woman who was a sinner were forgiven because of her faith (Lk 7[50]). Moreover, it is expressly recorded that on one occasion Jesus did not (Mt 13[58]), and could not (Mk 6[5]), put forth His power because of the want of faith of the people. The inference is necessary that the method of healing followed by Jesus was of the same general character as that practised by the priests of Asklepios, that is to say, it depended partly on a power put forth by the healer, and partly on an active receptiveness on the side of the sufferer. This, again, corroborates the definition given above of faith-healing, viz. that it consists, as a matter of historical fact, not so much in the power of faith (or of auto-suggestion) as in the power of faith acting in conjunction with some external agency, visible or invisible.

In the Apostolic age the passage 1 Co 12 is classical for its conception of faith-healing. According to it, the power to heal was a gift of the Spirit (v.[9]); it was one among other gifts (v.[11]); it was given not to all (v.[30]); it was one of the greater gifts, and as such was to be sought for (v.[31]); its chief object was the common good (v.[7]), and the royal road to its attainment was love (v.[31]). An instructive comment on this passage is supplied by Ac 3[6], where Peter and John are said to have healed a lame man by calling over him the name of Jesus Christ. The healing of Æneas by Peter (Ac 9[34]) and the raising of Tabitha (v.[40]) both imply the same process, while it is expressly said of the cripple of Lystra that Paul healed him because he saw that he had faith to be healed (14[9]). In Ja 5[14], to the invocation in the name of the Lord are added the agency of the elders and the anointing with oil; and it is expressly added that the prayer of faith will heal (save) the sick man, and that the Lord will raise him—*i.e.*, from his bed of sickness, not eschatologically. In all the cases the implication is that, as cases of faith-healing, they are the joint-product of the work of an invisible agent, Jesus Christ, and of the faith of the sufferer. (On the form and power attributed to the invocation 'in the name of Jesus,' see Heitmüller, 'Im Namen Jesu,' in *Forschungen zur Rel. u. Lit. des A. u. N. Test.* i. [1903] 2.)

As illustrating the nature of faith-healing as practised in the early Church, the ceremony of exorcism is instructive. It is constantly the third with prophecy and healing, as in the case when the activities of the pagan *mantis* are described (Rohde, *Psyche*[4], 357 f.). The exorcism of spirits is but another name for the driving away of disease, wherever the diagnosis in general starts from the postulate that all disease is the work of malignant spirits. For example, Irenæus (*adv. Hær.* II. xxxii. 4) says of his own times and of his own fellows:

'Some do certainly and truly drive out devils, so that those who have thus been cleansed from evil spirits frequently both

believe, and join themselves to the Church. Others have foreknowledge of things to come: they see visions, and utter prophetic expressions. Others, again, heal the sick by laying their hands upon them, and they are made whole.'

He goes on to say (§ 5) that Christians work their miracles merely by calling on the name of Jesus Christ in a pure, sincere, and upright spirit, or, in other words, by faith (cf. Just. Mart. *II Apol.* 6, *I Apol.* 30, *Trypho*, 39, 76; Tert. *Apol.* 23, 37, 43, *de Idol.* 11, *de Pud.* 21; Origen, *c. Celsum*, i. 11, iii. 24).

Perhaps the most vivid description of the faith-healing of the Patristic Church is that given by Augustine in his *de Civitate Dei* (xxii. 8. 3). He there tells, among others, the story of a man at Carthage who had been operated on for fistula with partial success only, but who was cured by prayer, and so saved from the necessity of a further threatened operation; and also of a leading Carthaginian lady, named Innocentia, who was healed of an incurable cancer in the breast through the sign of the cross being made over her. The union of divination and healing is here again exemplified by the fact that Innocentia was told in a dream how her cure could be effected. Another man, a doctor, was, at his baptism and after a dream, cured of gout; and an actor, of hernia and paralysis; a paralyzed youth was cured when brought into contact with some earth from Jerusalem. The most graphic story of all is that of a brother and sister being healed of St. Vitus' dance at the tomb of the martyrs in the church where St. Augustine was ministering—the sister, indeed, while he was preaching. He adds many other examples of cures wrought by faith-healing and the agency of the martyrs, and declares that what he gives is but a small sample of similar cures wrought within the two years preceding the writing of this volume—he knows, he says, seventy such cases.

The history of faith-healing knows of no artificial divisions, but runs on unchanged, so that what is true of one age is found true of another. The phenomena of pre-Christian days recur under Christianity, whether in its earlier or in its later forms. Thus the Middle Ages present a rich collection of instances of faith-healing, or miracles of healing, as these were then considered. A few typical examples must suffice, it being understood that they are quoted more as testimony to the belief in faith-healing than as being in every case beyond suspicion.

St. Bridget cured a blind girl named Daria (*Les Petits Boll.* ii. 184) and two lepers with the sign of the cross (Baronius, *Martyr. Rom.*, Antwerp, 1589). The works of healing power of St. Francis of Assisi are numerous, and were recited in the bull of his canonization. Another St. Francis (of Paula), three centuries later, was a still greater wonder-worker: 'He gave eyes to the blind, hearing to the deaf, speech to the dumb; he made the halt to walk, the cripple to have the use of his limbs, and recalled six dead persons to life again' (see *Les Petits Boll.* iv. 143). Similar marvels are told of St. Geneviève (*ib.* i. 100 ff.), of St. Germanus, 'the father, physician, pastor, and love of his people' (Fortunatus, *Lives*), of St. Vincent Ferrier (*Les Petits Boll.* iv. 227), of St. Carlo Borromeo, of St. Cuthbert, St. Patrick, of all great saints indeed, and of numberless lesser saints.

Nor was the religious movement of the 16th cent. able to crush out faith-healing. The saints, it is true, fell out of favour where the Reformers' spirit prevailed; but the witches remained, and Satan remained as an ever-active power of evil. In one striking case, at all events, faith-healing was able to hold its own. English kings since the days of Edward the Confessor, and French kings apparently from Clovis onwards, had touched for scrofula, or 'the king's evil.'

Queen Elizabeth touched, but omitted the sign of the cross; Charles I. invited by proclamation his subjects to come to him to be touched; Charles II. touched 92,107 persons; William III. touched without success; Queen Anne touched 200 persons, including Dr. Johnson when thirteen months old; George I. discontinued the practice.

A case of cure by faith-healing which seems well authenticated is that of Margaret Périer, a boarder at Port Royal, in 1685, who was cured of a persistent lachrymal fistula by the application of a spike from the Saviour's crown of thorns (see R. H. Hutton, *Essays Theol. and Lit.*[2], 1877, vol. i. pp. xxxiii–xxxv).

But, though faith-healing fell into disrepute in proportion as the spirit of rationalism prevailed, the belief underlying it found defenders continuously. Paracelsus, Glanvill, Valentine Greatrakes, van Helmont (see his *de Magnetica vulnerum curatione*, 1621), the Cambridge Platonists, and John Wesley all set forth that philosophy of life on which faith-healing depends. Moreover, Martin Luther, the Moravians, the Waldenses, the German Pietists, the English Baptists and Quakers, the famous healer of the last century, Prince Hohenlohe-Waldenburg-Schillingsfürst, Father John of Kronstadt, and the Peculiar People have all practised the art. Our own days, moreover, are witnessing its revival, under the influence of the recrudescence of Theosophic and Animistic, Orphic, and Hermetic modes of thought.

2. The means employed.—(1) Foremost among these, though the least important, we must place *some of the ordinary articles of the pharmacopeia*. The majority of these, it is true, such as iron and arsenic for the blood corpuscles, strychnine for the nerves, and pepsine or bismuth for the alimentary canal, call for little or no faith as a co-operant. But, in many cases where the mind reacts on the body through a depressed nervous-system, through fancy, in epilepsy, or in some cases of hysteria, the medical man will use drugs, or other media, not for their own efficacy, but as a means of calling forth that faith through which the *vis medicatrix naturæ* may be stimulated into action. Nor can the therapeutic value of confidence in the medical man be easily overrated as affording that restfulness of the soul which is one necessary condition for faith-healing.

(2) In Roman, Greek, and Christian times alike, great use has been made of *the hand*, and especially *the right hand*, as an instrument of healing. Blindness, child-birth, lameness, abdominal troubles, snake-bites, and strokes of any sort which were attributed to Divine or demonic influence were all treated as curable by the magic power of the Divine or human hand; to these must be added the touch of the *foot*, or of the *dress* as healing agencies, and also *kissing* anything which was thought to possess healing power (Weinreich, *Antike Heilungswunder*, 14 ff.). But, to make such magic power effective, there was obviously needed a co-operant as well as a prevenient faith.

(3) The so-called '*temple-sleep*' of the pagan temple was used as a species of faith-healing. The patient was put to sleep, and in the state of hypnosis he was either operated on or received suggestions that he was healed, which (if the inscriptions may be trusted) were found, when the patient awoke, to have effected their purpose. Modern hypnotism is aware of the part that faith plays in its activities, and is agreed that patients of low intelligence make bad cases, through their inability to make any continuous effort of attention, *i.e.* through their lack of a living faith. The ancient temple-phenomena repeat themselves in many of the miraculous healings performed by Christian saints.

(4) *Miscellaneous objects* used in faith-healing are: blood, oil (St. Cuthbert), spittle (St. Hilarion), hair, the sign of the cross, baptism, holy water (St. Willibrod), or water in which a saint has washed (St. Amandus), the bed on which a saint has died (as in the case of St. Vincent Ferrier), the medal of a saint (St. Francis Xavier), a tooth (St. Maturin), a shroud, relics, indeed anything which has in any way come into contact with a saint. In fact, nothing is a stronger argument for the validity of faith-healing in some sense and to some extent than the predominant place it took in the first 1500 years of our era. When all deduction has been made for credulity, exaggeration, imposture, and the desire to edify, there still remain a large number of healings which must be regarded as genuine, and must be accounted for either by the power of faith or by the power of the saints, or by a union of both. The probability is in favour of the last solution. That such wonder-works began to die out from the 16th cent. is

hardly to be accounted for by a supposed cessation of activity on the part of the saints, but rather by the want of inner and potent subconscious belief in their power. In other words, faith-healing, whether in the narrower or in the wider sense, characterized the West for 1500 years; it became sporadic for the next 400 years, and is now once more raising its head. And the inference is that, where an unquestioned faith—*Massen-illusionen*—in invisible powers holds the field, every individual subject to the influence of this faith is a suitable subject, by virtue of it, either for faith-healing, or, conversely, for falling a victim to any current form of 'possession' or hallucination (*la contagion mentale*) (cf. W. von Bechterew, *Die Bedeutung der Suggestion im sozialen Leben*, Wiesbaden, 1905).

3. The species of faith-healing.—For the sake of clearness, the principal species of faith-healing may be described as magnetic, mental, spiritualistic, and spiritual.

(1) *Magnetic.*—This is described by its supporters as a special case of the use of a primordial and universal force which displays itself in a balance between pairs of allied opposites, *e.g.* attraction and repulsion. Its therapeutic use was familiar to antiquity and is seen in the use of the hand (Weinreich, 1–66). It appears in some of the miracles of Jesus (Mk 5^{30} 8^{23}), was practised by His followers (Ac 5^{15} 9^{17} 19^{12}), and meets us in Roger Bacon, Paracelsus, van Helmont, and Robert Fludd, long before Mesmer in 1775 gave it wide currency. Afterwards the theory of a 'fluid' was discredited by the researches of Puységur and Faria, and, finally, James Braid; and the result has been undeservedly to neglect the unquestionable actuality of a force of some kind known as animal-magnetism, in favour of another known as hypnotism. The mental power has ousted the physical. In both the appeal is made to the nervous system, whether by way of establishing or disturbing its equilibrium; and it is claimed for magnetism that it effects its therapeutic results by the natural use of a force radiating from the operator, which is cognate to a universal force in which the nervous system of all living beings is bathed at its periphery. The chief method of magnetic healing is by passes, by touch, especially at neural centres, and by the application of objects which have been in contact with the operator. But, through the favour shown to hypnotism, magnetic healing has fallen comparatively into the background, though there can be little doubt that it masks a real force of some kind.

(2) *Mental.*—Mental healing is both active and passive. As active, it consists in the impartation of ideas, or suggestion, by the healer to the patient. As passive, it consists in the reception and assimilation of such suggestion. The healing proper, however, is sought in the consequent mental activity of the patient himself. He has been enjoined, for example, to fix his thoughts—by an effort of attention, continuous or repeated—on such virtues as joy, peace, contentment, or love; and, by implication, to exclude their opposites. The soul, it is assumed, will be put by this means in a more favourable condition for the activity of its inherent capacity for health. By some, indeed, faith-healing is identified with this auto-suggestion, on the ground that thought in man is distinctively the Divine in him, and that all that is required for the maintenance or restoration of health is the free play of this inherent Divinity. The phenomena of telepathy, moreover, have been invoked to support the contention that 'absent treatment' by mental healing may be as effectual as that given in the presence of the patient. The difficulties in the way of accepting this whole theory of mental healing lie in the facts that suggestion has less to do with the conscious mind than with the subconscious; that there is no good ground for regarding thought as pre-eminently the Divine in man; that the human mind in its finiteness is too weak a power for the work thus demanded of it; and that such results as mental healing secures are better assigned to spiritual healing, as defined below.

(3) *Spiritualistic.*—It is claimed by spiritualists that the spirits are the only doctors they require, and that these spirits can both diagnose and prescribe the proper remedies because of their superior knowledge. The evidence, however, for such assertions is too slight to call for more than a mere recital of the claim thus made.

(4) *Spiritual.*—Spiritual healing, in its strict and proper denotation, may be said to be synonymous with faith-healing in the stricter sense. The object of this method is to procure for the *soul* of the sufferer an influx of spiritual life, and it reposes on the assumption that physical diseases are the result, directly or indirectly, of psychical disorders, and that, therefore, the wise healer will strike at the causes which lie in the soul rather than at the symptoms which are seen in the body. The power which alone can heal the soul is God, and the link between God and the sufferer is faith. This faith is defined as a quality in the spirit of the healer (and the sufferer also, though in the former actively, in the latter passively) which enables him to render quiescent his 'mortal mind,' and so to place his spirit in a positive state of calm, poised, at peace, and a channel for the Divine spirit to pass through to the sufferer. This state of openness and serenity may be otherwise defined as the normal condition for prayer, and spiritual healing in its turn then comes to be defined as the product of the power of God directed, by faith through prayer, to the soul that needs healing. And its professors maintain that such healing activity, being kinetic, never fails of *some* beneficial result, even though that result may not show itself at once on the physical plane.

4. Suggestion.—It is necessary to say a word on the part suggestion plays in the many theories of faith-healing. The word is used frequently as if it were coterminous with the influence exercised on us by our whole environment, or with any influence exercised by any person on another. Or (Lefèvre) it is applied to all ideas which impinge on the mind without apparent motive and are unconsciously assimilated; or (Forel) to a deliberate alteration, by word or gesture, of another's nervous system by which entrance is afforded to the desired idea; or (Wundt) as a psychical act which blocks up all association-tracks of the nervous system other than the one suitable for the presented idea; or (Binet) as a moral impression which one person exerts on another; or (Sidis) as the invasion of consciousness by an idea without criticism or opposition. It is better, however, with Bechterew (p. 10), to distinguish between perception-activity in which the will takes an active part, and that in which the will is passive. The will is passive in a twofold manner: (*a*) with regard to all objects which lie beyond the centre of the field of consciousness (attention being concentrated exclusively on the one object at the centre); and (*b*) when the nervous system is depressed and, therefore, the power of attention is dissipated. To the latter condition of twofold passivity, suggestion proper belongs, and its proper place in our classification would be under the head of mental healing.

Closely connected with suggestion in general is hypnotism, the name given to a procedure which ensures an enhanced power to suggestion in a state known as *hypnosis*. In hypnosis two factors work

jointly—one physical and one psychical. The physical consists in a partial dissociation of the neural dispositions or systems, in such a way that, while some are depressed, others (or one alone) work with increased vigour. In a state of concentration or depression the full flow of nerve currents (ideas) in the patient is arrested, so that the one current which the hypnotizer desires to keep open runs with increased volume. The psychical factor is that of a co-consciousness, or secondary stream of consciousness, which is to the waking consciousness as the stars are to the sun. When one sets, the other rises (see Carl du Prel, *Philos. of Mysticism*). Mental dissociation of tracts of ideas and physical dissociation of groups of nerve-processes seem to be the two poles between which all the phenomena of hypnotism swing.

5. Another question must be touched on. Faith-healing, as we have seen, obeys the same law in its activity as thought does when it depends on subject and object. It is the product of two factors, not of one only. The power which actually heals may be latent and native in the sufferer himself, but it is not called forth except through some stimulus. No account, therefore, of faith-healing can be adequate which omits either the one or the other of its two components.

'In faith-healing the suggestion is that cure will be worked by spiritual or Divine power, especially if this power be appealed to at some particular place, such as a sanctuary, the foot of an idol, a fountain, or pool of water, the resting-place of some sacred relics, such as the bones of a saint, or it may be in presence of the Eucharistic procession, or during High Mass, or the administration of the Holy Sacrament. . . . This Divine power or energy is supposed to act by neutralizing or overcoming sickness, disease, and the ill consequences of accident. The faith-healer does not doubt the reality of matter or of diseases, but believes that he can draw upon a spiritual force to subdue or annihilate an existing evil' (Henry Morris, in *Brit. Med. Jour.*, 18th June, 1910, p. 1458).

The further question whether the theory of faith-healing is that man's organism is self-contained, like a *perfecta societas*, or that it is like an Æolian harp played on by outside forces—in other words, whether as a discrete mass it contains within it all that is necessary for health and wealth, or whether other agents, such as animism and the doctrine of angels postulate, supply its needs—may remain here undetermined as being a question of philosophy or of a *Weltanschauung*. In any case, both may be true, for they are not contradictories but contraries. A place or a thing may be sacred and potent, not merely because we think so, but because unseen powers make it so, and the *vis medicatrix naturæ* latent in us may be reinforced, and not merely stimulated, by external agents, whether visible or invisible. Hence we may conclude, with Clifford Allbutt, that we are not in a position to set any limits to the power of faith-healing. 'No limb, no viscus is so far a vessel of dishonour as to be wholly outside the renewals of the spirit' (*Brit. Med. Jour.*, *ut supra*, p. 1483).

FALL.

FALL (Biblical).—**1. The narrative of Gn 3.**—By 'the Fall' is meant that first act of disobedience to God which is narrated, with its consequences, in Gn 3. If this chapter were in the proper sense history, its interpretation would be easy; it would mean just what it says. But the beginnings of human life lie far beyond the reach of history; there neither is nor can be anything akin to tradition or recollection in a story which deals with the origins either of knowledge or of conscience. Such stories are the fruit of reflexion and imagination, which may be more naive or more philosophical, more childish or more spiritual, more gross or more refined, according to the minds in which they originate, but they are never historical. This is the case with Gn 3. It is a mythical explanation—charged with moral and religious lessons of the highest importance—of some phenomena in human life which especially impressed the writer. In his eyes life was an uncertain term of penal servitude, under the shadow of capital punishment. Both for men and for women it was under a curse. It could not always have been so. God could not have destined man to this misery from the first. There must be some explanation of how man came to be in this condition, and the explanation is given in the story of the Fall.

This view is adopted with practical unanimity by modern scholars, but agreement as to the character and purpose of the narrative does not necessarily result in agreement as to what it means. When we say that the writer gives his explanation in the form of a myth, the question immediately rises how far he was conscious of what he was doing—that is, how far the writer, who certainly did not make the myth out of nothing, was literally bound by its very terms, so that his work is simply one of statement; or how far he was capable of rationalizing or spiritualizing the myth, or feeling that it had significance in the rational and moral world, even if he could not use much liberty with what was probably a more or less sacred form. The various answers which have been given to these questions have issued in different readings of the whole story. Broadly, these may be illustrated as follows:—

(1) Gunkel tries to keep strictly within the limits of the myth. The one false path is that of modernizing. Eden is a garden which is the abode of God. Adam and Eve live in it on the fruit of the trees. They are in a state of childlike innocence, knowing no more than children know. That is the state in which God intends to keep them, and so they are forbidden to eat of the tree of the knowledge of good and evil. This has nothing to do with conscience. To know good from evil, or good from bad, means in Hebrew to know one thing from another; it is to have risen from the age of childhood to that of reason and experience (Dt 1^{39}, 2 S 19^{35}, Is 7^{15}). The tree is quite accurately described when it is called the tree of knowledge, and the aim of God in forbidding it to man is to keep man in his place. He is not to

become like God—to enter into His secrets and to share His sovereignty. The cunning serpent (who in a more primitive form of the myth must have been an evil god or demon) reveals God's purpose, and prevails on man to eat the fruit of the tree. The result is what he predicted. The eyes of Adam and Eve are opened. The shame which attends on this is not a sense of sin; it is a kind of knowledge to which childhood could not attain. God Himself admits that the disobedience has achieved something. 'The man is become as one of us' in v.[22] is not ironical. Man has actually made something his own which was once exclusively God's, and God punishes with His curse all who have had part in the presumptuous action—the serpent, the woman, and the man. But there is no connexion, rational or moral, between the act and the miseries which God inflicts. They are the revenge of a jealous God on an impious invasion of what He had reserved to Himself; and this invasion and revenge are the mythical explanation of the miseries. Such an interpretation may do justice to the myth used in Gn 3, but it does not do justice to that use of it. The author of the chapter was himself a modernist, compared with the original myth-maker, and it is not modernizing but reading in the spirit in which the chapter was written if we lift the whole to a higher level both of reason and of morality.

(2) It is a higher level which is reached in Wellhausen (*Prolegomena*[4], 306 ff.). He reads the story in connexion with Gn 4 and 11, which tell of the invention of the arts, the progress of civilization, and the building of the Tower of Babel. This whole process is a mistake from the beginning: man was fatally misled when he first tasted of the tree of knowledge. Civilization with all its triumphs is labour and sorrow; we build Babylon only at the cost of losing Eden. Gn 3 is thus an early anticipation of modern moods in which men speak of the bankruptcy of science, the strain of civilization, the happiness of the simple life. But the tragic fact is that the mistake is irreparable. Eden is closed against us with cherubim and a flaming sword, and we can never get back to the idyllic world again.

(3) It will hardly be questioned that thoughts like these were present to the mind of the author, but it is not easy to admit that they exhaust his meaning. While the knowledge of good and evil is undoubtedly in Hebrew the same thing as knowledge or intelligence *simpliciter*, its moral reference is not to be denied. It is not identical with conscience, or the knowledge of right and wrong, but it includes conscience. The Hebrew would not say that a person who could not tell right from wrong had the knowledge of good and evil. And, when we take the story as a whole, and particularly the account of the temptation of the woman by the serpent, and the judicial examination of the man and the woman by God, marked as both are by extraordinary psychological fineness in the domain of conscience, it is very difficult to deny that the centre of the author's interest lay here. Whatever may have been the original motive of the myth, the main concern of the writer who uses it in Gn 3 is not the beginnings of science or the beginnings of civilization, but the beginnings of sin. Of all human origins the origin of the bad conscience is for him the most fateful. It is sin which has robbed man of his primal felicity. All that is distressing in human experience is in some way of a piece with it. The travail of women and the toil of men would not be what they are but for the judgment it involves. It commits man to an exhausting struggle with an ungenial world without, and with creeping poisonous thoughts within, till he returns to the dust from which he was taken. There is no indication in the text that the victory will come at last to man's side. Nothing is said but that, as long as there are men and serpents in existence, they will be at war with one another. This, of course, is literally true, but even for the writer of the chapter (it is suggested) this literal truth did not exhaust the meaning.

With many variations in detail, this is the line of interpretation which is followed by most students—not from a vicious habit of modernizing, but from a conviction that it is what the writer of Gn 3 had in his mind. It has the corroboration of conscience, not, of course, in the sense that conscience turns the myth into history, but in the sense that conscience is directly appealed to in the main matter which interests the writer, and can only assent to his teaching that disobedience to God is that which blights life and works death. The chapter does not contain history or dogma, but ethical experience expressed in a mythical narrative. It is not the story of the first man, but of every man; and, if the key to its form is to be sought in comparative mythology, the key to its contents can be found only in the soul.

It is hardly necessary to inquire into the antecedents of the myth. While we find in other races and religions much that is analogous to Eden (see FALL [Ethnic]), to the tree of life, and to the streams which water the garden, nothing has been discovered analogous to the tree of the knowledge of good and evil. There is no parallel in Babylonian mythology to the story of the Fall as there is to the stories of Creation and the Flood; the Chaldæan Genesis, so far as known, is quite defective here. Nor can it be doubted that, if such a parallel were found, it would be as much inferior as those others, in religious and moral respects, to its counterpart in the Hebrew Scriptures. Neither need we inquire how the writer would have conceived the moral history of man to take shape had Adam resisted the temptation and refused to eat of the forbidden fruit. What he has to do is to explain the actual world, with its suffering, toil, and death; but whether or how he imagined an alternative world without sin and its curse we cannot tell. Probably a mistake is made when we try to deduce from the narrative a conception of man's original state or nature and ascribe it to the writer. In a composition of this sort, we must not make the author responsible for more than he says. The eating of the fruit of the tree of knowledge was forbidden under pain of death; but it is vain to argue from this as to what man's relation to death would have been had he refrained from eating. This is a question the author does not raise. He starts with death and all our woe, as things that in common experience are of one piece with the bad conscience; but, although he avails himself of the mythical form to represent the idea that disobedience to God underlies all the tragedy of human life, the world in which we actually live and have our tragic experiences is the only one which is real to him. We cannot build anything on the idea of another world in which death did not exist—except as a child might, for whom as yet death does not exist. To forget this is to treat the mythical element in the story as if it were science; and it is not doubtful that, when Gn 3 was written, such a view was no longer possible, even if it had once been so.

2. Apocryphal and apocalyptic literature.—Apart from Gn 3 there is no distinct reference to the Fall in the OT. The garden of Eden is mentioned in Jl 2[3], Ezk 36[35]; Eden the garden of God in Ezk 28[13]; and the trees of Eden in Ezk 31[9. 16. 18]; but, though Ezk 28 has various mythological features (including the cherub) which recall Gn 3, there is no allusion to the events of this

chapter. The margin of the RV is to be preferred to the text in the two passages (Hos 6^7, Job 31^{33}) in which the sin of Adam is directly recalled. But, at a later period, the story of the Fall concentrated upon itself a great deal of attention. In Sirach and Wisdom, and still more in the later apocalypses known as 2 Esdras and Baruch, it is a focus of theological speculation. The poetry of Gn 3, its psychology, its sense of the worthlessness of what civilization brings as compared with what we have to sacrifice to it, are lost; nothing remains but the interest in sin and death, and in their relation to each other. Sir $25^{23f.}$ is the earliest passage. The writer is reflecting in a disparaging tone on various evils which a bad woman may bring into her husband's life, and on this small occasion observes: *ἀπὸ γυναικὸς ἀρχὴ ἁμαρτίας καὶ δι' αὐτὴν ἀποθνήσκομεν πάντες.* This does not mean that woman was the cause or origin of sin, but that it began with her; and, as death is the doom of sin, we all owe our death to her. There is nothing in this akin to a doctrine of original sin, though it implies that sin only needed a beginning to extend its fatal consequences to all mankind. If Sir 25^{23} might be regarded as merely a passing petulance, such as a cynical person might still indulge in who did not believe in the Fall at all, a much more serious utterance is found in Wis $2^{23ff.}$:

'God created man for immortality (*ἐπ' ἀφθαρσίᾳ*), and made him the image of His own proper nature [reading *ἰδιότητος*; others *αἰδιότητος* = of His own eternity]; but by the envy of the devil death entered into the world, and those who are on his side have experience of it.'

Here the myth has been frankly turned into science—rationalized as far as the author could rationalize it, and made to yield a doctrine of human nature. The questions which, as we have seen, Gn 3 does not raise are both raised and answered here. God, as the author has said in the previous chapter (1^{13}), 'did not make death, nor does He delight in the destruction of the living.' He did not make man for death, but for immortality; this is included in 'His own proper nature,' in the likeness of which man was made. This is an idea, if not of Greek origin, peculiarly congenial to the Greek mind, even when Christianized. The serpent has disappeared, and is replaced by the devil: the idea of a close connexion between the two, whether it be that the devil makes use of the reptile, or that the reptile is regarded as an incarnation of the devil, first emerging here, became common (cf. Rev 12^9 20^2). This, as Gunkel observes, may be one of the points at which in the last stage of the myth a return is made to the beginning, the serpent having been originally a demon or evil god. The author of Wisdom does not explain what he means by the envy of the serpent: the idea was variously expanded in later haggadic treatment of the Fall, sometimes man, with his Paradise and immortal prospect, being the object of envy, sometimes God (Bousset, *Relig. des Judentums*², 469). The main point is that the author finds in Gn 3 an explanation of how a being constituted for immortality lost that high destiny, and became what we see man to be.

A deeper and more despairing kind of reflexion is found in 2 Esdras. The writer of this apocalypse, who lived through the terrible events of A.D. 70, is a pessimist in a profounder sense than the author of Gn 3; but he finds in the Fall of Adam there recorded the explanation of all the sin and misery of the world in his own age. These are universal:

'In truth there is no man among them that be born but he hath dealt wickedly: and among them that have lived there is none which hath not done amiss' (8^{35}).

But the purely mythological element disappears from his speculations on the origin of all this evil. It is connected with Adam certainly, but there is no longer either a serpent or a devil in the case.

'A grain of evil seed was sown in the heart of Adam from the beginning, and how much wickedness hath it brought forth unto this time! and how much shall it yet bring forth till the time of threshing come!' (4^{30}).

Who sowed the grain of evil seed in the heart of Adam *ab initio* he does not tell; but it originated apparently one continuous self-propagating life of sin in the world. It is supposed to be in Adam before he is tempted, and to be, if not the source, the ally of temptation and the cause of the Fall.

'For the first Adam, bearing a wicked heart, transgressed and was overcome; and not he only, but all they also that are born of him. Thus disease was made permanent; and the law was in the heart of the people along with the wickedness of the root; so the good departed away, and that which was wicked abode still' ($3^{21f.}$).

Man, as he is, has two things in him—the wicked heart, which he has inherited from Adam; and the law, which God has given him as a guide to Himself. This does not solve the problems of theodicy; it only raises them. How can man be responsible for his wicked heart if he has inherited it—that is, if it belongs to the natural, not to the moral, world? And how are we to understand the *cor malignum*, the יֵצֶר הָרָע, in Adam, before he had transgressed at all? What dogmatic theology calls 'original sin' is part of 'the sinfulness of that estate whereinto man fell,' but the *cor malignum* or *malignitas radicis* is inherent in Adam before he falls. It is part, apparently, of the constitution of his nature as he came from the hand of God (*ab initio*, 2 Es 4^{30}). It is not, however, the ultimate origin of evil or the idea—which a Jew would not seriously have contemplated—of ascribing it to God that really distresses the author; it is the fact that all men are involved somehow in the sin and doom of the first:

'This is my first and last saying that it had been better that the earth had not given thee Adam; or else, when it had given him, to have restrained him from sinning. For what profit is it for all that are in this present time to live in heaviness, and after death to look for punishment? O thou Adam, what hast thou done? for, though it was thou that sinned, the evil is not fallen on thee alone, but upon all of us that come of thee. For what profit is it unto us, if there be promised us an immortal time, whereas we have done the works that bring death?' ($7^{48 (116) ff.}$).

Further than this the writer does not go. He is depressed by what man is, endures, and has to expect; he is tortured by his sense of the solidarity of the race in sin and death; but, when he tries to connect what he sees and feels with Gn 3, as a story of the origin of sin, he is both intellectually and morally baffled. He is obliged to assume *ab initio* the very thing he has to explain—the existence of the *cor malignum*, or יֵצֶר הָרָע, in Adam; and the moral inequity of allowing Adam's act to decide the destiny of the race is unrelieved.

The writer of the Apocalypse of Baruch represents the same circle of ideas, but probably feels less intensely about them, and seeks moral relief by emphasizing individual liberty as against the solidarity of mankind.

'If Adam did sin first and bring untimely death upon all, yet those too who were born of him each prepared for his own soul its future torment, and again each of them chose for himself his future glory. . . . *Non est ergo Adam causa, nisi animae suae tantum; nos vero unusquisque fuit animae suae Adam*' ($54^{15.19}$).

The doctrine, 'Every man his own Adam,' might formally be taken as a direct contradiction of that expressed in 2 Es 7^{118}, but it is probably not meant to be such. It rather suggests that the implication of the race in Adam's sin and its consequences is not so arbitrary as it can be made to appear; it is morally mediated, after all, by the fact that we all somehow make Adam's act our own. We may be hopeless and unhappy, but we are not compelled to rebel and blaspheme.

In comparison with these apocryphal books, in which real problems of the spiritual life are discussed in connexion with Gn 3, it is only necessary to mention that the story of the Fall is elaborated

in the Book of Jubilees ($3^{17ff.}$) and the Apoc. Mosis (7 f.), but in ways that have no new interest for thought (Bousset, 411; Couard, *Die religiösen u. sittl. Anschauungen der alttest. Apokryphen u. Pseudepigraphen*, 113); cf. also Enoch 69^{6}.

3. **The New Testament.**—The ideas which we find in the apocryphal books just examined were, no doubt, familiar to many Jewish minds in NT times; but, apart from St. Paul, there is little trace of them in the NT itself. In the Synoptic Gospels Jesus nowhere alludes to Gn 3; and in Jn 8^{44}, when the devil is described as a murderer from the beginning, it is clear from the parallel in 1 Jn $3^{8ff.}$ that the allusion is not to Adam's forfeiting of life by sin, but to Cain's killing of Abel. In the Apocalypse there are many references to Gn 3, but rather to its scenery than to its incidents; the end of history returns to the beginning, and Paradise is restored (2^{7} $22^{2.14.19}$) with the tree of life. The old serpent, who is the devil or Satan, is cast down from heaven and chained (12^{9} 20^{2}). But there is no speculation or reflexion on the Fall. The same may be said of some of the allusions even in St. Paul. Thus Ro 16^{20} probably borrows its form from a recollection of Gn 3^{15}. In 2 Co 11^{3} there may be a reference not only to Gn 3, but to an idea current in certain Jewish circles, that the serpent seduced Eve to be unfaithful to her husband as well as disobedient to God; so in the same chapter (v.^{14}), where the transformation of Satan into an angel of light is also found in some Jewish elaborations of the OT story (for both, see Schmiedel, *ad loc.*, and Everling, *Die paulin. Angelologie u. Dämonologie*, Göttingen, 1888, p. 58 f.). But there are two passages in St. Paul where more is, or seems to be, based on the OT story, and where we seem to be in close connexion with the circle of ideas in which the authors of Sirach, Wisdom, 2 Esdras, and Baruch move. The interest of both is that St. Paul draws in them a parallel, which is in other respects a contrast, between Adam and Christ.

(1) In the earlier passage (1 Co $15^{21f.}$), as in Wis $2^{23f.}$, death is in view rather than sin: 'As by man came death, by man comes also the resurrection of the dead. For, as in Adam all die, so also in Christ shall all be made alive.' Adam is the head of the old humanity, which (whatever its original constitution or destiny may have been) is, in point of fact, mortal; this is what it is, and it is so in virtue of its connexion with him. Christ is the head of the new humanity, which (in spite of the mortality due to Adam) is destined at last to triumph over death; it is really immortal in virtue of its connexion with Him. The fact that in the two cases the connexion is quite different in nature is disregarded by the Apostle. The connexion with Adam, which involves us in death, is an affair of heredity; we are descended from him in the ordinary course of nature, and stand where we do, liable to death, apart from any choice of our own. But the connexion with Christ is not a matter of heredity, but of faith; it is only those who believe in Christ that are in Him, and will share His triumph over death. There is nothing in the fuller reference in vv.$^{45-49}$ which enables us to say more. In particular, there is no reference in them to sin. What is present to St. Paul's mind is that the creature made of the dust of the ground, the ἄνθρωπος ἐκ γῆς χοϊκός, cannot as such be immortal. 'Flesh and blood cannot inherit the Kingdom of God,' not because they are sinful, though that is true, but because they are essentially corruptible, and the Kingdom is incorruptible. There can be no such thing as immortality in nature; if there is to be immortality at all, it must be in another mode of being—not that mode of being with which we are familiar from our connexion with Adam, but that which has been revealed to us in the resurrection of Christ. Immortality, in other words, is strictly supernatural. A connexion with Christ of the kind formed by faith is needed to ensure our participation in immortality, just as our mortality is sure in virtue of our connexion with Adam. It is needed to ensure it; and it does. 'As we have worn the image of the man of clay, so shall we wear the image of the heavenly man.' An elevation or transmutation of nature, an evolution in which our being rose to a higher level, rather than the reversal of a doom, might seem to satisfy the terms here employed; but, congenial as this might be to a modern mind, it is improbable that it represents St. Paul's thought. Even if we set aside v.^{56} as a marginal comment which interrupts an inspired text, it is shrewdly to the purpose, and thoroughly in keeping with the other passage in which the Apostle treats of the same subject.

(2) The other passage is Ro $5^{12ff.}$. St. Paul is not dealing here, in the first instance, with immortality, but with the δικαιοσύνη θεοῦ; it is this which is revealed in Christ, and, consequently, when he again draws a parallel between the first and the second Adam, the emphasis falls not on death and life, but on sin and righteousness. Death comes, no doubt, in the train of sin, just as grace reigns through righteousness unto eternal life, but sin and righteousness are here the primary interests. 'As through one man sin entered into the world and through sin death, and so death extended to all men, for that all sinned'; so, we might suppose the Apostle continuing, by one man righteousness entered into the world, and through righteousness life; but we should find it difficult to provide the parallel to the clause 'for that all sinned.' These last words themselves (ἐφ' ᾧ πάντες ἥμαρτον) have been taken very variously. (*a*) Some have ventured to identify Adam and his posterity in such a way that his responsibility became immediately theirs—that is, theirs without any action on their part which mediated it from him to them. As Bengel puts it, '*Omnes peccarunt Adamo peccante.*' This seems to agree with the fact that the individual is involved in the moral responsibilities of the race, awful as these are, without his consent being first asked and obtained; he is born participant in the guilt and doom of mankind. Whether St. Paul would have shrunk from this or not, it raises more moral difficulties than it solves. (*b*) Others would make the ἥμαρτον apply to voluntary individual sins. Every man is his own Adam, and the author of his own fate. Within whatever limits this may be true, to say that it is true absolutely is to ignore the solidarity of the race in sin and its consequences, with which the Apostle is specially concerned at this point. (*c*) The interpretation which appeals for relief to the doctrine of heredity, and assumes that man inherits from Adam that which, when it is morally appropriated, reveals itself in consciousness as sin, is perhaps not unfair to the passage, but cannot directly appeal to anything in it for support. St. Paul is conscious that men are somehow one in sin; but, though he knows that only the faith of the individual unites him to Christ and makes him a partaker in righteousness and life, he never raises the question whether there is anything analogous to faith—an individual and voluntary appropriation of the inherited *cor malignum*, *granum mali seminis*, *malignitas radicis*, יצר הרע, or however it is to be called—in virtue of which we are morally involved in the responsibilities of the first man. While the solidarity of the race in sin and death is an immediate datum of experience for him, which he connects (without defining how) with the entrance of sin and death into the world through

Adam's disobedience, he gives us no means of constructing a doctrine of man's original state, or of the origin of evil. Adam, as the head of the old humanity, and as a foil to Christ the Head of the new, is just what we are before we are united to Christ by faith—a creature of clay, or of flesh, sinful, weak, mortal; an Adam before the Fall, in a state of original righteousness, may seem to be logically implied in what St. Paul says of 'the disobedience of the one,' but is a conception of which he makes no use.

It is quite futile to think that a Pauline doctrine of the origin of evil can be deduced from Ro 7[7ff.]. There are undoubtedly allusions here to Gn 3, so far as the expressions are concerned, but no historical doctrine can be based on this piece of generalized and ideal autobiography. If we say that in 1 Co 15[21ff. 44ff.] the mortality of man is made to depend on his inheritance of Adam's nature, and that in Ro 5[12-21] the condemnation of man, with all its fatal consequences, is conceived as dependent upon his being involved somehow in the transgression by Adam of God's express command, we go as far as the Apostle does. He really does not transcend theoretically the problems presented by 2 Esdras. He makes no use of the serpent or the devil in explaining the origin of evil. Man is a sinner, all men are sinners, sin is in the stock and has been from the beginning; it is deep, virulent, constitutional, no hurt to be healed slightly. But St. Paul's theodicy is not in a doctrine of its origin, in the act of Adam or otherwise; it is in his doctrine of redemption. Sin in its unity and universality may be taken for granted, and it may also be overcome; but not even on the basis of the Bible—OT or NT—will its origin ever be explained.

JAMES DENNEY.

FALL (Ethnic).—i. *ORIGIN OF THE BELIEF.*—1. Man's curiosity regarding the things around him, itself the source of numerous Nature-myths, must early have been aroused by the condition in which he found himself. His speculative faculty had caused him to ask questions regarding the origin of the world and of mankind, and to these questions his cosmogonic and creation myths supplied answers. Hence it is not surprising that he should have sought an explanation of such things as appeared to him evils in his lot—hunger, his battle with the forces of Nature, the difficulty of obtaining food, the existence of disease and death, and, so far as his moral faculty had been awakened, the opposition of good and evil in himself, the struggle he had to follow the law he felt to be right, or even, perhaps, the customary laws of his tribe. These questionings gave rise to innumerable myths, found among many races and at all levels of civilization, which suggest as the answer that in the distant past something had occurred which reduced man to the state in which he now found himself, or that some disaster, perhaps anterior to his appearance on earth, had affected his destinies, or that some being, hostile to man, had injured him physically and morally, or that men had gradually deteriorated from some earlier existing state of happiness. Such occurrences may be comprehensively included under the title Fall, as used in Christian theology, while the stories which embody them are called Fall-myths. As a rule, the form and contents of such myths have been moulded by man's experience of the things which produced, or which he fancied to produce, evil to himself. As breach of tabu, or the breaking of divine commands, frequently produces evil in the actual life of primitive men, so they readily imagined that some such act originally introduced all the evils of life. Man's natural conservatism may have made him look askance at the introduction of the elements of culture: hence the idea that the craving for illicit knowledge on the part of some ancestor produced the Fall. Or it was put down to an early desire to be as the gods. Or man's sensual cravings were believed to have been his ruin, as seen, for example, in myths which told how, at first, he had lived without requiring to satisfy them. Or woman, being at all times regarded as a source of evil, and the subject of a variety of sexual tabus, was sometimes held to be the cause of man's undoing. Occasionally, too, beings exterior to man are blamed for his fall; but, as a rule, he takes the blame upon himself. In a few cases, it is some act, generally regarded as contemptible, which is supposed to have ruined man, as in an Algonquin myth. Goldziher has argued (*Myth. among the Heb.*, Eng. tr. 1877, p. 79) that hunters and nomadic shepherds look down on agricultural races as being slaves to the soil in comparison with themselves, the free wanderers; while, where a people is partly nomadic, partly agricultural, there is a conviction that 'they have taken a step towards what is worse, and have sunk lower by exchanging pasture for crops.' In such cases, myths arise which tell how the downward step was taken, or show how man doomed himself to labour on the soil in the sweat of his brow; and these myths of a Fall are closely connected with others which set forth the dignity of a shepherd life.

This theory, intended to explain the origin of the Fall-story in Genesis, hardly applies to it as a whole, since man is already in charge of a garden and is not a nomad, while his fall is anterior to the curse of tilling the ground. The form of the curse, however, may have been moulded by some lost Fall-myth attributing man's ruin to agriculture—to the conservative nomad a species of illicit knowledge. For some myths which illustrate Goldziher's theory, see ii. 2 (1).

2. A different conception underlies the myths of a Golden Age, especially among the Greeks, whose poets praised agriculture; yet even in them we see a trace of the same idea, since man eats of the fruits of the earth without labour or tillage. When the Golden Age passes away he must eat them in the sweat of his brow. The same idea is present in those myths (Hindu, etc.) which tell how man lived without food, till, having tasted the earth or its fruits, he was forced to live upon them and labour to produce them.

3. Some of these myths have assumed a highly poetical form; on the other hand, even among advanced peoples like the Persians, some are exceedingly crude, and betray their primitive origin. In some cases, notably among peoples of a highly philosophic cast of mind, as well as with individual thinkers, the causes of man's present condition take a profounder form, especially where the doctrine of metempsychosis is made use of. This article will consider (1) myths explaining the presence of death and other evils by man's fault; (2) myths of a Fall; (3) myths of a Golden Age of innocence from which man deteriorated; (4) myths of a lost intercourse between gods and men through the growing wickedness of the latter; (5) myths of a Fall in a former existence; (6) myths of a divine Fall.

It should be observed that the idea of deterioration through a divine curse, usually on account of some act of wrong, is quite

a usual one in myths. The existence of apes is commonly believed in Africa to be due to a curse which turned offending men into that shape; while in N. Zealand, among the Indians of Huarochiri, and with the Namaquas, the habits of animals, like those of the serpent in Genesis, are conferred as the result of a curse or blessing (Shortland, *Trad. of N.Z.*[2], 1856, p. 57; *Fables of Yncas*, Hakluyt Soc., p. 127; Hahn, *Tsuni Goam*, 1881, p. 66). Transformation of human beings is, in all mythologies, attributed to Divine anger on account of human wrong-doing.

ii. *VARIOUS MYTHICAL EXPRESSIONS OF THE FALL-BELIEF.*—1. **Myths of the origin of death.**—The existence of death was one of the clearest indications of a serious disorder in human life. Ethnological evidence from all parts of the world proves that man's thoughts about death had everywhere taken much the same form. To man, with his intense love of living, death appeared unnatural; hence his firm belief in a life beyond the grave, or in the possibility of the renewal of life on this earth. The unnaturalness of death from the savage point of view is shown by the universality of the idea that disease and death are due to demonic and magical influences, and that, if men were never bewitched or killed by violence, they would always live on. Death from any natural cause is inconceivable. But, if death is unnatural, the question arises, How was it first introduced into the world? Various mythical answers were given, all tending to show that a time had been when death did not exist, and in some of these we see distinct traces of the idea that its coming was due to man's disobedience or folly. Other causes are alleged, *e.g.* the wrong delivery of a divine message, or a compact between an evil being (*e.g.* Death personified) and the divinities, or the malice of an evil being, or the first man's death establishing a precedent. Traces of such myths may be found in some of the higher mythologies, but they are most common among lower races. We are here concerned only with those in which the origin of death and other evils is due to man's own fault, as in the Hebrew account of the Fall.

(1) In some cases the fault is *man's stupidity or carelessness*, as the following myths will show. The Dog-rib Indians say that after the Thunder-bird had made all things, he gave the Indians a large arrow which they were to keep with great care. But it was lost through the stupidity of the Chippewas, and the creator was so angry that he left the earth for ever, and now men die (Bancroft, *Nat. Races*, 1883, iii. 105). A Shawnee myth relates that there was a time when men could walk on the ocean or restore life to the dead (here death already exists, but is vanquished), but they lost these privileges through carelessness (Schoolcraft, *Ind. Tribes*, 1857, iv. 255). In Jap. mythology, death is introduced because, when the deity Great-Mountain-Possessor sent his ugly elder daughter as wife to the suitor for his younger daughter's hand, he sent her away. Had he not done so, their offspring would have been immortal; as it is, they are as frail as the flowers (*Kojiki*, xxxviii. 115). Where the performance of religious rites according to a prescribed ritual is all-important, myths regarding any breach of ritual are sure to arise. Among the Maoris such a breach is the cause of the entrance of death into the world. When the culture-hero Maui was baptized, his father omitted part of the *karakias*, or prayers to the gods. For this reason men became mortal. As yet there was no death, nor would there ever have been if Maui had been able to pass through the body of Hine-nui-te-po; but because of this omission he failed and died, and now all men must die (Grey, *Polynesian Myth.*, 1857, p. 16). In the Admiralty Island version, death is due to the fact that a certain chieftain's family could not recognize that his spirit, and not his body, which had fallen from a tree, was the real man, so that he makes his spirit return to the dead body, and thus perish (*Anthropos*, iii. [1908] 194 f.).

(2) In other cases, *death results from a quarrel* (cf. the death of Abel), or from *man's wickedness*. An Eskimo myth relates that two of the first human beings quarrelled regarding human immortality. The one who advocated men's dying gained the victory; hence arose death (Nansen, *Eskimo Life*, 1893, p. 272). Among the Hare-skin Indians death is said to have arisen from a quarrel regarding the possession of a screech-owl. An old man fled with it, but was pursued and killed; a relative of his killed the chief murderer; he was in turn slain, and thus death and war arose (Petitot, *Trad. ind.*, 1886, p. 180). The Aleutians say that formerly men, as they grew old, plunged into a lake and renewed their youth. But a woman who had a divine lover made him angry by her peevish complaints. He killed her brother, and so made all men subject to death (Farrer, *Primitive Manners and Customs*, 1878, p. 13). In Blackfoot Indian legend also the folly of woman introduced death (Grinnell, *Blackfoot Lodge Tales*, 1893). The Caribs, Arawaks, and others ascribe death to the fact that the creator, finding men so wicked as to try to deprive him of life, took away their immortality and gave it to skin-casting creatures. A myth current in Polynesia relates that the early part of Rangi's reign was a Golden Age, in which death, war, and famine were unknown; but through a quarrel, death entered into the world, followed by disease and famine, and thus, in spite of Rangi's interposition, the Golden Age passed away (Gill, *Myths and Songs*, 1876, p. 286). In an Admiralty Island legend an old woman strips off her skin, and thus regains her youth; but one of her sons wishes to wed her. In [illegible]nsequence of this evil wish, aggravated by [illegible]ood, the old woman re-dons her skin, an[illegible] [illegible]en death has been in the world (*Anthr*[illegible] [illegible]08] 193).

(3) [illegible] way that [illegible] death is attributed to *man's disobedience*, [illegible]lly through a breach of tabu, *e.g.* eating some forbidden food; and myths of this nature have very naturally arisen among people who believe that breach of tabu, or eating a totem animal or plant, is inevitably followed by punishment, especially by the death of the tabu-breaker. Wherever such a custom or belief existed, it would be easy to found a myth upon it as the reason for that puzzle—the origin of death and other evils. Some of these myths may have been influenced by the account of the Fall as told by missionaries; on the other hand, they are so consonant with savage customs and methods of thought that they bear marks of originality. A Dog-rib Indian myth relates that the first man, Tschapiwäh, gave his children two kinds of fruit, black and white, forbidding them to eat the former. They were obedient for a time while he was absent to fetch the sun, but disobeyed him when he went away a second time to obtain the moon. He was angry with them, and said that henceforth the earth would produce only bad fruit, and men should be subject to sickness and death. His family bewailed their lot, and he then relented so far as to say that those who dreamt certain dreams should have the power of curing sickness (Klemm, *Culturgesch.*, 1843–52, ii. 155). The tabu is often connected with the idea that eating the fruit of any strange country or people makes one belong to it; hence arise myths that mortal men are immortal beings who were condemned to earth because they ate of its fruits. A Tonga version of such a myth makes certain immortal gods journey from Bolotoo (Hades) and land on Tonga, where they ate of its fruits. Soon some of them died, and all were condemned to live there and people the world with mortals.

Hence arose the race of men, subject to decay and death (Mariner, *Account of the Natives of the Tonga Islands*[2], 1818, ii. 115). The same idea occurs in Sinhalese cosmogony: the immortal beings of the fifth period of creative energy ate certain plants, and so became subject to mortality and lost the power of returning to the heavenly mansions. At the same time arose the division of the sexes (Forbes-Leslie, *Early Races*, 1866, i. 177). In other cases the tabu has nothing to do with eating. The Ningpos of Bengal say that once men were forbidden to bathe in a certain pool. Some one did so; hence men became subject to death (Dalton, *Eth. of Bengal*, 1872). There is an Australian myth to the effect that the first pair were forbidden to go near a tree on which lived a bat, which was not to be disturbed. Gathering firewood, the woman approached the tree; the bat flew away, and death arrived (Brough Smyth, *Abor. of Vict.*, 1878, i. 429). Elsewhere the disobedience is not connected with a tabu. Another Australian myth makes death result from men refusing through fear to carry the fierce dogs of Buhloo (the Moon) across a creek. 'If you had done what I had asked you,' said he, 'you could have died as often as I die, and have come to life again as often as I come to life' (K. L. Parker, *Aust. Legend. Tales*, 1896, p. 8). In Uganda it is thought that death was introduced because when Kintu, the first man, was sent down from heaven, he was told that if he forgot anything he was not to return for it, since Warumbe (death or disease) would assuredly go with him to earth. He forgot millet, and, contrary to his wife's advice, returned for it, with the result predicted (Johnston, *Uganda Protectorate*, 1902, ii. 704). The Basutos say that Matoome, the first man, came out of the earth with his sis[illegible] Matoomyan, who had a life-preserving medicin[illegible]ad [illegible]e told him to lead their cattle in one direct[illegible]cendan[illegible] disobeyed her, and she, in a rage, went [illegible]he earth with her medicine. Thus deat[illegible]y freque[illegible]se came into the world (Campbell, *Tra[illegible]* [illegible] *Afr.*, 1822, i. 306). The following myth [illegible]d by a native of Tumele (Cent. Africa). Til made men deathless, and forbade them to kill the beasts; they broke his command, and were all destroyed save one. Til now changed a gazelle into a woman, who bore the survivor four children, two white and two black. These were also deathless; but the frog complained to Til that it was unfair to make harmless animals subject to death, and guilty man immortal. Til saw the justice of this, and made men subject to old age, sickness, and death (*Ausland*, Nov. 4, 1847). In Togo, death is due to the petition of a frog, who reached the Supreme Being before the dog, who sought that man might live again after death (*Anthropos*, ii. [1907] 203; cf. iii. [1908] 277); and in an Admiralty Island version, death comes from the ingratitude of a man who sought to deceive the tree which had saved him from a demon (*ib.* iii. 194). The Melanesians account for death by various myths, one of which turns on an act of disobedience on the part of a woman made by the divine hero Qat. She was stolen by Marawa; Qat urged her to return, but she refused; therefore, while the pair were sleeping, he pulled their teeth, shaved their hair, and covered their eyes with spiders' webs so that their sight became dim. Thus old age and death became the lot of men (Codrington, *Melanesians*, 1891, p. 266). In New Guinea (Mowat), death came upon all men because the mother and grandmother of the first man who died, instead of obeying his injunction to remain until he returned to them as before, went in search of him (Beardmore, *JAI* xix. [1890] 465). An American Indian myth reported by the Jesuit missionaries in 1634, and apparently quite original, has a curious resemblance to the Greek Pandora myth (see below, 2 (3)). After the world had been recovered from the Deluge, the divinity Messou gave a Montagnais Indian the gift of immortality enclosed in a small box, subject to the condition that he should not open it; for, so long as the box remained closed, he would be immortal. His curious and incredulous wife opened the box to see its contents. And thus all Indians became subject to death. This myth was current in other parts of Canada (*Relation de la Nouvelle France*, 1636)—among the Ojibwas in 1857 (Hind, *Labrador*, 1863, i. 61).

These myths of the origin of death and kindred evils through a 'Fall' form the most concrete answer to man's questionings about his evil plight—death being taken as typical of evil generally—while they approach the series of the more complete Fall-myths current among many peoples, which must now be considered.

2. Myths of a Fall.—(1) Some myths of this class bear a striking resemblance to the story of Genesis, and may have arisen as a result of missionary teaching, or through the gradual diffusion of the Hebrew story in the same way as *Märchen* have been diffused over a wide area. In others, the likeness may simply be due to the colouring of an original myth with pigments borrowed from outside sources. Each myth of this kind must be judged on its merits, and with a full appreciation of the possibility of similar stories arising through similar circumstances, surroundings, and psychic conditions, in more places than one. Many others are undoubtedly original—even a few which might seem at first sight to be borrowed. Especially is this the case where, in many of the myths which follow, as in some already referred to, the Fall is due to the eating of a forbidden food. This need not necessarily have been borrowed from Genesis, but shows how emphatically the system of tabus, especially with regard to foods, was connected with punishments meted out automatically to the tabu-breaker, and how naturally all this was reflected in myths of the origin of evil. Man accounted for the latter by that which appealed most easily to his imagination, and of the danger of which he had seen many evidences. His Fall was a punishment visited on him for breaking a divine tabu. Such a view might easily become current among the lowest races, since it is found that the creative beings of, *e.g.*, the Andamanese, Australians, and Bushmen are also moral governors, punishing men for breaches of their commands. The Batutsi say that the Fall was due to Nyinakigwa's breaking of the divine prohibition to tell how, being sterile, she had three children, the gifts of the deity Imana (*Anthropos*, iii. [1908] 2 ff.). Where it had become customary not to eat of certain foods at certain seasons, it would be easy to form a myth suggesting that men had been told by a higher Being not to do so, and that, when they had done so, much evil had resulted. Thus the Andamanese, whose remarkable theology, according to the best authorities, is independent of Christian influence, believe that Puluga, the creator, gave the first man, Tomo, various injunctions, especially concerning certain trees which grew only at one place (Paradise) in the jungle, and which he was not to touch at certain seasons—during the rains, when Puluga himself visits them and partakes. Later, some of Tomo's descendants disobeyed and were severely punished. Others, disregarding Puluga's commands about murder, adultery, theft, etc., and becoming more and more wicked, were drowned in a deluge. Two men and two women survived, and, in revenge, wished to kill Puluga, who, telling them that their friends had been justly punished, disappeared from the earth. But even now these trees are strictly

tabu during the rainy season when Puluga visits them invisibly, and it is firmly held that, if any one dares to tamper with them, a new deluge will result (Man, *JAI* xii. [1882] 164, 166f., 154). Here, a native system of tabus has given rise accidentally to a series of myths bearing a certain resemblance to the Genesis story, and this may, quite conceivably, have happened elsewhere. An Australian myth, which might easily have become a Fall-myth, points to this conclusion. When the divine Baiame left the earth, the flowers withered and died. Three trees alone were left which none dared touch, because Baiame had put his mark upon them. When he saw that no one touched them, he sent a kind of manna upon the earth (K. L. Parker, *More Aust. Legend. Tales*, 1898, p. 84). A Fall through breaking a divine tabu regarding food or some other divine orders will be found in several of the myths which follow. Such myths, involving a catastrophe to many, should be compared with *Märchen*, in which an individual comes to grief through disobedience, *i.e.* breaking a tabu. Here, too, the incident reflects actual customs.

A myth, current among the Maidu Indians, may possibly owe some of its details to missionary teaching. The good world-maker, Ko-do-yam-peh, sent man on the earth, where all animals were tame and the soil fruitful. He bade him take all things freely, but always to bring his food home and cook it, never to kindle a fire in the woods. But the evil Hel-lo-kai-eh told man to cook his game in the woods. He did so, with the result that the smoke made the animals wild, as they now are; the ground was changed, and man had only roots and worms to eat; frost, rain, and tempests arose; and death was introduced into the world (*FLR* v. [1882] 118 ff.; cf. the 'Bushman myth,' § 3). In Pentecost Island (New Hebrides) a woman, become the wife of the sun-god, is violated by the moon-god, who enters the tabued precincts of the happy land; she is accordingly driven away, and bears two children, one black (the son of the sun-god) and the other white (the son of the moon-god); they engage in conflict, and the black son, the ancestor of the natives, expels his half-brother, the ancestor of all white men (*Anthropos*, vi. [1911] 902–905). A kind of dualism runs through all American Indian mythology (see DUALISM [American]; here the evil being acts the part of tempter, but the myth, even if some details have been borrowed, is in the main original. Similarly in a Blackfoot Indian myth, when Nāpi the creator makes the first pair out of clay, death is introduced through the folly of the woman, and all later misfortunes arise through disobedience to the creator's laws (Lang, *Making of Religion*, 1898, p. 260). Another myth which, according to Leland, 'gives the fall of man from a purely Indian standpoint' traces all human evils to that idle loquacity which is, above all other things, most contemptible in Indian eyes. A child was born of an Indian girl by the spirit of the mountain. She was bidden never to tell her people of his origin. The child fed them miraculously, and would have made of them a mighty nation, but they never ceased to ask his mother whence he came, and she told them, 'It shall be to you exceeding sorrow that ye ever inquired.' She and the child disappeared, and thus the Indians, who should have been a great, became a little people (Leland, *Algonquin Legends*, 1884, p. 257). The dualistic idea of the origin of evil reappears in a myth current among the Khonds of Orissa. Boora Pennu, the god of light, had a consort, the Earth-goddess, the source of evil. Her jealousy of her husband's love for his creature man caused her to introduce physical and moral evil into the world. Such men as rejected her influence were deified; all others were condemned to suffering, moral degradation, and death (MacPherson, *Mem. of Service in India*, 1865, p. 273). Compare with this the old Mexican belief that the Golden Age of Anahuac came to an end through the envy of the god Tezcatlipoca, who seduced the daughter of king Huemac, whereupon followed a decline in moral purity and the departure of the culture-hero Quetzalcoatl (Hardwick, *Christ and other Masters*, 1855–59, pt. iii. p. 151).

Certain Negro and Malagasy myths may be due to Christian or Muhammadan influence; but here again we cannot assert this with certainty, and indeed a more ancient source may be appealed to. In some of these myths may be seen that contrast between the nomadic and the agricultural life already referred to. Thus in Calabar it is told how the first human pair were called to Abasi (the Calabar high god) by a bell at meal-times. Abasi had strictly forbidden to them both agriculture and the propagation of their kind. Both these commands were broken, more especially through the woman's being tempted, by a female friend who had been given her, to use the implements of tillage. Thus man fell and became mortal, and his agricultural occupation was his curse (Bastian, *Geog. und eth. Bilder*, 1872, p. 191). This is also hinted at in a myth from Madagascar. The first man was subject to none of the present human evils, and was placed in a garden of all delights, but forbidden to taste of its fruits or drink of its limpid streams or partake of any kind of food or drink. His fall was brought about by his great enemy, who painted to him the sweetness of the apple, the [illegible]lousness of the date, and the succulence [illegible]e. At last he ate, and thus brought a[illegible] (Baring-Gould, *Legends of OT Char*[illegible] In the sequel a pimple appeared [illegible]creased till it burst. From it emerge[illegible]irl, who became through him the mot[illegible]kind. The Dahomans and the Agni are cr[illegible] with a belief in a first pair, a tree and forbidden fruit, and the temptation of the woman by a serpent (Delafosse, *L'Anth.* iv. 434). Such legends may appear to be due to Christian influence, but we must not overlook the capacity of myths to diffuse themselves over wide areas in long-distant ages; hence such stories may have long ago reached Africa from Semitic sources. On the other hand, they may be quite original, like the Andamanese myth. Others would explain their likeness to the story in Genesis by the early presence in Africa of a Semitic element, now represented by such a people as the Masai (Merker, *ZE* xxxv. 373), who possess a mythology which is said to be in many points similar to the narratives in Genesis, but contains no Christian elements. Hence it has not been obtained from Christian sources, and Merker thinks the Masai have preserved these traditions from the time of their separation from the Israelites. They hold that Paradise resulted from the moistening of the sterile earth with the blood of a huge dragon slain by God (cf. the Babylonian combat of Tiāmat and Marduk). The first man was brought down from heaven; his wife came out of the earth. They were forbidden to taste the fruit of one of the trees of Paradise. The woman was tempted to eat by a serpent: she and her husband both enjoyed the fruit; then fear fell on them and, as a punishment, they were expelled from Paradise. We hear nothing of the curse of tilling the soil; the Masai are mainly a nomadic people.

F. Max Müller has found all the elements of the Fall-story in Egypt, and thinks the Israelites derived their story thence. The myth is yet unpublished, but it is possible that all these African myths may also have been derived from it, since we know that many Egyptian customs and beliefs filtered slowly

through to the remotest parts of Africa (see the Egyptian Golden Age myth, § 3 (5).

The Madagascar myth of the Fall producing a different sex may be compared with the Sinhalese myth, above, ii. 1 (3).

(2) The idea of a Fall occurs in various forms in the mythologies of several higher races. Among the **Hindus**, who more than any other people have brooded over the problem of evil, various reasons were alleged to account for man's evil plight. A Fall in a previous existence was, as we shall see, a favourite method of accounting for it; in other cases it was regarded as the inevitable consequence of the association of the soul with a material existence; again, the doctrine of emanation, as in the Gnostic view, suggested a gradual deterioration, keeping pace with the increasing distance of souls from the divine; while, as in Greek mythology, a series of successive world-ages, each growing worse than its predecessor, was also postulated.

In the earliest writings (the Vedas) there is no Fall-myth; the story of the incest of Yama and Yami (Rigveda) affords no real parallel to the Genesis story, as is sometimes supposed, but is a crude explanation of origins. In later times the more philosophical views occasionally give place to a concrete myth, *e.g.* that of Brahmā, identified with the first man Manu Svāyambhuva, and Satarūpa, Manu's wife, the equivalent of the creative principle. Śiva dropped from heaven a blossom of the sacred *vatā*, or Indian fig—the *bōdhidruma*, or tree of knowledge of Brahman and Buddhist alike. Ensnared by its beauty, Brahmā gathered it, thinking it would make him immortal and divine. While still exulting in this thought, he was punished by being consigned to an abyss of degradation, whence he could be freed only after a long term of suffering. His wife, adds the myth, had urged him to take the blossom, and on their descendants was the curse entailed.

This myth, which has very frequently been cited as a parallel to Gn 3[1ff.], owes nothing to the latter, is of late origin, and possibly is derived from a Buddhist myth with several variants. One form, cited by Hardy (*Man. of Bud.*, 1864, p. 66), tells how the Brahmas who were born into this world were happy, and peace reigned everywhere. A peculiar scum arose on the surface of the earth; one of them tasted it, found it palatable, and devoured it greedily. The others followed his example, with the result that the glory of their persons faded, and it became necessary to make the sun and moon. Their skins grew coarse; they deteriorated morally and physically; and the world became filled with passion and evil. The Tibetan form of the myth is similar. Men lived to 60,000 years, and were invisibly nourished and able to rise at will to the heavens. But, through covetousness and the consequent eating of a honey-sweet substance (or herb) produced by the earth, they lost these gifts, became vicious, and were forced to practise agriculture for the sake of food (Pallas, *Reise*, 1771–76, i. 334). In the Nepāl version, earth is uninhabited, but visited occasionally by the dwellers of the heavenly mansions (*Abhasvara*), who were innocent, and androgynous. But desire to eat arose in their minds; they tasted the earth, lost the power of return to Abhasvara, and had to eat the fruit of the earth for sustenance (Hodgson, *Buddhism*, p. 63). The Sinhalese version resembles this, but after eating earth for 60,000 years these visitors became covetous. Earth lost its sweet taste, and brought forth a kind of mushroom of which they ate till it failed them. Thus they proceeded from food to food, till their spirit nature was lost, and they became men, filled with wicked ideas (Upham, *Sacred Books of Ceylon*, 1833, iii. 156).

(3) However lightly the **Greeks** may have estimated moral evil or veiled it under æsthetic forms, they were by no means blind to it, and myth and philosophy alike tried to explain its existence. The early legend of Prometheus accounts for the evils of human life by the fact that the hero, in stealing fire from the gods, was trespassing the limits set to human knowledge and power by them. Hence their resentment. It thus exhibits that aspect of many mythologies, seen even in the Hebrew, of the gods' jealousy of men, of men becoming their equals, while the idea of man's encroaching on something forbidden is parallel with the Semitic Tree of Knowledge and other forbidden things. Hesiod (*Works and Days*, 52 f.) brings the story into connexion with that of Pandora, fashioned by the gods to bring evil to Prometheus and the whole race of men. Within her breast were infused falsehood and guile by Hermes, following the counsel of Zeus. She was received by Epimetheus, in spite of the warning given him by his brother Prometheus. And now evils came into the world, because Pandora removed the lid from a vessel in which they were contained, and so dispersed them among men. In a story mentioned by Proclus, Prometheus himself had deposited this vessel, which he had received from the Satyrs, with Epimetheus. Contrary to warning, Pandora opened it, thus showing her nature. But according to Philodemus, Epimetheus himself opened it, bringing evil and death upon his fellows. Hesiod's intention is to teach that woman is the intermediate cause of human ills (cf. Gn 3[6]). Better had it been for man to have remained alone than to have joined himself to this Greek Eve, the later creation of the gods. A similar duplication of the idea of human ills being brought about by rash desire for illicit knowledge as well as by woman occurs in the myth of the Sirens, who say they will send men who listen to them on their way the wiser. For they 'know all things,' 'all that will hereafter be upon the fruitful earth' (*Odyssey*, xii. 191). The close approach of these leading ideas of the Greek myth to those of the Semitic story is remarkable; but, in spite of possible points of contact between early Greeks and Phœnicians on the one hand, and Phœnicians and Hebrews on the other, we need not suppose that the two are interdependent or have any common source except in the similarity of man's psychic conditions and environments leading him to formulate his conception of the world on more or less similar lines. What alone seems certain is that Greeks and Hebrews, in common with some other peoples, believed that the gods were jealous of human advancement in culture, and that human ills were due to the acquisition of such culture and also to female curiosity. The wide-spread belief in woman's power for evil, and the sexual tabus resulting from it, are sufficient to account for her place in many myths as the direct or indirect cause of the Fall. We may here compare a Delaware legend which tells how, in the beginning, men had tails, but for their wickedness these were cut off and changed into women, who would be a perpetual trouble to man (Hunter, *Memoirs of a Captivity among the Indians of N. America*, 1823).

In the story of Pandora later theological animus may be detected. In earlier times she seems to have been a great Earth-goddess, mother of all things. The tabued vessel may have been suggested by the grave-*pithos* from which primitive Greek belief held that the *keres* of death and disease fluttered forth. See J. E. Harrison, *Prolegomena to Greek Rel.*, 1903, p. 284 f. For a comparison of the Semitic and Greek stories, see Symonds, *Greek Poets*, 2nd ser., 1879, p. 115.

(4) In the **Persian** sacred writings a myth occurs which some think to have been borrowed from Jewish sources, while others suggest its influence on the Hebrew story. A careful examination of

the myth (which, possibly through earlier faulty translations, seemed to have closer resemblance to Gn 3 than it really possesses) shows that it may have been quite independent in origin, while it need not have exerted any exterior influence. It occurs in the *Bundahiš*, a work which, in its present form, dates from the 9th cent., but doubtless enshrines material of a vastly older date. There is no reason to suppose that the myth is not archaic, and its contents suggest an exceedingly primitive view of things. The *Bundahiš* describes the covenant made between Ahura Mazda and Ahriman (after the discovery of the former by the latter, towards the end of the first three thousand years) that Ahriman's power should last only nine thousand years. In the first three thousand Ahriman is caused to remain in confusion; in the second, he is triumphant; in the third and last, he is gradually overcome (see AGES OF THE WORLD [Zoroastrian], vol. i. p. 205). At the beginning of his triumphant career Ahriman is said to have made a rush at the creatures, 'springing, like a snake, out of the sky down to the earth.' He first destroyed the primeval ox, from whose body and seed various plants and animals proceeded. Next followed the destruction of Gāyōmarț, the archetypal man, but from his seed sprang a human pair, Māshya and Māshyōī, who existed first, apparently, as plants growing out of the earth, and were then changed into human form. To them Ahura Mazda said: 'You are man, you are the ancestry of the world, and you are created perfect in devotion by me; perform devotedly the duty of the law, think good thoughts, speak good words, do good deeds, and worship no demons!' After having washed themselves they acknowledged the power of Ahura Mazda, but now 'antagonism rushed into their minds,' so that they were thoroughly corrupted and declared the evil spirit to be the creator. 'That false speech was spoken through the will of the demons, . . . through it they both became wicked, and their souls are in hell until the future existence.' At first they drank only water and were clad in herbage; but after thirty days they drank the milk of a goat, expressing their delight in it, and by this second false speech enhancing the power of the demons. Thirty days later, they slaughtered and ate a sheep, roasting it with fire 'extracted by them out of the wood of the lote-plum and box-tree, through the guidance of the heavenly angels' (and probably by friction). The skin of the animal served them for clothes; later, they wore woven garments. They dug iron out of the earth, hammering it with a stone, cut down wood, and made a shelter from the sun. Their gracelessness increased; the demons became more oppressive; and they fell to fighting with each other. At the end of fifty years they were moved to desire of each other. A pair of offspring were born to them, but, 'owing to tenderness for offspring,' they devoured them. This 'tenderness' was taken from them by Ahura Mazda, so that their succeeding children remained alive. Here, as in the Hebrew and other Fall-stories, advance in culture is associated with a lapse from righteousness, but temptation is merely hinted at, and we learn only by inference that the drinking of milk and eating of flesh were forbidden. On the whole, the differences are greater than the resemblances, and we may have here an original and ancient myth, which at a later date may have received some colouring from Hebrew sources, but obviously is entirely Parsi in its teaching (*Bundahiš*, chs. i.–xv., in West's *Pahlavi Texts*, pt. i. *SBE* v. [1880]). In other parts of the *Bundahiš* it is clear that Ahriman seduces human creatures to evil, rather than that the evil comes from within themselves. So he announces his intention to the creator: 'I will force all thy creatures into disaffection to thee and affection for myself' (*Bund.* i. 14), and Ahura Mazda says he cannot rest at ease, for he must provide protection for his people against the seductions of Ahriman, who 'casts this into the thoughts of men, that this religion of Ahura Mazda is nought, and it is not necessary to be steadfast in it' (xxviii. 3–5). It is not clear that a taint of evil is inherited. At all events, king Yima, sixth in descent from Māshya, appears to have lived in righteousness 'till his glory (or reason) departed' (*Bund.* xxxiv. 4); when this happened he took a she-demon for wife through fear of the demons, and gave his sister Yimak to a demon as wife. 'From them have originated the tailed ape and bear and other species of degeneracy' (xxiii. 1). Yima is the Yama of the Vedas, who committed incest with his sister Yami, just as, in a later Pahlavi text, Yimak pretended to be Yima's demon-wife, and lay with him (*SBE* xviii. [1882] 419). Yima appears in the earlier Iranian writings (*Vendīdād*, ii.) as a righteous king whose reign was a time of innocence, without cold, heat, age, disease, death, or envy of the *daēvas*, and full of prosperity and productiveness (*Yasna*, ix.; *Yašt* xv.). Here, too, it is said his 'glory' departed through his lie, when he began to delight in falsehood (*Yašt* xix. 34). Firdūsī, in the 10th cent., says that the lie consisted in his pretending to be a god. Yima is not here the first man, though he may in an earlier myth have had that position; this, however, is rendered unlikely by the fact that he is through all the sacred writings placed in a later generation. Disease and death, too, were in the world before his time. He may, therefore, have simply been the ideal righteous king, who at last fell, like all other men, through the seductions of the *daēvas*. In the earliest writings of all, he also bears this righteous character, but is taken as an example of apostasy, apparently because he sinned through flesh-eating after having lived on vegetable food. The interpretation of the passage *Yasna*, xxxii. 8 is much disputed, and Tiele and others do not accept this rendering. There is no doubt, however, that the Iranians believed the earliest state of men to have been one of innocence and prosperity, when they lived on imperishable food and were free from the ills of life, and that all this came to an end through the envy of the *daēvas*, who corrupted men (*Yasna*, ix., xxxii. 5).

(5) The idea of man's hapless plight as a punishment is also suggested in myths which refer it to a wrong choice (like the choice of Plato's pre-existent souls, see § 5) made in the beginning of things. The Ashantis trace all their woes to the folly of their ancestors. In the beginning there were three white and three black men and women, who were told by a divinity to choose either a box or a piece of sealed-up paper. The blacks chose the box and found in it gold, iron, etc.; while the whites chose the paper, which contained wisdom. After their choice the blacks worshipped 'fetishes' instead of their high god (Hutton, *Voy. to Africa*, 1821, p. 320). So the Navahos assert that their ancestors chose a richly decorated jar which contained rubbish, and hence they are now poor and miserable; the Pueblos chose a coarse jar full of flocks and herds, and now enjoy plenty (Schoolcraft, *Indian Tribes*, iv. 90). The Ashanti myth probably existed before the appearance of the whites, and would then have referred to some other race, to judge by the analogy of the Navaho story. With both may be compared a Tongan and Fijian myth, alleged to be archaic, and also to have received its present application after contact with Europeans, to the effect that the first-born of mankind was disobedient to the Creator and grew black, while the second-

born, by virtue of a higher obedience, remained fair, and was the ancestor of the white race (Hale, *Exploring Exped.*, Philadelphia, 1846, p. 177).

The choice of a worse object and the obtaining of many benefits thereby, on the part of a hero or heroine, and the choice of a better object which produces nothing but evil to the malicious chooser, is a favourite theme of *Märchen*, in countless forms and in all parts of the world, civilized and savage (cf. § 5).

3. Myths of a Golden Age.—Combined in some cases with the myth of a Fall, and always predicating man's earlier innocence and happiness, is the legend of a Golden Age, or the more philosophic idea of a series of recurring world ages.

(1) Even among the lowest races, especially after contact with a higher civilization, such a conception is not wanting. The Bushmen tell how once they could 'make stone things that flew over rivers' (Lang, *Myth, Rit., and Rel.*, 1899, i. 169), while their myth of origins relates that once men and animals (who could speak) lived together till men made fire, which they had been forbidden to do, and so startled the animals that they lost the power of speech and fled ever afterwards from man's presence (Stow, *Races of S. Afr.*, 1905, p. 130). Cf. the Amer. Indian myth, ii. 2 (1), and the idea (as in the Prometheus legends) that fire is illicit. In Samoa, as elsewhere, we hear of a primitive Golden Age when all things could talk. The idea of a Golden Age in the past, lost through man's fault, took shape in various ways, but it was more immediately suggested by the almost instinctive conviction (common to old races as to old individuals) that things must once have been better, just as men generally hope that things will be better in the future. In some cases a people dwelling in comparative comfort and plenty in some desirable part of the earth, but driven out to a less pleasant region by a stronger race, would easily shape to themselves a legend of a happier state of things long ago, and with each generation the mythic happiness of that state would be increased. All migrations would tend to do the same, just as in some cases the dim memory of rivers and mountains crossed, joined with the desire to be buried in one's native place, suggested the idea of the journey of the soul over a perilous way to the land of the departed. Occasionally the memory of such migrations appears to be mixed up with myths of human origins; men came from below the earth or descended from the skies (see § 4). In the latter case the myth usually takes the form that men and gods then lived together, or that there was intercourse between heaven and earth; this ceased through some act of human folly (cf. the Tongan myth, ii. 1 (3)). Finally, the idea of the Golden Age may have been suggested to men by observing the happiness of the child, and by thinking that all men were thus happy in the childhood of the race.

(2) The most typical form of the Golden Age myth is the Greek one given by Hesiod in his *Works and Days* (following upon, but distinct from, his myth of Pandora), where we learn that a new race was formed in each of the series of successive ages, gradually deteriorating. The first age was that of the golden race of men, who were prosperous and happy, and passed from life as in a sleep. The second was the silver age, in which began sorrow; men could not refrain from injustice, and refused worship to the gods. The third was that of the race of bronze—a race of warriors who took away life with their own hands. Then came the fourth age, that of the men who fought at Thebes and Troy, now in the Isles of the Blest, where Kronos reigns; and, lastly, the iron age, that of the present, full of toil, wretchedness, and corruption. The Attic Cronia, like the Saturnalia, commemorated the fabled Golden Age, while both were a kind of harvest festival. According to Pindar (*Ol.* ii. 70), Kronos now reigns in the fortunate isles in a species of Golden Age. Among the Greek philosophers some trace of this tradition is found. Plato, in his *Critias* (xvi.), teaches that the human race started aright, but by gradual deterioration and loss of the divine admixture in their nature the early promise of mankind was broken. It also coloured Roman philosophic thought—Cicero, Seneca, and Lucretius asserting man's degeneration from a purer state, while in Ovid the Golden Age is connected with the native god of agriculture, Saturn, whose festival, the Saturnalia, represented that primitive happy state, though it is possible that the myth may have arisen to explain the festival. Saturn was identified with the Greek Kronos, and made the culture-hero and teacher of the happy people who owned his rule. Ovid's picture, doubtless, represents current mythic conceptions: it was an age without guilt or need of punishment or war; the earth produced its fruits without man's labour; there was eternal spring and abundant prosperity. In the succeeding ages of silver, brass, and iron, degeneracy began until the earth was filled with evil and violence, sorrow and toil and pain (*Metam.* bk. i.). To all this, however, there would be an end, and the Golden Age would return. Hence Virgil's prophecy:

'Jam redit et Virgo, redeunt Saturnia regna' (*Ecl.* iv. 6).

(3) It has been seen (ii. 2 (4)) that the Iranian Yima was king of a Golden Age of innocence, without disease or death, though, with the usual inconsistency of myth, death is already present in the world (*Yasna*, ix.), while this age is later than the time of the first man. Yima was directed by Ahura Mazda, after the evils of winter came to his territories, to make an 'enclosure' for his people, within which no evil things could come. Thither he was to bring 'the seeds of men and women of the greatest, best, and finest on this earth,' and seeds of the finest animals and plants; they bring forth two of their kind every forty years, and enjoy uninterrupted happiness (*Vendīdād*, ii.). This earthly Paradise somewhat resembles the kingdom of Yama in the other world, where he rules over the souls of the dead, as represented in the Rigveda (x. 14. 1, 2); and it is not impossible that the Iranian legend may have been coloured by the Indian, which is undoubtedly primitive, since the conception of the first man as ruler of the kingdom of the dead, whither he has first penetrated, is certainly early. But it is more likely that an earlier Iranian myth which made Yima the first to die and his people the souls of the dead who followed him had become corrupted in course of time into a belief in an enclosure filled with more or less supernatural beings (see Darmesteter, *SBE* iv. p. lxxv, *Introduction*; for another interpretation, cf. BLEST, ABODE OF THE [Persian]).

(4) Confucianism, which holds that man is made by nature virtuous, and might easily remain so, has its legends of a Golden Age of virtue and the true practice of religion, of innocence and happiness, without disease or death, which issued in the catastrophe of a flood, because, according to the *Li Ki*, men turned away from the Monarch of the universe, bent their eyes earthwards, loving sensuality, desiring knowledge, or, according to Lao-tse, to eat, and so became the prey of all miseries and addicted to all kinds of crime. Or, according to the *Shi King* (iii. 3. 1), men draw their being from heaven, but time and the environment in which they live soon produce error and sin. The primitive lapse is thus reproduced in the life of every man. The *Shi King* also describes the

virtuous and happy reigns of such kings as Wan; while, according to the *Shu King* (pt. v. bk. 27. 2), Khih Yu was the first to produce disorder, which spread among the people. But, as this rebel is held to have lived about 2700 B.C., the Chinese Golden Age is thus brought within historic times. A verse sometimes quoted from the *Shi King* (iii. bk. 3, ode 10, 3, Legge's translation), as proving that the Fall was due to a woman who overthrew her husband's wall of virtue, does not refer to a primitive fall, but only describes in general terms the weakness of even the best of women.

(5) Some trace of a myth of the Golden Age appears in ancient Egyptian religion. Maspero says: 'Certain expressions used by Egyptian writers are in themselves sufficient to show that the first generations of men were supposed to have lived in a state of happiness and perfection' (*Dawn of Civ.*[2], 1896, p. 158). They recalled the earthly reign of Rā in the beginning as a Golden Age long ago passed away. Men's wickedness had been the cause of its ending, and of Rā's leaving the earth and causing the death of its people at the hands of a goddess. But with the survivors a compact was made that they would no more be destroyed. Men looked back to that happy time with longing, and expressed it by the phrase 'the times of Rā,' while of anything which was superior of its kind they said that its like had not been seen since the days of Rā (Maspero, *op. cit.*; Lenormant, *Les Origines*, 1880–84, i. 448).

Connected with the legend of a Golden Age is the myth of a Paradise, not always, however, inhabited by the first human pair, as in Genesis, but by gods, or supernatural beings, or deathless men. Among the Greeks there is the conception of Elysium and the Islands of the Blest, as well as that of the Garden of the Hesperides, a home of the gods, in which Hera's golden apples grew on a tree guarded by a dragon which Herakles slew, afterwards stealing the fruit. Some have seen in the last an echo of Genesis (Lenormant, *Origines*, i. 94). But beyond the seductive beauty of both gardens and the mystic tree there is no real parallel: the dragon acts differently from the serpent, and Herakles is unrepresented in Genesis, while there is no temptation or 'Fall.' The Hindu sacred Mount Meru, with its gardens and four rivers, unapproachable by sinful man and guarded by a dragon, has its counterpart in the Iranian Alborz (Hara-berezaiti), the seat of Mithra, where there is no night, darkness, cold, putrefaction, or uncleanness (*Yašt* x. 50). A similar garden mountain, moistened by water flowing from the fountain of immortality and forming four rivers, and guarded by an animal called Kaiming, appears in Chinese mythology, and possibly was suggested by Buddhist influence. The fabled earthly Paradise is the counterpart in space of what the Golden Age is in time. Both are equally remote and usually inaccessible. Possibly the idea that Paradise with its Golden Age had been lost to men in the past led to the idea that it still existed far away, to be reached by adventurous or favoured mortals. The idea that gods dwelt with men in the past suggested the existence of an earthly home of the gods, while it doubtless helped to form myths of a Golden Age. That divine earthly home perhaps became also the inaccessible Paradise.

(6) *World-ages.*—Among various races cosmogonic speculation, in the attempt to conceive a beginning of things, has imagined a series of world-ages, which in some mythologies end each in a catastrophe, and are occasionally connected (as in Hesiod) with the Golden-Age myth. The Hindu world-ages are also connected with the theory of a Golden Age and of the gradual deterioration of mankind. In the Kṛta age all was perfect, men were innocent and happy, they had free intercourse with the gods, who frequently assumed human form and spoke to them of the divine world whither they would go. But in the next, or Tretā, age, men had departed from their primal perfection; in the third, or Dvāpara, age, doubt and atheism flourished; while in the present, or Kali, age, evil of all kinds predominates in human life. These four ages are but divisions of one in a vast series of cycles through which the universe passes, according to Hindu philosophic pantheism. Each cycle endures for 12,000 years, and each year is equivalent to 360 ordinary years (*Laws of Manu*, i. 68–86; *Viṣṇu Purāṇa*, bk. i. cap. 3). Similar beliefs are found in Buddhism, while four ages, each terminating with a catastrophe (but unconnected with a Golden Age), were mythically represented in ancient Mexico (Clavigero, *Hist. of Mexico*, 1787, i. 401). With these may be compared the Stoic world-years (Plutarch, *de Orac. Def.*) and Plato's speculations. In other cases (*e.g.* Scandinavian and Persian) four great ages include the whole drama of the universe, and involve gods rather than men; both show, however, how for an age the gods had peace, and assert the coming reign of peace and right (*Corpus Poeticum Boreale*, 1883; *Bundahiš*, xxxiv.). A late Persian legend tells how Ahura Mazda showed to Zarathuštra a tree with four branches, of gold, silver, steel, and iron, representing four periods yet to come—of revelation and its acceptance; of the reigns of two succeeding kings; and, lastly, of the evil sovereignty of the demons. In a variant there are seven branches and seven periods. The whole is couched in the form of a prophecy, while it describes past events; its form may owe something to the Greek myth; and the age of revelation is dimly adumbrated as a true Golden Age (West, *Pahlavi Texts*, i. 192, 198). It is quite distinct from the earlier conception of the great ages of Iranian mythology. See AGES OF THE WORLD.

(7) While these myths of a Golden Age make the deterioration of mankind a gradual affair, those others, of the origin of death or of a Fall, show how it was produced at one fell stroke, though the myths frequently tell how the previous condition of man was a Golden Age of peace, innocence, and plenty. It should be noted, however, especially in connexion with the idea of a series of world-ages, which appears also in primitive mythologies, that, in contradistinction to a primitive Golden Age, it is sometimes held that various races of men were created and then destroyed as being unfit for survival, and inadequate to their surroundings. The existing race is thus a survival of the fittest. We find this in Brāhmanic myths, in the Quiché *Popol Vuh* (with the further idea that some of the earlier peoples degenerated into apes), and among lower races (Lang, *op. cit.* i. 202). This view also resembles a widespread mythical conception of the ancestors of the race being ignorant of the arts and given up to various evil practices, *e.g.* cannibalism, until they were taught better by a god or a divine culture-hero. The race thus improved instead of deteriorating, and an ascent of man is postulated (in line with the teaching of modern science) instead of a descent from better things. The idea of Aristotle (*Pol.* ii. 8) was that men were at first on a level of ignorance and darkness; and that of Æschylus, in his version of the Prometheus story, that men lived in caves and were wretched till enlightened by Prometheus. The latter may point to a Greek myth differing from that of the Golden Age, just as in Egypt a myth, contrary to that already noticed above (5), told how Osiris weaned the first people from a condition of bestial savagery. In Babylon, according to Berosus, Oannes taught men, who till then had lived as beasts, while the Babylonian epic of Gilgameš makes Eabani live with beasts as a beast till the sacred prostitute, Ukhat, shows him a higher life (cf. Jastrow, *Relig. of Bab. and Assyr.*, Boston, 1898, p. 476 ff.). The same people sometimes hold simultaneously the most diverse myths—products, in certain cases, of different tribes or races which have amalgamated—without any thought of their incongruity. Yet even in such cases, so long as the divine culture-hero remains among the people whom he has taught, there is for them a kind of Golden Age. Then he takes his departure, promising to return; but till that time men must live in toil and pain.

This was a frequent myth among all branches of the American Indian race.

The Greek myth of Saturn's reign and the Egyptian of Rā's both postulate the presence of a divine being with men during their state of innocence.

4. Myths of a lost intercourse between gods and men.—Analogous to the idea of the divine culture-hero dwelling with men for a time in a kind of Golden Age is the belief (related to that of a Golden Age), found among many races, that at the earliest period of human existence there was free intercourse between gods and men, heaven and earth, either by some method of reaching the sky or by men having actually dwelt with the gods. This is usually part of a myth explaining the origin of man, who, as was sometimes thought, came from that glad upper world. Various reasons are assigned for that intercourse having ceased; occasionally it is human curiosity, weakness, or error which caused this happy state of things to end; but it may also arise through ancestor-worship, especially where the ancestors worshipped have become gods, from whom the people or their rulers trace their descent. In Andamanese mythology, the high god Puluga lived with men till they tried to kill him. He answered that he was 'as hard as wood,' and that if they persisted in disobeying him he would destroy them and the world with them. This is the last occasion on which he made himself visible (Man, *JAI* xii. 167). Among the Kurnai of S. Australia it is held that a great being, Mungan-ngaua, once lived on earth and taught them all the arts they know. He instituted the Jeraeil (mysteries), but some traitor once revealed the secrets of these mysteries to the women. Mungan sent fire between heaven and earth so that men went mad with fear; then the sea rushed over the earth, drowning all save a few, who became ancestors of the Kurnai. Some of these were changed into animals. Mungan then left the earth and now remains in the sky (Howitt, *Nat. Tribes of S.E. Aust.*, 1904, p. 630). Among the Negroes of Fernando Po it is held that once there was a ladder from heaven to earth by which the divine beings descended to men, until a cripple started to ascend. His mother chased him, and the gods, horrified at the sight, and at the possible intrusion on their domain, threw down the ladder, and have left humanity alone ever since (M. H. Kingsley, *Trav. in W. Afr.*, 1897, p. 507). The Fantis have a myth which tells how the first men lived in a lofty and desirable land, but were driven from it to the lower world in order to learn humility (Smith, *Nouveau Voyage de Guinée*, 1744, ii. 176). The people of Guiana hold that their forefathers once lived happily above the sky. But curiosity tempted them to descend to earth by means of a rope-ladder and to taste its food. One of their number (in one of the variants, a woman) stuck in the hole in the sky, thus preventing all possibility of return. There are several variants of this myth, some of which tell of men's longing to return to heaven, and their condemnation to remain below in spite of their pleading (Brett, *Legends of B. Guiana*, 1880, p. 103 f.). A myth of the same kind, found among the Kirghiz, is also connected with the earlier Golden Age. On the top of Mt. Mustagh-ata is an ancient city built in the days of universal happiness. Since that time ceased there has been no intercourse between its inhabitants, who are still happy, and the fallen race of men (Sven Hedin, *Through Asia*, 1898, i. 221). Instances of divine beings descending to earth and thus losing their immortality have already been referred to (ii. 1 (3), 2 (2), Tongan, Hindu, Tibetan), and exemplify this conception, which is also met with in the myths of various tribes of the Algonquin stock. A divine woman, for some reason which varies in different myths, but which is occasionally said to have been disobedience or immorality, is banished from heaven to earth, and falls on the back of the turtle, who then sends another animal to fish up the earth, where she becomes mother of a dualistic pair of demi-gods and also of the human race (Brinton, *American Hero-Myths*, 1882, p. 54).

5. Myths of a Fall in a former existence.—This latter notion of a fault committed in a higher state leading to banishment to the earth is the basis of those myths and beliefs which trace man's Fall and his present misery to his wrong-doing in a pre-existent state. Metempsychosis, wherever it is held in an ethical form, presupposes the idea of a Fall. In Hindu belief, the souls which departed from the primal essence were condemned to existence in the body within a purgatorial world, and each life is now conditioned by its conduct in the former. The misery of life is thus a direct penalty for the primal Fall as well as for the sins of all succeeding existences (Manu, vi. 77, 78). This idea of human life as a purgatory, whether borrowed from Egypt or not, appears sporadically in Greek religious and philosophic thought. Pythagoras and his school postulated the guilt of the soul in a higher state as the cause of its separation from the divine and its imprisonment in the body, through one or several existences (Zeller, *Pre-Soc. Phil.*, 1881, i. 48), and Empedocles taught that mundane existence was the doom of souls hurled earthwards from the heaven of which they had proved unworthy. This, too, according to Plato, was the Orphic doctrine—the soul expiated in the prison of the body the sins it had committed in a previous existence. Plato himself, while sometimes teaching the belief in a Golden Age, lays stress on pre-existence and a Fall in that earlier state, due either to indolence, weakness, and perverseness, or to a wrong choice of the destinies of life (cf. the Ashanti myth above, 2 (5); *Phædr.* 246; *Repub.* x. 2. 614). A similar doctrine of the Fall appears in Philo and in Origen, and has been upheld by later Christian philosophers, *e.g.* Müller in his *Christian Doctrine of Sin*, Eng. tr., 1885 (see PRE-EXISTENCE).

6. Myths of a divine Fall.—A more profound thought is reached in the occasional myths which tell of the Fall of a god. In most of those myths concerning the Fall of the first of men they are conceived as almost more than human—the first man is sometimes a creator, or, when he dies, he becomes king of the dead. It has been seen, too, how immortal gods lose their immortality and become the first of men through descending to earth and eating its fruits (see ii. 1 (3), 2 (2)). Wherever dualism prevails (and it runs like a coloured thread through the stuff of most mythologies), the divinities are usually subject to the attack of evil beings—titans, giants, wicked divinities, serpents, etc.—and are frequently defeated by them. Though this defeat is not, strictly speaking, a Fall, yet it shows a strain of weakness in the gods, such as is also adumbrated in the thought of an immutable fate to which the gods must be subject, *e.g.* the divinities of Scandinavia could not avert the death of Balder. Again, that strain of weakness is seen in the idea, so prominent in Zoroastrianism, and which occurs even in savage mythologies, that the works of the good creator, and especially man, are subject to, and frequently overcome by, the attacks and wiles of the wicked divinity. Where myths of a divine Fall exist, they occasionally show how it affected for the worse the lot of man. In a Hindu example, Brahmā was seized with a guilty passion for his daughter Sarasvatī, which he could not resist, and, pursued by the reproaches of his creatures, he quitted the body which he had soiled; or, according to a legend in the Purāṇas, being

proud of his works and wishing to make himself equal with the supreme Being, he was sunk by him in matter, followed by all his creatures (B. Constant, *De la Religion*, iv. 116, 117). A genuine ancient Mexican myth relates that Quetzalcoatl, Tezcatlipoca, and their brethren were gods in heaven and passed their time in a rose-garden until they began plucking roses from the great rose-tree in the centre of the garden. Thereupon Tonaco-tecutli, in his anger at their action, hurled them to earth, where they lived as mortals (Brinton, *Amer. Hero-Myths*, p. 95). Two curious Scandinavian myths in the *Edda*, both ancient, and the first of them certainly dating from heathen times, suggest a fall of the gods. In the *Völuspá* we read, 'The Æsir met on Ida's plain: They altar-steads and temples high constructed. Their strength they proved, All things tried, Furnaces established, Precious things forged; Formed tongs, and fabricated tools; At tables played at home; Joyous they were; To them was naught the want of gold, Until there came Thurs-maidens three, All powerful from Jötunheim.' There is here a suggested weakening of the gods and an end of their happy state on Ida's plain, through the seductions of these female giants, just as the seductive Pandora brought evil upon men (Thorpe, *Edda of Sæmund*, 1866, 'Völuspá,' stanzas 7 and 8). The other myth, which occurs in 'Bragi's telling,' relates how Loki was seized by an eagle (a giant in that shape) who would not let him go till he took oath to bring to him Iðunn, guardian of the gods' apples of immortality, out of Asgard. Loki agreed, and lured Iðunn into a wood under pretence of comparing her apples with others which he had found. There she was seized by the giant, who fled with her. Loki would have been punished by the sorrowful gods had he not agreed to go and seek her in Jötunheim. Thence he brought her, pursued by the giant, who was slain by the gods (Dasent's translation of *Edda*, p. 86). The seduction of the goddess is involuntary on her part, but the story resembles Loki's final revolt against the gods, of whom he was one, as a result of the giant nature which was in part his.

A war between two classes of supernatural beings, and the utter ruin and banishment of one of them to a lower state, is the subject of various myths—Greek, gods and Titans; Scandinavian, gods and giants; Hindu, gods and demons, etc. (for other examples, see Baring-Gould, *Legends of OT Char.*, i. 5 f.). Some such idea, connected with that of a fall of higher powers, underlies the vague statements in the Bible regarding the fall of the angels, so much developed in Rabbinical and Muhammadan lore (cf. *Book of Enoch*), while it forms a central doctrine in various Gnostic systems and in Manichæism.

The Fall and the Flood.—In some cases peoples who have a myth of the Fall have also a Deluge-myth. Sometimes this is directly brought into connexion with the Fall as its punishment; in other cases it is a separate event, usually resulting as the punishment of further human wickedness. Or, again, it is merely a catastrophe ending one or more of the successive world-ages. In some myths all human beings are swept away and a new race is formed; in others, a few survive who re-people the earth. Andamanese myths are examples of a flood as a direct punishment of a Fall (see ii. 2). The Caribs also say that men at first lived in happiness and to a great age, until they became wicked and a flood came and swept them away (de la Borde, *Reise zu den Caraiben*, 1684, i. 380). See DELUGE; Baring-Gould, *Legends of OT Char.* i. 116-133; Lenormant, *Les Origines*, p. 382 f.

iii. *COMPARATIVE STUDY OF FALL-MYTHS.*—1. With few exceptions, the surveys of Fall-myths have been uncritical. Anxiety to prove the truth of the Biblical story of the Fall has led several writers to find echoes of it in myths and legends from all parts of the world. It was enough for such apologists to discover a myth of a tree, or a serpent, or of both together, or of a woman and a serpent, to see in it a corruption of the Hebrew story, which they suppose to have once been common to all races of mankind. But wherever tree-worship, or serpent-worship, or totemism has prevailed, such myths are inevitable, and it is far from unlikely that all these and other elements were laid under contribution in the gradual formation of the Hebrew myth. But myths involving any or all of these elements need not have any connexion with it. Examples of such forcing of myths into a connexion with Genesis are the Greek story of Eurydice bitten to death by a serpent; the similar Hindu story of Pramadvarā's death and her recovery by her lover Ruru, as told in the Mahābhārata; the Mexican myth, also represented in hieroglyphic pictures, of the mother of mankind attended by a huge serpent; the Babylonian myth of the conflict of Tiāmat and Marduk; the Egyptian myth of the conflict of Typhon and Osiris; the Hindu tales of divinities, such as Kṛṣṇa, striving with, and overcoming, monstrous serpents; or of Indra, victor over the serpent Ahi; the Greek legends of Apollo and the python, or of the dragon slain by Minerva; Mexican stories of a huge serpent slain by Tezcatlipoca; the Scandinavian myth of the Midgard serpent, offspring of Loki, overcome by Thor. All these are held by such apologists as Deane (*Worship of the Serpent*[2], 1833) and Faber (*Horæ Mosaicæ*[2], 1818, i.) to be pagan versions, derived from a distorted reminiscence of primitive history, of the temptation of the woman by the serpent, and of the overcoming of the tempter by a promised Deliverer. On the other hand, Doane (*Bible Myths and their Parallels*[4], 1882) and Higgins (*Anacalypsis*, 1878) throw discredit on the Biblical narrative by the existence of these stories. Both methods are equally uncritical.

2. Again, a Babylonian cylinder showing a horned man and a woman sitting on either side of a tree and plucking its fruits, while a serpent is seen behind the woman; a bas-relief from Rome representing two persons standing near a tree encircled by a serpent; a painted vase from Cyprus, of Phœnician provenance, with a tree from whose branches hang bunches of fruit which a serpent is in the act of taking—are sometimes cited as witnessing to the existence of a myth, akin to the Hebrew, in the lands where they have been found, or, at least, to the diffusion westwards of a Semitic story of the Fall (see Delitzsch, *Babel und Bibel*, 1905, p. 37; Lenormant, *op. cit.* i. 106).

3. **The serpent in mythology.**—It is certainly a striking fact that the serpent or a fabled dragon should so universally be chosen as the symbol of evil, physical or moral. The explanation is probably to be found not in distortions of the story of a primitive temptation and Fall, but in the fact that the serpent or other reptiles, and possibly occasional survivals of extinct monsters, must have struck early man everywhere with terror or aroused his amazement. In many mythologies, Vedic, Amer. Indian, etc., the serpent is the guardian of the waters. We may see in this a memory of the time when such creatures—pre-historic monsters or large serpents—lived in or near the waters and levied a toll on human life, especially from those who came to draw water. Stories of their destruction would easily attach themselves to the mythic cycles of this or the other god, and gradually assume a more ethical form, until a mythic

serpent or dragon became the symbol of darkness or evil (as in the myths referred to above), or elsewhere remained the enemy of man, keeping back the most valuable treasure, water, from him. The mysterious, uncanny, and demoniac nature of the serpent would easily make it the vehicle of man's mythic fancies, sometimes his fabled enemy, but also possessor of a higher wisdom and occasionally man's friend — a character which the serpent of Genesis may have had in the earlier forms of the story (see Barton, *Sem. Origins*, 1902, p. 93). On the other hand, the myths which speak of women overcome by a serpent are not to be confused with the Biblical story in its present form — of a woman tempted by a serpent to evil. The latter, however, may have some connexion with a whole series of myths and *Märchen* in which the serpent has a mysterious relation to woman— her lover, seducer, or husband. These stories arose from the general animistic and totemistic idea that men and beasts had much in common, and that there was a time when their qualities were identical. But the persistent appearance of the serpent rather than other animals in such stories may have some other significance besides, and, taken in connexion with a series of myths showing that menstruation originated from woman's having been bitten by a snake, that significance is possibly phallic.

Ch. Schoebel, in *Le Mythe de la femme et du serpent*, 1876, seeks to show that the story of Genesis and its supposed correlates referred to above have a phallic significance. As soon as man, until then bi-sexual, became two, male and female, the sexual act was committed after having been forbidden. By it, man thought to put himself on a level with the creator and to equal his creative power by the force of the flesh. This failed; hence his shame and also his punishment.

LITERATURE.—Most writers on the subject have written either from the apologetic or from the destructive standpoint—to prove or disprove the truth of Genesis. Their studies are unsatisfactory and forced. In the best commentaries on Genesis some parallels are usually cited, but frequently these are exaggerated, especially that from the *Bundahiš*, where it is doubtful whether the demon had the form of a serpent, as is asserted. The reader may be referred to Kalisch's, Dillmann's, and Driver's Comm. on *Genesis*; C. Geikie, *Hours with the Bible*, Lond. 1881, vol. i. ch. 2; S. Baring-Gould, *Legends of OT Characters*, do. 1871, vol. i. ch. 4; F. Lenormant, *Les Origines de l'histoire*, Paris, 1880, vol. i. ch. 2; B. Constant, *De la Religion*, do. 1824, vol. iv.; C. Hardwick, *Christ and Other Masters*, Camb. 1855–1858; F. R. Tennant, *Sources of the Doctrines of the Fall and Original Sin*, do. 1903, ch. 2; cf. also the other authorities cited in the article.

J. A. MACCULLOCH.

FALL (Muslim).—The Fall (*hubūṭ*) of Adam and his wife from Paradise is repeatedly epitomized in the Qur'ān (ii. 33–36, vii. 18–24, xx. 115–121), with slight variations. The temptation is ascribed to Iblīs ([D]iabolos, the D being mistaken for the Syriac sign of the genitive), determined to injure Adam, before whom he had declined to prostrate himself when commanded to do so. Adam, intended by God to be His deputy on earth, is told that he and his wife are to dwell in the Garden, and eat thereof where they will, only not to approach one tree, 'lest they be wrongdoers'; they are also warned that Satan is their enemy, who will try to drive them out of the Garden. Satan, whose purpose was 'to reveal to them that nakedness of theirs which was concealed from them,' offers to show them a tree of perpetuity and unending sovereignty, assures them that they have been forbidden to eat of it only lest they might become angels or immortal, and swears that he is their true friend. They eat, their nakedness appears, and they begin to stitch leaves from the Garden to cover themselves. Upbraided by God, they implore forgiveness, but are told to descend, enemies of each other.

The hints which the Qur'ān contains were amplified by the Muslims from the Jewish and Christian records and their own fancies. In the chronicle of Ṭabarī († A.H. 310 = A.D. 922) the name of Eve (*Ḥawwā*) is introduced, and the serpent (originally a quadruped,[1] not unlike a camel) is employed to carry Iblīs in its mouth and so elude the guardians of Paradise, who would not have admitted him. It is also Eve who first experiments with the fruit, and, finding it harmless, persuades Adam to eat. There are thus four persons involved in the story—Adam, Eve, Iblīs, and the serpent (who loses his legs in consequence of his service to Iblīs). The four, when thrown down from the Garden, fall in different places: Adam somewhere in India, either on a mountain called Wāsim near a valley called Bahīl between Dahnaj and Mandal, or in Ceylon on a mountain called Budh (for which most authorities [*e.g.* Mas'ūdī, ed. Barbier de Meynard, 1861, i. 60; Muqaddasī, ed. de Goeje, 1877, p. 13] substitute Rahūn); Eve at Jeddah; Iblīs at Maisan or Abolla; and the snake at Iṣfahān or Sijistan (Damīrī, *Zoological Dictionary*, Cairo, 1309, *s.v.* 'Ḥayyah'). Adam's footprint, 70 cubits long, was shown on the mountain in Ceylon; the other foot landed in the sea at two or three days' distance (Ibn Khordadbeh, ed. de Goeje, 1889, p. 64). At first Adam was so tall that, standing on the earth, he could hear the singing of the angels in heaven, but his height was afterwards reduced. He brought down with him various leaves of the Garden, which account for the perfumes of Ceylon; and, according to Mas'ūdī, a sheaf of wheat and branches of some thirty fruit-trees. He and Eve met at 'Arafāt, and this event is commemorated by some other local names connected with the Meccan pilgrimage.

The Fall is of far less consequence in Muslim theology than in Christian, because the former— which employs it to account for weeds, the antipathy to snakes, and the troubles of menstruation and child-bed—does not use it to account for *death*; indeed, it infers from the words of the Qur'ān that man had not been created immortal, whence Satan could tempt Eve by a promise of immortality. Besides this, Adam is invested with the character of Prophet, whence he himself makes good the consequences of the Fall. But a question which gives rise to considerable discussion is the relation of the Garden whence Adam was expelled to the Garden which is promised to Believers. The various opinions held on this subject, with the arguments in support of them, are collected in the Eschatology of Ibn Qayyim al-Jauziyyah († A.H. 751 = A.D. 1350; *Works*, 1325, i. 43–80), who shows that the founders of legal as well as theological schools have expressed themselves on it. Those who (following the example of Ibn Qutaibah [† 276]) are content to supplement the Qur'ānic texts from the OT naturally hold that the scene of the Fall is some place on the earth; and the name 'Eden' is identified by them with *'Adan*, or Aden, in Yemen. But this word is certainly used of heaven in the Qur'ān (xix. 62, etc.); and, if the Qur'ānic texts alone be considered, the result appears to be a drawn battle; it is certain that, according to the *sūras*, Adam was created on and for the earth, and that the Garden whence he fell is the Garden which is promised to Believers. The suggestion that Adam, though created on earth, had been, like the Prophet, taken up into heaven, was, indeed, made, but found few supporters; for such a miracle could scarcely pass unnoticed.

Muslim writers ordinarily assume acquaintance with certain parts of the story which are not found in the Qur'ān, especially the name *Eve* (meaning in Arabic 'black,' just as *Adam* means 'red'), and her causing the Fall and expulsion from Paradise

[1] According to Jewish Midrashic literature, the serpent of the Garden originally had feet (Gray, *XIV Cong. internat. des orientalistes*, i. [1905] 186).

(*Alf Lailah*, ed. Macnaghten, 1839, i. 7, tr. Payne, 1882–84, i. 7). Familiarity with the story of the serpent is often assumed also (*e.g.* Damīrī, *s.v.* 'Ḥayyah').

LITERATURE.—Ṭabari, Ibn Qayyim al-Jauziyyah, etc., as above.

FALSEHOOD.—See LYING.

FAMILY.

FAMILY (Primitive).—**1. Rudimentary forms of family life among lower animals.**—Traces of the grouping, more or less permanent, of parents and offspring usually understood by the term 'family' are found among the lower animals: among birds, companionship of male and female after pairing, the sharing of labour in building the nest, of incubation, and of the care of the young while they are unable to look after themselves, present close analogies to the essential functions of the human family. On the other hand, among some mammals, especially the carnivora, the protection which the family organization would demand from the male is lacking, and the offspring sometimes become, or would become but for the protection of the mother, the prey of the male. The quadrumana, especially the anthropoids, in the relation of the parents to one another and to their young, seem to approach more nearly to the human type. It is recorded of the gorillas that they move about in bands consisting of females and one male, while the male builds a nest for the female and sleeps at the foot of the tree to protect her and the young at night. The chimpanzee is said to act in the same manner, and the evidence (Wallace, *Malay Archipelago*, London, 1869, i. 93) points in the same direction in the case of the orang-utan.

The essential features which make it possible to speak of family life among the lower animals are the provision for the needs of the female and the protection of both the female and the young, by which the family becomes an organization directed towards the preservation of the species. The human family is organized upon the same basis, the chief difference being its greater permanence, due in the first instance to the longer period during which the children require the care and protection of their parents.

2. Functions of man and woman as members of family group.—(*a*) *Man.*—Subject to certain qualifications, it may be said that among primitive races the functions of the senior members of the family are clearly recognized. The duties of the male are to protect the female, to supply her with a habitation, and to provide food, sometimes by agricultural labour, more often by the chase. Instances may be quoted of the views of primitive peoples on these points.

The Patwin of California held strongly that it was the duty of the father to support his family (Powers, 'Tribes of California,' *Contributions to N. Amer. Ethnology*, Washington, 1877, iii. 222). Among the Iroquois, during the first year of marriage, the products of a man's hunting belonged entirely to his wife, and subsequently were shared equally with her (Heriot, *Travels through the Canadas*, London, 1807, p. 338). Admiral Fitzroy (*Voyages of the Adventure and Beagle*, London, 1839, ii. 182) records that among the Fuegians a youth who desired to marry must show that he was capable of supporting a wife by hunting and fishing. Among the Botocudos, girls were married at a very early age, but after marriage remained with their father until nubile; the husband, however, was required to support his wife (J. von Tschudi, *Reisen durch Südamerika*, Leipzig, 1866–69, ii. 283). Among the Kurnai, a man was required to support his family with the assistance of his wife (Howitt-Fison, *Kamilaroi and Kurnai*, Melbourne, 1880, p. 206). In Samoa it was considered the duty of a man to support and protect his wife, and the duty of the wife to obey her husband and to wait upon him and upon any visitors (Brown, *Polynesians and Melanesians*, London, 1910, p. 43). Im Thurn records that among the Indians of British Guiana a man must show that he could do a day's work and support a family before he was allowed to marry (*Indians of Guiana*, London, 1883, p. 221). Prowess in fighting as well as in hunting was also required. The head-hunting Dayaks of Borneo, as well as the Nāgās, make marriage depend upon the number of heads taken by the aspirant (Bock, *Headhunters of Borneo*, London, 1881, p. 216; Dalton, *Descrip. Ethnol. of Bengal*, Calcutta, 1872, p. 40). Among the Kafirs and Bechuana of S. Africa, the bridegroom elect must have killed a rhinoceros (Livingstone, *Miss. Travels and Researches in S. Africa*, London, 1857, p. 147). In Burma, failure to support constituted a ground for divorce (Fytche, *Burma Past and Present*, London, 1878, ii. 73). The obligation to contribute to the support of a wife was even continued after the marriage had been dissolved; and, when the husband died, the duty of supporting her devolved on the husband's relatives.

(*b*) *Woman.*—The provision towards the support of his wife and family made by the male parent naturally varied according to the character of the community. Where the staple of life was obtained by hunting and fishing, the provision of food fell largely to the father; and among pastoral peoples the care of the flocks and herds was also his duty. Agriculture originally fell to the lot of the woman, as is still the case among the majority of the Bantu peoples of Africa. In Melanesia, where both men and women work in the plantations, the duties of each sex are strictly defined. The woman was also responsible for such domestic duties as the collecting of fuel, the cooking, the making of pots, weaving, and the care of the children. The position of the woman varied, from the almost complete subjection to her husband of the Australian *gin* to the supreme authority of the woman in the long house of the Senecas. The customs attendant on exogamy and the tracing of descent through the mothers tended to place restrictions upon the power of the husband, while vesting it in the woman's male relatives; but even in the exogamous and matrilineal societies of Melanesia the husband and father was supreme in authority in his own household, and the wife's authority, so far as dependent on status, did not exist. In Africa, among the Bantu races, even where, as is still largely the case, matrilineal descent prevailed, the authority of the husband and father was paramount except in certain matters, in which traces of the authority of the kin remained. Among the Baganda, for instance, the wife's kin hold the husband responsible for negligence in the event of the wife's adultery.

(*c*) *Relation to children.*—The early care of the children naturally devolved upon the mother, but, in the case of the boys, after infancy they passed from her tutelage. Among the Australian tribes, boys were under the care of their father; but in a matrilineal society of primitive type the claims of the kin cause them to pass to the care of their

maternal uncle, who is also sometimes responsible for their preparation for initiation. In the Torres Straits this claim is also to some extent recognized in the case of girls; when the time arrives for their initiation, they are handed over to their maternal aunts for instruction and preparation (Haddon, *Head-Hunters*, London, 1901, p. 135). As a rule, however, the children live with their parents until their marriage; or, in the case of boys and where the institution of a men's house is recognized, until their initiation, or attainment to the age of puberty.

3. The dwelling-place and the family.—One of the urgent needs of human existence is some form of shelter against the inclemency of the weather. The dwelling-place, as the centre which, through early habit and by custom, has come to be recognized as the gathering place for those who are closely connected by birth, has played an important part in the development of the family and of the acknowledgment of the common obligations and privileges it entails. In the early stages of human society, a camp-fire, with at most a screen of boughs or some natural hollows in the lee of the rock as a shelter against the wind, served to give warmth and protection to a mother, her children, and their male protector. As the group increased in numbers by the birth of children and the accession of husbands for the daughters, owing to the desire for companionship and the protection of contiguity, the tendency would at first be to enlarge the shelter rather than for the group to split into a number of smaller groups, each with a shelter of its own.

The Rock Veddas of Ceylon, who live in caves and rock-shelters, and in this respect present a parallel to the Palæolithic inhabitants of the Madelenian epoch of Europe, are an example of a people at an early stage in the development of the communal house inhabited by the members of one family or kin. The Veddas reckon descent through the mother, and the husband on marriage joins his wife's family group, of which the head is his maternal uncle, his wife being his cousin. Each group, consisting of husband, wife, daughters, and daughters' husbands, is recognized as the owner of a cave. Within the cave, however, each of the smaller groups within the kin group, *i.e.* the families, has a fire of its own, around which the members sit at night. No family ever usurps the place of another (Seligmann, *The Veddas*, Camb. 1911, p. 625 ff.). This represents the beginnings of the large communal houses which have been found in various parts of the world, the best known examples, perhaps, being the long houses of the N. American Indians, which sheltered not merely one but several kin. Among the Orang Mamaq of Sumatra, each *suku*, or clan, lived under one roof (Wilken, quoted by Hartland, *Primitive Paternity*, London, 1910, i. 264). The communal house has reached its most elaborate form in Borneo in the Lelak village, where as many as 200 families may live under one roof, each in separate apartments, with doors opening out on to a common verandah (Haddon, 331). The raised communal houses of the clan found in Kiwai Island in the Torres Straits resemble the Vedda cave-dwelling in internal arrangement, each family having its own hearth (Haddon, 99). The men's house or club house of Melanesia—found wherever Melanesian influence has penetrated, as, for example, in Fiji—in which all unmarried men live between the time when they leave their own family on attaining puberty and their marriage, is a relic of the communal house. The separate hearth for each member is a record of the distribution of the occupants in families in the earlier stage. A reminiscence of the communal house also exists among the Bontoc Igorot of the Philippines, but in this case the club house belongs to the girls of the village. When it is realized that the secret society to which the club house belongs has in Melanesia taken the place of the social group of the tribe into which young men were introduced by initiation ceremonies which conferred upon them the status of manhood and made them members of the tribe, their relation to the communal house and their position in relation to the development of the family and family life become clear. The custom in Fiji, by which a man leaves his wife and family and returns to the club house for a lengthy period after the birth of a child, is not merely a matter of convenience but a ceremonial reversion to an earlier stage.

The extension of the dwelling, if local circumstances are favourable, is an obvious method of accommodating an increase in numbers, as well as the most likely to impress forcibly upon the outsider the importance of the kin. The Pueblo value daughters more than sons, for the reason that they add to the power and importance of their family by the introduction of their husbands into the group; instead of the newly married pair seeking a home of their own, more apartments are added to the already elaborate cliff-dwellings characteristic of this people (Mindeleff, *13 RBEW* [1896] 197). The communal house, however, is not the only or, indeed, the more usual result of the expansion of the family or the kin. Its construction presents difficulties which can be overcome only in peculiarly favourable conditions, and it is only in localities presenting such conditions that it would be feasible that all the daughters' husbands and families should be permanently accommodated in the parents' dwellings. The normal course of development has rather been in an opposite direction, and it is here that the house has played a more important part in the development of family life.

Sometimes only temporary residence with the wife's family was demanded, the married children subsequently building dwellings for themselves around or near the parents' abode, as among the Arawak. After the death of the parents, the group which had formed around the original home split up, each going its own way to form the nucleus of a new settlement (Im Thurn, 186, 221). The growth of a settlement by the grouping of the dwellings of married children near the parents' house finds a parallel in Florida Island in Melanesia (Codrington, *The Melanesians*, Oxford, 1891, p. 61), where, however, the land appropriated for the dwelling belongs to the husband's kin. Many primitive peoples make the provision of a house a condition of the recognition, partial or complete, of a husband's position and rights over his wife and children. Among the Yaos and Anyanja, when the intending bridegroom has obtained permission to marry from the relatives of his bride and afterwards from his own people, he returns to the bride's village 'to build the house,' the ceremony taking place when it is nearing completion (Werner, *Natives of British Central Africa*, London, 1906, p. 131). The further step, when the husband, usually after the claims of the kin or the bride's parents have been recognized by payment of the bride price, is allowed to take his wife to his own village, involves a more or less complete recognition of the independence of the husband as against the claim of the kin. In the case of the Melanesian custom mentioned above, the distinction between the kin and the family is recognized on both sides; on the female side by residence with the husband's kin, on the male side by the appropriation of communal land, subject to rights of inheritance, to the needs of an individual and his family.

4. Polygamy and the family.—The polygamous marriage presents points of interest in this connexion. The earliest form of this type of marriage is probably the *pirauru* custom found in Australia, whereby a native, when sojourning with a tribe other than his own, is provided with a temporary consort from the class with which marriage would be permissible. Among the Yakuts, a man who travelled a great deal used to marry a woman in each of the villages to which he usually resorted, and in W. Africa the same custom was followed by native traders. In New Guinea, as the different classes lived in separate villages, no wife would live with the husband, and, if all the wives belonged to distinct classes, each would live in a different village (Brown, p. 119). A trace of this form of localized polygamy was preserved, when the bride followed her husband, in the practice of assigning a separate hut to each wife and her children, as, for instance, in the Kafir kraal and the enclosures of the other Bantu races of Africa. The same custom existed in the case of the chiefs in Samoa, where the wife did not enter the family of her husband (Brown, p. 43). Among the Anyanja of Central

Africa, the free wife stayed in her own village; her husband did not necessarily remain with her, as the men, especially the Angoni, spent much time in travelling, usually on trading expeditions. If he had more than one free wife, he divided his time between their different villages. The men also had slave wives, who either followed the husband or lived in his village. If he took up his residence permanently with his chief wife in her village, his slave wives followed him, lived in his wife's hut, and acted as her servants (Werner, 133).

5. **Early form of the family.**—Widely divergent views have been held as to the origin of the family. One school of anthropologists, of whom Morgan, McClellan, and Bachofen may be taken as the representatives, have maintained that in the earliest stages of the development of human society the family as such did not exist. They hold that within the group individual marriage was non-existent, and that the widely spread custom of tracing descent through the mother, the close connexion existing between the mother's brother and her children, and the nomenclature of primitive relationship point to a state of society in which promiscuity and uncertainty of paternity were the rule, and the children were regarded as belonging to the group and not to a particular family. The family, it is maintained, is a comparatively late development which has slowly evolved within the larger group. On the other hand, it has been held (Atkinson-Lang, *The Primal Law*, London, 1903) that the primitive horde was a single family, from which the young males were driven by the jealousy of the male parent as soon as they had attained maturity. Westermarck (*Hist. of Hum. Marriage*, London, 1891, p. 40 ff.), arguing that man was not originally gregarious, largely on the ground of the difficulty of obtaining an adequate food supply, quotes a number of instances in support of his view that the family and not the group is the original basis of society, and that, even where a group of a few families are found in association, they tend to separate in times of stress.

The Wild Veddas of Ceylon, one of the lowest races in the scale of social organization ever described, were said by Pridham (*Account of Ceylon*, London, 1849, i. 454) to live in single pairs, building their huts in trees, while the Wild, or Nilgala, Veddas were said by Bailey (*Trans. Ethnol. Soc.*, new ser., ii. [1863] 281) to live in pairs or families in caves. Seligmann (p. 62) says that the social group among these Veddas usually consists of the father, mother, daughters, and daughters' husbands. The Fuegians recognized no relationship outside the family (Stirling, *S. Amer. Miss. Magazine*, iv. [1870] 11). The Yahgans of Fuegia live in families, seldom in clans (T. Bridges, quoted by Westermarck, 45). The Bushmen lived in hordes consisting of the members of one family (Fritsch, *Die Eingeborenen Süd-Afrikas*, Breslau, 1878). According to von Tschudi (ii. 283), the Botocudos of Brazil recognized the family as the only tie, while the same thing is stated of other Indian tribes of Brazil. Among the Caishánas, for instance, each family is said to dwell in its own solitary hut (H. W. Bates, *The Naturalist on the River Amazons*, London, 1863, ii. 376). Petroff records of the Eskimos of Alaska that they live in families or groups of families without cohesion, and that a young man will wander away from his family on a hunting expedition, marry, and settle, without regard to his native place of origin, or his original group (*Population, Industries, and Resources of Alaska*, Washington, 1884, p. 135). The Australian tribes of Victoria used, in times of scarcity, to break up into their constituent families, the head of each betaking himself to the land which had been frequented by his father (Brough Smyth, *Aborigines of Victoria*, London, 1878, i. 146). Schoolcraft, in his account of the Indians of North America, speaks of families becoming widely separated in times of scarcity.

It would be possible to extend the number of quotations from the observations of travellers to show that the family is widely recognized among primitive peoples as the social unit, whether the group consists of one or more families. When, however, the composition of that unit and its relation to its social environment are examined, it must be conceded that the evidence, even if it does not go to uphold the group theory of primitive society in its entirety, does demonstrate in many cases a transition from one fundamental basis of social organization to another. The group, which may in a loose sense be termed the family in the earlier form of social organization, has undergone a change of composition. It is only in the later stages that the family, in the strict sense of a group consisting of father, mother, and children, has become the social unit. But the importance of the kin in the early stages does not involve a negation of the existence of a rudimentary family in the strict sense. At this stage, however, certain privileges and duties connected with the disposal of property and the right to control the lives of its members, which later are recognized as essential features in the organization of the family, are vested in the blood relatives or kin. The substitution of patrilineal for matrilineal descent, which would seem at one time or another to have existed among almost every people, has been accompanied or preceded by a re-adjustment of the organization of the social unit; and from this re-adjustment has evolved the family of civilized type, of parents and offspring, with full recognition of relationship on both sides of the house.

6. **Relative importance of father and mother, in the early stages of development.**—The prevalence of mother-right and the organization of society on a basis which recognizes blood relationship to the kin through the mother, while ignoring the father and his connexion with his children, whether it existed in its logical entirety, as has been inferred from the evidence, or not, necessarily renders the origin of the family obscure. The marriage customs and social organization which accompany matrilineal descent, as well as the use of primitive terms of relationship, have led some writers to deny that the father in the earliest stages of primitive civilization had any place in the family group at all. There is ground for maintaining that the physiological facts of paternity were not fully recognized, even if in the earliest stages of human progress they were recognized at all. The beliefs as to conception and pregnancy current among the Arunta of Australia, as reported by Spencer-Gillen, appear incompatible with any such recognition. Apart from this, the importance of the mother's brother, upon whom devolved the duties which at a later stage fall upon the father, shows that it was he, and not the father, who was regarded as head of the group. But the position of the father begins to be recognized at a very early stage, although he does not attain his full share of family authority, rights, and duties until the patrilineal stage of social development is reached. At the same time, in the stage prior to paternal authority, the existence of a small group of persons, closely related, living more or less in close association, and recognized as forming a unit within the kin to which the term 'family' might be applied loosely, is not only highly probable, but is clearly indicated by the fact that the functions which at first fall to the kin are gradually assigned to the mother's brother, and not to the kin as a whole. Upon the mother's brother fall all the rights and duties which under fully recognized father-right fall upon the father. He is the nearest relative of his sister's children, he is responsible for their well-being, he provides for them, and—most important of all in a primitive society—they inherit his property.

The preponderating importance of the mother in primitive social organization is shown by the fact that in the earliest stages the children belong to the mother's kin and not to that of the father. In a society in which mother-right is the rule, status depends upon the mother; the status of the father

is of no consequence. In the Congo, even legitimacy is of no consequence; the fact of birth gives the child status as a member of his mother's family (Dennett, *Journ. Afr. Soc.* i. [1901] 265). Among the Fantis of the Gold Coast, it is stated, the father is hardly known or is disregarded. Although it is not probable that among many peoples at the present day the father is absolutely unknown to his children, numerous instances are recorded where he does not live regularly with the mother. In the Torres Straits Islands men of one island frequently marry women of another; these women stay in their own island, and the husband returns periodically to his village to cultivate his own land (Haddon, 160 f.). In early forms of polygamous union a man may have wives in several villages, the custom being that the wife should not dwell in the husband's village. At this stage the family, as an association of both parents and their offspring, can hardly be said to exist, and, as already suggested, its place is taken by the unit consisting of mother and offspring more or less closely associated with a male head—the mother's brother—within the kin.

7. Position of the husband and father as a resident with the wife's kin or family.—A further stage in the development of the family is reached when the father, instead of being a temporary visitor, lives with his wife's kin.

The Orang Mamaq of Sumatra are organized in *suku*, or clans, which are exogamous. The members of the *suku* live together, and, as no members of the same *suku* can marry, husband and wife do not, as a rule, live under the same roof; but, when they do, the man goes to the woman's clan. His position, however, as regards authority is not affected; the children belong to the mother's clan, and the father has no rights over them. These rights are exercised by the mother's brother (Wilken, quoted by Hartland, *op. cit.*). Arab matrimonial customs furnish instructive instances of the position of the father. Robertson Smith, on the authority of Ibn Baṭûṭa, states that in the 14th cent. the women of Zebid were perfectly willing to marry strangers, but never followed their husbands, on whose departure they themselves took charge of the children. The women of Jâhiliya had the right to dismiss their husbands at will. In reference to Saracen marriages he also quotes Ammianus Marcellinus (xiv. 4), who says that the wife gives her husband a tent and spear as dowry. Robertson Smith interprets this as meaning that she provided her husband with a home, and that he was under an obligation to fight for her kin (*Kinship and Marriage*[2], Lond. 1903, p. 79 ff.). If this interpretation be correct, it is a step in advance of the practice of some primitive races, among whom in case of tribal combat the husband leaves his wife's kin and fights on the side of his own—a custom held to be the origin of the numerous legends of which Sûhrab and Rustam is the type, in which a combat between father and son, who are unknown to one another, results in the death of the former (for an examination of the father and son legend, see Potter, *Sohrab and Rustem*, London, 1902).

Among the Syntengs of Assam, although the husband only visits his wife at her mother's house and himself lives with his own mother, yet, if he dies, his widow keeps his bones after his death, on condition that she does not re-marry. If she marries again, the man's children hand over his bones to his clan, to be placed in a building which the wife may never enter. Among the neighbouring Khasis, however, the husband goes to live with his wife in her mother's house, and may after the birth of one or two children remove her (Gurdon, *The Khasis*, London, 1907, p. 82). A similar juxtaposition is found in Sumatra among the Menangkabau Malays: the husband is only a visitor, and each party lives in his or her birthplace; but among the Tiga Loeroeng the husband goes to live with the wife, or may build her a house in the settlement of her clan (Wilken, quoted by Hartland, ii. 10 ff.). Here the children belong to the mother's clan. A further development is also found. Lower down the river-valley, where one of the two clans is much the stronger, the residence is with the stronger, whether it be the clan of father or of the mother; and descent follows residence.

It is not infrequently the case that the wife does not reside with the husband until a child has been born. This apparently happened in Formosa, where 'Labanism'—the practice by which a son-in-law resided with his bride's family for a term of service—also existed. Sometimes this term of service was extended or became a permanency, and the husband eventually, on the death of the parents, succeeded as head of the family (Davidson, *The Island of Formosa*, London, 1903, *passim*). In Japan also the husband appears originally not to have been a member of the family. In Samoa, the husband resided with the wife's family and acted as a drudge until the birth of the first child (Brown, p. 43). Among the Yakuts, although the bride price was paid at once, the bride was retained at home, often for as long as four or five years, and at each visit the bridegroom brought a present for her parents (Sumner, *JAI* xxxi. [1901] 84). A variant of this custom of regarding the husband as a more or less temporary visitor of his wife is found among the Ossetes. Although the bride is taken to her husband's home, he himself goes to live with friends. The bride visits her parents for the first time at the end of a year, and her first child is born in her parents' home. It is said that no man takes notice of his children in the presence of other people (Darinsky, quoted by Hartland, ii. 17).

It will be noted that a number of the cases cited belong to a stage of transition. The existence of the family is recognized, but claims are made on its behalf which could be enforced in their logical entirety only on a kinship basis.

8. The blood-feud.—The blood-feud (*q.v.*) throws much light upon the early stages of the evolution of the family, particularly at the point at which it passes from an organization based upon kinship to one founded upon the marriage tie.

The supreme influence of the relationship traced through the mother is shown in the custom of the Kumeka, a people of the Caucasus, whereby, if a man murdered a brother by a different mother, the blood-feud arose between himself and the surviving brothers born of the same mother as the murdered man. In Dagestan the murderer of a wife paid blood-money to his own children as well as to his wife's relatives (Darinsky, quoted by Hartland, i. 272). A number of customs among various tribes of Africa are peculiarly significant in this connexion. A husband among the Kunama did not avenge his wife unless she were murdered in his presence; this duty fell primarily on his wife's brothers or her sister's son. Nor were a man's children responsible in case of his own violent death, while the duty of avenging his children's death, should he slay them, fell upon his wife's brothers (Munzinger, *Ostafr. Studien*, Basel, 1883, p. 488 ff.). Among the Herero, though they are patrilineal in other matters, the blood-feud is left to maternal relatives; while, in the case of the death of wife or child through no fault of his, a man pays compensation to his wife's relatives (Dannert, *Zum Rechte der Herero*, Berlin, 1906, p. 10). Analogous customs are found in the Marshall Islands, among the aboriginal tribes of Manipur, in Fiji, among the Maoris, and among the Indians of British Columbia.

In all these cases the blood-feud follows the blood, *i.e.* the duty of vengeance falls first upon those who belong to the mother's kin, and not upon those whose connexion has been brought into existence by marriage.

9. The power to pledge the members of the family.—A similar conception of family ties and rights is shown in the custom, which is common in Africa, of pledging children in payment of debt.

Among the Bavili the mother may pledge her child, but the father must be given the option of pledging his goods in its place, and he may ransom the child (Dennett, *Journ. Afr. Soc.* i. 266). The father cannot pledge the child, but a brother may pledge the sister, or the uncle the niece on the same condition, if the mother is dead. On the Ivory Coast the kin may pledge children, though, if the pledge is a married niece, the husband must have the option of offering goods in her place (*ib.* i. 411). A woman cannot pledge children for her debts without the authority of her brother; and the mother, not the father, is responsible for the children's debts.

10. The bride price.—The institution of a family independent of the bride's parents is not infrequently made to depend upon payment of the bride price, and in these cases the line of descent of the children is changed when the conditions of the marriage bargain have been fulfilled. In the Luang Sermata group of the Moluccas, the payment of the bride price gives the right to reside with the wife, but does not entitle the husband to carry her off. But on the islands of the Ambon and Uliase, on the payment of the bride price, the bride is handed over to the bridegroom, and she is conducted to his dwelling. Side by side with this custom there exists another form of union. Proposals of marriage having been made by the man's relations, if he is accepted, he establishes himself in the bride's dwelling and becomes practically the slave of his wife's parents, acting the part of the secret lover. All children belong to the mother's family. In Wetar, in the same group, although the married pair live at the wife's home until they get a separate dwelling, payment of a bride price secures his children to the husband. On the island of Serang, when the wife enters her husband's family, payment of the bride price is followed by constant gifts to

the wife's parents, to keep alive his right in his wife and children (Riedel, quoted by Hartland, ii. 27 ff.). In the Torres Straits Islands, the birth of each successive child involves payment to the wife's parents. On the other hand, in the islands of Mabulag and Badu, although the husband took up his residence with his wife's people, payment of the bride price annulled the rights over her of her father or her family, except that in the case of the re-marriage of a divorced woman part of the compensation given to her former husband was handed over to her father (Haddon, 159, 161). The two different systems exist side by side on the Wallubela Islands. Here, in the case of the man who lives with his mother's family, payment of the bride price gives the man equal rights over his children as if their mother had formally been handed over to him in the first instance. Marsden (*Hist. of Sumatra*, London, 1811, p. 225 ff.) states that, in Rejang in Sumatra, on payment of the bride price, the woman became the slave of her husband; but, except in case of a quarrel, a small part of the bride price was never paid, in order to keep up the relationship and the family interest. The alternative method of the husband becoming a member of the bride's family was also found. In this case he and his wife might emancipate themselves by payment, but this was made difficult if there were daughters, as their value belonged to the family. The Achehnese have an interesting custom by which, for every twenty-five dollars in the bride price, the parents have to support the bride for one year, the husband giving her only a small monthly present (Hurgronje, *The Achehnese*, Leyden, 1906, i. 295). A right would here seem to have been transformed into a duty. The Belunese of Timor have a double system: the home and the children follow the marriage price, but this is payable by either the man or the woman, the descent being determined accordingly (Wilken, quoted by Hartland, ii. 57).

11. Residence.—Throughout Africa, among various tribes, residence with the wife's family is common, whether for a shorter or a longer period. Among the Dinkas the period of residence ended with the birth of the first child (*JAI* xxxiv. [1904] 151). Among the Bambala a man will be required to fight for his father-in-law's village against his own (Torday, *ib.* xxxv. [1905] 399, 410). Both Bushmen and Hottentots required the husband to reside with the wife's parents; among the former it was his duty to provide them with game. In S. America, among the Bakairi (Fritsch, 445), the husband worked in the father's clearing, and on the death of his wife he was bound to marry his wife's sister. This custom was common elsewhere. The Lengua of the Paraguayan Chaco sometimes compromised in the matter of residence, the man and wife spending half their time in the homes of the parents of each (Grubb, *Indians of the Paraguayan Chaco*, London, 1904, p. 61). The husband among the Arawak worked for his bride's father (Im Thurn, 186, 221); when the family became too large to be accommodated in the father's hut, the younger man built a hut for himself near by. When the head dies, the several fathers separate and build houses for themselves, thus each forming the nucleus of a new settlement. Settlements of the same kind are found in Melanesia.

12. Authority of the father.—Reference has already been made to the absence of influence of the father in the primitive family, and the vesting of parental rights over children in the mother's kin, and especially in the mother's brother. The gradual recognition of the father as the person responsible for the well-being of his children, and as the holder of the rights to dispose of them and to exact obedience from them, has only very slowly ousted the older conception—by stages which are fairly clear.

The customs of the people of the Lower Congo may be taken as typical of an early, if not of the earliest, stage. There the uncle, who is addressed by the children as 'father,' exercises paternal authority over the children of his sister; the father is without power; and, if the husband and wife separate, the children go with her as belonging to her brother. The children, as they grow up, go to live with their uncle (Bentley, *Pioneering on the Congo*, London, 1900, ii. 333; M. H. Kingsley, *Travels in W. Africa*, London, 1897, p. 224 f.). Among the Bambala the family is beginning to develop its form; there are two types of marriage. In the case of child-marriage, or, more properly, child-betrothal, the boy lives with his chosen bride's parents until he is of marriageable age, and any children of the marriage belong to the maternal uncle. In the case of marriage of adults, a bride price is paid to the father or maternal uncle, and any children then belong to the father. But a father has little authority, and any property he himself has is inherited by his sister's eldest son (Torday, *JAI* xxxv. 410 f.). Kinship is reckoned on the mother's side, but also on the father's, for one or two generations; father-right is beginning to override mother-right. Among the Bangala a man may sell his nephews to pay his debts (Livingstone, 434); so also in Angola. Although the father may have no power over his children, the case is different when the mother is a slave; among the Kunbunda they are reckoned his children, and can inherit from him. The customs of some negro tribes exhibit instructive peculiarities. Among the Ewe of Anglo in Upper Guinea, the nephew accompanies the uncle on trading journeys and acts for him, accounts to his uncle for all that he takes, and receives a share of the profits. But it is the uncle and the father together who negotiate for his marriage; and the father is also consulted as to the marriage of his daughter, and receives a share of the price (Ellis, *Ewe-speaking Peoples*, London, 1890, p. 207 ff.).

Among the Fantis a further step in the organization of the family has been taken. The Fantis are matrilineal; the head of the family is usually the eldest male in the line of descent, and in his compound dwell not only the younger members of his line of descent, but also his own wives and children. His power is limited, however, by the fact that he cannot pawn his children without their mother's consent, and any members who have left to live with their maternal uncle are out of his power (Sarbah, *Fanti Customary Laws*, London, 1897, *passim*). Among the Kunama of Abyssinia the right of the father has been extended to cover the son's earnings, but not his life and liberty, which remain in the power of the maternal uncle (Munzinger, 477 ff.).

The position of the mother's brother and his relation to his nephew are of great importance in Melanesia, and especially in Fiji. But even in this region it has begun to give way to a recognition of the father as head of his family. On the island of Muralug, Torres Straits, patrilineal descent is recognized, but the bride's brother still arranges the details of a girl's marriage, although the father receives the bride price, and his consent to the marriage is required. The bridegroom exchanges a sister for his promised wife; and, if he has no sister, he gives a daughter of his maternal uncle (*Rep. Camb. Exped. Torres Straits*, v. 145, Camb. 1910).

Among the Australian tribes the authority over the children is very slight, but it rests with the father, so far as boys are concerned, until the time of initiation, when it is vested vaguely in the elders of the tribe. In the case of girls, the

authority is concerned chiefly with the right of betrothal, while after marriage the power of the husband is practically absolute. Such control as exists is vested mainly in the girl's or her mother's brother. Among the Dieri (Howitt, *Native Tribes of S.E. Australia*, London, 1904, pp. 177, 167, 195, 217) the right of betrothal rests with the mother, who acts with the concurrence of her brothers. The Wallaroi exchange their sisters without the intervention of their mother.

13. The inheritance of power and property.—The gradual growth of the feeling of solidarity in the family as opposed to the kin, *i.e.* in the unit in which the relation of father to offspring is more potent than the connexion which is traced through sister or mother, can be seen in the customs connected with the disposal of power or property. Where the feeling of kinship is predominant, at a man's death his property would be divided among the members of his kin, with whom he was connected through his mother. The 'potlatch' of the Haida of Charlotte Island in N. America, to which the whole kin contributed or in which they shared, is an instance of an analogous character, which shows the solidarity of the kin in relation to personal property. A parallel instance may be quoted from Samoa, where all the relatives contribute to the dower of the *taupou*, or village maid. As the conception of a relationship within the kin increases, it becomes generally recognized that the direct heir is the sister's son rather than the kin as a whole. At this stage of development it is usual for the chieftainship to be elective, and the tendency is for the honour to fall to the wealthiest or to the one who is possessed of the greatest amount of traditional knowledge. A further stage is reached when a man's affection for his own children is strong enough for him to endeavour to break through this restriction. The evidence from Melanesia is of importance in connexion with the evolution of the family, as it offers numerous examples of a transition from one set of customs to another. The peoples in the various islands are divided into exogamous clans, and for the most part trace descent through the mother: husband and wife 'belong to different sides of the house,' and neither at marriage passes over to the side of the other. It is clear that at one time the heir in all cases was the nephew. In Bogotu the chief is the head of the predominant *kema*, or clan. But, it is stated, no *kema* is continuously predominant, because a chief, in order to secure the chieftainship to his children, transfers what he can of his own property to his sons, who are not of his own kin (Codrington, 32 ff.). Property is frequently transferred to the son, or used to secure the son's advancement in the club house during the father's lifetime. In the New Hebrides, the chieftainship tended to become hereditary, as the chief handed on his traditional knowledge to his son. At Motu the headship had become hereditary. In the case of land a distinction was recognized. Land in long occupation, which, it would be assumed, had originally been cleared by the kin, would descend to the sister's son, but land cleared by a man himself—a task in which the sons would assist—would descend to the children. Further, this land would continue to descend from father to son; but, should the fact of its clearing by an individual, and not by the kin, be forgotten or overlooked, it would descend to the nephew. Trees, in which property was recognized as apart from the land, whether planted on land belonging to the planter or on that of another, also descended to the sons. Strictly speaking, personal property was inherited by the nephew, but might be secured to the children in various ways. Frequently it was hidden in the owner's lifetime for the benefit of the children; in Florida a canoe might be given to the son by the father's direction; or the direct heirs might be bought off. In Banks Island, both land and personal property might be inherited by this method.

14. Conclusion.—A general review of the evidence relating to the primitive family—a subject around which in its various aspects much controversy has arisen—would suggest that many of the theories which have been put forward have been based upon superficial observations and imperfect evidence. Early travellers have read into what they have seen much that belonged to the civilized conditions with which they were familiar, while by the use of ill-defined terms of relationship, which did not correspond with the native connotation, they have misled those who relied upon their evidence. If the precise meaning of a group consisting of father, mother, and offspring is to be attached to the term 'family,' it must be recognized that in the early stages of civilization the family as a group, though not necessarily non-existent, as has been maintained, is not so closely-knit an organization as it becomes at a later stage. The economic value of the woman, as an important factor in the production of material comforts and utilities, as a source of the accession of strength from outside, and as the mother of future members of the tribe, was recognized at an early stage; and this accounts largely for the fact that many of the functions of the family of which the father was recognized as the head in a later development were vested in those related to the woman by blood—at first the kin as a whole, later the smaller group within the kin consisting of her immediate male relatives, or, using 'family' in a looser sense, the family connected by blood ties. It is only by gradual stages—through the bride price, the compensation, whether it be the husband's service for his life or a term of years, the exchange of another woman (a sister) for the bride, the loss of all or some of his children, or a payment in goods or money, or through forcible abduction—that the husband has been able gradually to secure independence of the unit of which he becomes the head, in location, in the disposal of property, and in the ordering of the lives of its members.

LITERATURE.—This is given in the article.

E. N. FALLAIZE.

FAMILY (Assyro-Babylonian).—The three meanings usually given to this word were also present in Assyro-Bab.: (1) the head of the household, with his wife, children, and other relatives; (2) a group of people connected by blood or by marriage; (3) the same, including the tribe or clan. The commonest word for 'family' is, perhaps, *qinnu*, from *qanānu*, 'to build a nest,' though this may not have been its original meaning. The word occurs in the Assyr. historical inscriptions; 'his brothers, his family (*qinnu-šu*), the seed of his father's house' (Aššurb. iii. 10); 'his wife, his sons, and all his family' (*qinnaššu gabbi* [letter K. 13, l. 8]); '300 families (*qinnāte*) of the criminals (implicated in the rebellion)' (Tigl. vi. 31). A synonym of this word is *kimtu*, which explains (*WAI* ii. 29, 72–74*fg*) the cognate forms *kimu*, *kimatu*, and also *limu*, all meaning, probably, something collected—a group, or the like. *Kimtu* is the Bab. rendering of *ḫammu* in the name *Ḫammu-rabi*, which the Babylonians translated as *Kimta-rapaštu*^{m}, 'my family is wide-spread,' or the like; and of *ammi* in *Ammi-ṣaduga* (*-ṣaduqa*), rendered as *Kimtu*^{m}*-kettu*^{m}, 'the righteous family'—to all appearance they did not recognize in *ḫammu* or *ammi* the Arab. divinity '*Amm*. These examples show that *kimtu* was regarded as the equivalent

of the Arab. *hamm*, or *ḥâmmat*, and, though it could be used in the restricted sense of *qinnu*, a wider meaning was sometimes present: *kimti lurappiš, salati lupaḫḫir, pir'i lušamdil*, 'may I spread abroad my family, may I gather together my relatives, may I extend my offspring' (Meissner and Rost, *Beit. z. Assyr.*, Leipzig, 1893, pp. 254, 255). *Bîtu*, 'house,' also became a synonym of the above words, with the addition of servants and dependents (*Cun. Texts*, xviii. pll. 16, 26).

All these expressions naturally belong to the period following that of the early nomadic times of the Sem. tent-dwellers. The word for town, *âlu*, is probably the same as the Heb. *ôhel*, 'tent,' Arab. *ahl*, 'family,' with transferred meaning, implying that the inhabitants of the early centres of population were as one large family. The character expressing *âlu*, however, seems to be rather a large house than a tent.[1]

The members of a Bab. family were the husband (*mutu, ḫa'iru*), the wife (*âššatu, ḫirtu*) or wives, and their children.[2] More than two wives seem to have been unusual, and, in the case of a double family of this kind, both were expected to interest themselves in their common offspring. A wife might give her maid-servant to her husband (*Code of Ḫammurabi*, § 146; Gn 16[1ff.]), but in that case he could not himself take a concubine. The maid-servant thus honoured was not equal with her mistress, and presumption on her part might result in her being relegated to her old position, even though she had borne children. If the wife were childless, the husband might take a concubine (§ 145); and, if a malady had stricken the wife, the husband might marry again, but the sick wife could not be divorced (§ 148). That there may have been transgressions of these laws is not improbable, but they seem to indicate the composition of the families of the well-to-do. A second wife appears to have been taken sometimes to provide a servant for the first (Pinches, *OT in the Light*[3], p. 175). An ill-treated wife could claim her freedom (*Cod. Ḫam.* § 142).

Descent was always traced through the father, and the Sumer. custom of mentioning the female sex first in certain cases may have had merely a mythological origin, due to the teaching which made Tiâmat, or 'Mother Ḫubur,' the first creator. Her offspring, who overcame her, however, were all gods, not goddesses. Even in the purely Sumer. pantheon, it is nearly always the divine husband who is the more powerful. It was the husband, therefore, who was the more important as a progenitor, and, in the so-called 'family-laws' of the Sumerians, the clause dealing with the denial of a foster-father not only takes precedence of that of the mother, but is also punished more severely (Pinches, *OT in Light*[3], p. 190 f.). The descendants of a man were called his 'seed' (Sumer. (*n*)*umun*, Assyr.-Bab. *zêru*) or 'progeny' (Assyr.-Bab. *nannabu*). To indicate his parentage, and thus identify him legally, his father's name was given, and generally, in later times, the founder of his tribe, *e.g.* 'Marduk-naṣir-âbli, son of (*âbli-šu ša*) Itti-Nabû-balâṭu, descendant of (*âbil*) Êgibi'; 'Balaṭu, son of (*âbli-šu ša*) Ina-êši-êṭir, descendant of (*âbil*) Bêl'u.' The number of Bab. families thus indicated is considerable, but the Assyrians generally omit these genealogical indications.

The father was supreme in his house. It was he who gave his daughters in marriage, whether adoptive or otherwise (Meissner, *Beiträge z. altbab. Privatrecht*, p. 92; *JRAS*, 1897, pp. 603–606). He gave his adopted children a share of his property, and his sons seem to have had no legal right to complain either of the adoption or of being thus deprived of patrimony (Pinches, 176 f.). The obedience required (by contract) from an adopted son apparently only reflected that expected of a man's own child. A man could disown his son, but the judges had to inquire into the matter *Cod. Ḫam.* § 168), and it needed a repetition of a grave fault to justify cutting off from sonship (§ 169). The denial of a father or mother by adoption, however, might apparently be followed by immediate expulsion (*Cod. Ḫam.* § 186; Pinches, 177). In Sumerian times the penalty of denying a foster-father was slavery (Pinches, 190 f.; cf. also p. 176, where, however, there is the same penalty for denying a foster-mother). The frequency of adoption was very likely due to the desire to carry on the family traditions and name, though the scarcity of slaves (Meissner, 16) may have had something to do with it.

If adoption took place during infancy, a nurse was hired, and maintained for three years (*WAI* ii. pl. 9, 45–50*cd*). At the age of reason mutual liking seems to have been taken into consideration (*ib.* 40–43*b*: 'If he dislike [be hostile to] his father, he shall go forth into [the family of ?] whoever has caused him to enter'). Instruction was not neglected. 'He caused him to know the writing' (concerning himself [?]) (*ib.* 66*cd*). Women might adopt as well as men, and could give their foster-daughters in marriage. The latter were expected to help their adoptive mothers, should they afterwards be in want (*JRAS*, 1899, p. 106). For the legal aspects of adoption, see *ERE* i. 114.

Apparently the father married off his sons in the order of seniority, and any of the younger sons who remained unmarried at his death were provided with a bride-gift by their elder or married brethren (*Cod. Ḫam.* § 166). When the time for the wedding came, the bridegroom conveyed the bride-gift to the father of the woman decided upon, the latter having probably been offered beforehand by one of her parents. As a father could give his sons property without prejudice to their sharing after his death (*Cod. Ḫam.* § 165), in like manner the parents gave them the wherewithal for the bride-gift (Meissner, 14).[1] In return for this, the woman brought a dowry, generally in the form of house-furniture. Ceremonies attended all these transactions, and there was a fixed ritual for the wedding itself (see MARRIAGE [Semitic]). Absolute fidelity—a most important thing in family-life—was expected, and probably generally obtained. In the case of long absence from home on the part of the husband, however, he could expect this only if there were food in the house; otherwise the woman was allowed to become another man's mistress, resuming her former place in the household on her husband's return. Children born in consequence of this custom were credited to the real father (*Cod. Ḫam.* §§ 133, 135). In all probability this was a law of which advantage was seldom taken, being a remnant of a loose state of family-morals. Wilful desertion acted like divorce (§ 136). Unfaithfulness on the part of a wife, except in the above circumstances, was at first punished by drowning (Family Laws), or death by being thrown down from a tower (Ungnad, *Hammurabi's Gesetz*, iv. 86). Later (in the time of Samsu-fluna), she was marked as a slave, and sold (*ib.* 86). Though the wife could not divorce her husband,

[1] This, however, would merely imply that the Sumerians were house-dwellers at the time when they came into contact with the Semitic Babylonians.

[2] Synonyms of *ḫa'iru* are *êrišu*, *išḫû*, and *naḫšu*, those of *âššatu* or *ḫirtu* being *marḫitu* and *iššu*. Other forms are *ḫâyaru*, 'husband,' and *ḫiratu*, 'wife' (*WAI* ii. 36, 39–46*cd*). The spouse of the sun-god is called *hirtum*; Ištar is the *ḫiratu* of Tammuz; the wife of Ut-napištim, the Babylonian Noah, is called *sinništu*, 'woman,' and *marḫitu*, 'wife.' There was apparently a distinction between a divine and an earthly spouse.

[1] This is naturally a remnant of the old days of wife-purchase. For dowries provided by selling the comeliest maidens by auction, see Herod. i. 196.

the husband could divorce the wife, upon paying her divorce-money. She retained her dowry.

Whether women were looked upon with more respect in earlier (Sumerian) times than in later is uncertain, but it is to be noted that the ideograph for 'mother,' *ama* (also, probably, *aga*), is written with the sign for 'divinity' within that used for 'house' or 'dwelling-place.' This has led to the suggestion that the Sumerians thought of her as 'the divinity within the house.' It seems more likely, however, that a mother was herself regarded as the dwelling-place of some divinity—probably one of the manifestations of Zērpanîtu^{m}, who, as Aruru, created the seed of mankind with Merodach, and was possibly conceived as acting within her (see BIRTH [Assyr.-Bab.], vol. ii. p. 643^{b}).[1] The mother occupied a high place with regard to the children in the family. If she said to her son (or foster-son), 'Thou art not my son,' he had to forsake the house and the furniture; and if, on the other hand, he denied his (adoptive) mother, he was first marked by having his temple shaved, and then, having been led around the town, was expelled from the house. Wives were at liberty (no doubt with the consent of their husbands) to carry on business, and also to appear as witnesses to contracts.

In the absence of the father, the (eldest) son, if old enough, took his place, and administered his property. Otherwise the mother became head of the family, and administered the property for her sons' benefit (*Cod. Ḫam.* §§ 28, 29). On the death of the father, his children divided the property according to the usual custom, and engaged not to bring actions at law against each other with regard to the sharing (Pinches, 178 ff.).

The respect due to parents was apparently willingly given by their children. In a letter from Elmešu^{m} to his father, of about the time of Ḫammurabi, he prays that Šamaš and Merodach may grant his father enduring days, that he may have health and life, and that his father's protecting god may preserve him. He hopes that his father will have lasting well-being. In the body of the letter, he seems to have regarded the direct pronouns 'thou' and 'thee' as too stiff, so he substitutes the words 'my father' wherever he can, sometimes along with the pronoun required.

The best family-picture of later date is that given in the history of Bunanitu^{m} and her lawsuit with her dead husband's relatives. She had married Abil-Addu-nathânu, bringing with her a dowry of 3½ *mana* of silver, and the pair had one daughter. They traded with the money of her dowry, and bought a house at Borsippa, with grounds, borrowing a sum of money to complete the purchase. In the 4th year of Nabonidus she made an arrangement with her husband, and he willed all the property to her, in consideration of her dowry and the fact that they had always acted together. The next year they adopted a son, Abil-Addu-âmâra, and made known that their daughter's dowry was two *mana* of silver and the furniture of a house. After her husband's death, her brother-in-law laid claim to all her property, including a slave whom they had bought. The judges decided in her favour, and decreed that, according to their tablets, Bunanitu^{m} and Abil-Addu-âmâra, her adopted son, were the rightful heirs.[2] The lender was to receive the money which he had advanced, Bunanitu^{m} was to have her dowry back, and her share of the property besides. The daughter was to receive the slave (Pinches, 459 ff., 462 ff.).

The private letters belonging to the period of the later Bab. empire show the same courteous spirit between members of the same family as of old.

Noteworthy is the letter of a father to his apparently more successful son, in which he tells him that there is no grain in the house, and asks him to send some. He prays to Bêl and Nebo for the preservation of his son's life, and tells him that his mother greets him (*ib.* 453). Affectionate letters between the brothers and the sisters of families are also found, as well as others showing that brothers were not always on good terms. Among the last may be mentioned the letter of Marduk-zēr-ibnî to Šulâ his brother, protesting against the latter's rapacity (*ib.* 453 f.). A noteworthy communication is that of Nabû-zēr-ibnî to his four brothers, protesting against the slandering of their brother Bêl-êpuš (*ib.* 452 f.).

Of the few lists of families extant, those of certain slaves may be quoted to show in what manner the enumerations in such cases were made:

'Ubara, Nabû-banî, his brother, 1 suckling (lit. 'child of milk'), 2 women—total 5; Paliḫ-ka-libluṭ, Nabû-âḫa-êreš, his brother, 1 child of 4 (years), 2 women—total 5; Zazâ, 1 child of 4, 1 woman, 2 daughters—total 5; Ḫarranû (the Haranite), Amat-bêli-uṣur, a child of 5, 3 women—total 5' (S. A. Smith, *Keilschrifttexte Asurbanipals*, Leipzig, 1887–89, pt. iii. p. 63 ff. [and pl. 20]). For the family of the slave Usi'a (Hoshea), see Johns, *Assyr. Deeds and Documents*, Cambridge, 1898–1901, iii. 447.

It is to be noted that the word 'wife' (*âššatu*) is not used in these cases, but simply 'woman' (*sinništu*), implying either that slaves were not regarded, at least sometimes, as regularly married, or that their wives were not held worthy of the more honourable term.

From life-long association and intercourse, slaves or vassals were probably often enough treated as members of a man's family; and, when the women of that class were favoured with the attention of the master of the house, this quasi-membership became a reality. The children of a free man and a slave, however, were not regarded as his legitimate children unless he acknowledged them during his lifetime (*Cod. Ḫam.* §§ 170, 171). The best way to ensure their freedom and inheritance of his property was apparently by emancipating the mother.

LITERATURE.—For further details, see the Code of Ḫammurabi, in C. H. W. Johns, *Oldest Code of Laws*, Edinb. 1903; A. Ungnad, *Hammurabi's Gesetz*, Leipzig, 1904–1910; T. G. Pinches, *The OT in the Light of the Records of Assyria and Babylonia*^{3}, London, 1908, pp. 487–525, also 169 ff., 430 ff., 553, 554; B. Meissner, *Beiträge zur altbab. Privatrecht*, Leipzig, 1893; H. de Genouillac, *La Société sumérienne*, Paris, 1909, p. xxi ff.

T. G. PINCHES.

[1] The Sumer. saying: *Salla-mu alšaga, kalammaene tilbab-(b)eneše=Uri-mi da[miq?] ina niši-ia gummuranni*, 'My womb being fortunate, among my people they hold me perfect,' if rightly translated, shows in what high honour the mother of a family was held.

[2] Property given to a wife in due form could not be taken from her after her husband's death (*Cod. Ḫam.* § 150).

FAMILY (Biblical and Christian).—'Here is a social group which, in its present form, is by no means an original and outright gift to the human race, but is the product of a vast world-process of social evolution, through which various types of domestic unity have been in turn selected and, as it were, tested, until at last the fittest has survived' (Peabody, *Jesus Christ and the Social Question*, New York, 1901, p. 134).

I. *IN THE OLD TESTAMENT.*—There are not wanting indications that the Hebrews, like all the other Semites, passed through the stages of exogamy, totemism, and reckoning descent in the female line. But in the earliest historical times the matriarchate is a superseded and forgotten system; the patriarchate is in secure and unquestioned possession. The family is constituted under the headship of the father; the woman passes over to the clan and tribe of her husband; kinship, tribal connexion, and inheritance are all determined by the man. The Hebrew historians assume that through the expansion of the family all the wider groups are evolved, and the genealogists attempt to derive the tribes of Israel, and ultimately all the races of mankind, by male descent from a common ancestor. The Hebrews were always remarkable for the intensity of their family feeling; the strength of their nation lay in the depth, variety, and richness of the characters which were created in their homes; and their moral and spiritual progress is largely the evolution of their domestic life. In their Scriptures the imperfect relations of husband and wife, parent and child, brother and sister, master and servant, host and stranger, were displayed with a fine healthy realism; and under each head there is slowly but surely developed an ethical ideal which is the preparation for the perfect Christian type of the family.

1. **The father.**—The reverence paid to the head of the family was due not so much to his superior wisdom and strength as to his position as priest of the household. His unlimited authority rested on a spiritual basis. The family was a society bound together by common religious observances. Every one born into it recognized, as a matter of course, its special cult, in which the worship of ancestors seems to have been originally the distinctive feature. The *tᵉrāphîm* (Gn 31[19. 34f.], 1 S 19[13. 16] *et al.*) are usually understood to have been images or symbols of ancestors. The family burying-place was holy ground, and many of the famous old sanctuaries probably owed their sacredness to their being regarded as the graves of heroes. Ancestor-worship was, of course, family worship. The father was the guardian of the traditional cult, which he passed on to his eldest son, thus securing the continued prosperity of the family. According to the earliest documents, the patriarchs erected altars and offered sacrifice (*e.g.* Gn 12[7f.] 13[18] 22[9] [Abraham] 26[25] [Isaac] 35[7] [Jacob]). The father presided at the passover, which was a family rite, observed in the home (Ex 12). In the days of Saul, when the tribes had long been united in the worship of Jahweh, each family, or clan (*mishpāḥāh*), still had its *sacra gentilica*, and every member was bound to attend the annual festivals (1 S 20[6. 29]). Any one who cut himself loose from the authority of the father debarred himself from the protection and favour of the ancestral *numina*. As the strength of the family was thus rooted in spiritual causes, it became a matter of sacred duty to secure its continuance. The cult must be handed down from father to son, from generation to generation. Celibacy was at once an impiety and a misfortune, for it threatened the existence of a social unity of worship. When a family became extinct, it was a cult that died.

2. **Husband and wife.**—The position of woman is the touchstone of civilized society. In ancient Israel the husband had a proprietary right over his wife. He was the owner or master (*ba'al*), she the owned or mastered (*bᵉ'ûlāh*). In the Decalogue she is mentioned as part of his wealth, along with his house, slave, ox, and ass (Ex 20[17]). To betroth a woman was simply to acquire possession of her by paying the *môhar*, or purchase-money. A 'betrothed' was a girl for whom the *môhar* had been paid. Her own consent to the transaction was unnecessary, all the arrangements as to the marriage, and especially as to the purchase-price, being carried through by her father or guardian. So long as this commercial idea of marriage prevailed, certain blemishes marred the beauty of family life.—(*a*) Polygyny was common. If a husband regarded his wife simply as a valuable asset, his power of multiplying wives was limited merely by his purse. It was the ambition of most men of rank and wealth to possess a large *harîm*. In addition, any of the female slaves of the family was at his disposal as a concubine. Sometimes the legal wife took the initiative in suggesting this arrangement, as in the cases of Sarah (Gn 16[2]), Rachel (Gn 30[3]), and Leah (Gn 30[9]). Of course, the approximately equal numbers of the two sexes placed limits to polygyny. In the middle classes, of which Elkanah may be taken as a representative (1 S 1[1]), it was probably the ordinary practice to have two wives. 'Rival' (צָרָה) was the technical term for one of the two (1 S 1[6]), and Dt 21[15ff.] deals with the case where one wife is beloved and the other hated. In the nature of things, a large proportion of the poorer classes must have been monogamous.—(*b*) The woman being the man's property, he had the right to divorce her at his pleasure (Dt 24[1]). He could at any time send her back to her own kin, provided he was willing to return the *môhar* with her. No moral stigma of any kind attached to her from the mere fact that she had been divorced.—(*c*) While the husband was allowed a wide sexual liberty, law and custom dealt very strictly with the wife. Adultery on her part was a crime punishable by stoning (Dt 22[22]), and the same sentence might be passed on the wife who at her marriage was found not to have been a virgin (22[21]).—(*d*) Being herself part of her husband's estate, the wife was incapable of inheriting property. Her right of ownership was confined to presents. She was the mistress of the servants whom she received as personal attendants on leaving her home. But even these were ultimately the property of her husband and his heir, since they could not revert to her own kindred.—(*e*) The husband's authority over the wife easily degenerated into tyranny, and in the lower ranks of society her lot was, doubtless, often hard, since she had not only to fulfil the arduous menial tasks of the household, but might be required to engage in field labour or tend the flocks and herds.

Various causes, however, conspired to improve the position of women, and so to elevate family life. (1) Marriage was not always an affair of the market. Sometimes the heart obtained its rights. In all ranks of society there was a considerable freedom of intercourse between the sexes, and the spirit of romance was not to be quenched. In a simple pastoral society, men and maids naturally met at wells, and love-matches were sometimes the result (Gn 29[18. 20]). The Song of Songs celebrates a rustic love that is strong as death; and in kings' courts, marriages were not always conventional (1 S 18[20]). (2) The *môhar* tended to lose its original meaning of purchase-money, and came to be a gift to the bride herself. Laban's daughters complained that he had sold them as slaves and wasted their *môhar* (Gn 31[15]). (3) While an injured wife could not divorce her husband, she was not without redress. She always had claims on the protection and aid of her blood-relations, who were ready to defend her if she had any just cause of complaint. The women of the family were its most sacred trust, and any insult offered to them was sure to be avenged. The aim of legislation was also to restrict the man's freedom of divorce. By requiring him to give his wife a bill of divorce, it enabled her to resist any attempt on his part to re-assert his rights over her (Dt 24[1]). If a man falsely charged his wife with unchastity before marriage (22[13-19]), or if he had seduced her and been consequently obliged to marry her (vv.[28. 29]), he was deprived of the right of divorce. (4) The typical 'mother in Israel' was far from being the morally and intellectually stunted creature who is often met with in Eastern lands. If she was a person of rank, she was too powerful and independent to be treated as a mere chattel. If she was a woman of character and ability (Pr 31[10]), she knew how to increase her husband's affection and to improve her own condition. Once and again the interest of Hebrew history centres in the action of some brave and noble woman. (5) The whole prophetic movement was towards monogamy. Gn 2[18-24] makes woman the helpmeet of man, and the love of one man for one woman the normal relation of the sexes. When the prophets regard marriage as the symbol of Jahweh's covenant with Israel, and adultery as that of idolatry, they think of monogamy as the ideal. Hosea strikes the keynote of a new doctrine when he tells the story of a love which does not loathe and repudiate a prodigal wife, but cherishes and seeks to redeem her. Malachi (2[14-16]) proclaims the Divine detestation of divorce. The Hebrew Wisdom reinforced prophecy in the endeavour to purify the family life of the nation, and there is

abundant evidence that Israel ultimately began to realize the folly and iniquity of sexual licence on man's part as well as on woman's. Yet the law of monogamy was never placed on the Jewish statute-book; and Justin Martyr (*Dial. c. Tryph.* 134) states that, even in his time, the Talmudists allowed every common man to have four or five wives, while kings might still have as many as eighteen. But by that time humanity had heard the voice of the final Lawgiver. See, further, MARRIAGE (Semitic).

3. **Parents and children.**—(*a*) To have a numerous progeny was the universal desire in ancient Israel. Children were a heritage of Jahweh, and happy was the man who had his quiver full of them (Ps 127[3-5]). The honour paid to the wife was dependent on her having a son. If she was childless, she endured a reproach; for barrenness was regarded not only as a misfortune, but as a Divine judgment. 'Give me children, or else I die,' was Rachel's heart-cry (Gn 30[1]; cf. 1 S 1[11]). The husband who had no son dreaded the extinction of his house. His fear was probably rooted in ancestor-worship. If he died childless, he would have no one to pay the needful dues to his *manes*. If, therefore, his first wife had no son, it was his sacred duty to take a second or a concubine; and, if he died without an heir, it was an act of piety on his brother's part to marry his widow and raise up children in his stead (Dt 25[5. 6]).—(*b*) The first desire of parents was for sons, the defenders of the hearth and the main support of the home. It was the first-born son who was dedicated to Jahweh (Ex 22[29]). But daughters were also welcome, and that not merely because they were required for the labour of the household, or because a *mōhar* could be demanded for them, but because their beauty was desired and their chastity honoured alike in kings' courts and shepherds' tents (Ps 45, Canticles, *passim*). There was none of that contempt for girls which has always marked many Eastern races. Female infanticide, which was practised among the Arabs, was apparently unknown among the Hebrews.—(*c*) The *patria potestas* was, however, almost absolute. Abraham's readiness to sacrifice Isaac (Gn 22), Jephthah's sacrifice of his daughter (Jg 11[34-40]), and the practice of offering children to Molech (2 K 23[10], Jer 32[35]) rest upon this authority. The father had power to cast out a bond-woman with the child she had borne him (Gn 16[6]). He could sell his daughter into bond-service (with concubinage), though not to foreigners (Ex 21[7-11]). He could not, on any account, sell her into prostitution (Lv 19[29]). He might cause a prodigal son to be stoned to death (Dt 21[18-21]), or a prodigal daughter to be burned alive (Gn 38[24]). Children were required to render the utmost respect and obedience to both their parents (Ex 20[12], Lv 19[3]). Any one cursing his father or his mother was put to death (Lv 20[9]).—(*d*) The early education of the children was mostly in the hands of the mother. The sayings of Lemuel were taught him by his mother (Pr 31[1]). Proverbs contains many references to the instruction (*mūsār*) of the father and the teaching (*tōrāh*) of the mother. Schools are never mentioned in the OT.—(*e*) The solidarity of the Hebrew family was so complete that grave injustice was often done to the children. The sin of Achan was expiated by the destruction of his whole household (Jos 7[24. 25]). It was the task of the prophets to preach the doctrine of individual responsibility, separating 'the soul of the son' from 'the soul of the father' (Ezk 18[4]).—(*f*) The stress which the OT lays upon the family is indicated by its closing words, which contain a promise to 'turn the heart of the fathers to the children, and the heart of the children to their fathers.' A strong and pure domestic life is to save the earth from a curse (Mal 4[6]). See, further, artt. CHILDREN and EDUCATION.

4. **Brothers and sisters.**—(*a*) Polygyny divided a man's family into sub-families, each presided over by a mother, whose personal jealousies were apt to be shared by her children. The full brother was the natural guardian of his sister. Laban takes precedence of Bethuel in the arrangements for Rebekah's betrothal (Gn 24[50]). The sub-families were so distinct that in early times brothers were permitted to marry half-sisters (20[12]). Tamar, Absalom's daughter, thinks that David will certainly allow her to marry her half-brother Amnon (2 S 13[13]). Ultimately, however, such unions were forbidden by law (Lv 18[9]).—(*b*) There was no difference of legitimacy, in the Græco-Roman sense, between the sons of wives and those of concubines. Even Jephthah, though a prostitute's son, is brought up in his father's house, and rightly complains of his expulsion as an act of violence (Jg 11[1. 7]). The claim not unnaturally made by the wife, that the son of the bond-woman should not share the inheritance with her son (Gn 21[10]), was never sustained by law. Four of the tribes of Israel were descended from the sons of Jacob's concubines. A man's acknowledged children were all legitimate, irrespective of the status of their mother. The bastard (*mamzēr*) was not one born out of wedlock, but the offspring of an incestuous union (Dt 23[2]).—(*c*) The domestic word 'brother' had a wider application to the clan, the tribe, and the nation. Israel and Judah (2 S 19[41]), Israel and Ishmael (Gn 16[12] 25[18]), Israel and Edom (Nu 20[14]), were brethren. But those who were kin were not always kind. The Prophets have to ethicize the ideal of 'a covenant of brethren' (Am 1[9]), the Psalmists sing the praise of brotherly unity (Ps 133[1]), and ultimately Christianity sets itself the task of making humanity a family.

5. **Master and servant.**—The Hebrew slave was a true member of the family. He was part of his master's wealth, but he was not regarded as an inferior being. He was circumcised, and kept the passover. He was admitted to the family cult. He prayed to the God of his master (Gn 24[12]). In the Deuteronomic law his humane treatment is rooted in his master's remembrance that the Hebrews themselves were once slaves in Egypt (Dt 15[15] 16[12] etc.). It was a still higher consideration that the same Divine creative power made both master and slave (Job 31[15]). The Hebrew religion, perfected in Christianity, enunciated principles which slowly undermined and ultimately abolished slavery. It created a spiritual climate in which bond-service dies a natural death. See SLAVERY.

6. **Host and guest.**—The Hebrew family was scarcely complete without the 'stranger' or guest (*gēr*, μέτοικος), who, separated for some reason from his own kindred, put himself under Israelite protection, and then was included in the sacred blood-bond. As Jahweh was 'the protector of strangers' (Ps 146[9]; cf. Zeus Xenios), hospitality rested on religious sanctions. There are many exhortations to deal justly and generously with the *gēr* (Ex 22[21] etc.), who worshipped the God of the land in which he sojourned, shared the privilege of the sabbath, and was perhaps admitted to the *sacra* of his patron. This family tie between host and guest was also to be perfected in Christianity.

'The Christians looked upon themselves as a body of men scattered throughout the world, living as aliens amongst strange people, and therefore bound together as the members of a body, as the brethren of one family. The practical realization of this idea would demand that whenever a Christian went from one place to another he should find a home among the Christians in each town he visited' (Sanday-Headlam, *Romans*[5], Edinburgh, 1902, p. 363.

II. *THE CHRISTIAN FAMILY.*—Jesus had personal experience of the privilege and obligation of

home life. He spent many quiet years in the Holy Family at Nazareth, which was to Him a shrine of moral culture, a temple of Divine communion. His whole thinking was influenced and inspired by the experience. He came to regard the sacred relation of the family as mirroring the rightful relation between God and man. He had an intuition of the essential oneness of these relations. He saw that of all the immeasurable forms of love none is so beautiful, so lasting, so Divine as the love of husband and wife, parent and child, brother and sister. He grasped this force as the key of all future moral and spiritual progress. By consecrating marriage, by emancipating womanhood, by sanctifying childhood, by expanding brotherhood, and making the domestic group the type of the Divine social order which is to be, He created what may distinctively be called the Christian family.

1. The consecration of marriage.—Both in the lower and in the higher aspect, the union of two personalities is the beginning of family life. Jesus recognizes its physical aspect (Mk 10[8]), which He never regards as in any way sinful or ignoble. It is scarcely possible to overestimate the importance of the change which He effected by His law of marriage. On many of the burning questions of His age He refused to commit Himself, but in regard to the institution of the family He repeatedly expressed His mind with the utmost emphasis. To the laxity of the time He opposed an austere purity, which startled even His own disciples, and probably seemed to the ordinary intelligence fanatical. It is true that, in spite of the technical lawfulness of polygamy, the Jews had become to a great extent monogamists. But divorce was scandalously common, and the discussions on the subject had fallen to an extremely low level. Between the two great Rabbinical schools of the period there was a standing dispute (based on Dt 24[1]), not whether divorce was permissible, but for what reasons. The school of Shammai wished to restrict them to acts of unchastity, but the school of Hillel inferred that a divorce was warranted when a wife burned her husband's food in cooking, while Rabbi Akiba thought that a man might lawfully dismiss his wife if he found another more attractive (Mishna, *Gittin*, ix. 10). In opposition to this licentious trifling, Jesus categorically denies the rightness of divorce (Mt 19[9], Mk 10[11], Lk 16[18]). In His view marriage is not a creation of law, which can merely recognize and protect it, but an institution based on a Divine creative act. Its true significance is to be sought, not in human customs, but in the human constitution. Moses, indeed, allowed divorce (Mk 10[5]), but only as an expedient, as the lesser of two evils, regulating what he could not prevent, reducing anarchy to law, while by a legislative compromise he violated human nature. From temporary ethics Jesus passes to absolute morality. He sees that marriage in its true nature is not a legal status, a social contract, a licensed partnership for mutual help and support, but a real union of complementing personalities, a forming of one flesh (10[6-8]). In His view the question is not, May a man divorce his wife? but, Can he? and the emphatic answer is, He cannot. The sacred bond is essentially indissoluble. It is not to be violated even by a look or a thought (Mt 5[28]), and, except as a formal recognition of an already broken union, divorce is impossible. Jesus discerned the Divine ideal of the institution, and made that the law of His Church. He directed His legislation to the perfecting of the home in the interest of the Kingdom. It was not so much that He 'changed the family (which till then had only a civil importance) into a religious institution' (Schmidt, *The Social Results of Early Christianity*, Eng. tr., London, 1885, p. 203) as that He discovered its Divine principle, which is inherently and eternally religious.

'To dishonour this first of human relationships is to loosen the bonds of society, to lower present social ideals, to do injury to the essential nature of both the man and the woman. It was, therefore, not in the spirit of a purist or a fanatic that Jesus thus put checks upon divorce, but in that of the ethical and social philosopher' (Shailer Mathews, *The Social Teaching of Jesus*, New York, 1910, p. 90).

2. The elevation of womanhood.—Jesus' lofty conception of the family involves the emancipation of woman. Astonishingly free from Eastern prejudices, He abolishes the idea of a husband's property rights in his wife, and liberates her spirit from the last trace of servility and abjectness. He never commands her to be in subjection to her husband (contrast Eph 5[22]), and never traces the transgression of mankind to her weakness (1 Ti 2[14]). 'He simply treats woman as an equal—equal in the matter of marriage and divorce, equal as a companion' (Shailer Mathews, *op. cit.* 97). St. Paul's teaching on this head is not quite self-consistent, but he clearly has the mind of Christ when he enunciates the principle that in Him 'there can be no male and female' (Gal 3[28]); and Augustine, while he gives celibacy and virginity the exaggerated importance of a more perfect virtue, teaches that the natures of man and woman are equally honourable, and that 'the Saviour gives abundant proof of this in being born of a woman' (*Sermo* 190, § 2). All the Fathers teach that husband and wife must equally honour the sanctity of the home. Errors which are condemned in the one cannot be condoned in the other.

'In consequence of Christian respect for reinstated woman, it is no longer she alone who is thought capable of committing adultery. The doctors of the Church vigorously attack the pagan pride which accused woman alone, whilst man claimed to be free. Henceforth the unfaithful husband was held to be as guilty as the wife who violated her duty' (Schmidt, *op. cit.* 200).

3. The dignity of childhood.—The family exists especially for the child. Jesus was Himself the Holy Child, reared in the shelter of an earthly home, meeting parental authority with filial submission, growing in favour with God and man. His profoundest teaching was coloured by thoughts of family life, and He has left words which have for ever hallowed childhood. He made the spirit of a little child the type of Christian character (Mk 9[36]), and gave children a share in His kingdom (10[14]). He did not prescribe minute details for the conduct of parents and children. In general it was His part not to legislate but to inspire. He entrusted to others the task of incarnating His principles in the midst of imperfect human conditions. Under the influence of His spirit paternal authority ceases to be an arbitrary tyranny, and the servile dependence of children is replaced by the truer and gentler dependence of love and gratitude (cf. Eph 6[1-4], Col 3[20-22]). Christianity vitalizes the fine Roman saying, 'Maxima debetur puero reverentia' (Juv. xiv. 47), and gives it the sanction of a far higher faith.

4. The expansion of brotherhood. — In the original condition of mankind, blood was the single tie which bound men together, the family was the sole basis of rights and duties. Every one who was not a brother was counted an enemy. Only the life and property of a kinsman were safe. We have seen how the idea of brotherhood was gradually extended to the tribe and the nation. It was reserved for Jesus to place *all* men in the relation of brethren to each other. In His name St. Paul exhorts Philemon to receive back Onesimus 'no longer as a servant, but as a brother beloved' (Philem [16]). The thought of 'the brother . . . for whom Christ died' (1 Co 8[11]) has been the inspiration of the noblest service of the human race. The Saviour's hope for the world is to be fulfilled through the expansion of those affections which

are naturally born and nurtured in the sanctuary of the home. The family is His microcosmic kingdom. He makes the first social unit also the last. 'His entire theology may be described as a transfiguration of the family' (Peabody, *op. cit.* 147). 'Paternal love is His representation of the love of God, and the family. . . . His type of that divine society towards which humanity with a Christ within it must move' (Shailer Mathews, *op. cit.* 104).

5. **The subordination of the family.** — The dearest relationships may, however, conceal the subtlest temptations, and Jesus was alive to the dangers which lurk in the affections of the home. Love may narrow as well as widen the heart. Domestic selfishness is as disastrous as any other form of selfishness. Just because the devotion of kindred is so intense, it is apt to be exclusive. When Jesus entered on the work of His vocation, and, again, when He began to call men to be disciples, He came into collision with the claims of the family. Then and only then did He seem to depreciate it. 'He that loveth father or mother more than me is not worthy of me' (Mt 10[37]). 'Whosoever shall do the will of God, the same is my brother, and sister, and mother' (Mk 3[35]). The family exists for the sake of ends beyond itself; it is the preparation and equipment of personalities for the service of God and man. It was part of the tragedy of Jesus' life that He was not understood by His own brethren, and that He had to assert, in unequivocal language, His independence of the interests and obligations of His former home. The pain of separation from His kindred, and especially from His mother, was proportionate to the tenderness of His love. By example as well as by precept He taught that, when the call of duty comes into conflict with the claims of affection, the former must prevail. It was not that He loved the family less, but that He loved the Kingdom more. As Bengel notes on Mt 12[48], 'non spernit matrem, sed anteponit Patrem.'

6. **The ultimate social aggregate.** — Though the best institutions may easily become the most mischievous when they are perverted and mismanaged, that does not affect their intrinsic value. The character of the teaching of Jesus on the family has never been so adequately appreciated as to-day, when science and politics are concentrating the attention of the educated world on the crucial problem of the ultimate social unit. Many anti-Christian attacks are being directed against the domestic group, but 'it is clear that monogamy has long been growing innate in civilized man,' and this relationship is 'manifestly the ultimate form' (Spencer, *Principles of Sociology*, London, 1876-96, i. 673, 752). The Christian family is the germ of the yet higher civilization of the future. It enfolds in itself the promise and potency of all social progress and pure human happiness.

'It is the mature opinion of every one who has thought upon the history of the world, that the thing of highest importance for all times and to all nations is Family Life. . . . Not for centuries but for millenniums the Family has survived. Time has not tarnished it; no later art has improved upon it; nor genius discovered anything more lovely; nor religion anything more divine' (H. Drummond, *The Ascent of Man*, London, 1894, pp. 378, 407).

JAMES STRAHAN.

FAMILY (Buddhist).—In the 6th cent. B.C., when Buddhism arose in the valley of the Ganges, the family had already been long constituted, and its every detail settled, in accordance with the tribal customs of the Aryan, Dravidian, Kolarian, and other inhabitants. Neither at the beginning, in the precepts put into the mouth of the Buddha in our earliest documents, was any attempt made to interfere in any way with those customs; nor afterwards, as the influence of the new teaching spread, do we find any decree of a Buddhist Council, or any ordinance of a Buddhist king, prescribing a change there in family relations. When Buddhism was subsequently introduced and more or less widely or completely adopted in other countries, the Buddhists evinced no desire, and probably had no power, to reconstitute the family according to any views of their own on the subject. It is possible, therefore, to speak of the family as Buddhist only in a very modified sense—an observation equally true of all religions so late as, or later than, the Buddhist. But the general tone of the Buddhist teaching, and the adoption by a proportion of the inhabitants of any country of the system of self-culture and self-control we now call Buddhism (the Buddhists called it the *Dharma*), could not fail to exercise a certain influence on the degree in which previously existing customs were modified to suit the new environment. And in our oldest documents, in those portions addressed to beginners in the system, and amounting to little more than milk for babes, we find allusions, not indeed to the readjustment of any point of detail, but to the general principles which should guide a good Buddhist in his family relations.

Thus in the edifying story of the partridge,[1] the Buddha is represented as laying especial stress on the importance of reverence being paid to the aged, and as concluding his discourse thus:

'So, since even animals can live together in mutual reverence, confidence, and courtesy, so much more should you so let your light shine forth that you, who have left the world to follow so well taught a doctrine and discipline, may be seen to dwell in like manner together.'

This is here addressed to the *bhikkhus*. Afterwards the same story was included in the popular collection of Jātakas (Fausböll, Lond. 1877-97, i. 217-220); and it was well known to the Chinese pilgrim, Yüan Chwang (Watters, *On Yuan Chwang's Travels in India*, do. 1905, ii. 54). A similar sentiment is found in the popular anthology of favourite stanzas, the *Dhammapada* (verse 109, a celebrated verse found also in other Buddhist anthologies, and repeated, in almost identical words, by later Sanskrit writers).[2]

In the *Sigālovāda Suttanta* the Buddha sees a young man worshipping the six quarters, North, South, East, West, the nadir, and the zenith, and shows him a more excellent way of guarding the six quarters by right conduct towards parents and wife and children, and teachers and friends and dependents.

'In five ways the son should minister to his mother and father, who are the East quarter. He should say: "I will sustain in their old age those who supported me in my youth; I will take upon myself what they would otherwise have to do (in relation to the State and the family); I will keep up the lineage of their house; I will guard their property; and when they are dead and gone I will duly make the customary gifts."

Thus ministered unto, the father and mother in five ways show their affection to their son. They restrain him from evil, and train him to follow that which is seemly, they have him taught a craft, they marry him to a suitable wife, and in due season they give him his portion of the inheritance. . . .

In five ways the husband should minister to his wife, who is the West quarter. He should treat her with reverence; not belittle her; never be false to her; acknowledge her authority; and provide her with things of beauty. Thus ministered unto, the wife should in five ways show her affection for her husband.

1 *Vinaya*, ii. 161, tr. in *Vinaya Texts*, iii. 194 (*SBE* xx.).
2 Manu, ii. 121; *Mahābhārata*, v. 1521.

She should manage her household well; carry out all due courtesies to relatives on both sides; never be false to him; take care of his property; and be able and active in all she has to do.'[1]

Passages of similar tendency are found in other parts of the *Nikāyas* addressed to beginners or householders. The principles set forth in them may certainly be called Buddhist, since they have been adopted into the *Dhamma*. But it is probable that they are a selection from the views as to family and sexual relations already current among the Aryan clans to which the Buddha himself and most of his early disciples—to whom we owe the record—belonged. What is Buddhist about it is the selection. For instance, we know from the later law-books that the pre-Buddhistic Aryans performed, at a marriage, magical and religious ceremonies which bore a striking resemblance in important details to ceremonies enacted at a similar date by other Aryan races in Europe. Other religious ceremonies were performed at the name-giving, the initiation, and other important periods in the history of the family. All these are, of course, ignored and omitted in the exhortation. Buddhists could not countenance practices which they held to be connected with superstition. And they put nothing in their place. There are no Buddhist ceremonies of marriage, initiation, baptism, or the like. Marriage is regarded as a purely civil rite, and the Buddhist clergy, as such, take no part in it. This is probably the reason why Asoka, in his edicts on religion, does not mention it. He considers marriage, and the observance of family customs, a civil affair.[2]

In pre-Buddhistic times, divorce, but without any formal decree, was allowed. So Isidāsī, for instance, explains how she had had to return twice to her father's house, having been sent back by successive husbands owing to incompatibility of temper (the result of her evil deeds in a former birth).[3] No instance is recorded of similar action taken against the husband. In countries under the influence of the Thera-vāda (the older Buddhism) there is divorce on equal terms for husband or wife on the ground of infidelity, desertion, or incompatibility of temper. This is, however, infrequent. Fielding estimates it, for village communities in Burma, at two to five per cent of the marriages;[4] and the present writer, while not able to estimate any percentage, for which there are no statistics available, is able to testify to the very low number of divorces in Ceylon.

The wife, after marriage, retains her own name, and the full control of all her property, whether it be dower or inheritance. Property acquired by the partnership (of husband and wife) is joint property. There is no *harîm* system; marriage is monogamous (that is, among the people; kings often follow the Hindu customs); women go about unveiled, engage in business, can sign deeds, give evidence, join in social intercourse, and have just such liberty as they and their men-folk think expedient. Fielding, who has given the facts for Burma in considerable detail (chs. 13–17), does not discuss the question how far this state of things is due to the influence of Buddhism, and how far to the inherited customs and good sense of the people. But, when we call to mind that the same or closely related races have, under other influences, much less advanced customs, and that in early Buddhism a remarkably high position was allowed to women, we may conjecture that the influence of early Buddhist teaching was not without weight.

FAMILY (Celtic)

FAMILY (Celtic).—1. The evolution of the Celtic family is wrapped in considerable obscurity, and it is by no means easy, from the evidence that has come down to us, from both Christian and pre-Christian times, to conjecture through what phases it had passed before the dawn of history. In the case of Celtic countries, too, it has always to be remembered that the Celtic-speaking inhabitants were comparatively late comers, and that the previous inhabitants had for ages their own social institutions, which may or may not have undergone a similar evolution to those of the invaders of Indo-European speech. Nor can it be supposed that the institutions of the invaders would necessarily supplant those of the earlier inhabitants, especially in the remoter districts, where the indigenous population would be most likely to hold its own. Further, it is not impossible that, in some cases, the institution which survived was neither that of the invaders nor that of the previous inhabitants in its entirety, but a working compromise consisting of elements from both sources, the development of which it is now by no means easy to follow. It may well be, for example, that the curious system of fosterage, which played so large a part in Celtic family life (see artt. CHILDREN [Celtic], and FOSTERAGE), owed its origin to some such fusion of Celtic and pre-Celtic institutions, but it is now, at this distance of time, a fruitless task to speculate upon the matter. Further, it must be borne in mind that, in the documents which describe the social life of the Celts, our information relates almost entirely to the higher circles of the population—that is, to the free members of tribes (doubtless in the main sprung from men of Indo-European speech) who at the earliest did not reach the British Isles before about 1800 B.C. and the West of Europe some centuries before. What the institutions of the 'unfree' tenants of Celtic countries may have been is involved in great uncertainty, and their social organization may well have developed on lines distinctly different from those that were characteristic of the Indo-European conquerors of Gaul and the British Isles, and of the kinsmen of these conquerors in other countries of cognate speech.

2. A study of the various treatises which embody the ancient law of Ireland, together with the documents which describe the social system of ancient Wales, and, similarly, an investigation into the clan organization of the Scottish Highlands, make it abundantly clear that the family basis was patriarchal, and, at any rate in Christian times, essentially monogamic. In Gaul, too, as Cæsar (*de Bell. Gall.* vi. 15) tells us, the family structure was of the same type, and the family groups had attached to them groups of *ambacti* ('clients')—a word of Celtic origin, which is the exact phonetic equivalent of the Welsh *amaeth* ('farmer'). Nor is this development of Celtic institutions to be wondered at, because the type of family in question is the natural correlative of the kind of military and semi-nomadic life which ultimately brought the Celts into a dominant position (until Rome conquered them) in Celtic lands. At the same time, there are indications that there were, at any rate in some parts of these lands, certain unusual features of family life, which impressed some of the observers of the ancient world. For example, Cæsar (vi. 18) acquaints us with the curious fact that, in Gaul, it was thought to be a shameful thing for a boy to be present before the face of his father in public, until he was of age to bear arms. He also tells us (v. 14. 4) that in

Britain ten or a dozen men had wives common to the group, and that in this matter brothers mostly joined with brothers. Strabo (iv. 5. 4), following Posidonius, speaks of a rumour that the Irish had no definite system of matrimony, but he could not vouch for the truth of this view. Dio Cassius (lxxvi. 12. 2) says that the Caledonii had wives in common (ταῖς γυναιξὶν ἐπικοίνοις χρώμενοι); and, in his description of Thule (derived from Pytheas), Solinus (*Polyhistor.* ch. 22) says that the king of that island had no wife of his own. These statements regarding the inhabitants of Britain appear to have gained a wide currency in antiquity, and we find Bardesanes in Eusebius (*Praep. Evang.* vi. 10) repeating the story that several persons jointly had one wife in Britain; while Jerome (*adv. Jovin.* ii. 7, p. 335) says of the Scoti:

'Scotorum natio uxores proprias non habet: et quasi Platonis politiam legerit et Catonis sectetur exemplum, nulla apud eos coniux propria est, sed, ut cuique libitum fuerit, pecudum more lasciviunt' (see, further, above, pp. 456 f., 460ᵃ, 462 f., 465).

It has been thought that the absence in Welsh of any word for 'son' as distinguished from 'boy' (*mab*), or for 'daughter' as distinguished from 'girl' (*merch*), points to an analogous situation in remote times in that country; but this absence of separate terms may easily be one of the accidents of language. Again, the so-called Pictish succession, whereby the Pictish crown descended from the reigning king to his sister's son, has been thought to have had its roots in a remote matriarchal system; but the criticism of this view by d'Arbois de Jubainville, in *La Famille celtique* (p. 88) makes it hazardous to accept it. Nor would it be safe to attach undue importance to certain cases of legendary nomenclature, such as *Conchobar mac Nessa* ('Conchobar, son of Ness') and *Gwydion fab Don* ('Gwydion, son of Don'), where the hero is called after his mother's name. The prominence given also to the grouped goddesses called 'Matres' and 'Matronae' (on whom see *ERE* iii. 280) in certain regions cannot, in view of the scantiness of the general evidence, be regarded as of any significance in this connexion.

3. Still, notwithstanding the rumours of antiquity,—which it would be rash to say were entirely devoid of foundation, at any rate in the more backward districts,—the evidence of Cæsar as to Gaul and the abundant testimony of the Irish and Welsh laws alike reveal, both in Gaul and in Britain, communities where the male head of each social group is in unmistakable prominence. Of the *patria potestas* enjoyed by the husbands in Gaul, Cæsar says (vi. 19): 'Viri in uxores, sicuti in liberos, vitae necisque habent potestatem,' and both the Irish and the Welsh laws show us that women could not be members of the recognized tribes. The organization of the Celts was everywhere based on the tie of blood: in Gaul the tribe, in Ireland the clan under its chief, and in Wales the *cenedl* ('kindred') under its *pencenedl* ('head of the kindred'), were all governed by the idea of a common ancestry. The family proper was the smallest subdivision of the social organism, and was founded on the principle of monogamic marriage. The organization of the family had at one time a very important practical significance, since it was closely connected with the tenure of land and the occupation of the dwelling-houses built upon the land—in other words, with succession, and also with responsibility for the payment of compensation for wrongs committed by a kinsman (see CRIMES AND PUNISHMENTS [Celtic], vol. iv. p. 261, and BLOOD-FEUD [Celtic], vol. ii. p. 725). There were thus reasons for the evolution of the family-group in the direction of greater compactness and definiteness.

4. The Irish legal documents, such as the *Senchus Mór*, with its commentary, the *Book of Aicill*, and other treatises, unfortunately do not present us with a very clear account of the structure of the Irish family, and the descriptions therein contained have given rise to much discussion; see d'Arbois de Jubainville, *op. cit.*; also the 'Introduction to the Book of Aicill,' in *Ancient Laws of Ireland*, vol. iii. p. cxxxix, and especially the Introduction (by Alexander George Richey) to the Brehon Law Tracts, *ib.* vol. iv. p. xlix. The latter Introduction, which deals with this complicated subject most thoroughly, may be supplemented with advantage by a study of R. Atkinson's *Glossary to the Ancient Laws of Ireland* (vol. vi. in the Rolls Series). Both the Introduction in question and the *Glossary* show how little can be gleaned with certainty from the Irish laws as to the precise significance of their fourfold classification of the Irish family into the *gelfine*, the *derbfine*, the *iarfine*, and the *innfine*. Of these family-groups it is evident, from the account given by Atkinson in his *Glossary*, that the *gelfine* was the most living and vigorous form of the family in the times to which the Irish Law Treatises refer, though this form may, even then, owing to the settlement of a large part of the land of Ireland, have lost something of its earlier *raison d'être* in the occupation of new territory. According to Atkinson, it can be stated with certainty that the *gelfine* included two varieties: (1) the *gelfine iar mbelaib* ('frontwards'), and (2) the *gelfine iar culaib* ('backwards'), the former denoting five men of the direct line—father, son, grandson, great-grandson, and great-great-grandson; the latter denoting the similar descendants in the direct line from the father's brother. Of these two varieties it would appear that the former was the more important aspect of the *gelfine*, and Richey in his Introduction has ingeniously suggested that it began with the occupation of new lands, when the father would hold the original dwelling, and, if he had five sons, four of them would during their father's lifetime occupy each a homestead on the land, while the fifth son would in time succeed to his father's homestead. The view held by Whitley Stokes and by d'Arbois de Jubainville, that *gel* in *gelfine* means 'a hand,' and that it is cognate with the Greek χείρ, is improbable; and, consequently, there appears no warrant for the view that the *gelfine* was essentially a 'familia in manu.' Of the other names for family-divisions the term *derbfine* ('true-family') suggests that it may have denoted what was for a time a rival classification with some of the other divisions, and the present writer is inclined to hazard the opinion that these terms, which have given rise to so much ingenious discussion, are in reality surviving traces of different family arrangements, which prevailed at different periods, and that the Irish, instead of discarding the old classifications completely when the *gelfine* came into favour, allowed them to remain as names, and regarded them as being forms of family arrangements which were in reserve in case of need. The process of evolution has doubtless operated here, and has left some of its traces, as in the case of other social institutions.

5. The Scots who carried with them the Gaelic tongue into Scotland brought also their tribal organization, but, as Skene (*Celtic Scotland*, iii. 320) points out, the original clan-organization of the Gaelic-speaking invaders from Ireland appears to have been broken up, and new septs or clans came to appear as a distinct and prominent feature in the organization of the Gaelic population. The basis of the clan-system was, however, essentially the same as in Ireland; and, just as there were in Ireland certain dependent septs, so, too, in Scotland there were, side by side with the clans of kinsmen corresponding to the Irish 'free' tenants, other

'unfree' clans corresponding to the *fuidhir* tenants of Ireland. (For an account of the development of the clan and family system of the Highlands, the reader should consult Skene, iii.)

6. In Wales, the family organization within the tribe (*cenedl*) was only of one type, namely, that corresponding in the main to the *gelfine* of Ireland. It consisted of the ancestor, his sons, his grandsons, and great-grandsons. So far as the occupation of land was concerned, the corresponding territorial division was the *gwely*, upon which a body of members of the same family were settled, occupying the original mansion of the family, and the supplementary *tyddynod* ('homesteads') which were built upon the land to accommodate the sons as they married. This family organization among the Welsh was responsible for the payment of the *galanas* ('blood-fee') in the case of the commission of homicide by a member of the family (see CRIMES AND PUNISHMENTS [Celtic]). It will thus be seen that in Wales, as in Ireland, it was the practical questions of land-tenure and responsibility for the actions of kinsmen that made the family as such so important a factor in social life, with the result that pedigrees were kept with remarkable care. With the introduction, however, of the English manorial system and English law, the pressure of practical necessity upon family organization became less urgent; but, nevertheless, the sense of kinship, even to the recognition of distant relatives, has remained far stronger in Wales than in corresponding circles in England at the present day, and this recognition of kinship shows itself in a marked way in the sense of obligation which most Welshmen feel to attend the funerals even of distant kinsmen—a feature of Welsh life which generally appears strange to Englishmen who come to reside in Wales.

7. The various terms which express family relationship, in spite of their common Indo-European origin, are somewhat different in the two great branches (the Goidelic and the Brythonic) of the Celtic tongue. For example, the term for 'father' in Irish is *athair*, the phonetic equivalent (with the regular loss of Indo-European 'p') of the Latin *pater*, while, in the Brythonic group, the corresponding Indo-European term of endearment, *tăta*, has entirely supplanted the more formal Celtic term for 'father,' giving the Welsh and Breton *tăd*, and the Cornish *tas*. Similarly, in Welsh, Breton, and Cornish, the place of *modr* (the equivalent of Lat. *mater*, Irish *mathair*) has been taken by the analogous term of endearment *mam* from *mamma*. Likewise in Brythonic (cf. Welsh *taid*, 'grandfather,' *nain*, 'grandmother') we have survivals of Indo-European terms of endearment. In Ireland, too, the terms for 'foster-father' (*aite*) and 'foster-mother' (*muime*) are, in origin, both survivals of terms of endearment also. The Irish word *mac*, like the Welsh *mab*, can mean both 'boy' and 'son'; and the Irish term *ingen* ('daughter')—a word meaning literally 'one born into the family' (for *eni-gena*)—has the same dual meaning. In both branches of Celtic speech, too, the words which originally meant 'grandson' and 'granddaughter' have come to mean 'nephew' and 'niece.'

8. In modern Welsh the term in regular use for 'family' is *teulu*, but the reader should be on his guard against assuming that in Welsh mediæval documents this word had the same meaning as it now has. Its meaning then, in accordance with its derivation (from *ty*, 'house,' and *llu*, 'host'), was 'the retinue or bodyguard of the head of the household'; and, in the case of the king, this retinue had a special head, the *pen teulu*, and a special bard, *bardd teulu*, of its own. The earlier meaning of the word now survives only in a South Wales term for a 'phantom funeral procession' (pronounced *toili*=*teulu*).

9. The treatment of children among the Celts, as well as the interesting practice of fosterage, is discussed in the artt. CHILDREN (Celtic) and FOSTERAGE, and the place of the wife in the family, together with the conditions of marriage (including the question of marriage gifts) will be considered in connexion with the subject of MARRIAGE (Celtic).

LITERATURE.—Rhys and Brynmor-Jones, *The Welsh People*[4], London, 1906; H. d'Arbois de Jubainville, *La Famille celtique*, Paris, 1905; *Ancient Laws and Institutes of Wales*, ed. Aneurin Owen (Rolls Series, London, 1841); Wade-Evans, *Welsh Medieval Law*, Oxford, 1909; *The Ancient Laws of Ireland* (Rolls Series, London, 1865-1901); R. Atkinson, *Glossary to Ancient Laws of Ireland* (Rolls Series, London, 1901); W. F. Skene, *Celtic Scotland*[2], Edinburgh, 1890.

E. ANWYL.

FAMILY (Chinese).—*Introductory.*—The analysis of a Chinese character is not always a reliable guide to its primitive meaning. The usual form of the character for 'family,' *i.e.* those under the roof of one paterfamilias, is a pig under a roof, and the *Shuo Wên* (*c.* A.D. 100) says that, originally meaning a pig-sty, it was afterwards metaphorically used for a human home. It is just as likely, however, that originally the part of the character which stands for 'pig' had merely a phonetic value; and in any case the *Liu Shu Ku* (between A.D. 1250 and 1319) sets aside this derivation, and analyzes another form of the character into three persons under a roof.

The institution of the family is ascribed to Fuh-hsi (2852-2736 B.C.). Before his time the people were like beasts, knowing their mothers but not their fathers, and pairing without decency. Fuh-hsi established the laws of marriage, organized clans, and introduced family surnames.

Society in China is predominantly patriarchal. The family is the social unit and the norm of social organization (Williams, *Middle Kingdom*, New York, 1876, i. 296). A mandarin is the parent of his children people. 'The Empire is one family.' 'To the Son of Heaven there is no stranger: he regards the empire as his family.' In accordance with this idea, *hsiao*, filial piety, the duty of a child, and *t'i*, the duty of a younger brother, are the fundamental social virtues. 'Esteem most highly filial piety and brotherly submission, in order to give due prominence to the social relations' (*Sacr. Edict* [A.D. 1670], i.).

A typical Chinese family might consist of father, mother, sons, daughters-in-law, and grandchildren. To have four generations alive in one household is marked felicity; if five are alive at the same time, many are the congratulations, and special announcement of the fact is made in the temple of the City-Guardian.

1. **Husband and wife.**—Marriages are arranged by the parents of the bridegroom and bride through the agency of a 'go-between.' 'In taking a wife, how do you proceed? Without a go-between, it cannot be done' (*Shi-King*, xv. 6). Betrothal is considered binding, and often takes place at a very early age. In some cases the future daughter-in-law is brought as an infant into her future husband's family, and grows up as a member of it. The custom, however, is not of high repute, and is particularly objectionable where, as in at least one district, the future husband and wife cohabit from their earliest years, and there is no formal marriage. Early marriage is usual. A boy is of age at 15. Prohibition of inter-marriage extends to all persons of the same surname, even though they should belong to widely separated parts of the Empire; and, if a man would marry a near relative on his mother's side, the contracting parties must be of the same generation; *e.g.*, a

man may marry his cousin but not his aunt. Otherwise there is no restriction. In practice, of course, regard is paid to equality of social status—'Eight ounces is a match for half a pound'; and the horoscopes of the parties are often taken into consideration. The bride brings her trousseau; but the husband's family have to pay a dowry for her, although among the wealthy this is somewhat of a formality. Marriage arranged in this way is not of affection, and in many cases, at least in the humbler ranks of life, is as much providing a help for the mother-in-law as a wife for the son. But it is evident from popular tales that romance is not unknown in Chinese life, through love stirred by favourable report or accidental glimpse. Doubtless, too, in many cases, however affection may be lacking to begin with, it springs up in the course of years. The virtue of a husband is to be 'a just person,' and of a wife to be obedient. Conjugal harmony is recognized as the foundation of successful family life, and finds its emblem in mandarin ducks—types of conjugal modesty and fidelity (cf. *Shi-King*, i. 1). Owing to the low status of women and the excessive desire for offspring, the wife is too often regarded merely as the possible mother of sons. In the lower ranks of life, where it is her function to 'boil rice' as well as to 'bear children,' it is desired also that she be a capable housewife. Theoretically she is a keeper at home. Her husband refers to her as 'the person within,' with the addition of various depreciatory epithets. Whatever the origin of foot-binding, it is popularly regarded as a salutary check on woman's proclivity to gadding about and to worse evils. Foot-binding, however, is by no means universal; and among the lower classes, especially in certain districts, women are allowed great freedom, and take even too large a share in heavy outdoor work. Owing to the lack of female education, a wife can seldom be a companion to her husband. Nor is this looked for; and a household is apt to fall into two sections, male and female, the women and girls taking their meals apart from and after the men-folk.

Besides the normal form of marriage, in which the bride goes to live in the home of her husband's parents, there are other forms, in which the husband joins his wife's family. This may happen when the wife's parents have no sons, and, instead of marrying their daughter out, bring in a son-in-law to marry her. In this case the husband does not take his wife's surname; but some arrangement is come to, such as that the first son of the marriage shall take the surname of his mother's parents, and carry on the succession for them. A second class of such marriages is where a husband is called in to marry a widowed daughter-in-law. In such cases the wife retains the surname and even the name of her deceased husband, and the children of her second marriage carry on his succession and not that of their own father. In this case the second husband leaves his own clan and is merged in that of his wife, and is regarded with a certain measure of contempt.

Re-marriage of a widower is usual; and re-marriage of a widow is not infrequent, though to remain faithful to the memory of her husband is considered more estimable, and a second marriage is celebrated with 'maimed rites.' The arrangements for the re-marriage of a widow are made by her parents-in-law; but more regard is paid to her will in the matter than would be paid to the wishes of a daughter. There is no fixed rule with regard to the disposal of a widow's children; but it may be taken for granted that not all her sons at least would be allowed to accompany their mother to her new home.

Concubinage.—Chinese law recognizes only one wife, but concubinage is legal. The practice dates from ancient times. Of Yao (2356 B.C.) it is recorded that he gave his two daughters in marriage to his successor Shun, though this is a case rather of polygamy than of concubinage. It may be noted that the marriage of two sisters, as in this case, is now unknown, though marriage of a deceased wife's sister is not forbidden. Concubinage is common among the wealthy classes. Among the poorer it is less common, and usually only for the purpose of securing a male succession. There is no legal limit to the number of concubines that may be taken.

Divorce.—According to law there are seven reasons for which a husband may divorce his wife; but the law recognizes no right of the wife to divorce her husband. The seven legal reasons for divorce are unfilial conduct (towards the husband's parents), adultery, jealousy, loquacity, theft, grievous disease (*e.g.* leprosy), barrenness; but some of these, *e.g.* barrenness, are not recognized by custom. To these legal reasons must be added poverty, which is the commonest cause of all. It is difficult to estimate the percentage of divorces, but divorce is not supposed to be frequent (Dyer Ball, *Things Chinese*, ed. Shanghai, 1903, p. 212; Doolittle, *Social Life*, i. 107). No legal process is necessary, though a writing of divorcement should be given, and is usually demanded by the second husband of the repudiated woman as a precaution. The repudiated wife is married by the aid of a 'go-between.' This is not so difficult as it might seem; for the desire for children is strong, and matrimony is largely a mercantile transaction, in which a woman whose reputation is damaged may be had at a cheaper rate. The husband's somewhat despotic power over his wife is limited in practice, not so much by legal restraints as by public opinion, and in particular by the fear of his wife's relatives, especially if they are of a powerful clan. Short of divorce a man may, if his wife offends, send her back to her parents, as a hint that their family discipline has been defective. This is regarded as a disgrace to them; and it is for them, if the wife has been in the wrong, to placate her husband and persuade him to take her back. In practice, though not in law, a concubine has little protection against her husband, and can be sold at his pleasure.

2. Parents and children.—In the family the father is the supreme authority—a general rule with many qualifications according to the ability and force of character of other members of the family group. A woman is not supposed to rule; as a girl she should obey her father, as a wife her husband, as a widow her grown-up son. But, while it is true that the status of women is low, it would be a great mistake to infer that they can have no influence. Of the twenty-four examples of filial piety, more than half are instances of piety towards mother or stepmother; an aged mother is usually treated with much deference. The duty of a son to his parents takes precedence of his duty to wife or children. The eleventh of the examples of filial piety is a man who, because his means are insufficient to maintain his mother and his child, says to his wife: 'One may get another child, but it is impossible to get another mother,' and proposes to economize by burying his child alive. As he is digging the grave, he is rewarded by finding a pot of gold. According to the same principle, to put away a wife because she is displeasing to her mother-in-law is laudable; and it is considered right to subordinate the wife's interests to the mother's. The object of having children is broadly stated to be that parents may in old age enjoy their ministrations; and *hsiao* has been defined

as to serve parents with propriety, to bury them with propriety, and to sacrifice to them with propriety (*Analects*, bk. ii. ch. v.). A parent's birthdays are times of congratulation, particularly from the fiftieth year onwards, men observing their fifty-first, sixty-first birthday, and so on, while women observe their fiftieth, sixtieth, etc. A coffin is considered to be an appropriate gift from a filial son to his parents; and to provide a seemly funeral is an important part of his duty, though extravagance is not favoured by classical precept. The great importance attached to *hsiao* underlies the practice of rewarding a man's merit by granting honours to his deceased parents and ancestors; on the other hand, to say to a child that he lacks family training is, by its reflexion on his parents, felt to be a severe rebuke. Parental authority is not less wide than filial duty. If filial piety suggests the sacrifice of a child to a mother's comfort, paternal authority is warrant for the deed. In practice, if not in law, it lies with the parents to decide whether a new-born child shall be brought up or not. The question, of course, concerns female children only: 'One may kill a girl though she might have become a queen; no one kills a boy though he may become only a beggar.' The extent of infanticide varies in different times and places; in some it is lamentably common. It may seem a paradox to say that a nation in which infanticide is practised, not indeed without protest (cf. Chinese tracts against it), but without grave social reprobation, is also distinguished by love of young children; but the fact is so. Among the poorer classes very young children take their share in the family work, attending to still younger children, herding cattle or geese, and gathering fuel. But, in spite of all that can be fairly urged, it is easy to do less than justice to the happiness of Chinese children. Where foot-binding is practised it is, of course, both crippling and painful.

Corresponding to filial piety the parental virtue is *tz'ŭ*, 'tenderness.' More generally it is the mother who is spoken of as the Family Tenderness, while the father is the Family Gravity (*yen*). 'A grave father makes filial sons,' and paternal severity is recommended by the example of Confucius, who maintained towards his son an attitude of distant reserve (*Anal.*, bk. xvi. ch. xiii.). Manuals of family discipline are not lacking which exhibit an ideal of family life. Of these a well-known example is Chu Fu Tzŭ's *Family Instructor*, with its precepts on cleanliness, moderation, economy, and education, and its hinted darker side in its warnings against the beauty of maids and concubines or the good looks of young serving-lads. Family training is, on the whole, not well carried out. Excessive indulgence and weak retreat before childish obstinacy are apt to alternate with passionate anger and unreasonable harshness. In the case of children who are guilty of extreme disregard for their parents, appeal may be made to a magistrate; or, in spite of legal restrictions, a father may exercise his own disciplinary powers with little fear of question, even in those very rare cases in which he may arrange to have his son removed by death, though, in the case of a son adopted from beyond the family, questions might be raised by his relatives. Crimes against parents are particularly heinous. The guilt of parricide is such as to involve not only the whole family of the parricide, but also his neighbours and his teacher.
